Q. Yes?—A. These cattle would be what we call "fit to ship"; they would be what you might call cattle which if they were graded by the government would grade red and blue, the best product that it is possible to produce in the west country. When I had these cattle for sale, why there did not seem to be very much of an outlet here for these cattle, and I undertook to export them.

Q. You say there was not much of an outlet; what price could you get for them at the time you put them into the feed lot?—A. In fact I never had an offer—I could not sell any of these cattle at all.

Q. So that, not being able to find a market for them you put 500 head of them into the feed lots to fatten?—A. No, that was the finished product, after they were finished.

Q. When was that?—A. That would be in April of 1933.

Q. So that the 600 head that you put into the feed lot you had finished by April of 1933; they were fattened then?—A. Yes.

Q. And at that time you say you could not get any price for them in Canada?—A. Well, I could not interest anybody in Canada to look at my cattle. We had a lot of cattle on feed throughout Alberta that year, and feed was short.

Q. What was the going price on the markets at that time for the best finished cattle in Alberta?—A. At that time, in March and April, it was from 3½ cents to 4 cents a pound.

Q. For finished cattle?—A. Yes.

Q. And did it pay you to feed and finish them?—A. No, it was certainly a losing proposition.

Q. Perhaps you will give the committee the benefit of your experience in feeding and finishing this particular lot of cattle—you put them in the feed lot in December?—A. We put them in—the cattle; it usually takes from 120 days on to make cattle that are what we call "good kills"; it takes as you know a lot of grain to feed these cattle, and the amount of attention they have to have in looking after them—it is an expert's work successfully to feed a bunch of steers.

Q. Yes, and as a result of the cost of the feed and the labour that you put into feeding them from December to April, could you get the cost of that feed and labour out of that when it came to marketing?—A. Not at the price the cattle were worth when they went into the feed yard.

*By Mr. Kennedy (Peace River):*

Q. What were they worth when they went in?—A. They were worth approximately 3 to 3¼ cents a pound.

Q. That is, when you put them in?—A. Yes.

*By Mr. Sommerville:*

Q. And when you had them finally finished they were worth?—A. Three and a half to four and a quarter cents a pound.

Q. And you could not interest anyone in Canada you say in cattle, even at that price?—A. No.

Q. Then what did you do?—A. Well, I engaged space and exported these cattle.

Q. You exported them?—A. Yes.

Q. To?—A. These went to Birkenhead.

Q. And you found an outlet for them there on the British market?—A. Yes.

Q. What did they return to you?—A. I just could not tell you in exact figures, as near as I can remember about \$4.35.

Q. Net?—A. Net.

Q. Back to you?—A. Yes.

Q. And you say they were the finest kind of product?—A. Yes, they were considered to be good cattle.

Q. What weight would they be?—A. When they were exported they would weigh about 1,200 pounds.

Q. And in good condition?—A. Yes.

Q. Well then, perhaps you will give the committee your experience with reference to how that market was opened to you, and what situation developed; how were you able to take advantage of the export market?—A. Well, that particular market has been developed purely by the ranchers in the western country themselves, owing to lack of an outlet for our cattle that we have been growing in the west, we have been forced to do something with these cattle in order to get some returns for our work; and gradually through a good many years that market has been developed, mostly by the western ranchers seeking an outlet for their surplus product.

Q. And then was there any difficulty about getting space?—A. No, I had no trouble getting space.

Q. How was the space provided; has there always been an abundance of space available?—A. There has not always been an abundance of space available. In the year 1932 we were very short of space.

Q. Then what happened?—A. In 1932, through the efforts of the Hon. Mr. Stevens in fitting up additional boats, a lot more space was made available to the producers in Canada. I understand that the Hon. Mr. Stevens has fitted up nine boats in the year 1933, and it made a lot of extra space for us.

Q. How did the exchange situation work out?—A. Well, the exchange situation was greatly in our favour in 1933, compared with 1932?

Q. How was that?—A. Well, in selling my cattle—I have been exporting for a good many years as a matter of fact—in 1932 I sold my exchange that I received, proceeds from the sale of my cattle, I got \$3.67 for my sterling.

Q. For sterling?—A. Yes, through the efforts of our government here; through the efforts of the Hon. R. B. Bennett and the government—they stabilized the pound last year at \$4.60 and that made a great difference to the exporters of cattle at that time.

Q. It enabled you to get back a figure that you could not get before?—A. I got back in 1932, \$3.57; as against \$4.60 last year.

Q. And that gave you back a better return on your cattle?—A. Yes.

Q. And that return amounted to \$4.35 net back to Alberta.—A. Yes.

Q. Now perhaps you will give the committee the benefit of your knowledge of the cattle industry and its place in the life of Canada. You had some very interesting figures which you showed me the other day?—A. Do you want me to read that?

Q. You had some to show to me, and they were very interesting figures, as to the position of the live stock industry?—A. Well, I came down to Ottawa to see if I could put before some of the people down here some views of what could be done that might assist the cattle industry in our country, throughout the whole of Canada, in fact; and if you wish me to read this, I will.

Q. I am sure it would be interesting to have the benefit of your 25 years of ranching experience presented to this committee, particularly as it relates to live stock?—A. The range cattle industry of Canada represents—it is one of the major agricultural industries in the Dominion of Canada. For a good many years Canada has been concentrating on wheat, thinking that wheat constitutes our main export product, and that the wealth of Canada was derived from wheat. Well now I have some figures which I have compiled here that I would like to show you.

Low farm prices, and particularly low cattle prices still constitute the greatest living problem of practically fifty per cent of Canada's population. It must be admitted that until the revenue of the primary producer is increased, no permanent recovery is possible. Last year we were able to demonstrate the importance to Canada of the annual revenue from cattle as compared with that from wheat. The following statement shows the comparison for 1932: the year 1932 figures are used because the 1933 statistics are incomplete.

In 1932—Canada's revenue from cattle amounted to.. . . .	\$205,778,795
In 1932—Canada's revenue from wheat amounted to.. . . .	129,105,000
Cattle:	
1,276,665 head sold, average price \$34.40.. . . .	43,789,610
(Inspected sales, plus local country kill)	
Calves sold.. . . .	2,915,052
Dairy products, mills, cream, butter cheese..	159,074,133
Wheat:	
428,514,000 bushels, average price 30 cents.. . . .	\$129,105,000
	<hr/>
	\$129,105,000    \$205,778,795

*By Mr. Factor:*

Q. That total shows the aggregate?—A. The total revenue from the cattle.

*By the Chairman:*

Q. You include dairying in that, do you?—A. Yes, sir, dairying is included in that.

The decision of the Prime Minister a year ago to meet the loss on exchange, which later rectified itself, together with the action of the Hon. Mr. Stevens in fitting up 9 cattle boats led to a strong export movement. It is now clear that without this assistance our cattle markets would have been entirely demoralized.

Despite this assistance, however, other causes have contributed to decrease the price of cattle by 33 per cent.

*By Mr. Sommerville:*

Q. 33 per cent less?—A. Yes. On the other hand, other farm prices have improved as follows:

Hog Prices (Calgary) Jan. 15, 1933.. . . .	\$2.75 per cwt.
Jan. 15, 1934.. . . .	8.75 per cwt.
Wheat Prices (Cayley) Jan. 1, 1933.. . . .	.30 per bushel
Jan. 1, 1934.. . . .	.50 per bushel

Horses have more than doubled in value in the year.

Q. That is, wheat and hogs and horses have all increased, while cattle have decreased?—A. Cattle have decreased for the year 1933. In a national crisis, the government adopted the policy with respect to wheat marketing which has resulted in an increase in prices as shown. The cattle industry yields a revenue to Canada two times that of wheat, and affects a much greater number of people, and is now in greater need.

Having regard to production cost, the national crisis in the cattle industry is now greater than it has ever been in the case of wheat, particularly when it is borne in mind that it takes four years to produce a two-year old steer and one year only to produce a hundredweight of wheat, or six months to produce a hog.

Q. Just let me get that; four years to produce a two-year old steer—what do you mean by that?—A. We breed the cows this year in 1934; that cow will have a calf the following year, in 1935; it will be a yearling in 1936, and a two-year old in 1937; making four years.

Q. From now?—A. From now.

*By Mr. Young:*

Q. Count that again?—A. We breed a cow this year.

Q. In 1934?—A. Yes. That cow next year will have a calf.

Q. That is one year?—A. In the history of the ranching business that is two years.

*By Mr. Sommerville:*

Q. Each stage a year; this is one year, 1934 is one year; and 1935 is one year?—A. It becomes a yearling in three-years' time.

Q. In the 1936 ranching year?—A. Yes.

*By Mr. Young:*

Q. Let us take a date.

The CHAIRMAN: Mr. Young, what he means there is four financial years' operations are involved in the production of a two-year old steer.

The WITNESS: Four years from the time of breeding to produce a two-year old steer.

Mr. KENNEDY (*Peace River*): He is right enough about the time for raising a two-year old.

*By Mr. Sommerville:*

Q. The two-year old has to be put into condition for market, and by the time he is in condition for marketing, that is the fifth year?—A. Yes.

Q. That means then if the farmer is discouraged and driven out of the cattle business, that it takes him three or four years to get back into the cattle business?—A. Yes.

Q. But if he is discouraged in the hog business, he can get back within six months?—A. In one year's time a man can get into the hog industry in just as big shape as he ever did before.

Q. That is a matter of only one year.—A. One year.

Q. But with reference to the cattle industry, it is an operation of several years?—A. Yes.

Q. And if he is discouraged and has gone out of the cattle industry, it takes him quite a time to get back in again producing beef steers?—A. More especially when you take into consideration the breeding of good cattle, the kind of cattle that they require in the old country. If I should sell my herd of cattle to-day, cattle that it has taken me 35 years to breed up to the standard which they are to-day—I have not another lifetime to spend in breeding these cattle up, and to go out on the open market or the stockyard, or any other place—wherever you go to pick up cattle—to start in with a half-bred cow and to breed up to the standard that they require and which we must have to ship to the Old Country if we are to maintain the outlet there for our good cattle—it is a long hard task to grow these cattle.

Q. The point of your evidence being that if the cattle industry is not assisted, there is danger of persons passing out of the industry, and of it being a long time before it gets back on its feet?—A. The standard of our cattle would be lowered, because it takes a long time to breed good cattle.

Q. Thank you, Mr. MacLeay; will you continue?—A. It is imperative that the government undertake a national cattle marketing policy immediately. Recommendations are outlined in the attached memorandum.

There are, therefore, two ways only of ensuring a healthy home market: curtail our production to within what we consume; develop an export outlet which will effectively lift the surplus off our home market at a reasonable cost, and at an adequate price.

*By Mr. Ilsley:*

Q. Is that the memorandum? There is a memorandum in addition to what you have read, is that the memorandum?—A. I will give you that in just a minute.

The United States is deliberately working out a plan of curtailed production. If the government so decides, Canada can follow the same course. On the other hand, given the proper kind of export outlet and reasonable marketing costs, cattle production will expand; cattle revenues will increase, and the balance of trade will improve. The growing of fodder and coarse grains will be encouraged on millions of acres, both of marginal land and land now devoted to the growing of wheat. Wheat acreage will thus be reduced on a thoroughly practical and logical basis, and the government's problem in this regard can thus largely be solved. Any obstacle, however, now or later, to this free export outlet will utterly destroy the advantages of the plan that we now propose. The main thing for us is to maintain an outlet for our surplus cattle, which are not a very considerable number.

Proposed British quota against Canadian cattle. Make representations in the strongest possible terms against the imposition of any quota. It is understood that this matter will again come up for discussion in June. If the quota is inevitable, argue Canada's case for an increasing supply from this country as against foreign competition. Consider the following:

Britain imports annually from S. America (chilled or frozen) .	1,305,658
“ “ “ “ Australia (chilled or frozen) . .	207,142
“ “ “ “ N. Zealand (chilled or frozen) .	92,937
“ “ “ “ Irish Free State (alive) . . . . .	582,174
“ “ “ “ Canada . . . . .	51,433

Total (alive and dead) . . . . .	2,239,344
----------------------------------	-----------

Q. What was the amount you gave for Canada?—A. The amount for Canada was 51,433 head.

Q. That was our export last year?—A. That was our export.

Q. As against the Irish Free State “alive” 582,174?—A. 582,174.

*By Mr. Factor:*

Q. Have you the figures for 1932?—A. 1932—no.

The CHAIRMAN: Our exports were about 16,000.

The WITNESS: We exported 17,000? That was in 1927. In the year 1931 we exported 27,000 head; in 1932, 17,000 head; in 1933, 53,000—if I am not mistaken, I have it here—51,000 head are the actual figures that entered Great Britain, 51,433; although we did export some in December that had not been received for that year.

The CHAIRMAN: 53,000 I think is the total.

Mr. SOMMERVILLE: That is right too.

The WITNESS: Present imports from Canada amount to only 2·3 per cent of the total British importations. If necessary to obtain favourable consideration, increase the preference on British goods.

*By Mr. Sommerville:*

Q. That is, you would urge that if it is necessary to maintain a quota, you would increase the preference on British goods if you could get an outlet for Canadian cattle?—A. Yes. I think that this industry is of such a magnitude and of such importance to the Dominion of Canada that there is nothing that we could afford not to do.

*By Mr. Kennedy (Winnipeg):*

Q. Would it be fair to state that if such an outlet is assured it would make all the difference between a good price and a bad one?—A. If we had not had an outlet for cattle this past year our cattle would have been unsold in Western Canada.

Q. Have you been able to compute what it has meant to Canada?—A. In dollars? I have never tried to do that.

Q. Would it be very substantial?—A. I would not like to hazard a guess on a thing like that, but it would have demoralized our market if we had not had this export outlet for 53,000 head of cattle. We would simply have had no market at all; the cattle would have been all on our hands and we would not have been able to sell them.

Q. But from your experience you would say that it was of very great importance to Canada?—A. The export situation saved the cattle situation last year. If it had not been for that—we went broke anyway—it saved us from holding cattle over and feeding them through last year. The ranch's overhead is heavy where they have to feed so many cattle and with a feed shortage on the range and a shortage of grass, if we had not been able to dispose of these cattle, it would have been a very very serious situation.

Q. But you consider the provisions that provide for a quota for the export of Canadian cattle under the Ottawa agreement of great importance to Canada?—A. Not a quota, an unrestricted outlet.

*By Mr. Hsley:*

Q. With reference to a quota, you would consider that of importance?—A. I would not think we should have a quota at all.

*By Mr. Sommerville:*

Q. There is a quota at the present time, nevertheless, and a request has been made at the present time for us not to ship more for the first six months of this year than we shipped during the first six months of last year; that is what you are referring to, the necessity of maintaining an open market?—A. An unrestricted outlet for our cattle.

*By Mr. Factor:*

Q. What about other countries in the world, outside of Britain?—A. Outside of Britain—I am not worrying about South America; it is up to South America to fight their own cause—we are looking after Canada.

Q. No, no; I mean exploring the market, say in Russia?—A. That would be—anything to help take the cattle from our market here and relieve the congestion that is here at the present time.

*By Mr. Senn:*

Q. Have you ever studied the possibility of taking the poorer classes of cattle that are selling to-day at a cent or a cent and a quarter a pound—the canners and cutters—disposing of them in some other way than as for food?—A. No, sir, other than food I have never thought of anything.

Q. It is quite freely suggested in live stock in Eastern Canada, at least, that a number of such cattle can be disposed of in a fertilizer?—A. There was a considerable number of the cheaper classes of cattle last year used by the fox farmers out there.

Q. Well, that is another outlet?—A. How many I could not say, but they were buying cattle in the Calgary stockyards for their foxes.

Q. You have never seriously considered that proposition?—A. I have no cattle of that quality.

Q. You will admit that they are marketed on the stockyards in Eastern Canada at least?—A. Well, during last fall they bought a certain number—how many I could not say.

*By Mr. Factor:*

Q. The problem then is to get markets for our cattle?—A. Yes.

*By Mr. Sommerville:*

Q. Yes, Mr. MacLeay, will you proceed?—A. To help off-set any antagonism on the part of British feeders or breeders, let the Dominion Government take immediate steps to purchase, say, 150 high class, pure bred bulls in Britain. Our government actually purchased a total of 348 bulls in Canada in 1933, at a total cost of \$42,108. A part of this money spent this year in Britain would do more than any other kind of argument to influence the British people in our favour against placing any quota upon Canadian cattle imports.

Q. You would make an exchange with the British farmer to buy pure bred bulls from him and then to supply feeders and cattle to the British market?—A. If they are taking our cattle it would seem to me only fair and just. These bulls are restricted. The outlet for British bulls is to the Argentine where they usually sell most of their bulls. If we could go and buy a certain percentage of bulls it would certainly be appreciated in that country.

*By Mr. Senn:*

Q. Are you a pure bred cattle breeder?—A. No sir.

Q. You were talking very much as if you were. I am afraid the live stock breeders in Canada would not agree with you in that?—A. We get a few of these good bulls, possibly donated by the Department of Agriculture at the present time. They give these bulls away.

Q. Are you suggesting that we do not get good bulls as it is in Canada?—A. You breed a lot of good bulls in Canada, especially in western Canada. I do not know so much about eastern Canada, because I am not familiar with it; but I do know that in western Canada we do get wonderful herds of pure bred cattle.

Q. Does it not seem hard to pass over these people who breed good bulls in our own country?—A. Why should our Dominion government. If they are bonusing pure bred breeders it would almost seem to me they would be justified in bonusing—

Q. I do not think it is fair to say they are bonusing pure bred breeders; they are buying these bulls for distribution and improving the quality of the farmer's stock?—A. To this extent that the government with unlimited means at their disposal go onto the market in direct competition with myself and other ranchers in regard to bulls. If we want to buy we are forced to step

up to a certain price because we have not unlimited means to buy these bulls, and the government buys bulls and takes them away from the ranchers who have those good cattle where those good bulls ought to go. They take those out into dairy areas where there are cheap cattle to improve the cheap cattle. A cross from a good bull and a poor cow is nothing but a poor animal at best.

Q. I think the average price you quoted a moment ago for the animals that were bought in this way by the Department of Agriculture only amounted to a little over \$100 each, didn't it? Is that an exorbitant price to pay?—A. 348 bulls for \$42,108.

Q. That might be about \$125. It does not look to me that that is an unreasonable price to ask anybody to compete with?—A. Irrespective of whether they buy 348 or not, I would certainly ask the government as long as the people in Britain are taking our cattle to go over there and buy more bulls—whether they cut this quota down or buy additional bulls.

*By Mr. Sommerville:*

Q. This is a further argument you are using with the British market for maintaining the open market in Great Britain?—A. Yes. I did not advise the government to stop buying bulls in the country or assisting the pure bred breeders. I didn't make that statement.

Q. No. You suggested that when they were buying from Canada it would be desirable also to buy in England?—A. A certain percentage of bulls in Great Britain.

Q. And that was to help the rancher and the cattle industry in Canada?—A. Yes, create a better feeling among the breeders in the old country towards Canadian cattle. I am now comparing some freight rates, and I am taking as a basis wheat against cattle:—

Take immediate steps to decrease transportation costs. This is imperative for the following reasons: Railway freight rates are too high. An export rate must be granted as in the case of wheat and processed meats.

Note the following:—

Wheat—

Domestic Rate:	Calgary to Vancouver.. . . .	41 $\frac{1}{4}$ cents per cwt.
Feed Rate:	Calgary to Vancouver.. . . .	30 cents per cwt.
Export Rate:	Calgary to Vancouver.. . . .	20 cents per cwt.

Just half of the domestic rate on wheat. This is the domestic rate on wheat from Calgary to Montreal, 60 $\frac{1}{2}$  cents per hundred-weight; export rate Calgary to Montreal 51 cents; ocean rate, Montreal to British port 15 cents per hundred-weight.

Mr. YOUNG: Is that the present rate?

The WITNESS: That was last summer. That is what was paid on the boat that took over a load of cattle of mine. That is what they have been getting. I am only basing the quotation on this one boat. What the average cost was, I could not say.

*By Mr. Sommerville:*

Q. You are comparing it with your freight costs and your ocean costs on your own cattle?—A. On my cattle.

Q. That is the present argument?—A. Yes. One hundredweight of wheat from Calgary to British port, we will say Liverpool, last year, cost 66 cents per hundredweight.

Q. The CHAIRMAN: All rail.

The WITNESS: All rail from Calgary to Fort William, rail from Fort William to Montreal, and ocean rate from Montreal to a British port.

*By Mr. Sommerville:*

Q. Two-thirds of a cent a pound?—A. Sixty-six cents a hundred.

Processed meats—domestic rate Calgary to Montreal \$1.60 per hundredweight; export rate, Calgary to Montreal, \$1.23 per hundredweight.

Q. That means that the processed meats are going through for export and get a rate of \$1.23 as against \$1.60?—A. \$1.60.

Fresh meats: domestic rate, Calgary to Montreal, \$1.88; export rate, Calgary to Montreal, \$1.64 per hundredweight.

Q. Twenty-four cents a hundred less for export than domestic rate?—A. Yes.

Live cattle: domestic rate, Calgary to Montreal, \$1.14½ per hundredweight.

Q. For live cattle?—A. Live cattle. Export rate none.

Q. There is no export rate?—A. No, sir.

Q. You mean it is the same rate?—A. Yes.

Q. That is to say that wheat gets an advantage of an export trade, processed meat gets the advantage of an export rate?—A. Yes.

Q. Fresh meat gets the advantage of an export rate?—A. Yes.

Q. But live cattle do not get the benefit of an export rate?—A. No, sir.

Q. And your argument is that there should be immediate steps taken to provide for an export rate on live cattle?—A. Yes.

Q. And that that would assist in the marketing of your livestock?—A. It would mean a net return back home to the producer, just the differential in the export rate and the present domestic rate.

*By Mr. Factor:*

Q. Has that been the case all the time?—A. It has been for a good many years. We used to have an old export rate on cattle of 90 cents a hundred but it was taken off a good many years ago. I do not know what year it was.

*By Mr. Young:*

Q. That is Calgary to Montreal?—A. Calgary to Montreal, 90 cents.

We have demonstrated on a revenue basis the value of the cattle industry compared to the wheat industry. Wheat, processed and fresh meat, all enjoy a decided advantage in an export railway freight rate over their domestic rail rate. Export rates quoted above were not granted to the wheat and packing industries without sufficient proof being advanced to substantiate their claims.

Cattle exports have now reached such volume that in 1931 we exported 27,000 cattle; in 1932 we exported 17,000 cattle; in 1933 we exported 53,000 cattle when we had additional assistance given to us in fitting up the boats by the Honourable Mr. Stevens.

Cattle prices have steadily declined in the same period. In 1931 the average price received was \$40 per head; in 1932 the average price received was \$34.30 per head; in 1933 the average price received was \$28.85 per head.

*By Mr. Factor:*

Q. The more business you have done the less you seem to have been able to get?—A. I think in 1931 our volume of business was greater than in 1932 or 1933. More cattle were handled through the stockyards and local country kill than was handled either in 1932 or 1933.

Increase in cattle population: November 1, 1932, total 8,511,000; November 1, 1933, total 8,876,000, an increase of 365,000 head of cattle or 4½ per cent. That is an increase in one year one thousand head per day.

*By Mr. Young:*

Q. Was that increase due to the fact that the cattle were not saleable?—A. That had a lot to do with it. People were holding back with expectations.

Q. It is not because they were raising any more?—A. Yes, they had been, I expect. Quite a percentage of this is due to the increase in dairy cattle. I have no means of differentiating between beef and dairy cattle. All I can get from the Department of Agriculture is the total number of cattle. I think a lot of this—quite a percentage would be dairy cattle increase.

*By Mr. Sommerville:*

Q. And instead of there being a normal decrease of shipments or selling, the people held them over because of low prices?—A. Yes.

From the above statements it is manifestly evident that at no time in the history of either the wheat or packing industries have either had such a just claim for an export railway freight rate as has the cattle industry to-day. Same rate to apply on all cattle billed for export to any port outside of Canada, the United States not including. The rate to be based on differential between export and domestic rate given on fresh beef, which is 24 cents per hundred-weight. As dressed beef is approximately 50 per cent of live weight, the differential granted to cattle should proportionately be twice that granted on dressed beef or 48 cents per hundredweight reduction on the domestic rate of \$1.14½. The proposed export rate, Calgary to Montreal, 66½ cents per hundred-weight.

Q. That is your suggestion?—A. Yes, that is our suggestion.

Q. Based upon this argument that your dressed beef gets 24 cents?—A. Yes.

Q. And your dressed beef constitutes 50 per cent of the live weight?—A. Yes.

Q. And to put it in the same class on the matter of weight you should get a 66½ cent rate?—A. A 48 cent reduction.

*By Mr. Ilsley:*

Q. That would be a higher proportionate reduction?—A. That would be allowing a percentage of 50 per cent for killing. It would be the same rate as is given on fresh meat.

Reduction in ocean rates. These rates have been based upon demand for space which is greater than available supply. Lack of space and high rail and ocean rates have been the main factors in holding prices down to present levels.

*By Mr. Young:*

Q. When you speak of lack of space, you mean lack of space that is fitted up for cattle, not ocean space generally?—A. Lack of space for cattle. I am just referring to cattle alone.

Q. What I am trying to get at is the fact that because there is a boat it does not necessarily mean that she can take cattle?—A. Boats have to come up to certain specifications.

The CHAIRMAN: The Board of Trade in England is the controlling body.

The WITNESS: They have to live up to certain regulations.

The following rates are paid for space for representative years and average price per pound for cattle. In the year 1905 the rate was from 25 to 30 shillings. That is for space from Montreal to a British port. That would be from 6½ to 7½ dollars a head.

*By Mr. Senn:*

Q. What year was that?—A. 1905. Export cattle selling on the Toronto markets at that time sold for \$4.60, and the average weight of these cattle that were exported at that time would be 1,400 pounds or better. Now, the demand was for heavy cattle; no light cattle at all were exported.

In 1906 the price in Toronto was \$4.50. The cattle were all the same weight. In 1907—from 1905 to 1913 the rate was the same. The price varied in Toronto. Up to 1913 in Toronto export cattle sold at \$7.10. That is what cattle were worth in 1913 in Toronto, all weighing around the same weight.

In 1932 they charged us \$12 a head. Cattle were worth 5 cents in Toronto and the steers were weighing a thousand pounds against 1,400 pounds formerly. In 1933 they charged us from \$12 to \$15 per head—raised the rate. Cattle were worth in Toronto \$3.50, and the cattle being exported would average approximately 1,000 pounds per head.

*By Mr. Factor:*

Q. It has more than doubled since 1913?—A. Since 1913 it has just doubled—from \$6.50 to \$7.50 from the year 1905 to 1913.

*By Mr. Sommerville:*

Q. And the price of your cattle is about half?—A. Just half what they were in 1913.

*By Mr. Young:*

Q. Do you know what has happened in ocean rates in other commodities at the same time? Have they gone up or not?—A. I do not know. I understand that lots of steamers are tied up for want of business.

*By Mr. Sommerville:*

Q. You are just speaking about ranching?—A. Yes.

*By Mr. Senn:*

Q. You say that there is a shortage of space at the present time. Do you think that the price is exorbitant, \$12 to \$15?—A. Yes, I most assuredly do.

Q. If the trade was there, don't you think there would be sufficient space on hand to accommodate the trade?—A. Well, I could not answer that question. I am not a steamship man. I do not know for what reason they do not ship it. I know that the Dominion government have had to give assistance to those steamship companies to induce them to go into the business of carrying cattle.

Q. It looks to me if it were a profitable trade there would be no shortage?—A. I could not say. They used to carry cattle for \$7.50. If it were profitable in those days it must be doubly profitable to-day, and the expense of running ships no greater than it was.

*By Mr. Young:*

Q. Who paid the cost of fitting up the ships in those days?—A. The steamship companies.

Q. The government did not have to help?—A. No, sir.

Q. What is the extent of the help?—A. Last year, I understand nine boats were fitted through Mr. Stevens.

Q. At government expense?—A. Yes. They were assisted by the government, partially or totally. I am not in a position to say.

*By Mr. Ilsley:*

Q. Do you know the total expenditure?—A. No, sir; I do not.

The CHAIRMAN: We can get all that. I cannot give it to you now as I am not a witness.

Mr. ILSLEY: \$25,000.

The CHAIRMAN: Roughly; but I can put one of my officials on the stand any time and give you the details in regard to that, and the reasons for it, or the alleged reasons.

Mr. ILSLEY: Relief expenditure, was it not?

The CHAIRMAN: No. It was a vote in parliament.

The WITNESS: It cost \$3 per hundredweight to deliver cattle from Calgary to Liverpool as against 66 cents per hundredweight, and that rate if it were going by water from Fort William would be high to deliver wheat at a British port.

*By Mr. Sommerville:*

Q. Sixty-six cents from Calgary to Liverpool on wheat as against \$3?—A. As against better than \$3. It varies from \$3 to \$3.50.

Q. Per hundredweight to deliver cattle?—A. From Calgary to Liverpool.

Further it costs more to deliver cattle from Calgary to Liverpool than the cattle are worth in Alberta, the ratio being 3 as to 2½.

Q. That is a rather significant thing. The cost of carrying your cattle from Calgary to Liverpool is greater than the value of the cattle itself?—A. Yes, sir.

Q. That applies to your good heavy cattle?—A. That applies only to cattle. You might say that 100 per cent of the cattle exported are the better class of cattle. That does not refer to any of the poorer grades of cattle.

*By Mr. Factor:*

Q. Does that rate include the feeding of the cattle too?—A. \$3 to \$3.50 would include the feed.

*By Mr. Boulanger:*

Q. And the care of the animals?—A. Yes, the care of the animals. Rail and ocean rate. The rail rate is \$1.14 and the ocean rate \$15 a thousand, 1½, that would make \$2.64½ rail and ocean rate to say nothing about feeding and expenses in transit.

Transportation costs and net returns to shippers are shown on export sales sheet attached. I had some export sales sheets which I left here with Mr. Stevens.

Shipping costs for the year 1905 per pound compared to the cost for the year 1933. In 1905 the weight of a steer was 1,400 pounds and the rate was \$7.50 which gives .53½ per hundredweight to land the cattle.

The CHAIRMAN: Is that the ocean rate?

The WITNESS: That is the ocean rate alone.

*By Mr. Sommerville:*

Q. A little better than half a cent a pound?—A. Yes, about half a cent a pound. In 1933 our steers averaged 1,000 pounds and the rate was \$15 and it cost 1½ cents for the ocean rate alone against .53 cents in 1905.

Labour, plus shipping costs, for 1933 are no higher if as high in 1905. I have no proof. I could not verify that. That is a statement I am making. I have no proof for it.

*By Mr. Kennedy (Peace River):*

Q. Is that labour for running the ships and so on?—A. Yes, the labour for running ships and fuel—whatever it takes to run a ship.

In 1933 our Federal government paid for the fittings on six boats which formerly was paid by shipping companies. That is to the advantage of shipping companies over those of the days when they were granting us a .53 cent rate. To-day our government is assisting them in fitting up.

*By Mr. Ilsley:*

Q. I thought you said there were nine boats?—A. Yes, nine boats last year. Steamship companies are not justified in charging over what they charged during the 1905-1913 period.

The savings to live stock producers on rail and ocean transportation costs will be immediately reflected back in larger net returns on cattle exported.

Cattle export prices govern the general price structure in Canada. It is increasingly evident that transportation costs must be reduced.

In 1933 Canada marketed and sold 1,464,540 head of cattle. Included in the above number were the 53,000 cattle exported or about  $3\frac{1}{2}$  per cent of the total marketings. Our government are justified in taking any steps necessary to increase returns on the  $3\frac{1}{2}$  per cent cattle exported which reduces our surplus and thus assists the whole market.

To assist the people of Ontario in buying our feeder cattle and bringing them down here to finish them in Ontario or Quebec, or wherever they may be finished, feeding in transit rate should be provided with a nine months stop-over privilege. Shippers are now required to pay two local rates. One, from ranch to feed-lot; two, from feed-lot to market.

Further, the shipper should have the right to divert his finished cattle to any of the main markets in lieu of export. This privilege is granted on the U.S. railways.

Here is a copy of a letter from the assistant general freight and passenger agent of the Great Northern railway in connection with this feeder rate. It is addressed to the Western Stock Growers' Association, Calgary, Alberta:

Dear Sir:

Your letter of January 30th addressed to us at Havre, Montana, has been referred to us for reply.

The through rate on cattle, ordinary value, carload from Havre, Montana, to Chicago, Illinois, is 75 cents per cwt.

In connection with feeding in transit, the through rate applies from Havre to Chicago.

If the cattle are to feed in transit at some directly intermediate point an additional charge for the transit privilege of  $8\frac{1}{2}$  cents per cwt.

That letter is addressed from Helena, Montana, February 9, 1934.

*By Mr. Ilsley:*

Q. How do the American rates compare with the Canadian rates for the transfer of cattle?—A. I did not compare them.

*By Mr. Sommerville:*

Q. Your argument now is that there should be feeding in transit rates so that the shipper may have the right to divert his finished cattle to any of the main markets in lieu of export?—A. If we have the privilege of a through rate from Calgary to Montreal if these cattle are for export, why we should have a through rate on these cattle from Calgary to Toronto, say, if they want to hold them somewhere in Ontario to feed and then ship them to the Toronto yards.

*By Mr. Senn:*

Q. There is no difference in the freight on the different qualities of cattle coming east, is there?—A. No, sir; there is only the one rate, \$1.14½.

Packers grain-feeding live stock—Restraint of Trade.

*By Mr. Sommerville:*

Q. What do you mean by that?—A. To prevent unfair manipulation of prices by packers, the feeding of cattle by packers should be prohibited. With supplies of finished cattle in their own feed-lots, the packers are thus enabled to draw upon these fed cattle held in reserve, and stay away from the stockyards on a rising market, and are thus able to prevent a legitimate advance and force sales on their own terms.

Q. What do you mean by that?—A. I mean that in our country it is a usual procedure for packers to buy up cattle and lambs especially—I do not think they do it with hogs—but they buy thousands of cattle and lambs and put them into their own feed yards and feed these cattle for their own use. It means when I go to market with some cattle if the run should happen to be short and the tendency of prices is to strengthen it is not necessary for the packers to go on the yards to buy cattle; they can go down into their own feed yards where they have thousands of cattle on feed and select cattle for their own need that day and stay off the market.

*By Mr. Ilsley:*

Q. You think that should be prohibited?—A. Yes. I think that is in restraint of trade.

*By Mr. Senn:*

Q. And you say that that practice is followed?—A. Yes, extensively.

*By Mr. Sommerville:*

Q. You say there are thousands on feed in the packer's yards to-day?—A. Yes, last week. I do not know to what extent there are to-day, but they have been drawing on them. They put in a lot of cattle last fall and lambs. They put in more lambs than anything else.

Q. And that is to say that when there is a weak market with a great many cattle coming through they buy them at the low figures and put them into the feed lots, and then when the market improves and you send your cattle onto that improved market you have to meet the competition of the packer who goes down into his feed-lots and brings out his cattle?—A. Yes.

Q. And he does not go onto the market to buy?—A. Yes, sir.

Q. You think that with his facilities for packing he should not be given that advantage of competing with the ordinary rancher or cattle producer?—A. He has a distinct advantage in holding up prices because he is not forced to go into the market and buy cattle on that market; he can go to his own feed-lots and take the cattle out of his own feed-lots and ship them to different points where he may wish to ship.

Q. But you are entirely dependent upon the public market for the prices you get for your cattle?—A. Yes.

*By Mr. Young:*

Q. When the packer bought those cattle, did he not take that many off the market?—A. Yes.

Q. Did not that help some?—A. At the time it did help.

*By Mr. Kennedy (Peace River):*

Q. What should be done with those cattle when the packer buys them? They must either be left on the market or taken off by someone. What should the packer do with them?—A. After they are finished?

Mr. SOMMERVILLE: When they go on the market.

*By Mr. Kennedy (Peace River):*

Q. You say they should not be allowed to feed them, don't you?—A. Those cattle are feeder cattle that should go out in the farming districts.

The CHAIRMAN: You think that the farmer or rancher should do the producing of the cattle and the packer should stick to his job of processing.

The WITNESS: Yes.

*By Mr. Young:*

Q. Would you forbid the packer owning a ranch of his own?—A. No, sir.

Q. You would let him own a ranch but not a feed-lot?—A. Yes.

*By Mr. Sommerville:*

Q. You would let him learn how to lose money?—A. I surely would. I would like to have the packers own extensively cattle ranches in western Canada.

Q. There might be more sympathy then.

*By Mr. Senn:*

Q. Are there any cases of that kind?—A. Yes, sir, there are.

Q. Do some of the packers own ranches?—A. Yes, sir.

*By Mr. Factor:*

Q. Does that practice prevail in the east?—A. I do not know.

*By Mr. Sommerville:*

Q. You say they buy large quantities of lambs?—A. Yes.

Q. Is that the same situation that develops when large quantities of lambs are bought in the west for very low prices and brought east and kept in the coolers until the spring lambs come on and these are brought out in competition with the farmer's spring lambs?—A. Yes. That applies to Toronto, I think. It could happen quite easily in Toronto. They could ship two or three thousand lambs from their feed-lots in Calgary onto the Toronto market and might easily break the market here. I do not know how many lambs it would take to break the market, but I think that they could if they wished lower the price on any of these eastern markets by shipping large numbers from their feed-lots.

Q. That is another question of reserve supply?—A. Yes.

Q. No, Mr. MacLeay, have you something further; you have given us something that is quite new?—A. I just made one or two notes here—sweatshop labour, I think it is worrying our government quite a lot about the price of labour that is being paid in factories in eastern Canada here, which undoubtedly no one wants to see. The case with the rancher out in western Canada is that there are no fixed hours. The ranchers do not go to work at eight o'clock in the morning and quit at five. They usually go to work when the sun comes up, and they are fortunate if they get in when the sun is down; and very often you do not get very much dinner. The average rancher, if he has a ranch on any kind of scale at all, his holdings are large, and you can see you have no chance of doing your work and getting back to have anything to eat at dinnertime.

*By the Chairman:*

Q. Lunch time?—A. At lunch time. We call it dinner.

Q. I wanted these gentlemen down here from Toronto to understand?—A. Well, what has happened about the rancher out in that country, he has been working fairly long hours, without getting anything for it; not only getting nothing for his labour, but if through good management in the past he had amassed any considerable amount of capital, that to-day has been taken away from him, and he is not getting any pay for his labour. He has to pay dearly for the privilege of working.

*By Mr. Young:*

Q. He is getting no wage at all, then?—A. No, he has not for several years.

*By Mr. Factor:*

Q. He has a roof over his head and enough to eat?—A. Yes, he has that.

Q. Some of the labour men have not even got that?—A. Well, possibly they have not.

*By Mr. Boulanger:*

Q. What are the wages paid by the ranchers to their help?—A. By the ranchers? Ranch-hands are skilled help. You can't go out and pick up anybody and everybody as a rancher. It takes years to make a ranch-hand. He is a high-priced labourer. Good ranch-hands get around from \$40 to \$75 a month.

*By Mr. Sommerville:*

Q. And their food?—A. Yes.

*By Mr. Young:*

Q. They are still getting that, are they?—A. Yes. That is not general, but I am paying that.

*By Mr. Factor:*

Q. That is better than getting \$5 and \$6 a week, like some of the labour men in the east?—A. This kind of work is a different kind of work from any kind of work you might have down east. It takes years to learn this kind of work. It is not everybody that can make a good cow-hand.

*By Mr. Young:*

Q. How long will a man last at it?—A. Well, providing he doesn't get killed, he may live to a fair old age.

*By Mr. Kennedy (Winnipeg):*

Q. Mr. MacLeay, would you care to express any view as to the areas of land in the west that have been taken out of ranching and taken over to wheat; that is as to return to the rancher?—A. The percentage of land that should go back to the rancher?

Q. Yes?—A. Well, as far as telling you the number of acres or anything like that, I cannot do that; but it is a tremendous area. Tremendous areas out there were taken out of the ranching industry which never should have been taken out.

Q. Those areas out there which are now what you call dried out areas having to be taken care of, would those in the main prove good ranch lands?—A. They will be in time. It takes a long time for this land to go back to grass, native grass, and grasses that are what we call good grasses for cattle.

Q. About how long would it take to return them to that condition, for instance?—A. Possibly fifteen or twenty years.

*By Mr. Boulanger:*

Q. Would that be southern Alberta?—A. Central and southern Alberta.

Q. And Saskatchewan, southern Saskatchewan?—A. And Saskatchewan.

*By Mr. Young:*

Q. Will native grass come back to the land in time?—A. It will, in time, come back. I say fifteen or twenty years. It will never be the same as it was before it was taken, but it will come back and be fair, good grass land again, I think, in about twenty years; from that time on.

*By Mr. Kennedy (Winnipeg):*

Q. Is that your considered view, that large areas that are now in wheat will never prove profitable wheat-growing lands?—A. Yes; we have great areas there that were settled where our provincial government have for years been trying to get the people out during the winter time, and to induce the people to go out of there. They are giving free land, offering free land in other parts of Alberta where they could make a living, trying to get these lands back, consolidated into areas where they could produce, put them back into ranches, back to the ranching industry again.

Q. There is a great disinclination on the part of people who have once homesteaded, to move away?—A. Some of them. A man that goes in with a lot of money and spends fifteen or twenty years of his life there, hates to get up and pull out.

*By Mr. Kennedy (Peace River):*

Q. How much do you think you should get for a two-year old steer in order to make a ranch pay a man's expenses and keep from going behind?—A. I think after the very careful figures that have been compiled in years past, when the United States government were up there in connection with the Smoot-Hawley bill, comparing the cost of production in Canada, in western Canada, with that in United States, it was estimated that it took from 5 to 6 cents a pound to raise those steers.

Q. Do you think, from your own experience, that you could make it go at that?—A. Well, sir, it would seem like heaven to me, compared with what I have been getting in the past two or three years. I would try awful hard.

Q. You have been going behind in the last two or three years?—A. Yes.

Q. What do you think you would have to get to keep from going behind?—A. I think the average man—we would be fairly satisfied to see such prices as that, 5 and 6 cents for those good steers.

*By the Chairman:*

Q. On the ranch?—A. Yes, on the ranch.

*By Mr. Young:*

Q. Do you have local taxes to pay out there on your ranch?—A. Yes.

Q. How do they compare with what they were twenty years ago?—A. Twenty years ago our taxes were practically nothing. Twenty or thirty years ago when I went to that country first, I owned Alberta. I had no taxes to pay. My cattle ran in Alberta, no fences, no taxes, turn our cattle loose and we gathered them with the round-up in the spring or summer when we needed them.

Q. Now what do your taxes amount to?—A. That varies according to the areas that you are in. They will force you into municipalities in places,

and build schools; parts of those ranch lands have been homesteaded, and their taxes are high. Well, the industry cannot support it at the present time.

Q. You are also forced to fence, are you?—A. Yes. In that country to-day there is no open range country any more. The country is all taken and leased and fenced.

*By Mr. Sommerville:*

Q. You were dealing with Mr. McLean's statement?—A. Yes, he made the statement, I think, in front of this commission, that Canada consumed 99 per cent of the cattle that are produced.

Q. Yes?—A. That is my memory.

Q. That was his statement?—A. Well, I would say that to-day in summing the situation up, that that places Canada in a very enviable position as far as our cattle industry is concerned, if we only have one per cent of our cattle to take care of. It means that this industry is supported at home, and it would be very easy to ascertain a certain cost and to fix a price on those cattle.

Q. That is, it is an almost entirely home consumption market?—A. Yes.

Q. And because of that you would favour fixing a minimum price?—A. I would, yes.

Q. On a certain grade of cattle?—A. Yes.

Q. If you fixed it on one grade of cattle, would that raise the standard of the whole market?—A. Yes, I think it would.

Q. That is like giving a minimum wage to the live stock producer?—A. Yes.

*By Mr. Factor:*

Q. It is not quite as easy as that; how would you fix the price, by legislation or what?—A. Yes, I would. If we only have one per cent of our cattle to take care of then the situation is—if wheat is easier understood amongst you people than cattle, if we only had one per cent of our wheat to take care of, we could do anything, would do anything with it to get rid of it so as to raise the level for the balance that we still had; and we could easily determine the price that could be charged in Canada for profit.

*By Mr. Young:*

Q. Suppose you fix the domestic price for cattle, and it is fairly high, and the people turn around— —A. No, I don't say fairly high; I just say a fair, just price.

Q. Suppose the high obtained on mutton or pork, and people turned to this other kind of meat, what would happen then?—A. As far as mutton and pork are concerned to-day, I think as far as the hog producer is concerned, he is not worrying very much about it. With these prices that are maintained to-day, he is fairly well looked after.

Q. What I am trying to get at is this, can you fix beef cattle on the domestic market without fixing it also on other kinds of meat?—A. It might not be possible. It might be that at the same time you are fixing the price of beef, a minimum price could also be put on pork.

Q. You would have to take in fish, then?—A. Well, you might have to take in wheat, if you want to go that far; take in everything. I am not anticipating a situation like that at all.

*By Mr. Kennedy (Peace River):*

Q. Is it true that cattle prices right now are away out of line?—A. They are out of line with wheat, mutton, pork, or any other product that is grown on a farm or a ranch.

Q. That is, out of line by being lower?—A. Yes.

*By Mr. Sommerville:*

Q. Your suggestion is that some kind of minimum price be put upon cattle or some grade of cattle?—A. Yes.

Q. And have you a suggestion as to the authority through which that might be done, or the body through which it could be done?—A. No, sir, that would be up to our government to determine.

Q. But you feel it is one of the necessities of maintaining the industry that you have described this afternoon?—A. An industry of the magnitude of the cattle industry in the Dominion of Canada, and of the importance to the people of Canada,—I do not think that our country can afford to allow an industry like this to perish, you might say.

Q. You mentioned a little earlier the grading of meat. You referred to red label and blue label meat?—A. Yes.

Q. Would you just give us the benefit of your experience with respect to that?—A. Red and blue label meat are the best grades of meat.

*By Mr. Senn:*

Q. You mean of beef?—A. Beef yes. Our government several years ago established the grading of meat. The grading of meat is done by the packers themselves, inspected by federal inspectors who inspect this meat to see that the packers keep this meat up to a certain standard.

*By Mr. Sommerville:*

Q. That is, red and blue labels are attached to the meat by the packers themselves?—A. Yes.

Q. And certain regulations have been set as to what shall constitute red label beef and what shall constitute blue label beef?—A. Yes.

Q. And the packers attach these labels to the quality that they believe complies with those regulations?—A. Yes.

Q. And then the inspectors from the department go around to the packing establishments from time to time and check up on the beef that is there, to ascertain whether they have complied with the regulations?—A. Yes.

Q. That is the system, as I understand it?—A. That is the practice.

Q. Is that universally done in Canada, or is that only at the larger packing plants?—A. No, I think only at the larger packing plants.

Q. And that would be in the nature of premium beef?—A. Yes.

Q. Is there any premium paid on that grade of cattle that produces that premium beef?—A. No, sir.

Q. Have you any observations to make to this committee as to your views on that point?—A. Well, it would almost seem to me that grading meat the way they do, when a man is producing that class of cattle that will grade red and blue label meat, if his cattle are all of that quality some differential in price should be paid him over and above the average common run of cattle. But no one is paid anything for producing that in our country at all. I know that. With red and blue label meat there is a universal price set. Last fall the price set for the best steers in our country was two cents a pound.

Q. Who set it?—A. Well, we have no outlet in western Canada; we are not close to outlet market centres like people in eastern Canada where you have Toronto and Montreal markets. We have no market. Calgary is our only market, and it is not a market. Ranchers never ship their cattle to Calgary on the market.

Q. Why?—A. Because there is no market there.

Q. What do you mean by saying that there is no market?—A. Well, there is a market there all right, but if two ranchers should happen to conceive the idea of shipping on the same day, if one rancher shipped in twenty carloads, and

another rancher had twenty carloads, forty carloads of cows, and then we were marketing a certain grade of cattle that day, like beef cows, and they come in there with forty carloads of cows—I am not blaming the packers—it does not always happen that the packers are on the market for forty carloads of cows that day, and the result is the ranchers never go direct to Calgary with their cattle. Cattle are usually sold at home, or they will ship them to Winnipeg or Toronto. Very few cattle go to Montreal.

Q. You say that the best price for the best steers last fall was two cents a pound?—A. Two cents a pound.

Q. Two dollars a hundred?—A. Yes, \$2 a hundred.

Q. And that would mean that a 1,000-pound steer would give you \$20 gross?—A. Yes.

Q. And that, you say, took four years to produce?—A. Four years' effort.

Q. \$5 a year for your effort in producing that 1,000-pound steer, as a gross charge?—A. Yes.

Q. You have sold quantities of your cattle out there on the ranch at prices similar to that, have you? I think you sold some, you told me, last fall?—A. I sold no cattle last fall in Alberta. I exported all the cattle that I had.

Q. What about your cows?—A. Well, the outlet for our cows in Great Britain is not a good outlet. They do not seem to want our cow beef. It is not acceptable on that market. The result is that our cows have to be marketed at home. I could not sell my cows at all last fall, so I put them in the middle of November and started to feed them. I hay fed them. I didn't grain feed them. I fed them on good bunch grass hay. In the olden days the ranchers never fed grain; it was all grass, and we made good beef out of grass alone. I fed those cattle until March 17, when they were marketed—January 17.

Q. Of 1934?—A. 1934.

Q. This year?—A. Yes.

Q. And after growing them, and then feeding them and fattening them in this way, what price did you get for your product?—A. Here is my sales sheet. These were as good a bunch of cows as ever left a ranch in southern Alberta.

Q. How many?—A. I had 174 head that paid two cents, and 47 head that paid  $1\frac{3}{4}$  cents on January 17.

Q. Where?—A. At Cayley, the shipping point.

Q. In Alberta?—A. Yes. Not at a market, at the shipping point.

*By Mr. Factor:*

Q. Who bought them?—A. Burns & Company.

Q. Packers?—A. Yes.

*By Mr. Sommerville:*

Q. What is made of the meat of these cows; where is it sold?—A. These cows are not cheap meat. They are really an excellent quality of meat.

Q. So I believe?—A. These cows are the highest priced meat that is sold for ungraded meat in the city of Calgary or shipped to the coast.

Q. Those cows that you fattened and sold at  $1\frac{3}{4}$  cents and two cents a pound produce the best graded meat that is sold in Calgary?—A. No, not the best graded meat.

Q. Well, the best meat outside of the blue and red label beef?—A. Just as good as any meat.

Q. And you got  $1\frac{3}{4}$  cents and two cents a pound?—A. Yes.

Q. Why the variation from  $1\frac{3}{4}$  cents to two cents?—A. Well, I suppose it would mean a cheaper meat to the packers. I could not see very much difference in the cows myself. They were pretty much all of a class.

*By Mr. Factor:*

Q. What would that meat retail for in the stores of Calgary, can you say?  
—A. In good condition these good cows and heifers—they were not all cows, a percentage of them were heifers, some of those cows had one calf, might have been four or five or six years old; there were some three-year olds—this meat would sell in Calgary for as high a price as any meat sold in the city of Calgary barring government graded red or blue meat.

*By Mr. Kennedy (Peace River):*

Q. What would the hides be worth?—A. Oh, I did have that quotation, but I could not say now.

*By Mr. Kennedy (Winnipeg):*

Q. Would the butchers be able to get any filet mignon out of that?—A. What?

Q. Filet mignon, could the butchers get any filet mignon out of that class of cattle?—A. Yes, certainly; tenderloin, sirloin, filet mignon.

Q. That we pay 75 cents to a dollar for?—A. A dollar and a half.

Mr. FACTOR: A delicacy I have enjoyed little of.

*By the Chairman:*

Q. I suppose if you went in the Palliser there and had some, you would pay \$1.50?—A. Yes.

*By Mr. Sommerville:*

Q. Well, you are not living on a filet mignon diet on two-cent cattle, are you?—A. No, you are not buying filet mignon down in Ottawa.

Q. Not in Ottawa?—A. No. We have it at home on the ranch because it is the cheapest thing we can eat.

Q. Apparently you have grown good beef, Mr. MacLeay. Now, are there any other observations that you would like to make to the committee with respect to the question of live stock marketing or live stock?—A. Well, I think I have covered the ground fairly well.

Q. Well, I am sure we thank you for this very interesting statement of fact, and the very great thought that you have given to the subject, opening up new angles to us that must have been interesting to all?—A. Well, I am sure any cattleman in Canada to-day will do anything to assist in trying to rectify these present prices which are absolutely unjustified.

Q. You came down here of your own accord?—A. Yes.

Q. In the desire to see if something could be done with the authorities here?—A. Yes.

Q. You did not come down here as a witness?—A. No.

Q. To appear before the committee?—A. No, I didn't come down to appear as a witness at all.

Mr. SOMMERVILLE: We thank you very much.

The CHAIRMAN: You make as good a witness as you do a rancher, and I want to thank you.

The WITNESS: Thanks very much, Mr. Stevens.

GEORGE H. BARR, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Barr, you are a barrister and solicitor, practising in Regina?—A. Yes.

Q. And have been for some twenty-five years or more?—A. Yes.

Q. You act for the Saskatchewan Co-operative Live Stock Association Limited?—A. Yes.

Q. And have ever since its organization?—A. Yes.

Q. Perhaps you can tell the committee your association with the co-operative farmers' efforts in the province, in order that I might get the background of your experience and knowledge?—A. Yes. I have been brought into contact with various farmers' organizations in Saskatchewan for the last twenty or twenty-five years, starting with what we look upon as the old Grain Growers' Association which is really the parent farmers' organization of western Canada. I had the honour to be solicitor for that body some twenty years ago, and continued to act in that capacity until it merged with another farmers' organization and lost its identity. Following that, I was asked by the government to act as legal adviser to various groups of farmers who desired to organize themselves into co-operative marketing organizations.

*By Mr. Ilsley:*

Q. In Saskatchewan?—A. Yes.

Q. That is the Saskatchewan government that you meant?—A. Yes, the Saskatchewan government. Under that direction I organized first the Saskatchewan Co-operative Poultry Producers, and later on as that extended I also organized and obtained a Dominion charter for the Canadian Poultry Producers, and I still act as counsel for that body. At the same time or shortly afterwards I organized this body that we are representing here to-day, the Saskatchewan Co-operative Live Stock Producers.

*By the Chairman:*

Q. That experience goes back how many years?—A. About twenty years; that is starting with the old Grain Growers' Association. That is really the parent body. I was going to say just by way of explanation—and I think it would perhaps facilitate the presentation of our case, if I may put it in that way, to explain to the committee at the outset that we are down here, Mr. Roblin as the president of the Saskatchewan Co-operative Live Stock Producers, representing 17,000 farmers, members of that organization, and Mr. Ingleson of Winnipeg, representing the Manitoba Co-operative Live Stock Producers and what we call the C.L.C. Western, that is the Canadian Live Stock Co-operative, Western, which is a co-ordinating body through which we operate the general sales agency at St. Boniface.

*By Mr. Sommerville:*

Q. At the Winnipeg market?—A. Yes. So we are here representing some 25,000 members of these organizations, and our organizations are not exclusive at all. Our facilities are open to any producer, and as a matter of fact we do market stock for practically double that number of farmers, or from time to time they avail themselves of the facilities that we have to offer.

*By the Chairman:*

Q. Something over 40,000?—A. Something over 40,000.

*By Mr. Sommerville:*

Q. Producers of live stock?—A. Yes, producers of live stock. Since the inception of that company some seven years ago, we have handled over \$20,000,000 worth of live stock in the Saskatchewan Co-operative alone; and for the convenience of the committee, I may say—and arising out of a suggestion made by Dr. Coats, I believe, at the preliminary hearing of this committee, that co-operation was one of the matters in which you gentlemen would be interested—I have prepared the various documents or by-laws and so on under which we operate, in the form of a supplementary memorandum which I will file with the committee by way of a supplement to our brief.

I may say, too, that we have two briefs prepared, one dealing with the situation from the aspect of the C.L.C. Western which will be presented by Mr. Ingleson, and one by our own Saskatchewan association which will be presented by Mr. Roblin. Those gentlemen will deal with the marketing from a technical standpoint, giving you the benefit of their personal knowledge and experience in connection with these various problems. In my evidence, if I can be of any assistance to you, I shall endeavour to give you an outline—a brief outline—of the development of what might be called the legal framework of these organizations as a background for the evidence which those gentlemen will give.

Q. Then your organization in Saskatchewan is purely a producers' organization?—A. Yes, it is purely a producers' organization.

Q. And the organization in Manitoba is purely a producers' organization, this co-operative association?—A. I should vary that, Mr. Sommerville, slightly. That anticipates the description of our subsidiary, Saskatchewan Co-operative Abattoirs Limited, which I will deal with later; but with that reservation, your statement is correct.

Q. But yours is a producers' organization?—A. Yes.

Q. In both provinces?—A. Owned, operated and controlled entirely by the producers.

Q. By the producers themselves?—A. Yes.

Q. And then these two producers' organizations use a third co-operative organization for the marketing of their live stock?—A. Yes.

Q. On the live stock exchange at Winnipeg?—A. Yes, and particularly in relation to export.

Q. And particularly in connection with your export business?—A. Yes.

Q. Then perhaps you would just give to the committee an outline of the legal framework that you referred to, and then we might have the benefit of the evidence to which you refer. Will you just proceed, Mr. Barr?—A. I don't want to go too much into detail, but perhaps just an outline of the constitution of this body may be of value, as affording some suggestion to a possible solution to this problem, which I think has been so well presented by the last witness—it certainly appealed very much to me. In order that we may get the national aspect of the situation, and I think perhaps our co-operative effort in western Canada may be, and I hope it will prove to be, of some assistance in working out a plan on a real national basis to put purchasing power in the hands of our farmer people, without which there is no prosperity for any of us. I quite agree with Mr. MacLeay—I am in the midst of it, most of my clients are farmers, his statement is no exaggeration of the situation at all. We are absolutely facing disaster unless this situation is handled in a national way.

Now, I proceed with the organization. The purposes of the organization, as set forth in our constitution and as operated, is to market the product of our members with as little expense as possible, in order that we may return to the producer the actual return for his products. Control of the organization is invested in two directors who are elected from the seven districts into which the province is divided for convenience, and each of these districts is in turn divided into what we call our local shipping associations. I may say that the position at which we have arrived to-day is the result of what you might call the evolution of this effort based upon the experience from year to year; and we have found that the establishment, the development and the encouragement of local shipping associations has been a very important factor in relation to all the things that you were discussing here—quality production, accurate information, volume and so on.

To keep proper relationship between volume and overhead the local associations are autonomous. Under the special act of incorporation which we obtained each of the local associations are autonomous within themselves. They have their own by-laws, their own officers, and they are a members' organization.

*By the Chairman:*

Q. Do they function independently?—A. They function in respect to certain local features independently. They have the right to own and dispose of their own weigh scales, and their own facilities in a local way; and nothing that may happen to the association can imperil their assets, and on the other hand, any difficulty which they may get into cannot imperil the reserves of the parent association. That is a departure that became necessary when this directing policy was introduced, should situations arise by which the whole of the reserves might have been imperilled through indiscretions in a local way, you see. Now, in order that we may ensure volume—and I think perhaps this is important, because I believe there is a little misunderstanding in Eastern Canada in regard to our so-called cooperative associations; some people seem to think there are certain objectionable features on account of certain coercive elements I think. I might tell you that that certainly does not exist. It is true that each member signs a contract to use this association exclusively to market his live stock over a limiting period of time; but in the contract, which is in the binder, you will find that any member has the opinion of withdrawing from the association on a month's notice at the end of any year.

Q. Will you file this?—A. I will file this (filed as exhibit 68). To that extent it is a purely voluntary association, and the fact that we have been able to increase our membership and have now some 17,000 members, each of whom have the privilege of withdrawing, if he so desires, is some indication of the service that has been rendered by this association and the extent to which we have done what we set out to accomplish.

The next departure in the development of this organization was to attempt to do some processing ourselves. The farmers, in order to make themselves as cognizant as it was possible with all features of the marketing of live stock, taxed themselves during the marketing of these products a certain percentage of the proceeds. In this way they have created a fund of some \$170,000, which has now been converted into an abattoir at Saskatoon, a stockyard at Saskatoon, and a stockyard at Regina. So that in order effectively to accomplish what they set out to do the farmers themselves have contributed the sum of \$170,000 over the past seven years in our organization alone, and they established these facilities which are open not only to their members, but to all comers on a fair and reasonable basis.

*By Mr. Factor:*

Q. That is the Saskatchewan Cooperative?—A. That is the Saskatchewan Cooperative Live Stock Producers' Association. We call our subsidiary the Saskatchewan Cooperative Abattoir Limited.

Q. Do you handle or process your own products?—A. We do not do that now. First, may I give you the relationship of these subsidiaries to the parent body. We issue to each member of our association preferred 3 per cent non-cumulative stock in the subsidiary company to the full extent of the contribution of each member by way of deductions under his contract.

*By Mr. Kennedy (Winnipeg):*

Q. Non-cumulative?—A. Non-cumulative 3 per cent stock. This stock is redeemable at par at the will of the association, so that from time to time if reserves were built up, and as farmers who came in contribute to that fund to facilitate the handling work, they have the prospect—at least we hope they

have—of having their money returned to them; but that is not the important factor, it is the creation of facilities to help themselves. Now, after an attempt at processing our co-operative abattoir decided to confine itself entirely to the production, the assembling and the marketing of live stock; and they have made arrangements with the packers now by which the Abattoir Company is used entirely as a killing station on a per head basis—that is, the abattoir operating in Saskatoon. So that it may be said that we are purely now an assembling and marketing organization, and that the abattoir is only used in co-operation with the packers for killing requirements as they may be needed, and on a certain agreed scale of fees.

Now, the next development. Perhaps I had better make this further explanation, that it is recognized that this subsidiary company should always be used as an arm of service of the main body; that is, to accomplish the main purpose; so that the common stock is entirely held by an elected board of directors of the organization itself. One Board of Directors operates both the parent organization and the subsidiary. The next development which I think perhaps will be of interest to you is that at one stage in order to take advantage of the British market we entered into an arrangement with a small organization, another co-operative which secures supplies from various Dominions, and actually started a very successful marketing program in the Old Country for our Canadian organization. I was brought into intimate contact with that by meeting the Board of Directors of the C.W.S., the Cooperative Wholesale Society of England. They have a consuming opportunity represented by 5,000 retail stores, and it seemed to be the logical thing and an opportune time to see if the producer of food on the western prairies and this great distributor organization in England might not go one step further in co-operation, and we dispose of our product to that body. Now, I met these gentlemen in the winter of 1930-31. We made an arrangement. Their meat expert came out, and I have no doubt some of the cattle Mr. MacLeay speaks of went forward as a result of the trip of that gentleman to Canada. I was in England again in 1931, in the summer, and I met the same gentleman. They expressed themselves as highly delighted with the type of cattle they were getting from us; and I met the same meat expert near Manchester, and the word that he sent back with me to my organization was to increase the shipments as much as possible. Our steers were bringing on the British market at that time from 100 to 125 shillings apiece. Our own Mr. W. A. Wilson, the agricultural representative for Canada connected with the Office of High Commissioner in London, told me that he was simply delighted with the type of cattle that were coming forward. At about that time this trade came to a standstill. Now, I emphasize that as indicating that the men interested in this industry, through their own initiative had laid the foundation for a splendid trade with the logical market, and the tragedy of it is that the whole trade—remember, we had the stock here and they wanted them at the stores there—and that whole trade was cut off over night. The big factor was one over which none of the producers in Canada had any control, and that is the fluctuation in exchange when Britain went off the gold standard in September, 1931. That whole trade was cut off, and we lost \$18,000.

I would just like to suggest to the committee that in considering the various elements that enter into the stabilization of this industry, and the assurance to the producers that if they do their part, there will be some kind of a stable and continuous market, that that question of exchange fluctuation be taken into serious consideration; and I know that the 17,000 farmers who are represented here would concur in the suggestion, or the recognition, given by Mr. MacLeay that an effort was made to stabilize exchange to some extent, as the result of which the trade has been to some extent rehabilitated.

*By Mr. Sommerville:*

Q. That is to say, you urge that the stabilization fund of last year be made a permanent feature of any marketing program?—A. Well, I would go a great deal further than that. I may say that as a result of my experience there, and my connection with the farmers of Western Canada, who are simply dazed by the experience into which they were thrust, I was forced to make what study I could of the problem of exchanges, of the working of the gold standard, and the stabilization of the gold standard from the commodity angle and so on; and I would go a great deal further than you suggest to secure a definite stabilization, and to reach an arrangement between our money and British money, and other portions of the British Empire, by agreement; quite irrespective of gold backing or any other supporting factor, based upon the requirements of home buying, and based upon real wealth as represented by the things that people believe in—what they eat, what they need in the way of clothing, and what they need to shelter themselves.

*By Mr. Ilsley:*

Q. That is what is called aligning the dollar with sterling?—A. It goes further than that, aligning it freely without any reference to gold; that is another question.

*By Mr. Sommerville:*

Q. But it applies, as of necessity?—A. I would suggest this; if we cannot do it, if the human race have not got ability enough to deal with this artificial situation in a fundamental way, and recognize that after all, all trade is barter, and money is only a member in such a factor to facilitate barter, rather than to hinder it, then I would fall back on the next branch and say if we cannot do it in that way, by all means let us do it in a national way, stabilize it, through a stabilization fund. I look upon that as a temporary expedient and as not striking at the very root of the difficulty. So much for that factor.

Now, I do not like to wander away from the real problem that you wish to have considered; but may I just, in the light of some of the evidence I have heard here, give you briefly some of my observations in Denmark, because when I was over there I took advantage of the opportunity in the interest of my clients to visit Denmark at the time of the World Dairy Congress, and as the guest of the co-operative organizations of Denmark. I was taken from bacon factory to bacon factory, and to dairy plants; and was furnished with all the various by-laws and so on, under which they operate. On my return, as a result of that experience at that time—I was on the advisory committee of the Canadian Chambers of Commerce, and I endeavoured through the medium of that organization to assist in formulating some policy which might in a measure adapt the Danish system to the requirements of this country; that is, to formulate a form of agricultural policy which would co-ordinate our various efforts, and eliminate minor differences of a local nature, and develop a real national policy similar to that in Denmark. They have a central organization there, which has met with immense success in connection with the marketing of their product successfully, and it is known as the Agricultural Council of Denmark. I have here a copy of the type of statistics which they get out for their people on their situation, and I will file this with your committee, if you desire.

(Exhibit No. 70 filed; Statistics of Danish Agriculture).

In an attempt to assist if I could in working out some plan that would help meet the situation in Canada, I prepared a draft of a constitution for a similar body, purely voluntary, that might coordinate our various organizations in

Canada. I would be very glad if it would be of any assistance to the committee at all to file that, as perhaps in it there might be some suggestion as to how we might in a measure adapt the Danish system to our own requirements.

(Exhibit No. 69 filed; draft of proposed organization).

Mr. SOMMERVILLE: Thank you.

The WITNESS: I recognize that there are many factors that obtain there which do not obtain here, but I believe we ought to be big enough in Canada to learn from anybody. I am satisfied that there is a certain suggestion there that we might well adopt in the industry here; and that relates to the function of the President of the Agricultural Council of Denmark, whose principal function is to assist in the coordination of the activities of the various agricultural organizations. The Chief Executive Officer has his offices in Copenhagen, and he is the nerve centre of the cooperative activities of Denmark, of the whole export trade; and keeps in touch with potential markets and prices, and so on, and as a result the very things that we are struggling for here in Canada are under control to some extent in Denmark, and I feel that in the light of the situation that is now facing the western Canadian farmer and the efforts that are being made to induce him to go back into mixed farming, the time is very opportune to see if we cannot work out some national policy, not in any selfish way for western convenience, but in order that the western farmer may be given purchasing power in order that the wheels of industry in eastern Canada may turn. I may tell you that in our university we had an expert recently make a survey of the requirements of our province, and his estimate was that it would take \$140,000,000 to put our farm population on a normal basis. They are doing without everything—running binders with a bit of plating tied with a piece of binder twine. I would like to give you one instance to indicate the psychology of the western farmer in regard to these problems. I say it is not selfish, because if you give the western farmer purchasing power he will spend that \$140,000,000 and you will get the benefit of it; it will redound to the benefit of every man, woman and child in Canada. We will never get that until the western farmer is on his feet. I used to teach school near Qu'Appelle, and there were a fine lot of Ontario old farmer families who went in there in the rebellion days and have struggled and built up fine homes, and I would like to give you as a pointed illustration the observation made to me by one of that type of pioneer in regard to the matter of going into mixed farming. He said, "Yes, it is all very well; you can come and lecture us about mixed farming and we go to work and take it for granted that everything told us is true. We put in an expensive plant, make the investment and mortgage our farms to do it and just when we are all in it the bottom goes out of the market owing to factors over which we have no control and all we have left as a souvenir for our effort is the mortgage on the farm." That is an actual statement made by one of the best type of farmers in western Canada. That is the psychology and the reaction, and there is a wonderful opportunity afforded right now to get our farmers back into industry. I think it is not asking too much that Canada as a whole recognize that this is a national problem and must be dealt with in a national way; and that if we are going to ask our men in the face of what they have gone through in the last few years to make that expenditure again and that effort again, they should be given some assurance that every effort that is humanly possible shall be made to give them stability of price, continuity of market, and a planned and organized effort so that they will not be defeated by their own success.

It has been well said that under normal condition a thrifty man to pay his debts will do two things—he will get up an hour earlier and work an hour longer, or he will do without things. Now we are told that we should work an

hour less; so that this is an age of anomalies. The western farmer is confused. And if we are to believe John Maynard Keynes, the men who advocate doing without everything are either fools or madmen. However, in his desire to rehabilitate himself and to get out of this slough of despond which obtains, the western farmer is justified in asking that in regard to these factors over which he has no control everything humanly possibly should be done in a national way to have them put under adequate control and eliminated if possible. Perhaps I have taken advantage of you in giving you some of my views, but I have been absorbing them for thirty-five years. I have lived among these people and have run a farm myself, so I can give you some idea.

Mr. SOMMERVILLE: You make your money in law and lose it in agriculture.

The WITNESS: I lose it both ways now

Mr. SOMMERVILLE: You are not a farmer, you are what they call an agriculturist.

The WITNESS: I have the honour and the experience.

Mr. FACTOR: You are a gentleman farmer.

The WITNESS: Well, just to give you an illustration. I have a half section five miles west of the city of Regina. My share is one-third of the crop and on that farm for three years hand running my share was from \$2,200 to \$3,000. For the last three years it has been less than \$200—not enough to pay the taxes.

Now, that is not an isolated illustration. I think I should correct, in regard to our own province, perhaps the erroneous impression that the last witness may unwittingly have left in regard to southern Saskatchewan. That land is just as good land for producing wheat and cereals as it ever was; it is purely a matter of moisture. The soil is there, and you can go twenty feet deep and it is just as rich twenty feet down as it is on the surface, and it is capable of again producing great crops. There are sections, and there is no question about it, south of Moose Jaw and in the sand hill district down to Johnston Lake which would make your heart ache to see the fine houses abandoned—land that never should have been settled; but the great area of wheat plains around Regina, Milestone—

The CHAIRMAN: Weyburn.

The WITNESS: Yes, and Weyburn are capable of again producing and will produce. Give the people of western Canada a fighting chance and they will make good. But these are uncontrollable factors. There are certain controllable factors in the matter of price levels and within the limits of human capacity. I am delighted, as one member of the delegation, to see the way this committee is working. I have read some of the evidence, and I believe it is a gesture that is appreciated very much by all the people in western Canada who are looking for some encouragement in these very discouraging and destructive times. I do not want to encroach upon the time that could perhaps better be taken up by men who are in direct contact with the actual problems of this industry; but there is one other observation worthy of note, and that is the very fact that there are areas that were utilized for farming instead of being kept for ranching and that is, perhaps, as good an illustration as you could get of the folly of allowing development to go on in a haphazard manner without some reasonable planning and control. This is a good illustration of that one fact, I suggest to the committee in its deliberations that in as far as it is possible to plan and not to run away in a haphazard fashion. We are going to plan on a national basis.

Now, we have prepared two briefs. We came down here on comparatively short notice, and we have done the best we could. We have briefs that have a great deal of detailed information. Mr. Ingleson will be glad to proceed, but we will file with you briefs that will cover a good deal of detailed information from which I think you will be justified in agreeing with me in the general conclusion which I have endeavoured to put before you.

*By Mr. Sommerville:*

Q. May I just get this clear. Your association has been in operation now for seven years?—A. Yes.

Q. And I understand that in that time you handled over one million head of livestock?—A. Yes, sir.

Q. Having a value of upwards of \$20,000,000?—A. Yes, sir.

Q. And that your representative Mr. Roblin and Mr. Ingleson, will present details of the live stock industry with a view to presenting some suggestion for improvements?—A. Yes, I think we have worked out some. I am not taking any credit. I think we have worked out a very comprehensive, workable and successful plan, and I hope when they get through that you gentlemen will agree with me in that observation.

Q. I understand that you are having a copy of the brief prepared for each member of the committee?—A. There will be two briefs.

Q. They will be available for us in the morning?—A. Yes, two briefs, one particularly applicable to the Saskatchewan organization, and one which is a joint brief. At the conclusion, to save time, and for your convenience, we have put the joint recommendations at the end of the brief which will be presented by Mr. Ingleson as representing both organizations. You will find some constructive recommendations in that brief.

Q. Before you close, you intimated that you had a long connection with the Poultry Co-operative Association of Saskatchewan?—A. I organized it.

Q. Could we have the benefit, in connection with your briefs, at a later date, of your observations on the effect on the poultry industry of some practises that we have heard of in the use of poultry as loss leaders in chain and department advertisements. I do not want you to give it to me now, necessarily, but if you will be good enough to give us your views in some definite form from your observations upon the subject, after Mr. Ingleson and Mr. Roblin have completed their briefs, we will be grateful?—A. If you will allow me to make a suggestion. The one man who has been the inspiration and the mainstay of that organization is Mr. Landruth of Winnipeg, who is vice president and manager of the Canadian Poultry Pool which handles a very large volume and was successful last year in marketing our considerable surplus on the British market. My evidence would be secondary evidence, and as all lawyers know secondary evidence is not as good as primary evidence.

Mr. FACTOR: We have had a lot of that.

The WITNESS: I will ask Mr. Landruth to prepare a statement for you giving the specific detailed information based upon actual personal contact with the business, which will be much more satisfactory.

*By Mr. Sommerville:*

Q. I did not know of your connection with the poultry industry until you mentioned it, and I thought the committee would like to have the benefit of that information because of certain evidence which has been given?—A. I am very proud to be the counsel of that organization.

Q. As a lawyer, I appreciate their constancy.

*By Mr. Kennedy (Winnipeg):*

Q. There is just one point. You filed with the committee a document you have prepared based upon your observations as to the live stock and dairy industry in Denmark. What I want to ascertain is whether this document that you have filed is a replica of the constitution or organization published, or have you revised it with a view to meet conditions in this country?—A. It is a revision of the Danish constitution to meet conditions in this country, and while we have only one copy of this, I will be very pleased—I have the Danish

Constitution here, and if you think it will be of any service to the committee I will be glad to file it as an exhibit. It will give you some idea of not only the Constitution but the type of data and statistics which the Danish people send out to their members and by which they co-ordinate all these various activities in the national policy.

(Danish Agriculture Statistics. Published by the Agricultural Council of Denmark, Filed, Marked Exhibit 70).

*By Mr. Factor:*

Q. That is the constitution?—A. That is the constitution.

*By Mr. Kennedy (Winnipeg):*

Q. Since Denmark is one of our hardest competitors, I think it would be very interesting?—A. I would be very glad to file it as a supplement.

(Exhibit 70.)

*By the Chairman:*

Q. I understand that is your only copy?—A. Yes.

Q. Your training as a lawyer makes you hesitate in parting with it, but let us have a copy of it?—A. I think I will part with anything I have that will assist this committee in solving our problems.

*By Mr. Young:*

Q. Before you go, I would like to ask a question or two about your own farm. You say it is four miles from Regina, and you have it rented?—A. Yes, on a third of the crop basis.

Q. Your share of the crop is one-third?—A. Yes.

Q. And that was \$200 a year for the last three years?—A. I am just giving the average for the last three years.

Q. That means that the man who operated the farm gets \$400?—A. Yes.

Q. And then what would he have to pay out of that \$400?—A. I know this, that he didn't have enough out of the \$400 to live on; he had to draw on his reserves to keep going, I cannot give you the details; I didn't go into that.

Q. Did he have anything of the \$400? Was it sufficient to cover his actual debts and expenses, apart altogether from his own wages?—A. He is a busy fellow, but had it not been that I allow him to have all this—he has quite an income from dairying, from milk and cream and poultry; he gets all that; I told him that he could have all that; and it was that that supplemented his income sufficiently to enable him to keep up. If it had not been for that, I don't think he could have. Living near to the city, it made it a little more favourable than many people where they are away from the local market.

Q. Could you give us any statement as to what wages he got for the year?—A. Well, he is very thorough, and keeps an accurate record. I will endeavour to get that and send it. I did not anticipate going into that.

Q. I am trying to find out what wages he gets for his work.—A. It is safe to say that he has been working on a basis, during these years, which would not afford him a reasonable standard of living, and had he not had some reserve, this supplementary means of sustaining himself, he could not have kept up. I think that is fair.

Q. If you took out the cost of his feed and seed and threshing, his outlay for labour, seed, feed and threshing, would he have any wages at all?—A. No, he would not have any wages at all.

Q. He would not have any wages at all?—A. No. That is what I say. He is living on reserves. We are all living on reserves, and there is very little left right now. As you all know, right now we are living on faith.

Q. Hope and charity?—A. Well, no. I will say this—and I think it is an absolutely correct statement—that there is not a single farmer in western Canada who wants any charity or any patronage from anybody. He wants a fair deal and a fighting chance, and he will get through if he gets that. That is the way I feel about the western farmer, and I have come in contact with a great many of them.

*By Mr. Kennedy (Peace River):*

Q. You mentioned a return of \$600; was that due to low prices or low prices and bad weather?—A. Well, both; mainly low prices, purchasing at less than cost of production.

The CHAIRMAN: Thank you, Mr. Barr. We will have the other two members of the Saskatchewan delegation to-morrow. It is now 5.30, and I do not think it would be advisable to start one of those gentlemen to-night, so we will go on at 11 o'clock to-morrow morning, and we will have the other two gentlemen from Saskatchewan, Mr. Ingleson and Mr. Roblin.

The committee adjourned at 5.35 p.m., to meet on Thursday, March 22, at 11 a.m.

HOUSE OF COMMONS, ROOM 368,

March 22, 1934.

The special committee appointed to inquire into price spreads and mass buying met at a 11 o'clock a.m., the Hon. H. H. Stevens, presiding.

Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. The minutes of yesterday's two sittings indicate the names of the witnesses that were heard, and the filing of certain exhibits. I will declare the minutes adopted unless there is some objection.

This morning we had intended to proceed with our friends from Saskatchewan, but there is a gentleman here who was not summoned; he is here from Alberta, and has been here for several days, desiring to be heard, I think our Saskatchewan friends will forgive us if we bring this gentleman on now. It is most unfortunate that he should have come in that way without giving us an opportunity of arranging it, but we feel that in justice to him we should give him the opportunity to be heard. So we are calling Mr. R. H. M. Bailey, president of the Alberta Milk and Cream Producers Association.

R. H. M. BAILEY, called and sworn.

*By Mr. Parry:*

Q. As was stated by the Chairman, you are president of the Alberta Milk and Cream Producers Association, and on their behalf are down to make representation to the committee this morning?—A. Well, hardly. I came down to attend a meeting of the federation of producers for the Dominion of Canada.

Q. To put it bluntly, you are here to speak on behalf of your association?—A. Yes.

Q. And your association represents what proportion of the milk producers of the province of Alberta?—A. Practically all organized producers.

Q. And you are here, I take it, to discuss with the committee, certain phases of the milk control bill that came into operation last year in Alberta?—A. Yes.

Q. And you appreciate, of course, that the committee have had the advantage of hearing some very concise evidence from Mr. Frawley on the same subject?—A. Yes.

Q. Will you just proceed with your memorandum?—A. I would like to explain, Mr. Chairman, at the outset, that I was requested to appear before your committee, and was asked to appear a week ago to-morrow; so it is not a case of exactly forcing myself on the committee.

The CHAIRMAN: No, I did not mean that. You say you were requested to appear. By whom were you requested?

The WITNESS: Well, the organizations which were represented here thought it would be a good thing if I could give evidence before your committee.

The CHAIRMAN: That is all right. The reference I made was simply that we had not been properly advised of the matter, and it was unfortunate that we had to break up our program in order to hear you. Had we had the opportunity of making arrangements, we would have done so without interfering with others who are here.

The WITNESS: I appreciate that. I just wanted to clear that up, that it is not a case of personally pressing myself before your committee.

Mr. Chairman, I have prepared a short memorandum which will bring the question to your attention, and with your permission I will read it: I appreciate the opportunity you have given to me to present to you from the producer's angle the question of production and distribution of milk in the province of Alberta.

Having read the evidence in the reports and findings of the select standing committee under the chairmanship of J. J. Frawley, K.C., solicitor for the Utility Board of the province of Alberta, I will try and deal with the question of the whole milk and cream problem without too much overlapping of facts and ideas already expressed.

*Conditions of Producers Prior to Order Setting the Price—*

1. Producer facing continuously lower price levels.
2. Spread being increased in distributor's favour.
3. Arbitrary price setting by distributor.
4. Ignorance of what actually happened to the so-called "surplus".
5. Surplus being used as a lever to lower prices.
6. Producers becoming retailers.

These conditions forced producers' organization to look for ways and means of control. Result,—

(1) Applied to government to amend Utility Act to include milk as an utility.

(2) Asked for an immediate investigation into costs of production and costs of processing and distributing.

What happened,—1. Government amended act making milk a utility; 2. Public investigation followed, the board sitting in Calgary and Edmonton with all factions of the dairy industry, including producer and consumer, being represented by counsel; 3. Producer discovered,—

(1) The so-called surplus was the real money maker for the distributor;

(b) That public interest was with the producer;

(c) The producer's eyes were opened to facts concerning their own business as never before;

(d) Price raise to the producer in Calgary of 45 cents per hundred pounds making the price to the Calgary producer \$1.95 per hundred pounds for what they called "city sweet milk". The price in Edmonton was raised from \$1.35 to \$1.85 for city sweet milk.

(e) Trade stabilized to both the advantage of the producer and distributor and the continuity of supply guaranteed the consumer.

*Public Utility Control.*—At this stage I wish to make the statement that the producers of whole milk and inspected cream appreciate the work and findings of the Alberta Control Board; the stabilization of the producers' price; the immediate and definite financial benefit accruing to the producer as a result of the board's orders, particularly the amount of spread returned to the producer; also the benefit to the distributors who process and distribute our product, who have, we believe, up to the present, received more benefit than the producer from the board's order. We look upon the control measures as an experiment, but a good one.

*Production and Distribution.*—The policy of our organization is that we believe the producer should receive cost plus. We believe the distributor should receive cost plus.

*By Mr. Parry:*

Q. That is what is being done, is it not, in fixing the price to-day; it is based on a cost plus basis?—A. Not yet.

Q. At \$1.95?—A. Well, that is milk that is used as bottled milk or city sweet milk.

2. The producer can determine his cost of production equally as well as the distributor. This was proven during the investigation into the costs of both branches of the industry.

3. The consumer must pay the costs of production as well as the cost of processing and distributing, his interests being protected by control boards who must always have the interests of the public mind.

4. I notice in evidence that has been submitted to your committee that the reason for there being a surplus was accounted for by the low value of other farm products. I wish to state that the numbers of producers shipping to the different plants in the cities of Calgary and Edmonton has remained practically static for the last three or four years and the increase in production, if any, is accounted for by the fact that the producer already in the field increased his production in order to secure sufficient revenue to carry on.

*Surplus.*—At the investigation in the city of Calgary, evidence was submitted by the distributors, on cross-examination, that all of the milk produced within the Calgary milk shed was required as whole milk or table cream for the consumers in the city of Calgary. This discovery immediately suggested the fact to the producer that the term "surplus" should not be used in regard to the supply within that milk shed and efforts were made to make use of the information given and a resolution was passed at the Provincial Milk Producers' Association meeting, held in Calgary, requesting a new definition of the term "surplus" and that the term "surplus" should only be applied in any milk shed where there was more milk being produced than the requirements of the consumer within that area from the standpoint of both milk and table cream.

*By Mr. Young:*

Q. What do you mean by milk sheds?—A. The area in which milk is produced for city use.

The CHAIRMAN: The same as a water shed.

*By Mr. Senn:*

Q. Of what extent is that milk shed?—A. In Edmonton, fifteen miles, and Calgary approximately twenty miles. Only a small proportion is produced outside the twenty-mile zone, I might say.

*By Mr. Young:*

Q. Are there natural boundaries for it?—A. It is a gentleman's agreement between the health board, the distributors and the producers' organizations.

Q. It is an arbitrary line drawn by these boards?—A. Yes, it is actually arbitrary in the final analysis.

*By Mr. Senn:*

Q. Do municipal regulations have anything to do with it?—A. No, not actually, although in effect they have. The health boards, of course, are anxious to bring the zone as close to the city as possible, on account of being able to carry out proper health regulations, and they are all back of the close-in supply.

Q. By that I mean the inspection of the farmers' premises; is that required by the utilities commission or the municipal board of health?—A. The municipal board of health; it is entirely within their control at the present time.

*By Mr. Parry:*

Q. You spoke of asking for a new definition of "surplus"; what is the present definition?—A. I wonder if I could perhaps facilitate matters by reading a resolution passed, and give you the picture exactly to be drawn. It is published in Calgary, Alberta, passed at a meeting of the producers held there, and is as follows:—

Whereas it has been proven by the evidence of the distributors of the city of Calgary that all milk produced within the Calgary milk shed is required either as sweet milk or domestic cream; and whereas what has been considered surplus is not actually a surplus according to the requirements of the consumers in the city of Calgary; and

Whereas we are of the opinion that this condition can be shown in most of the milk sheds within the province of Alberta; and whereas it has been proven that the distributor has made his greatest profit out of the distribution of cream; and whereas the board has set the price to the consumer, not having set it to the producer;

Therefore be it resolved that this convention go on record as demanding that the term "surplus" shall not be used where all the milk produced is required either as sweet milk or domestic cream, and that the term "surplus" shall only be used when milk within the milk shed is more than sufficient to supply the needs of the consumer within that area, when such amount over those requirements may be termed a surplus, and that the board be requested to set the price of all milk used for domestic cream purposes at a price according to what the consumer pays.

*By Mr. Young:*

Q. Is any farmer in this milk shed permitted to ship milk; if his dairy is in fit shape, could he qualify to ship milk in?—A. Not under present conditions. In the first place, the distributor won't take it; and in the second place—well, I guess the health department will inspect his premises, and he can become a producer retailer but not a shipper of whole milk.

Q. How do you qualify to ship whole milk?—A. Membership in the organization supplying whole milk has practically remained constant for the last three or four years.

Q. A sort of closed organization, is it?—A. Really it is.

Q. You have to buy in; it is like a seat on the grain exchange, you have to buy a seat from somebody else and get in?—A. You get it as a result of being in the field at the proper time.

Q. These men are going to die off; are they going to pass this on to their heirs, the right to ship milk into Calgary?—A. Well, the best way to break in, in the event of a producer selling out his herd, all of his herd, the quota or average goes with the herd.

Q. That is the way it is continued; and other farmers, or would-be producers in this area who are not in, have not much hope of ever getting in?—A. No. If they are very anxious to get in, they go into the retail field. They don't now; they used to.

Q. And set up a production system of their own?—A. Yes.

*By Mr. Senn:*

Q. What proportion of the farmers in that area—you say within twenty miles of Calgary and of Edmonton fifteen miles—are outside of the organization?—A. That would be rather difficult to determine.

Q. Is it any large percentage?—A. Yes, I would say the percentage would be in favour of those outside.

*By the Chairman:*

Q. More than half of them?—A. Yes, I would imagine so. It is a straight mixed farming area, and that is one reason why they have not gone into it; they prefer to be out of the dairy business on account of the 365 days in the year.

*By Mr. Senn:*

Q. In that article you read, you said the price was fixed to the consumer but not the producer; do you mean milk or cream?—A. Cream.

Q. The price is fixed?—A. It is fixed to the consumer.

Q. The price is fixed to the producer for milk?—A. Yes.

Q. But not for cream?—A. But not cream. I might explain that; that is the result of ignorance I would say on the part of the producers in this way, that they thought cream could not be controlled; but actually when we went into the question thoroughly we found that cream was covered by the act as well as milk, and the term "milk" applied to milk in fluid form. As soon as we became aware of that, we immediately asked for control measures for cream. We solved the cost of production if it is determined in the same way as milk, because the consumer pays higher for cream than he does for milk.

Q. What percentage of milk which is furnished at the present time is being paid for as surplus?—A. What percentage?

Q. Yes?—A. It varies according to the locality. Speaking from memory, about 29 per cent, I believe, in the Edmonton shed; anywhere from 40 to 50 in Calgary, and in Winnipeg about 15.

Q. What is the differential in price between the surplus milk and contract milk?—A. In Calgary, 72 cents to \$1.95.

Q. That is delivered?—A. Yes, delivered.

*By the Chairman:*

Q. Contract milk is \$1.95?—A. Yes.

Q. And the surplus receives only 72 cents?—A. Perhaps I had better go into that a little bit further. We were in a rather peculiar position in the province of Alberta at the time I left; and I might say this, that the board intended to adjust this difficulty and promised to do it within a few days. That is three weeks ago. It may not exist now. I am telling you what existed when I left. The actual facts were that in Calgary one distributing plant was paying 20 cents butter fat for milk separated for cream purposes, and the exportable churning price was either 26 or 28 cents. It is 28 cents now, I believe; so that the shipper at Calgary supplying cream was getting six cents below the actual exportable churning price of milk.

*By Mr. Senn:*

Q. You know definitely that this surplus milk is separated and sold as sweet cream?—A. There have been times when there has been what we call our second surplus, which is sold at churning cream prices; but on account of the rise in price, churning cream was bringing more than milk actually used for table cream purposes.

Q. Can you tell me, at the price the consumer pays for sweet cream, what the distributor would realize for fluid milk on that basis?—A. Well, I notice in Mr. Frawley's evidence that he has agreed to furnish you with those prices, and it is a very involved statement; but I can say this, it was proven by evidence and exhibits filed with the commission that the profits of the business in the province of Alberta were practically all in the cream business.

*By the Chairman:*

Q. That is profits to the distributor?—A. To the distributor.

Q. That was in the cream business?—A. In the cream end of the business.

Q. Not in the milk?—A. No; with the exception of co-operative groups, they all show losses in the distribution of milk.

*By Mr. Senn:*

Q. That was proven very definitely last year in the investigation that was carried on, that the large profits were in the sale of cream. It was only bought as milk on a butter fat basis?—A. I know very much lies in the surplus, from the standpoint of the producer at the present time.

The CHAIRMAN: Will you go on with your memorandum, and then if there are other questions that arise as we go along, they can be asked.

The CHAIRMAN: Will you please proceed with your memorandum.

*By Mr. Kennedy (Peace River):*

Q. Do you think the price should be fixed on cream to the producer?—A. Most certainly, on the basis of what the consumer pays; it should be put on an exact equality with milk.

Q. Has any action been taken to do that?—A. We have asked for that.

The Board, in setting the price in Calgary and Edmonton set the price of cream to the consumer but did not set the price to the producer, with the result that when the price of churning cream advanced, the producer of milk which was separated and used as table cream was getting anywhere from 5 to 8 cents less per pound butterfat than ordinary churning cream prices, with the result that the fluid milk producers of the Province have requested the Control Board to set the price for milk separated and used as table cream at a price according to what the consumer pays. I might suggest here that it is my opinion that similar conditions exist throughout the different provinces in regard to the cream situation.

As a result of the low price paid for milk used for table cream purposes, the producer to-day in Alberta is not getting the cost of production.

*By the Chairman:*

Q. Is not getting the cost of production for milk?—A. For cream. You see, there is a schedule.

Q. You want to get the price of table cream fixed on the same basis as the consumer pays for milk, that is, of course, based on the difference between cream and milk.—A. Yes. You see, our milk is taken in by the plants, the milk that is used for surplus just the same as milk that is used for table purposes.

Q. Yes.—A. Just to give you a picture of that, the price ranges,—well, I think in Calgary a good deal of it at a cost of 25 cents a hundred pounds hauling charge. The net price on the statement which I had in my possession when I left Calgary was the basis of the payment, 72 cents per one hundred or a net price to the producer of 47 cents.

*By Mr. Senn:*

Q. But the distributors buy all the cream from the producers.—A. Yes, they have a certain number of producers who supply the cream, in the City of Calgary for instance, inspected—

Q. And how does the price to the consumer compare with butter prices?—A. Well, in the position I have been describing to you they have been getting

about 7 cents per pound more butterfat than the shipper who has been supplying the table cream. Of course, it is a ridiculous position and I think is remedied by this time.

The CHAIRMAN: Yes. Well proceed please.

The WITNESS: As a result of the low price paid for milk used for table cream purposes, the producer to-day in Alberta is not getting the cost of production.

*Payment for Milk Used for Table Cream.*—In Calgary the price varies from 20 cents to 28 cents per pound butterfat. In Edmonton the price varies from 26 to 27 cents; in Regina 33 cents per pound butterfat; in Winnipeg 28 cents. The Saskatchewan government in an effort to control the price of milk used for table cream passed an order in council on October 14, 1933, setting the price of "domestic cream" at 10 cents per pound butterfat over the special grade churning cream. This will give your committee an idea as to the variation in prices to the producer, which are not at all justified considering the price the consumer pays is about the same in all cases.

*By Mr. Young:*

Q. Is it not a fact that cream will come in in excellent condition for churning and still would not be fit for table cream.—A. In some cities it cannot be used for table cream except it is from inspected herds and it must be pasteurized. That is not a compulsory pasteurization, it only applies to larger plants.

*By Mr. Kennedy (Peace River):*

Q. If the price is fairly uniform, that is, the price to the consumers, in the various Western cities, Calgary, Edmonton, Winnipeg and so on, how do you explain the difference in the price paid to producers.—A. It is just a question of the distributor taking the best advantage of his opportunity, that is all, making the most of his opportunity.

Q. Will you develop that a little? What do you mean by "taking advantage of his opportunity"? Is it because of bad management, or difference in distribution, or capitalization or what is it?—A. Well, I think I would like to take that up a little later on, Mr. Kennedy. In justice to the distributor in those different points in Alberta I think I had better make this explanation: After the price was set to the consumer, the butterfat churning price for special cream was 14 cents to the distributor—I am dealing with Calgary now—or a 6 cent bonus over special cream prices which made the price 20 cents per pound butterfat. They took the stand that as the Board set the price to the consumer on that basis of the price they were paying for cream that they were entitled to hold it down to that point. We took the stand that they were not, and that was the position when I left.

*By Mr. Kennedy (Winnipeg):*

Q. Were any representations made on behalf of the consumers against this fixing of prices?—A. On behalf of the consumer.

Q. Yes.—A. Practically not a word in either Calgary or Edmonton. There was some comment made through the *Free Press* in Winnipeg, but as far as Alberta is concerned there was no opposition at all by the consumer. In Edmonton the City Solicitor represented them along with Mr. Frawley, and in Calgary the Provincial Government appointed a solicitor to act in the consumers interest, but there was not a single consumer appeared to give evidence.

Q. And in the operation of this legislation which fixes prices for milk products how is it working out so far as the general public is concerned, the consumer; has any agitation against it developed to any extent.—A. None at

all with the exception, I believe, of some of the small stores whose position, you might say, was prejudiced in this way, that they have to sell a certain volume—10 quarts—before they get a special discount from the distributor. That was only in Calgary.

Q. But as far as the consumer is concerned it is quite satisfactory.—A. The consumers' attitude is this, that as long as the producer is getting the benefit they are satisfied. I think I am quite safe in saying that.

*By Mr. Senn:*

Q. Are the consumers paying more than they did before?—A. No. The actual increase as far as the consumer was concerned was the ordinary seasonal increase of one quart per dollar, but the Board gave back in Calgary 5 cents of the sum that had been taken away and in Edmonton 10 cents. I might say that that meant to our organization a sum in the neighbourhood of \$1,200 a month.

*By Mr. Kennedy (Winnipeg):*

Q. In Winnipeg the price was increased by the Public Utilities Commissioner, was it not?—A. Not over the former prices.

Q. I think so.—A. Well, but you are speaking of the time when the producers got down to 91 cents a hundred.

Q. There has been, say in the last few months, an increase in price over the then prevailing price.—A. Oh, yes. They got decided benefits the same as we did in Alberta, absolutely.

Q. In the operation of your Act do you allow a differential between the prices that will be charged to the consumer by chain stores as against the waggon price of milk.—A. Well, in Edmonton the price is 9 cents to the stores and that gives them a cent.

Q. Just explain that, please. You say 9 cents to the stores, from whom.—A. From the distributor. They get a wholesale price of 9 cents.

*By Mr. Senn:*

Q. In bulk.—A. No, buying in bottles.

Q. But they have to buy a certain number of bottles.—A. Yes.

*By Mr. Kennedy (Winnipeg):*

Q. But the price to the consumer, getting it at a chain store or getting it delivered from a waggon, what is the difference?—A. There isn't any, it is the same price, 10 cents a quart, except the stores wish to give it at cost which they don't in Edmonton. In Calgary there is a different situation.

Q. Generally, are not the chain stores permitted to sell at a lower price than other distributors of milk?—A. In Calgary the price is 8 cents to the stores on a basis of 30 quarts or over and they sell at 9 cents which is a cent lower than the waggon price in Calgary. Edmonton is in a different position. We have never had the same difficulty in Edmonton.

Q. At Edmonton?—A. Yes.

Q. But there is a difference then of one cent?—A. Yes, a difference of one cent in Calgary.

Q. So that you can get it from the store cheaper?—A. Yes, but before the order the difference was from two to three cents in places.

*By Mr. Parry:*

Q. And that was the result of an investigation by the government?—A. Yes.

Q. In respect to Calgary and Edmonton?—A. Yes, sir. By the way, I think the store situation in Calgary and Edmonton was about 5 per cent of the business.

*Processing and Distribution.*—In this field of the industry will be found the main reason for the price the consumer pays and the price the producer receives. A statement was made by one of the leading distributors, during the investigation in Alberta, that if he were to have a monopoly of the distribution in his city that he thought it would be possible to give the consumer one quart more for the dollar and pay the producer 40 cents per hundred pounds more for his milk. This would show a loss in processing and distributing of milk, paid for by the producer and consumer, of 80 cents per hundred pounds of milk. This would mean in the milk shed where this statement was made an increase of revenue to the producer on the volume of milk sold as whole milk, and in which field there are approximately 230 producers, an advantage of approximately \$100,000 in twelve months and a similar saving to the consumer within that consuming area. It is not too strong then for me to make the statement that your committee, and others who are trying to rectify the evils of overlapping, will have to look for a remedy namely in the field of distribution. The overlapping in distribution has caused the distributor, who originally had the market, having his volume cut into by both large and small distributors forcing him to increase his spread.

The distributor received very definite benefit as the result of the control measures put into effect in the field of distribution. The discounts for wholesale milk and competition in this regard were abolished. The discounts to the three and four quart retail consumers were also abolished. The contracts by tender, by large institutions were cancelled, eliminating the competition to secure these contracts at a very material saving to the distributors. Store discounts were eliminated to a degree and the business generally set on a basis of stabilization. The wagon sales, we believe, were also increased.

A factor also in the field of distribution, that reacted against the interests of the producer and the consumer, was the increased capitalization of the larger distributors, in many cases the doubling of capitalization, and the distributor attempting to pay overhead and increased salaries and interest out of the same volume of business and very often a decreasing volume, which had the result again of cutting the producer's ultimate price in many different ways.

*By Mr. Ilsley:*

Q. Are you speaking of the situation before this was made a public utility, or since it was made a public utility?—A. This situation developed before.

Q. Before?—A. Before it was made a public utility.

*By the Chairman:*

Q. It still continues, does it not, as a public utility?—A. Oh, absolutely. The field has not changed at all practically.

*By Mr. Kennely (Peace River):*

Q. Mr. Frawley in his evidence, at page 203, states:—

The board shall not be bound by any rule of law or public utility practice to see that any rate of return is provided on any plant, equipment or investment in excess of the actual value thereof for the time being.

At present, is it your opinion that the rates to the distributor are in excess of what is necessary in relation to the needs of the community, taking into consideration the value of plant, and so forth?—A. Well, we have a plant in Edmonton and a plant in Calgary that could handle the needs of the city without any trouble at all.

Q. One plant?—A. One plant.

Q. How many plants have you?—A. In Calgary four large ones and about thirty producer retailers, and in Edmonton three large ones and about forty-two producer retailers.

Q. Do you know anything about the value that is fixed on these plants?—A. That, of course, would be very difficult to give a definite figure, but I could possibly answer your question in this way; in 1928 we had a one hundred per cent producers organization and we had a distributor handling all our milk. There was only one distributor in the City of Edmonton. We were offered that plant for \$125,000 including everything, good will—everything. That plant was servicing the city although it was a rather old plant. They felt they needed a new one, and they built a new plant at a cost of approximately \$450,000.

*By Mr. Young:*

Q. After selling the old plant?—A. The old plant was sold out to different groups for different purposes.

*By Mr. Senn:*

Q. You say they built a new plant, you mean the same firm?—A. The same firm, yes, and that firm resold the plant to a Dominion Corporation, and when we approached them with regard to the purchase again, a couple of years after, it was placed at in the neighbourhood of a million and a half dollars. The volume of business had been decreased rather than increased, and I think that gives a pretty sound picture of how we lost good money. I think perhaps I had better give that picture now because I believe it is general throughout Canada. For instance we had, say, a thousand pounds a day to be paid for at city price for what they call operating necessity; that was cut off. We got the city price for ice cream milk; that was cut off. We lost in spread 25 cents a hundred pounds. Just figure this out, it is simply an enormous sum of money which the producer has lost by reason of the increased prices which have been instituted by distributing organizations coming into the field and increasing the cost of distribution.

*By Mr. Parry:*

Q. And you have not received back those concessions since the legislation came into effect?—A. No. All we have got back is the 10 cents which I mentioned and we got that from the Board.

*By Mr. Ilsley:*

Q. What does the Board base the spread on? Is it the costs of the most expensively operated plant?—A. The Board have had their auditors in the largest plant in the City of Edmonton; they are now in the largest plant in the City of Calgary, and they are trying to determine the costs of processing and distributing milk without any relationship to capitalization.

Q. What costs, some theoretical costs, or the costs of one of the largest plants actually in operation?—A. The great difficulty is, the Board have no control over ice cream for instance, and that is a big factor in all plants usually, and as a result the plants have to apportion overhead to different departments, and naturally we are rather suspicious of the amount that is apportioned to the milk department.

Q. You have four or five processing and distributing plants, as I understand it, in a city, and the Public Utilities Board is asked to allow that plant a certain spread between what they pay the producer and what they charge the consumer as a fair spread, and upon that they base these prices?—A. Yes.

Q. Well now, what is it they base that on? Do they try to find out the cheapest and best or the most efficiently operated plant and take the cost of

that plant and base the spread on that; is that what they base it on?—A. In both distribution and production they only take the very best herds in trying to determine the cost.

Q. And if there was no competition between all those plants the spread would be very much less?—A. No question about it at all. For instance, instead of a two hundred unit wagon they would have a four hundred unit wagon, and so on.

Q. In other words, your idea is that competition should be eliminated, there should be a regulated monopoly is that the idea?—A. Well, that is where we are heading for. I would say that a franchise by the city should be given to both distributor and producer organizations.

Q. Yes?—A. With a guarantee of continuity of supply and quality.

Q. That is what you would have?—A. Absolutely.

*By Mr. Kennedy (Peace River):*

Q. When was this new \$450,000 plant built?—A. About 1929.

Q. When was the million and a half asked for?—A. Between 1929 and 1931.

Q. Do you know if at present they are paying dividends on a million and a half or on \$450,000?—A. I believe they paid preferred dividends this year.

*By the Chairman:*

Q. On what?—A. On preferred stock.

Q. I know, but on how much?—A. I think it was in the neighbourhood of half a million. I cannot give the exact figures on that.

*By Mr. Kennedy (Peace River):*

Q. What about salaries and bonuses?—A. Well, we did not go into the question of salaries in the investigation at all, but that has been taken into consideration by the Board in their audit.

Q. Well, in your brief there you said something about the capitalization and salaries being increased?—A. Well, yes, for instance in this particular plant I believe there were actually two managers in place of one. The Board is making full allowance for all these things.

*By Mr. Parry:*

Q. I see Mr. Frawley in his evidence states:

that the amount of the return to the distributor shall be based upon the then existing value of his building, and not upon any previously set capital structure of the company?—A. That is right;

--A. Yes, that is definitely understood.

*By Mr. Senn:*

Q. Do I understand you to say that the Board does not take any cognizance of the distribution that is made between say the fluid milk, the cream and the ice cream?—A. They are entirely separate. The ice cream is entirely separate from the other.

Q. And do the Board just accept the company's figures?—A. They have placed their own auditors in there, and in this particular plant they were in there months, but you see you have butter, ice cream and other by-products, such as cheese, all in one plant.

Q. And did they think then that the system in vogue in different plants was a sound one?—A. Well, the only answer I could give to that, Mr. Senn, would be this, that they had an expert who had at one time been an employee with the distributor plant but who was then an employee of the government. He was overseeing the whole cost system, he was in charge of it.

Q. But they did not make any specific finding?—A. No, all they did was render an audited statement to the Board. They were not supposed to render a recommendation, just simply an audited statement.

Q. I think you said that you were suspicious?—A. Well, naturally.

Q. Why would you be suspicious?—A. Well, when there are four departments and only one is being investigated, naturally the one that is being investigated would not have any less than it should have.

The CHAIRMAN: Go ahead with your memorandum, please.

The WITNESS: Price Cutting: Before the control measures were in effect, the distributors were price cutting in the wholesale field, retail field, special contract field, and every time they cut price the reaction was felt by the producer. But one feature of price cutting that is still maintained by practically all the distributors is the adding of butterfat to milk. In 1932 the average butterfat content in the milk sheds of Calgary and Edmonton was approximately 3·5. The average butterfat content in the milk sold to the consumer varied from 3·8 to 4 among the larger distributors. The difference between 3·5 milk and 4 milk from the standpoint of butterfat value was 25 cents per hundred pounds of milk. This method of competition in order to show a deeper cream line on the milk bottle is still being practiced and is a very dangerous form of price cutting, from the standpoint of the dairy industry, and from the consumers' standpoint we are told by those who make a study of food values of milk, that a 3·5 milk is a better food product than a milk of higher butterfat content. The point we wish to raise is that the producer must, in some way, pay for that increased butterfat content.

*By Mr. Young:*

Q. How is he getting that out of the producer?—A. I think possibly it is being treated as a competitive thing and an advertising feature.

Q. Do they charge the higher price for the full per cent?—A. No.

*By Mr. Young:*

Q. How does the producer suffer?—A. For instance, there are different ways that he may suffer as the result of this; on the standard of milk, they may be prepared to pay on 4 per cent instead of 3·6, as it is now.

*By Mr. Senn:*

Q. What is the standard at the present time?—A. At the present time it is 3·25.

Q. By provincial law?—A. Yes.

*By the Chairman:*

Q. That is cream?—A. Yes, 3·4 would in Ontario, I believe, increase the content.

*By Mr. Young:*

Q. And you are afraid they will increase that and still call it milk?—A. That is one of the questions raised, I do not know whether it is better or not.

Q. You are afraid there will be a demand for richer milk, you are fixing your prices on a cost-plus basis all the way through, and you are afraid that the consumer will get a richer product for the same price; but you are still on a cost-plus basis?—A. That is the point, we sell our milk on say a 3·6 standard and we get 5 cents a point up or down.

Q. Yes?—A. Now, the average price for the product which you get on the 3·5 basis is affected by each point up or down. Now then, in some cases they are adding 5 points which is 5 cents a pound, or 25 cents on a hundred pounds of milk.

*By Mr. Factor:*

Q. Your point is that in actual practice on that basis the producer loses 5 points?—A. Oh, it is not actual; you cannot continually say he is losing that.

Q. Figuring it out on the profit, you are quite right; but can you point out any way in which the producer actually loses through the distributor making the milk richer?—A. I do not think I could,

*By Mr. Senn:*

Q. Is it not a fact that if they only distribute milk up to standard, they could possibly pay more for the milk they are buying?—A. Yes, that is one way it would work.

Q. Is not that the way the producer looks at it?—A. That is correct.

*By Mr. Heaps:*

Q. Is not the price fixed now?—A. Not on butterfat, don't you see; we do not sell it per pound of butterfat.

Q. But it is fixed by regulation, isn't it?—A. The price for milk, yes; but not for cream.

*By Mr. Young:*

Q. You say it is not on a butterfat content, hence you say you sell on 3·6—what do you mean by that?—A. You don't buy it at so much a pound butterfat, they deal with you on the basis of 100 pounds of milk. Basis 3·6 butterfat content.

Q. You pay \$1.95 for milk and that milk has to be 3·6 in order to get the \$1.95?—A. Yes.

Q. Then, you are selling 3·2?—A. No selling 3·8 and 4.

Q. Then what is your 3·2?—A. That is the minimum.

Q. Then, what is your objection?—A. It is simply price cutting by way of advertising.

Q. You do not object to advertising?—A. No—we do in that form, of course.

Q. You would not object to advertising in the newspapers by these distributors?—A. They don't advertise that way.

Q. Would you object if they did?—A. I don't know, I don't imagine we would.

Q. Instead of spending that money, say for additional cream? I cannot see how anybody suffers by that.—A. It is by adding cream to the milk, that is one way the producer-retailer gets new business; increasing the cream line, and the larger distributors have to increase the cream line as well, and if it costs him 25 cents more a hundred, it will affect the spread he gives the producer, don't you see?

Q. You say now that the producer-retailer builds up his milk, and that he has to do that to protect himself and to keep selling milk?—A. There is no limit to where it may go.

*By the Chairman:*

Q. In other words, you would prefer a standardized product?—A. A real standardization of milk, and anything above the standard set should be charged for, and dealt with, as cream.

Mr. FACTOR: You would have a standardized product, a monopoly regulated by the government.

The CHAIRMAN: Let us get along.

## The WITNESS:

*Public Interest.*—The public has been protected by the stabilization of price which, to a degree, assures,—

1. Continuity of supply.
2. Increased earning of the producers in the milk shed is immediately reflected among the consumers within that area.
3. Increased earnings enable producers to keep up necessary standard of equipment and comply with regulations of health boards.

*Producer-Retailer.*—The Board's Order definitely benefitted this section of the producers. The reason being that the effect of a minimum price was, that it was made more difficult for a producer to become a retailer because of the fact that the only way they could secure business was by cutting the price, and as the price was set, they could not very well enter the field. We would suggest that there is only one way to permanently keep the producer within the production field and that is by making the price the producer receives for production sufficient to warrant him carrying on his business. This should be done by the distributor as a matter of self-defence.

*Health Regulations.*—It is the policy of all our producers' organizations to cooperate with health boards to ensure a safer and better quality of milk for the consumer's use.

*Co-operative Movement.*—We believe that the producers in their efforts to cooperate, by the handling of their product from producer to consumer, should consider in every market,—

1. Is there already in this market a sufficient service being rendered to the consumer?
2. Is the producer getting a fair price? If both requirements are being met, leave market alone or purchase outright the existing plant or plants already in the field.

*Pasteurization.*—We believe that a definite policy of compulsory pasteurization is in the best interests of both the consumer and the producer.

*Whole Milk and Domestic Cream Specialty.*—Milk being declared a public utility, it is automatically separated from all branches of agriculture. We believe,—

1. That it should receive the same consideration as other utilities, such as light, heat, etc.
2. That the extra expense involved in the production of handling, hauling and steady supply demanded, entitles it to be considered as a separate part of the dairy industry.
3. That from the standpoint of public interest, it should be entitled to special consideration.
4. That, if the field were thrown open to cheese and butter interests, what would happen is that the producer seeking the whole milk market would not rise to the price level of that field, but on the contrary those within the present milk shed would be forced to descend to the level of the outside field or export market.
5. That you cannot compare the control of exportable or importable products with that which is produced and consumed locally.
6. That the mixed farmer to-day is in a better position than those who specialize in milk production.

*By the Chairman:*

Q. You are really interested chiefly in the whole-milk producer?—A. Specializing in it.

Q. And your contention is that the whole-milk producer is entitled to a larger measure of return than is the man who is in the cheese or butter branch of the industry?—A. When you take into consideration the labour and the money involved in the production of fluid milk—

*By Mr. Senn:*

Q. And the sanitary requirements?—A. The sanitary requirements in particular.

*By the Chairman:*

Q. Yes. Well then, put it this way; is it your contention that the present set-up in Alberta does not give the whole-milk producer any undue advantage over his fellow producer of cheese, butter, and such products?—A. Yes, I certainly think that, when comparing all the matters involved.

*By Mr. Young:*

Q. You gave us figures a few minutes ago which would seem to indicate that the whole-milk producer was soon to get \$400 a year more for his milk than he did?—A. I said he would, providing he got the 40 cents extra which it was suggested could be given by the monopoly.

*By Mr. Ilsley:*

Q. Why do you say he is entitled to a larger return for his labour than the man who is producing butter, or cheese; do you say that that is because more skilled labour is involved?—A. Yes; well, there is certainly experience required that is not required in other branches. The main thing is this, he has got to carry a surplus in order to guarantee a supply to the trade. I am speaking in the old way of surplus. He has got to carry that, and produce it 365 days in the year. The dairy man works I think on the average at least 4 to 6 hours a day more than any other branch of agriculture; he has got to in order to keep up his production.

Q. I mean, the supply of milk to the consumer?

Mr. FACTOR: The supply of fluid milk.

*By Mr. Ilsley:*

Q. The supply of fluid milk to the consumer?—A. He does not know just what the supply would be, and he is actually penalized by the distributor.

*By the Chairman:*

Q. Mr. Bailey, I am afraid you are confusing the distribution part of it with production. What I had in mind was this; here are two farmers near Calgary, one produces milk for fluid distribution, and the other produces milk to be delivered to the creamery for butter?—A. Yes.

Q. Now, under the present law, the fluid milk producer gets a larger price for his milk than the one who delivers to the creamery?—A. In that picture you have got to take hauling 25 cents; you have got to take the skim milk which is of value on the farm for the production of pork, for instance, at 25 cents; and when you take these two factors, compare it with the price the producer is receiving in Calgary for milk daily, you will find that on the basis of the production of milk alone, he is as far ahead without any consideration for any other branch that he may be developing on the farm.

*By Mr. Senn:*

Q. But he has to observe higher sanitary methods in production?—A. Absolutely, and it is a very considerable expense.

Q. His premises are inspected periodically, are they?—A. Yes; and of course he pays a licence—it is not a very big factor, \$10 in the Calgary area.

Q. Do your producers have a binding contract with the distributor as to the amount of milk furnished from day to day by the producers?—A. We have. I think perhaps I will stick to the Calgary system. We have a quota determined as the result of an arrangement between the producer and the distributor. This quota was based on a three year average of the producers. If the distributor sells the full amount of that quota spread over the whole group of producers, then he is paid \$1.95 for the whole of his quota; but if they sell 25 per cent below that quota, then he takes off that 25 per cent. Here is the system worked by one plant; they have an arrangement so that if any producer produces less per day than his quota, the amount that he produces less is added to the quota of those who keep up to their average, do you see. He is hurt both ways. And then they take the surplus. That is the system of quota that is actually in practice.

*By Mr. Parry:*

Q. Do you think you are going the whole length when you are isolating whole-milk as a subject of its own, and leaving it in a water tight compartment, away from all the other products?—A. I think so.

Q. What I have in my mind is this, that one of the problems with surplus milk would be to control the supervision so that it could be distributed to make the export products; also dovetailing in with your own particular farm producers' organization?—A. The control of any production of the bulk of requirements on the field would naturally have to take in the export field, and we would have to take what it would bring.

*By Mr. Senn:*

Q. Would you say that all the milk distributed as fluid milk is paid for at the city price?—A. We have had no reason to doubt our distributors at all in that regard.

*By Mr. Heaps:*

Q. Have you any idea of the quantity of surplus milk there is?—A. That all depends on the particular shed; I know, for instance, of at least three or four where there is not any actual surplus at all.

Q. So far as your own knowledge of the business is concerned, do you know approximately the amount of surplus milk there is?—A. We are speaking now from the standpoint of the market used for manufacturing purposes, and I would say that it would not amount to more than 5 per cent possibly in Alberta. That is just a rough estimate, but I think it is pretty close.

Q. Five per cent of the total production of milk is considered surplus?—A. Yes—as churning cream, I am considering churning cream as surplus.

*By Mr. Kennedy (Peace River):*

Q. What about the cost to the producer; do you think the present price is returning the producer his costs and fair wages?—A. No, it is not. The return that goes back to the producer—it makes no allowance for capital at all.

Mr. FACTOR: Do you mean the present price fixed by the board?

*By Mr. Kennedy (Peace River):*

Q. Yes, the price they are getting in Alberta?—A. I am answering that question taking into consideration the price paid for surplus at the present time.

Q. What the producer gets?—A. Yes.

Q. Can you give us any figures on that?—A. Just roughly; the average price paid in Calgary is 144, that is the last statement that I had which I was just looking at, at one of the larger plants.

*By the Chairman:*

Q. That is the average?—A. That is the average over all, \$1.44.

Q. And that was over the month?—A. That is for two weeks; put in every two weeks.

*By Mr. Factor:*

Q. Including surplus?—A. Including surplus.

*By the Chairman:*

Q. Taking the surplus at a low figure, and the other 95 at the fixed?—A. Yes, within a cent; but it is the same in Edmonton. Now, the price which we submitted, without any allowance being made for capital, or owner-control and management, was \$1.50 over all.

*By Mr. Factor:*

Q. Over the cost of production?—A. Yes; and that included from 37 herds an average production per year of 7,335, I think.

*By Mr. Kennedy (Peace River):*

Q. That was the average?—A. Yes, and the herds—

*By Mr. Factor:*

Q. The figure is not \$1.95, the surplus affects that?—A. Surely, and that is the part of our product that is bringing the most money, and the consumer pays the most for.

Q. You told Mr. Heaps just now that surplus was 5 per cent of the total production?—A. I was talking of the actual surplus in the export production—five per cent of that going into the manufacture of butter.

Q. What is the percentage of the surplus that constitutes the relation to the total production?—A. Considering table cream as surplus?

Q. Treating it as surplus, and on the basis of demand?—A. On the basis of demand, in Calgary 50/50, and Edmonton 30/70.

Q. In other words, in Calgary you get the low price for 50 per cent of the total production?—A. That varies of course, according to sales.

*By the Chairman:*

Q. But then that surplus is used for the production of table cream?—A. Certainly.

Q. And you do not as producers get any advantage from the price secured for that table cream, and that is your chief complaint about the way it is at the present time; but you say that is being mitigated?—A. I think that will be corrected to a degree.

*By Mr. Kennedy (Peace River):*

Q. Were the figures on the cost of production challenged by anybody?—

A. Only in the ordinary way, the distributor did not relish the idea of the producer being able to determine costs.

*By Mr. Heaps:*

Q. Might I ask this question: how much surplus goods do you produce in relation to the market?

Mr. KENNEDY (Peace River): Do you mean in Alberta, or for the whole of Canada?

An Hon. MEMBER: His own bailiwick.

The WITNESS: You speak of markets for our particular milk shed?

Mr. HEAPS: Yes.

The WITNESS: About five per cent, I would say, would absolutely cover it.

Mr. FACTOR: Apparently there is a conflict in the term "surplus."

The CHAIRMAN: The non-saleable surplus, what cannot be disposed of.

The WITNESS: The amount diverted for churning purposes I am referring to; 5 per cent.

*By Mr. Heaps:*

Q. So that you have 5 per cent of goods you have no market for?—A. No, no; we get the churning price.

Q. Then you have no actual surplus?—A. It is all utilized.

Q. It is all utilized?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. Yesterday there was some suggestion made about the disposal of old cows, and so on, the past fall on the beef market; can you tell us anything about that?—A. Of course, most dairy cattle are not beef cattle. When we have to sell them, we have to take the usual cannery price, and it ranges from 35 cents to say 50 cents per 100 pounds, barely pays for truck haulage on an ordinary 10-mile haul.

*By the Chairman:*

Q. Pretty poor stuff?—A. Yes, exactly. Of course, they use everything in the plants.

*By Mr. Kennedy (Peace River):*

Q. Do you know what they use that meat for?—A. No, I would not like to suggest.

Mr. FACTOR: Sell it to some camps in British Columbia.

*By Mr. Kennedy (Peace River):*

Q. Would the price the farmer gets from the canners buy a hide back from the plant?—A. I doubt it very much.

*By the Chairman:*

Q. He ought to skin it at home?—A. He should now, at the price of hides.

Q. Let us get along?—A. I notice a question was asked Mr. Frawley in regard to the store price of milk.

The average storekeeper receives a cent per quart for handling a quart of milk over the counter. It was suggested that the storekeeper might not be receiving enough for the handling of milk to enable him to pay a decent wage to his employees. It has been proven that the distributor in many cases is not receiving the cost of production. Other branches would be very glad to show even a one-cent basis for their share of the profit. Further, if the wagon price is the only method by which the consumer can be served properly, then we feel that no consideration should be given the stores for handling milk, and they should only handle it as a special accommodation feature when the consumer is unable to secure it otherwise.

*By the Chairman:*

Q. May I ask a question there: Are you quite clear in your own mind that the door to door delivery must be the continuing method of distribution of milk?—A. I think it is the only system possible.

Q. I mean, there is no question of it?—A. No question at all.

Q. In your mind?—A. No question at all. We have absolutely endorsed the distributors' argument in that regard.

Mr. FACTOR: What about this point, where distributors have four or five or six wagons on the same street, delivering?

The CHAIRMAN: That comes under that problem; no doubt of that.

The WITNESS: There is no question that if you can solve that, you have solved the producers' price and you have solved the consumers' price.

*By Mr. Ilsley:*

Q. You would solve that by monopoly?—A. It is the only way; or by agreement, distributors' agreement.

*By the Chairman:*

Q. They had it solved in Ottawa here fifteen years ago?—A. And we had it five years ago.

Mr. KENNEDY (Winnipeg): I think the same thing happens with laundries and dry cleaners, and every other class of business.

The CHAIRMAN: No.

The WITNESS: It is not the same thing as milk.

Mr. EDWARDS: They are not perishable products.

The WITNESS: The human element enters into milk.

*By Mr. Kennedy (Winnipeg):*

Q. It is just the same thing, surely. Does not the same practice obtain in other businesses?—A. I would not say so.

Q. Where a half a dozen serve a street?—A. You mean with regard to over-lapping?

Q. Yes?—A. Oh, surely.

Q. It is a question of degree.

The CHAIRMAN: One goes to every door.

Mr. KENNEDY (Winnipeg): You can't get down to every second or third door and regulate them all, surely.

The CHAIRMAN: Go on, Mr. Bailey.

The WITNESS: All right. Control measures—of course you will realize that the part of this I am reading now is within the power of the provincial government.

*By Mr. Factor:*

Q. It pretty nearly all is?—A. I think mostly.

Control Measures: We would recommend that control boards be given increased powers.

1. That they be given authority to licence producer, distributor, stores, with power to suspend and cancel. In this way the production and distribution of milk could be controlled by the board without recourse to court procedure. I think Mr. Frawley mentioned about a case in Edmonton.

2. Legislation providing producer organizations with power to levy and collect on all their product, where an organization exists controlling up to 75 per cent of the product in that particular field.

3. Legislation making it compulsory for all distributors and processing plants to place in their plants automatic scales which register and mark weights.

4. Providing for standardization of butter fat content in milk.

5. Provision made for uniformity in control measures throughout the Dominion.

6. Control measures to apply to all milk used for table cream purposes, and price be set to producer according to what the consumer pays. It may be that the only solution to the producer-consumer problem will be a monopoly by way of franchise to both distributor and producer organizations.

If I might be permitted to make a suggestion in conclusion of this memorandum to the effect that I believe governments should assist producers' organizations by passing legislation as they, the groups, see their requirements as a result of knowledge they possess of their own particular business and make provision for producers' organizations to execute legal contracts from the standpoint of local arrangement, and assist them to finance within the industry, make that financing possible by legislation. All dairy farmers need is the power to work out their own salvation within themselves. Potential leadership is within all agricultural groups, but has not found expression within itself as a result of its inability to control and run its own business, through lack of power by legislation that lies within the power of governments to furnish.

*By Mr. Ilsley:*

Q. Legislation in provinces?—A. For instance, under the New Zealand act, where they could make a definite levy on every pound of butter. I think it was Mr. Fulton of New Zealand who last week made the statement when they wanted a fund for advertising purposes, they got £25,000 by making a special levy.

Q. Give the producers' organization the privilege of imposing taxation upon its members?—A. It really is indirect taxation.

*By Mr. Young:*

Q. A tax not only on its members, but non-members as well?—A. Well, where the controlling interest lies inside the organization, they should be empowered to bring the rest in, because they are working in the interests of them.

*By the Chairman:*

Q. What you want is a compulsory pool arrangement, really?—A. Well, not in the ordinary sense that pools have been considered in the past. We don't want to compete with private industry.

Q. But you want to have it compulsory that all in the industry shall come into the organization?—A. All of the producing members, or say 75 per cent, lined up with an organization, and determining for the rest, with the authority to act, what would be for the mutual benefit of all.

The CHAIRMAN: Are there any other questions? We must try and get along.

*By Mr. Kennedy (Peace River):*

Q. With regard to some of the other cities where they have not public utility control of milk, are the consumers getting a better deal than they are in Edmonton and Calgary, or do you know? Are they paying more for their milk?—A. No.

Q. Are they getting better milk?—A. No.

Q. Poorer milk?—A. I would not say that.

Q. Are the producers getting any better deal?

Mr. ILSLEY: Your question is not clear. You ask whether they are getting more for their milk. Where?

Mr. KENNEDY (*Peace River*): There are cities in the west where there is control. Edmonton and Calgary; and there are cities where there is no control, as I understand it.

Mr. ILSLEY: Yes.

*By Mr. Kennedy (Peace River):*

Q. That is, public utility control. I am asking if the consumer in the places where you have open competition without public utility control are getting milk cheaper than the cities where they have control?—A. Where there is control, the producer is getting the better deal.

Q. What about the consumer?—A. Oh, the consumer is practically paying the same.

Q. Practically paying the same?—A. We have it right in Alberta.

Q. Is there any advantage from the standpoint of the health of the community where you have control, over the place where you have not control?—A. It has a big advantage with the consumer.

Q. You say it is better?—A. A definite advantage.

Q. A definite advantage from the standpoint of health?—A. Yes.

*By Mr. Kennedy (Winnipeg):*

Q. You can have health control without price control?—A. Yes. I get what you mean now. Do you mean that the utility board is affecting the quality of milk?

Mr. KENNEDY (*Peace River*): Yes.

The WITNESS: No, I would not say that; but in Winnipeg, I believe, the board are considering issuing licences or have done so. I think it is just in process.

*By Mr. Ilsley:*

Q. I wish you would not get away from that first question, is the consumer paying more where you have control or is he not? The producer is getting a lot more, apparently?—A. Dealing with the consumer now, directly—

Q. I am talking about the consumer?—A. I will answer that in this way, that in Medicine Hat, where there is not control, at the present time the consumer is paying 10 cents and the producer is getting \$1.80.

Q. Talk about the consumer now. You are just confusing it. The question was about the consumer, and you said something about practically the same?—A. Well, answering it this way, the price the consumer pays in other cities in Alberta where there is not control is the same, 10 cents per quart.

*By Mr. Heaps:*

Q. For the same quality of milk?—A. Surely.

*By Mr. Edwards:*

Q. Do they pasteurize in those independent towns?—A. Yes, in the two I have referred to, Medicine Hat and Lethbridge.

*By Mr. Ilsley:*

Q. You say the producer gets less, yet the consumer does not pay more?  
—A. Surely. The spread is decreased.

Mr. FACTOR: What happens in those cities where there is no control?

Mr. KENNEDY (*Winnipeg*): It is the same.

*By Mr. Kennedy (Winnipeg):*

Q. The producer gets less; who gets the spread?—A. The distributor.

*By Mr. Ilsley:*

Q. The effect of this legislation was to cut down the profit of the distributor?—A. Yes.

*By Mr. Young:*

Q. When you say they pay 10 cents at Medicine Hat, that is 10 cents delivered at the door; what is it in the store in Medicine Hat?—A. I could not tell you.

Q. You don't know whether it is the same in Calgary?—A. I don't know that there is very much store business there.

*By Mr. Kennedy (Peace River):*

Q. Is there better control of the quality of milk under the Public Utility regulations in Alberta, say in Calgary and Edmonton, than in other cities where there is not that public utility control?—A. It is controlled from the standpoint of the municipal health board, and there is much better control in Calgary and Edmonton than in Lethbridge and Medicine Hat.

Q. Is that due to the municipal authorities alone, or is it due partly to the public utility control?—A. Due entirely to the municipal authorities.

*By the Chairman:*

Q. It is a health matter, separate from this other feature?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. There is another point, Mr. Bailey; you mentioned several times that as the producer got better prices for his milk, he was able to provide better equipment; does that make it easier for the health authorities to guarantee to the consumer in these cities, Calgary and Edmonton, a better supply of milk?—A. Surely; it has a real definite effect in that regard.

*By Mr. Ilsley:*

Q. What percentage is the distributor permitted to earn on the fair value of his property, assets and undertaking?—A. Up to date that has not been considered at all. They have not gone into the question of capitalization, or even overhead.

Q. They are making a wild guess at it then, are they not?—A. Yes.

Q. It is not on a scientific basis at all?—A. Of course the statements submitted by distributors over their whole business have shown a profit.

Q. In order that you will understand what I mean, in the province that I come from, there is a provision of the Public Utilities Act that a public utility shall be entitled to earn only an amount equal to 8 per cent of the fair value of its property, assets and undertaking. That is the basis of the price in our province, the public utility price?—A. The distributors have not asked for it yet in the province of Alberta, and there has not been any real consideration given to it.

Mr. FACTOR: How do they fix the price of \$1.95?

Mr. ILSLEY: On a wild guess, he says.

The WITNESS: Well, perhaps this was taken into consideration; they show a definite profit over all.

*By Mr. Kennedy (Winnipeg):*

Q. It was a matter of negotiation, was it?—A. Well, really, I think it was an arbitrary figure. The distributor would like to have held us to \$1.65, which we would have sold for.

Q. The producer would like to have got more than \$1.95 and you compromised on \$1.95?—A. The basis we asked for was on the basis of the consumer paying 10 cents per quart. We asked \$2 per hundred or a fifty-fifty basis. We used to get that, or a little more.

Q. Without all this explanation, does it not come down to this: That in arriving at the fixed amount, the producers wanted more and the distributors wanted to pay less, and you arrived at a compromise, not on a scientific basis but on a basis of compromise?—A. No, it was not a compromise; it was an arbitrary figure set by the board.

*By Mr. Kennedy (Peace River):*

Q. How much would you have to get in order to get cost plus; you mentioned that?—A. Well, we would have to get in the neighbourhood of \$2 per hundred pounds.

*By Mr. Factor:*

Q. You get \$1.95?—A. No. \$1.45.

Q. Including surplus?—A. Yes.

*By Mr. Young:*

Q. You would not be satisfied with a 40 cent increase?—A. Well, it would be an awful help.

Q. Still you would want 16 cents more?—A. That applies to any business.

Mr. FACTOR: That is human nature.

The CHAIRMAN: We will have to try and get a little progress, if we can. Are there any more questions? Thank you, Mr. Bailey.

The witness was discharged.

C. W. HAMBLY, called and sworn.

*By Mr. Parry:*

Q. Mr. Hambly, you are a member of the local legislature in Ontario for the counties of Lennox and Addington?—A. Frontenac and Lennox.

Q. Residing in Napanee?—A. Yes.

Q. And you are by occupation a drover?—A. Yes.

Q. And have been for how many years?—A. I have been for between twenty-five and thirty years.

Q. And specializing in hog shipments?—A. I have shipped hogs for about twenty-five years, perhaps a little over.

Q. You have shipped hogs for twenty-five years; and is it not a fact that it is customary to ship live stock products from points east of Belleville to Montreal, in the main?—A. Well, it is of late years. It did not used to be so much so as it is of late years.

Q. But of late years you have been shipping a considerable proportion of your stock to the stockyards in Montreal?—A. Yes, of late years; all the stock that I ship, unless it is once in a while a load of cattle has gone to Montreal or sometimes hogs have gone up to Hull.

Q. To Hull, Quebec?—A. The Canadian Packers at Hull.

Q. The committee learned from a witness yesterday that up until last summer—that would be early in the summer of 1933—in connection with the marketing of hogs, the purchase of hogs on the stockyard was at a flat rate; that is to say, the only differential would be a dollar for selects?—A. Yes, Montreal has been that way for some time until very lately.

Q. Do you remember the change in the method of settlement coming into operation last year?—A. Well, yes I do, to quite an extent. It got so later in the summer of last year that you were being docked 25 cents a 100 for your light hogs, and apparently it was about that until very lately.

Q. By very lately do you mean within the past month, or during the currency of this month?—A. I would say within a month.

Q. And have you any particular instance in mind which you can refer to where the differential was decidedly increased?

*By Mr. Ilsley:*

Q. You were docked from your bacon prices?—A. Yes, the lights, what they call lights or under 160 pounds.

Q. That would be 25 cents a 100 pounds?—A. Yes, 25 cents a 100.

Q. Less than the bacon hog price, is that correct?—A. Sometimes 50 cents a hundred.

*By Mr. Parry:*

Q. Was there any particular medium—taking Mr. Ilsley's question—of knowing what you were to be docked as a differential?—A. No.

Q. Within the past few months?—A. No. You found that out after you got to market.

Q. You took what you received?—A. Yes, we took what we could get.

Q. You just stated that in March of this year there was apparently a large increase in the application of differential schedules?—A. Well, we were notified by the packing house at Hull that there was going to be at their yard, at their packing house, a different plan or scale under which they would be docking butchers, lights, heavies and extra heavies.

Q. Now, did you in this month send any shipments to the stockyards at Montreal?—A. Yes. Being at the House in Toronto I did not have a chance to be home, but I was home on the Friday, and on Friday morning I was told by a commission man in Montreal that I had better not ship any hogs. That would be around the 10th day of March. I always used to ship on Saturday. Saturday came on the 10th and he told me I had better ship no hogs at all, but some fellows who usually buy for me had some calves, so that I was in a position where I had to go and load the calves anyway. While I did not care to buy any hogs there were some farmers who usually had sold to me who wanted to get rid of some so I thought perhaps I would take a few as I would likely have a load and in that way I could take a deck of hogs and calves.

Q. And you did ship?—A. Yes, I shipped on the 10th. I sent out a price of 8½ cents for the good hogs.

Q. First of all, will you tell us what the quantity was that you shipped on the 10th of March?—A. 105 hogs and two sows.

Q. Have you your invoices and statements with you?—A. Yes.

Q. You might have those in front of you in going over the particulars. Now, this shipment was a shipment of 105 hogs and 2 sows. And how did you grade them for the purposes of shipments?—A. Well, I just graded them as I had been grading before, and I sent out my price of  $8\frac{1}{2}$  cents.

Q. Is that for bacon hogs?—A. For bacon hogs, yes, plus one dollar for selects.

*By Mr. Parry:*

Q. How many selects did you grade?—A. I was paid \$12 for selects.

*By Mr. Ilsley:*

Q. \$1 per hog?—A. Yes.

*By Mr. Parry:*

Q. And you graded some selects then in that particular shipment?—A. Yes.

Q. What other grading did you make?—A. Well, I just did as I always had done, just as long as I had my number of selects, in fact, I generally considered that I would try to have more, one or two, but sometimes I had less than that.

Q. You mean to say that your practice then was to put in more selects than were actually paid for in the stockyards?—A. That is the trouble with the grading of hogs. The farmers receive back from some department the number of selects that would be in my load, but as I say I generally tried to put in one or two more, that is, I generally paid for more selects than I received pay for at the market.

Q. Will you just follow that shipment through from your records?—A. Well, on that date, March 10, I shipped 105 hogs and 2 sows. The hogs got to the market on Sunday and on Monday there were sold 49 hogs at  $9\frac{1}{4}$ .

Q. By the way, were those particular hogs sold to the packer or to the small buyer?—A. They were not. As I understand it, we could have sold the whole bunch of hogs to the Canadian Packers if we would take  $9\frac{1}{2}$  for our bacon plus a dollar for five selects.

Q. Five selects of what you had graded as twelve?—A. Yes. The price for the lights would be 9 cents. I cannot just tell you how many, but I would suppose there must have been about 29 butchers hogs that they were going to pay  $9\frac{1}{2}$  cents for.

Q. Is that the general price?—A. Well, that was what they were trying to put in force through the packing house.

*By Mr. Ilsley:*

Q. That is the differential you are talking about?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. What would the average of the hogs be?—A. Butchers hogs weigh from 160 to 235 pounds.

*By Mr. Factor:*

Q. That differential has existed for sometime, has it not?—A. No, not in Montreal.

Q. It was only 25 to 50 cents before?—A. No, there was no difference in Montreal between a bacon hog and a good butchers hog.

*By Mr. Parry:*

Q. Until last summer when there was a demand made.

The CHAIRMAN: Until a couple of weeks ago.

The WITNESS: I never heard of anything of the kind until they began to talk this on the 10th of March last.

*By Mr. Parry:*

Q. But you were paid the differential last summer that you had never been paid before.—A. On lights, yes. With regard to those light hogs frequently they were sold at the same price that our bacons were.

Q. Now, will you just go on and follow that shipment through. You have told us about the first lot, I think you said 49, that were sold?—A. 49 were sold at  $9\frac{1}{4}$  and they were sold on the 12th. There was nothing more sold that day except the sows which were sold for  $7\frac{1}{4}$ . I was in Montreal that day and stayed until night because I was watching that shipment. Then on the following day, Tuesday the 13th of March, they sold in one bunch 15 hogs at  $9\frac{1}{4}$ .

*By the Chairman:*

Q. The same price?—A. Yes. Then they turned round a little later and they sold 14 more at  $9\frac{1}{2}$ . That left me then with 27 hogs, 5 of which were my selects. I was told by the commission man, Mr. Marr, that he never got another bid for my better class of hogs that week.

*By Mr. Parry:*

Q. And you kept them there and fed them there that week?—A. They were fed there at my expense.

*By Mr. Kennedy (Peace River):*

Q. You could not get another bid for your selects?—A. No.

Q. I thought that was the only hog the packer wanted?—A. The packing houses certainly do take that kind of hog, but I will tell you this, the packing houses won't buy my selects away from the rest of the hogs. This is an illustration, if they cannot get my light hogs and my other hogs at their price they would not buy my bacon hogs and my selects at all, and I think you will find that to be the case in every instance. I would like to make another statement if it is not out of the way. The same thing applies to lambs. For instance, we will say you have a good load of lambs and that there are ten buck lambs and the season comes when they will not take the buck lambs among the ewe lambs. If you take your buck lambs out they will not buy your ewe lambs.

*By Mr. Parry:*

Q. For domestic purposes, is there any difference between the buck and the ewe lamb?—A. I don't think so, I never knew of any.

Q. And if you take your buck lambs out they won't buy your ewe lambs?—A. That is right.

Q. And are you penalized for the buck lambs?—A. Well, they will buy your lambs and weigh them all up and for every buck lamb that you have got in the load they deduct \$2 a lamb.

*By Mr. Young:*

Q. Unless they can get them all they won't buy any?—A. That is so.

*By Mr. Factor:*

Q. That is your personal experience?—A. Yes.

*By Mr. Parry:*

Q. What you say is, that you carried these selects in the stockyards at your expense without even having had a bid for them?—A. I think they got in there on one Sunday and did not sell them until Monday the week following.

*By Mr. Factor:*

Q. Who did you sell them to?—A. Those hogs were sold to Mr. McGarry, a smaller packing house than the Canadian Packers.

*By Mr. Young:*

Q. Were there no bids all that week?—A. There never was a bid all that week.

Q. There wasn't a bid of any kind?—A. No, there wasn't a bid of any kind.

*By Mr. Factor:*

Q. On the balance of your shipment?—A. Well, I was not there but the commission man—Mr. Marr—said there was no bid made.

*By Mr. Kennedy (Peace River):*

Q. Who bought the hogs that were sold?—A. The hogs that were sold on the 12th of March, that was on the Monday after they got there on the Sunday, were sold to a man named Goodman Fox. He is a Jew, a very decent fellow too.

Mr. FACTOR: Dealing in hogs?

Mr. PARRY: We should investigate that matter.

*By Mr. Factor:*

Q. Is he one of those speculators?—A. There were 49 sold that day. The two sows were sold to the Canadian Packers, and those were all the hogs that were bought from me that day. On Tuesday the hogs that were sold were sold to a fellow—I suppose he is a Jew—named Ctovsky. That is the way he spells his name. He paid  $9\frac{1}{4}$  for them on Tuesday; that was 15 hogs. 14 hogs were sold to McGarry. As I say, McGarry is a smaller packing house than Canadian Packers.

Mr. FACTOR: I wish you would leave out the nationality of these people, it is rather embarrassing.

The WITNESS: There is not much disgrace in being a Jew because they always have the money.

Mr. FACTOR: I am going to take issue with you on that.

*By Mr. Parry:*

Q. What did you receive for the last shipment of your selects?—A. The last shipment was kept there that length of time and they sold 27 hogs weighing 5,030 pounds for 9 cents.

*By Mr. Young:*

Q. And your selects were among them?—A. My selects were amongst them; they got my lights with the 5 selects and they were sold to McGarry who had bought 14 hogs the week before.

*By Mr. Parry:*

Q. Now, have you compared the price which was offered to you by the packing house with the money actually received by you in selling through competitive sources by grades?—A. For this load?

Q. Yes?—A. Yes.

Q. And what does it show?—A. Well, if the hogs had sold on the 12th of March at their prices I would have lost money.

Q. You would have lost money?—A. I would have lost a little money, yes; keeping the hogs a week and selling the butcher hogs and the light hogs as I did I got out with somewhere between \$25 and \$30, not all on my hogs, because I had a double deck. The calves made me \$103, so on my shipment I was ahead somewhere about \$30.

*By Mr. Factor:*

Q. You lost on the hogs?—A. The hogs would lose me money that way, but I would have lost a little more money selling the week before.

*By Mr. Young:*

Q. The last sale you made was the sale of 27 hogs and you say your selects were included in the 27?—A. These 27 hogs along with the selects were hogs that the packing houses ought to buy, but it looked to me as if to get square with me they just let me keep the hogs there till they eat their heads off.

Q. Why would they do that?—A. Because I had sold my lighter hogs and butcher hogs away from them.

Q. The first day you went in the packer would have bought your entire carload?—A. Yes, that is the way I understood it. The 9½ would be only for 27 hogs.

Q. And you had 49 bacon hogs in your car?—A. No, 49 light hogs. They were hogs that averaged less than 160 pounds, but outside of being light they were nice and round, and well finished hogs.

*By Mr. Kennedy (Peace River):*

Q. And the farmer gets about 25 for light hogs?—A. Yes, I had paid the farmers 25 for light hogs.

*By Mr. Parry:*

Q. What would you say as to the use of butcher hogs for domestic purposes as contracted with bacons and selects for local domestic consumption?—A. Well, I know that in our town if the butchers there are buying hogs for the domestic trade they do not want the heavy hogs. They want a hog that will weigh about 150 to 160 or 175 pounds.

Q. What you would characterize as a light hog?—A. Yes. The light hogs that are well finished in our town are butcher hogs.

Q. And is there any distinction, to your knowledge, in the price which the butcher pays for pork? I am talking now of what the butcher pays for pork.—A. The butcher first generally inquires what we are paying for hogs and, of course, he tried to buy the hogs he wants in accordance with the price that we are paying for hogs.

Q. That is not my question. I am trying to find out if there would be a possibility of the butchers buying light pork in preference or alongside of the bacon and selects and paying the same price in the market?—A. As far as that goes, the butchers in our town, for cutting up, would not buy these selects and good bacon hogs. A bacon hog has to weigh from 180 to 235 or 240 pounds.

*By Mr. Senn:*

Q. Do you know what the preference is in Montreal?—A. On the market?

Q. Yes, do the butchers in Montreal prefer a light hog or a heavy hog?—A. Well, I think the butchers in Montreal try to buy for their trade the light hog, and of course, a butcher hog is defined in their manifesto for grading hogs as weighing from 160 to 235 or 240 pounds. Now, they want to dock you a dollar for a good butchers hog. I have watched them grading hogs and, in my

experience, the butchers hog will be put right among your select hogs. Of course, a butchers hog has not got to weigh up to 180 or 190 pounds to be a select, but has to weigh from 160 pounds up to that. Of course, he can go up to 240 pounds. What makes a select hog is a good type of bacon hog, a long hog, quite well finished just as your bacon hog which is fatter and makes him bigger and heavier in the shoulder than the select hog, and I claim if they are going to dock you for your butchers hog, especially where you have so many selects in a deck of hogs, a portion of them will be called butcher hogs and you will be docked a dollar instead of being paid a dollar premium. That is my claim.

*By Mr. Kennedy (Peace River):*

Q. Your claim is that they are grading hard, is that it?—A. Yes.

*By the Chairman:*

Q. Do you think the desire to buy a load all together, that is, selects, bacon hogs, and lights and heavies, is because it is possible to use what normally would be graded butchers for Wiltshire sides as bacons or selects?—A. Well, I think what the packing houses want most—and it is just my opinion—is to get the light hogs for this reason, as I understand it; I am not saying this is true, but as I understand it, in Montreal there are not the number of buyers going on the market that there used to be and the reason is partly this, that the packing houses say, “buy your light pork off me, I will sell you these light hogs cheaper.” You can go on the market and buy those hogs and send them to the Montreal abbatoir and have them killed. Now then, they fixed this so that they are going to buy your whole load of hogs and they sell back to the small buyer off the market which is to their advantage and they have him as their customer.

*By Mr. Parry:*

Q. And you have noticed that the small buyer in Montreal is decreasing?—A. The small buyer is getting scarcer in Montreal.

*By the Chairman:*

Q. That would turn a competitor into a customer?—A. Yes. I think I am telling you what is true.

*By Mr. Kennedy (Winnipeg):*

Q. I understood you to say that for the Montreal market it is the light hogs they want there?—A. Not necessarily, it is the hog that the small buyers—the butcher fellow wants; he is usually trying to buy a little lighter class of pork than what the packing house is.

Q. The other day Mr. McLean, giving evidence here, along the same point, he was asked:—

Q. Take, for instance, in the Montreal market, do you find there is a larger price paid for heavy hogs;

and the answer is:—

A. Yes. Most of the heavies get there;

and he goes on there a little further down to say:—

Q. But they pay more proportionately for heavies?—A. Yes, I think so at most times of the year.

He gave the impression that you could get a better price for heavies in the Montreal market than you could for the lighter classes?—A. There is this, if you have hogs that weigh over 240 pounds he is a nice hog. I cannot say

whether they would pay as much, but they dock you 50 cents less a hundred than for bacon; when he weighs over 270 they pay \$1 a hundred less for him; so that you see if a hog is a little past weight and they want to dock you, they will dock you.

Q. I am not questioning your evidence at all, it is just to clear it up. Your experience is they dock you because of their being heavy?—A. Yes.

Q. Then that is your evidence; your heavies were all absorbed on that market?—A. I most calculate heavies as heavies—180 or 190, to about 235; and then they want them with that reduction and they don't take them without that reduction.

*By Mr. Ilsley:*

Q. And you said, as I remember it, that they paid as much for heavies as though they made a deduction for heavies—and that is quite a heavy differential, from \$2 to \$2.50 a hog?—A. Yes.

Mr. SENN: The evidence was that that was fixed by the order of an organization called the Joint Swine Committee.

The CHAIRMAN: In Toronto.

Mr. ILSLEY: Only in one market?

The CHAIRMAN: That is the point. The point at issue, Mr. Ilsley, is this: up to March 10, or very recently, the Montreal market has not followed the practice in Toronto, and at some of the other markets, of having an arbitrary differential. It has been an open market, but for some months they have made attempts, and they are now trying to get on that market, or live stock exchange, the same rules that obtain in Toronto and at some of the other points.

The WITNESS: Yes, that is what they are trying to do.

*By the Chairman:*

Q. Now, in your opinion, as a drover doing business on the Montreal exchange for 25 years, would the application of the fixed differential to the Montreal market be an advantage to the producer?—A. No.

Q. You think it would be to his disadvantage?—A. It would be to his disadvantage.

Q. You are quite clear on that?—A. Yes. This is what would happen, if they could get this scheme working in Montreal they would do this: the fellow who was buying hogs in the country locality has got enough to do to keep the farmer satisfied without him losing lots of money paying for selects. As quick as you would go begging the farmer for butcher hogs, as they call it—would weigh around 280 to 290—there is where the trouble would be in the drover keeping his customers satisfied, I claim he could not do it.

*By Mr. Ilsley:*

Q. There was a gentleman here yesterday who said it was a good thing to encourage the production of bacons and selects, as good hogs as possible, and he did not object to the differential payment. He was speaking of the Toronto market. Would that be an advantage in Montreal?—A. Well, I am not in the Toronto field to-day and do not know what they do there. We buy a great many hogs from Western Ontario, right west of Toronto, and they go right through there and on down to Montreal.

Q. That is the case, is it?—A. That is the case, I know it, and see it there. There is a fellow by the name of Knight, who lives at Ridgetown, and I have seen him have as high as ten loads of hogs that were brought into Canada Packers and brought right in to the market at Montreal. Now, that is from the cornbelt; Ridgetown is in the corn belt, and they grow a lot of hogs there, and they go to Montreal.

*By Mr. Senn:*

Q. There would be a small percentage of those which would be bacon and selects?—A. Yes, a very small percentage of them that would be selects—but his selects, he gets a small percentage of selects—smaller than we have from our locality. I will say this that in places, in Montreal or Hull, they get a lot of these hogs which they consider about the best hogs the packer can get for killing and culling out for quality.

*By Mr. Kennedy (Winnipeg):*

Q. Mr. Chairman, I wonder if you would not clear up a point just there. Is the application of the differential which applies at the yards in Ontario held up with respect to Montreal because of certain governmental regulations which have not been passed in Quebec?—A. Well, I have always understood it this way—that the Quebec Provincial government would not pass the enabling legislation which the other provinces did.

*By Mr. Parry:*

Q. And they have not done so yet?—A. They have not done so yet.

Q. But in spite of that fact they are endeavouring to force the application of the differential to Montreal?—A. Yes.

*By Mr. Ilsley:*

Q. Just one other question: your evidence would indicate that there is a combine among the buyers on the Montreal market, the fact that you got no bid for five days for your 27 hogs, five of which were selects, would indicate that there is a combine among the Montreal buyers; is that correct?—A. I think there was an understanding then made—that it was an understanding that the packing houses in Montreal when we break up our loads of hogs, we would get no buyers.

*By Mr. Young:*

Q. What buyers were on the market at that time?—A. There was not very many packing house buyers there that day to do business.

Q. You say the buyers were not out?—A. I did not see them.

The CHAIRMAN: Would you ask him, Mr. Young, what buyers were there during the week?

*By Mr. Young:*

Q. Yes. What buyers were there during the week?—A. I was there—I suppose there were buyers standing around there—I think they—

*By Mr. Kennedy (Winnipeg):*

Q. Your feeling is that you were being disciplined?—A. Putting a penalty on me for not selling them hogs.

*By Mr. Young:*

Q. What buyers do you generally find on that market when you are there?—A. Well, there is Wilsils?

Q. Who are they?—A. A packing house, or an abattoir; then there is McGarry who has a buyer out.

Q. Is he a packer?—A. A small packing house; and Canada Packers.

Q. Were there any local butchers?—A. Yes, local butchers.

Q. Sometimes quite a number of them?—A. Quite a number of them.

Q. Any speculators or dealers at all?—A. No, once in a while there is a person there and he buy a few hogs to ship out to some outside place.

Q. The local butchers were absent this time, were they?—A. I could not say they were absent, I suppose they were around there—not trying to do anything.

Q. Do you think they were being influenced by some ring?—A. The local buyers—I could not say small buyers were; but they were the only ones that was buying. I have understood that some hogs, that is good hogs, that were shipped in on the 10th were left there, and were there on Monday—are there yet, not sold; just for the same reason.

Q. On Monday of this week?—A. I have understood that.

Q. Trying to break you all up. Have you had any experience shipping direct to the packing plants?—A. Yes, I have shipped to packing houses.

Q. How did they treat you there?—A. For years I shipped all the time to Harris Abattoir. When I first started shipping hogs—I started shipping hogs to Montreal until there came a time when there was an agreement between the packing houses that there was to be a certain line west of Montreal here somewhere near Kingston that the Montreal packing houses were not to buy hogs west of that line. So that cut me out. I had been shipping to William Davies, Montreal; and I had to stop; and I didn't ship any hogs for about a month, and then one day I was called to the telephone, and it was Mr. Jim Harris was talking—he called me and he wanted to know if I would buy hogs for him, and I asked him what I would pay, and he said, You have about as good an idea about that as I have—you go out and buy me a load of hogs and ship them here.

Q. That is to Montreal?—A. That is to Toronto. And I said, Well, Harris what will I pay. He says, You know as much about what you ought to pay as I do, but buy a good deck of hogs. I went out and bought the hogs and took them up to Mr. Harris to the Harris Abattoir. After the war things got a little different, and Mr. Harris died, and ever since then I haven't had very good luck selling hogs in Toronto, and I had to go to the Montreal market.

Q. They will buy west of Kingston now?—A. Oh, yes, they buy any place; but there is this, when you ship to the Montreal market you are shipping your hogs to a commission man, and you are taking all the chance there is.

*By Mr. Factor:*

Q. You don't ship direct to the packers?—A. Some of them do; this man Knight that I spoke of, he is shipping direct to Canada Packers.

Q. How does his business compare with yours?—A. He is further away from Montreal. I don't think he gets any more money for his hogs, he buys them a little cheaper.

*By Mr. Young:*

Q. Did he get the same treatment as you got on this occasion?—A. Well, I couldn't say. I know this week he had seven—I think it was seven—decks of hogs and he was afraid to go to Montreal, or go any place with them as far as that goes; but Canada Packers in Toronto bought his hogs—he took those hogs to Toronto and they fed those hogs and shipped those hogs on down to Canada Packers at Montreal. That is one of the reasons why Canada Packers in Montreal did not get in a corner.

Q. You mean they brought these hogs from Toronto?—A. He ships from Ridgetown, west of Toronto; he shipped to Toronto and Canada Packers fed them and shipped them to the packing house in Montreal.

*By Mr. Factor:*

Q. Then they reship them to the packing house in Montreal?—A. Yes.

*By Mr. Young:*

Q. You say they would have been in a corner without these hogs?—  
A. They wanted more hogs and they wouldn't go out and get them.

Q. That shipment enabled them to force down the price at Montreal?—  
A. It would help.

*By Mr. Senn:*

Q. Have you ever heard of a case where the drovers and shippers were offered a premium, or given a premium, to ship their hogs direct to the abattoir instead of passing them through the stockyard?—A. No, I never heard where they did get a premium—I cannot say it is true, nor isn't true—I do not know.

Q. Do you know of any special inducement offered along that line?—  
A. There might be an inducement offered in this way, possibly their grade might be a little better, or they might receive a little higher price for bacon—or anyway they might receive a little higher price for bacons on the settlement. I have a statement here—

Q. I think that is a very important question, I have heard that statement made?—A. I have a statement here anyway, that I think is sometime in February—wait just a moment, it won't take me long—here it is right here. There is a fellow by the name of Knox buys for Canada Packers at Hull, and this is what happens; he wanted my hogs, and of course my hogs were to be graded but I was to receive \$8.65 for my hogs. They had my hogs weighed and there were 64 hogs weighed—average \$8.65, it shows according to this—seven selects, I got \$7 for seven selects; then it goes on, sixteen bacons, thirty butchers, two sows. Now, it didn't make any difference about the grade that day, they paid the same thing for the whole bunch.

*By Mr. Parry:*

Q. And that amounted, without the grades, to what they had said they would pay, down to the last cent?—A. Yes.

Q. Now, there is something I would just like to develop for a moment. You were saying that the competition in Montreal is between Canada Packers, Wilsills, and several small concerns; are Canada Packer' and Wilsills' prices generally in line?—A. Well, generally, yes:

Q. Are they ever not in line?—A. Well, I have seen them when they were not.

Q. And what was the result?—A. Well, the result was—I think about four weeks ago that Wilsill would not stand for what Canada Packers wanted and he went out and bought his hogs at a higher price.

Q. And the producer got more money?—A. Not the producer, the drover got it.

Q. The drover, I am not used to these terms. Do you suggest that there was any row, or was that just a temporary thing?—A. It wasn't just satisfactory between the buyers for Canada Packers and the buyers for Wilsills after hogs.

Q. You have had experience on the Toronto and the Montreal market, and comparing the competition of ten years ago with the competition of to-day, what would you say briefly was the fact?—A. Well, I haven't had anything on the Toronto market except some cattle for quite a while, but there is not much competition, when you have a load of cattle on the Toronto market among the buyers.

(Mr. ILSLEY, Acting Chairman).

Q. No competition?—A. I consider it no competition at all.

Q. I see, and the same thing in Montreal, except that there appears to have been a falling out between two of the houses?—A. That is about it, yes—I think there is a bit of competition here in cattle.

*By Mr. Factor:*

Q. Mr. McLean tells us that the packing business is the most competitive business in Canada?—A. I think the drover's business is.

*By Mr. Parry:*

Q. In a community where there is a stockyard would you recommend that cattle be sold through the stockyard, or direct to the abattoir?—A. Well, I have this in my own head—since I have been selling hogs, I think all hogs and all stock ought to go right all to the stockyards. I would say another thing. I think that if the government would take and do away with all graders and all the offices of graders, they would save a whole lot of money, and if they want to improve the hog, and the bacon hog, let the government take a portion of that money, and I do not think they would have to take it all, and let them place in every neighbourhood two or three good boars and sows, and give them free to the farmer. That will do more to improve the hogs in this country than they are doing now.

Q. Is one dollar enough to pay for the raising of a select hog, above the bacon grade?—A. I claim that if a person has got a select hog, that a dollar is no good, they should have three dollars at least for that select hog. I don't care how good a bunch of hogs is bred—there is no breed that is better than the Yorkshire as far as that goes—but if a man has got a good litter of Yorkshire pigs, and he has a good place for them and he grows them right straight along and gets them to market at about five months' old—weighing somewhere around 190 to 200 pounds and if he sells them just then as bacon hogs, he is getting more money than if he tried to raise them and have them all select—for he can't feed them so good, can't grow them so fast and have select hogs of them. It does not pay, considering the difference, to raise the select hogs.

Mr. SENN: I think I agree with you on that.

*By Mr. Senn:*

Q. Would you advocate having hogs on a flat basis?—A. I advocate this, if there was nobody bothering the drovers, the drover comes to the country and if he comes across a good bunch of hogs, he has got to pay pretty well to get that bunch of hogs, or his competitor—and there is competition among the buyers in the country—if he does not give a good price for that bunch of hogs, some other fellow will go and buy them. Then if he comes across an inferior bunch, he has got to buy them so that he can sell them on the market and get out.

Q. It is not part of the practice—I have sold hogs to drovers for years, and I never had a drover, up until the time the Hog Grading Act came into effect, that paid me any more than he paid my neighbour, no matter what the grade was, unless they were sows?—A. With the grading they can do that; all they have to do is pay you a dollar or more on your selects. But if the drover had to go out himself in the country and had no grade, he then would have to buy good hogs so that he could sell them on the market at the good hog prices. If he bought poor hogs, he would have to buy them so they would pay that price; let him take his hogs on the market, not to the packing house, and the commission man steps in and he will take out the inferior hogs and sell them for more than they are worth and he can get the usual price for his goods hogs. Let us do the same with hogs as they do with cattle, sell on their merits.

*By Mr. Parry:*

Q. Sell on their merits on the respective grades, not on the price—take all?—A. Yes.

*By Mr. Young:*

Q. You say you have dealt with stock on the stockyards, and got pretty rough treatment on the stockyards. Why do you want to sell them all there?—A. Well, if there were no hogs went over to the packing houses, they would be forced to not give us that kind of treatment, if they could not get the supply at the packing house. It makes a difference on how they are going to buy their hogs on the market.

Q. These packing houses ship their hogs to Toronto?—A. They did this week.

Q. Could they in that connection play one market against another?—A. Sure; they do it all the time.

The ACTING CHAIRMAN: The committee will adjourn until 3.30.

The committee adjourned at 1.10 p.m. until 3.30 p.m.

---

The Committee resumed at 3.30 p.m.

INGIMAR INGALDSON, called and sworn.

*By Mr. Parry:*

Q. Mr. Ingaldson, you are the manager of the Canadian Live Stock Co-operative (Western) Limited and secretary treasurer of the Manitoba Co-operative Live Stock Producers' Limited?—A. Yes sir.

Q. You come from Winnipeg?—A. Yes.

Q. And you were formerly a member of the legislature?—A. At one time, yes.

Q. When you say you are manager of the Canadian Live Stock Co-operative (Western) Limited, that is the organization referred to by Mr. Barr yesterday?—A. Yes, jointly operated by the two provincial organizations in Manitoba and Saskatchewan.

Q. I understand you are filing with the committee a brief of the views of your association and that it is your intention this afternoon to explain and to amplify and contract the brief in accordance with the wishes of the committee. Would you please file the brief now as an exhibit?

(Brief filed as Exhibit 71).

I understand that for the convenience of this committee you have prepared additional copies. Now, will you proceed?—A. Mr. Chairman and gentlemen, we appreciate naturally very much the privilege of appearing before this committee. In preparing the material we have endeavoured to prepare it largely from a marketing point of view, and, also, of course, from the producers' point of view. Now, I will follow the brief fairly closely and just discuss the various points taken up and will endeavour not to take up too much time because I know time is one of the factors we must always remember. On the first page we have example number 1, as I have numbered it. That deals with the spread between the consumer's dollar and the producer's dollar; and in bringing this in we admit at the outset that we have not got facts enough to give evidence worth while, but we do it for the purpose of bringing it to light in the hope that some definite information may be secured in connection with spreads between what the producer receives for his live animal and what the consumer actually pays. Now, example 1 is an example covering one steer that was marketed on the St. Boniface market last fall, and it gives you an idea of what is actually taking—of what actually took place in connection with that particular steer. I will mention the steer later.

Q. Excuse me. I think for the purpose of the record—because the exhibits are not always available—it would be well if you would give the details without

going into the conclusions, giving figures indicating certain costs and certain net returns. That would assist very much in the evidence afterwards.—A. In example number 1 we indicate the actual amount that the steer sold for on the St. Boniface market in September. That was a top quality steer that sold at  $4\frac{1}{2}$  cents at that time.

*By the Chairman:*

Q. Is that net to the producer—\$39.28?—A. Yes. I was going to explain briefly there the expenses in putting that particular steer through the market. The condemnation insurance all through the Dominion is one-half of one per cent. That is not exactly the same on all markets, but condemnation insurance is used; and then the average cost of marketing an animal from Manitoba points is about 55 cents a hundred or \$5.50 as the cost of marketing the animal.

Mr. FACTOR: That represents all the charges?

The WITNESS: That is all the charges.

Mr. YOUNG: That has nothing to do with killing?

The WITNESS: No. That is on the market until the animal is actually sold. That means that the producer received \$39.28 for that particular steer. Then there is a statement there showing the dressing yield, and the fact that the steer was sold out of the processing house at 8 cents a pound for \$44 for the carcass.

*By Mr. Factor:*

Q. Is that an actual fact or an illustration?—A. No. It is an actual fact according to the information secured for this specific purpose. Then there is the value of the offal which brings the value of this steer out of the plant really at \$53.32. Then the retail price is—550 pounds of beef were sold at \$58.19 and the value of the offal \$8.32, making a total of \$66.51. The producer realized \$39.28 for this particular steer. So there was a gross through the plant and retail of \$27.23.

Q. You do not give the cost of processing that steer.—A. No. I did not get that information fully enough to give, but they had the value of the offal less the \$1 that they sold the carcass less than what they actually bought the steer for. What the processing house in this case got on the offal was \$7.32, and the point I am trying to bring out is that the producer only realized 60 per cent of the value of that particular steer.

Mr. YOUNG: The packing house got \$8.32 for the offal and they lost \$1 on the steer. So that their costs must have been \$7.32?

The WITNESS: Yes, \$7.32.

Mr. YOUNG: And the rest of it must have gone to the retailer.

The WITNESS: The retailer, yes. \$14 and some odd cents of it went to the retailer. I have the detailed statement but I cannot lay my hands on it.

*By Mr. Factor:*

Q. I cannot understand that statement. You say the value sold by the processing plant, out of which must come the cost of processing is \$52.32. Now, do you take off the \$7.32 in the processing?—A. The gross value of the steer is \$45. That is the top figure. The plant sold the beef to the retailer, the man that is going to retail it over the counter, for \$44; therefore, they lost \$1 in the transaction. Now, to offset their work of processing they have the value of the offal which is \$7.32.

Q. That is their gross?—A. That is their gross in that particular case.

*By Mr. Young:*

Q. The offal includes the hide and the liver?—A. Hide and liver.

Q. The heart?—A. The value of the offal at that time was hide,  $7\frac{1}{2}$  cents, \$5.25; edible fat 80 cents; tongue  $10\frac{1}{2}$  pounds, 42 cents; liver 9 pounds, 42 cents; heart 4 pounds, 8 cents and other minor casings 5 pounds or 65 cents. That makes a total of \$8.32.

Q. They do not say anything about the value of fertilizer?—A. Manure and moisture, 254 pounds, no value. Going on with this particular statement, we are of the opinion that it does not present the average that the producer realized. You can take a 3 cent steer at the same time and the beef will be sold fairly close to the better quality beef and the offal will be worth more, that is in comparison with the original cost, and consequently that figure of 60 per cent is rather high; but we have no definite, authentic information, and that is really the reason why this was brought in—so that it would be studied a little further and we would get that information so that the producer would have an idea what is taking place.

Now, example number 2. I am not going to read it over. It was merely taken from an American journal showing the result of some study that was made by Professor Ashby of the Illinois College of Agriculture.

Now, that pretty well covers the two examples. In the American statement,  $43\frac{1}{2}$  per cent of the value went back to the producer,  $56\frac{1}{2}$  per cent was taken up in the cost of delivering to the market, processing and selling to the retail trade.

Now, then, we have example number 3 which sets out the actual cost of handling a carload of live stock through our markets. It sets out the expenses in detail, giving the various charges and the cost per 100 pounds.

*By Mr. Factor:*

Q. What is a mixed carload?—A. A carload that contains so many cattle, so many calves, so many sheep and so many hogs, or lambs as well, if the case is such. You can see the figures there setting out the various costs. First of all by the hundred and then the percentage of cost. Now, example number 3 deals with a small carload of live stock, 12,000 pounds and the expenses are set out in the same way, showing that the expenses are a little higher on a small carload of live stock which takes up the freight—the freight is a little more, and the selling commission is a particle more.

*By the Chairman:*

Q. Before you leave that. In this example number 3, which is a mixed carload of 2,200 pounds, you show a charge for the freight and marketing. That is the marketing in the live stockyards?—A. The St. Boniface market.

Q. Of \$22.90?—A. Yes, that is the total.

Q. Or 55.8 a hundred pounds?—A. Yes.

Q. All right. Go ahead with number 4?—A. Number 4 is a similar statement showing the cost of handling a light load of 12,000.

Q. Number 4 shows a light load?—A. A 12,000 pound load.

Q. You show a charge of \$81.90?—A. Yes.

Q. That works out at 68.3 a hundred pounds?—A. 68.3 a hundred pounds. The object there is to show that the lighter load will cost more to market.

Q. Before you leave that, have you any particular comment to make upon those charges. For instance, the yardage or feed or commissions, or do you come to that later?—A. I have that in a percentage here. I think, possibly, I will cover it later under example number 5.

Now, in example number 5 is a statement showing the cost of marketing based on gross sale of 257 cars on the St. Boniface market during January.

*By the Chairman:*

Q. Is this actual?—A. Yes, actual. The total cost of marketing an average car from the Manitoba point is \$122.90. As in example number 3, this is worked out on the actual value of the 257 cars during the month. The total value was \$279,000 or \$1,086 per car, or, in other words, 11.03 per cent of the gross value. Now, the freight is taken care of and the stop-over privilege and unloading which is 4.7 per cent of that cost. Then we have the yardage and the feed. The yardage and feed there is 1.09, and during recent months we have had a good deal of discussion in connection with excessive charges or excessive costs at the yard, at public stockyards, and if you men analyse this fairly carefully you will find that the cost is not really excessive for the service that is being rendered in the handling of live stock.

*By Mr. Young:*

Q. That is yardage?—A. Yardage and feed.

Q. 1.09 is not of the value of the car but of the expenses?—A. No, 1.09 of the gross value of the car in dollars and cents.

*By Mr. Factor:*

Q. We have had a statement here that there was an allowance of \$10 or \$12 a ton profit on the feed?—A. Yes.

Q. In some cases \$20 at Toronto?—A. That is quite true. I do not know whether the committee wish me to go into that in detail, but here is the position roughly. Public stockyards have been built up at all the larger centres of this country of ours and they were built up at times, some of them in 1914, some in 1918, and some of them in 1920. Our yard at St. Boniface is an exceptionally good yard. We are proud of it. The cost is not too high, as I understand the cost of constructing. The service is rendered and the object there is to try to carry that organization if it is possible, and it has been found in order to carry that utility that they would have to have a charge for yardage and feed, and the question has come up whether it would be sounder business to increase the yardage charge and reduce the charge for feed or to leave the yardage charge as it now stands, which is set out in example number 3, and the charge of feed at the rate it is charged at the present time. My opinion is that it is just as well to leave the feed charges reasonably high, or rather simply say abnormally high, than to add on the yardage charges. Our plant in St. Boniface is under a provincial charter, and the charter says that they shall never earn more than 6 per cent of their paid-up capital and they shall never exceed 5 per cent depreciation on their plant.

During the last four or five years they have been earning at about the rate of about 3 per cent for depreciation and a similar amount—and sometimes nothing as far as interest on the capital is concerned.

*By Mr. Ilsley:*

Q. What is a fair amount for depreciation?—A. On a plant of that description 5 per cent is not any too high.

*By Mr. Young:*

Q. Do you keep the yard constantly in repair?—A. Yes, the depreciation fund has been used to quite a degree.

Q. Do you use the depreciation fund for repairs?—A. They have used that for the last few years.

*By Mr. Ilsley:*

Q. What about replacements?—A. You mean just ordinary everyday general repairs?

Q. Yes.—A. No, that comes out of revenue; but replacement—if a building is going to pieces or the roof is bad or something like that we call that really replacement and used money in the depreciation reserve for that purpose.

*By Mr. Parry:*

Q. Are you suggesting that the fee for yardage and the allowance for feed are not adequate to properly remunerate your company under present conditions?—A. It must be remembered that it is not my company that handles the public stockyards.

*By Mr. Young:*

Q. What do you mean by public stockyards in St. Boniface; this is a capital company, is it not?—A. Yes. The company is owned by the two railways jointly. That is the two railways contributed the moneys to build the plant.

Q. It has a provincial charter?—A. Yes, it is a subsidiary, operated as a subsidiary organization.

Mr. ILSLEY: I understood it had some connection with your co-operative organization.

The WITNESS: Not the public stockyard itself, no.

*By Mr. Parry:*

Q. I think you had better explain to the committee again the situation more fully as to exactly what the functions are, because I feel very much confused about appreciating the relationship of these figures to what you are doing?—A. Of course, the questions arose out of this 1.9 per cent for the cost of yardage and feed, and I merely explained the public market charge which is that charge.

*By Mr. Ilsley:*

Q. Does that 1.9 per cent have any relation to what appears to be the high charge for hay? You appear to reason from the fact that it has cost you 1.9 per cent that the profit on hay that the other witnesses complained about is not excessive?—A. It is all included in that 1.9 per cent.

Q. What profit have you been getting on hay?—A. They are charging now \$1.15 a bale on our market and they are paying, oh, I presume, between—around \$8 a ton for the hay they get in.

Mr. PARRY: Can you make that uniform?

The WITNESS: That would be \$23.

Mr. ILSLEY: A ton that you charge?

The WITNESS: Yes.

*By Mr. Young:*

Q. \$4.50 for handling and \$10 profit on hay; is not that the understanding?—A. No. There is no definite understanding as to the actual cost of handling it.

Q. We had some figures the other day. A witness said \$4.50 a ton was allowed for handling in the yard and from \$10 to \$12 in addition to that profit on the hay?—A. That is covered under the Live Stock and Live Stock Products Act, and I am not just sure of the relationship.

*By Mr. Kennedy (Winnipeg):*

Q. Will you just tell the committee what is the present cost per ton for hay to the yard and what the farmer has to pay for it?—A. Well, the present

cost is around \$8 a ton to the public market, and they charge at the rate of \$1.15 a bale, and there is supposed to be 100 pounds. That is \$23.

Q. It costs \$8 and they get \$23.

*By Mr. Parry:*

Q. And over and above that is that \$4.50 charge that is referred to?—A. No. That is all the charges. Of course, in that they have got to unload it and deliver it into the different alleys and look after it all the way through.

Q. Have you ever analysed these costs? Can you tell us how they are made up—so much for unloading and so much for handling?—A. No. That is not our business, and consequently it is general information that I can give as to what they are paying and what we are paying for the hay used for our animals, naturally.

Q. Now, could you let us have that because we have a spread of \$15. Can you break that up any further for the information of the committee?—

A. Not clearly. I have not got the labour costs in connection with the handling of that hay. It has got to carry a certain overhead and a certain cost in handling and delivering.

*By the Chairman:*

Q. May I ask you this question: you have worked out here on these 257 cars a charge of \$122.90 a car which includes freight?—A. Which includes freight.

Q. Have you any criticism of these charges?—A. A producer naturally when his product is selling as low as it was during 1933 has opposition to all of these charges because of the low net return that he receives; but what I am trying to make clear is that as an operator on a market I fail to see how those charges can be materially reduced.

Q. That is my point.

*By Mr. Young:*

Q. You have here selling commission \$20 and shipping managers commission \$26.40. Will you explain that?—A. The selling commission and pro rating is made up of an average fixed carload of cattle, \$15. That is, the maximum is \$17 and the minimum is \$10, and the average is approximately \$15.

Q. In this case it is \$20?—A. Yes. The pro rating is \$5. When the settlements are made out direct to the producer and there are thirteen owners or over in the carload shipment, that is those two costs combined.

Q. That is to say they get \$5 for dividing the money up among the thirteen?—A. Thirteen or over. We have as high as 90 in a carload. As far as our organization is concerned, the average is approximately 20.

*By the Chairman:*

Q. What is that shipping manager's commission, \$26.40?—A. The shipping manager's commission is paying the man that assembles that live stock at the shipping point.

Q. That has nothing to do with the charges at the yard?—A. No, nothing to do with the charges at the yard; but he is the man that looks after the stock from the farmer to the yards until it is sold. In other words, instead of the drover, as we commonly know him under the old system, this man is looking after the co-operative assembling of live stock, holding it, spending time in the country, and working with the producers, bringing it to the market and looking after it.

*By Mr. Young:*

Q. Is he the man who accompanies the car to market sometimes?—A. Yes, mostly.

*By Mr. Factor:*

Q. The problem from your point of view is not that the charges are too high, it is because the price of product is low; is that right from your point of view?—A. Yes, that is so. I refer again later in this brief to some of those charges.

*By Mr. Kennedy (Winnipeg):*

Q. I gathered the impression that the present rate even on mixed cars was \$17 per car and there was some question of it being reduced to \$15. Your set-up shows a Cross of \$20?—A. That takes in the two charges—the selling commission is one charge and the pro rating is another charge.

Q. I know; I realize that; but the actual cost per car is \$20. It is for selling the men's products to a packer and getting what is coming to them and giving them their cheque. That is the pro rating part. So that the cost to the farmer is at the rate of \$20 per car?—A. Yes, when the settlements are made direct to the producer for each animal that he happens to have in the car.

*By Mr. Kennedy (Winnipeg):*

Q. I gathered the impression that on the present rate, even on mixed cars, the commission was \$17 per car, with some question of it being reduced to \$15; your statement here shows a cost of \$20?—A. That takes in the two charges. The selling commission is one charge, and the pro rating is another charge.

Q. I know that, but the actual cost per car is \$20?

The CHAIRMAN: No, the two together.

*By Mr. Kennedy (Winnipeg):*

Q. It is selling the men's stuff and figuring out what is coming to them and giving them their cheque, that is pro rating?—A. Yes.

Q. So that the cost to the farmer is at the rate of \$20 per car?—A. Yes, when the settlements are made direct to the producer for each animal that he happens to have in the car. We will take as an example—

Q. That is clear; I understand it now?—A. If a man comes in with a car-load of live stock and he knows the man, one owner, then the charge is \$17; he gets just one settlement and one cheque, and the charge is \$17.

Q. The reason I raised that particularly, Mr. Ingaldson, was because it was represented to me by a commission merchant that at the present time they were only being allowed \$17 per car, and he gave me an invoice showing a number of owners, and stated in a case like that it was proposed to reduce it to \$15. He says, "We ought to have \$17; that is what we get per car now," and showed me this invoice. That was not a correct representation?—A. No. There is a pro rating charge when you make the settlement direct to a number of owners that are down with the cars.

*By Mr. Kennedy (Peace River):*

Q. Do any commission firms do pro rating and simply charge \$17 for the whole thing?—A. No.

Q. We had evidence here the other day that that was done in some cases?—A. Not according to the regulations that we are operating under on our market.

*By Mr. Young:*

Q. Are these charges that are made by the joint stock company at Winnipeg the same charges as the co-operatives charge at their yards?—A. Just what is your question again?

Q. For instance, at Regina and Saskatoon the co-operative association have their own yard; are their charges the same as these?—A. Yes.

Q. Identically the same?—A. Yes.

Q. All the way through?—A. Yes.

*By Mr. Senn:*

Q. You referred to that yardage and feed item; is the feed inspected in any way on the yards?—A. The feed is under the inspection of the Dominion representative who is stationed on the yard.

Q. And is it always satisfactory?—A. No, not always. The chop for the hogs, I would say, consistently satisfactory, but the hay is not always satisfactory.

Q. The reason I ask that is that I have heard complaints just along that line, that the feed is of a nature that the cattle are not very apt to fill up on, and they go over the scales still hungry?—A. What is in use on the St. Boniface market is ordinary midland hay, as we call it, that is cut off rather low land, inclined to be coarse.

Q. And it might be not well harvested, I suppose?—A. Well, commission firms complain very seriously if they get hay that is not up to standard; and I will say this that the public market company has endeavoured to give us good hay of that type. It is not cultivated hay, it is midland hay.

*By Mr. Kennedy (Winnipeg):*

Q. Just another point there, Mr. Ingaldson, dealing with that same item of yardage and feed, 1·9 per cent cost per car; I take it that the effect of your argument is this, that while the feed itself may be considered high, or abnormally high, yet taking the combined charge of feed and yardage together, that it is a reasonable charge; and further than that, that if you reduce the charge on feed you would have to raise the charge for yardage, is that it?—A. That is the situation, yes. Let me try and put it this way: We have a plant there, and if it is going to operate it will almost have to get enough revenue from year to year to make both ends meet. If this were cut down they would find themselves in a position that they would not get enough to make both ends meet.

*By the Chairman:*

Q. The long and short of it is that there is not much complaint that can be made of the charges on the Winnipeg live stock yard?—A. That is our opinion.

Mr. FACTOR: It is different, apparently, from the Toronto and Ontario situation.

*By Mr. Young:*

Q. Neither you nor your company have any interest in this yard; it belongs to the railways?—A. It belongs to the railways; they are joint owners.

Q. There is no water in their stock—and I don't mean the live stock?—A. I would say no. The actual amount of money that was put up to construct the plant is the actual amount of capital that was required to carry the plant.

Q. Is it efficiently managed; you have seen other yards, and you can compare them?—A. I would say yes.

Q. It is?—A. Yes.

*By Mr. Kennedy (Winnipeg):*

Q. It may seem superfluous, but when you use the term "public stockyards," I take it you do not mean that the public have any particular interest in it at all, but it is open to the public?—A. Open to the public.

Q. It is privately owned by this provincial corporation?—A. Yes.

Q. Any profits accruing go only to the shareholders in that corporation?—A. Yes.

The CHAIRMAN: All right, will you proceed?

The WITNESS: Is there any further question in connection with shipping managers' commission?

The CHAIRMAN: You seem to be satisfied with that.

The WITNESS: You understand just what that means; that is an active shipper.

Mr. FACTOR: If you are satisfied, we are not going to look for complaints.

The WITNESS: Transit insurance is charged to take care of any loss in transit of any live stock that is shipped forward.

*By Mr. Young:*

Q. Does that cover any animal that gets down in the cars and gets hurt?—A. Yes, it covers any animal that is hurt or killed in transit.

Q. One-half of one per cent?—A. No, it is so much per head. An example there, transit insurance, cattle and calves, ten cents per head; hogs seven cents per hog.

Q. It figures out to one-half of one per cent in the total?—A. No, it does not—well, pardon me, I didn't get your question. Yes, it is on this total; it is one-half of one per cent.

*By Mr. Factor:*

Q. In example five it is figured out?—A. Yes.

*By Mr. Kennedy (Winnipeg):*

Q. When you say that these rates are satisfactory to the producer, we can take it that you are expressing the point of view of the producers generally who use the St. Boniface stockyards?—A. My statement was that when the live stock is as low as it has been, that is in 1933, the producer naturally wonders whether this service could not be rendered at a lower price; but on the whole, I cannot see that the service could be rendered any cheaper than what it is being rendered at the present time.

Q. And the purpose of your association is to serve the producer?—A. To serve the producer as close to cost as we possibly can.

*By Mr. Edwards:*

Q. Under normal conditions, the producer would not have much complaint?—A. No, under normal conditions he would not have much complaint.

*By Mr. Young:*

Q. If this man shipped one of these cars to the packing house instead of to the yard, what of these charges could be eliminated?—A. The two charges would be eliminated, that is yardage and feed.

Q. Yardage and feed?—A. Selling commission and pro rating.

Q. That is all?—A. That would be the two charges that would be eliminated. The man looking after the shipping of the live stock would be paid as much when it goes to the plant.

Q. That would be 3·7 per cent?—A. 3·7, yes.

*By the Chairman:*

Q. All right, will you continue?—A. This example No. 5 is really put in there for information purposes. I do not know whether it is necessary to deal with the weight in carloads. I want merely to say this, that the minimum

weights do not apply just exactly the same all over. I understand that there are lower weights in certain parts of eastern Canada—lower minimum weights—than there are in the west.

Q. What is your minimum weight in the west?—A. 20,000 pounds for mixed cars; 16,000 pounds for hogs and sheep. Our contention is that it is a little high, and we deal with that in our recommendation at the end of this memorandum. About two years ago the railway companies put into effect a lower, reduced minimum. That is, you can ship a carload of 12,000 pounds—that is a mixed car—whereas before you had to pay for 20,000, but now you can ship a carload of 12,000 pounds.

Q. And get the 12,000 pound rate?—A. Yes. The rate, whereas it was 22 cents at the usual minimum, is 28½ cents.

Q. On the 12,000 pounds?—A. On the 12,000, and we feel that that is a little high.

*By Mr. Factor:*

Q. You mean the reduced minimum rate is a little high?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. How high should it be? What do you think would be right?—A. I would say about 25½ cents, a reduction of 3 cents a hundred, should be about a fair rate. Then the 6,000 pound rate is 39½ cents. I don't know that you can make much of a complaint there, owing to the fact that it is not used very often, and a 6,000 pound car will not give much revenue to the railway company, so I am not saying anything about that. But I do feel that on the 12,000 pound minimum the rate should be reduced slightly.

*By Mr. Senn:*

Q. Are those rates approved by the Railway Board?—A. Yes.

*By Mr. Edwards:*

Q. What is the average mileage hauled?—A. To our market?

Q. Yes?—A. Let me put it this way: Considerable quantities of Saskatchewan live stock come into our market. They come five or six hundred miles, but from Manitoba points the average would be about 100 miles. The total average, I would say, would be around 250 miles.

*By Mr. Ilsley:*

Q. Why does Saskatchewan stock go to Winnipeg instead of Saskatoon, Regina and Prince Albert?—A. Larger centres, and wider outlet for the live stock.

*By Mr. Edwards:*

Q. Probably a shorter haul?—A. No, they are longer hauls; it is the larger centre and the wider market. Then we have a paragraph here dealing with truck transportation. This paragraph also is more for information purposes. It gives you the various rates charged by truck. We find that there is a great deal of difference in the charges.

*By Mr. Factor:*

Q. Trucking costs to the stockyards?—A. Yes. We find a truck might be operating for say 100 miles distance from the market at 55 cents, we will say, or 50 cents; and another truck in another area might be operating the very same distance and charging 60 cents. There is no system of arriving at the charges that the trucks make. Then I go on to outline the cost of putting

animals through the public stockyard that are delivered by truck, and the cost is \$1.05 a head, full-grown cattle; 40 cents a head on calves; 27 cents a head on hogs and 26 cents a head on lambs; or in other words, approximately 12 cents per hundred pounds on cattle, about 13 cents per hundred on hogs, and about 26 cents per hundred on lambs. It is more for information purposes.

*By Mr. Factor:*

Q. What do you mean by putting the live stock through the stockyards; does that mean the same as the charges in example No. 5?—A. Yes. Those are the charges for trucking in live stock. The other is for a carload of live stock.

Q. But it is the same character of charges?—A. Yes; there is no charge for feed in that case. It is the yardage and selling commission. It is worked out on a per head basis.

*By the Chairman:*

Q. I suppose most of those brought in by truck are not fed?—A. Hogs coming a considerable distance by truck are fed, as a rule.

Q. That is extra?—A. Yes, that is extra.

*By Mr. Young:*

Q. Those trucks apparently deliver to the yard; don't they deliver to the packing house there?—A. They deliver to the packing house, yes.

Q. To a greater extent than to the yards?—A. I would say so, yes.

Q. The packing house gets more?—A. Let me clarify this; as far as hogs are concerned, yes; cattle, no. There is more goes to the yards of cattle than goes to the plant.

Q. I presume they find they can do better there, is that it?—A. On the average, yes, I would say that is so.

Q. The trucker finds he can sell his cattle to better advantage on the yard and his hogs to better advantage at the packing houses?—A. That is presumably the reason.

The next question we have there after these examples have been gone through, is a pertinent question, the effect of direct deliveries to plants. That is something that everyone I think, interested in the live stock industry is keenly interested in at this time. I think possibly I will read this particular part of the brief so we will have it fairly clearly before us:

The effect that direct deliveries to packing plants has upon the price levels at the public market is extremely difficult to prove in dollars and cents. It is generally recognized that the public market is the place where prices are established. This applies more in particular to hogs but in a general way applies to cattle and lambs. The cattle and lambs are sold on their individual merits whereas hogs are sold according to grade. The public market is the only institution that handles live stock where competition in selling takes place. At the public market various buyers, large and small, come to make their daily purchases. With large deliveries direct to processing houses it lessens the need of buying at the public market. If a buyer is in a position where he is indifferent whether he purchases any stock on a certain day, he will naturally endeavour to buy cheaper, which has the effect of lowering the level of the market. Some of the larger buyers, owing to the fact that they have had heavy supplies of direct deliveries to the plants, become indifferent as to the volume that they buy and in every case bid on a lower basis. If all live stock were purchased on the public market the buyers would be operating at a similar price level for the livestock that they purchase during a given period. If one buyer is able to secure his supply of, say, lambs as

an example, at a lower level due to direct deliveries for a given period than the average on the public market, he would be in a position to go out and offer his supply of lambs to the retail trade at a lower price, placing the buyers operating on the market in a position where they cannot meet this lower price in selling to the retail owing to the fact that they had purchased their supplies at a higher price. The result of this would be that all other buyers would try and buy cheaper in order to meet this competition, making the net returns to the producer somewhat less. The same, to a degree at least, can be applied to cattle. Hogs, owing to the fact that they are graded, cost the buyer almost the same.

*By Mr. Young:*

Q. You are assuming that the man who buys at the plant buys cheaper, and therefore he can sell cheaper, and therefore forces the local buyer who is out on the open market to come down; is that the case?—A. Yes, that is the opinion that we had.

Q. That is to say, when you take a load of hogs or cattle—not so much hogs, but cattle to a packing plant, the packing plant would sell it for less than the price you would get at the yard?

*By Mr. Factor:*

Q. We have had evidence that your market has been depressed by the action of the Toronto buyers more than the direct action of the buyers in the Winnipeg market. What do you say about that?

*By Mr. Ilsley:*

Q. If you will excuse me, I would like to have Mr. Young's question answered first, for my benefit?—A. Well, we have been in this trade for a number of years, and it is our candid opinion that the more volume a processor can buy direct, the stronger position he is in to be indifferent at the public market as to the price that we pay.

*By Mr. Young:*

Q. But your statement to-day is that he buys at the packing house at a lower price; if that is the case, it must be so much lower. What is it, a half a cent lower, or a quarter of a cent lower, or how much less does he pay?—A. I would not venture a reply there.

Q. Would you say that he buys any lower?—A. Yes, that is our opinion.

Q. Have you any figures at all?—A. Not to prove it.

Q. Any examples?—A. Purchases made, outside of hogs, at a processing plant are not open to the public.

Q. But the man who sells cattle can go out and tell what he got for them; there is no law against that?—A. Yes; and that, of course, varies.

*By Mr. Senn:*

Q. According to the quality?—A. No; the quality being the same, it varies according to the statement they make.

Q. There is a statement in this that the stockyard is the only place where live stock is sold on a competitive basis. We had a witness this morning who said that there was very little competition between buyers, the packers at certain markets. What is your experience on the Winnipeg market?—A. It varies. Some days we have very little competition. Other days we have reasonably keen competition.

Q. Why do you say you have no competition on certain days?—A. The buyers are indifferent.

Q. Do you think there is any combination among them, or collusion between them?—A. I would not venture to make that statement, no.

*By Mr. Kennedy (Winnipeg):*

Q. Before you go on, I think it is obvious that the owners of the stockyard would naturally want all live stock forced through the yards. That is obvious, is it not, in their own interests?—A. That is natural, yes.

Q. Is it your opinion that all live stock should be forced through the yard or that direct sale to the packers should still continue?—A. In our opinion, in the best interests of the live stock industry, we have said that the live stock should be sold through the public market.

Q. All sold?—A. All sold through the public market.

Q. You say in the interests of the live stock industry. Of course, there are different branches of that; there is the commission merchant, there is the packer and producer?—A. Yes.

Q. Would you say from the producer's point of view, it would be in his interest if it was all forced through the yards?—A. Absolutely.

Q. In the producers' interests?—A. Yes, that is my candid opinion.

*By Mr. Edwards:*

Q. He has competitive buyers?—A. Yes.

Q. The buyers at the yard with the packing company at the plant?

*By Mr. Senn:*

Q. Another question that I was asked yesterday of another witness was in regard to the practice which is allegedly carried out in certain stockyards, that certain alleys are open to certain buyers, and no other buyer goes down that particular alley on a certain day. Is there any such practice prevailing in the St. Boniface market?—A. The question is whether a certain alley is allotted to a certain buyer? That is the question?

Q. Yes?—A. The selling is not by auction; it is a man to man sale. The practice on our market is this, that we will agree to take in a certain buyer into the cattle alley to-day, we will say—

Q. Who is "we"?—A. That is our organization. I am speaking of our organization. We will agree to take in a certain buyer into the alley this morning, and if this buyer is prepared to pay the price that in the opinion of our salesman is the price, he is going to buy the bulk of the live stock in that particular alley that day.

Q. Where does the competition enter in there?—A. The competition is the ability of the man that you have in selling, in knowing what prices the animals should sell at on that particular day.

*By Mr. Kennedy (Peace River):*

Q. The competition is between the buyer and seller?—A. The competition is then between the buyer and the seller. If the salesman figures that the buyer is not prepared to meet him, he will turn him out and get someone else in.

*By Mr. Factor:*

Q. What you meant by competition existed in direct buying between the packer and seller?—A. In the direct buying between packer and seller.

Q. Yes?—A. Let me get your question.

Mr. KENNEDY (*Peace River*): At the yards?

Mr. FACTOR: No.

The WITNESS: At the plant?

*By Mr. Factor:*

Q. Yes?—A. Generally speaking, the man that delivers live stock to the plant is not a competent seller. Generally speaking—more in particular trucks—the man that delivers that live stock to the processing plant is not a qualified salesman.

*By Mr. Young:*

Q. He is a trucker?—A. He is a trucker, that is his business; and consequently the man that buys at the plant is the only one that really enters into the transaction.

*By Mr. Ilsley:*

Q. I got the impression that the packers sent their buyers to the homesteads of producers, and there is the competition. You are talking about competition in wits, not competition in business. It is competition between buyer and seller.—A. That is why we have salesmen.

Q. And the man who is seeking to sell, is he not a competent seller?—A. The farmer himself, you mean?

Q. Yes?—A. As a rule, he is.

Q. Yes?—A. But great numbers of them are not. They don't know the condition of the market.

Q. Just explain there; the evidence is that more and more throughout Canada they are selling these cattle to the packing plant; I think that is correct?—A. Yes.

Q. Why are they doing that, if it is a disadvantageous practice?—A. There are really two questions there. Are you now asking in connection with the selling of the cattle, the beasts on the farm?

Q. Selling to the packing plant, wherever that sale takes place. I gathered it took place on the farm for the most part. There is evidence about packers' buyers going into the yards—back yards, not stockyards—and buying cattle?—A. In Manitoba that does not apply. The packers, outside of a few of the larger feeders, do not go out into the country to buy from the farmer.

Q. How does he make his sale to the packing plant in Winnipeg?—A. Through the medium of either the trucker or a man who happens to be acting as a shipper from that particular area.

Q. Why does he intrust this vital function of selling his stock to a trucker who is not a skilled seller? Why does he do that?—A. Well, I don't know if I can answer that question directly.

*By Mr. Edwards:*

Q. Is he not under the impression that he is eliminating the middleman on this service?—A. Well, yes. What I was going to answer there was this, that during the last three years the price of live stock has been so low that the producer has been trying to find a way of marketing his animals, thinking that he is cutting out some of the expenses. Our opinion is that he is not actually cutting out the expenses.

*By Mr. Kennedy (Winnipeg):*

Q. Permit me to ask a question just there; it is obvious that you are a well informed witness—and I do not say that to flatter you—but in view of the fact that you are, I am interested in your opinion. Inasmuch as the farmers to-day do sell large quantities of their produce direct to the packing plants, it must be that those who do so prefer to market them in that way. That being so, do you give as your considered opinion that these farmers would

like to have a law passed that they must discontinue that practice?—A. I have a rather interesting piece of evidence that I am going to submit a little later, and I might as well tell you what it is. We sent out some questionnaires and I have some one hundred of these in my bag; and one of the questions is dealing with that particular thing.

Q. I know, but my experience is that answers to questionnaires are often very, very irritating. Give an answer to my question, if you can; in view of what I have said, if the farmers do follow that practice in a large way—selling direct to the packing plants (I am not interested in the packing plants at all)—but force them to discontinue the practice; that is the general feeling; you think that would suit them?—A. I would say so, yes; the majority of them.

Q. You think farmers like to be made to do things that they don't want to do?—A. They are being made to do it all the time.

Q. Will they like it the more because they are made to do it, however?—A. I don't mean, Mr. Kennedy—I mean this; that all our statutes indirectly one way or another tell us what we shall do.

Q. Oh, I know that?—A. And this question is in a similar category.

Q. I am not arguing as to whether it should be or not, but I am interested naturally in the point of view?—A. We feel it would be in the best interests of the industry from the producer's point of view; let me put it that way.

*By the Chairman:*

Q. Let us try to visualize a district, we will say in Manitoba, fifty miles out; is this the practice—correct me if I am wrong—try to get this down to some point where we can all have the same understanding: that the trucker, the man interested in trucking who has a truck will go around amongst the farmers who have one or two head of stock for sale; obviously it would not pay the farmer to ship in one or two head, therefore, if the trucker will go to his yard and pick up that stock he is inclined to make that deal with him. If a trucker is inclined to carry stock to a particular abattoir, the farmer would not be disposed to protest against it going to the abattoir, although he might prefer to have it going to the yard. Is that a fair statement?—A. That is a fair statement, and the reply is this: I have a little paragraph on that, I just read that a moment ago—and the trucker agrees to take the live stock at so much per hundred pounds.

*By Mr. Young:*

Q. Is that a commission?—A. A commission.

Q. You don't do it?—A. We don't do it. We handle co-operative, or marked live stock altogether—and when I am speaking I am naturally speaking from that angle. The farmer has to pay 50 cents a hundred to deliver that live stock to the market, and the tendency has been on the part of the trucker to deliver that to the processing plant, and in that way save in the case of cattle 12 cents a hundred pounds, 15 cents a hundred on hogs, and 20 cents on lambs. Now, that has been the tendency in the Province of Manitoba.

*By the Chairman:*

Q. Would you say that that is one of the chief reasons why there has been an increase of truck deliveries to the abattoirs?—A. I do not know that I would say that it is one of the chief reasons, but it is one of the reasons.

Q. Well, what are the other reasons?—A. The low cost, and the effort to try to save a little bit in the marketing of that animal is another reason; and another reason is this, that our processing houses appear to have made a determined effort within the last few years to have the stock delivered direct to their plants.

Q. Therefore, it would appear that influence by the packers is used to direct the movement direct to the plants?—A. Yes.

Q. That is your considered opinion?—A. Yes, that is apparently the effort at this time.

*By Mr. Senn:*

Q. What kind of influence?—A. By buying the stock outright—if there is a straight carload of hogs, for example; and trying to have the shippers from certain sections ship their stock direct to the plant, and not go through the yard.

Q. Has it ever come to your notice or view that the trucker may receive a commission from the farmer, or producer, and also receive a commission from the packing house for bringing the hogs direct to them?—A. No, I would not be prepared to make a statement there. We do not know.

*By Mr. Young:*

Q. Is not this the case: that the farmer sends the cattle in with the trucker to market; the trucker brings him back his price and says, I got six cents a pound for these cattle; does not that farmer then take his newspaper and check that price against the market price for the day?—A. In Western Canada, and you know that, a lot of our papers are weekly papers that the farmer gets; and there is not one out of a hundred that gets a daily paper.

Q. Yes?—A. And secondly he is not properly informed as to the actual market.

Q. He would go to considerable trouble to find out what the market was; it goes over the radio every day?—A. Yes, and a great many batteries have run out this last while, and they haven't got radios. He is not able to get the prices.

*By Mr. Kennedy (Winnipeg):*

Q. One of the reasons you gave for shipping direct to the packing plants is because of the depressed price; that surely carries the inference that he is getting a better out-turn, that he is getting more for his stock. You say, because of the low price, that is a contributing factor to shipping direct to the packer. I would infer from that that he figures, whether he is or not, that he is getting a better net return than if he shipped it through the yard?—A. That is his opinion, yes.

Q. Do you think he is availing himself of that?—A. I do not like to say. But I do feel that the average farmer who only produces possibly five to eight hogs in a year, three to five cattle beasts, does not follow the market and does not know the condition of the market; and a lot of them who only produce that small number do not actually know the value of their live stock.

Q. Now, apart altogether from these radio batteries being run down, I have an idea that the farmers are pretty well informed as to the competitive prices. If one ships to the packing plants direct, and another sells through the yards, it seems to me that in these days it does not take long for the news to circulate throughout the community as to where the best price is paid; do you think so?—A. It circulates, there is no doubt about that.

Q. They meet in church every Sunday, and they have meetings during the week, and this information goes?

MR. ILSLEY: They have telephones, don't they?

MR. KENNEDY (Winnipeg): Certainly.

*By Mr. Parry:*

Q. They have party lines?—A. There is something; party lines in western Canada to-day are not so many as they used to be, there is not more than one now where there used to be 15 or 20.

*By Mr. Kennedy (Peace River):*

Q. Is it possible for two farmers shipping, one to the plant and one to the stockyard, to really compare the out-turn of these two shipments? It is not a question of grade, but rather one of another nature; are these men able to compare the shipments accurately?—A. It is extremely difficult in the case of lambs and cattle. As far as hogs are concerned, yes; the hog price, when it is once established on the market is set for that day, and the plants pay the same price. Now, I don't want to be misunderstood, my contention is this, not that I can say that this man got less to-day for his cattle at the plant than he should have got, but it is the effect that the truckers' deliveries direct to the plant have on the general price level.

*By the Chairman:*

Q. Yes?—A. That is my argument.

Q. That is the whole point is it not?—A. Yes. No doubt we could get statutory declarations one way or another, or both ways.

Q. In other words, if the plants at Toronto or Winnipeg, or at any of the larger centres had half their supplies delivered to them direct, there is a tendency for less competitive buying on the market and a generally depressing effect upon the price?—A. Yes.

*By Mr. Young:*

Q. Well, is that so, or not? Let us suppose that 100 farmers are in there, each with a steer to sell, and the packers require 100 steers: And then let us suppose the next day there are only 35 farmers there, and the packers require 35 steers. Is not the competition the same? You have taken these 65 steers direct to the plant, and you have taken 65 steers off the open market. Now, you have subtracted the same quantity from both sides of the equation?—A. I must admit I don't just get your question.

The CHAIRMAN: It is algebraic.

*By Mr. Young:*

Q. You have 100 farmers each coming in there with one steer; the packers require 100 steers—there would be the need for these steers. But instead of having them there, 65 go direct to the plant. The packers require another 35 to keep their plants going, and there is only 35 on the market?—A. Yes.

Q. Would there not be just as much demand for these 35 as there would have been for the 100?—A. No, 65 steers will almost keep them going.

Q. Not if they require the 100?—A. If they got the 65 they would not be quite as keen as though they required the 100.

Q. All right then, we will take it that there are 100 steers on the market, and the packers say we can get along with 65 and they only buy 65; what becomes of the other 35?—A. In this case your question would really mean they were wanted by one packer, but on the market there is more than one packer.

Q. Not necessarily one packer?—A. Let me answer it this way: This one processing house has the 65 steers, and we will say there are three processing houses that require 100.

Q. We have heard it said here that 65 per cent are going to the packing houses, that the packing houses get 65 per cent of their requirements direct?—A. That does not apply to cattle.

Q. What is the percentage of cattle?—A. We do not know.

Q. Somebody said 20 per cent of cattle, and 65 per cent of hogs?—A. We do not know, there are no statistics available showing the amount of cattle that are bought direct by the processing plants.

Q. The percentage would not make much difference if the packers only get about 10 per cent at the packing house; that would leave the market with 80 per cent—only 20 per cent removed; it seems to me that would not make any difference, so far as competition is concerned, whether they buy that outside of the yard or not?—A. I do not suppose we could arrive at a definite conclusion there. I am expressing my opinion that it has a depressing effect. Now, as I said awhile ago, I cannot prove it.

*By Mr. Factor:*

Q. But that is your feeling?—A. That is our opinion, that it has a depressing effect.

*By Mr. Kennedy (Peace River):*

Q. A little while ago you answered a question with regard to the competition between the seller and the buyer; I believe the cooperative organizations have been built up on the basis that they could sell their product, with proper organization, better than for local buyers to come and buy a cow here and a pig there, and so on.

Mr. SENN: You mean selling in their yards?

*By Mr. Kennedy (Peace River):*

Q. By the commission men buying in the yards; and in that case the general opinion is that such organizations are likely to be better sellers of live stock than individual farmers scattered throughout the countryside in Manitoba, or in any other part of the Dominion of Canada?—A. I would say so, yes.

*By Mr. Senn:*

Q. Just along that line, I would like to get back to the practice in loading alleys. You say a competent seller can possibly do better work with a single buyer, and Mr. Kennedy has mentioned the information that is available to him. What factors do enter into the setting of the price that he is going to ask?—A. There are two or three things that enter in there: first of all, is the amount of live stock on the market that particular day; the second factor is the quality of that live stock that is on the market; and the third factor is information from other markets indicating the amount of live stock on the other markets, and the tendency of those markets.

Q. Does not the demand have something to do with it?—A. If the supplies are small, yes. If we have a market day with light receipts, we naturally feel that the market should be a trifle stronger, and work on that assumption.

Q. I suppose there are certain times when the packers' institutions are wanting a certain class of live stock, or cattle, or hogs, or so on; how do you know what their demand is, or do you take only one buyer in?—A. Of course, the live stock is put into classes; as far as our own organization is concerned, we have four salesmen—one man sells a certain type of steers, another man sells the females, and the third man sells the cows and bulls; then we have a man that sells the hogs and the lambs, and each one is charged with knowing what the condition is before he starts operating on a certain day.

Q. What particular live stock exchange exercises the greatest influence over yours. You said it was the supply on other exchanges, and other conditions which were factors entering into the setting of prices. Which one exercises

the greatest influence upon yours?—A. I would say Montreal, as far as hogs are concerned; Toronto at times, of course, but Montreal more particularly on hogs.

Q. What about cattle?—A. Montreal is interested in a certain class of cattle, and Toronto is interested in a little different class, so they keep pretty well balanced up.

Q. But it is really these two markets which influence your market so far as price is concerned?—A. Yes, they are the two large markets—outside St. Boniface market—these three are the largest markets in the Dominion.

*By Mr. Kennedy (Winnipeg):*

Q. There is one phase of this I would like to clear up with your assistance. You are the secretary-treasurer of the Manitoba Co-operative Live Stock Producers Limited?—A. Yes.

Q. Now, that is a company with a provincial charter, I take it?—A. Under the Co-operative Associations Act.

Q. And any profits accruing from the operations of that company go to the shareholders of it?—A. Yes.

Q. And the profits that your company makes (or loses) whatever they are—let us assume that they are profits for the moment—any profits that accrue through the operation of your company are derived from the operation of marketing live stock for the producers; is that right?—A. Yes—better make it “any earning.”

Q. All right, any earnings. Any earnings that are derived from the services rendered by your company in marketing cattle for the producers?—A. Yes.

Q. Then it must follow that any earnings of your company must come out of the producers?—A. Absolutely, yes.

Q. And the higher the earnings of your company are, the lower are the net earnings of the producer?—A. Naturally.

Q. Let us go one step further; from the money point of view the interests of your company and the interests of the producer are by no means identical, in fact they are opposite?—A. How do you figure that out—pardon me for putting it that way, I did not intend to be rude.

Q. That is all right. If your earnings must come out of the producer, then the greater the earnings of your company are, the less are the returns to the producer?—A. Let me answer it this way—

Q. I know, but that is reasonably obvious?—A. The way a commission firm operates on the market is at so much per car or at so much per head, and that as a matter of rates covering the firms operating.

Q. Yes, I am not questioning rates; I just wanted to get the background of it, because of the name “co-operative”—I do not say there is any intention to mislead—there is the implication there of the pool idea, but the fact would be that any earnings through your company comes out of the producers?—A. Yes.

Q. And the greater the earnings are—I am not saying they are too high at all—but the greater they may be, then the less is the net return to the producer?—A. Yes, I will answer that in just a moment.

Mr. ILSLEY: I think he should be permitted to explain.

The WITNESS: The organization is the producer himself.

*By Mr. Kennedy (Winnipeg):*

Q. I see?—A. The organization is the producer himself. I happen to be working for over 1,000 farmers in the Province of Manitoba, quite apart from several thousand belonging to the Saskatchewan organization.

Q. Does your organization handle any of the stock other than your own members?—A. Yes, we do.

Q. What percentage?—A. I would say, around 40 per cent.

Q. Yes. Well, your company is an ordinary joint stock company.—A. No, it is under the Co-operative Associations Act.

Q. I know, but any surplus of earnings which you have goes simply to your shareholders?—A. To the members.

Q. Yes, and you do market considerable stock for non-members of your association?—A. Yes.

Q. Then, it would be fair to say that the interest of your organization is not identical with the interests of the producers generally?—A. Well, it is a producers' organization.

Q. Yes, I know?—A. And when they built up the organization, they built it up having in mind that it was going to be of service to them.

Q. Well, I am not arguing that really at all; I just wanted to get the basis of it. I understand you.

*By the Chairman:*

Q. That is, any excess earnings that you have at the end of the year—what becomes of them?—A. It goes back to the producer.

Q. Your members?—A. Yes.

Q. In the distribution of dividends?—A. Yes.

*By Mr. Factor:*

Q. But it does not go back to the 40 per cent of the producers who are not members of your association, that is what Mr. Kennedy means?—A. No, it does not.

*By Mr. Kennedy (Winnipeg):*

Q. That is exactly my point, your interests are not identical. In so far as any of the shareholders of your organization are concerned, naturally any increased earnings they share in, but these non-members do not share in these earnings?—A. No, they do not.

Q. And it would be better so far as your business is concerned if all live stock was forced—I do not say through your company—through the stockyard and sold there, and not direct to packers?—A. As far as the earnings of our organization are concerned, yes.

Q. And would be wrong to assume that earnings are the chief reason for your company being in existence?—A. Yes.

Q. It would be wrong?—A. Yes, it is wrong to assume that; we are a service organization.

Q. I know, yes. But apart from the philanthropic outlook, it comes down to this—and I am not reflecting on your organization?—A. I do not take it that way.

Q. Its real purpose is to do business, we will say, honestly and profitably?—A. Under the system that we have operating in this country, that we must do.

*By Mr. Ilsley:*

Q. But the main purpose of your organization was not to invest money and make a return on the investment, but to help your members as producers?—A. That is the sole purpose behind the organization.

Q. Yes, that is very different.

*By Mr. Factor:*

Q. How is it you only succeeded in getting 60 per cent of the producers to become members of your cooperative?—A. Well, we haven't got 60 per cent.

Q. How many have you got?—A. The business that we handle is 60 per cent from our members and 40 per cent from others. We have not 60 per cent of the producers in the Province of Manitoba.

*By Mr. Senn:*

Q. Is there a limit to the dividend paid on your capital stock?—A. We have no capital, it is a membership organization.

Q. It has no shareholders?—A. No, it is a membership organization.

Q. Do all the profits over expenses go back to the members of your organization?—A. Yes.

Q. On the basis of their consignments to you?—A. On the basis of the live stock that they have contributed to the organization to handle. But it might be well just to give a brief explanation there. The earnings of a sales agency, a commission firm, which is commonly owned, can never amount to very much as far as the producer is concerned. What he hopes to realize out of an organization of our type is service in the handling of the commodity. In statement No. 5, I think it is, 1·8 per cent is the total amount that we get for the services rendered. Out of that we have to carry the overhead of the organization; and there on that same statement you see \$279,000 worth of live stock. So you can understand that even though we were making 20 per cent on the gross income, that it could never amount to much by way of a bonus back to the producer; so it boils down to a service organization, and that is what we are trying to be.

*By Mr. Factor:*

Q. Service to the extent of getting better prices for your product for your producer?—A. That is the idea behind the movement, yes.

*By Mr. Young:*

Q. Well, all the stuff that is consigned to you is sold on the yard?—A. Yes.

Q. None of the stock that is sold to the packing house goes through your hands?—A. None at all.

Q. You spoke a moment ago about the trucker preferring to go to the packing house, and I think you said if the trucker takes a load to the yard, he has to pay out of his earnings the yardage and commission, is that right?—A. He is operating say on a flat rate of 50 cents—for purposes of argument—and we will say he has one cattle beast that will realize 38 cents for himself if he goes through the yards.

The CHAIRMAN: Is that 38 cents per hundred pounds?

The WITNESS: Yes, 38 cents a hundred pounds. If he takes that same cattle beast to the plant he will realize the 50 cents a hundred.

Q. Suppose the farmer said to him, I want you to take this animal to the yard, would not the trucker reply, you have to pay a higher rate for that?—A. In some cases they operate on two rates. We had heard one or two complaints, that in a great number of cases the producer is under the impression that his stock is delivered to the yard.

Q. I see. Can you tell us whether there is any increase in the percentage of stock going to the packing houses over the railroads?—A. I would say, yes; there has been an increase this last while.

Q. How do you account for that?—A. In many cases, endeavouring to market it a little cheaper. Let me put it this way: a man that is shipping out of a certain district—now these are men belonging to our organization.

Q. They have to ship to your organization?—A. Yes, they are all bound under the organization to go to the public market. We will say an individual is shipping co-operative live stock.

Q. Co-operative live stock?—A. Let me put it that way, marked live stock. He will go to a producer and tell him he can take it to the plant at 10 cents or less a hundred than he used to, say, last year, and the producer will think he is saving and he will be satisfied to let him take it to the plant.

Q. Does he explain to him that it is going to the plant instead of to the yard?—A. I do not know, but I know that is happening in some cases—generally, I do not know.

*By Mr. Senn:*

Q. You mentioned co-operative live stock. Do any of the independent shippers market through your organization?—A. Yes, part of that 40 per cent is taken up through independent men operating through our organization.

*By Mr. Ilsley:*

Q. You are suggesting that those who are selling to the packing plants now should be prevented from doing so if that can be done by some legislation?—A. Yes.

Q. Now, do you know about what proportion of the hogs in Canada go to the packing plants? We have that, I think, 65 per cent.

The CHAIRMAN: Generally, it was stated.

Mr. ILSLEY: The 65 per cent.

WITNESS: I have not worked that out particularly.

Mr. KENNEDY (*Winnipeg*): According to the evidence we got yesterday from an official of the Department of Agriculture it was about 58·8 per cent last year going direct to the plants and 41·2 per cent to the stockyards.

Mr. ILSLEY: Yes, and the proportion is increasing year by year.

Mr. KENNEDY (*Winnipeg*): This was for 1933.

Mr. ILSLEY: Yes. I say the proportion is increasing year by year.

The WITNESS: It appears to be that.

Mr. KENNEDY (*Winnipeg*): There are some figures going back for a ten year period.

Mr. ILSLEY: Has it not increased?

The WITNESS: I know that—

Mr. KENNEDY (*Winnipeg*): It only increased 1·2 per cent in ten years.

The CHAIRMAN: Mr. Ilsley, with regard to that point, when it came up yesterday I looked up the reports, and in the last five years it has increased. In that ten year period there have been several additional yards established which are not taken into account—the weight of that is not taken into account.

*By Mr. Ilsley:*

Q. Now, I gather from you that many of these producers who sell direct to the packing plant are producers of a small number of animals?—A. Yes.

Q. Is that correct?—A. Yes. You said many?

Q. Yes?—A. Yes, that is all right.

Q. That is what I gathered from your own evidence?—A. Yes.

Q. It would follow from that that a larger proportion than 58·8 per cent of the individual producers of hogs in Canada—perhaps a considerably larger proportion than that—are selling in the course of the year all their animals direct to the packing plant?—A. Yes, they are.

Q. The proportion of sellers would be greater than the proportion of hogs provided it is the small sellers who are doing it?—A. In that picture. As I said a while ago, and somebody kind of wondered whether I was all wrong—that no statistics were available as to the amount of cattle and lambs going to the plants.

Q. I know that. I left out cattle and lambs because of that fact, but I am talking about hogs?—A. The reason why the hog statistics are available is because they are graded; they are graded at the plants as well as at the yards.

Q. This is the thing that occurred to me—it may occur to some of the others also: if that law were passed preventing that, it would compel a great majority of the hog producers in Canada to desist from doing something that they think it is to their advantage to do. That is correct, is it not?—A. I will try to give you a picture there as far as hogs are concerned. I do not pretend to know anything about the situation in the east, but I do think I know something about the west. In Alberta, the majority of hogs are sold on a f.o.b. basis. That is, we have in Alberta a certain number of local associations and they sell their hogs each week on what we call a f.o.b. basis. They are sold in a competitive way. Bids are forwarded from the processing houses to certain firms that are agents for these associations. Possibly five bids come in, and those hogs are sold to the highest bidder and they are part of those hogs that go into the plants direct. The same applies to a certain degree in Saskatchewan, not so much. Some of our local associations are selling their hogs on a f.o.b. basis; so, taking 58 per cent as the basis, it would not be fair from the number of producers point of view, because they are actually sold on a competitive basis. A large part of the Alberta hogs are sold on competitive bids, and a certain proportion of the Saskatchewan hogs are sold on the same basis. So, 58 per cent is not the true picture as far as the west is concerned.

Q. Competitive bids from the packing houses?—A. Yes, competitive bids from the packing houses.

Q. I still come back to this, if the thought is worth developing—you see we are confronted with the necessity of considering some remedy?—A. I understand what you mean.

Q. Now, if a law could be passed and were passed preventing these hog producers from selling direct to the plant this would refrain the majority—the overwhelming majority of hog producers in Canada from doing something which they apparently consider it to their advantage to-day?—A. I thought I had made my explanation clear there, that you are not interfering with the overwhelming majority, because of the fact that those hogs that are sold on bids belong to a great number of individuals, and even though 58 per cent of the hogs go direct to the plants they are sold on that basis, and consequently are not shipped without any prearrangement to the plants.

Q. I am not talking about whether it is prearrangement or not; I am talking about whether you sell direct to the plant or not. Your position is that they should go direct to the stockyard; they should all go to the stockyard?—A. Yes. That is our difficulty and I am trying to answer your question. You feel that 58 per cent of the producers would be legislated against if that was put through, but my argument is that it would not be—I cannot estimate the number—but it would not be 58 per cent, because of so many of the hogs sold on a competitive bid f.o.b.

*By Mr. Young:*

Q. You get an offer from a packing house for 10 cents for so many hogs and you wire an offer to a certain town and they ship those hogs direct to the plant; is that right?—A. Yes. When they wire you get wires from more than one plant.

Q. You get offers from several plants; but you select somebody who offers you 10 cents?—A. Yes, the highest bidder.

Q. After, you wire your local point and say, "Ship so many hogs to such a point." That does not go through the yard at all?—A. No. If you pass a law requiring—

Q. —the stock to go through the yard, you will not be able to do that?—A. No.

Q. You are willing to forego that privilege?—A. I feel—let me put it this way—from the producer's point of view that it would be sound business.

*By the Chairman:*

Q. In other words, you think that those same packers bidding on an f.o.b. basis could just as well bid on the live stock for those cattle or hogs?—A. Yes.

*By Mr. Senn:*

Q. Have you any districts where there are abattoirs located and no stockyards in the west?—A. No. I do not think we have any point in the west where there is an abattoir and no stockyard.

Q. I have a case in mind. Take, for example, the city of Hamilton where there are two abattoirs. Practically all the hogs within a twenty mile radius go to those two abattoirs by truck. Would you say that those hogs should go right past Hamilton to the Toronto stockyard and then go into the yard and have those abattoirs compete there?—A. That is a natural question, and my reply would be this. At Hamilton, a neutral agent should be the medium through which that stock is sold. If those two plants are not prepared to pay the price that is available somebody else will or the stock will be moved on.

Q. I am not saying that they do not pay the price available on the Toronto stockyards, but your contention is that those animals should all go to the Toronto stockyards before entering the abattoir?—A. Yes, I feel—I do not change my thought there—I feel that it would be sound business.

Q. I am afraid you would have a terrible time with the farmers of that locality?—A. I do not doubt that at all.

*By Mr. Kennedy (Winnipeg):*

Q. What I am going to say really continues Mr. Ilsley's point of view. He referred to the figures about hogs; 58 per cent being sold direct to plant and 42 per cent going through the yard. In your explanation there must be some difference of view as to just how the 58 per cent was made up. But we will come at it from the other end. Let us assume that at present 42 per cent go through the yard; would you propose that there should be legislation that would put the other 58 per cent through the yard as well? In other words, 100 per cent of the live stock should go through the yard?—A. That is my idea, yes.

MR. SENN: Would not the same result be accomplished by excepting localities such as I have spoken of.

THE WITNESS: Well, in any move you have got to take the whole picture in consideration and try to work out something that will carry out what you have in mind.

MR. SENN: I am impressed with your suggestion, but I do not think I could support the other suggestion.

THE WITNESS: We have certain recommendations that we are going to try to make.

*By Mr. Young:*

Q. A witness told us yesterday that when stock is shipped by rail to the yards frequently certain carloads are set aside for certain packing houses—they are not allowed to go through the yard; have you had any experience of that?—A. I am not sure that I get your question.

Q. Carloads of stock shipped to the yards are sometimes set aside and sent to the packing houses and do not go to the stockyards at all?—A. Then they are on a direct billing to the plant.

Q. The statement was made that they got there regardless of the billing?—A. No, they do not. They go through to the plant. Some of those small plants, if they happened to buy a load out in the country or buy it on the way into the market, if they have not got facilities at their small plants, that stock would be in the yard and he would drive over to the plant.

Q. I understand from the witness that the cars were not unloaded in the yards at all; the car was simply set aside and went to the packing house?—

A. When they are billed to the packing house that has a siding they are not unloaded; they go direct to the plant.

Q. There is no such thing as switching a car without the consent of the consignor?—A. No, it has got to be consigned by the man who is shipping the live stock.

The CHAIRMAN: Let us try to get along.

*By Mr. Factor:*

Q. It seems to me that if we could only raise the price of live stock all your troubles would be over?—A. I do not know that I would agree with that altogether.

Q. You would not agree with that?

The CHAIRMAN: Let us get on.

The WITNESS: I have some further statements here in connection with direct delivery to plants, but I think I had better not spend time in reading these over any further. I go on to say that no doubt statutory declarations can be secured, and that our experience has been that it can work both ways. I made the statement a little while ago that we found men delivering stock into the yards where it was desperately hard for them to get the same price as was bid at the plants, but it is our contention that the general average is what we are interested in, and we feel it would be better if going through a yard. Then the next question I deal with here is the question of whether or not processing plants should operate under the Live Stock and Live Stock Products Act.

*By Mr. Factor:*

Q. What page is that?—A. That is page 7. I don't think I will take time to read this particular part.

Q. Your recommendation is that all regulations that affect live stock— — A. Public stockyards.

Q. —should apply to packing plants' buying practice?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. Could you give us a few of the outstanding differences between what happens in stockyards and the plants with respect to this question?—A. The public stockyards have been in operation in this country for quite a number of years, and the Live Stock and Live Stock Products Act has been built up for the purpose of protecting the producer. That is the idea behind the Live Stock and Live Stock Products Act. Under these regulations a commission firm must do certain things. They must put up a bond, a Dominion agriculture bond it is called; they must put into effect a shippers' trust account; they must handle the live stock in a certain way. The public markets company must do certain things also. They must have a scale that is operated by a man that is under government bond. They must have a scale with what we call a type register beam, and they must issue a scale ticket for every transaction covering the sale of an animal put on the public stockyards. As far as the processing plant is concerned, they are not obliged to do any of those

things. They can buy in quantities at their plant without taking out a bond, without having a shippers' trust account, without having a neutral weighman, without having a scale with the type register beam, and in general without following the regulations that are set out in the Live Stock and Live Stock Products Act.

*By Mr. Ilsley:*

Q. Just at that point, the first three you mention would be unnecessary, would they not? The object of a bond and a trust account and something else was to see that the shipper got his money. He will get his money if he sells to the packing plant, won't he?—A. Yes. Generally, I would say yes. We have, in this country, had instances where processing houses might be small houses, and are not as strong as they might be, but generally I would say yes. Still I feel that the producer is entitled to that protection just the same as he secures that protection when he comes to the public market.

*By Mr. Young:*

Q. Do you find any complaints about weights received at the plants?—A. Oh, it works both ways; we get complaints, and we have a lot of men that think they get the correct weight. So I would not venture any statement there that the weights were not correct.

Q. Some think they get better weights at the yard, and some think they get better weights at the plants?—A. It works both ways.

*By Mr. Parry:*

Q. Who does the grading at the packing plants?—A. Men under the Dominion Department of Agriculture.

*By the Chairman:*

Q. That is in hogs?—A. In hogs; that is the only animal that is graded. The others are not graded.

*By Mr. Young:*

Q. You talk as if you were in favour of hog grading, Mr. Ingaldson?—A. I am, yes.

Q. We had a gentleman this morning who was not; but you are convinced that it is better?—A. Yes, I am; and I will deal with that a little later on, if you don't mind.

*By Mr. Senn:*

Q. Would you say it is true that there is less shrinkage in the hauling of hogs weighed in directly at the abattoirs than in the yards?—A. Hogs weighed at processing plants are weighed off cars with us, that is in Winnipeg.

Q. And paid for on an off-car basis?—A. They are paid for on an off-car basis. All hogs going through the yard are handled on a feed and water basis.

Q. Do you think there is very little difference?—A. In the weight?

Q. Yes; is there any advantage in sending hogs direct to the abattoir, from the standpoint of shrinkage? That is what I want to get at?—A. Well, the shrink is, of course, 10 to 14 pounds going to the plant.

Q. That varies very much according to the distance they travel?—A. Yes. The shrink is 10 to 14 pounds. Let me put it this way, we feed a hog on the average 10 to 15 pounds; and naturally that hog, when he goes into the plant and is weighed off-car, is that 10 to 14 pounds lighter than when he is sold through the yards.

Q. There might be a little variance in the price between the abattoir and the off-car weight; would you say that the prices vary?—A. In the settlement at the plant, I understand—now, I say I understand—that they pay 4 per cent over the market for the hogs to allow for that, to make up for that shrink. That is our condition. I don't know what your condition is here in the east.

The next question that I have is in connection with processing plant regulations. I have outlined those fairly well on page 8. As I stated, they are not under the regulations. In connection with that, I feel that the settlements to the producer for marked or co-operative live stock should have a scale ticket accompanying the settlement in every case, and that the settlement be made direct to the producer rather than through the medium of individuals.

*By Mr. Young:*

Q. Will you define that word "co-operative live stock". I think there is a little confusion there?—A. I have used the two terms, marked or co-operative live stock. What I mean there is this: A farmer has two steers, and he ships them to market to be sold at a market or at a plant. In order to keep the identity of those two steers, a clip mark is put on the animal, and that is what we call marked or co-operative live stock.

Q. It has nothing to do with a particular company, this co-operative company?—A. No. It is a common practice. The marked or co-operative stock coming to our market is some say 80 per cent, and I take it at about 75 per cent of all live stock coming in; that is marked or co-operative stock. We only handle between 25 and 30 per cent of all the stock, so you can see that other firms are handling that same stock shipped in the same way.

Q. The extent of the co-operation in that case is just to keep them all in the one car and ship and sell them?—A. Yes, that is it.

*By Mr. Senn:*

Q. Do you have a certain form on which you make returns to the shippers?—A. Yes.

Q. Are they all the same for the various commission houses who are dealing?—A. No, they have different forms; different forms for different firms.

Q. Are there any additional fixed charges on these return bills?—A. Just the pro rating charges that we discussed at the beginning.

Q. No others?—A. No. Our opinion is that the settlement should be made direct to the producer for that marked live stock. We have had experiences in Manitoba where an individual that is shipping on a commission basis takes the settlement for the whole load, of the cattle contained in the shipment, and he will make a settlement possibly right away without any statement.

Q. You have no organization charges or levy of any kind?—A. We have a membership charge that the members pay.

Q. And that is deducted?—A. That is deducted from his proceeds.

Q. And that is the only charge?—A. That is the only one outside of the regular charges. I was going on with this statement in connection with settlement direct to the producer. These men will take a settlement back for the full load, and they might make a settlement to the producer in cash without issuing any statement, without issuing any scale ticket or any evidence as to what the animal sold for. Then he might make up a statement and issue a cheque, and when the cheque is presented there might not be any money in the bank.

*By the Chairman:*

Q. These men are not bonded?—A. No, they are not bonded, not under any regulations. For that reason we feel that the settlements for the co-operative stock should be made direct to the producer.

The next question I have here before me is whether the public markets, the public stockyards, are really essential. It has actually come to the place where it will almost be necessary to decide whether the public stockyard is the medium through which live stock will go.

Q. That is if direct shipments are continued?—A. Yes. I understand we have a condition on the Edmonton market where there is not enough going through there to keep them operating, you might say.

*By Mr. Young:*

Q. That is through the yard?—A. Yes. The question is a pertinent one.

Q. How much is going through the packing house there, plenty to keep them going?—A. I don't pretend to know; but that is my understanding, that they are getting enough to keep them going. As far as our market is concerned we have been handling a fair volume of live stock there over the market; but if the change continues to take place we have got to face it sooner or later, whether public markets can continue operating in this country.

*By Mr. Factor:*

Q. Why do you use the term "public stockyards"? They are incorporated companies, are they not?—A. Well, I don't know what else we could call them.

Q. They are stockyards?—A. They are a public utility in this way, that a man can take an animal into that yard at any time for the purpose of selling, and that is why we call it a public market.

*By the Chairman:*

Q. The public meet and buy and sell?—A. Yes, that is the reason.

*By Mr. Factor:*

Q. It is not run by the municipal government?—A. No, not necessarily. But it is a public utility in this way, that you can bring in your stuff at any time for sale.

Q. In this sense, is not an hotel a public utility? Anybody can go in and register as a guest in an hotel?—A. Yes, I would say so.

Q. I mean the term "public stockyard" seems to convey to me that it has something to do with public ownership?

Q. Yes, I mean to say, the term "public stockyard" seems to convey to me the idea that it has something to do with public ownership?—A. It has not.

*By Mr. Parry:*

Q. Are there private stockyards?—A. Owned by private individuals, yes. It is a term that we use and we don't seem to be able to get away from it.

*By Mr. Senn:*

Q. Are there any stockyards that do not come under the Act?—A. No, there are no public stockyards that do not come under the Act. There is a provision for special licences for small yards when they start operating, and they cannot operate without coming under the Act.

*By Mr. Kennedy (Winnipeg):*

Q. Perhaps these yards are so defined under the Act?—A. Yes, I think they are. Now, there are a number of reasons or arguments that I submit here, and I am going to say that the public stockyard is essential in this country. I don't know but what I might as well read that.

*By Mr. Factor:*

Q. It is the same problem, the packing plant against the public plant?—  
A. It is, but what I am trying to bring out here is this, that we are approaching a difficult question as to whether that utility will continue to be the medium through which to sell live stock. That is the reason I am bringing that in at this time.

The experience in the handling of live stock prior to the time that public stockyards were created indicates that it is absolutely essential that public stockyards be maintained. In thinking back, many can remember the time when all live stock was sold outright on the farm, either to a drover or dealer, or to a representative sent out from a processing plant. If the supply was somewhat restricted the country buyer became active. If the supply was plentiful the buyer was indifferent whether he would purchase any live stock or not and the producer was left in a position where he had to retain the animals on his farm, and in some cases shipments were made to the larger centres and yarded in railway pens and sold by the individual or the dealer as best he could. When the demand was fairly active he was able to realize a price for his shipment, but if the market was glutted he was obliged to sell his live stock at a sacrifice price.

Q. Did you say, at a sacrifice price?—A. That has been the experience of the producer prior to the public market. "Without the public stockyards as a medium there would be no authentic public information available as to price levels and the general trend of the demand for live stock."

*By Mr. Young:*

Q. That would not be done before by the yard?—A. Not unless they had a straight load of that particular type. If they had straight loads they could; but with mixed loads, and the great majority of our shipments are mixed loads, the public yard is the only place where it is convenient to do it. Now then, I go on to describe the effect that has on the situation, particularly with respect to stock that is being shipped in a co-operative or "marked" way; and the processing plant would find it very difficult to secure their cattle. I think that would establish the situation that the processing houses in this country, if they were not in the public market they would find themselves in a rather awkward position.

Q. Are there processing houses at points where there are no yards, trying to get supplies.—A. I do not know. The men in the processing plants I think admit that they could get along very nicely without a cow in the stockyard. They would have to set up a system of buying in the country, and I think that that system would cost the producers of this country just as much as it is costing them now to use the public market as the medium through which to sell their stock. I am confident of that; and if they are discontinued the producer is the one who will actually pay for it.

*By Mr. Kennedy (Winnipeg):*

Q. How would it do to make the stockyards public in every sense so that they would be nationally-owned and operated, then let all live stock go there?—  
A. I think that would be sound. I think that would be sound, although now I speak with definite knowledge of our one yard; I think that yard is operated both efficiently and economically.

*By Mr. Senn:*

Q. Would you carry that a little further and say that the commission work should be done by government officials too?—A. Yes, I do not doubt at all that these men could do as good a job as is being done at the present time.

*By Mr. Edwards:*

Q. Do you think you would have the same competition, the same rivalry, if you had that under government control as you would with individual control?—A. Possibly not the same rivalry, no; but I think we would have similar competition in buying.

Q. Well, I gather that it is your opinion that if you eliminate the stockyards and have only the packers to buy the products you more or less eliminate the competition in buying; at least you have a tendency for a smaller number to get together and fix prices?—A. Yes.

Q. So that you feel that the producer is being much better served by having this competition on the stockyard?—A. I do, yes.

Q. There is just another question I want to ask: Mr. Kennedy, of Peace River, brought this up the other day when we had a manager of a Toronto firm on the stand, and the impression was abroad pretty much in Ontario that the overhead charges in the packing plants were considerably increased by high salaries and so forth. Now, the members of your mutual company are not of that opinion I take it; you think your plant is managed economically?—A. Just let me get that question again?

Q. No excessive salaries are paid?—A. In our organization?

Q. Yes.—A. No, we feel that there is not.

Q. Your people are satisfied?—A. The producers are satisfied, yes.

*By Mr. Kennedy (Peace River):*

Q. Explain the salaries to the committee, will you?—A. Yes, I haven't got that, but I will try.

*By Mr. Edwards:*

Q. You are the secretary-treasurer?—A. I could give them to you off-hand.

MR. EDWARDS: I am not asking for particulars.

MR. KENNEDY (*Peace River*): You might file a statement.

THE CHAIRMAN: File a statement with the Counsel of the Committee.

THE WITNESS: Yes, I can do that; I remember just what they are.

*By Mr. Edwards:*

Q. Just another question, if it is not asking too much; you said you are building up a sinking fund of 5 per cent amortized over 20 years?—A. Just pardon me, there, you are confusing the public markets, or public stockyards; Public Markets Limited is the name of our yards, and our own organization.

Q. You are just selling?—A. I am not representing the public stockyards, or Public Markets Limited.

Q. That is owned by the railways?—A. Owned by the railways, and operated by them.

*By Mr. Young:*

Q. You are really a commission firm?—A. Yes, we are selling.

*By Mr. Kennedy (Winnipeg):*

Q. You are a provincial commission firm, a co-operative?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. Do you think this is the chief point you have been making: that the public stockyards should have better information as to the price levels and the general trend of prices?—A. Yes, that is one of the points that I tried to bring out.

Q. Do you think it would help then under present conditions if we had public information regarding the prices paid by the packers on every load shipped direct to the packing plant?—A. I do not think that that would change the price level, but I think it would show in some cases at least that the price is not retained as high.

Q. Do you think it would be a good thing, from the standpoint of the producer, to have that information?—A. Yes absolutely.

*By Mr. Parry:*

Q. It would tend to make the competition more fair?—A. It would not change the competition if they continued to get as much as or more than they are getting at the present time direct to the plant. It would not change competition, but I do feel that it would be information that the public is entitled to. Now, the next question—I am going to leave that, I am afraid I am taking too long.

The CHAIRMAN: All right, go ahead, Mr. Ingaldson.

The WITNESS: The next question I have here is sudden change in prices, the fluctuations in price levels. Now, that is a pertinent question, and the first reaction will be that we cannot do anything about it. That I think would be the first reaction of this committee. But we feel that something should be done, and again I refer to the recommendations, in building up a more steady price level than we have had during the last two or three years. We have had the experience of hogs going up a half a cent a pound, or three-quarters of a cent, during the day. We have had the experience of that jumping action, up a certain amount and then down a certain amount every four or five days.

*By Mr. Young:*

Q. Have you ever checked these fluctuations against the British prices?—A. Yes, and I have given you a lengthy statement here indicating the trend back and forth.

Q. We follow them do we?—A. To quite a degree.

Q. Not entirely?—A. Not entirely, no; but to quite a degree.

Q. Sometimes we have independent fluctuations of our own?—A. Oh yes, quite often we have independent fluctuations.

Q. Have you ever tried to trace the causes of them?—A. We have tried to, but I would not be prepared to make any statement as to the conclusions that we have come to.

*By Mr. Senn:*

Q. How could our price fluctuations follow those of the British market in the case of hogs and bacon, when the hogs are bought and paid for here perhaps a month before the bacon is delivered in England?—A. Well, I do not know that I would be qualified to answer that question. But we do know this, that if Canadian bacon drops four shillings and a cable comes through, we expect next morning to take a lower price. We know that to be the fact, but I would not attempt to say anything more about it.

*By Mr. Ilsley:*

Q. It varies with the prospects in the British market, doesn't it?—A. I do not know.

*By Mr. Kennedy (Winnipeg):*

Q. Naturally, if the cable is up prices respond?—A. They do, if the tendency is higher, they go up; it works both ways.

*By the Chairman:*

Q. I notice, Mr. Ingaldson, you say in your brief: "In our opinion the sudden changes that take place are brought about, to a large degree, through competition in the selling of meats and meat products. That competition is created by the processor of meats and meat products and also by the retail trade. A large retail buyer, whether it is chain stores or departmental stores, owing to the large volume handled can almost set the price that they are prepared to pay the processor of meats, and then in turn the meat is sold as a leader frequently at low prices." Would you please elaborate on that just a little?—A. We express that as an opinion. We cannot prove it; but here is what we know: we go into a retail store, more in particular the chain store, and we will find that a certain class of meat on a certain day is sold below what we consider is the actual cost of that commodity. They use that as a result, as a leader; and we have had some men in the processing game make the statement to us that the large chain store, or departmental store, will go into their plant—or into their cooler, and make a bid for a certain number of carcasses on the rail; and just as much as say to the processor, "Take it or leave it"; and that is why I made that statement.

*By Mr. Young:*

Q. "Take it or leave it," if the processor does not take it, then what does he do with the meat?—A. That is the question.

*By the Chairman:*

Q. The chain store being a large agency for the distribution of meats, and following a policy such as you have described, the effect of that would reflect back upon the price paid in the market on the hoof?—A. Oh, yes, that is the inevitable result of a cycle of that kind.

Q. In other words, the producer would pay for that reduction which is arbitrarily fixed by the large buyer?—A. That is our opinion.

*By Mr. Factor:*

Q. What is the spread in price between that received by the producer and that sold by the retailer, do you know?—A. Well, we have no authentic information. That first example here is merely used for the purpose of bringing it to your attention as a committee in the hope that the whole question would be enquired into, and, if possible, find out what is actually taking place.

*By Mr. Young:*

Q. It would be much easier for us to find out, if you were to tell us when this was done, and by whom??—A. Well, I know. I do not suppose that we can furnish that evidence; it is outside of our circle.

Q. Is it hearsay evidence on your part?—A. No, it is not hearsay evidence; it has been given to me by men in the processing of meats.

Q. Then you could give the secretary the name of the man who told you and the date when it was done and the firm that made the offer?—A. Yes, I could do that.

Mr. EDWARDS: Would that be good evidence?

Mr. PARRY: You can give us the name and the date?

WITNESS: I do not know that I can give the date, but the approximate date.

Mr. PARRY: You will do that.

WITNESS: I can do that.

Mr. PARRY: We can investigate. We have so many statements which are unsubstantiated, and we want to know the fact.

WITNESS: I appreciate that. In my brief I do not pretend to be an authority on it. We are expressing there an opinion the same as, of course, has been expressed before.

*By Mr. Ilsley:*

Q. You have been very fair about it, I think?—A. I could go on and discuss it a little further. Here is one little item that might be of some interest. Price cycles in hogs have been so low that in 1932 our producers more or less went out of the hog business and now they are going into it pretty heavily.

*By Mr. Young:*

Q. Why are they going into it now?—A. Because of the better price.

Q. And is it your experience that they generally go in when prices are high and go out when they are low?—A. I am sorry to admit that that has been the experience; and yet, we cannot blame the producer for that, because he is placed in the position that he has got to try and live, and he is trying to fish around to see what he can best do. If beef is selling fairly well he will try to raise beef and if milk is selling reasonably well he will try to raise animals that will milk and when he has got that far the price changes and he tries to go into something else and when he has gone into that something else, something else changes and he is continually in a cycle that he cannot get out of. Once something is done to try to make it possible for him to realize a certain definite price then our producers can become again effective.

Q. He is following the market?—A. He is trying, but he cannot do it; it changes so often and so suddenly.

Q. Are there any producers who seem able to anticipate the market?—A. No, I do not think so.

*By Mr. Factor:*

Q. What percentage of the production of live stock is domestically consumed particularly in Canada?—A. Oh, I would say about 90 per cent.

The CHAIRMAN: In Canada?

The WITNESS: Yes.

*By Mr. Factor:*

Q. So that the sale of the meat and meat products would have some effect on the price level of the live stock?—A. There is no question about it. Just at the present moment the hog situation is a little different, but that is an odd situation, and I am afraid when our producers, in another year or so, get back into a heavy supply of hogs, unless some definite plan is made, we will find once more that they are up against the same problem of dropping prices.

Mr. YOUNG: What do you mean by "some definite plan"?

*By the Chairman:*

Q. I was going to ask that question. In your memorandum you have one observation right under your hand now, "a definite plan should be devised whereby the sudden and drastic fluctuation in price be reduced to a minimum"; and that is virtually repeated in your recommendations?—A. Yes.

Q. Would you mind giving to the committee any suggestion that you have in mind that will give effect to that idea?—A. Here is the position. 90 per cent or over 90 per cent of our cattle are consumed in this country.

Q. Over 95?—A. Meat is an article that is consumed daily. The purchasing power of our Canadian consumer varies, of course, but, generally, it is low now; but take it over a period of years it is reasonably the same. The

consumer is not interested in continual fluctuation in price on meats he is purchasing for his table. He would be quite content to buy meat the same as milk—you were talking about milk this morning—at a fairly steady level during the year. There might be a little hump here when the supply is not as plentiful, a little bit down in summer when the supply might be a little heavier, but on the average when we are consuming practically all of that commodity we should be able to have a reasonably steady price, and if that were the condition our producers in this country—I now speak of western Canada—would be content to go ahead and breed and feed live stock of quality required by our Canadian consumers.

*By Mr. Young:*

Q. Having done that, having reached the point where it would be possible for them to breed and raise good live stock, would not they raise more of it?—

A. Yes.

Q. And then what would become of our 90 per cent consumed at home?—

A. If we raised more of it?

Q. If we raised more of it?—A. It comes in to a plant.

Q. Wait a minute. We are going to raise more cattle because it is more profitable. At present we consume 90 per cent. If we double our output, and double our production, we cannot double our consumption, can we?—A. No, I do not expect that to be done, and that is why I say that if we are going to make the live stock industry of this country worth anything to the producer we should have some definite plan that we can rely on, and he will adjust his endeavours according to that plan.

Q. You suggest adopting a plan to give him a constant price?—A. A reasonably steady price.

Q. How are you going to prevent him, when that price is profitable, from raising so much stock that he will glut the market?—A. Of course, that is going to be a problem.

*By Mr. Factor:*

Q. Is not the solution the development of an export market for his cattle? That was told to us yesterday?—A. Yes, of course that is a solution to a certain degree.

Q. To a large degree?—A. But are we not in all the different countries to-day being fenced in by a certain corral; is that not our position?

Q. That has been the trouble.

*By Mr. Kennedy (Peace River):*

Q. Do you not require a plan in regard to breeding and feeding?—A. Absolutely.

Mr. SENN: I have not heard the plan yet.

The CHAIRMAN: Might I ask you what you consider—

*By Mr. Ilsley:*

Q. I asked a question whether it did not lead inevitably to a rigid curtailment of production. He seems to be skirting around it. You say you will adjust your breeding and feeding in accordance with a plan. What do you mean by that? How are you going to curtail production?—A. Absolutely, if we cannot find a market.

*By Mr. Edwards:*

Q. It is the same with a factory when it is overloaded?—A. If we cannot find a market for our surplus live stock or anything else the only thing to do is to curtail that particular commodity to meet with the demand.

*By Mr. Factor:*

Q. Would it not be better to develop the export market and sell the surplus cattle?—A. If we could do that, yes; but as I said a while ago the corral is being made smaller and as a result of that we have got to face that. My contention is that we cannot go ahead without facing it, without recognizing that we have got to do something.

Q. So, you are going to say to each farmer that he shall raise so many steers and no more?—A. Yes.

*By Mr. Ilsley:*

Q. And you are going to say to the farmer who proposes to raise steers, you shall not raise any?—A. If that is necessary, because if there is no market there is no use of them raising steers. I think we will find a market. I am very confident we can find a market, but if we cannot find that market there is no use to go ahead without doing something about it.

*By the Chairman:*

Q. Now, may I become a little more specific. You have mentioned simply a plan. May I ask you this question: in your opinion, what price is a minimum price at which good steers should be marketed, we will say, at Winnipeg, in order that there may be a fair return to the producer?—A. A choice quality butcher steer, 1,000 pounds or over, on the Winnipeg market should be 6½ cents a pound.

*By Mr. Senn:*

Q. Would not that depend altogether on the price of feeds?—A. Naturally. Yes, the cost of production has got to come into the picture. That is the cost of getting that animal up to a certain age.

*By Mr. Kennedy (Winnipeg):*

Q. It varies from year to year?—A. Yes, it does.

*By Mr. Senn:*

Q. You are speaking of the present time?—A. Yes, I am. Taking coarse grain at a cent a pound—oats and barley at a cent a pound which I think the producer can grow it at.

*By Mr. Kennedy (Winnipeg):*

Q. It would not be practical to fix a given price such as you suggest, would it?—A. I am not talking about fixing the price. I am talking about an understanding in the industry. As it is at the present time there does not appear to be any understanding. The producer is left in a position where these sudden fluctuations make it so that he does not know from day to day what is going to happen.

*By Mr. Senn:*

Q. The law of supply and demand is not good enough to-day to fix prices by?—A. No. I would say no.

*By Mr. Young:*

Q. Now, this morning we had a gentleman who outlined a plan for allowing certain farmers to produce milk, and now we have one who will allow certain farmers to produce cattle, and next week we will have one with the same provision for wheat, and when we have got around all the products what are you going to do with the rest of the farmers?—A. I do not pretend to know it all,

but are we, in thinking of the interest of our country, Canada, justified in continuing without making some concerted definite effort towards making it possible for basic industry in this country to continue.

*By Mr. Factor:*

Q. You advocate restricted production?—A. If you like. You are definitely faced with it if you cannot find a market, and that is the job of those that make concessions of one kind or another between countries—if we cannot find a market what is the use of allowing the producer of any commodity—live stock or anything else—it does not matter—to continue without any system or any plan?

*By Mr. Kennedy (Peace River):*

Q. You are only advocating restricting production when there is too great a surplus?—A. Absolutely. Coming back to hogs—

*By Mr. Factor:*

Q. Wait a minute. You are also advocating the fixing of a better price which, in itself, will increase production?—A. Pardon me, I did not say fixing a price, but I did say a steady price.

*By Mr. Edwards:*

Q. Without too great a variation?—A. Without too great a variation, seasonal fluctuations.

*By Mr. Young:*

Q. How will you fix that? Prices will not keep level unless you do something to fix them?—A. Now, let me try to outline the picture. In 1932, in connection with hogs, we had possibly—what was it we shipped out that year—some 50,000,000 pounds of hog products.

Mr. SENN: 32,000,000.

The WITNESS: 32,000,000. That was less than 5 per cent. Let us make it 5 per cent. We were operating without any plan, without any special governing regulation in connection with the handling of that product from the time it left the producer until it reached the consumer. Hogs went down to \$2.65 on our market. That was in line with the old country market, on account of the money situation and one thing and another; but do you mean to tell me there was any reason why hogs in this country should go down to that level, if there had been a plan to take care of that? The consumer was not asking for hog products down that low. The consumer was quite satisfied to pay a reasonable level.

*By Mr. Young:*

Q. Why do you say that?—A. Because I know consumers to a certain degree.

*By Mr. Factor:*

Q. They didn't have the purchasing power?—A. Their purchasing power was not any greater or less than what it is to-day, and they are buying hog products to a certain degree.

*By Mr. Young:*

Q. You mean the unemployed or partially employed were willing to pay high prices?—A. The unemployed are taken care of in this country.

*By Mr. Ilsley:*

Q. By whom?—A. By the state, by the government; and do you mean to say that the government would not have been prepared to pay two cents more, on the basis of two cents more for a live hog, to keep these men living, and

women, rather than to let them go down to the level where the basic industry of the country is going to be driven out of business?

*By Mr. Factor:*

Q. Pardon me, but I notice here that the government is buying beef in Calgary at one cent a pound for sixteen relief camps in British Columbia?—A. One cent a pound?

Q. Yes, that is what it says.

The CHAIRMAN: What is that? What is the authority?

Mr. FACTOR: It is a clipping from a British Columbia paper.

The CHAIRMAN: Well, I doubt if that is anything authoritative.

*By Mr. Young:*

Q. Do you think the relief chits issued we will say by the Saskatchewan Relief Commission or other relief commission, would be increased if the price of pork went up five cents a pound?—A. I am sure they would.

Q. You are sure?—A. I am sure they would.

Q. Do they fluctuate with fluctuating prices?—A. They are paying fluctuating prices now and that is what we are objecting to.

Q. They change from day to day with the price, do they?—A. Sure they do.

Mr. EDWARDS: You had better make it clear; you said that the government was buying beef; that is the British Columbia government buying it.

The CHAIRMAN: It is six o'clock, and it is obvious that we are not through yet. We will adjourn until to-morrow at 11 o'clock, when we shall try and finish up with Mr. Ingaldson and his friend.

The committee adjourned at 6.00 p.m., to meet on Friday, March 23, at 11 a.m.

HOUSE OF COMMONS, ROOM 368,  
March 23, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock, the Hon. H. H. Stevens president.

Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. The minutes of the yesterday morning and afternoon meetings indicate the witnesses called and and the exhibits filed. I will declare them approved unless there is some criticism.

Mr. FACTOR: I would like to take this matter up which you have drawn to my attention. It is in connection with the report of the special commissioner appointed by the Department of Labour to investigate the alleged tobacco combine. The Department of Labour appointed a special commissioner. He made a report to the department, and under Section 28 of the Combines Act it is provided that the report shall be made public unless the commissioner reports to the minister that it is not advisable, in the public interests, so to do. The matter of the tobacco question is very important to the farmers of Ontario, as Mr. Senn will vouch. They are not getting within 10 cents of the cost of production of their tobacco and they are being dictated to by the huge tobacco monopoly. This report is very important to the committee, and I see no reason why the Minister of Labour should not produce the report.

The CHAIRMAN: Would you mind passing the letter up to me, Mr. Factor? Perhaps before any further discussion, I might read what the Minister of Labour says. The letter reads as follows:

"Dear Mr. Stevens,

With reference to your letter of February 23 asking that the report on an alleged tobacco combine, made by the registrar under the Combines Investigation Act, be filed with the special committee on price spreads and mass buying, I desire to say that the investigation carried on in this matter, as you probably know, was an *ex parte* inquiry, and it has never been the practice nor is it contemplated by the Combines Investigation Act that the report of an investigator should be made public. Undoubtedly the reason, amongst others, is that when an investigator sees the firms who are under review the information is given him in confidence and any other information gathered by the investigator is taken *ex parte*, without the person or firm whose business is being investigated having an opportunity to reply.

I would respectfully suggest to the committee that any evidence that was available to the investigator under the Combines Investigation Act is equally available to the committee and by subpoenaing any necessary witnesses, those against whom your committee may direct its activities can be present and have an opportunity of presenting their side of the case. I feel sure that your committee will recognize the justness of this course.

The same observations would apply substantially to the registrar's report in connection with the radio sets and tubes inquiry."

That is signed by Mr. Gordon, Minister of Labour. I understand that if we wish, in confidence, to see these files, we can have access to them. The point the minister raised, it will be noted, is this: That the statements contained in

the report are largely *ex parte* statements, or they are statements that are taken without the person representing the other side of the case having an opportunity to be present or to refute them. They are not proven statements in the sense of a hearing being held. They are preliminary to a contemplated hearing, and there is much to be said, I think, as to the soundness and fairness of the Department of Labour's attitude in not making public these preliminary investigations. In any case, that is the situation; but I think the committee could achieve its end quite as well if we were to request access to the files for investigation purposes, and then decided what witnesses we wished to call. There is no suggestion, Mr. Factor, or disposition on my part, to in any way restrict the investigation into either tobacco or radio or other matters referred to.

After further discussion:

MR. FACTOR: Then we will leave it stand until Tuesday morning, when the matter will be finally decided.

THE CHAIRMAN: Yes, and counsel will go into the matter. Mr. Ingaldson is to continue his evidence. I would like, if it is at all possible, to speed up this evidence. We would like Mr. Ingaldson to be as specific as he possibly can in his statements.

I. INGALDSON, recalled.

*By Mr. Parry:*

Q. At the conclusion of yesterday's sitting you were discussing the advisability and necessity of obtaining a definite plan to stabilize the cattle industry and avoid the wide fluctuations that from time to time take place. That is the point you left off at?—A. Yes. I think we had fairly well covered that point. There were some remarks passed last night that I was advocating reduction in production, but that is not my thought. The first thought is that we must try and find the widest possible markets. If we fail to find those markets, then the question of production must enter into the picture. I will leave that. I don't think we need to go any further into that particular question. The next that we have in this memorandum is merely information. I don't think I need take any time to go through examples Nos. 6, 7 and 8. You men, if you think they are of any interest to you, will be able to study them through and arrive at a conclusion. The object there is to try and show, approximately, the resemblance of our market to the old country market. That is for live cattle that we shipped out last year, and for hogs or Wiltshire sides that have been shipped out during 1932 and 1933.

Q. You put these figures on a comparative basis, have the pound and dollar in reflection?—A. Yes, we took it on a 100-pound basis, not a 112-pound basis, and showing the key at the bottom. Example No. 8 gives you the approximate cost of 100 pounds of bacon sold in Great Britain, and if you compare that with the figures, the market price on a given date, you will be able to see whether it compares favourably with the old country market.

*By Mr. Senn:*

Q. By the way, last night you promised to give us some more copies of the report; are they available?—A. They are in the mail, and I will have them this morning as soon as I get back to the hotel, and I will see that you get the copies.

Q. I would like very much to have one?—A. I will see that you get enough copies before I leave, sir.

Example No. 9 is merely to indicate what effect the difference in value of sterling has on the live stock prices. One example there with respect to a hog—if sterling was around four cents, it would mean a loss of approximately two cents a pound live weight.

Then the next question here—and I won't spend much time on it—is the question of grading of beef on the rail. That question has been brought up in the west quite a little and considerable discussion has taken place. In our opinion we cannot see that the grading on the rail of beef would be feasible at this time, we have such a great number of various classes; and in the method of selling adopted at the yard, the seller and the buyer is actually grading these animals when they are going through their hands.

Q. Before you go farther, there is one point that occurred to me in regard to the cost. You show the cost of a pound of pork or Wiltshire side laid on the British market; is the cost of processing included in that estimate?—A. Yes, the cost of processing and delivering. There are two charges that you will note, a charge of \$2.13 costs to seaboard, which includes processing.

Q. By the way, I had a conversation with a gentleman last night who was saying that the cost of processing in Denmark was much less than it is in Canada; can you give any information with respect to that?—A. I am afraid I have not information that is authentic enough to give. That is my understanding, the same as you mentioned, that the method that they have adopted over there cuts down the cost of processing. Of course, there they settle for all their hogs on the rail basis. It is not settled on a live basis. It is settled on a rail basis.

Q. That would not affect the cost?—A. No, that does not affect the cost; but our understanding is that the cost is somewhat less.

Q. Could you tell the committee where that information could be obtained?—A. Mr. Barr has a fairly complete file on that, and we could no doubt secure his file. He was over there in 1931, I think it was, and made a study and secured information. We can no doubt supply that file for information purposes.

*By the Chairman:*

Q. May I ask you this: In your figures that you give in No. 8, when you take \$5.00, that would be a 5-cent rate for bacon?—A. A 5-cent hog, yes.

Q. You add to that the cost of handling that hog?—A. Yes. The first price is the market price of the hog. The dressing percentage is around 71 per cent, so that the actual cost of that 71 per cent works out to \$7.01. Then when they prepare them into Wiltshire sides, as I understand it, there is 79.4 per cent out of that 71 per cent that is actually a Wiltshire side. That brings that cost up to \$8.83. Then the cost of processing and shipping to seaboard is \$2.13. Then the ocean rate and selling in the old country market is \$1.43.

Q. How do you explain the difference between the dressed cost per hundred pounds and the loose Wiltshire, the market cost of loose Wiltshire under the column of the \$5 hogs and under the column of the \$9 hogs; how do you explain the difference there.—A. Well, the \$9 hog of course has cost more in the first place, and when you take 29 per cent off of that, it brings up your cost to \$12.67.

Q. Is it wholly accounted for in the difference in the price of the original hog?—A. It is accounted for in the shrink when the hog is being dressed.

Q. All right, as long as that is understood?—A. It is the killing of the hog, and it is dressed.

Q. I mean, the additional price is accounted for in the additional price of the hog only, no other factor?—A. No, not in that particular statement.

*By Mr. Senn:*

Q. That is the bacon price is it?—A. Yes, I have taken it on the basis of bacon.

Q. I suppose the select hog cost would probably be a little less?—A. No, the select hog would cost more.

Q. There would not be so much trimming on the select; there would not have to be so much trimmed off?—A. Oh, that varies somewhat. I am not just exactly familiar enough with it to answer this question outright, but this was information given to me as to the costs, and I have used it as given.

Going on a little further with the grading of beef, I say that at the present time the two top grades are graded in quite a number of inspected plants, not all of them, but it is a voluntary grading.

Q. On the rail?—A. On the rail, for selling purposes. It is red and blue. The red is the top and the blue is the second. We feel that it would be good business to have the five grades of beef graded, if it is going to be of any real value.

Then in connection with the grading of hogs, there has been a question in the west as to the advisability of grading hogs on the rail for settlement purposes. Owing to the extremely long distances that hogs travel to market, we feel that it is not sound as yet to try to put into effect the grading of hogs on the rail for settlement purposes. On March 5 of this year, it was put into effect that there should be grading of Wiltshire sides in all plants, and they are being branded as a certain brand, but I do not need to go into that any further. I think it is sound business and should be continued.

*By Mr. Kennedy (Peace River):*

Q. What is the effect of having long shipping distances?—A. Well, we will take a farmer in Peace River, for example; if his hog should go down to Quebec city, it will take at least twelve to fifteen days before the return for that particular hog could get back to the producer; and we feel that owing to these tremendous distances that the time is not opportune as yet to put into effect the grading of hogs on the rail for settlement purposes.

Q. Would it not be worth grading on the rail just to ascertain how closely the number of selects and bacon compare?—A. Yes; and I think that the grading on the rail for export purposes is going to be the instrument in giving information as to approximately how it comes out.

Now, I have some other paragraphs here in connection with the actual position of this country and other countries. I am not going to go into that at any length, but merely come to the conclusion and recommendation that we desire to make. I think most of you men have read this over, and I am not going to spend much time in outlining this. I think possibly Mr. Roblin will deal with that a little further. I would like to read the recommendations. They are:—

(a) That provision be made without delay for the establishment of a permanent commission of three members, to be known as the Canadian Live Stock Production and Marketing Commission to perform such duties and to be vested with such powers as the government may from time to time deem necessary or expedient for the purpose of improving and stabilizing the live stock industry.

(b) That a conference to be known as the "Canadian Live Stock Conference" be convened by the government within the next two months and thereafter at least once a year; consisting of one representative of the live stock producers' organization or organizations of each province, together with two representatives of each of the following, namely: The Industrial and Development Council of Canadian Meat Packers; the railway companies joint council; the Retail Merchants Association and the consumers' associations of Canada, to confer with and make recommendations to the said commission on all matters of mutual interest or concern pertaining to the live stock industry.

(c) That such commissioners be authorized to engage the services of one or more experts to act in an advisory capacity to the said commission and conference, and to secure and compile accurate data and perform such other services as may from time to time be required of them.

Now then, there are other recommendations that we make that should be looked into by this commission and conference, but I am not going to take the time to read these, however. Now, the natural question is, what is the reason for making these recommendations? We feel that the live stock industry is working on more or less four sections: The producer is the primary one interested, he is the one that produces the animal; and if we had time to go into some of the prices that were realized by the producer last fall, I know that you would agree with me that he is in a desperate position. Prices are just a trifle better at the present time, but we do not know how long this is going to last; the hog prices are working lower at the present time, and the cattle prices are not any too strong or steady. In October last year on the St. Boniface market, for the whole month, we found that the average price realized for cattle was \$1.96; and out of that had to come the cost of transporting these animals to the market, leaving possibly \$1.30 to the producer per 100 lbs—that included all of the best quality—by taking out what we call baby beef, the average price to the producer was \$1.68, or just a trifle over 1 cent a pound net.

*By the Chairman:*

Q. That is beef?—A. Beef, yes. I have just outlined that briefly for information purposes. Then we have the processing industry, then we have the retailer, and then finally the consumer; and there does not seem to be any understanding between these four groups that are working—or looking after the live stock industry. We feel by a commission and conference that we could bring about an understanding of just exactly what is taking place, and in that way work out a solution to the problem. We are not advocating that definite legislation be put into effect to control a set price and all that; but we do want to see that the industry understands one another, and that confidence be created in the industry as a whole; and I feel, and we feel, that through this medium this can be accomplished. Personally, I have a great deal of faith in human nature—we get checks now and then, but nevertheless we are all human, those that are in the industry from the producers to the consumer, and if we can get together and get to an understanding I feel that something may be accomplished greatly worth while.

*By Mr. Senn:*

Q. Number 4 here says, "a plan whereby prices for live stock delivered to the market would remain steady throughout the year, subject only to slight seasonal fluctuations"; is that the plan you have just outlined?—A. That is the conference that is recommended, if it will be agreed that this conference be put into operation—and this commission.

Q. That is the only plan you have to offer?—A. No, we have other plans outlined; I did not read them because of the time.

Q. It seems to me that the big problem in live stock today is just as you say, stabilization of prices; I think that is what this committee has in mind, to find some method of doing that.

The CHAIRMAN: We would like to have his pertinent suggestions as to how to do that.

*By Mr. Senn:*

Q. So far as I can understand Mr. Ingaldson, he has only this one to offer; the stabilization of prices through this conference?—A. Which I think goes a

little further; I was leaving that more or less to Mr. Roblin. If the conference could not agree, could not find a common ground for working out some of these things that we have outlined here, then in our opinion we must get down to a definite authority for doing that.

*By Mr. Heaps:*

Q. Would you have a fixed price?—A. The Commission, if it is necessary to give them that power; we don't want to ask for that now, we believe that an understanding can be built up.

Q. If you want to stabilize prices, somebody has got to have the power to fix them?—A. Yes, true enough; if those who are in the industry are not able to meet on common ground. But we feel that there are men big enough and bright enough in the industry to meet on common ground and arrive at a decision that some level must be found and retained; but if they cannot find that, then I feel that the time has come as I said yesterday—that we cannot drift on much longer without making some plans.

*By Mr. Senn:*

Q. But you would prefer to have this commission that is proposed try to find a price level?—A. I am of that opinion.

Q. And if they can't agree the proposal is for the government to step in and fix prices—is that the idea?—A. That is, the commission is under the control of the government.

Q. Yesterday, in regard to the bacon situation, you stated quite definitely that the price of hogs in Canada followed the fluctuations of the British market for bacon?—A. Yes, very closely.

Q. How can a commission off-set that?—A. I tried to outline that with the prices of 1933 yesterday; my contention is that we are now shipping out less than 10 per cent of our commodity.

*By Mr. Factor:*

Q. Is not the problem rather to find an export market and to increase our surplus, that in itself will help?—A. Oh, absolutely; the outlet is what we are naturally interested in.

*By Mr. Senn:*

Q. I cannot understand how that will be, because then our domestic price is absolutely dependent on the foreign price?—A. Not when you have such a small percentage of difference.

Q. I do not think that is a desirable situation.

*By Mr. Young:*

Q. Can you show us how we are going to get the domestic price above the export price?—A. The proposition I have in mind is this: the hogs we export are less than 10 per cent, and that is just about where we have been most of the time; my contention is this, that you must put up some medium to take care of that 10 per cent, so that the processing industry can operate without fear of losses on the export or on the domestic basis, as it was in 1932.

Q. What medium would you suggest?—A. I feel that that should be worked under this commission.

*By the Chairman:*

Q. Would you suggest Patterson scheme applied to hogs?—A. It really works out to a similar plan. My contention is that this commission, if it is necessary to resort to that, could be given the power to take care of the surplus, and to leave the domestic market to find its proper level.

*By Mr. Young:*

Q. Its proper level?—A. Yes, so that we could go on working.

*By Mr. Edwards:*

Q. Perhaps you mean, "profitable" level?—A. Not "profitable," I am not talking about that; if your consumers cannot pay the price for the commodity they are consuming, we cannot expect to keep it at a point at which they cannot consume it.

*By Mr. Heaps:*

Q. Do you intend then, in any way, to control production to meet the demands of the domestic market?—A. No, our ideal is to have a world market outside of this country, because we naturally in Canada are a surplus country in live stock; but if we can't find it then, and then only, we have got to take into consideration the restriction of production.

*By Mr. Young:*

Q. Well now, supposing you worked this scheme of yours by some means or other, and devised a plan for the raising of the domestic price higher than the export price; how are you going to stop our people buying bacon somewhere else and shipping it in?—A. That is the question that arises; why are not American hogs coming into this country at this time—that is the same question.

*By Mr. Senn:*

Q. Would it be to the advantage of the Canadian hog producers, if the American hogs were coming in here?—A. Certainly not.

*By the Chairman:*

Q. If you raise the internal market substantially above what the export market is, you would have to impose some import restrictions, quotas, or tariffs; some form of import restriction?—A. That is what we have at the present time in this country.

Q. Well, you would have to do that, would you not?

*By Mr. Edwards:*

Q. That is your opinion, you think that should be done?—A. I am not expressing an opinion on that.

*By the Chairman:*

Q. Put it this way: how would you maintain the internal market above the level of the export market?—A. I tried to outline that to you, but I am afraid I have not made myself clear. My contention is that this board, or commission, if given sufficient powers—if it is necessary to do that—could be responsible for the handling of the export surplus.

Mr. HEAPS: And the imports?

The CHAIRMAN: Just let him finish.

The WITNESS: Could be made responsible for the handling of that export surplus; and then by extending their control, if it is necessary, arrive at a domestic price, irrespective of or apart from the export price.

*By the Chairman:*

Q. Well now, having arrived at a domestic price which is in excess of the export price, and having agreed as to exports, how would you prevent the reimporting of that lower priced export, or the importation of lower-cost products from other countries?—A. Under the present system, the system that we have to-day; that is what is being done.

Q. Yes?—A. If all counties were on a free basis, sure; we would not need these things. As they are not, you have got to work it out.

Q. In other words, you have got to impose a tariff, or a quota, or an import restriction?—A. If we are controlling, yes.

Q. Now, what else have you got?

Mr. FACTOR: I thought we had had enough on that, Mr. Ingaldson.

The WITNESS: I did not know that.

*By Mr. Kennedy (Peace River):*

Q. Do you think the farmer has as much right to ask for any benefits there may be in things such as tariffs as anybody else?—A. If we are operating under that system, absolutely.

The CHAIRMAN: Of course he has.

The WITNESS: We could not do it for one section, and leave another section out of the picture altogether.

Q. Do you think the farmer would be willing to take a chance on having everything open, if everybody else is taking it?—A. Yes, and he would survive, too; he cannot survive under the present system with one thing tied up definitely in a certain sphere when he is left to go without anything.

Q. Do you think we have the right to ask for a regulated price on some products, such as beef, pork, and so on?—A. I think so, yes; I do feel that that is where we are hitting for.

Q. What would be the result if you don't get it?—A. The result is taking place every day in the western country, where men are driven to the wall—driven out of existence you might say. That is what is taking place.

*By the Chairman:*

Q. You think we must have a stabilized internal market?—A. Yes, I cannot see anything else for it.

*By Mr. Young:*

Q. You think that is the logical outcome of the protection given other industries?—A. Yes.

The CHAIRMAN: Yes; plus the inhibitions against our goods going into other countries.

Mr. ILSLEY: We might as well have a budget debate.

The CHAIRMAN: Hear, hear.

The WITNESS: I did not want to get into any debate.

The next thing I have, and I won't take long on that, in order to try and get some information from our producers, and their ideas, we sent out a questionnaire, of which I think you have copies.

*By Mr. Parry:*

Q. Are you filing copies of the answers to those questionnaires?—A. Just whatever is the desire of the committee.

*By the Chairman:*

Q. Are they confidential?—A. No, they are not confidential.

Q. We would like you to file that.

(Replies to questionnaires—exhibit 72, filed).

If you will let us have those replies we can have an analysis made of them?—A. I have a tentative analysis given here covering 84 of the replies to this questionnaire.

*By Mr. Parry:*

Q. Do you regard these 84 replies as being representative of a large section of the producers in your area?—A. Yes. We have among these a lot of men who are heavy live stock producers.

An analysis of the 84 replies received to the questionnaire is as follows:—

- |                            |      |    |     |    |         |    |
|----------------------------|------|----|-----|----|---------|----|
| 1. Top Steers.. . . .      | High | 8  | Low | 5  | Average | 7  |
| Medium Steers.. . . .      | "    | 6½ | "   | 3½ | "       | 5½ |
| Baby Beef Sucking.. . . .  | "    | 9½ | "   | 6  | "       | 8½ |
| Baby Beef Pail Fed.. . . . | "    | 6¼ | "   | 4  | "       | 6¼ |
| Bacon Hog.. . . .          | "    | 9  | "   | 6  | "       | 8  |
| Lambs.. . . .              | "    | 9  | "   | 6  | "       | 7½ |
2. Breeding: 44 decrease, 11 increase, 21 steady. Reason for change 43 low prices, 25 lack of feed, 14 no answer.
  3. Quality in breeding: 27 retained, 21 improved, 33 deteriorated. Reason for deterioration: 12 low prices, 9 lack of sires.
  4. Registered sires: 53 in favour, 28 against.
  5. Deliveries to plant or yards, 32 to both yards and plant, 49 to yards only. Reason to plant: 22 excessive cost, balance no answer. Average price: 23 about equal, 34 consider lower at plant, 11 no answer.
  6. Continuation of stockyards: 82 that stockyards essential. Direct deliveries to yards carloads: 13 want both yards and plant, 68 yards only. Direct deliveries by trucks to yards: 13 want both, 68 to yards only.
  7. Sudden fluctuations: 78 unsettling effect unable to plan. Steady prices with slight fluctuations: 80 that permanent improvement would be the result. Prepared to continue producing at reasonable profit: 81 prepared to continue.
  8. National commission: 71 answer in favour, 6 against. Control Board: 66 answer in favour, 10 against.

I will point out that No. 7 is relatively not so important to-day, because this matter of fluctuations was covered reasonably well yesterday; and No. 8 more or less leads up to the outline of our recommendation.

*By Mr. Young:*

Q. Were these questionnaires sent out to producers or to drovers?—A. They were all sent to producers.

*By Mr. Senn:*

Q. Were they all members of your association?—A. No, not all members. I sent them out more or less to men whom I knew in various parts of the province, whom I felt were men who should be able to make a very good reply.

*By the Chairman:*

Q. There is one question there, No. 5 on your questionnaire, which reads as follows:

When marketing the live stock produced on your farm, do you consign them for sale to the public markets, St. Boniface, or direct to processing plants?

First: In case your live stock is delivered direct to a processing plant, what is the main reason?

Second: Do you consider that the average price realized at the processing plant is as high as the average realized at the public stockyards?

And I note that the answers you have recorded here indicate that 34 consider prices are lower when stock is delivered at the plant, and 23 consider they are about equal?—A. Yes.

Q. So that it would appear from the answers to your questionnaires that there is no attraction to the farmer who sends his stock direct to the plant?—A. No, that appears to be the idea they have outlined; that the cost at the yards is too high.

Mr. FACTOR: You mean the charges, the costs of selling?

The CHAIRMAN: They don't say that here.

Mr. FACTOR: I think you misinterpret the answer, Mr. Chairman; I think that 34 consider the cost more at the plant.

The CHAIRMAN: No, no; the average price received is lower at the plant.

Mr. FACTOR: Is that what the answer is?

The CHAIRMAN: That is what the answer is, and that is what I cannot reconcile with the suggestion that the farmer feels he has to pay too high on stock at the yards; they seem to be utterly inconsistent.

*By Mr. Young:*

Q. Well, who sends there?—A. Of course, they might not be the same men that replied to both questions, do you see.

Mr. EDWARDS: No, but it is an expression of opinion.

Mr. YOUNG: But they say they do better on the yards.

*By Mr. Senn:*

Q. Yesterday you made the statement that it was very difficult to find out—that you were unable to find out—whether the prices were higher at the yards or at the plant; how would these farmers know?—A. Well they shipped their stock to both places and that is the basis they replied on.

Q. I would think they would have to ship part of their stock on the same day both to the plant and to the stockyards?—A. Yes, quite true. They expressed the opinion, however it came to be ascertained. I do not know that it can be done.

Q. Well then, it is not of very much value?—A. Possibly, but to my way of thinking I was anxious to get an expression of opinion, and most of these are expressions of opinion.

Mr. EDWARDS: It would be a good thing to check up on this would it not.

The CHAIRMAN: Well, he is giving us what his check up is.

Mr. EDWARDS: I mean, with regard to the same people on the same day.

The CHAIRMAN: Yes. Are there any more questions you wish to ask Mr. Ingaldson?

Mr. SENN: I think we had better get on.

The CHAIRMAN: I think we had.

Mr. KENNEDY (*Peace River*): Do you think your method of organization and sales is getting any more for the producers of the consumer's dollar; and if so, how—give us an illustration?—A. That is rather a difficult question. We feel we are, yes. We feel that we have been of benefit to the producer. We know in certain sections from the local point of view that the producer was paying possibly a dollar a hundred to market his animals before the organization started, and after the organization started it would possibly cost him 65 cents a hundred, to market them; and then, if for some reason our local went out of existence in that particular area, it was not long until he got back up to the old rate of a dollar a hundred for marketing his stock.

Q. That is to say, you have reduced the costs of the commission man, the general charges, by that much?—A. Yes, the man in the country.

Q. The competition is between your firm and the ordinary commission man?

—A. True, yes.

Q. And you have reduced these charges by one third?—A. I do not know on the public stockyards, but out in the country.

Q. You mean the drover?—A. Yes.

*By the Chairman:*

Q. By the way, Mr. Ingaldson, did not your co-operative society receive a grant last year from the dominion government of ten thousand dollars?—A. That was two years ago.

Q. Two years ago?—A. Yes.

Q. Ten thousand dollars?—A. Yes.

Q. What was that money for, to pay losses?—A. It was partly for that, and partly for carrying on a dominion-wide, co-ordinating organization. It was partly for that, and it was partly to make up losses that we had in 1931 when we were exporting and the Old Country went off the gold standard, you see.

*By Mr. Ilsley:*

Q. What organization got the amount?—A. The Canadian Live Stock Co-operative Limited; not the organization that I am representing, that is The Canadian Live Stock Co-operative (Western) Limited.

*By Mr. Factor:*

Q. They were granted that by the Federal Parliament?—A. Yes.

Mr. MULLINS: Mr. Chairman, might I ask the witness a question?

The CHAIRMAN: Yes, Colonel Mullins.

*By Mr. Mullins:*

Q. Do the old-time exporters, who operated on the yards for years all over the Dominion go there now?—A. I don't know.

Q. Oh yes you do?—A. I do not know.

Q. Oh yes you do; you can answer that emphatically.

Mr. FACTOR: How can he answer it emphatically.

*By Mr. Mullins:*

Q. You were on the yards when I was on the yards?—A. No I wasn't.

Q. Is not the difficulty, so far as live stock on the yards is concerned, due to the lack of the old-time exporter being off the market and not taking the surplus export cattle and shipping them to the markets for which the cattle are suitable; is not that one of the difficulties on the market to-day?—A. I explained that I thought yesterday, when I said that we were gradually being crowded into a corner—it used to be that we could move from 150,000 to 200,000 head to the American side.

Q. To the American side?—A. Yes, then we could keep our market reasonably well. At the same time we were moving a certain number to the Old Country and this meant added strength to the market.

Q. Another question: When the exporter was walking down the yards and took the surplus of these export cattle, suitable for the export business, did it not stiffen the market for the local cattle?—A. Yes, absolutely; it was an added outlet. To-day we are restricted in that outlet.

Q. Then your difficulty to-day is the lack of export buyers on the various markets?—A. No.

Q. But one who knows where the export cattle could go, instead of incompetent men shipping to markets where the live stock does not suit the market?—A. No, I say no; because if we had an unlimited outlet the buyers would be there, and that would create competition.

*By the Chairman:*

Q. You do not agree that the present-day operator is incompetent, compared with the old-time operator?—A. You could hardly expect me to agree to that.

The CHAIRMAN: That is a case where you and the colonel will more or less have to differ. I do not think we could pursue that argument; there is a difference of opinion.

Mr. MULLINS: No, it was just getting the information to the committee that the trouble is on the market, and the reason for the low prices he is talking about is because this surplus of export cattle is not being taken off the market to stimulate prices, as was the case when the old-time exporters were operating.

The CHAIRMAN: Yes, I think we have that on the record. Thank you, Mr. Ingaldson.

(Witness discharged.)

PERCY E. ROBLIN, called and sworn.

*By Mr. Parry:*

Q. You are here to make representations on behalf of the Saskatchewan Live Stock Producers' Association, Limited?—A. Yes, sir.

Q. And I understand your representations are in printed form for the use of the committee?—A. They are, sir.

Q. Will you file a copy of your brief, and if you have extra copies I would be glad to pass them along to members of the committee.

(Exhibit 73—Brief submitted by the Saskatchewan Co-operative Live Stock Producers' Limited; filed).

Mr. FACTOR: Mr. Chairman, without any desire on our part to get off the discussion, is there any way to shorten this up by having the witness make some pertinent observations about his brief, and then we can ask such questions as we may wish.

The CHAIRMAN: Yes, I think that would be a very excellent idea.

Mr. SENN: Any duplications in the material which he is presenting, matters that have already been covered by the other witnesses to-day and yesterday, might be eliminated.

The CHAIRMAN: Yes.

*By Mr. Parry:*

Q. I believe you gave special consideration to that last evening?—A. Yes, I did consider it, but most of the representations I have to make are along a little different lines. I will endeavour to deal with it in a general way. I do not see how you are going to avoid dealing with certain things without a certain amount of duplication; however, I will endeavour to avoid duplication as much as possible.

*By the Chairman:*

Q. Suppose we let him read it, it will not all be repetition, and you can make a note of any questions you may wish to ask him later. Will you do that? Will you just read it, and if there are any points which you consider are not necessary, just pass them. We will follow you and question you later.

*By the Chairman:*

Q. I think, to begin with, you can just indicate 17,000 farmers—I would not read every word of that?—A. I think Mr. Barr covered the history of the association in his introduction.

Q. Very well?—A. In view of that, there is not much use in reading it.

Q. No, I think that is quite right?—A. I will start in on page 2, then.

*By Mr. Factor:*

Q. That is, with “national policy necessary”?—A. Yes.

In submitting our recommendations to the committee we feel that it is essential to view the whole question from the angle of the general welfare of the Dominion as a whole, and not from any sectional angle. Bearing this in mind we ask the question: What is really needed so far as the live stock industry is concerned? And in answer we venture to suggest that the time is opportune for the formulating of a live stock policy embracing and co-ordinating all sections of the industry including:

- (1) Production
- (2) Transportation
- (3) Assembling and marketing
- (4) Processing and merchandising
- (5) Distribution
- (6) Consumption.

*By the Chairman:*

Q. Might I suggest that this part regarding production does not particularly concern us. We will be interested in getting the information, but I think we should dispense with that, because that is really an agriculture department matter. We are interested in the spread, transportation and prices and so on. If you could turn to transportation, we will take the observations regarding production as read. Will you turn to transportation?—A. Yes, I will be glad to do that, Mr. Chairman, if I may be permitted to make one brief remark in that respect.

Q. Certainly?—A. I hope I will be able to impress upon the minds of the committee the necessity of the development of what might be termed a live stock policy, one of the things which we have not got in Canada to-day. The situation, as I view it in Canada to-day is that we are endeavouring to produce and market live stock as sectional units. For instance, the producer is in a chaotic condition so far as production is concerned. Transportation needs considerable adjustment because of the advent of the truck and improved highways. The processing industry has endeavoured to carry on its field of activity; also the distributor has attempted to carry on his field of activity, without any co-ordination whatever. That is what is embodied in what I am trying to express in the development of a live stock policy.

Q. I notice you cover each of those points in this?—A. Yes. In view of that, of course I think we will have to come to the matter of production in some degree?

Q. Yes, quite so?—A. Then, transportation, I might read that section, although I do not cover the matter of transportation very fully, only just in a suggestive way.

In the handling of live stock two forms of transportation are common, namely the truck and the railway. It is interesting to note that with the advent of the truck and improved highways for distances ranging from 10 to 75 miles, the truck has been a strong influence in directing traffic its way. As an indication of the growth of this form of live stock marketing we refer to the government reports of truck deliveries to public markets during 1932 which ranged from 11.58 per cent to 68.31 per cent on the various markets, or an average of 28.93 per cent.

*By Mr. Senn:*

Q. You just referred to public markets; does that include abattoirs?—A. No; if you will just follow me:

This report does not include deliveries to packing plants by truck, of which there is apparently no record. It therefore follows that for short distance or local haul very keen competition has developed not only between truck and railways but between truck owners themselves. It would appear that in the competition offered a number of adjustments will have to be observed if unfair practices are to be prevented.

I have been rather brief in that, and I think there is a great deal involved in it. I believe the truck has a very important place; I think we should make use of it; I think we will have to make use of it. The producer demands it. It is a very convenient method of transportation for live stock. It comes to the producer's farm, and takes his live stock, saves him the expense of breaking up a six or eight horse outfit, takes his live stock quickly to market, convenient to load and easy to handle. In view of that, I think we are going to be forced into the position of having to acknowledge the truck. In view of the fact that it is a new instrument of transportation, it has rather disrupted, more or less, our whole marketing system. Economic conditions have encouraged that just a little bit, in view of the fact that people in an effort to make an existence, who were able when times were a little better to purchase a truck, since that time have been using those trucks for the transportation of live stock as a matter of livelihood; and have virtually become drovers, in a sense, in the country, in the assembling of live stock. We have a very great number of existing rates in respect to this question.—Mr. Ingaldson pointed that out to you yesterday—a very grave variation in these rates. The reason for that is again the pressure and the need for people trying to find their livelihood, and in consequence they are evading certain regulations and fairness in this transportation.

*By the Chairman:*

Q. Do you think the trucker should be put under control, licensed?—A. Quite so. I think it will have to come to that, because the whole system is being demoralized in view of that. For instance, we have a farmer who desires to be a neighbour to his nearest resident, and justly so; he wants to render a service. He operates his truck under a farm licence, which is probably \$25, whereas a commercial licence is \$80 to \$100 in the province of Saskatchewan—I don't know just what the figures are; but that farmer becomes a competitor with the man in the commercial field. He is going beyond being a neighbour in many instances in taking the neighbour's live stock, for instead of the neighbour selling the live stock as his own product, the product has to go to market under that licence because he has a farm licence. He has to take that product to the public market and sell it as his product, misrepresenting the situation and endangering the security of the man who owns the live stock in this way, that the man receives

remuneration, and according to our stockyard regulations, he must receive remuneration for that stock as his own stock. If he was to get drunk or something, the man might be out of luck about getting his returns. In view of these things, there is a very grave sense of insecurity.

*By Mr. Factor:*

Q. There is no supervision over that?—A. No, there is no supervision over that, up to the present. I think the very principle of trying to issue a commercial licence is an attempt to meet that situation; but as I say, it is a new form of transportation and it has got to be adjusted. That may come under the utilities board or it may come under the commission. We have suggested that a commission should take charge of that supervision and look after it.

*By Mr. Heaps:*

Q. How many months a year do trucks operate?—A. It varies. Some years they operate twelve months, particularly in western Canada. In certain parts of Saskatchewan this year they have operated twelve months in the year due to the lack of snow. They almost invariably operate eight months in the year.

Q. That would be a fair average, eight months in the year?—A. Yes.

Q. How does the farmer get on in the other four months when he wants to deliver?—A. He has to resort to the railways again. The result is that the people of Canada have got to keep up the railways; as a consequence the railways are not paying. I have no brief for the railways, but there is not a fair break there. I have to be concerned about that as a taxpayer of the country and a citizen.

*By Mr. Young:*

Q. Is it a practice for farmers selling any stock for their neighbours in this country to make a business of it, or does it just happen in isolated cases?—A. Yes, under the economic conditions they make a business of it.

Q. They are making a business of it?—A. Yes, because their farm operation—it is a matter of people trying to find an existence; and in view of that, they are evading regulations and all the other things that are possible, and disrupting our whole economic system.

Q. Your objection is that a man taking in cattle for his neighbour is engaging in the trucking business without a trucker's licence?—A. Yes.

*By Mr. Senn:*

Q. It is a violation of provincial regulations?—A. It is a violation, yes; and it is insecurity to the man who sells his live stock. I think you men will understand that the man has to sell that live stock under that licence; he would be subject to a penalty if he made a commercial activity out of trucking. In view of that, he has to sell the live stock as his own product. The man who has furnished the live stock is not getting the security of the returns for that live stock, because the man is not licensed and bonded, while the commission concerns and stockyards have to carry this bond in order to protect the producer.

Q. One neighbour will know another well enough to send his stock with him?—A. Yes, of course; I grant you that there are not very many of these cases that happen, but there is the greatest possibility of that, and I know that the live stock branch is concerned about that very thing.

*By the Chairman:*

Q. Yes, they have it under consideration as a matter of fact, the question of licensing?—A. Yes.

Q. Will you proceed to the next point?—A. That very thing, of course, enters into the matter of marketing which I will deal with now.

Assembling and marketing: In the assembling of the producer's live stock to be delivered to market, we have assumed in our introduction that all live stock should go through the same medium of channel.

Q. You agree with Mr. Ingaldson, do you, that it would be better if it were possible, and as far as possible, that live stock should be marketed through what is known as the public yard?—A. Well, I think that the public markets were established for a purpose as public markets. If you don't put anything through the public market, it can't very well be a public market, as I see the situation; and that is apparently what has happened to-day. It is going direct to the packing plant. Stock is being divorced from the public market and in view of that we have no market, not as a public market. I think the public market is absolutely essential, because we have conditions that make it essential. There are times when men desire to dispose of live stock before they are a finished product. In other words they are a feeder product, feeder hogs or feeder cattle. You must get feeder cattle to market some place. You can't always dispose of them in your locality. In getting them to market you may find it necessary to assemble this cattle into carload lots so it will sell to advantage. In view of that, there is at once the necessity for public markets. Divorce the marketing section from the public markets, only leave that section of the business to them, and they would be so weakened that they could not function. Then you would have to set up some other kind of machinery; and I am not prepared to-day to suggest to you men any other kind of sectional unit there that would take the place of the public market. I think there is a place for the public market. From my practical observation of the situation, and I have farmed for twenty-seven years in Saskatchewan, I do not see how we can get along without the public market.

Q. The public market therefore should be encouraged and supported?—A. And supported, yes.

Q. That is your view?—A. Yes. The principle is there, that it is a public market. There must have been a necessity for it or it would not have been evolved. In view of the necessity, I think it is only fair to-day to give it a fair chance to demonstrate its ability.

*By Mr. Factor:*

Q. Your contention is that selling direct to the packer weakens that?—A. Yes.

Q. Weakens the public market?—A. Yes, it can't do anything else.

*By Mr. Senn:*

Q. Do you know anything of the practice that I asked Mr. Ingaldson about yesterday, of a drover or trucker getting some consideration for taking live stock direct to the abattoir or packing plant?—A. I don't know that I can tell you about the trucker getting consideration, but I can tell you of drovers getting consideration, so far as railways are concerned. For instance, I can tell you—it comes right under the section, as a matter of fact—that there is a general practice of collecting what is termed a clearance charge at both ends of the marketing. We have them in Saskatchewan and we have them in Alberta, drovers operating in very large fields. A man resident in a certain point has virtually an army of men out in the country purchasing for him, congregating and purchasing live stock for him. I don't know that I can give you statutory evidence in this respect, but I am inclined to feel—in fact, I have it from very good authority that the packer is paying a clearance charge of \$10 at the receiving end of it and a clearance charge of \$10 on the selling end.

*By the Chairman:*

Q. Ten dollars for what?—A. It is a direct clearance charge. The drover gets \$10—at least I assume that he gets it.

Q. For how much?—A. For a carload.

Q. For a carload?—A. Yes, for a carload of stock, and it goes direct to the plant.

Q. That is, the drover gets it?—A. Yes, the drover gets \$10, the same man. For instance, we might say a given individual at Edmonton was assembling live stock there, and he gets a clearance charge—what is called a clearance charge—of \$10 for assembling a carload of stock. Then when it is taken direct to the plant he gets another \$10.

*By Mr. Senn:*

Q. It is a bonus?—A. Yes, it is bonus.

Q. To induce stock to go into the abattoirs?—A. The result of that is that if that man is a commission man, if he was to sell that stock—if he had this man in the country getting it together as a commission man, and he was to sell that stock at Edmonton, he would only get \$10 as commission for the selling of that stock. He buys at the stockyard and ships direct to Montreal or some other place down there and he gets \$20 where he would only get \$10. As a consequence he breaks down the Edmonton market.

*By Mr. Factor:*

Q. From the packing plant, does he get both charges?—A. I think that is a fair statement.

*By Mr. Young:*

Q. Is that a secret commission or is it done quite openly?—A. Perhaps I am not altogether safe in making this statement, in a sense, but I believe that this is the practice which has prevailed.

Q. Have you ever run across a definite case of it, a concrete case?—A. It involves a much larger question than this. I will make this statement, in my capacity as president of our organization, that I would like to have you men remember that I cannot afford, as an official of that organization to be a constant investigating body. I think that is a responsibility, and I would like you men to understand that I believe that is a responsibility of the co-operative bodies in the provinces where they are organized. They are the only bodies who are making investigations of the actual practices on the market; and under these economic conditions, of course, we cannot keep men employed for making investigations. In view of that, we have to assume some things. In view of assuming them, I think it is only fair and just to the industry that a thorough investigation be made of the activities of some of these men who are expending their energies in the country. It perhaps is not fair for me to make that statement, but in making that statement, I hope it will be a suggestion to this committee to make a thorough investigation of what has happened in so far as that is concerned.

*By Mr. Ilsley:*

Q. Who is it that you say should investigate?—A. Well, the committee that Mr. Ingaldson has suggested to you in our recommendation. We suggested a committee.

*By the Chairman:*

Q. A conference?—A. Yes, or commission. That would be the responsibility—it may not be the responsibility of the three men that are involved in that, but I think that they should have men placed at their disposal to make a thorough investigation of these activities.

Q. Your statement is that to the best of your knowledge the general practice in marketing there is a practice obtaining of paying a commission at the shipping end for the direction of carloads of stock to packing plants?—A. Yes.

Q. As well as a commission at the receiving end?—A. Yes.

Q. And while this may not be illegal, your point is that it is a practice prejudicial to the general marketing of live stock?—A. Just exactly.

Q. And you ask us, if we can, to look into it?—A. Yes.

The CHAIRMAN: I think we can look into it from the standpoint of auditing. We will take a note of it. I don't think this should be accepted as evidence, but we will take a note of the suggestion and have it investigated.

*By Mr. Ilsley:*

Q. These are buyers for the packers, are they not?—A. I don't know that we are in a position to say they are buyers for the packers, but they do work in conjunction with the packers.

Q. Are they not acting as agents for the packers when they buy the cattle?—A. I might say we have one operator in the province of Saskatchewan who goes direct to one given packing plant all the time, and he has developed a very large business.

Q. Does he represent himself to be anything but a buyer for this packer?—A. No, he represents himself in his own capacity.

Q. Why are packers not entitled to pay him what they like, as much as they want to?—A. The point is this, that it is directing live stock from the public markets rather than to the public markets.

*By Mr. Factor:*

Q. The extra \$10?—A. Yes.

Q. That is an incentive?—A. Yes, it is an incentive for him to go direct to the packing plant and not to the public market; and as a consequence you are breaking down your public markets.

*By Mr. Ilsley:*

Q. When the producer sells his stock to this man, does he not know that he is selling to the packing plant?—A. No.

Q. What does the producer think he is doing with his stock?—A. I don't know that he is concerned; he sells his stock outright to that particular man. As a matter of fact, we have established two market places; we have established a market place at the farm and we have established a market place at the public market. That is breaking down the public market again, because the man at the farm has not any control; if he sells the live stock, he has not any control over the destination of it. The possibility of building up an organization out in the country is making a market place in the country instead of a public market.

*By Mr. Young:*

Q. You object to that, do you?—A. I don't think that is good practice.

Q. You think the farmer should not sell his stuff on the farm; he should ship it?—A. Yes, I think that the farmer is at quite a disadvantage in selling

his stock on the farm. My reason for saying that is that every farmer does not own a radio; every farmer these days is not in touch with the daily press; he is not very closely in touch with market values, and in view of that he is bound to get advantage taken of him. I can give you an illustration.

Q. What would you do with the grain farmer who has only an occasional animal to sell; would you deny him the right to sell to a drover at his gate? —A. Well, I don't know—I don't think it is fair to deny a man the privilege. That would be a restraint of trade, probably. But I think that an organization could be set up that would suggest to that man that it was to his best interest to take his stock to the public market and have it sold, rather than have it sold at his gate at the farmyard.

Q. If he has got only one or two animals, it would not pay him to ship them?—A. Well, I think it is decidedly to his advantage, even if he has only one or two animals. My personal observations are that I would much rather ship my own animal, with the identity maintained, and that is what the co-operative organization is set up for. We mark these animals with a hair clip, as Mr. Ingaldson has told you, that marks an animal as my animal, and I get my return according to the grading, a weigh scale ticket from the co-operative. I get a weigh scale ticket and get all the information associated with it, as a consequence of the producer marketing his live stock on the public market, and not in his own farmyard. I can give you an attested illustration here of what happens in that respect, of where a man makes a mistake in selling his live stock at the farm. Here is a man from Watrous, Saskatchewan; I have an attested statement from Mr. Oakman. I will just read this:

I, Edmund Oakman, farmer, hereby attest that to the best of my knowledge that on January 11, 1934, a drover or stock buyer came to my place and made me an offer of \$95 for nine hogs. He later raised his bid to \$100 and stated he was shipping from Drake on Saturday, January 13. Having had my stock listed with the pool at Watrous I called up the shipper on the phone and he suggested the drover probably was not buying stock for my benefit, so I decided to ship through the pool. I shipped from Watrous on January 22, retaining one heavy one at home. I received for the eight hogs the sum of \$142.40.

Now, there was a rise in the market in that respect; on January 8 and January 12—and this was on January 11 that the drover was there—the market was steady at \$6.75 according to government reports. He sold these hogs as stated in this article on January 22 at \$8 a hundred. The market had risen.

*By Mr. Senn:*

Q. And the hogs were growing?—A. Yes, the hogs were growing. I will deal with that right here. The net value of the eight hogs sold was \$142.40. He retained one hog at home at an estimated weight of 200 pounds, which is a marketable hog, and the price offered by the drover was \$6.75. The value of the hog was \$13.45. The total value of the nine hogs would have been \$155.85. The drover offered him \$100. The gain of eight hogs at two pounds a day would be 16 pounds in 11 days, or 176 pounds, sold at the actual market value as at 8 cents a pound or \$14.08. The advance in the market price on the 1,600 pounds, and the added 176 pounds at \$1.25 a hundred is \$22.20, or a total of \$136.28, or a disadvantage to that producer in selling to the drover on that basis of \$19.57. So I say in view of that, that the producer is the loser almost invariably when he sells his live stock on the farm, unless he is a very prudent man and knows live stock, is a good salesman and knows market conditions; and most of our producers do not.

*By Mr. Young:*

Q. That is very true, Mr. Roblin. Take the case of farmers in a district where they don't raise many cattle, and you could not gather up a co-operative carload in that district. A drover will go there with the truck and pick up a steer here and another one two or three miles away and another one somewhere else and the farmer will be able to get rid of that stock; if they waited for your co-operative, they might have to wait for months. Is that not a considerable convenience to them?—A. No. I think it just reverses itself. As a matter of fact, Mr. Young, I know that you come from Saskatchewan. Unfortunately we evidently are not operating satisfactorily in your locality, because here is the situation—

Q. I have not made any reflection on your organization at all, Mr. Roblin. I am trying to get at the facts?—A. Very good, we won't waste any time in that respect. Here is the situation. I think I pointed out in this memorandum that the activity of the drover is irregular and erratic at all times. I have got a letter here that will tell you that the drover comes when the situation is favourable for him to come. He is not there on the job to purchase and take this live stock. If we were satisfactorily organized in the province of Saskatchewan, there would always be a man in your locality to take the live stock off your hands when it is ready, because live stock is particularly perishable article. When it is ready to go, it should go. There are instances when a man desires to have it go; and the answer to your question is that in districts properly organized, where there is a sufficient volume to take care of it, one man should be responsible for that and take the producer's live stock to the public market. The situation as it is to-day is that when the prices begin to spring, we have a raft of these men coming out in the country to get their live stock, and then when the prices are sagging and a man is a little hard up and wants to get rid of an animal, even if the market is depressed, he has not got the service. So I say that section of the business is very badly organized, the whole thing broken up.

*By Mr. Senn:*

Q. Do I understand you to say that you have no drovers who ship regularly from station yards?—A. Yes, we have in some areas drovers who ship regularly.

Q. The practice in Ontario is that the drovers ship regularly to the market. He is at a station on a certain day at a certain time and the farmer knows he can take his stuff there and the drover will be there to take it?—A. I might say that I was brought up in Ontario and I know the drover system in Ontario; I also know the drover in my particular locality that I came from—he was a witness before you here yesterday. We have at least five drovers—one truck a day going past our farm. I do not think the competition is reflected to the producer; I am satisfied that it is not reflected to the producer.

*By the Chairman:*

Q. I take it that what you are really arguing, or giving evidence on, is that you favour the co-operative system as against the private drover system?—A. Most decidedly. I cannot arrive at any other conclusion, because the co-operative system tries to take the producer's live stock right from his farm to the public market, where we believe it should be sold; and when the bargain is made on the farm, unless the man is a very competent man and understands the business—I can understand how men like Mr. MacLeay, who was here yesterday, and who is a trained man in the live stock industry, knows his cattle, and has a chance to sell in the market, and I think that a man in that position usually does not support the stockyard because he has an outlet for his cattle somewhere else in a direct way.

*By Mr. Factor:*

Q. Does not the farmer sell to the drover and thereby avoid the charges on the stockyard?—A. Not altogether, the reason why the farmer sells his live stock to the drover to-day is because of the very dangerous fluctuations in price levels; namely 50 to 75 cents sometimes in a day, and he is frightened to take a chance that he has to take on a public market in view of that fluctuation.

*By Mr. Senn:*

Q. Is not that likely to happen even if he sends it to a co-operative commission house?—A. What we are hoping to do is that we will be able to avoid these desperate fluctuations; and that is what we would like to see this commission do—steady the market and control these fluctuations. Mr. Ingaldson pointed out to you yesterday that meat commodities are a steady product, people eat them in day in and day out, and they don't have to pay these terrific fluctuations; in view of that I cannot see any reason why if competent men are put on the job world prices can't be evened up a little bit, and not get these dangerous fluctuations in price to frighten the farmer from going to the market.

Q. I fully agree with you that if we could avoid these price fluctuations it would be very materially to the farmer's welfare?—A. That is the problem.

*By the Chairman:*

Q. You are very strong on that point, the stabilization of markets?—A. Yes, I am.

Q. I wonder if we could get along—stockyard charges are your next point?—A. Yes.

Q. Will you just state briefly what your point is, because we have been over this ground very frequently, and you might just emphasize your particular points having in mind the evidence you have heard?—A. There is a great deal of objection to-day to the stockyard charges, there is quite a general objection; as a matter of fact we have a number of our members objecting to stockyard charges. I think largely the reason why these men are objecting to stockyard charges in a general way, is because they have not made a very thorough study of the situation, and do not know just what is involved in handling live stock on the stockyard. As a matter of fact, they are driven to the point of desperation to get a dollar or so—a few dollars out of their live stock, and they feel that the present charges make a grave hole in their returns. On the other hand, it is a matter of price levels, it is a matter of effort to try to bring up prices rather than a matter of trying to chisel off two or three dollars in the shape of little incidental charges. We do not believe the action taken by the Department of Agriculture—and I do not say this in any critical way at all—in adjusting charges will get very far. We feel that the effort is so small that it really does not amount to anything.

Q. Just a minute now, to what are you referring?—A. I am referring principally to the recent reduction in commission charges.

Q. A reduction in yardage charges?—A. Yes. The average marketing charge for a farmer with 20 hogs and 5 cattle only amounts to about \$1.00 or \$1.25 to the producer; and if you could bring the price up a quarter of a cent a pound to the producer, you would give him the benefit of \$20 to \$30 more for his stock.

*By Mr. Factor:*

Q. In other words, the yard charges would really not amount to anything?—A. No.

*By the Chairman:*

Q. Then I take it, from what I read here and from your observations, that you have no real complaints to make against the present stockyard charges?—A. I do not want the impression to go to the public that we are favoring the present charges; I am quite satisfied in my own mind that if all live stock was shipped to the public markets, the charges could be reduced. I also feel that the feed charge is too high; I admit that, and our producers feel that they are too high. We are allowed to-day, under the Live Stock and Live Stock Products Act \$10 per ton on feeds, and \$4.50 for transportation charges. Now that Act is under the direct supervision of the government. There is not a single activity, gentlemen, from the producer's farm up to the public market but what the department of agriculture authorities—the authorities of the live stock branch—have not absolute access to; they know all of the charges that are involved, but everything stops right there.

*By Mr. Factor:*

Q. We had evidence yesterday where an extra profit of \$6.00 per ton on hay was made over the charges allowed by the regulations?—A. It must have been in violation of the act and regulations of the department referred to. I hardly see how it could have happened, because I know in our case we have to turn in our invoices month by month to the live stock branch, under whose supervision this thing comes.

*By Mr. Senn:*

Q. Did I understand you to say that the request that went out from the Department of Agriculture for a reduction in stockyard charges was not warranted?—A. Yes, and again I do not wish to be critical of the department—it is not warranted. The public markets are not deprived of volume—you know that you could reduce the volume, and reduce the charges, and then expect to keep on in any business; could you? And that is what happens with direct shipment, we are actually reducing the volume going to the public market; and when on top of that we reduce the charges there is going to be only one result, and that is the elimination of the stockyard. We have operated a small stockyard in Saskatchewan.

*By the Chairman:*

Q. Where is that?—A. We have one in Regina and one in Saskatoon.

*By Mr. Senn:*

Q. Has your live stock yard acceded to the request of the Department of Agriculture?—A. We have. We did not accede to them till after we had made out a clear case that we felt it was striking at the wrong place, which I think they thoroughly understand.

Q. Is your stockyard on a paying basis or not?—A. We are on a slightly paying basis, yes; and we are ready to submit our figures in that respect, as a matter of fact they are already open to the Department of Agriculture.

*By Mr. Ilsley:*

Q. You have competition in Saskatchewan?—A. Yes, we have a very small yard in Saskatoon—but as a matter of fact I do not know that particular reference is needed in respect to our internal troubles there—we have some troubles of our own.

*By Mr. Senn:*

Q. That is in connection with the abattoir in Saskatoon?—A. It has no connection with the abattoir.

Q. Is it your own?—A. The abattoir is within the organization, but it is separate and distinct from our organization—we just operate the stockyards, the abattoir is operated on its own.

*By the Chairman:*

Q. Now we will get to the next point, export marketing?—A. Well, with regard to export marketing: we feel that that is a thing for a responsible commission to develop to the fullest extent; there are a great many things involved in export marketing for products both live and dressed. We are very strongly in favour of the principle of rail grading so far as export products are concerned. I will just read the section relating to that:

A very important phase of marketing is the taking care of our exportable surplus. While Canada is largely on a domestic consuming basis it is recognized that a small exportable surplus has a very detrimental effect on our domestic prices. The proper control and guidance of this surplus is vitally important as applies to both live and slaughtered products. Since export markets, particularly the British, require both quality and quantity it necessarily involves four elements, namely, production, transportation, processing and Government direction. In view of this the most complete co-ordination should exist between these departments if the export section of the industry is to thrive. A study should be made of the export markets, their potential requirements, our ability to fulfil these requirements as to quality and quantity, the supervision of standards of quality and grading, direction as to trade regulations, transportation, insurance and overcoming obstacles and barriers in trade operation.

*Mr. Senn, (Acting Chairman):*

This is quite a broad field, and I am of the opinion can only be satisfactorily worked out by some kind of a commission which will give it very special study, which will study outside markets; and I think in any control that we have we will have to develop all potential markets that it is possible to develop. When we have exhausted these markets it is then time to try to regulate production, and I haven't the slightest doubt about what production can be properly regulated with a little bit of horse-sense used in the development of regulations.

*By Mr. Parry:*

Q. Within the organization itself?—A. Yes, through the co-operative organizations, and with the co-operators working with their producers in competition with the export demand, that will bring better marketing.

*By Mr. Kennedy (Peace River):*

Q. You mentioned among the different points you made, I think, that the real question is getting rid of this exportable surplus and the effect it has upon the price in Canada—you want to stabilize prices?—A. Yes.

Q. Do you think it is possible to do that in Canada without getting control of the abattoirs and the packers?—A. It is quite possible, if the packers will work with us in the development of a co-ordinating policy, and lay their cards on the table and play the game—if they do that I do not think there would be any need for the socialization of the industry. I am trying to avoid that for the time being.

Q. Do you mean the packing industry?—A. Yes. I do not think there is any need for it, because the situation is this; with the present tendency to merge we have got to the place that I am afraid of; I think we could develop a little

more competitive market than we have if we have all live stock coming through the public market. We are offering this suggestion to the packer, to play the game, to go all the way with us in the co-ordinating of our efforts; if efforts fail to do that then I think it is up to the government to take charge.

*By Mr. Factor:*

Q. What do you mean by that—co-ordinating and references of that kind?—A. To explain that, I think that is the producers' problem; we have got to have this advisory council or commission, to develop the potential market and find out what the capacity of that potential market is; along with that is the statistics of our domestic markets, we have our live stock budget and when we have exceeded the capacity of that then I say that if the packer will stay exclusively on the market, and not go out in the country and build up his organization through the drover and the commission man, and leave the producer to take his stuff to the public market and bring it there on a regulated basis which can be agreed on, that the commission through the packer trying to bring his supplies regularly as he requires them and in the quantities that he requires—

Q. I know, but you just made the statement prior to that that considering the mergers in the packing industry, competition would not exist even in the stockyards?—A. Well, in view of that I think it would be the duty of the commission to determine the price differentials between the live animal and the finished product, giving due regard to a remuneration for the packer which would be fair for his capital investment and the services rendered.

*By the Acting Chairman:*

Q. In other words, you are advocating a policy whereby this commission would have absolute authority to control prices?—A. Well, I do not know whether you have to go so far as that, so far as to fix prices; to some degree they could control prices, I think that would happen—I think we need to have a thorough understanding of the situation as to the possibilities of our markets, then the next step is to try and control price levels by production, which I think can be done by reasonable conferences with the producers. I am satisfied that the producers will try, within limits, to do the right thing.

Q. Then you say they should have power to regulate production?—A. I do not think it is necessary to exercise that power, I think it is a matter of coordinating; I think it is a matter of working with the people. What is happening to-day is that we have the Department of Agriculture, the extension departments of the universities and the packers' council all working together trying to encourage the development and breeding—right at the moment in hogs, and no control. Now the governing factor there is that we have got a high price for hogs to-day, but I am afraid that that price is going to break because of the increase in production—we will be loading up with so much pork that we are going to get another terrible reaction; and I think the right kind of a body could regulate that.

*By Mr. Parry:*

Q. You would like to see certain coordination applied between producers and distributors. I observe in the brief that there are many cooperative marketing organizations dealing in live stock?—A. Yes.

Q. And they function together do they?—A. Yes, they do function together—not in a very well organized way—perhaps I am wrong there, we function together; for instance Mr. Ingaldson and myself, by submitting a joint report here covering the Manitoba Cooperative Live Stock Producers and the Saskatchewan Live Stock Producers. In 1931—between 1929 and 1931 we were organized across the Dominion, and the reason for the disruption in that

organization is losses we suffered because of the break in exchange in export cattle. We were at that time coordinating, the Alberta Live Stock Producers' Association with the Saskatchewan Live Stock Producers' Association, the Manitoba Live Stock Producers' Association, The United Farmers of Ontario, the Quebec Cooperative Federee and the Maritime Marketing Board.

Q. That is the number of the provinces, but I am referring to the provincial marketing associations?—A. There is only one provincial marketing association in Saskatchewan that is marketing for all producers, I grant you that. There is a gentleman here now in the room to-day who is marketing some live stock for the ranches, but that is not the general practice of marketing for all producers in the province. Last year we marketed nearly two million head of live stock for the producer in Saskatchewan. I think that we can be recognized as the only producer organization in the province.

Q. I notice in the statement here that you apparently have five separate marketing organizations; Killarney, Ridgeville, Rock Lake, etc.?—A. Mr. Ingaldson could give you information—it is quite true, under the Cooperative Markets Act charters were given to small local areas which might delay the operating in the locality they represent. The Manitoba Cooperative Live Stock Producers represent the whole province.

*By the Acting Chairman:*

Q. Shipments that are made by the producers concerned go direct to the cooperative organizations' commission house?—A. I could not say, Mr. Ingaldson can give you that information.

Q. What is the practice in your province?—A. In our province—to my knowledge there is only one or two small local organizations there; I think one is at Lloydminster, and the other at Young, Sask. They were operated as a local organization and they were prior to the institution of our association.

Mr. PARRY: Perhaps Mr. Ingaldson could answer that point now.

Mr. INGALDSON: These associations that you refer to, they all belong to the provincial organization. Each local shipping association is organized under a charter, and they all belong to the provincial body.

The ACTING CHAIRMAN: They all send their live stock to you?

The WITNESS: Yes.

*By Mr. Parry:*

Q. What I am trying to drive at is this: you have stated to the committee the proposition that your producer associations should be supported by the government; now, has the stage been arrived at in your opinion when you have sufficient control over the component units to be able effectively to lay down certain regulations and then go to the government and ask them to support them?—A. Just let me have that again, I don't know whether I just got you quite clear.

Q. What I am trying to put to you is this: Is there sufficient cohesion in these organizations within the producers' associations, to say to this committee, the first part of this thesis has been accomplished; what we want is teeth put in our enforcement of our regulation?—A. Yes, I think that is the case; we have 100 operating locals in the Province of Saskatchewan to-day. While we don't cover all the province, there is probably only half the province, we have only been in the effort of organization for seven years, and our organization capacity has been limited it takes money to organize these locals and get in touch with these people, but we cover 100 operating locals in the province of Saskatchewan to-day.

*By the Acting Chairman:*

Q. Now, gentlemen, we have only a few minutes left; will you proceed, Mr. Roblin?—A. I think probably I have covered about all.

*By Mr. Factor:*

Q. I think probably you have covered it pretty well on page 6?—A. I think that summarizes it pretty well:—

Finally we would suggest that the adoption of a policy along the lines above indicated would result in benefit to all parties concerned—to the *producer*, economic freedom, removal of insecurity; to the *consumer*, high quality, steady supply, reasonable prices through elimination of waste incident to violent price fluctuations; to the *packer* and all *intermediate services*, steady employment, continuous supply, capacity to pay reasonable remuneration; to the *retailer*, guarantee of steady supply of satisfactory products, thus enabling the retention of his customers; to the *export trade*, extension of our markets and the holding of our markets once they are acquired.

*By Mr. Young:*

Q. How many real buyers have you in Saskatchewan; I do not mean individuals, but the big buyers—the real competitive buyers?—A. Well, do you mean on the stockyards or in the country.

Q. I am speaking of people like Swifts, or Burns—how many such buyers are there?—A. Burns, Swifts and Canada Packers.

Q. There are three?—A. Yes, They are all there are.

Q. Do you think they ever get together and arrange prices?—A. Well, I am rather inclined—there is a possibility. As a matter of fact I want to say that I have information here that indicates that from a certain market in Saskatchewan certain deliveries were presented from a certain local territory on that market, and were reshipped from that market to an outside market, and several carloads were brought in from Alberta to take the place of the local deliveries.

Q. Assuming that to be the case, that the packers are so organized that they can determine prices on the various markets, what recommendations have you to apply to that situation?—A. The only recommendation I have got is to resort again to the commission in that respect, as I have already said; the price situation is the question in my mind. In view of that I think there is only one thing to do, analyze the situation, find out what the difficulty is—and I think that this responsible commission could carry that out.

*By the Acting Chairman:*

Q. Don't you think you are giving this commission a large contract to fill?—A. Yes, it is a very very large contract, but it has got to be handled some way or another.

Q. There is one question I would like to ask: on page 1 you mention the fact that in the member's contract provision is made for deducting a small percentage from the proceeds of his live stock; have you ever had any one question the legality of that proceeding?—A. Never. We have collected from the producers in the province of Saskatchewan under their contract—they have agreed and have contributed in the past seven years approximately \$170,000.

Q. Have you ever looked into the legality of it; could you enforce that by law if you needed to?—A. I do not think there is any question. I think you have a legal authority here who could probably go into the contract situation. We are operating under a special act of the Province of Saskatchewan

legislature. Our contract has stood up for seven years under a number of tests of violations of that contract, which amply demonstrate the fact that the contract is valid and satisfactory; because we have had some producers who failed to live up to their contract and we have had to take a few cases to court, but very few.

*By Mr. Kennedy (Winnipeg):*

Q. I suppose the matter is determined by the terms of the membership, the terms on which they entered?—A. It is an agreement on the part of the producer to solve his own problem.

Q. The deduction is made pursuant to the terms on which they are admitted into membership in to your association?—A. No, sir, deductions are made on the basis of marketings.

Q. I mean, when they become members, they agree to the deduction?—A. Yes.

Q. I do not see how there should be any difficulty with such an arrangement?—A. I do not think there is the slightest difficulty in that respect. It is an agreement between the producer and the organization itself.

The ACTING CHAIRMAN: Thank you, Mr. Roblin, very much. (The witness was discharged.) We will meet again at 3.30.

The Committee adjourned at one o'clock, to meet again at 3.30 p.m. this day.

---

The committee resumed at 3.30 p.m.

The CHAIRMAN: Order, gentlemen. This afternoon we have Mr. Byers from Saskatchewan, or Alberta.

Mr. BYERS: Both places.

JACK BYERS, called and sworn.

*By Mr. Parry:*

Q. Mr. Byers, you are secretary of the Western Stock Growers' Association, with head offices at Calgary in the province of Alberta?—A. Yes.

Q. And I understand that in addition to your secretarial experience you bring a wealth of personal experience in connection with ranching and marketing of live stock?—A. Yes.

Q. You are here with a memorandum to present on behalf of your association?—A. Yes.

Q. Will you just proceed?—A. I might say that I also have been connected with the Federation of Saskatchewan Stock Growers and British Columbia Beef Growers. For the benefit of the committee I would like to say, Mr. Chairman, that it is perhaps rather unfortunate that so many representatives of producers come to a committee of this kind without any really co-ordinated idea of what they want themselves. I may perhaps be in the same position. I will have some of my own remarks to make further on.

*By the Chairman:*

Q. As I understand it, the statements you make are founded upon your own knowledge?—A. Yes. If it would not be asking too much, I think I would rather like to read these remarks first, and the committee could ask me any questions they would like to ask afterwards. I think it would facilitate matters so far as time is concerned. One of the gentlemen said yesterday that we were having a rehash of what we had before. It is unfortunate for a man who comes third or fourth who has to re-hash these things, because there are certain statements everybody makes, even outside of some of his own unusual ones.

Q. I understand that you prefer, as far as is possible, to make your statement without interruption and have questions afterwards?—A. Yes, I would

Q. Well, we can't promise that, but we will ask the committee to try and respect your wish. Will you proceed?—A. Yes. The beef cattle producers of western Canada appreciate this opportunity of placing before your committee their views concerning the problem involved in the re-establishment of the cattle industry. Before I go further, I might just say in this case that I represent the cattlemen; some of you probably don't know it, so I might say that our range men of western Canada were in the cow business before the country became a grain growing, hog growing and chicken country. Some of the problems mentioned now were not found at that time. In appearing before you as a representative of these western producers it is my purpose to deal with a number of phases of the industry, and to endeavour to interpret to you the cattlemen's viewpoint concerning their difficulties and the solutions of same.

Following the mass of data already placed before you it is unnecessary for me to make more than passing reference to the important place the beef cattle industry plays in Canadian agriculture. Here is an industry which last year contributed \$27,500,000 to the Dominion's agricultural revenue. This is the sum paid producers for cattle and calves sold on stockyards and to packers during 1932. It does not include the value of export cattle, or country killed. If the value of this \$27,500,000 in providing employment to those engaged in stockyard and railway capacities, packing houses, and wholesale and retail distributing organizations, could be estimated, it would be multiplied many times over.

The year 1933 was the most disastrous cattlemen of this country have ever experienced. To remind you of the evil days into which this once prosperous industry has fallen, the following figures showing the net value of cattle and calves sold in Canada over a period of years will be of assistance:

#### VALUE OF DOMESTIC MARKETINGS

Year	Cattle	Calves
1928	\$81,000,000	\$7,900,000
1929	75,300,000	8,900,000
1930	47,700,000	5,600,000
1931	33,300,000	3,700,000
1932	24,700,000	2,700,000

*By Mr. Parry:*

Q. For the purpose of the committee,—just paraphrasing that,—between the years 1928 and 1932, you show a volume of \$81,000,000 in 1928 and in 1932, a volume of \$24,700,000?—A. Yes, and in calves, \$7,900,000 and \$2,700,000. I might say that the records for 1933 were incomplete, and that is the reason 1933 is not shown here.

*By Mr. Young:*

Q. It is all due to the decline in price, not to decline in numbers?—A. I will come to numbers later. The tables for these five years were as follows:

*By the Chairman:*

Q. Marketing?—A. The marketings in these five years were as follows:

Year	Cattle	Calves
1928	964,866	418,603
1929	921,125	456,707
1930	676,076	353,063
1931	699,496	338,509
1932	619,300	335,213

*By Mr. Parry:*

Q. If I might, for the benefit of the committee, interject, this demonstrates that the value dropped from 81 to 24, referring to millions of dollars, whereas the volume or number of cattle dropped from 96 to 61.

The CHAIRMAN: 964,000 to 619,000.

The WITNESS: You will see that the value dropped considerably more than the number.

*By Mr. Factor:*

Q. That represents the total product?—A. Those are cattle marketed through stockyards and packing plants.

*By the Chairman:*

Q. The total?—A. That is the total sum paid the producers for cattle.

Your inquiry is largely directed toward a study of conditions in Canada's export cattle trade and I am sure from the information you already have you will agree with me that instability has always featured the foreign marketing of Canadian cattle. This unhappy condition, may I add, has never been more marked than during the past six months.

Since the year 1910 total live cattle exportations have swung violently between a peak of 515,000 head valued at over \$46,000,000 and a low point of 25,000 head valued at \$1,400,000. I might say that in this period of 1903 to 1913 we averaged an export of something like 165,000 cattle in this country, mostly to Great Britain; the next period something like a quarter of a million each year to the United States; the peak of the exports in this country was 1930 when we exported practically three-quarters of a million cattle dead or alive, from Canada.

*By Mr. Factor:*

Q. You said the instability was more marked during the last six months? —A. Instability, I said.

*By the Chairman:*

Q. Will you proceed?—A. Yes. Playing as it does, a part in the establishment of domestic prices, it is obvious this unsettled condition during the last twenty-three years has been, in itself, a serious handicap to those engaged in beef cattle production.

A number of causes lie behind these extreme variations in export figures. As far back as 1883 the United States placed restrictions on the shipment of our cattle, the effect of which was felt for six consecutive years.

In five of the years since 1914 exports to Great Britain have been nil, and in three additional years in this period, shipments to Britain have been less than 500 head annually.

More recently we have witnessed the disastrous effect of the United States Hawley-Smoot tariff of 1930. In a fifty-year period the United States has made nine changes in its tariffs against our cattle, each a drastic one. These, in brief, are as follows:

1883, 20 per cent on all cattle.

1890, Cattle over one year \$10 each, under one year \$2 each.

1897 (Dingley tariff) cattle under one year \$2 each. Others if valued under \$14, \$3.75 each. If valued over \$14, 27½ per cent.

1909 (Payne Aldrich) Same as Dingley tariff of 1897.

1913 (Underwood) All cattle free.

1921 Tariff of 30 per cent on all cattle.

- 1922 (Fordney McCumber) Cattle over 1,050 pounds, 2 cents per pound.  
Under 1,050, 1½ cents per pound.  
1930 (Hawley-Smoot) Cattle less than 700 pounds, 2½ cents per pound.  
Over 700 pounds, 3 cents per pound.

Throughout this period of instability in exporting, the general trend of beef cattle production in Canada has been upward, particularly in the west. As far back as 1893 ranchers in the western territory commenced augmenting their herds and this development continued until well into the first decade of the present century at which time the rapid invasion of homesteaders and the extension of homestead areas arrested the progress of the cattle ranching industry.

The peak of settlement in the west was co-incident with a tremendous increase in the human population of the Dominion with which the production of cattle did not keep pace. The federal census of 1901 reported a beef cattle population of 3,167,774 head. The 1911 census figures were 3,930,828 head, an increase of approximately 24 per cent. In this ten-year period Canada's human population increased by approximately 34 per cent.

Due in part to the impetus given all agricultural production during the years of the great war, and also to the establishment of cattle herds on large numbers of the grain farms, in the west, beef cattle figures mounted rapidly. The 1921 census returns showed there were 5,870,804 beef cattle in Canada.

From the figures presented a moment ago in connection with the value of domestic marketings in the five-year period 1928-1932 you noted the volume of marketings was falling. There were 345,566 less cattle marketed in 1932 than in 1928. The decline in calf marketings was 83,390. This has resulted in a tremendous pile-up of cattle on farms and ranches and recent figures indicate this is being continued. For example, as at December 1, 1933, there were estimated to be 103,700 more beef cows than on the corresponding date of 1932, an increase of 15 per cent. The number of steers two years old and over in the Dominion on December 1, 1933, has been estimated at 54,000 head more than the total for 1932.

Unfortunately, during this long period of expansion in beef production no effort has been placed behind the sale of beef in order that the increase might be absorbed. In certain years exports to both the United States and Great Britain easily took care of the surplus over domestic requirements, but since the total elimination of Canadian cattle from United States markets and a substantial reduction in the numbers moved annually to Great Britain, the cattle producers of the west have felt some impetus should be given domestic consumption.

It has been estimated that an increase of only 25 pounds in the per capita consumption of beef in Canada would wipe out the existing annual surplus and place the industry on a sound basis. Unfortunately the cattlemen are unable to follow the example of the orange growers of California who, a few years ago, invested the sum of \$750,000 in an advertising campaign and not only wiped out a huge surplus but actually created a shortage of their commodity.

The beef producers of the west are financially incapable of instituting a campaign aiming at the popularizing of their product among consumers.

That the public are receptive to suggestions of this kind is shown in the results of the beef grading policy, which as you are aware, was inaugurated by the federal government in 1928. This policy established two grades, red label and blue label, and provided grading services in abattoirs.

In spite of the puny effort placed behind the publicization of this policy, increases in graded beef consumption were spectacular. Here are the figures:

Year	Red label	Blue label	Total lbs.
1931.. . . .	6,346,558	10,894,190	17,240,748
1932.. . . .	7,534,881	14,213,887	21,748,768
1933.. . . .	9,885,635	20,796,974	30,682,609

The cattlemen's criticism of this policy is that no adequate effort has been made to explain it to the buying public (with the result that in every city in Canada certain butchers, exhibiting the health of animals branch stamp of approval and indicating it as the blue brand have fraudulently capitalized on the policy) and that no adequate return has been made to the producer of branded beef. I might say that beef killed and medically inspected in a medically inspected abattoir have a blue stamp on them, that is approving the health of the cow. The average housewife will point to this, and she does not know any different. The prices paid for cattle qualified for the red and blue label when hung on the rail and those not suitable for grading, choice though they may be, are one and the same. No premium is paid for quality, that is, has never been returned to the primary producer as a premium.

*By Mr. Factor:*

Q. Who gets the advantage of that, the packing houses?—A. I would imagine so, and the retailer.

Q. And the retailer?—A. Yes. Sufficient for the past of the cattle industry. Permit me now to sketch briefly the situation as it has existed during the past six months.

As you are aware, ruinous prices, the lowest on record in the Canadian industry, existed during the latter part of last year. In October prime butcher steers sold at Winnipeg for \$2.88 per hundred pounds. Values quoted at other centres were on similar levels. A condition of absolute stalemate existed for several weeks and even at the ridiculously low figures at which cattle were quoted it was hard to move them.

It must not be assumed because specific reference to the prices prevailing in October of last year has been mentioned that cattle producers were suddenly confronted with this spectre of ruinous values. As a matter of fact they had been watching the value of their product continuously dwindle for five years. The following figures show the monthly weighted average prices per hundred pounds of the total sales on all Canadian stockyards for the years 1928 to 1932 inclusive:

#### MONTHLY WEIGHTED AVERAGE PRICES

Year	Cattle	Calves
1928.. . . .	\$ 7 55	\$ 9 30
1929.. . . .	7 35	9 65
1930.. . . .	6 35	7 90
1931.. . . .	4 30	5 40
1932.. . . .	3 60	4 00

Returning to the situation as it existed last fall it is important to note that had it not been possible, in this critical period, to move several thousand head of beef cattle to Great Britain, the prices paid producers would undoubtedly have been even lower than they were.

It is equally true that the market upturn recorded since December 1, 1933, has as one of its main contributing factors a healthy demand for choice finished

cattle from overseas. Prices paid by overseas buyers have, in a large number of instances, established the ruling values at Western points for certain classes of Canada.

May I again divert for a moment to impress upon you the important fact that even to-day, with an improvement over last October, selling prices are still below the cost of production.

The day I left Calgary to appear before you the tops of the choice finished steers were quoted in that city at \$4.75. The cost of producing a pound of beef under ranch conditions in Alberta is very close to six cents. Our cattlemen are still selling their product at a terrible loss.

I would just like to quote one instance of this. Mr. MacLeay, who gave his evidence the other day, had something like 150 steers which he tried to sell to one of the buyers in the Calgary district. He would have had to take \$1.75 for these steers, if he could have got it, but he couldn't get the \$1.75, and I bought these steers for the Old Country outlet to be fed and finished and to be moved in February or March, guaranteeing him a price of \$4.50. I was just about as popular as the skunk at a garden party with all the packers for raising the February price to four cents, which is actually what it amounted to, because that is what they had to pay. That was for the cattle that at the time I took them they would not pay \$1.75 for.

Q. They would not buy them themselves, and they resented your buying them?—A. They certainly did.

I have mentioned the value of the British market to the industry in the crisis of last year. The ranchers of Western Canada have played no small part in the establishing of Canadian cattle on that market. During 1931, members of the Western Stock Growers' Association, the organization I am representing before you to-day, contributed one quarter of the total Canadian exports of 28,000 head. During 1933 we were responsible for shipping 4,000 head, and of these all save 300 head were direct from ranches. In addition to our own shipments other shipping organizations included ranch animals in their consignments. It should also be noted that an appreciable number of the export cattle moved from Ontario to Britain originated on Western ranches, being sold to Ontario operators as feeders. The interest of the Western ranchers in the export market is therefore a vital one.

Our Western ranchers note with dismay that there is still an entire lack of security in the export situation. They are locked out from the United States market, and as has been indicated, have been concentrating on shipments to Britain. In a general way they have improved the quality of the animals sent overseas. They have endeavoured to do their part in establishing a continuity of supply and in a number of cases have suffered financial losses through this desire to keep cattle moving steadily. And yet it appears their efforts are again to meet checkmate.

In September of 1931 because Great Britain went off the gold standard we had a loss of \$16,000 worth of space, we didn't have allotted to anybody because we use it as the space is required; and I want to say for these ranchers that they certainly played the game and every one of them took a very heavy loss—one of them took a loss of \$4,000 in making a shipment.

*By Mr. Young:*

Q. How could they lose \$4,000?—A. Through exchange.

Q. Through exchange alone?—A. Yes.

You will recall that the only concession granted beef producers at the time the Imperial Conference agreements were signed was the free entry of Canadian cattle into British ports. In this they were given a basis of equality with cattle from the Irish Free State.

In the month of December last, exporters all over Canada were startled by a press statement to the effect that Ottawa had agreed with Britain to restrict exports in the first three months of the present year to a figure equalling that of 1933. This figure was 7,863.

Movement of cattle overseas this year to date has been brisk. In the month of January, 4,469 head were shipped and in the month of February, 3,438 head, a total of 7,907. Had the original quota arrangement been maintained Canadian producers would have been without an export outlet from the end of February until a new quota was established for the second three month period commencing April 1. It is always difficult to forecast market trends but many of those close to the situation predicted a drop of a full cent in cattle prices all over Canada if the export outlet became closed. It is the opinion of the officers of our Association that this situation would have occurred if the export door had been shut.

Fortunately for the industry Ottawa re-explored the situation with the British Ministry of Agriculture following representations made by our Association with the result that last month it was agreed exports to a total of 20,200 head would be allowed into Britain in the first six months of the year. This figure approximates that of the number entering Britain in the same period of 1933.

The British Minister of Agriculture has announced the entire question of cattle imports will be reviewed when the Imperial Conference Agreement is reconsidered in June this year, and he has promised adequate protection to the British farmer. The situation after the present quota is filled is one of dark mystery so far as the Canadian exporter is concerned.

The danger of an immediate drop in domestic ruling prices, following the filling of the quota, exists today as it did during the period the three month figure was being so rapidly filled. Up to March 8, 8,947 head of the 20,200 to be allowed into Britain in the first six months of this year had been shipped, and several hundred head have left Western Canada since that date. There is every likelihood that the present quota will be exceeded long before June 30.

At the Ottawa sessions of the Imperial Conference Canada secured a market for 280,000,000 pounds of pork and bacon annually for a five year period. There is no suggestion that this figure is to be reconsidered in June 1934 or that a quota basis will be established for these products. With this in mind you will agree the beef producers cannot be blamed if they feel the Imperial Conference Agreements did not give them the same consideration as the pork industry.

If the cattle industry of this country is to be saved from utter chaos it is imperative that the British outlet remain available for our cattlemen. The abandonment by Britain of the quota against Canadian cattle, in the opinion of the members of the Western Stock Growers' Association is the most important task our government can devote itself to in the interest of the live stock industry. Other steps for the rehabilitation of the industry can be taken, and these, with your permission, I shall indicate in a few minutes, but their results must necessarily be deferred. The maintaining of the British outlet will bring an immediate benefit. That the British authorities are open to conviction on this subject is seen in their willingness to establish a quota figure for the first six months of this year, on a basis of parity with 1933, before the first three month quota period was ended, following representations to Ottawa by our organization.

In the light of the total imports of cattle and beef into Britain the Canadian cattlemen's request for unrestricted entry of live cattle is not unreasonable. In 1933 you will recall we landed in Britain 51,433 head. From the Irish Free State, a country that is not receptive to the policy of Empire unity, Britain drew 582,000 head. In addition to these shipments Britain received, largely from foreign countries, over 11,000,000 hundredweights of frozen beef and over 900,000 hundredweights of tinned beef. Surely Canada's modest contribution can be maintained without difficulty.

Canada's total importations to Great Britain represent about 1/474th part of the total importations of last year; which is about 2 per cent of the total taken on an Empire basis.

Uncertainty regarding permissible shipments has a demoralizing effect on ocean transport. The fitting of vessels for carrying cattle has been accomplished only through strenuous efforts on the part of shippers through the Department of Trade and Commerce. Last year the Honourable Minister at the head of this department gave some assistance to nine vessels in order that they might be available for the export cattle trade. The agreement covering this assistance specified rates of \$12 per head for heavy cattle and \$10 for cattle weighing under 1,000 lbs at time of loading on ships. Other vessels not receiving assistance lowered their existing rates to meet this figure and maintained them on this basis until September 1, at which time they established a rate of three pounds with the 10 per cent reduction for light cattle. The nine assisted vessels raised their rates to meet this higher figure when their agreements with the Department expired on December 31. All shippers through Saint John and Halifax are now paying this basic rate of three pounds.

It may be noted in passing from this phase of the export question that ocean transport has become exceedingly costly compared with the days when Canada made substantial contributions to the British market. The rate on cattle in the late 90's and early 1900's was between \$7 and \$8 per head for animals that would outweigh those to-day being shipped by from three to four hundred pounds. In the old days the exporter paid a railway rate of 90 cents per 100 pounds on his cattle from Calgary to Montreal. To-day he pays \$1.14½.

Exporting cattle is a costly enterprise. Of the 4,000 head handled through our Association last year, the majority had transportation, handling and selling costs in the neighborhood of 50 per cent of the gross returns, assessed against them. In some instances, these in the case of slightly inferior cattle or those failing for other reasons to meet a favorable reception on landing, the total costs were considerably more than 50 per cent of the gross.

These shipments were made through the port of Montreal. During the winter months the exporter has a heavier bill of expense due to an additional 6½ cent freight rate to the Atlantic ports and one extra day of transit feeding to Saint John and two days extra feeding to Halifax. These two items combine to raise the cost to the shipper by approximately \$3 per head.

The injustice of prevailing freight rates on cattle is one that adversely affects both the domestic and the export shipper. Representations have been made to Ottawa by our organization, from time to time, concerning this matter, usually with a standard response that in times of declining freight revenues reductions in existing rates cannot be considered. A moment ago I mentioned the old-time rate of 90 cents per hundred pounds on cattle from Calgary to Montreal. Which is the more profit to the railways, the movement of around 120,000 head annually, the volume moved in the late 90's and early in this century at 90 cents per hundred, or 50,000, the total moved last year?

*By Mr. Parry:*

Q. 50,000 was the total moved last year?—A. Yes. I say, that in the old days it was no trouble to get the railroad to give us a special train to move say 14 cars from Maple Creek to the seaboard. To-day they won't think of taking a train of anything less than 60 cars. You don't have to have 60 cars of stock, if you haven't got enough live freight you can sometimes look around and pick up enough dead freight to make up the trainload.

Last year we had an open British market, there was no restriction on exports except that of heavy costs, and this rate of \$1.14½ was one of the main grievances of shippers.

An export freight rate on cattle moving from interior points to seaboard is urgently needed, fully justified and amply supported by precedents.

Allow me to give you some of these precedents.

Three distinct rates prevail on grain from Calgary to Vancouver. Grain for domestic use carries a rate of  $40\frac{1}{2}$  cents per 100 pounds. Grain for feed purposes carries a 30 cent rate and export grain takes a 20 cent levy. It costs the railway not one cent more or less to carry grain intended for export than it does to carry the domestic or feed commodities and it is reasonable to assume that on the lowest of these three rates, the export rate of 20 cents per 100 pounds, they are making a satisfactory return.

Here is another example closer to the live cattle industry. Fresh meats for domestic consumption moving from Calgary to Montreal are assessed on a basis of \$1.88 per 100 pounds. For export this commodity carries a rate of \$1.64. On cured meats moving from the western city to the Quebec port for domestic use the tariff specifies a rate of \$1.60; the export product carries a levy of \$1.23.

A comparison between the equipment of to-day used for the movement of grain and of meat products and that of a few years ago is such that the railways may well be proud of their progress. The latest of the steel refrigeration and grain cars operated by both roads are the last word in railway rolling stock. What equipment offered the shipper of cattle compares with the most recent of that available to the grain or meat shipper? There is no comparison. The cattlemen are still using the antiquated stock cars that did service when the west was first opened for settlement.

One may well seek the reasons for the establishing of more favourable transportation rates and the construction of modern equipment for the service of the grain and meat processing traffic. Nor is the reason hard to find. Both of these industries are intensively organized and have been in positions to make adequate representations for these changes. The cattlemen, heretofore, have not consolidated their opinions and reached the ear of a body having authority to give them the justice their case warrants.

I might say that I have been arguing freight rates for many years, and this is the first time in my life that I ever knew that fresh meat processed by the packing houses had domestic and export rates for freight.

*By Mr. Factor:*

Q. Have you ever presented the fact to the Board of Railway Commissioners who fix these rates?—A. I do not think it would be of any use.

Q. Why?—A. Because they just tell you it is no use coming to them for a reduction in railroad rates at the present time when conditions are so bad; It's no use trying to get something for the shipper these last few years when conditions have been so bad, you can't get anything at all.

Q. Did you make any application?—A. Several applications have been made at different times to have these rates reduced.

Q. And they were rejected?—A. Yes.

Q. Why did you not appeal to the privy council?—A. That takes a lot of money.

Q. I mean the governor in council?—A. I am appealing to the government now.

Q. You never carried an appeal from the board of railway commissioners to the governor in council?—A. No.

I tried to find out the difference in the cost of handling these cars, the cost of hauling them to the coast and back again—of course you know most of them have to come back empty. One of the troubles is the tremendous weight in these new steel cars, in the refrigerator car, for instance, about

one-tenth of the capacity is taken up by the facilities that are provided there; the old stock car was quite a different thing. They have to be hauled back empty and as they are heavier cars, there is a greater cost for hauling.

*By Mr. Young:*

Q. Have any new stock cars been devised?—A. Not for general cattle, no; we have had some improvements recommended in the form of gates which are put in mixed cars to keep the different classes of live stock apart.

In the face of the export rates granted on grain and fresh and cured meats, the justice of the cattlemen's demand for a rate considerably lower than the present domestic rate on export cattle stands fully warranted, and in the face of the fact that last year \$400,000 of public funds were expended as subventions on coal shipments in Canada, the argument that the present period is no time to consider railway tariff reductions falls by the wayside. In dealing with the domestic situation with regard to beef cattle I shall ask your indulgence while I review charges assessed against shipments at Canadian stockyards. In connection with export cattle, however, I wish to point out two charges which exporters consider distinctly out of line. As you have learned from others appearing before your committee a charge of 35 cents per head is assessed at stockyards for weighing and yardage. Export cattle usually move through a stockyard at the original shipping point solely for the purpose of weighing and when this 35 cents per head is charged, as it is in these cases, for the use of the scales without any of the other services of the yards, it adds an expense against the cattle which is in no manner commensurate with the service rendered.

I may just explain that a little more fully. If I landed in Calgary with 200 head of export cattle, the seller requires them to be weighed by me to take over. There are probably no facilities to weigh them, and I have to move into the yards and use the stockyards scales. If I have just to move them over to the scales and to the cars, it costs 35 cents per head, under the live stock and live stock products act. I will come to that later.

*By Mr. Factor:*

Q. What is the yardage for domestic purposes?—A. Just the same, only they can stay in there a week.

*By the Chairman:*

Q. Your point is that for domestic purposes they use both the scales and the yarding facilities?—A. Yes.

Q. Whereas for export purposes you merely take them to the yard and weigh them?—A. That is all.

Q. And therefore you do not require the use of the yardage for storage?—A. None whatever.

Q. The charge is the same in each case?—A. Just the same.

Again, when cattle are resting at divisional points en route to seaboard, charges of \$1 for unloading and \$1 for loading are made in addition to the hay and straw charges. The question of existing prices for hay and straw at stockyards will be dealt with in a moment. It is my wish to point out here that the charge of \$2 per car for loading and unloading, a service requiring only a few moments of time on the part of stockyard labourers is another of the items which in the aggregate run the total cost of exporting cattle to an almost prohibitive figure. I may say, if you are coming down with a trainload of cattle, 33 or 35 cars of cattle, you have to stop at Winnipeg, and Winnipeg comes under the live stock and live stock products act, which of course entitles them to charge \$2. You come on to White River, you make one stop at White

River, and then to Montreal. Well, they do not come under the live stock and live stock products act, yet they charge you \$2 loading and unloading, together with the same price as the stockyards charge you for hay.

*By Mr. Factor:*

Q. Together with a profit of \$10 to \$12 a ton?—A. Just the same.

*By the Chairman:*

Q. Can you carry your own feed with you?—A. No sir, the freight rate would be so high it would taste so strong of silver that the cows would not eat it.

*By Mr. Factor:*

Q. Under what authority do they charge you?—A. An old Spanish custom that has become law.

Q. And they also charge you the extra profit on the hay as feed?—A. \$25 a ton for hay.

*By Mr. Young:*

Q. If that \$2 for loading and unloading is too much to White River, would it not be too much to Winnipeg?—A. That is what I am saying, it is too much, but you see gentlemen, one comes under the act.

*By Mr. Factor:*

Q. One has the approval of law, and the other has not?—A. The other has not, only an old Spanish custom.

The Livestock and Livestock Products Act gives the stockyards companies authority to make these charges, it is true, but we find that others, under cover of this act also make similar levies. At White River and Hornepayne, to give two illustrations of many, the transportation companies operate the yards for through billed cattle. These yards do not come within the purview of the Livestock and Livestock Products Act but the railways make the \$2 charge just the same.

The Livestock and Livestock Products Act was designed to insure a profit over operation costs to stockyards companies. We maintain, and we think you will agree, that some form of amendment to this act or a new piece of legislation that will insure beef cattle producers a profit, is long overdue, and to prevent them from making unnecessary profit out of the producer. But from the rumours you hear to-day about livestock and livestock products, it has no effect whatever upon the stockyard. They have money from operating costs to pay a dividend when the producer is only getting about 50 cents to a dollar on the cost of production. Everybody all along the line wants to justify himself, that he should make this cost of operation, whether the primary producer gets a thing or not; and after all he is the one that supports the whole structure. If he is not going to be helped and carried through, then the rest will fall down. It would be unfair to indicate these weaknesses in the export situation and not pay tribute to what effort has been made in behalf of the cattlemen. By universal agreement the stabilization of the pound sterling at \$4.60 for purposes of export, announced by Premier R. B. Bennett in his budget speech of 1933 did much to establish confidence in the overseas market and encouraged many men to ship who otherwise would not have done so. It is the devout hope of all exporters that this stabilization will be continued for the fiscal year of 1934. Fortunately, the British pound went to par soon after the announcement of the policy and for the major part of the time since, has hovered around \$5, where it is at present. Calls upon the stabilization fund, have, therefore, been extremely

light, but exporters feel the moral effect will continue even though demands on the stabilization fund be less in the next twelve months than they have in the past year.

Credit should also be paid the two trans-continental railways for effecting a reduction in the elapsed time necessary to move shipments from the west to sea-board. Whereas three to five layovers were necessary, cattle often are now taken through to Montreal with only two layovers when volume warrants.

If it appears to you that this presentation leans heavily toward the export phase of the cattle situation, permit me to assure you here that the domestic angle also calls for a number of reforms and these, with your permission, I shall now proceed to outline. The somewhat extended detail of the export business is justified, however, by the circumstances under which your committee was called into being, and the name it has been given.

It is sometimes necessary to remind ourselves that the fundamental concern of beef cattle producers is the prevailing domestic price for their product. Foreign markets are of value only in so far as they assist in raising the level of the home price and at the present time with a quota on cattle to Britain and the barrier against cattle across the international boundary still firm, it is to the recovery of the domestic market that we must look for a large measure of the relief we hope is soon to be forthcoming.

Correctly or incorrectly beef producers have long felt they are victimized in the marketing of meats and meat products in Canada. They maintain that far too large a proportion of the consumer's dollar goes to those who process and distribute beef and far too small a proportion is returned to themselves. I may say through co-operation and organization with the association that I am the manager of, we have endeavoured to make export shipments big enough so as to make it worth while so the railways can give us a faster run. We will run from Calgary to Winnipeg and Winnipeg to White River, and White River to Montreal.

*By Mr. Young:*

Q. You try to make a full train?—A. Yes; in that way it reduces the cost considerably, because your shrinkage is the time the cattle spend on the railway.

Q. A full train load is just the same as a car load?—A. It is the same, only you get a little more service, but no reduction in cost.

*By Mr. Factor:*

Q. That is a very general statement you are making there, that the producers are victimized in the marketing of meats and meat products in Canada. Have you got anything to substantiate that?—A. I said I have long felt that. I have made it general enough.

Mr. ILSLEY: Rightly or wrongly.

The WITNESS: Yes, true, correctly or incorrectly.

Mr. FACTOR: That is only a feeling; that does not help us very much.

The WITNESS: I will probably emphasize the feeling a little further on. Unfortunately, it has been impossible for us to compile figures showing exactly these proportions for Canada, but in the United States where the same complaint is made by cattlemen, statistics show that 57½ cents of the consumer's dollar goes to those who act between the producer and the consumer, and only 42½ cents to the producer himself.

Canadian cattlemen have long looked with suspicion on those directing the meat packing industry. I appear before you to-day as a cattleman and not as a business efficiency expert with a wealth of knowledge regarding the intricacies of the meat packing industry, but I do suggest to you in behalf of

our western cattlemen, that the distrust they show in those who handle their cattle, as they move toward the consumer's table, should be recognized, and that action should be taken which will either prove this distrust unfounded or rectify the evils which may be found to exist.

In support of this contention and without any desire to condemn the packing industry unheard, the following data will explain the producers' frame of mind:—

During the year 1932, 147 packing houses and abattoirs paid the farmers and ranchers of this country \$73,463,953 for their cattle, calves sheep and hogs. In this case I was unable to keep the hogs and sheep away from me.

In addition, these 147 establishments purchased dressed meats, fresh or partially cured, to the value of \$8,217,289. The total of these two sums \$81,681,242 represents the value of the raw materials as they went into the hands of the packers.

Mr. FACTOR: You are going a little too fast.

The WITNESS: I beg your pardon.

*By Mr. Ilsley:*

Q. What year was that?—A. 1932.

Q. The calendar year?—A. Yes.

*By Mr. Factor:*

Q. What was the total purchase of the raw material?—A. \$81,681,242.

Q. When processed that brought a revenue of what?—A. It represented \$117,596,697.

Incredible as it may seem this \$81,000,000 purchase gave the packers a stock which, re-emerging from their plants as fresh meats, cured and cooked or canned meats and by-products had a value, according to Department of Trade and Commerce figures, of \$117,000,000. The actual figures are \$117,596,697.

On an investment in materials of slightly over \$81,500,000 our packers made a gross profit of nearly \$36,000,000 or, in terms of percentage a gross profit of 44.2 per cent. You may scour the country from one end to the other, gentlemen, without finding a live stock producer who achieved a gross profit of 44.2 per cent in 1932.

*By Mr. Ilsley:*

Q. 44.2?—A. Yes.

Q. Where do you get this profit from; do you get it by subtracting \$81,000,000 from \$117,000,000?—A. I am showing the gross profit.

Q. Does not that cover wages and operating expenses?—A. Certainly; I am saying it is the gross profit; it is a clear gross profit.

Q. You can call it gross profit if you want to, but it does not look like gross profit to me?—A. That is what it is.

Q. I do not think so?—A. What would you call it?

Q. I certainly would not say it is a profit just because you subtract one figure from the other without taking into account operating expenses. However, I do not know anything about accounting?—A. Nor do I, so it would be no use for me to argue with you.

Mr. EDWARDS: That is the term that is generally used.

Mr. FACTOR: That is usual, is it?

Mr. EDWARDS: Yes.

The WITNESS: It is important to note that these figures do not include those for poultry, eggs, cream, butter or cheese or any of the other commodities forming an integral part of the activities of our Canadian packing houses.

Allow me to give another illustration of the spread between prices paid for live cattle and those quoted after the animal has been slaughtered. You will recall mention was made a few moments ago of the low price of \$2.88 for choice steers at Winnipeg last October.

At that time a choice 1,200 pound steer was worth \$34.56 to the producer at Winnipeg less transportation, stockyards charges and selling commission. During the same month the by-products of a 1,200 pound steer had a total gross by-product value of \$7.45. This total is established as follows:

Hide, about 60 pounds, at 7 cents per pound. . . . .	\$ 4 20
Fancy meats, heart, liver, tongue, ox tail, cheek meat, sweet breads, tripe. . . . .	1 50
Casings . . . . .	1 00
Fats, edible and inedible. . . . .	75

Total by-products credits, per head. . . . . \$ 7 45

*By Mr. Edwards:*

Q. Is that a fair statement?—A. That is the actual statement.

Q. Yes, but there are a lot of circumstances in the hide business that you do not put in there?—A. I cannot see that, that is what makes me suspicious. Seven cents for the raw hide and 46 cents for the tanned hide looks like a tremendous spread to the average cattleman. I am allowing him seven cents; I want to know what happens to the difference?

Q. The country hide and the packer's hide is quite a different thing?—A. I understand that. I am allowing them 7 cents a pound, and that makes 39 cents of a spread.

*By Mr. Senn:*

Q. Are your cattle infested with warbles?—A. Yes, everything they can get.

Q. That would affect the price of the hide?—A. It would at this time of the year, but not in October. It would not have any effect on the hide.

*By Mr. Factor:*

Q. What year is that spread for?—A. Last year.

Q. 1933?—A. Yes, that is last year.

Q. Where did you get that information from, may I ask?—A. I had this information from the packers, that is as far as the by-products is concerned.

Q. What about the other?—A. I have a bill for it, for the 46 cents a pound, buying one or two more sides back on the side.

Q. Seven cents raw and 46 cents tanned?—A. Yes.

Q. From these figures you will see that of the gross value of the live steer 21.5 per cent was returned in the gross wholesale value of the by-products. It needs no comment of mine to reveal to you the opinion of the producer towards such an obviously unfair situation.

In a town a few miles south of Calgary at a time when hides were practically valueless to the cattleman, the same hides processed into tanned leather were being quoted to the same cattleman at a price of \$60 per side. By the act of tanning a hide it was mysteriously converted from an almost worthless product into one carrying a valuation of 46 cents per pound.

These two illustrations, the value of by-products compared to the value of a live steer, and that of a raw hide compared to a piece of leather, indicate the conditions under which cattlemen are operating. Along with other examples that could be given they reveal the reason for the wide spread discontent at present existing among all producers of agricultural commodities.

Even the ordinary every day marketing of cattle on our domestic markets provide several thorns for the flesh of our producers. In the first place they are required to take 3 per cent off the loading weight to allow for shrinkage. This 3 per cent shrink is charged against the producer no matter under what conditions the cattle have been moved to the shipping point, even though they travel on a hot summer day a distance of twelve or more miles and are gaunt from hunger and pathetically thirsty when they arrive at the scales, a 3 per cent deduction is made for shrinkage.

*By Mr. Young:*

Q. Is that done with all cattle that go through the packing house?—A. It is done with all cattle bought in the country.

Q. With all cattle bought in the country?—A. Yes.

Q. That does not apply to cattle shipped in on the railroad?—A. No; they hold off the shrinkage. It applies to all country bought cattle that are loaded at country points.

Mr. FACTOR: Loaded on trucks?

The WITNESS: No; I am talking about car load lots.

*By the Chairman:*

Q. These were all at country points?—A. Yes.

Q. And they took off three per cent for shrinkage?—A. Yes. In some of the cases these cattle have travelled 50 to 60 miles and were two or three days on the road.

Mr. YOUNG: They were pretty well shrunk by the time they got there.

The WITNESS: Yes.

*By Mr. Senn:*

Q. They are not paid for at a flat price?—A. Bought per pound.

Q. There is an F.O.B. price and an off car price, and different ways of buying them, is there not?—A. On the ranch they are bought F.O.B. railroad. They used to be all sold by the head, but you never see any cattle sold by the head any more in western Canada. They are bought F.O.B. railroad, so much per pound.

*By Mr. Young:*

Q. You sell at the loading point?—A. All of these cattle are sold in the country to the packing house.

*By Mr. Senn:*

Q. You are told that when the bargain is made?—A. Three per cent shrinkage?

Q. Yes.—A. You cannot get away from it; he would not take them.

Q. If you took those cattle to the loading point and shipped them through to the packing house, could you not sell them without shrinkage?—A. No.

Q. You have no choice in the matter?—A. No.

Q. You cannot load them at your point and ship them to the packing house and take the weights there without shrinkage?—A. No; he buys them F.O.B. at the railway point.

Q. Suppose you did not sell?—A. What would you do with them?

Q. Load them into your cars and ship them into the packing house. If you did that, what would happen?—A. He would not buy them when they got there.

*By Mr. Senn:*

Q. If you ship them to the stockyards, what would happen?—A. You probably would not sell them there, no, not a quarter. There is no market for ranch cattle in western Canada.

*By Mr. Young:*

Q. These are for export?—A. No.

Q. What are they for?—A. Home consumption.

Q. Where do they go?—A. Toronto, Montreal, or to the coast.

Q. To the packing houses?—A. Yes.

Q. Direct to the packing house?—A. Yes.

Q. How about competition? Do you buy at the ranch?—A. No, I do not buy.

Q. You are a ranch man?—A. I am a ranch man.

*By Mr. Factor:*

Q. Who is the intermediary?—A. Between the packing house and the rancher?

Q. Yes.—A. The drover, the big buyer, whatever you might call him.

*By the Chairman:*

Q. Let me get this right. You bring 100 steers off the ranch?—A. Yes.

Q. You take them to a High River shipping point or some place like that?—A. Yes.

Q. You are forced, if you wish to sell these animals, to sell them at that point to the packing house buyer and accept the 3 per cent shrinkage?—A. Yes; they are already sold, Mr. Chairman. My word, no rancher would come to a shipping point without having them sold.

Q. The buyer has been up to the ranch and bought them?—A. Yes.

Q. Suppose, as was asked a moment ago, you refused to sell them to the buyer at the ranch, and you shipped 100 head into Winnipeg?—A. Yes.

Q. —what would happen?—A. Well, they would know in Winnipeg long before you arrived there that you would not take the proposed offer, and you would get less.

Q. Mr. Buyer would inform them?—A. Yes.

Q. Can you make a statement of that of your own knowledge? Can you give us an incident that you know of? I have heard that statement made.—A. It is hard to prove those cases, but nevertheless it is a fact.

*By Mr. Factor:*

Q. But the effect is there?—A. Yes. We have cases right now where a man has a lot of cattle to sell, and he has a packer buyer come out there, and if he does not buy them for some reason, a question of price or shrinkage, etc., you are lucky if any other one ever comes out.

*By the Chairman:*

Q. You are interfered with?—A. I fear so.

Q. You think there is collusion?—A. Yes. Not only that, but there is no competition in the cattle industry in this country on the question of buying, as far as western Canada is concerned. Why would there be? It is a buyer's market. The packer is a highly organized unit. He knows how many cattle are needed. He knows if he cannot get yours, he will get that of someone else.

*By Mr. Young:*

Q. You cannot escape from them?—A. Only if you go to the stockyards and then you have more charges.

Q. That is not much escape?—A. Certainly it is no escape, none whatever. Again, a deduction of one-half of one per cent of the total value of cattle shipped is made as a condemnation charge. This charge is a relic of a by-gone day. The health of Canadian cattle, acknowledged the world over, is such that this condemnation charge has long since been non-applicable, yet it still persists to hamper the cattle producer in his endeavour to make his operations financially successful.

On arrival at stockyards the cattle are assessed on a basis of 35 cents per head for weighing and yardage. Sometimes the cattle are in the yards only a few hours before they are sold and moved out, but so far as the charge is concerned it makes no difference whether they remain an hour or a week, this charge of 35 cents per head stands.

An attempt was made before this body last year to justify the prevailing high prices of hay and straw at stockyards. In our opinion this attempt failed miserably. No amount of argument, in our opinion, can justify the adding of from \$12 to \$13 per ton to the price of hay simply because it is fed by a stockyard company. Then to come to this half of one per cent reduction condemnation insurance. Someone explained this or tried to explain it the other day. This was originally a gentleman's agreement between the cattle man of western Canada and the packers, and also the animals branch here at Ottawa, that this one per cent would be left to take care of tubercular cattle that existed at that time, many years ago. It is said there is no fund being built up out of this money. It is being interchanged, taken from one account and charged to another. That is probably correct, and knowing the statement that has come from the packers—it is always their assumption that the condemnation is more than the money they ever collected or were credited with—the fact remains that to-day it does not cover just tuberculosis. They have it covering about 60 odd things with highly technical names, and they force you to pay this. Take a case like this, a man sells 200 odd cows, they take from him at the railroad point \$23. The condemnation insurance is just a legalized system of theft, that is all, because the cattle of western Canada—we have proof of that by the British market—are the healthiest cattle in the world. We would not be allowed to go there, if they were not.

*By Mr. Senn:*

Q. If the cattle were shipped to the British market, there would not be any condemnation; the packers would lose nothing on them anyway, would they?—A. No; but all our cattle don't go to the British market.

Q. I have heard complaints made that condemnation charges should not be levied against export cattle, even if it is a legitimate levy against others?—A. But there are cases where commission men buy on order where they collect this condemnation insurance.

*By Mr. Ilsley:*

Q. Is this one of the charges authorized under the Livestock and Live Stock Products Act?—A. No; it is condoned by everybody.

Q. It does not have any statutory sanction?—A. No.

Q. Or sanction by government regulations?—A. No.

*By the Chairman:*

Q. If you shipped 100 head of cattle from an Alberta ranch to Toronto and offered them for sale on the market, and you lost let us say one or two head on the way down, would that be compensated?—A. No.

Q. You would lose that?—A. You would lose that, unless you could prove it was negligence on the part of the common carrier.

Q. And if you sold in the Winnipeg market, you would have to pay this condemnation insurance as well?—A. Yes.

*By Mr. Factor:*

Q. What is the modern interpretation of condemnation insurance? What is it?

*By Mr. Kennedy (Winnipeg):*

Q. You gave it as legalized theft?—A. I covered it by that.

Mr. PARRY: Mr. Factor was asking you to go into it more particularly.

*By Mr. Factor:*

Q. Yes, what does it cover? It is supposed to be a charge for something. Let us have that?

*By Mr. Kennedy (Peace River):*

Q. It was for tuberculosis?—A. That is what it was originally intended for, to protect against tuberculosis. Assume you were a drover, you buy a car load of cattle and you ship it in there. Well, naturally you have taken the onus on the quality and health of this cattle. They charge you. If you were thrown back the cattle—put in the tank—you would naturally have big losses. But they charge you half of one per cent and that protects you in that case.

Q. Suppose there are two or three cattle that die or have some form of disease; is that condemnation charged?—A. No, none whatever.

*By the Chairman:*

Q. We were told the other day it would cover that?—A. It will not cover.

Q. It does not cover?—A. No, certainly not.

*By Mr. Kennedy (Winnipeg):*

Q. Is condemnation insurance provided for by statute?—A. No.

Q. Not at all?—A. No, it has become law by custom, apparently.

*By Mr. Ilsley:*

Q. Is the meaning of your statement that it is now extended to cover a lot of other things?—A. That the packing houses could not prove—wanted to prove that this money was not sufficient to cover their losses, and they have added on additional diseases and bruises and everything else in it.

*By Mr. Young:*

Q. Covering bruises?—A. Everything.

*By the Chairman:*

Q. Ordinary risks?—A. Yes.

*By Mr. Young:*

Q. Does that cover broken legs, any injuries in shipment?—A. Any unseen; if they are unseen.

Q. What do you mean by bruises?—A. You can't find a bruise until an animal is killed. The inspector cuts that out. That is a loss.

Q. Any injury that they can see before the animal is killed is not covered?—A. No.

Q. It is charged right back to the shipper?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. Some sort of condemnation insurance is necessary is it not? You need some charge?—A. I think there is enough seen charges without any more unseen ones.

Q. Well, when the carcass is destroyed because of T.B., who should pay that?—A. Those that buy it.

*By Mr. Young:*

Q. If there was no such insurance, and the packer has an average of one steer in a hundred condemned, would it not affect the price he paid? Would he adjust his price accordingly?—A. Yes, certainly.

*By Mr. Senn:*

Q. It is protection to the shipper who sells to the packer?—A. It might be, if he has tuberculosis or something like that. Certainly it would not to the fellow that does not have that.

*By Mr. Ilsley:*

Q. On some of these markets the seller does not have to avail himself of that protection, though; he can take the risk; it is at his option. There was some evidence to that effect?—A. I heard that evidence the other day, but you will have quite a time following a cow through a packing house and proving she is yours; if she had tuberculosis, you would have quite a time proving she was not yours.

Q. You are suggesting there might be some fraud in shipment, that he is afraid of some fraud if he takes the risk himself? He is afraid some animal said to be is, that is not his, some diseased animal will be said to be his; you suggest that is the reason why he does not assume his own risk?—A. Yes. I would not want to go in a stockyard and follow a cow every time right through.

*By Mr. Young:*

Q. You prefer to pay the half a cent?—A. I do.

*By Mr. Ilsley:*

Q. You yourself do pay that?—A. Yes.

*By Mr. Kennedy:*

Q. To be practical about this thing, inasmuch as there will be cattle bruised and certain losses—I mean to say they are condemned by disease or something of that sort;—that loss has to be taken care of by some method?—A. That is always taken care of in the price the packer pays or anybody else pays. Any risk they are taking is taken care of in the price they are paying for the commodity. That is a regular business practice in any sale.

Q. Yes, inasmuch as it is taken care of in some other way?—A. Yes.

Q. Being taken care of by this condemnation insurance, do you not think that improves to some extent the price that they pay?—A. I do not.

Q. That is, as the risk is eliminated when they are bidding?—A. No. It is entirely unfair to a great tract of this western country that does not have any disease.

Q. I see how you feel. I am not taking any issue with it. But taking the point of view if I am buying cattle, and the question of a certain loss is incidental to the business, if it is taken care of by insurance surely that puts me in a position to give a better bid than if it was not taken care of?—A. It might be; but packers have never given us a concrete statement of how much money has been credited or debited, and what it was credited or debited for.

Q. You feel it would be better if there was no condemnation insurance at all, just let the seller take the chance of being called upon to refund?—A. Certainly.

Q. In the case of condemnation?—A. Certainly. Why should he not?

*By Mr. Ilsley:*

Q. The seller can do that now if he wants to, but he is afraid to do it, you say, for fear he will be cheated or beaten?—A. I don't say he is afraid to. I say I would be afraid. I would not be able to find my cows.

Q. You don't do it yourself?—A. No, I don't do it, because I have not time to follow these cows to the abattoir and see them killed. They may go to Montreal.

Q. What you suggest is that it is open to you to follow that practice, but you do not follow it?—A. These cattle may go thousands of miles from me to an abattoir.

Q. I know; all that is correct. But this committee is confronted with the necessity of making some recommendation, or suggesting something?—A. Yes.

Q. And you are suggesting that there should be no charge made for condemnation insurance to sellers of cattle, that they should take the risk themselves?—A. Yes.

Q. And yet in the same breath, almost, you say that it is impracticable?—A. I am talking about the men that I am representing. They do not have tuberculosis, and if this thing is something which was put on for tuberculosis in the first place, it should be defined what it is for and what it is for now; and if it is not for that, take it off.

Q. Would it not be better that some investigation be made as to the amount that would really cover this condemnation, this risk, and then have that amount imposed? You think that the amount is excessive. Would that not be better than what you suggest, namely that the seller take the risk?—A. Well, I am willing to take the risk.

Q. Well, you don't.

Mr. KENNEDY (*Winnipeg*): You don't take it.

The WITNESS: I can't take the risk.

*By Mr. Kennedy (Winnipeg):*

Q. You say you are willing to take the risk?—A. I would, but I can't. They charge you anyway.

Q. Let us be practical. Without condemnation insurance, you want to take the risk—and you say you can't because you figure there is too great a hazard in it—without an investigation of the elements of the hazard?—A. Yes. As far as the cattle is concerned, there is no hazard.

Q. No, but you figure as far as the seller is concerned, he is taking too great a hazard?—A. Yes.

Q. If he says, "I won't pay condemnation insurance, but I will stand the risk," the elements of hazard being, you say, they can't follow their cattle through or they may be hooked one way or another or cheated; those are the elements of the hazard?—A. Remember that the packer won't move this cattle; the buyer won't take them without deducting this money. They won't move this cattle. He takes it off right at the railroad.

*By Mr. Parry:*

Q. You have to pay it anyway?—A. Yes.

Q. Whether you like it or not?—A. Yes.

*By Mr. Ilsley:*

Q. Another witness said it was optional?—A. He won't move this cattle without deducting this money.

*By the Chairman:*

Q. In theory it is optional but in practice it is obligatory?—A. Yes.

*By Mr. Parry:*

Q. You are suggesting that it should be like a horse trade; when the deal is made, the packer can size up the cattle and take his own risk; that is what you are recommending?—A. Yes.

*By Mr. Kennedy (Winnipeg):*

Q. If he has to do that—and I am not arguing one way or another—but if he has to do that, and there is an element of risk in it to the buyer, is he not going to take that into consideration when he is making his bid on your stock and cover that hazard by reducing his bid to the same extent?—A. Certainly; I agree with you there.

*By the Chairman:*

Q. Do I correctly interpret you in this, that this condemnation insurance was originally designed to take care of possible cases of tuberculosis which could not be discovered until the animal was killed?—A. Yes.

Q. Your complaint is that by practice, without a direct law covering it, it has been extended to cover other alleged complaints against the carcasses?—A. Certainly.

Q. And in the third place, that no fund has ever been set up?—A. No.

Q. Out of this one-half of one per cent that is charged?—A. That is what I am given to understand.

Q. And no one knows what the charges amount to, one-half of one per cent over a period of years?—A. For the specific purpose it was set up for.

Q. For the specific purpose of T.B.?—A. Yes.

Q. And you don't know whether one-half of one per cent is too much or too small?—A. No.

Mr. FACTOR: And also they have extended the items which condemnation insurance covers.

*By the Chairman:*

Q. Yes, and your contention further is that many of these things which are cited as reasons for the support of condemnation insurance, such as bruises and so forth, are merely incidental to the business and should be borne by the buyer or the packer as the case may be?—A. Yes, surely, by the person who owns the cattle.

Q. You further stated, if I recall it correctly, that the people you represent, the big ranchers of Alberta— —A. And Saskatchewan.

Q. —and Saskatchewan, are free from tubercular cattle?—A. Certainly.

Q. And therefore your argument is that if you wish to ship your cattle without this T.B. condemnation insurance charge, you ought to be permitted to do so?—A. Yes.

Q. And that the buyer or the packer will not take them without making that deduction arbitrarily at the point of shipment?—A. Certainly; he won't take them at all.

Q. That is the practice?—A. Yes.

Q. And that is what you complain of?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. When you say the cattle are free from T.B., have you got T.B.-free areas?—A. No, not in the Alberta areas, no; but we have T.B.-free areas in Saskatchewan, and they won't take them without their one-half of one per cent.

*By Mr. Ilsley:*

Q. If there was free competition among the buyers it would not make any difference if that was changed?—A. No, if there was any.

Q. It would not make any difference for the reason suggested by Mr. Kennedy?—A. Yes, but there is no competition.

*By Mr. Mullins:*

Q. Is it deducted from the price of the cattle sold to the exporter?—A. No, it is not. I never have been, but in cases, other buyers buying cattle out in the country have.

Q. If you sold me a train of cattle in Winnipeg, and I was going through to England, I would take off the condemnation insurance?—A. Yes, you would if I let you.

Q. Which is unfair?—A. Certainly it is unfair.

The CHAIRMAN: All right, proceed, Mr. Byers.

The WITNESS: I remarked about that 35 cents stockyard charge; it does not make any difference whether the cattle are in the stockyards five minutes or a week, there is no difference.

*By Mr. Young:*

Q. Just on that fact, you say they charged you 35 cents per animal over the scales.—A. Yes.

Q. And that the same 35 cents charge is made whether you leave them in the yard or not?—A. Yes.

Q. Suppose you bring your cattle in from a distance, it won't cost you any more to leave them in the yard; you can leave them in there long enough to rectify the shrinkage?—A. I am not interested in shrinkage. In my case these cattle would be heading for the railway to go right out that day for export. I am delivering those particular cows.

Q. As soon as you leave them, they are going to take 3 per cent off for shrinkage?—A. Not in this case. These are weighed up for export.

Q. They don't take that off?—A. They don't take it off because these cattle are being exported, and in our own case the export buyer demands that 3 per cent be taken off.

*By the Chairman:*

Q. Your point is that the weighing charge and yardage charge should be separate?—A. Yes, you are paying for services.

Q. Which you do not get?—A. You are paying for a week's service, and you may not be getting five minutes' service.

*By Mr. Young:*

Q. In the case of a man who ships to the packer, and has to stand this 3 per cent shrinkage, what is to stop him from feeding and watering them, and watering them every night? Then he can stand the shrink?—A. They want 5 per cent then.

Q. Are you sure of that?—A. Yes, I am certain. You can't fool the packer.

Q. Your cattle have already shrunk in your fifty-mile journey?—A. Yes. He wants another 3 per cent, but he takes delivery at the railway. If there is no scale at that particular point, they will be weighed off cars in Calgary.

Q. Does he take 3 per cent shrinkage there?—A. No, possibly not; in some cases not. You might be a long time on the railway.

*By Mr. Kennedy (Peace River):*

Q. The point you are making is that the packer can do nearly as he likes under present conditions?—A. Certainly.

*By Mr. Young:*

Q. Sometimes he takes it and sometimes he does not?—A. Under certain circumstances he does not take it. They might be seven or eight hours on the cars and never have any shrink. I have moved cattle from Didsbury or Olds and have weighed them out, and weighed them off the cars at the stockyards and there has just been 3 per cent shrink.

Q. No fixed rule, apparently?—A. No.

The CHAIRMAN: Will you proceed.

The WITNESS: Representatives of stockyards have told you that the selling of hay at \$20 per ton on a purchase price of \$7 or \$8 per ton is necessary to meet operation costs of the stockyards. They have complained to you that the percentage of stock marketed through stockyards has fallen appreciably. We submit that the main reason for this fall in volume handled through stockyards is due to the inequality of charges. Piling up charges on feed is a poor method of meeting an operating deficit and stockyard operators need look no further than this injustice in the search for reasons for the decline in volume of which they complain.

*By Mr. Young:*

Q. You are not in favour of requiring all stock to go through the yard?—A. No, I certainly am not. We have ranchers in Saskatchewan in the business for forty years who never shipped cattle to the stockyards; in fact they were in business there before there were any stockyards in western Canada, no packing houses. In connection with the direct shipment to packing houses—I don't know anything about hogs, I am talking about beef—but in the direct shipment there are two factors that enter into a man going straight to the packing house, and in the question of stockyard charges which comes into it. It is the human side of it. He takes the line of least resistance and goes to the packing house because he figures he gets away from that list of charges that looks like water. The second thing is that the trucker or man who is hauling his stock may be a drover and time is valuable with him; he has probably to go fifty or sixty miles, and rather than go to the stockyards and wait on his return turn and take them back to the man he is hauling them for, he goes to the packing house. Whether he gets away from these charges or not, I am not prepared to say, but nevertheless, that is the reason he gives.

*By Mr. Kennedy (Winnipeg):*

Q. There is the point you have just made which I would like to stress. It was referred to yesterday or the day before, the question of abnormal charges for feed in the stockyards?—A. Yes.

Q. And the reason was given, as you have intimated, that it was necessary or it was one way of the packing house paying overhead charges?—A. Yes.

Q. That is an overcharge that is obvious to a farmer, and I take it that the reaction on all sellers, on all producers, is a feeling that an injustice is being done to them; is that right?—A. Yes.

Q. That is their feeling?—A. Yes.

Q. And that feeling is widespread?—A. Yes.

Q. I have no doubt of that at all.—A. It is hard to understand why hay worth \$6 outside the fence is worth \$20 inside.

Q. The farmers would not feel so bad if it was taken out of them in some other way that they did not know about?—A. No, I don't think they would, if it was by some other charge.

Q. You think that abnormal charge for feed is reflected in the tendency on the part of the farmer to escape paying that charge in the stockyards by shipping direct to the packing plant?—A. To get away from that line of charges, there is no question about that.

And finally, gentlemen, the shipper of cattle is required to pay a selling commission. In Calgary this is \$17 per car. There is more justification for this charge than for those made by the stockyards companies, for producers are not unmindful of the fact that an office organization is necessary behind the cattle salesmen and that very valuable services are rendered by commission firms in announcing prices and price trends. The selling charge, however, has no relationship to the value of the cattle. It is the same whether beef on the hoof is worth ten cents less than three cents per pound. That is the remarkable thing about it.

It has been my purpose in reciting these various factors entering into the marketing of cattle, to impress you with one fundamental, namely, that the beef cattle production industry has been neglected and that there is urgent need for legislation which will at least put it on a basis of equality with the various agencies dealing with beef and beef products from the time these leave the producers on the hoof until they are consumed.

In connection with the beef cattle industry I might say that before the grain farmers ever came through the west we were exporting a tremendous number of cattle from western Canada. It was probably the only living produced in western Canada of any volume. Since farming came into being the government have done a lot of things, they have spent hundreds of millions of dollars on elevator terminals, storage facilities and a lot of things for the farmer, but very little has been done for the British beef cattle industry at any rate.

*By Mr. Young:*

Q. What forces have operated to stop the export of cattle to the Old Country; you used to export tremendous quantities, what forces have operated to stop that?—A. You had the tariff situation in the United States which cut off the logical market for Western Canada, logical at least from the standpoint of geographical location.

Q. What shut off the British market?—A. Lack of shippers probably to a certain degree, and lack of cattle of the right kind.

*By Mr. Senn:*

Q. Wasn't there an embargo?—A. The embargo only stopped cattle from going inland at the time, they had to be killed on landing.

*By Mr. Young:*

Q. You mention lack of cattle, have people stopped raising them?—A. Well, we did increase cattle last year in Canada, we have had a considerable increase, and we have had an increase in population.

Q. And the domestic market has taken more cattle?—A. The domestic market is the best market you have, and should probably be concentrated on more than ever; but so long as you have a surplus you will have no competition, you must find a market outlet for these surplus cattle.

Q. Then you think the domestic market will be sufficient to take care of the supply?—A. No, the domestic market does not overtake the supply, we have a greater supply than we have demand.

Q. But there is little exportable surplus now, you would not say that that should not be developed?—A. No, I think we would have to export more cattle, and I think we would have exported more cattle last year if we had had the right kind.

*By Mr. Kennedy (Winnipeg):*

Q. It is not a question of surplus so much as it is of volume, and the fact that there is a surplus?—A. Certainly that is a factor, it does not amount to much—three or four per cent of the total production of the country; but the effect of that is to make a buyer's market and that has a tendency to force prices down. What interest would the packer have in raising the price, even if he could give another 2 cents a pound on the hoof—

*By Mr. Young:*

Q. I have heard the complaint made that the British buyer does not care much for buying Canadian cattle and hogs, because one year he can get them and the next year he cannot?—A. Well, he can get them in certain parts of Canada. There is no question about the inclination of the British buyer for Canadian cattle. Our cattle are very favourably received.

Q. They are glad to get them at any time?—A. Yes, cattle of the right kind, but we have a certain inferiority complex about that in that we want to sell, not what they want to buy but what we want to send. Our cattle should be graded just as carefully as our bacon is.

Q. Have we been a little careless in our shipments at times?—A. Yes we have.

*By Mr. Kennedy (Winnipeg):*

Q. I do not want to interrupt the trend of your brief, but there is one matter which I would like to have you deal with briefly before you leave. You had to do with a shipment of some cattle through the Hudson Bay, didn't you?—A. Yes, I had a space contract out of Hudson Bay on the first ship.

Q. That has a lot of interest for people in the West?—A. When I am through, if you would ask me about that, I will be pleased to give you what information I can.

The fact that legislation, in the form of an Agricultural Marketing Bill, is at present being considered in the House of Commons has not escaped attention, but as the representative of Western ranchers I do not wish to place myself in the position of commenting upon this proposed legislation before it is tabled in the House.

The beef cattle industry is desperately in need of a national policy and our producers are firmly convinced that the evils of marketing and distribution which they believe are at present rampant, can only be abolished by the formation of a National Live Stock Board. This Board, in their opinion, should have wide powers. It should have power to fix minimum prices for cattle on the hoof. It should have power to fully investigate any or all of the allegations made against the various marketing and distributing services connected with the beef industry and it should have power to immediately correct any injustices to the producer found in these services.

The creation of such a Board, vested with wide powers, would speedily result in relief to the sore pressed beef producers of Canada. It offers a means whereby the present drastic situation can be coped with. Delay in obtaining relief from

the present situation, whether this comes through increased prices or lower marketing costs, or both, will mean that many operators in the West will, in the near future, take the last step into bankruptcy. A National Live Stock Marketing Board, in our opinion, offers the only immediate means of continuing these men in production, and rehabilitating the entire industry.

*By Mr. Ilsley:*

Q. You approve of the principle of a fixed price?—A. Yes, sir.

*By Mr. Kennedy (Winnipeg):*

Q. You will recall that I was asking you a question just now, about giving the committee the benefit of your experience with respect to the shipping of live stock through the Hudson Bay route?—A. I did not follow the shipment through the Hudson Bay, for the reason that I was on my way to England with another shipment. I have all the particulars. There is nothing the matter with the rate. While there are some charges that are more than they are the other way, there is always the hope of changes as time goes on.

Q. I think the matter of rates has been gone into pretty well on a number of occasions, but perhaps you could give us some information about savings, insurance costs and other rates?—A. You must remember in the first place that there is a certain area of this country that is adaptable to the shipments of cattle through Hudson Bay—all across northern Saskatchewan and Alberta you could ship through Churchill. You should be able to save a little cost there, but your insurance is almost the same as it is out of Montreal on cattle.

Q. Take from an average area, from a practical point—from Saskatchewan, Alberta, or Manitoba—take cattle shipped from that area through the Hudson Bay to Liverpool, as compared with the other rate through Montreal—the combined rail and ocean rates—how do they compare, or do you know?—A. Just about the same average as Montreal; a little higher than they would be say from the Maritime ports, Saint John and Halifax.

Q. Is there any saving in cost, or insurance, on shipment of western cattle through the Hudson Bay route?—A. Not at the present time.

Q. Did you ship through there yourself?—A. We did, 200 head for a member of the organization.

Q. What was the net result of this, did you save anything?—A. No, just about the same for the reason that these rates were high and it was the first time it was ever done—incidentally it cost a little more money than ordinary.

Q. Was there any saving of time?—A. As compared to rail, yes.

Q. What was the condition of the cattle on arrival?—A. If you can travel one day on the railroad against six days in the railroad they must be in better condition.

Q. That is what I want to get?—A. They must be in better condition, for a sea voyage does not hurt cattle.

Q. Your experience is that cattle shipped by the Hudson Bay route arrive in the Old Country in better condition?—A. Yes, owing to less time on the railroad. You expect a 10 per cent shrink on cattle shipped to Montreal from Calgary.

Q. The more direct they go the better condition they are in?—A. Much better condition.

Q. The advantage then is the condition in which they will arrive on the British market when shipped by the Hudson Bay route?—A. It is a factor, the condition of the cattle; because they would be worth more money.

Q. I mean, is it an important factor?—A. Certainly, it is an important factor. But you must remember that you only have a short season.

*By Mr. Kennedy (Peace River):*

Q. You have mentioned a great many things, can you tell us anything about Russia?—A. Well, I have had a lot of good times in Russia.

*By the Chairman:*

Q. When?—A. Oh in 1926, 1927 and 1928; I was over there and I saw a lot of interesting things—

*By Mr. Kennedy (Winnipeg):*

Q. We are investigating as to cattle, we take it for granted that you had other interests?—A. Oh excuse me, I am not going to tell you anything in particular—what about cattle, what do you take for granted.

*By Mr. Kennedy (Peace River):*

Q. You were talking about getting rid of the surplus, is there any chance to get rid of the surplus there?—A. You ought to know the condition as well as I do as to why we don't sell to Russia—I would sell to Russia or to China, or to anybody who could pay me.

Q. Is there a market there for our cattle?—A. I think there is, yes. Their cattle per capita is lower than any other European country, and the quality is poorer.

Q. And you think then that there is an opportunity to develop the trade there?—A. I think there is.

*By Mr. Factor:*

Q. Did you explore the opportunities of the market in Russia when you were there?—A. I was very observant. I took a couple of shiploads of horses to Russia, but they didn't say anything about cattle to me.

*By Mr. Senn:*

Q. Has your concern ever seriously considered shipping cattle to Russia?—A. We endorse the movement of cattle to Russia—we endorse the proposition that the government should give some guarantee.

Q. Are you not a shipping organization, why do you not send cattle over there?—A. What do you mean.

Q. Is not your organization operating in connection with the export of cattle?—A. Yes, we do a service, exporting for members—getting space and doing necessary service.

Q. Have you never seriously considered sending your cattle to Russia?—A. On consignment.

Q. Any way you like?—A. We would not ship on consignment to them, but if a Russian came over here and gave us his money I would be tickled to ship him cattle; just as I would to anybody who could put up the price, whether he was a Russian or a Chinese, or anybody else.

*By Mr. Young:*

Q. You told us that you used to pay 90 cents to Montreal, and that you now pay \$1.14; you also told us that the railways used to be satisfied to take a trainload of from 12 to 15 cars and that now they want sixty?—A. I told you—let's get this straight—I said the rate was 90 cents at one time, and now we pay \$1.14—they did want \$1.48 and then there was a reduction, they brought it down to \$1.14½—and they said they could not go lower because they would be losing money. Then I said that in the early days, before the war—30 years ago—the railroad companies would be satisfied to give you a special train with

12 or 15 cars of cattle, but in those days they had light equipment, and their engines were of less horse-power. Now they have tremendously more horse-power and heavier cars, and they want a sixty-car train. They don't want all cattle—you can make up the balance of your train with dead freight, if you haven't got enough live stock. But my contention is that in the old days they could do it for 90 cents with a train of 12 or 15 cars, but to-day they want 60 cars, and they charge you \$1.14½.

Q. Has the fact that our railways have been building heavier roads and using larger engines and heavier cars—hauling larger loads—had the effect of increasing freight rates?—A. They just did it for one reason, to reduce the cost per ton haulage per mile.

Q. It has increased the cost, that has been the effect of efficiency in our railways?—A. That is what I cannot understand, with the haulage they have, they ought to be cut down these costs very greatly.

Q. Do you suppose it is the policy of the railway companies to discourage the shipment of cattle for export?—A. I don't know about that, I would not go that far.

Q. Did you say something about curtailing the production of cattle, would you limit the production of cattle in the West?—A. No, I don't just like to get on that point. Of course, it has a bearing on the volume of exportable agricultural products. When you talk about curtailing production, the condition of the country will itself automatically curtail the production of cattle. The range areas to-day will not probably take more than fifty-five per cent of the cattle they did thirty years ago. The farming population of western Canada are not in a position, and could not buy the rough cattle because they have not got the feeds to finish them.

Q. Do you think it desirable that more farmers should go into cattle raising?—A. I don't think so.

Q. There was a gentleman who came to me the other day and wanted me to support this wheat agreement, to curtail acreage in the west; his contention was that the western farmer should be encouraged to raise more cattle—you are not in favour of that?—A. I do not think that the population of this country will be able to take care of the surplus. Our first object is to take care of this surplus—our great difficulty is to find a market for these surplus cattle. About the worst thing that could be done would be to increase the export to the Old Country of the kind of cattle they don't want. There is a lot of our poorer cattle that have been worked off for sale as fox meat and by-products of all kinds, and probably by disposing of them in that way there would not be very much loss.

Q. You think then before the farmer is encouraged to go extensively into cattle raising, we ought to find markets for our cattle?—A. He had better give consideration to the market. But the really important thing to have in mind is that you cannot get into the cattle business in a year. It is a life job, after you have about 25 years in the business, working around cattle, you begin to know something about them.

The CHAIRMAN: I think that is all. I must thank you, Mr. Byers, for the very able way in which you have presented your case.

(The Witness was discharged.)

The CHAIRMAN: This morning there was some question about the distribution of cattle to the packers, and to the Live Stock exchanges. I asked one of my staff to try and compile a table which would set these forth, and I think he has it. I want to make this clear, this is not a set of figures which is prepared in this form regularly by either the Dominion Bureau of Statistics or the Department of Agriculture, it is a composite statement of information available from the two sources, and other sources in the Department of Trade and Commerce, which we have assembled in this form.

I will just ask Mr. A. E. Fortington to present this. Will you present this, Mr. Fortington?

Mr. FORTINGTON, called.

*By the Chairman:*

Q. What is the statement?—A. It is a statement compiled from all available sources of information.

*By Mr. Factor:*

Q. Who is this gentleman?

The CHAIRMAN: He is a member of the staff of the Department of Trade and Commerce, of the Markets' Intelligence Branch.

The WITNESS: This information is compiled from all sources known to us, as you have already indicated. It has been checked very carefully, and on the basis of hogs being the only graded type of live stock, the direct shipment of which are actually known, it has been found by checking that the hog figures of this branch are identical with those of the live stock branch; so we have no reason for assuming that the figures for cattle, calves and sheep should be otherwise than correct.

The CHAIRMAN: If the committee desires, we shall put the schedule in the evidence, and provide each member of the committee with a copy of it. I think you will find it useful.

Mr. ILSLEY: Can you state what proportion of the cattle are sold through the stockyards, and what proportion direct to the packing houses?

The CHAIRMAN: Yes.

Mr. ILSLEY: That is what we wanted.

WITNESS: The 1933 figures should be available this week.

The CHAIRMAN: You will supply these?

WITNESS: Yes.

The CHAIRMAN: Will you just answer Mr. Ilsley's question?

*By Mr. Ilsley:*

Q. What proportion of the cattle is sold direct to the packing plants and what proportion through the stockyards?—A. For each year?

Q. For last year.—A. 1927 to 1932? 1932, in the case of cattle, 8.96 per cent direct, 91.04 public markets, but that excludes the calves, which in 1932 were sold in the following proportions, 11.37 per cent direct, 88.63 public markets; sheep 80.41 per cent public markets, 19.59 per cent direct; hogs, 41.10 per cent public markets, 58.90 per cent direct.

Q. For the year 1932?—A. The ranches.

*By Mr. Senn:*

Q. Are you taking into consideration country killings in those percentages?—A. Country killings would not be included.

*By Mr. Ilsley:*

Q. What is the trend for the last five years?—A. In a beef cattle, direct shipments from 2 per cent to 10.

Q. 2 per cent to what?—A. 2.6 per cent in 1927 and 10.9 per cent in 1930, and up to the present figure of 8.96 per cent in 1932. The estimated increase on the preliminary figures for 1933, however, we expect will show a very substantial increase.

Q. That is the cattle figure?—A. Direct shipments. The forecast will show a very substantial increase. In the case of calves, the direct shipments from 1927 have increased from 9·4 per cent to a peak of 11·89 in 1930, and dropping slightly to 11·37.

Q. What are your preliminary figures for 1933?—A. A slight increase. The hogs have shown a slight downward trend from 1927, 60·8 per cent to the present 58.

The CHAIRMAN: You are speaking of direct shipments?

The WITNESS: Yes; the forecast for 1933 should be very very substantially higher. We prefer not to give percentages until we are sure of the accuracy of them.

Mr. PARRY: That is based on preliminary estimates?

The WITNESS: Based on preliminary estimates.

*By the Chairman:*

Q. What happened in 1923 to make those sudden changes develop?—

A. We have not revised those yet, 1,172,537 public markets, direct 2,032,881.

*By Mr. Young:*

Q. Something must have happened in 1933 to make that sudden increase in direct shipments?—A. Yes, interim observations for 1934 in all of them show an increase, particularly perhaps in the case of hogs.

Q. Can you explain?—A. Excepting so far as we have seen the picture, the organized efforts of men covering the country to establish direct contact with the farmers.

Q. The packers are going out for the business?—A. In certain zones, apparently so. The trend has been very very substantially higher. In 1927 it was 8·34 per cent, and in 1932 it has gone up to 19·59 per cent, and the forecast is substantially higher for 1933.

The CHAIRMAN: Will you make copies of that for each of the members of the committee and supply us with the 1933 figures as well? (Exhibit 74.)

The WITNESS: Yes.

The CHAIRMAN: Mr. Roblin wishes to file a statement. Gentlemen, that is all the evidence we have for to-day. Tuesday next we shall continue with this line. I am reminded that a witness from the Retail Merchants Association of Quebec will be hear on Tuesday.

Mr. FACTOR: We are sitting on Tuesday and Wednesday, and then we shall adjourn with parliament.

The CHAIRMAN: Yes.

Committee adjourned at 5.35 to meet again on Tuesday, March 27th at 11 a.m.

HOUSE OF COMMONS, ROOM 368,  
March 27, 1933.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock, the Hon. H. H. Stevens, presiding.

The CHAIRMAN: Gentlemen, we have the ordinary minutes recording the names of witnesses who were heard and certain exhibits filed. Unless there are any comments we will declare the minutes approved. There are two or three letters here of not very serious moment which, I think, in the ordinary course might be referred to counsel for the committee for such attention as may be required. One refers to a certain linoleum and oilcloth manufacturing company allowing a special discount to department stores. It is one of the ordinary complaints. I think that can be dealt with by the ordinary investigating staff. Another is from the city of Calgary asking that the expansion of the investigation into the packing plants be carried to that city which, of course, we purpose doing in the investigation which is now going on by auditors and investigators. So we can just leave that with counsel as well. The third is a little more sweeping, perhaps; it asks for a complete investigation into the lumber industry. What I did was this: I answered this letter, acknowledged it, and I said:—

I would point out to you however, that individual searching investigation of the lumber and forestry industry of Canada would be an immense task, and as the committee has already in hand work which will more than keep it constantly occupied for the balance of this session, it seems to me to be a physical impossibility to undertake this work.

I question the advisability of the committee attempting an investigation of that kind in addition to what we are doing at the present.

Mr. BOULANGER: It means forestry?

The CHAIRMAN: It means everything. He says: "Be requested to investigate every phase of the Canadian lumber industry."

Mr. BOULANGER: It is a big order.

The CHAIRMAN: Of course, it is something that could not possibly be undertaken, I should judge; and I indicated, as I have read, that in my opinion it was so sweeping it would be impossible for us to do it. Perhaps we can leave that also with counsel for the committee.

The clerk has a memorandum from the Bureau of Statistics which will be circulated. It is entitled: Cross sectional comparison of commodity price index number and actual prices. (Memorandum filed, marked exhibit 75.)

This morning we were to hear Mr. Messier particularly. He is secretary of the Retail Merchants' Association, Quebec Section, and his evidence will complete the hearings as far as the Retail Merchants' Associations of the different provinces are concerned. I will ask Mr. Messier to come forward.

ROSARIO MESSIER, called and sworn.

J. H. TETREAUX, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Messier, you are secretary of the Quebec division of the Retail Merchants' Association of Canada?—A. Yes.

Q. And as such on behalf of your association you have certain representations to make to this committee?—A. Exactly.

Q. As to the effect upon retail business of department and chain store practices in the province of Quebec?—A. Yes.

Q. Will you be good enough to let us have your statement that you have prepared for this purpose?—A. Yes. Perhaps I had better read what I have prepared. These figures are taken from the Dominion Bureau of Statistics, 1930. I represent the Retail Merchants' Association of Canada, Quebec Provincial Board, which comprises approximately 3,000 merchants, organized in some thirty-five districts or branch boards throughout the province.

When you invited me to appear before this honourable committee on behalf of the retailers of the province of Quebec, I must confess that I hesitated to accept, not because I had any doubt regarding the merits of our cause, but because I felt that within such a short period of time and having no special authority, it would be impossible for us to conduct an investigation and prepare a case which would be—as it should be—supported by authentic evidence. In numerous instances, we have not been able to obtain the factual evidence which, although undoubtedly true, was not communicated to us for apparent fear of ulterior unfair treatment.

However, in their desire to co-operate to the fullest extent with your committee, our officers thought that we should try to give you some idea of the effects of mass merchandising and unfair trading practices on the retailer, the community life and the consumer. Retailers of our provinces are alarmed over the growing tendency towards centralization of buying in the hands of a few large firms. In the province of Quebec in 1930 the total amount of retail sales of approximately \$675,000,000—the sales of order houses, department stores and chain stores were estimated at \$175,000,000.

*By Mr. Heaps:*

Q. Is that \$175,000,000 in addition to the \$675,000,000 or part of it? —A. Part of it. As follows: Department stores, \$75,000,000, chain stores, \$100,000,000. The amount of mail order business done by three firms was estimated at \$10,000,000. In 1926 there were 699 chain store units; in 1930 the number of units had gone up to 1,692.

*By Mr. Sommerville:*

Q. The increase was from 699 to— —A. 1,692 in four years.

Q. That is an increase of approximately 1,000 units in four years?—A. About 150 per cent.

Q. 150 per cent in the four years?—A. Yes.

Q. That is up to 1930?—A. That is up to 1930.

Q. Have they been increasing in numbers since that date—the units?—A. We have not got the figures.

*By Mr. Boulanger:*

Q. Might I ask you if some of these chain stores are not owned in Montreal? Is there a head office in Montreal for some of them?—A. I am under the impression that, at least, one or two of them have their head offices in Montreal—one in the grocery trade and one in the shoe business.

Q. And are there some of the mail order houses with head offices in Montreal?—A. One, I think. These figures show to what extent the retail trade is being centralized into the hands of a small group of firms and organizations. Now, let us consider how this centralization is being accomplished. A few examples of the trading practices of the monopolizing organizations will

serve to indicate the direction in which an explanation can be found. The following letter received at our office from one of the oldest and best reputed firms in the fur trade of Montreal tells the story of an unfair practice:

MONTREAL, March 6, 1934.

Mr. R. MESSIER,  
Secretary,  
The Retail Merchants' Association of Canada,  
Montreal Section.

DEAR SIR:—I am reliably informed that one of the big departmental stores has bought last fall several thousand muffs at \$1.35 while the lowest wholesale price known was \$1.75. To make such a muff costs the price of a bedding the lowest being 65 cents plus one skin say of "near seal" the cheapest being 0.60 to 0.65 cents, leaving 0.10 cents for labour.

Please note that a large number of these muffs were made with the higher price merchandise and were therefore sold under cost of material, not taking into account labour. . . .

*By Mr. Young:*

Q. Where did you get those costs of material?—A. This is a letter from one of the oldest furriers—a furrier that has been in business and manufacturing for forty years. That is his letter.

Q. He does not state where he gets his costs?—A. No. These are figures that you can certainly get very easily.

. . . . There is no doubt that the firm buying such merchandise knew very well that it was below the cost.

We will be pleased to give names and more information if the government decides to name anyone with power to investigate this specific case and others.

Your truly,

NORMANDIN, TURCOTTE, LIMITED,  
Per R. NORMANDIN, *Secretary*.

Another unfair practice is illustrated by the following extract from a letter received from one of our members in west Shefford—

*By Mr. Heaps:*

Q. What do you mean by unfair practices; unfair for people to buy at or unfair for the manufacturer to sell at?—A. He probably means, unfair to the trade, and unfair to the industry in general.

*By Mr. Factor:*

Q. Unfair to the retailer who has to sell it at a higher price?—A. Well, not necessarily. He says, for instance, that the price paid for the merchandise did not leave more than 10 cents for labour.

Mr. HEAPS: In that case were the people who were making the muffs receiving the fair wage according to the minimum wage law of the province of Quebec?

Mr. EDWARDS: Is there a minimum wage law? Just female.

Mr. HEAPS: According to law, I said.

The WITNESS: I could not investigate the whole case, but I was informed yesterday that the firm that had supplied these muffs last fall has gone into liquidation since that time.

*By Mr. Edwards:*

Q. Quite a common complaint, is it not?—A. Well, that would show that when they did not get a fair price for their merchandise they either had not paid their labour or they do not pay the supply houses.

*By Mr. Kennedy (Winnipeg):*

Q. Do you find that they sometimes put on special sales leading up to liquidation or preparing for liquidation; did you ever run across that practice in Montreal?—A. We have heard plenty about such a practice.

*By Mr. Edwards:*

Q. And then they open again in somebody else's name. That is quite common too, is it not?—A. Yes. Now, according to this letter received from a merchant in west Shefford:

I see in the catalogue of the T. Eaton Company in Toronto, a dress made of good printed calico, bust 34-44, at 49 cents with an order of \$5.

*By Mr. Young:*

Q. That is 49 cents with an order of \$5; it is a bonus?—A. Evidently a bonus or inducement. This is evidently a case of loss leader done with the intention of creating among the public the opinion that they are selling at extraordinary low prices.

*By the Chairman:*

Q. You have not got the ad there with you?—A. No.

Q. Do they give the date of the ad?—A. It says in the catalogue—

Q. It is a catalogue?—A. Yes. That can be found very easily in the catalogue.

Q. All right?—A. "At that price no merchant can buy the same material by the yard from his manufacturer."

From St. Hyacinthe, a few days ago I received a circular of the J. B. Lefebvre, Limited, who operate a branch of their chain store there, together with a few remarks pointing out the unfairness of some parts of the circular. For instance, there are rubber boots advertised, regular value \$3, price for that sale \$1.49. The explanation that I had is to the effect that either the merchandise illustrated is not properly illustrated—they mean either they show there a lady's boot instead of a man's boot—in that case the price would be right, but the illustration would not be right. If they really mean that this is a man's rubber boot, the lowest cost price will be \$1.90 wholesale.

The CHAIRMAN: The illustration shows a man's boot, does it?

Mr. TETREAU: It shows mens' and boys'. If it is a man's rubber boot it costs \$1.90 wholesale. Now, I am buying that line myself. I retail it at \$2.30. It is not \$3. They say it has a value of \$3 for \$1.49. I am buying that line at \$1.90 and I am retailing it for \$2.30.

Mr. SOMMERVILLE: Your spread is 40 cents?

Mr. TETREAU: Yes, if it is a man's boot it costs \$1.70 and it is advertised at \$1.49. Supposing he has got the regular discount of the favoured fellows from the boot companies, the most discount he could get is 14 per cent. It would not leave a profit reasonable for anybody in competition.

Mr. SOMMERVILLE: If he had a discount of 14 per cent over the \$1.70; that is the wholesale price?

Mr. TETREAU: Yes.

Mr. SOMMERVILLE: He still would not have—

Mr. TETREAU: A reasonable profit.

Mr. SOMMERVILLE: No profit?

Mr. TETREAU: Yes, no profit.

Mr. SOMMERVILLE: And that is what you call a loss leader?

Mr. TETREAU: That is what I call a loss leader.

Mr. FACTOR: Did you see the actual rubber boot that was sold?

Mr. TETREAU: No. I am going through the advertising and mens' and boys' rubber boots are there. The rubber is not like the shoes, it is a standard. If they sell a black rubber boot, every factory will have the same line priced at the same price.

Mr. YOUNG: And the same quality?

Mr. TETREAU: They are supposed to be the same quality, because they never put another line which is not accepted—

Mr. YOUNG: You say there is an arrangement between the factories?

Mr. TETREAU: There are some factories that may have a last that will fit a little better than another one, if you prefer to buy from this company on account of that.

Mr. YOUNG: You said all factories would charge the same price.

Mr. TETREAU: Yes, charge the same price. It is all listed.

Mr. YOUNG: They have an arrangement?

Mr. TETREAU: Yes, they have an arrangement. They have all the same price.

Mr. YOUNG: How did they bring about that arrangement?

Mr. EDWARDS: I do not think the witness would know that.

Mr. BARIBEAU: Have you knowledge that a group of retailers were organized in the province of Quebec some time ago for co-operative purposes, especially in the rubber business?

Mr. TETREAU: They have tried that and never succeeded.

Mr. ILSLEY: And could they get a sufficient discount?

Mr. TETREAU: No, they are against a group. We cannot make a group of five or six fellows and go there and buy big quantities.

Mr. SOMMERVILLE: The rubber manufacturers will not agree to sell to a group?

Mr. TETREAU: No.

Mr. SOMMERVILLE: Even though you were organized as a group and offered to buy large quantities, they would not sell to you on quantity prices.

Mr. TETREAU: No.

Mr. SOMMERVILLE: They would insist on you taking the goods at the ordinary retail price?

Mr. TETREAU: Yes.

Mr. BARIBEAU: But they organized just the same?

Mr. TETREAU: The manufacturers are organized, but the retailers, are not.

Mr. BARIBEAU: They tried.

Mr. TETREAU: They have tried but never succeeded.

Mr. SOMMERVILLE: They never succeeded in this respect: they never succeeded in getting the manufacturers to give them the larger discount for larger buyers?

Mr. TETREAU: Yes.

Mr. SOMMERVILLE: That is what you mean, is it not?

Mr. TETREAU: Yes.

Mr. YOUNG: You say there is a combine among the manufacturers and that combine controls prices?

Mr. TETREAU: Well, it looks like a combine.

Mr. EDWARDS: I submit that no witness can answer that question.

Mr. YOUNG: If he cannot answer, he cannot.

Mr. EDWARDS: He does not know.

Mr. TETREAU: They are putting out a price list for every season, and they are all the same price.

Mr. SOMMERVILLE: And you can draw your own deductions?

Mr. TETREAU: Yes.

Mr. SOMMERVILLE: That is as far as you can go?

Mr. TETREAU: Yes.

Mr. FACTOR: I think we have been given enough evidence on the rubber combine.

The CHAIRMAN: You had better use "rubber association" that is what it is; but the point I understand the witness is making is that certain retail distributors can get more advantageous discounts than the ordinary retailers are granted.

Mr. TETREAU: Yes.

The CHAIRMAN: And you as a retailer cannot get a discount that would enable you to meet that price?

Mr. TETREAU: Yes. It is impossible.

Mr. EDWARDS: It is again the secret discount.

The CHAIRMAN: Yes.

Mr. SOMMERVILLE: And that firm which is putting out the advertisement you are now referring to is one of those firms that is in the most favoured class—getting the same discounts as the large departmental stores?

Mr. TETREAU: Yes. I cannot say that they get exactly the same discount, but I know they have.

Mr. SOMMERVILLE: There is a list showing who were the firms, and I understood that this firm was on that list?

Mr. TETREAU: Yes.

The CHAIRMAN: We will have the association representatives here later and Mr. Young can then delve into the combine feature.

Mr. EDWARDS: Yes. That is the time to do it.

The CHAIRMAN: Go on Mr. Messier.

The WITNESS: There is another example of a loss leader in that same circular—

Mr. TETREAU: There is a woman's slipper that cannot be made or bought less than 22 or 23 cents and it is advertised at 19 cents. I am on the market for buying, and I have never found a slipper for several years to buy at that price.

Mr. FACTOR: It cannot be bought by the retailer?

Mr. TETREAU: I do not think it can be bought by the retailer at that price.

Mr. SOMMERVILLE: You say that is an evidence of a loss leader?

Mr. TETREAU: We cannot say anything else, because they are losing money on that. I am pretty sure.

Mr. SOMMERVILLE: Is there any other item on that same circular.

Mr. TETREAU: There are some lines of rubbers that we cannot discuss very much because they are imported goods.

The CHAIRMAN: Japanese and Singapore?

Mr. TETREAU: They may be Singapore or Japanese, and I think it is Singapore. It is pretty hard to discuss prices of these because I do not know really the list price of these shoes.

Mr. EDWARDS: How does the Singapore rubber compare with the price of equal quality Canadian rubbers?

Mr. TETREAU: Well, they are not the same quality.

Mr. EDWARDS: No. I know they are not; but how do they compare?

Mr. TETREAU: They compare cheaper, but I do not know what profit the importers are taking.

Mr. HEAPS: How much difference is there in the price?

Mr. TETREAU: Well, some lines we can buy cheap enough, and some others the difference is not very extravagant. There are a few cents just to let the people think they are cheaper.

Mr. HEAPS: The quality is not as good as Canadian rubbers?

Mr. TETREAU: I do not know for the wearing, but we have more confidence in the Canadian goods than Singapore goods.

Mr. YOUNG: Is there a great increase in imports of rubbers from Singapore?

Mr. TETREAU: I think so.

Mr. YOUNG: Has there been a corresponding decrease in imports from Japan?

Mr. TETREAU: I could not tell.

(Circular filed, marked exhibit 76.)

(Advertisement, *Montreal Daily Star*, Friday November 3, filed, marked exhibit 77.)

(Advertisement, *Montreal Daily Star*, Friday October 20, 1933, filed, marked exhibit 78.)

*By Mr. Sommerville:*

Q. What have you to say with reference to these two advertisements; they are apparently the same articles?—A. I would say with regard to these advertisements the remarks I had from a prominent gentleman's furnisher.

Q. This exhibit No. 78 reads, "Tremendous sale of 400 winter overcoats, fleeces, Carr Elysians, velours, tweeds and chevots at dollars less than usual as well as 40 genuine Sedan Montagnacs ordinarily \$69.50 and 40 genuine Isaac Carr's Elysians, ordinarily \$45, on sale for \$25." That is one of the advertisements. You are dealing with both?—A. Yes.

*By Mr. Factor:*

Q. What is wrong with that?

*By Mr. Ilsley:*

Q. Too cheap?—A. No, I don't say they are too cheap. Here is what one of the prominent gentleman's furnishers says:

That was distinctly unfair and it set a standard of retail prices to the public. In these advertisements, the Sedan Montagnac label and the Carr's Elysian label were prominently displayed and used as a bait to draw the public. The lowest price at which a Sedan Montagnac machine-made, can be tailored is \$57.50. The lowest price at which a Carr's

Elysian, machine-made, can be tailored is \$43.50. Assuming that as stated in the advertisement, 10 per cent of the lot were Montagnac's and 15 per cent were Carr's Elysian, the gross results on the sale of 100 overcoats would be a loss of \$2,410.

*By Mr. Sommerville:*

Q. On 400 hundred overcoats?—A. On 100 overcoats based on Montagnac and Carr's Elysian.

Q. On 25 per cent of 400, the gross loss would be \$2,410?—A. Yes. The loss would be compensated, I understand by the sale of the 300 other overcoats, the cost of which according, to the information we have, would be \$11.90.

Q. The other 300 overcoats in this sale cost \$11.90?—A. \$11.90.

Q. So that on these other 300 overcoats, the profit would be \$13.10?—A. Yes.

Q. And that would more than compensate for the loss on the 25 per cent of Montagnacs and Carr's Elysian?—A. That would be a gross profit of over 100 per cent on the cost price or over 50 per cent on the selling price.

Mr. FACTOR: Does the advertisement say 25 per cent Montagnacs?

Mr. SOMMERVILLE: Yes. "25 per cent of these coats are genuine French Sedan Montagnacs, ordinarily \$69.50 or genuine Isaac Carr's Elysians, ordinarily \$45."

*By Mr. Heaps:*

Q. Were these coats made in Montreal?—A. I was told so.

Q. Have you any idea of the conditions under which they were made?—A. No. That could be found out.

*By Mr. Factor:*

Q. In other words, this advertised price allowed a profit on the cheaper coats?—A. It made an overcharge, in effect, on the cheaper overcoats.

Mr. ILSLEY: That advertisement was not true, was it, because it says they are all that kind; does it not read that way?

The CHAIRMAN: No, 25 per cent.

Mr. ILSLEY: Does it not say that they were all exceptional bargains and sold at less than the usual cost?

Mr. SOMMERVILLE: It reads: "25 per cent of these coats are genuine French Sedan Montagnacs ordinarily \$69.50 or genuine Isaac Carr's Elysians ordinarily \$45, and every coat in the balance of 300 is exceptional value at this price."

Mr. ILSLEY: Yes; and the other one goes a little further.

Mr. SOMMERVILLE: Yes, "Fleeces, bar Elysians, velours, tweeds and cheviots at dollars less than usual."

Mr. ILSLEY: Yes.

Mr. SOMMERVILLE: It says: "Imagine getting the pick of fine Raceview fleece, velours, tweeds, cheviots, Montagnacs and Elysians—faultlessly tailored by one of Canada's best coat makers—for only \$25! Surely an opportunity that calls for decisive action."

*By Mr. Sommerville:*

Q. What you say is that the effect of them was to demoralize the clothing prices in the fall and winter of 1933?—A. Exactly.

Q. And that they were misleading and unfair to the retail merchants of Montreal?—A. Yes.

*By Mr. Young:*

Q. You say it is a false statement, that these coats were selling for more than their usual value instead of less; is that your statement?—A. No. On a certain proportion of the lot the retail price was much lower than the ordinary price. In fact, it was lower than the cost price. But on the other 300 coats, the margin of profit would seem to be too high.

*By Mr. Ilsley:*

Q. Does the ordinary buyer not understand that when he sees a sale such as that advertised, that he has got to be careful and pick out the bargains or he will get stung; that if he takes the others he is going to get badly stung? Has the public not got educated to that by this time?—A. I think you will find very few experts among the consumers.

*By the Chairman:*

Q. That is what you would like to do, assist to educate them?—A. Yes.

Mr. FACTOR: At the top of this advertisement, it says that one of the principles of this firm's advertising is scrupulous and rigid adherence to fact.

Mr. SOMMERVILLE: It is interesting to know about this.

The CHAIRMAN: We will check these two ads carefully as to this scrupulous adherence to fact.

Mr. YOUNG: In order to check that, you would have to get one of those coats which Mr. Messier says were sold for more than their usual price.

The CHAIRMAN: We will check it; we will have no difficulty in checking it.

*By Mr. Heaps:*

Q. Does Mr. Messier know the name of the people who made those cheaper coats?—A. I think I could supply the name.

Mr. HEAPS: I think that would perhaps be necessary.

Mr. SOMMERVILLE: I understand that Mr. Messier will supply the name to the investigator.

The WITNESS: Yes, or privately to the Chairman; because I would hesitate to give it publicly.

The CHAIRMAN: You give it to the counsel of the committee. In any case, we can check it.

Mr. FACTOR: And also ascertain the labour conditions.

Mr. SOMMERVILLE: That would be desirable.

The WITNESS: Here is another instance of the loss leader: In 1932, in order to attract the buying public to their shop, a chain store company of Montreal undertook to sell milk at cost. Apparently the milk was purchased at a very special price and in huge quantity from a local dairy firm. In a short time, the whole trade from the farmer to the retail distributor was disorganized.

*By Mr. Young:*

Q. What do you mean by disorganized?—A. Well, there was a price war going on.

*By Mr. Sommerville:*

Q. You say there was a price war going on?—A. Yes.

Q. What was the effect of the price war, that was thus started, on the producer of milk?—A. The price war had such a bad effect on the producer

that the Quebec government was forced to step in and set up a board empowered to control price levels, relations between producers and distributors, et cetera. In fact, I would like to file a copy of the bill which is going through the Quebec provincial legislature on this matter. (Exhibit No. 79.)

*By Mr. Young:*

Q. Where you have disorganized anything, you must first organize. Was there an organization before this?—A. No doubt when you want to make a war, you have to organize for the war.

Q. You say that as a result of this selling of milk at cost, the trade was disorganized. Therefore the trade must have been organized prior to that. Can you tell us anything about this organization?—A. No; but what I mean is this: In the ordinary course of business the farmer gets a certain price for his milk, and even though all the dairies do not retail milk at exactly the same price, they generally maintain a reasonable price, without having any definite agreement as to the retail price. But when one of the distributors come out with the retail price say two cents lower than the average, and he particularly advertises this price, you can immediately imagine what kind of reaction it has on the whole trade. All those who are in the same line of business, if they want to retain their proportion of the business or a fair proportion of the business, have to follow the march.

Q. And that matter is being dealt with by the provincial legislature?—A. At the present time.

*By Mr. Somerville:*

Q. As a result of what happened in 1932, was there not some measure or control bill introduced into the legislature of Quebec in 1933?—A. Yes. I understand that during the winter session of 1933 some measures were adopted, which can easily be had through the statutes of the province, with the object of preventing this practice of loss leaders.

Q. In milk?—A. In milk. Apparently the control was not good enough, because some of those who were maintaining cut prices in milk refused to fall in line until such time, they said, as there would be a law that would actually force them to maintain prices.

*By Mr. Young:*

Q. What reason did they assign for that? Did they say why they would not fall into line?—A. Because they would not feel reasonably protected against the possibility of some others cutting prices.

*By Mr. Boulanger:*

Q. A commission was organized by the Quebec government, and the commission tried to have producers and consumers work voluntarily?—A. Yes.

Q. And that did not work?—A. No.

Q. And now a bill has been introduced in the house to establish some sort of compulsory state of things?—A. Yes.

*By the Chairman:*

Q. But this abuse has been prevalent over some period of years, using milk as a loss leader; that is your contention?—A. Yes, but I understand that it became particularly bad in 1932.

*By Mr. Somerville:*

Q. And the reason that the voluntary system did not work, I understand, is because certain chains refused to co-operate?—A. Exactly; one in particular.

Q. All right, will you continue, Mr. Messier?—A. Yes. Here is another instance of deceiving selling methods. I will quote from a letter received from one of our members in St. Jerome. Here is what he writes, that a chain store advertised fine, big bananas, valued at 30 cents a dozen, for 19 cents. At the bottom of the card advertising these bananas we notice written in small type, "For to-day only."

*By Mr. Young:*

Q. Does it say what day of the week?—A. "For to-day only."

*By Mr. Sommerville:*

Q. That is rather good, for to-day only?—A. The card is placed in the window just at the time the store is closed and it is left there until the next morning. To all appearances this is being done in order to give the public the impression that the company is selling at a much lower price than any other merchants in town.

*By Mr. Young:*

Q. It is not a loss leader, then?—A. But since the advertisement is placed in the window just before closing the store and is removed the next morning, it becomes an unfair method of competition, because it is evident that the company has no intention of selling the goods at the advertised price but is merely using the advertisement to create a false impression among the public.

*By Mr. Sommerville:*

Q. Have you found that that occurs on Saturday closing, and that advertisements remain there over Sunday, using the Sabbath for advertising?—A. We have reports indicating that it happens on Saturday in St. Jerome; the same practice was found happening on Saturday, too, in Verdun, which is a suburb of Montreal; and it also happened on other week days. Some display cards were even displayed on Monday night, we will say, with the mention "for Monday only."

*By Mr. Young:*

Q. Was this a chain store that did this?—A. Yes.

*By Mr. Sommerville:*

Q. Will you give the name of the chain?

*By Mr. Young:*

Q. They were not cutting prices, were they?—A. I will give the name of the chain store. No, they were not cutting prices.

*By the Chairman:*

Q. It is a case where they had their cake and ate it?—A. They were not cutting prices.

*By Mr. Factor:*

Q. A banana split?—A. Nobody could say that the public had much advantage from those low prices.

*By Mr. Sommerville:*

Q. But you say it is unfair competition?—A. Yes.

Q. It is an unfair advantage?—A. Yes.

Q. An unfair practice?—A. An unfair practice, because consumers will think that this is a very special price, and they will expect their local grocer to sell at that price, and they will be surprised to see that their local grocer is charging a different price, is charging a higher price.

*By Mr. Factor:*

Q. Do you know of any case where an actual customer went into the chain store and tried to buy bananas at the reduced price?

Mr. SOMMERVILLE: He could not break in very well.

*By Mr. Boulanger:*

Q. Do you think if they have been fooled in that way, the public would go back again to that store?

Mr. SOMMERVILLE: They don't go; where they are being fooled is they see it at night.

*By Mr. Sommerville:*

Q. They see it at night and say, "See what we have missed to-day"?—A. Exactly.

Mr. YOUNG: Do other retailers ever do that?

*By Mr. Sommerville:*

Q. How is that being met by some of the other retailers?—A. Well, one of the local grocers in Verdun admitted last week that, to meet that kind of competition, he had to do the very same thing.

Mr. FACTOR: We can never hope to legislate against dishonesty.

*By Mr. Sommerville:*

Q. All right, will you continue, Mr. Messier?—A. Another unfair practice is concerned with the sale of certain articles. We have found cases, particular cases of that kind, of the sale of certain articles manufactured by a well-known firm, where the articles were prepared in sizes of packages smaller than the regular size generally sold on the market.

*By the Chairman:*

Q. Before you leave that, have you any illustrations of that?—A. No, I don't have any illustrations.

Q. That is, of these different sizes?—A. Although I can have twenty witnesses to corroborate that statement, because an inquiry was conducted into that.

Q. It would be of more use to us to have the facts; never mind the witnesses for the moment. I would like you, if you have not the evidence at your hand to-day, to supply counsel with instances.—A. The names?

Q. And the names of the firms and the articles involved.—A. Yes.

Q. Because that, I think, is a very pernicious practice and we would like to follow it through, but we cannot follow it through if we do not get assistance in following the illustration.—A. I have the name of the company, and I have all the particulars of the case.

Q. Give them to Mr. Sommerville, will you?—A. Yes.

*By Mr. Factor:*

Q. Standard brand articles?—A. Well, the case in question was in regard to a bar of soap.

*By Mr. Sommerville:*

Q. In regard to a bar of soap that is well known?—A. Yes.

*By Mr. Factor:*

Q. Was it smaller?—A. About ten per cent smaller.

The CHAIRMAN: We have quite a number of them, Mr. Factor.

*By Mr. Sommerville:*

Q. Will you continue, Mr. Messier?—A. Montreal dealers in electric washers had a sad experience.

Q. Electric washers, did you say?—A. Yes, with the firm that manufactured the "Apex" electric washer, a washer that is sold by the retailer at \$79.50 retail in the retail stores, and the dealers had to charge that price if they wanted to keep their agency.

Mr. YOUNG: A fixed price.

*By Mr. Sommerville:*

Q. It is a maintained price?—A. A maintained price. In the month of October, according to the statement given to us by our washer dealers, after the dealers had signed heavy orders for washers with the understanding that the manufacturers would protect them against cut price competition, one of the most important department stores had a special electric washer manufactured by the same firm under the name of the "Take Away."

Q. The "Take Away"?—A. Yes, the "Take Away," that is the name of the washer.

Q. It should have been "give away"?—A. In all particulars except one or two of minor importance, both washers were indentially the same. The "Take Away" was sold at \$57.50, that is \$22 less than the other.

*By Mr. Young:*

Q. What would your association do to that manufacturer?—A. The dealers naturally complained about this treatment from their manufacturer; and after discussing the whole situation with him, they were offered the privilege of buying the cheaper machine, but on condition that they purchase a minimum lot of ten washers of the same brand at the same price. It was evident that the average retailer could not carry in stock ten such washers if he wished to have a proper range of styles and prices.

*By Mr. Edwards:*

Q. Mr. Messier, were those sold under the same terms; I mean time payments, so much down; on the instalment plan or sold on a cash basis? Were the sales similar in both instances?—A. I could not say that.

*By Mr. Heaps:*

Q. Do you know anything about the labour conditions under which those washing machines were made?—A. No. I didn't make any investigation on that point.

Q. Do you know if the wages which the men and women working there for the manufacturer of those washing machines were the same for the "Take Away" washer as they were for the "Apex" washer?—A. No, sir.

*By Mr. Boulanger:*

Q. Where are they made?—A. Robert Mitchell Limited.

Q. Montreal?—A. Yes. Here is another instance of unfair competition.

*By Mr. Factor:*

Q. To which the manufacturer was quite a willing party, apparently?—  
A. Apparently, yes. One of the big department stores which does not sell cut flowers as a regular line, would sell flowers three or four times in a year, occasionally. On March 12, 1934—

*By Mr. Sommerville:*

Q. That is this month?—A. Yes—they advertised in the local papers certain flowers at ridiculously low prices as compared with those charged by reputable florists for the same products. For instance, we have tulips advertised at 59 cents, whereas the regular price would be 75 cents per dozen to a dealer and the wholesale price of these would be \$4 or \$5 or \$6 per hundred.

Mr. HEAPS: Might I point out here that the government are selling this week from the Customs department a very large quantity of tulips, unclaimed.

Mr. SOMMERVILLE: Bulbs.

Mr. HEAPS: I don't know whether they are going to depress the market.

Mr. SOMMERVILLE: Those must be bulbs, unclaimed bulbs.

Mr. HEAPS: Dutch bulbs.

The CHAIRMAN: They go by auction, so everybody gets a chance.

Mr. HEAPS: It depresses the market though.

The WITNESS: The claim of the florist on that point is this, that they keep a certain stock of cut flowers for the regular trade, with a reasonable margin of profit; and occasionally a firm like this which does not keep flowers regularly will come out on the market with a certain lot of flowers that they have bought—I don't know under what conditions—but which they put on the market apparently at cost price. This means that the florists, for that particular week, evidently will either lose their merchandise or have to operate at a tremendous loss.

*By Mr. Sommerville:*

Q. Or else go back at the producer and make him take less for his product?—A. Yes.

Q. In other words, your complaint in this respect is that the large store comes in occasionally and sells at these cut prices and disrupts the flower business?—A. Exactly.

Q. Both to the retailer and the producer?—A. Yes.

*By Mr. Young:*

Q. Have you any idea where they get their supplies?—A. No; but that also can be had by investigators.

*By Mr. Factor:*

Q. Apparently the only persons that get the benefit of the reduced prices are the people that buy; is that right, Mr. Messier?—A. Well, it is not even so sure, because we are not sure that these concerns are qualified to keep the goods in the proper condition.

*By the Chairman:*

Q. There is a little more to this. Apparently it is a complaint from the Florists' Telegraph Delivery Association, is it?—A. Yes.

Q. This association maintains a service to the public whereby they will telegraph, at the request of a customer, to deliver flowers in almost any part of Canada?—A. Not only service to the local public, but service to the public almost anywhere.

Q. Anywhere; which is, of course, a very highly organized service?—A. Exactly.

Q. Then the point which I understand that you are making is that here is a department store that does not normally handle cut flowers at all, which suddenly comes out with an advertisement which is obviously very much below the current market, and this destroys the market to the members of this association who have erected a rather complicated service for the public?—A. That is what the florists claim.

*By Mr. Factor:*

Q. What is the retail mark-up on flowers and bulbs, do you know?—A. I am not prepared to go into details in this matter, because I am not familiar with it.

The CHAIRMAN: This letter will go in as Exhibit No. 80.

(Letter from the Florists' Telegraph Delivery Association, with attached clipping, filed, marked Exhibit 80.)

*By Mr. Factor:*

Q. You don't know what he marks up a dozen bulbs at?—A. No.

The CHAIRMAN: Of course, with a highly perishable article like that, it is difficult to say what it is.

*By Mr. Heaps:*

Q. Is it not a common practice just before the Easter holidays for ordinary grocery stores to handle flowers and plants and so on?

Mr. SOMMERVILLE: Yes, not as loss leaders, not at cost; that is the complaint.

Mr. HEAPS: We don't know; he has not told us anything about that.

Mr. SOMMERVILLE: That is what he is complaining about.

Mr. HEAPS: He does not tell us the prices he bought at.

The WITNESS: The complaint is that these flowers are sold at prices that are below the market prices, the market level.

*By Mr. Heaps:*

Q. You don't know whether they are selling at a loss or a profit?—A. Well, according to the report from our florists, if they pay to the producers the regular price for the flowers they are apparently selling the flowers at a loss. If they are making a profit, it is because they have paid a lower price to the producers.

Q. But you have no knowledge of what they paid for the goods?—A. No, I don't have an actual statement.

*By Mr. Edwards:*

Q. Whether they are firsts or seconds, long stems or short stems or anything like that, you don't know?—A. I don't know. I am not an expert in flowers.

*By Mr. Young:*

Q. If there are more flowers bloom than can be handled through the regular channel and someone comes in and says, "I will sell these things at a lower price in order to bring new buyers into the market," do you see anything wrong with that?—A. If there was overproduction, Mr. Young, I figure that the market price would be reduced accordingly, the general market price.

Q. These people seem to be reducing the market price?—A. Well, they seem to be using flowers as a bait to attract the public, that is all.

Q. Flowers are things that people buy only when they can afford them. Everybody would buy them if they could. Very few people buy them because the price is out of their reach, but at Easter or sometime when they see flowers in the stores at half-price, it will tempt a great many people to buy who would not otherwise buy. Would that not increase your market.—A. Well, say I am in business as a grocer, and want to advertise a special line of goods; suppose I go out in the country and get a certain quantity of cream from the farmers on certain farms, direct from the farms, at a very low price, and then I put it on the market at cost. Apparently the public would have the benefit of the cream at a low price, but it will react on the whole market because it will mean that the competitors will drop their price, and that will go back to the producers, and work for a lower price to all.

Q. Just a minute, there must be thousands of people in Montreal who never think of going into the florist's shop, but they do go into these large stores, and if they see these flowers there on the table they will buy some of them; in doing so they lift these flowers off the market—hence there is less competition and less necessity for the regular dealers cutting their prices or destroying their stock?—A. I can make inquiry and find out about that for you.

*By Mr. Sommerville:*

Q. In a word, the wholesale price at the time you have given here in this letter, this wholesale price did not lag—there was no drag on the market?—A. We have taken it for granted that the wholesale price of these commodities is governed by the supply.

*By Mr. Young:*

Q. The question I asked was, would not the fact that these people were selling flowers to these particular people who did not ordinarily buy flowers, would not that avoid a break in the market among the regular dealers?—A. That is a question of opinion, it is a little difficult to answer.

*By Mr. Sommerville:*

Q. All right, Mr. Messier, what is your next point please?—A. The next thing would be the wages, hours of labour, etc of chain store employees and managers.

Q. Wages and conditions of labour for employees and managers of chain stores?—A. Employees, clerks and managers.

Q. What have you to say in reference to that?—A. A special committee of our association has been appointed to inquire into this matter. Of course, that investigation is far from being complete, because we had no special authority to accept statements under oath; but ten or twelve store managers and ex-managers, of two or three of the different chain-store organizations have already appeared before our committee. The following form of contract is an exhibit that has been submitted by one of these witnesses.

Q. That is, some ten or twelve managers of chain stores appeared before your committee and gave your committee certain information with regard to wage practices and conditions of labour?—A. With regard to wage practices and conditions of labour.

Q. And among other things they have handed to you is a copy of a contract they are supposed to sign?—A. A copy of a contract form. It might be of interest to the committee to hear the conditions of this contract:

THRIFT STORES LIMITED,  
465 Wellington St.,  
Montreal.

DEAR SIRs,—In consideration of my being employed by you as Manager of one or any of your Branch Stores, I hereby agree to the following terms and conditions:—

1. I shall receive a weekly salary of \$20. The company will pay me a bonus of  $\frac{3}{4}$  of 1 per cent on all sales, providing that my stock taking is not short and that I have carried out all the Company's instructions.

Q. Just stopping at that point?—A. In other words, if he made a mistake, or forgot to carry out one of the instructions of the company, he would not get any commission.

Q. If he was short at the end of the week on the inventory, he would not get the  $\frac{3}{4}$  of 1 per cent commission?—A. That would be deducted from his commission.

Q. What did you find from the report of the store managers who were before your committee as to the actual payment of that  $\frac{3}{4}$  of 1 per cent—was it paid, or did they just get the \$20?—A. Very very few of them are getting more than \$20.

Q. Very few?—A. Many of them have to pay charges out of their \$20.

*By Mr. Young:*

Q. You did not read that in the contract?—A. No, I will finish.

Mr. FACTOR: It is an old Spanish custom.

*By Mr. Sommerville:*

Q. Yes, it is an old Spanish custom; will you proceed, please?—A. The contract continues:

2. I shall be personally responsible to you for all merchandise and cash at any time contained in the store I may be placed in charge of, as well as for all shortages whether of cash or merchandise, as may be established by you after each stock-taking (Fire, Burglary, or Hold up, however, excepted); and I undertake to pay for same or execute such agreements, documents on a simple demand by you, and you may furthermore deduct the whole or such portion of said amounts as you may see fit from the commissions which are due, or which may become due to me.
3. I agree to accept your stock-taking of merchandise and moneys as established by you and as same may appear on your books as final; your books shall however, be available for my inspection and verification at your Head Office during ordinary business hours.
4. I agree, at any time upon a simple demand by you, to hand over to you all the documents, records and keys pertaining to the store(s) in which I may be stationed, and furthermore to check and make an inventory with your Company of all the goods, merchandise, moneys, fixtures and utensils in and about the said store(s).
5. The term of my employment may be terminated by you at any time without notice and I hereby expressly waive all or any

claims in damages which I may have against you, as and arising from my said dismissal from your employment.

Yours truly,

Witnessed.

Name,  
Age,  
Address.

Dated.

Q. That is the contract signed by the manager?—A. Yes. Now, the points on which they were all unanimous could be summarized as follows:

*By Mr. Boulanger:*

Q. Nothing is said in the contract about working hours; do you know anything about that?—A. I was just going to make a suggestion to your committee.

*By Mr. Sommerville:*

Q. You will speak of that later?—A. Yes—my suggestion would be, that in order to get the complete story of the conditions of labour and the responsibilities that these men have, and the practices to which they claim they have to resort to make both ends meet, I would suggest that your committee hear a certain number of these employees—or former employees—of the chain stores, so as to get the stories directly from them. I could give you the names.

The CHAIRMAN: Give us the names of a number of these?

*By Mr. Sommerville:*

Q. You say these employees tell you that in order to comply with the terms of their contract and not show a loss, they must resort to certain practices?—A. Yes.

Q. And that these practices are resorted to in the respective stores?—A. To the detriment of the public.

Q. By reason of the terms of that contract?—A. By reason of the terms of the contract—either of the company, or those who are in charge of these stores, the general superintendent and general manager.

*By the Chairman:*

Q. Do any of the ordinary retail establishments make demands upon their employees similar to those set forth in that contract?—A. I do not know of any.

*By Mr. Heaps:*

Q. Have you made any investigation as to the conditions of the ordinary retail stores, of which you are secretary?—A. Yes, I have to a certain extent.

Q. How do the wages and conditions of labour in such retail stores compare with conditions in the chain stores?—A. Well, in many of the independent groceries the manager is the owner himself. Most of them are taking their salary from profits.

Q. Or losses, perhaps?—A. Or losses, when they need money they take a certain advance out of their profit, but they do not take a regular salary.

*By Mr. Factor:*

Q. What about the clerks employed by them; how do their wages compare?—A. I know of some on which I happen to have some information who are paid \$20 a week, and I know some cases where they are paid \$25 a week.

Q. Clerks—that's not a manager?—A. Clerks, in a butcher shop.

*By Mr. Ilsley:*

Q. Are these practices brought about as a result of the strictness in the accounting for the merchandise required by the company operating the chain store?—A. Well, here are some of the details that were given to us: for instance, these managers who appeared before us were unanimous in stating that the manager is expected to find 20 packages of five pounds per bag of rice, that generally does not weigh more than 98 pounds. And then, if a manager receives five, ten, or more cases of green tomatoes, he is expected to sell them all—he is expected not to lose a single tomato—and if it happens that these tomatoes become over-ripe before they can be sold, the total loss is usually sustained by the manager. If he has enough nerve he can have them taken back, or credited to him, but if he does so too often—and he knows it—he is bound to lose his job; so, in order to avoid that he does not take any chances.

Q. The public pays the shot?—A. The public pays the shot.

*By Mr. Young:*

Q. You mean, he sells these tomatoes either ripe or green at short weights to his customers?—A. I would prefer to have you get the story from the managers themselves.

*By Mr. Ilsley:*

Q. An unreasonable contract under the accounting system, that is the cause of it?—A. That is the contention of the employees at least.

Q. They should not require them to get 20 packages of rice?—A. Twenty packages of rice of five pounds each out of a 98 pound bag.

Q. No there would not be more than 18 or 19?—A. Certainly, they have been required to get twenty packages of 5 pounds each out of a 100 pound bag of sugar.

The CHAIRMAN: It can't be done.

The WITNESS: It can't be done.

*By Mr. Ilsley:*

Q. They actually do that; there is evidence to indicate that they do that?—A. That is what we have been told by these employees themselves.

*By Mr. Young:*

Q. And these managers are required to get the prices which are set for such things as you have been speaking about?—A. I understand they are supposed to.

Q. I should think bananas, particularly, if they are over-ripe, ought to be sold cheap, say on Saturday; the manager should be allowed to sell cheap.

Mr. HEAP: Use them as loss leaders.

The WITNESS: I understand they are not supposed to vary the price.

*By Mr. Young:*

Q. They are supposed to stay to the fixed price?—A. That is what I understand; as I told you before, the best thing for the committee would be to have the story from these people.

*By Mr. Sommerville:*

Q. You are giving us the names of certain men?—A. They could give you much more than I could.

Q. What is your next point?—A. The next one would be: similar reports have been made to our office regarding wages and conditions of labour to the selling staff of some of the large bakeries. That would also be worthy of investigation.

Q. Is there a bread war, or a bakery war in Montreal or Quebec which would cause the reduced prices?—A. Well, I think I could safely say that there was a price war a couple of years ago, and it is not terminated yet.

Q. And is it as a result of the sale of bread at low prices in these large establishments that wage conditions have been affected in the bakeries?—A. According to the statement of the drivers, this is one of the bad effects that the war had on their wages—the lowering of the price to merchants to one cent; or, if you prefer to take it another way, merchants were given a margin of two cents a loaf on each loaf of bread.

*By Mr. Heaps:*

Q. What is the price of a loaf of bread?—A. The price of this loaf of bread I have given you was 7 cents retail.

*By Mr. Young:*

Q. What was the weight of it?—A. A pound and a half—I am not positive about that, I am not so familiar with that industry. Retail price 7 cents; whole-sale price 6 cents—the wholesale price was reduced to 5 cents, and the price of the grocer reduced to 5 cents, and the retail trade or the grocers who are in the habit of selling on a one cent margin in most cases kept on selling on a one cent margin, thus reducing the retail price to six cents; and the driver on the street calling from door to door was expected to sell at 7 cents—or was charged by the baker, and is still charged by the baker, at 7 cents.

Q. 6 cents?—A. 7 cents—on which he has a commission of 20 per cent; but since the amount of that reduction granted by the baker to the trade, the reduction of one cent; since that reduction has forced the retail price down to 6 cents in the majority of cases, the driver has to sell his own bread at 6 cents, for which he is charged 7 cents, thus supporting the loss himself—a loss of one cent—therefore getting only  $\frac{4}{10}$  of one cent per loaf of bread, instead of one cent and one fourth.

Q. I see?—A. In other words, competition is done at the expense of the driver.

Q. And that affects wages—in Montreal I understand there are several qualities of bread sold?

Mr. ILSLEY: It does not affect any wages particularly.

Mr. SOMMERVILLE: It affects his earnings.

The WITNESS: It affects his earnings considerably.

Mr. ILSLEY: The profit is one-quarter instead of  $\frac{4}{10}$  of a cent a loaf.

Mr. SOMMERVILLE: That therefore affects his return, he can't make a living wage on that.

*By Mr. Heaps:*

Q. Does he get any wages in addition to his commission?—A. I understand that some of the bakeries pay their drivers on a commission basis.

Q. Only?—A. Twenty per cent on the retail business, and eight per cent on the wholesale business.

Q. They receive no wages whatsoever?—A. That is what I am told.

Q. And these bakeries which are supplying the loaves now, at a slightly reduced price, are they large or small?—A. Large.

The CHAIRMAN: Slightly reduced—the reduction is over two-thirds of his former wages.

*By Mr. Heaps:*

Q. I meant a slight reduction for the baker?—A. It may appear to be a slight reduction for the baker, but it is a considerable reduction for the driver.

Mr. FACTOR: I suppose we can go into the bakery end of it later on.

*By Mr. Sommerville:*

Q. Yes, all right, Mr. Messier?—A. Such facts are particularly important because they are indicative of the unfair practices used by the large bakeries.

Q. That is, the large bakeries selling to chain stores have this effect, which you have described, upon the drivers of bakery wagons?—A. Yes. The large bakeries seem to endeavour to monopolize the baker industry. I am also informed that some of the large bakeries are selling their bread from door to door in many localities situated at 25, 50 or more miles from Montreal where they have their headquarters.

Q. That again has its effect upon the driver?—A. Yes, places that were mentioned to me were Huntingdon, Coaticook, and Drummondville.

Q. There are a number of them in any event?—A. They are a number.

*By Mr. Heaps:*

Q. To your knowledge do you know if the driver in these outside districts absorbs the losses?—A. That I could not say.

*By Mr. Edwards:*

Q. They purchase it at the retail price, and are allowed a commission of 20 per cent on it?—A. That is it.

Q. With the return of unsold loaves?—A. I could not say if they actually purchase the bread.

Q. I know it is the common practice?—A. They are charged anyway.

*By Mr. Sommerville:*

Q. They are charged with it?—A. They are charged with it, that would be the same thing; and they are supposed to be held responsible for the credits, although there was a judgment rendered lately by the Superior Court of Montreal ruling that the driver could not be held responsible for the credit. Now, the chain stores are not always offering to the public what we generally call "loss" leaders. Here I have two packages of vermicelli; one is 10 ounces, and the other 16 ounces.

Q. Just take the name off, take the label off the package. They are both "Sunshine"?—A. Both Sunshine. Both of exactly the same quality. Both contain a premium coupon.

Q. A premium coupon?—A. A premium coupon. Both are manufactured by the same firm. One has been bought in a chain store and the other one was bought from an independent store. I wonder if the public could tell me—I wonder if the members of the committee here could tell me—which of these packages is the ten ounce, and which the sixteen ounce?

Mr. SOMMERVILLE: Mr. Young is good on that.

Mr. YOUNG: Is there any weight stamped on that?

The WITNESS: Yes.

Mr. SOMMERVILLE: Just give us a guess; you are looking at them now.

Mr. YOUNG: Give me two guesses and I'll tell you.

The WITNESS: I think you would prefer to see the weight on the label. This one (witness displays the larger package) is ten ounces.

The CHAIRMAN: I would have taken that for the sixteen ounce package.

The WITNESS: This other one (displaying the smaller package) is 16 ounces. This package of ten ounces was bought from the Dominion Stores—

I have the invoice here for three packages of vermicelli, ten ounces, ten cents each—30 cents. This sixteen ounce was bought from an independent grocer; three packages of vermicelli, the invoice shows 3 for 27 cents, and that is in the city of Quebec.

*By Mr. Boulanger:*

Q. It is quoted that way?—A. It is quoted that way—three for 27 cents, 9 cents each.

*By Mr. Sommerville:*

Q. The sixteen ounce package was sold by the independent grocer for 9 cents?—A. Yes, and just before I left yesterday I found the same vermicelli in sixteen ounce packages offered by independent grocers at 3 for 25 cents.

*By Mr. Young:*

Q. What is the cause of the difference in the size of the packages, is there a larger hole in the one lot than in the other, or is it put up in a different form? Could they not put ten ounces in a smaller package than sixteen—possibly the lighter package contains a product in flake form, while possibly the other is long and small and could be packed more closely?—A. That might be.

*By Mr. Sommerville:*

Q. Are they both the same brand?—A. Exactly the same brand.

Mr. SOMMERVILLE: "Quick-cooking, Sunshine brand Vermicelli."

Mr. ILSLEY: The weight is marked on them I understand.

Mr. SOMMERVILLE: When you examine it closely you can see it.

The CHAIRMAN: The point I presume Mr. Messier is making is that by putting up two different sizes and selling one size to chain stores, it enables the chain store successfully to compete against the ordinary grocer, because of the deception in size.

Mr. FACTOR: They get more for the smaller package.

*By the Chairman:*

Q. As a matter of fact, the independent retailer was selling at a lower price than the other in this instance?—A. Yes, it seems to me it shows that the independent retailer oftentimes sells at a much lower price.

The CHAIRMAN: Yes, that is what I say; his price was the better one.

Mr. SOMMERVILLE: By the change in the package the chain store was able to sell a smaller quantity at 50 per cent more than the larger quantity was being sold at by the independent on the identical article.

Mr. YOUNG: Don't you think that is a pretty good advertisement for the independent?

The CHAIRMAN: Yes, if the public knew it.

Mr. EDWARDS: And that would offset the voluntary sale.

The CHAIRMAN: Not only that, but the deception to the ordinary woman purchaser is, of course, the offence in this instance.

The WITNESS: Now, for the information of your committee, I am going to file a certain number of advertisements taken from the Montreal newspapers.

The CHAIRMAN: Before you proceed, we will file these packages as exhibits. (The 10 ounce package was filed as exhibit 81.)

(The 16 ounce package was filed as exhibit 82.)

*By the Chairman:*

Q. All right, Mr. Messier; what did you say?—A. I wish to file with the committee a certain number of advertisements that appeared in the Montreal newspapers in 1933; this one would be October 5, 1933; this October 19, 1933; this June 22, another June 22, one of November 16, October 19, October 5, again October 19—but it is an ad. published by a different chain store; this June 22, then October 5, October 19, and October 19 again.

The CHAIRMAN: These will be filed as exhibit 83.

The WITNESS: There you have advertised various commodities sold by the grocery chain stores, together with the wholesale prices for corresponding dates.

*By Mr. Sommerville:*

Q. Attached to each advertisement you have the wholesale prices of the commodities advertised?—A. The wholesale prices supplied by three different wholesale firms.

Q. Wholesale grocery firms?—A. Yes.

Q. And these prices indicate that many of the articles so advertised were sold at prices below the wholesale price at the time?—A. In many cases, although you will meet with articles that were sold at a decent mark-up.

Q. Yes, but you have taken the whole ad?—A. Taken the whole ad.

Q. In each case; and you have taken the wholesale prices off the articles in the whole ad. in each case?—A. Exactly.

Q. And these wholesale prices are then the wholesale prices in everything below carload lots?—A. In one particular case. If you take the prices of the Model Groceries, the prices there are supposed to be the prices for carload lots.

Q. So that even in carload lot prices you will find many articles are sold as loss leaders by the chain stores?—A. Yes.

Q. And that is what you are complaining of with respect to this whole series of advertisements?—A. Exactly. You may have another example of unfair prices in that series of cases that were made against two different chain stores in Montreal for selling fruit of a quality inferior to the quality that was advertised.

Q. False advertising?—A. Yes, false advertising.

The CHAIRMAN: Court cases?

*By Mr. Sommerville:*

Q. Were these court cases?—A. Yes. The number of the cases and the address of the stores, the date and the amount of the fine paid, and so on.

Q. This is a series of convictions of chain stores?—A. Exactly.

Mr. ILSLEY: Why don't you put that on the record. I do not see any objection to getting that out. If these people have been convicted they may as well get some publicity.

*By Mr. Sommerville:*

Q. Will you please read the statements of cases referred to?—A. That was written on December 23rd, and it included convictions from the 7th of December.

Q. The convictions were only for one month?—A. Yes, December, 1932. Case 15,216, Thrift Store, 6151 Monkland, Outremont—I think it is—

*By Mr. Boulanger:*

Q. Regarding the number which you have, is that the number of the case in the recorder's court or in the police court—in which court?—A. I think it was in the police court. I am not absolutely sure. \$10 fine, plus the cost.

*By Mr. Heaps:*

Q. What for?—A. For selling fruit of a quality that was inferior to the quality advertised.

The CHAIRMAN: False advertising?

The WITNESS: Yes, false advertising.

Mr. FACTOR: Is that under the criminal code?

Mr. SOMMERVILLE: It must have been.

Mr. FACTOR: Is there a by-law in your municipality?

The WITNESS: No, I think it is the criminal code—Pure Food Act.

Mr. ILSLEY: Is it the Pure Food Act? I would not think it was. I do not think it would have anything to do with the advertising.

The WITNESS: No.

The CHAIRMAN: The only thing it could be would be false advertising.

The WITNESS: In the other case, 15217, Thrift Stores again, the same address, 6151 Monkland avenue, \$10 and costs for the same thing again.

*By Mr. Sommerville:*

Q. What was the next one?—A. The next one is 15220, a Thrift Store again, the same address again, 6151 Monkland avenue, \$10 and costs. The next case is 15221, Thrift Store again, 6151 Monkland avenue, \$10 and costs.

Mr. HEAPS: What were the goods? Were they being sold there under a false label?

The WITNESS: These were fruits.

Mr. HEAPS: Canned fruits or fresh fruits?

The WITNESS: Fresh fruits.

Mr. EDWARDS: Have you the names of the owners of those stores? Thrift store does not mean very much. Were these foreigners who were handling these goods?

Mr. SOMMERVILLE: This is a chain store operating—

The WITNESS: This is a chain store—Thrift Stores Limited.

Mr. ILSLEY: Were the offences all admitted on the same day? Was it a set of breaches on the same day—really one offence?

The WITNESS: I could not say from the information I have here, but, no doubt, we can have all the particulars.

*By Mr. Sommerville:*

Q. What was the next one?—A. 15222, Thrift Stores Limited, 1389 St. Catherine street west.

Q. That is another of their stores?—A. Yes, another of their stores. \$10 and costs. The next case is 14654, Thrift Store, 1229 St. Catherine street west.

Q. That is another store?—A. Yes, \$10 and costs. No. 14655, Thrift Store, 1229 St. Catharine street west, \$10 and costs. The next case is 15219, Stop and Shop, located at 960 Outremont avenue or street, \$20 and costs.

The CHAIRMAN: What is their offence?

The WITNESS: The same offence.

Mr. HEAPS: What was the offence—false advertising?

The WITNESS: Selling fruit inferior to the quality advertised.

Mr. HEAPS: It does not convey all I would like it to convey.

Mr. SOMMERVILLE: No. This will be information that will be made available.

Mr. HEAPS: You should search the records

Mr. SOMMERVILLE: Yes.

Mr. FACTOR: It does not seem to me that such an offence exists.

Mr. SOMMERVILLE: I assume it is false advertising.

The WITNESS: Now, the next case is 15218, Stop and Shop again, 960 Outremont avenue.

Mr. YOUNG: The same store?

The WITNESS: The same store. \$20 and costs. In all these cases the fruits sold were inferior to the quality advertised.

Mr. FACTOR: You are sure it is not fruit being sold that is unfit for human consumption—unfit for sales?

The WITNESS: I could not say.

Mr. ILSLEY: That is not what the records show anyway?

The WITNESS: No.

Mr. SOMMERVILLE: We will take this record and follow this through.

(List of cases filed marked exhibit 84.)

*By Mr. Sommerville:*

Q. By the way, were there any other transactions that you wanted to draw to our attention in connection with any of the practices you referred to in any of the chain stores?—A. It might be interesting to have a record of the prosecution for short weights.

Q. There have been prosecutions, have there?—A. I understand there have been some.

Q. Would you have information in your office with respect to that, which might be made available to the committee so that we could have them investigated?—A. I think we have some.

Q. We will ask you to let us have that.

*By Mr. Ilsley:*

Q. Your contention is that it is more prevalent in chain stores than in independent grocery stores, is it?—A. Well, I am still under the impression that the story you will hear from the employees will give you an illustration of the reasons why that may be so.

*By Mr. Sommerville:*

Q. There are conditions which promote it more readily in the one than in the other?—A. Apparently so, yes.

Q. What is next?—A. The next thing would be a document I would like to file with the committee indicating that the situation has developed to such a point in the city of Montreal that the city of Montreal decided last year to impose a special tax on chain stores, a special scale of taxes on chain stores, which I will file.

Q. A list of the special taxes?—A. List of the taxes taken from the charter of the city of Montreal. Maybe I could read it?

*By Mr. Ilsley:*

Q. Is it imposed now?—A. Yes, it is imposed now.

*By Mr. Sommerville:*

Q. Will you read that?—A. Special tax imposed on chain stores by the city of Montreal in March, 1933: An annual special tax on every person, firm, company or corporation operating one or more butcher's stalls in the city outside of the land used for public markets, not exceeding

1. Fifty dollars for each of the first and second stalls.
2. One hundred dollars for each stall over and above two and up to twenty inclusive.
3. One hundred and fifty dollars for each stall over and above twenty.

An annual special tax on every person, firm, company or corporation operating a number of groceries, not exceeding,—

Q. The first you mentioned applied only to butcher's stalls?—A. Butcher's stalls in the city of Montreal.

Q. The tax you are mentioning now applies to grocery stores?—A. Yes.

Q. What are the amounts?—A. They are:

1. Five dollars for each grocery over and above the first up to the fifth inclusive.
2. Twenty-five dollars for each grocery over and above the fifth up to the tenth inclusive.
3. Fifty dollars for each grocery over and above the tenth.

This tax shall not apply when such person has paid the tax prescribed by the previous paragraph.

*By Mr. Baribeau:*

Q. This was for Montreal only?—A. Yes, for Montreal only.

(List of Special Taxes on Chain Stores in Montreal filed, marked Exhibit No. 85.)

*By Mr. Factor:*

Q. How does the imposition of this tax help to remedy the matter of unfair practices or false advertisements?—A. Well, this was done because the administrators of the city of Montreal and the members of the Quebec legislature felt or thought that the development of the chain store organization had become alarming for the general welfare of the community.

*By Mr. Sommerville:*

Q. You are citing this as an indication of the effect of the chain stores upon the community?—A. Yes.

Q. And what the community has done, as a community, to provide more revenue from the chain stores?—A. Yes.

*By Mr. Heaps:*

Q. There was no such tax on departmental stores, was there?—A. No, not yet.

Q. Is your organization working towards that objective?—A. Well, representations have been made.

Q. By the retail merchants of Quebec?—A. Yes.

Q. To the provincial government, asking them to put a special tax on departmental stores?—A. No the city of Montreal.

*By Mr. Sommerville:*

Q. To the city of Montreal?—A. Yes.

MR. FACTOR: I notice even in France they are objecting to the evil effect of chain stores, according to an article in the newspaper the other day.

MR. SOMMERVILLE: And in Germany, too.

THE WITNESS: And Italy, too.

*By Mr. Sommerville:*

Q. Will you continue?—A. How is the retailer affected by these unfair practices and the resulting tendency towards centralization? If we take for

granted that \$10,000,000 are sold by mail, we generally figure it represents the amount of business of approximately 700 country general merchants. Their amount of business would vary around \$15,000 a year.

Q. In other words, the mail order business of \$10,000,000 which is now done in the province of Quebec is equivalent to 700 general merchants of Quebec doing about \$15,000 a year?—A. Yes, exactly. If we look at it from another angle, and consider this class of merchants that are affected by that kind of business, considering that it affects particularly the general merchants, dry goods merchants, boot and shoe merchants and hardware merchants—

*By Mr. Senn:*

Q. Not so much groceries?—A. Groceries not so much.

*By Mr. Sommerville:*

Q. Not so much mail order business done in groceries?—A. No, I don't think there are many groceries sold by mail; and certainly does not affect so much automobile dealers and gasoline stations and restaurant and the rest.

*By Mr. Factor:*

Q. In the figures that you gave us of the \$675,000,000 worth of business, the department and chain stores only did \$175,000,000 worth in 1930?—A. That is quite a decent proportion, for the province of Quebec.

Q. So that there was \$500,000,000 worth of business done by the independent merchants?—A. Yes, but that was more than 25 per cent done by small store organizations.

*By Mr. Young:*

Q. But the average turn-over of the independent merchants was 166,000, and the average turn-over for the average chain store was 103,000, according to the figures.

*By Mr. Baribeau:*

Q. Have you any figures of the municipal, provincial and federal taxes that are paid by the independent merchants of Quebec?—A. I have some that I will give you in a few minutes.

*By Mr. Young:*

Q. What have you to say as to this: You gave us figures of the total trade done by the various stores, and it figures out at about 103,000 for chain stores, and 166,000 for the independent merchants. You must get the lion's share of the business yet?

Mr. SOMMERVILLE: 166,000 what?

Mr. YOUNG: Units.

Mr. FACTOR: 1,692 doing \$5,000,000 worth of business.

Mr. HEAPS: I don't think that is correct. I think he gave you the number of stores in his organization but there must be a vast number of stores not in his organization.

Mr. SOMMERVILLE: He gave 1,692 as the number of chain stores now as compared with 699 in 1930.

Mr. YOUNG: Doing \$175,000,000 worth of business; then he gave us 3,000 as doing the other \$675,000,000.

The WITNESS: Oh, no.

Mr. FACTOR: That is of members.

Mr. SOMMERVILLE: Those are 3,000 members of the retail merchants' association.

*By Mr. Young:*

Q. How many merchants are there outside of your organization?—A. Well, I think the best source of information for those figures would be the Dominion Bureau of Statistics.

Mr. SOMMERVILLE: We will ask the Dominion Bureau to give us the information there.

Mr. YOUNG: You told us there were only 700 merchants affected by the mail order business.

Mr. SOMMERVILLE: No.

The WITNESS: No.

Mr. SOMMERVILLE: He is saying that \$10,000,000 of business is equivalent to 700 country merchants at \$15,000 each.

The WITNESS: No; I rather figure that it affects the business of some 5,000 retailers in the province of Quebec. Then you would naturally come to the conclusion that the average reduction in the sales of each of these merchants resulting from the mail order business would be \$2,000 a year.

The retail merchant loses a good part of the benefit of the cash business and has to support the credit. The following extract from a letter received from one of our members in Pointe Fortune is an illustration of that fact:—

These houses, he said, circulate their catalogues and procure all of the ready cash possible, previous to the departure of the merchandise.

In rural places the clients of those catalogue houses rely on their local merchant to take their produce or their merchandise in trade and obtain credit which at times is a loss to the local merchant while the mail order house receives the cash and will not take their produce and run any risk on same.

This kind of competition and all the unfair trading practices have a discouraging effect on the merchant.

From numerous cities and towns where chain stores and mail order firms do business comes the well-known story of rate cutting to attract the cash trade, of retail stores set up by wholesalers, of local trade being strangled by various unfair trading practices. As a correspondent from Rouyn, Quebec, puts it, "After we worked hard for eight years cutting the trees on the streets, chain stores came in and took the cream of our customers." He added that "the way it looks in town here, Dominion Stores, Eaton, Simpson, and Woolworth, and all those chain stores are going to run all the business and we will have to close doors. Therefore we hope something could be done to stop controlling the business by four chain stores in this town of Rouyn, because the town will go bankrupt in a short time, nobody will be able to pay taxes."

Here is an excerpt from a letter received from the president of the Chamber of Commerce at Joliette, Quebec:—

"If the present situation is allowed to continue, the individual dealer will have to disappear to make room for chain stores. If the individual stores disappear from small towns, I can assure you that not much will be left. There are chains which, from time to time, sell certain goods that they do not carry regularly. Woolworth, for instance, do not sell meat, bacon, bananas, oranges, graniteware, in a regular way, but sometimes they do buy such goods, the price of which is well known, and if they pay \$0.20 for an article, they sell it for \$0.20 even at a loss, whereas all other articles costing \$0.20 are being sold at \$0.40. In such a way, they create the impression that prices with all merchants are too high,

whereas their own prices are low, which is not the case. This amounts to a systematic destruction of individual trade, which shoulders its responsibilities, but which is often subjected to competition created by anonymous firms organized with public funds. If they succeed in crushing their competitors, they reap the advantage of large profits in big salaries. Should they be unsuccessful, the people who placed their money into their hands lose their capital or the interest thereon. Often these very same stores are purchased at ridiculously low prices after the first investors have lost their money. A prohibitive tax should be imposed on chain stores."

Here is another instance of unfair competition. The Eaton Company does not sell flowers as a regular line. On March 12, 1934, it advertised in a local paper certain flowers at ridiculously low prices as compared with those of reputable florists for the same products. This is most unfair to well-established business as it gives the public the impression that it is overcharged and tends to draw their trade away from them.

If we want to have an idea of the effect of the tendency the centralization of trade will have, we should first consider the value of the local merchant to his community.

In 1930, our association sent out a questionnaire to over 4,000 retailers throughout the province of Quebec, with a view to finding out the amount of the various expense items of the merchant in his locality. The figures contained in the replies received were compiled and the averages are as follows:—

*By Mr. Sommerville:*

Q. You had replies from how many?—A. Approximately 700 out of the 4,000 to which we sent the circular.

*By Mr. Baribeau:*

Q. Throughout the province?—A. Throughout the province.

*By Mr. Sommerville:*

Q. You say 700 merchants sent in their replies; the figures you are now giving to us are the average of the figures sent in by the merchants?—A. Exactly.

Q. Will you please tell us what the figures were?—A.

Municipal taxes.. . . .	\$ 188 55
Business taxes.. . . .	85 45
School taxes.. . . .	80 80
Licences, inspection fees, etc.. . . .	121 10
Church taxes.. . . .	30 00
Social works.. . . .	96 59
Salaries and wages.. . . .	1,195 21
Rent.. . . .	1,420 00

Let us add to these figures the amount of money paid to the local doctor, notary and lawyer, the amount paid to the farmers for their products; then multiply the total by four if you estimate that it is the rate of circulation of the money before it is sent out of the locality and you have an idea of the immediate financial value of the average retail merchant to his community.

Q. What do you mean by "then multiply the total by four" to get the fair rate of circulation of money; do you mean that money circulates four times in a community before leaving that community in the ordinary course of commerce—is that what you mean?—A. Yes.

Q. Illustrate it.—A. It might be interesting for the committee to hear an illustration of that local circulation that was made, I think it was two years ago, in the city of Sherbrooke. The local merchants in Sherbrooke decided one day to undertake a campaign to encourage "buying at home" and they thought that probably the best way to show to the public the advantage of local buying was to use something by way of an object lesson which would be spectacular; so they decided that they would take a dollar bill and have this dollar bill go through—

The ACTING CHAIRMAN: Trace it through.

The WITNESS: Through a certain number of stores. A local grocer started with a dollar bill, he went to see the dealer about a rubber shoe for a dollar, on which naturally the shoe dealer made a profit; and he said to the shoe dealer you will use this dollar bill to buy one dollar's worth of merchandise from another merchant—that man went to the hardware dealer and repeated the same experiment with the hardware dealer; that man went to the druggist, and so on, until this dollar had passed through seventeen different local merchants.

The ACTING CHAIRMAN: And the dollar came back to the same man.

The WITNESS: Possibly. Then they took another dollar and went to the chain store there, and bought a dollar bag of sugar. Then made arrangements with the local merchant to use his windows for display for a week. They took two different windows, in one of these they displayed the whole series of seventeen articles, with a big sign on top of it showing a dollar bill.

Mr. FACTOR: "See what your dollar buys."

Mr. YOUNG: Or "See what your dollar can buy in the City of Sherbrooke."

Mr. SOMMERVILLE: "When spent at home."

The WITNESS: When you buy it from the local merchant. Seventeen merchants had had the profit from that dollar and the dollar is still in the locality.

*By Mr. Factor:*

Q. You call that good advertising?—A. Yes. In the other window they just put the small bag of sugar, and the sign on the top of it was just as big as the other, with a dollar bill there, but in blank—telling to the public, see what is the result of your action, or what you are doing, when you are buying from the chain store—the only thing that you have had is a small package of sugar, and you are not even sure you have had the right weight, and your dollar is gone.

Q. Yes, to headquarters?

The ACTING CHAIRMAN: It is one o'clock, how much more have you, Mr. Messier.

*By Mr. Somerville:*

Q. He is almost through, just a few more minutes is all that will be needed for him to finish. Yes, Mr. Messier?—A. It is also a well-known fact that the merchant is generally one of the most civic-spirited citizens. He is an element of progress, stability and peace for the community. You have seen him in all parts of our country opening new centres to civilization, building villages, and towns. But we do not know of any community that has been established through the efforts of chain stores and other similar organizations, the reason is that they wait until there is sufficient population and the community has been properly organized before they open stores of their own.

Every retail merchant that disappears is a very serious loss to the community.

The unfavourable reaction of the centralization of trade and of the use of unfair practices on the consumer is certainly not less serious.

In a general way we can safely say that the mass of the consumers are interested to prevent the centralization of wealth into the hands of a few corporations or individuals.

I am far from being a communist, but I have always been of the opinion that in a community of 500 families the people would be much happier if each family possessed an amount of \$2,000 than if the total fortune of \$1,000,000 was in the hands of one person while the rest would be starving.

The mass buyers policy, paying the lowest possible price for their merchandise, results in lowest possible wages paid by producers and lowest possible return to the producer himself.

The consumer-producer and the consumer-wage-earner are therefore both adversely affected. They represent the larger part of the consumers. The following part in numerical importance is composed of unemployed, and the majority of them will soon go back to work when adequate measures have been applied to prevent the centralization of trade and the use of unfair practices in the trade and industry of our country.

We respectfully offer to the Committee the following suggestions with a view to improving the situation:—

The setting up of a Domestic Commerce Department to deal with the problems of the internal trade.

The regulation of competition by industrial and commercial codes, which would prevent such practices as fraudulent bankruptcy, false advertising, loss leaders.

A \$5 tax on every mail order catalogue.

A scale tax on chain stores.

Q. And these, you think, would help to relieve some of the difficulties that the retail merchants are suffering from in this country at the present time?—A. We feel that it should help.

Mr. SOMMERVILLE: Thank you very much, Mr. Messier.

Witness discharged.

Mr. SOMMERVILLE: We were to have had certain witnesses this afternoon, but owing to last moment conditions the witnesses could not be available; and therefore there will be no further hearing to-day. We will proceed at eleven o'clock to-morrow morning.

The Committee adjourned at 1:05 p.m., to meet again Wednesday, March 28, 1934 at 11 a.m.

HOUSE OF COMMONS, ROOM 368,

March 28, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock a.m., the Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen; the minutes disclose only the names of the witnesses and the exhibits filed. There is nothing further in them, and if there is no question about them, we will declare them approved.

The first witnesses are Mr. Donovan and Mr. Ryan. They had better just come together, if they will. We will swear both of them, and then we can hear them both.

M. G. DONOVAN, called and sworn.

T. G. Ryan, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Ryan, you are president of the Montreal Live Stock Exchange?—

A. That is right.

Q. And you have been, for a number of years, a live stock commission man on the live stock exchange?—A. Yes.

Q. That is your entire business?—A. Yes.

Q. And you are a member of what firm?—A. Maher & Roberts.

Q. That is a firm that has been established a long time on the exchange, is it?—A. That is right.

Q. How long?—A. Well, the firm of Maher & Roberts have probably been in business about seven years, I would think; but Mr. Maher, the senior member of the firm, has been established on that market for about eighteen years.

Q. Mr. Donovan, you are a member of the live stock exchange in Montreal?—A. That is right.

Q. And you have been dealing on that exchange as a live stock commission man for a number of years?—A. Yes.

Q. And you are a member of what firm?—A. My own firm, M. G. Donovan.

Q. And previous to that, I understand you had a number of years' experience in the packing industry in Montreal?—A. About seven years.

Q. In the various departments of the packing industry?—A. Yes.

Q. From office boy right through?—A. Right through to buying.

Q. In the manufacturing department?—A. Also, yes.

Q. And you were buyer for a number of years for certain packing interests operating on the Montreal market?—A. Yes.

Q. And following that, you went into business as a commission man on the Montreal exchange?—A. Yes.

Q. And have been, for a number of years, operating independently in that way?—A. That is right.

Q. Now, there are certain features of the live stock marketing situation which you desire to bring to the attention of the committee, that have arisen out of your experience. Will you tell me first of all what is the volume of business on the Montreal exchange?—A. Oh, it would be about 400,000 head a year.

Q. About 400,000 head of live stock per year?—A. Yes.

Q. How many stockyards are there in Montreal?—A. Two stockyards.

Q. What are they?—A. Two what we call public stockyards; one is owned by the Canadian Pacific Railway, and the other is owned by the Canadian National Railway. They are situated about eight miles apart.

Q. And what is the effect of having two such public stockyards in one city? What is the effect as far as the producer is concerned?—A. Well, the maintenance of two stockyards in Montreal quite naturally increases the marketing cost of any live stock marketed through the public markets in Montreal. They have to keep two staffs of employees, one in each stockyard. There is the upkeep of both stockyards. Either one has sufficient buildings and sufficient accommodation to accommodate all the live stock that comes to Montreal. It also means that buyers have to either have two sets of buyers, one on each market, or they are running back and forth through the city, and it causes great fluctuation in the prices from one market to another. If on a market day, say on Monday, the majority of the buyers decide to go to the east end stock market, and there is very little stock at that market, the price is liable to jump up \$1.50 or \$2 a hundred on certain grades of stock; while on the other market we may have a big supply of stock and we have got no buyers; instead of having a jump there, we might have a drop of 25 or 50 cents.

*By Mr. Young:*

Q. Have you no way of knowing where the stock is going; do buyers go blindly to the market?—A. They don't go blindly to the market, but if they are in the habit—we have a certain class of butchers in the east end of the city who are in the habit of going to the C.P.R. stockyards.

Q. Local butchers?—A. Local wholesale butchers, and they will flock to that market for the opening hour at eight o'clock.

Mr. RYAN: Just on occasion.

The WITNESS: On certain occasions they are there at eight o'clock, and there is a small run of stock; they don't want to be left, and they will say, "I have got to have more stock." If they wait till they ride out to Point St. Charles, while it is only eight miles, it is through the heart of the city, and it is possibly an hour's drive. Both markets opening at eight o'clock, they will buy on that market, being afraid of being left without any stock by going to the Point St. Charles market.

*By Mr. Sommerville:*

Q. In other words, two markets have to be maintained?—A. Two markets have to be maintained.

Q. And the cost of maintaining the markets come eventually out of the producer?—A. Yes.

Q. Unless they are maintained at a loss.

*By the Chairman:*

Q. Would it be possible to have one market?—A. Yes.

*By Mr. Senn:*

Q. In that regard, is there any set price or set rate for stockyard charges and also for commission charges on those markets?—A. Yes, but they

could be lowered. The manager of the west stockyards has openly stated that he could lower his charges 10 to 15 per cent if all the stock was going through that one market.

*By Mr. Sommerville:*

Q. That is, with increased volume?—A. Increased volume will permit him to reduce his charges.

*By Mr. Young:*

Q. If all the stock went through one market, would it entail additional switching for railways?—A. It would eliminate it.

Q. It would eliminate switching, would it?—A. Yes.

Q. In what way?—A. Because most of the stock is now coming—I would say probably 55 per cent of it is coming through the Point St. Charles yards. It is hard to point that out unless one is familiar with Montreal, and the way the two railways come into Montreal. The C.P.R. enter Montreal parallel with the C.N.R.—that is enter the island of Montreal. The C.P.R. branch off and go northeast, away up here to their siding yard—it is called the Outremont siding yard, whereas the Canadian National Railways comes in here, straight in to one of the stockyards. The C.P.R. will not break up a train there.

*By Mr. Sommerville:*

Q. At the point where they diverge?—A. Where they run parallel; but they bring the stock away up here, I think it is eight miles up to the Outremont yard. Then they break their train at Outremont and the stock waits there for the switching engine. It may be that that switching engine is waiting for the stock, or it may be six or eight hours before the switch engine comes up. When the switch engine comes, they move it two or three miles to Jacques Cartier Junction, and then the C.N.R.—here is their yards at Turcotte, and they have about an eight-mile run up to Jacques Cartier Junction. The same engine that gets this stock from the C.P.R., to go to the C.N.R., has ten or twelve private sidings along this route where they have to shunt cars, which means that once they pick up this stock, they have to stop and start, and every stop and start on a freight train with live stock on it, causes bruises.

*By Mr. Young:*

Q. Do you mean to say the switch engine that is taking that stock from one of these points to another has to stop at this warehouse and switch on the way?—A. Yes. There may be an odd night when there is some siding which is not working. But if there is any work to be done, it has to do it.

Q. They switch, and carry that stock on the switch train all the time?—A. Yes.

*By Mr. Sommerville:*

Q. It is either dropping or picking up?—A. Yes.

Q. At these private sidings?—A. Yes.

Q. When they are bringing in their live stock?—A. Yes.

*By Mr. Young:*

Q. Have you ever taken that up with the railway companies?—A. Yes.

Q. What do they say?—A. We can get both railway companies to agree that union stockyards in Montreal would be a fine thing for the producer; but it is a matter of four or five miles' run from this Turcotte yard into the C.N.R. stockyards, which they both admitted might be the logical place for the union stockyards, and there is between four and five miles run of track here that they cannot agree over running rights.

*By Mr. Boulanger:*

Q. Has the C.P.R. any connection with their own yard?—A. The same connection reversed. Their stock comes in here and it has to be switched at Jacques Cartier Junction—at least Outremont by a switch line to get to Jacques Cartier Junction; they get the stock and break it at Outremont and bring it to their yard at the north east end of the city, to the C.P.R. stockyards.

Q. What part of the city is that?—A. I would say the C.P.R. stockyards are in the northeast end of the city. It is at the corner of Mount Royal and Iberville streets.

Q. The C.P.R. has this same connection that you have outlined?—A. They each use the same track.

Q. They go to the east end stockyards?—A. Yes; they use the same connection.

Mr. RYAN: Depending on the origin of the stock, of course, whether C.N.R. or C.P.R.

*By Mr. Young:*

Q. The C.P.R. track comes in here; they have a train that is half stock and they won't break it there?—A. No.

Q. How are they going to get into this; suppose they have union stockyards out here, how are they going to get up there? They are going to have just the same trouble.

Mr. KENNEDY (*Peace River*): How are we going to get this on the record?

Mr. SOMMERVILLE: Yes; they can't take down "here" and "there."

Mr. DONOVAN: It is hard for me to explain without a railway map. They already have a switch track here.

*By Mr. Young:*

Q. You say they won't break the train?—A. No.

*By Mr. Sommerville:*

Q. When you say "here," they have a switch track at the point where the two lines are parallel?—A. Yes.

Q. And at the point where they begin to diverge?—A. Yes.

Q. They have a switch track?—A. Yes.

Q. But they will not break the train there?—A. No.

Q. In other words, the C.P.R. will carry their trains through to the C.P.R. distributing yard; what do you call it?

Mr. RYAN: Jacques Cartier Junction.

*By Mr. Sommerville:*

Q. And that they don't break up their train, and it has to go from Jacques Cartier Junction down to—A. To Turcotte.

Q. To Turcotte, which is some eight miles, and Turcotte is on the C.N.R.?—A. Yes.

Q. And that is the C.N.R. sorting yards?—A. Yes.

Q. And at the Turcotte sorting yards it is picked up and taken to the C.N.R. stockyards?—A. Yes.

Q. That is the process?—A. Yes.

Q. As far as the C.P.R. trains are concerned?—A. Yes.

Q. And if stock comes in over a C.N.R. train, directed to the C.P.R. stockyards, it is just the reverse process?—A. Right.

Q. And goes over the same trackage but in the reverse orders which has just been named?—A. Yes.

*By the Chairman:*

Q. May I just make a suggestion; I think this is very interesting and very important, but I am afraid we cannot do very much in regard to rectifying it, except one thing; and that is in your opinion, Mr. Donovan, it would be better if there was a union stockyard at Montreal?—A. Yes.

Q. And that the present conditions of the stockyard adds to the cost of distribution or marketing?—A. That is my point. I might say as representing the Montreal Live Stock Exchange, we have never advocated the union stockyards at any particular point.

*By Mr. Sommerville:*

Q. You just want the principle accepted and want the parties to work it out?—A. Yes.

The CHAIRMAN: I think that is about as far as we, as a committee, can go, having in mind our function.

*By Mr. Ilsley:*

Q. I may be wrong about this but I thought that he brought up another important point, that the railway companies were disposed to agree on a location, but could not agree on trackage rights and the amount charged for joint running rights. Is that correct?—A. I don't know if it was charges or principle, but I know that they both agreed; in visiting officials of both railway companies, they agreed that a union stockyard would be a good thing for Montreal.

*By Mr. Factor:*

Q. Owned by whom?—A. There was no question of ownership.

*By Mr. Senn:*

Q. A good thing for Montreal?—A. A good thing for the producers, for the sales of the producers' stock in Montreal.

Q. A union stockyard would eliminate shunting difficulties?—A. Yes, it would eliminate this extra haul of approximately sixteen miles on a lot of stock.

Mr. RYAN: And the delay in the delivery of stock.

Mr. ILSLEY: I think this legislation last year was to provide machinery for allowing the railway companies to co-operate.

The CHAIRMAN: My point was this; that having got the principle established, we could draw that to the attention of the parties who could give effect to it. We positively could not go into an examination of the physical side of it, where it should be and so forth.

Mr. FACTOR: I don't suppose we could go into the question of establishing stockyards, could we?

The CHAIRMAN: No, I think we would be getting out of our line.

*By Mr. Sommerville:*

Q. Mr. Donovan, how many commission firms are operating on the Montreal stockyards?—A. Seven.

Q. And they maintain their offices both at the C.P.R. yard and at the C.N.R. yard?—A. No. There are seven working at the Canadian National yard.

Q. There are seven working at the Canadian National yard?—A. Yes, and we just confine our business to the Canadian National.

Q. And that is where you are operating?—A. Yes.

Q. And how many firms are operating at the C.P.R. stockyards?—A. I don't know. I am not interested.

Mr. SENN: Are all these private firms?

*By Mr. Sommerville:*

Q. Are the seven firms all private firms?—A. No, there is one co-operative organization.

Q. One co-operative and six private firms?—A. Yes.

Mr. RYAN: I think there are three at the east end.

Mr. SOMMERVILLE: You think there are three commission firms operating at the C.P.R. stockyards?

Mr. RYAN: Yes.

*By Mr. Sommerville:*

Q. That would indicate that a large quantity of the stock goes into the St. Charles stockyards?—A. Yes.

Q. What have you observed as to the question of competition on the Montreal stockyards; what has been the effect of the movement of the last few years upon competition on the Montreal stockyards?—A. Well, the larger buyers seem to have set themselves to getting more stock in direct shipments and eliminating the smaller butchers.

Q. First of all, getting more stock by direct shipment?—A. Yes.

Q. That is, direct shipment to the plant?—A. Direct shipment to the plant.

Q. That is the first effect upon competition, and the second is they have directed their attention to the getting rid of the small butcher?—A. The small wholesale butcher.

Q. We have had some evidence from Mr. Ingaldson as to the effect of the direct shipments in reducing the quantity of livestock that came to the markets, and reducing the buying by the large packing plants. I suppose you agree with that general observation?—A. I do.

Q. That is one way in which competition has been reduced. Has competition been still further reduced by the effect of the merger of some four or five years ago?—A. Yes; that eliminated a couple of buyers.

Q. The merger eliminated several buyers from your market?—A. Yes.

Q. Apart from the question of there not being as much livestock on the market, and few buyers, which everybody recognizes as affecting competition, what would you say as to the question of the value to the producer of sales on the stockyards, as against shipments direct to the plant. Let us have your observations on that phase of it, Mr. Donovan?—A. I would say that my observation, from what I know to be facts, is that the sales on the public markets bring a greater return to the producers than the sale of stock on the siding.

Mr. YOUNG: Give us an axample.

*By Mr. Sommerville:*

Q. Amplify that for us. Take first of all, a shipment of cattle. We will deal with each variety in turn, but first of all, give us some evidence with respect to cattle?—A. Presume that a farmer had one cow, and if he ships it to the public market, that cow is fed and watered, and there is an experienced salesman there to sell it, a man who is familiar with the market conditions and with the sales price, and a man who knows the exact grade. He can picture what cattle will look like when they are dressed; and he would say it is a medium cow. Through his years of experience that have come to him, he would know when it is dressed it would be a medium cow.

Q. It would grade what is called a medium cow?—A. Yes. Presume that that cow weighed 1,000 pounds on the market, fed and watered. It would cost the farmer approximately \$1.25 to put that cow through the Montreal market.

That is the salesman's commission, the market's feed, the weighing, the yarding and so forth.

Q. It would cost \$1.25 to put an animal weighing 1,000 pounds through the market?—A. It would cost \$1.25.

Mr. RYAN: With the exception of freight.

Mr. DONOVAN: That is, without freight. I am just taking it after it gets to the stockyard. The freight is only where it comes to the stockyard or the plant siding. Now, if the beast presumably sold on the market as a medium cow, and sold for \$0.04 a pound, for a matter of figuring, it would be \$40, less \$1.25. If that cow was delivered to a packing house siding, there is the possibility that the grading might be different. They might call it, instead of a medium cow, the next lower grade, say, a plain cow or a fair cow.

*By Mr. Young:*

Q. They do it? I want to know if they do that?—A. I have heard quite a lot of arguments over them trying to do it. I know there has been quite a lot of battles on their sidings about it.

*By Mr. Senn:*

Q. I should like to ask one question to clarify that. Are the cattle that are brought to the packers' siding sold on the siding, or are they bargained for before they leave the station?—A. They are sold on the siding. I am not referring to cattle delivered to the sidings—

Q. Is that a common practice?—A. Absolutely, very very common.

*By Mr. Sommerville:*

Q. In Montreal?—A. All over Canada. I have had experience on every market in Canada.

Mr. FACTOR: I thought we had evidence that the packers send their representatives right to the farmers' barn.

Mr. DONOVAN: That is a quite different class from what we were talking about. We were talking about animals delivered—plenty of cattle are sent in carload lots or by truck lots to the packers' siding, and they are sold right there, and never touched by the open market. They are all sold right on the siding.

Mr. SOMMERVILLE: Sold by this method?

Mr. DONOVAN: Sold by this method.

The CHAIRMAN: Would you let the witness finish his deduction. He was about to say what would happen if the cattle were graded lower. He was about to tell us what the difference would be.

Mr. DONOVAN: I would like to say that that animal put on the public market would weigh 1,000 pounds, and it would be weighed by a sworn weighman, who has been approved by the federal Department of Agriculture.

*By Mr. Sommerville:*

Q. Over a government scale?—A. Over a government checked scale. The scale belongs to the stockyards, but the balancing and everything is supervised by the Department of Agriculture, and it has to have a registered beam. Now, when that animal is delivered direct to a packing house, it is weighed by a packing house employee, and the same animal that would weigh 1,000 pounds on the market would weigh, if it came off the car, a distance of say anywhere of 75 to 100 miles, about 915 or 925 pounds. Presume that they had agreed that it was a medium cow, the same as it was graded on the market, and presume the farmer got an equal price per pound, which I know sometimes they do, but he would only be getting paid for 915 or 925 pounds that it would weigh off the car.

Q. Let us follow that through. If the farmer got, we will say, four cents a pound delivered at the stockyards, or from the sale by the stockyards, and four cents a pound for the same animal delivered direct to the plant, you say that the farmer would still lose the 75 pounds in weight, the difference between the weight on the stockyards and the weight off the car or truck?—A. Yes, that is correct.

Q. And that is because on the stockyards all live stock is fed and watered before sold?—A. Yes.

Q. And that difference of 75 pounds an animal at four cents a pound, would represent \$3 an animal?—A. Yes.

Q. So that the same animal sold in the stockyard would produce \$3 more than if it were sold on the siding?—A. Less the cost of marketing, \$1.25 a head.

Q. Less \$1.25 per head?—A. Yes.

Mr. FACTOR: Less commission?

Mr. DONOVAN: That is including commission.

*By Mr. Sommerville:*

Q. That means that the farmer would get \$2.75 more at the market per head?—A. \$1.75.

Q. \$1.75 more per head than he would get by the direct delivery?—A. Yes.

Q. For the same animal. So that the same animal sold at the stockyards rather than sold by direct shipment, would produce more back to the farmer?—A. Yes.

Q. After all charges have been paid? That is your experience?—A. Yes.

Mr. KENNEDY (Winnipeg): The impression was given to this committee some time ago that there was an adjustment made.

The CHAIRMAN: An adjustment of four per cent?

Mr. KENNEDY (Peace River): That is in regard to hogs.

Mr. SOMMERVILLE: We will demonstrate on hogs in a few moments, but this is cattle. This is on the basis of the animal being graded exactly the same at both places?

Mr. DONOVAN: Yes.

Mr. FACTOR: Where did you get \$3.

Mr. SOMMERVILLE: 75 pounds at 4 cents a pound. The same principle applies to heifers, steers and butcher cattle all along the line?

Mr. DONOVAN: Yes.

*By Mr. Sommerville:*

Q. Does it not?—A. Yes.

Q. If that were applied to a carload you would just have the improvement of \$1.75 or more by so many animals in the car?—A. Yes.

Mr. KENNEDY (Winnipeg): I should like you to clear up the point as to whether or not there is some adjustment made.

*By Mr. Sommerville:*

Q. Now, is there an adjustment on the difference between food and water sale price at the yard, and the off-car price at the plant, that you know of?—A. Well—

Q. Have you ever heard of any on cattle?—A. The only way I can answer is that I do not know of any adjustment. That is the only way I can answer it, though quite often the buyers have used, you might call it sales talk, but they tell it as a fact, that they are buying the stock cheaper per pound on the siding than we are selling it to them on the market.

*By Mr. Young:*

Q. What does he tell the farmer who goes to the plant?—A. I do not know; it is done privately. I have no way of checking up what he tells that man.

*By Mr. Factor:*

Q. That does not dispose of the question of whether or not there is an adjustment?—A. To my knowledge I know of no adjustment being made.

Mr. KENNEDY (Winnipeg): You have not heard that opinion being given?

Mr. DONOVAN: No.

Mr. YOUNG: In the market quotation in the paper, is there not an off-car price?

Mr. DONOVAN: The market quotation in the paper is on the public market. You never saw, at least I have never seen in any paper a price published that was paid at the packers' siding. Any prices published in the papers show what happened on the open market.

*By Mr. Sommerville:*

Q. I will clear that up. If you sell cattle in the public stockyards at an off-car price, they are sold on a different basis, are they not?—A. Well, we do not in Montreal; we do not sell them off-car, we feed and water the stock.

Q. Then there is no adjustment and no difference in the matter of cattle as far as direct shipments and sales to stockyards are concerned?—A. No.

Q. Is there any other feature? You were pointing out that the saving to the farmer was \$2.75 a head?—A. \$1.75.

Q. Now, Mr. Donovan, what is the effect of the grading at the packing plant by the packing buyer, in which they are reduced from the one grade that you referred to to the fair cow grade?—A. I would say approximately 40 cents to 50 cents a hundred less.

Q. In other words, on the public stockyards, the grading is done by experienced salesmen?—A. Yes.

Q. Acting for the producer?—A. Yes.

Q. In the case of direct shipments, the grading is done by the buyer himself?—A. Yes, or he may have a truck driver or owner, or he may go there himself to fight out the grading, if he wishes.

Q. At any rate, he is the man who settles on the grade; if the owner is not willing to accept it, what happens?—A. I do not know what happens any more than there have been cases where an owner was not satisfied on the siding, and they asked the public market to take him out; but in the Montreal market we cannot do that any more, the Health of Animals branch will not allow the transport of the cattle.

Q. You have now dealt with the question of cattle—

Mr. YOUNG: We have not had any evidence on this point at all. The witness tells us that he knows what happens in the yard, but he is only guessing at what happens in the plant. He surmises they may grade them lower in the plant, and he surmises they may buy on the same basis, but we would like some evidence.

The CHAIRMAN: Mr. Young, would not this be a reasonable assumption on the part of the committee: I shall put this in the form of a question to Mr. Donovan. If a jobber sends his animals to the stockyards he has the protection of a government inspected operated scale, or a scale operated by an official that has been passed upon by the government, and a government inspected scale, and government graders? If he ships direct, he must be satisfied with the weighing and the grading of the buyer, or come to an understanding with him. Is that so?

Mr. DONOVAN: Yes, that is it.

The CHAIRMAN: He has not government protection behind him. That is really the point.

Mr. YOUNG: Are not the scales in the packing house inspected periodically?

Mr. DONOVAN: That is their private business. It is not inspected under the Department of Agriculture the same as the scales on the market.

Mr. YOUNG: They are inspected under the Weights and Measures Act.

The CHAIRMAN: They are inspected every so often by an official who inspects all scales.

Mr. YOUNG: The scale that is used, I understand, registers the weight, but somebody pulls the lever at the time for it to register?

Mr. DONOVAN: A sworn weighman, approved by the Department of Agriculture.

*By Mr. Young:*

Q. Who pays him?—A. The stockyard company, which has no interest whatever in the livestock.

Q. The difference is, in one case he is an employee and in the other case he is not.

*By Mr. Factor:*

Q. Have you knowledge of any cases where the packing plant did not pay the farmer for the right weight?—A. No, I have not.

Q. There is some insinuation in here. Let us get at the bottom of the thing; for it appears that there is some idea existing as to the producer not getting the right weight when he ships direct to the plant, because the scales are not government inspected. Do you know of any actual cases to that effect?—A. I do not know how you could ever get an actual case. The farmer on the farm has five or six cattle, and he delivers them into the packing house. I do not think he has a scale at home, or at least, the average farmer has no scale at home to weigh them before he takes them there.

*By Mr. Sommerville:*

Q. Once they are in the packing house, he does not get a chance to check them up and weight them on the public scale?—A. No.

The CHAIRMAN: The point I was trying to draw to the attention of the committee was this: We must not assume that there is crookedness on the part of the packers. All that we can assume is that the farmer does get certain protection, if he ships to the public market. On the other hand, he simply makes a deal privately with an interested buyer, and I do not see how he can go any further, because Mr. Donovan is making no charge that there is crookedness. He is merely pointing out the advantage of bringing stock to the public market. Did I understand you aright?

Mr. DONOVAN: Quite right; that is what I want to bring out.

*By Mr. Kennedy (Winnipeg):*

Q. I think there was a little misapprehension about the matter of grading, you have intimated to the committee that if they are shipped directly to the stockyards, there is the benefit not only of government-inspected weighing, but also of government grading; that would not apply to cattle?—A. No, not government grading; I said they got the benefit of experienced salesmen. I think that is the word I used there.

Q. Yes, that is right. It is really a difference between "trading" and "settlement"?

*By Mr. Sommerville:*

Q. There is a difference between "trading" and "settlement"?—A. Yes.

Q. That is to say, for settling purposes the commission man is trying to see that the grade is maintained on the highest possible level for his producer?—A. We call that trading; the other basis is more just a settlement on what he has shipped in.

Q. You call that trading?—A. Yes.

Q. In other words, the term "trading" is set up as opposite to "settlement"?—A. That is right.

Q. And settlement for what is shipped in is what you call "settlement"?—A. Settlement.

Q. Now, the question I presume is fundamental, that the longer the haul the greater the shrink?—A. Right.

Q. And the more advantage there is to the packing house in getting the animals with the greatest shrink?—A. Yes.

Q. And the less advantage to the producers; in other words, this question is more that of the weight over the market scale fed and watered; and on a thousand pound animal that would produce, I understood you to say, about 500 pounds a piece?—A. Yes.

Q. And that same animal weighed off the cars say at 925 pounds, that you referred to, would still dress 500 pounds of beef?—A. Absolutely.

Q. And the advantage to the buyer is in getting the animal weighed off cars or direct, as the case may be?—A. Yes.

Q. Because he gets a larger proportion of return in beef to the total purchased, and then you say that does not react to the benefit of the producer?—A. No.

Q. But to the benefit of the buyer?—A. Yes.

Mr. ILSLEY: Provided he pays the same rate per pound.

Mr. SOMMERVILLE: Yes, providing he pays the same rate per pound.

Mr. ILSLEY: Live weight.

The WITNESS: Yes.

*By Mr. Kennedy (Winnipeg):*

Q. Is it possible that the buyer of fed and watered cattle does not take into consideration the fact that they are fed and watered, and discounted in some way or other?

The CHAIRMAN: Ask the witness.

*By Mr. Kennedy (Winnipeg):*

Q. That is what I am doing?—A. It is my experience, I have had the packers quote me within the last six months, canner cows—the farmers were trying to get away from paying any market fees on them, and in advising the packer's buyers I have asked them, would they quote me a price for a load, or two carloads of canners off-cars; invariably they have quoted me the same price as the market, fed and watered.

*By the Chairman:*

Q. That is your experience?—A. That is my experience on the market.

*By Mr. Senn:*

Q. For the purpose though of diverting them straight to their abattoirs?—A. There was no purpose of diverting them, they just bid me the same price.

Q. It seems to me a strange thing that a packer would bid four to five cents, in the case of canner cows; the difference there would be very little, but in the case of higher-priced animals, I cannot think that they would quote you the same?—A. Well, they did quote me the same on more than one occasion, but that could be easily verified, I suppose, by members of the committee.

*By the Chairman:*

Q. That is your experience, Mr. Donovan, and that is all you can speak of?—A. That is my experience.

*By Mr. Sommerville:*

Q. We can find out what they pay at the plants. With respect to the question of these direct shipments, what is the view of the majority of packers and buyers on the market at Montreal as to whether the stock should be sold upon the public stockyards, or sold direct?—A. I personally was asked by our exchange to make a canvass of the trade on that question, and they all—with one exception—were in favour of having all stock placed on the public market.

*By Mr. Factor:*

Q. You mean all the buyers with the exception of the packers?—A. No, I mean all the buyers, with the exception of one buyer.

*By Mr. Sommerville:*

Q. And that buyer represented one packing firm?—A. Yes.

Q. All of the other packers were quite agreeable or desirous?—A. Desirous.

Q. Desirous of having all the stock sold upon the public stockyard?—A. Yes.

Q. But the one buyer was not agreeable?—A. Right.

Q. He wanted direct shipments?—A. Yes.

Q. You have referred to another method of reducing competition, that is by eliminating the smaller wholesale butcher; just how does that operate, will you explain that to the committee?—A. Well, we have in Montreal a very good hog trade, which used to be principally by what we call the local wholesale butchers, who would go on the market and buy anywhere from 100 to 600 hogs apiece. It was a big asset to the producer, inasmuch as these men worked with very small overhead and turned their stock over very quickly, and were back the next day or in a couple of days to buy more stock.

*By Mr. Young:*

Q. Did they slaughter the stock themselves?—A. They put it through the public abattoir, and had it slaughtered, for which they paid 56 cents per head for hogs.

Q. And they have the customers to take the meat?—A. Yes, most of them have what we call local packing plants throughout the city, they are in different parts of the city.

Q. They pack the meat themselves?—A. Absolutely.

Q. Do they export any of it?—A. No, no export. Just wholesale packers.

Q. They don't make bacon?—A. Yes, they make bacon, hams, sausage and all that for the domestic trade.

*By Mr. Sommerville:*

Q. These butchers were in the habit of buying cattle and hogs?—A. Principally hogs.

Q. And having them slaughtered in the public abattoir, and then manufactured in their own plants into products for the domestic trade; now what happened to these buyers, you say that they formed good competition?—A. They were the backbone of our competition. As I said it cost these butchers 56 cents to have the hogs put through the public abattoir. We found that one of the packing houses solicited their trade and told them, you don't have to buy on the market, we will sell you dressed at whatever the hogs cost us on the market, plus 25 cents a head for killing.

Q. That is, the packing house would sell these butchers the dressed hog at exactly the same price as the packing house paid for the live hog?—A. Yes.

Q. Plus 25 cents a head for killing the hog?—A. Yes.

Q. That meant they would save 31 cents on the killing?—A. Per hog.

Q. And they would buy the dressed hog at exactly the same price as the live hog, except for the 25 cents?—A. Oh no, at the same cost dressed—the same rate.

Q. In other words, the packing plant would bear the entire cost of the buying and selling operation, and the handling up to the point of delivery to the wholesaler for this 25 cent charge?—A. Yes.

Q. And the effect of that was, you say, to take these men off the market from buying live hogs?—A. Absolutely.

Q. And to what extent did that remove buyers from Montreal market—in volume, we will say?—A. About 1,500 to 2,000 hogs per week, 1,500 at least.

Q. An average of 1,500 hogs per week over the year?—A. Yes.

Q. And that is the amount of competition that was removed from your market by this process?—A. Yes.

Q. And has that been continuing up to the present time?—A. Up until there was a little turmoil which started over hog grading over two weeks ago, and there was a special effort put forth by the commission men to get some of these men back on the market.

Q. That is, because of a certain turmoil as you call it that happened a couple of weeks ago, the commission men have gone out and tried to bring these men back on to the market to form competition in buying?—A. Yes.

Mr. FACTOR: The conflict seems to be between the commission men and the packers.

*By Mr. Sommerville:*

Q. We will come to that in a few minutes. It was because of this conflict that you found it necessary to go out and bring them in to buy again on the market?—A. Yes.

Q. And I suppose to get them back on the market you had to offer them some inducements.

Mr. SENN: Will you ask the witness what grades of hogs?

*By Mr. Sommerville:*

Q. I am going to come to that, because that is what the difficulty arose over. Now then, Mr. Donovan, as a result of this method by which competition has been eliminated by the packers from the Montreal market, what has been the effect on prices; does the wholesale butcher pay less?—A. He pays less for his dressed hog to the packer, from the larger buyer, who has the control of what is left on the market, and he reduces that price.

*By Mr. Senn:*

Q. I can see this side of the picture; if the wholesale butcher pays less for his product, does the consumer pay less for the product?—A. No, I do not think the consumer does.

*By Mr. Sommerville:*

Q. You do not think it is passed on to the consumer; it does go back to the producer, in any event?—A. It does.

Q. Now then, Mr. Donovan, dealing further with another feature of your exchange that seems to be distinctive; I understand that on all the stock yards, under the Live Stock and Live Stock Products Act, requirements are strict that the sales be reported in all their details when each sale is made?—A. Yes.

Q. That is, the name of the commission firm selling?—A. Yes.

Q. The name of the buyer?—A. Yes.

Q. The character of the animal?—A. Yes.

Q. The weight of the animal?—A. Yes.

Q. The price paid?—A. Yes.

Q. That is put on the ticket at the time the animal goes over the beam scale?—A. And there is one other item put on there, the owner of the animal.

Q. The owner of the animal?—A. Yes.

Q. And all that is put on one ticket?—A. Yes.

Q. And that ticket becomes public property as soon as the animal goes over the scale?—A. Yes.

Q. Now, that is the operation on all the stock yards in Canada except Montreal?—A. Yes.

Q. And you have refused to carry that out?—A. Yes.

Q. Why; or, rather, may I say you put everything on the ticket but what?—A. But the price.

Q. And why do you not put the price on the ticket in Montreal?—A. We have always taken the stand that it was not the opposition's business to know what each one paid for the stock. We have had cases, or feel that we know of cases, where advantage has been taken of this information by some of the larger buyers in order to eliminate small competition.

Q. How is that, just explain that?—A. For example, a man whose business permits him to buy 10, 15, or 25 cattle; that is as far as his business will permit him to go, and he comes in on the market and buys a load of cattle at 4 cents a pound; if that is made public the larger buyers pretty well know what these cattle will yield, and know exactly what they will cost him, dressed.

Q. That is, what the beef will cost him dressed?—A. What the beef will cost him dressed, they also have a good idea of his outlet for the product.

Q. That is, his customers?—A. Yes, his customers.

Q. The retail butchers?—A. Yes, and they will set out to undersell him, and eventually eliminate him from the market.

Q. That is because they can go in and see this ticket; I understand the tickets are all kept in the same house?—A. Yes.

Q. These tickets are kept in the market house, and any person who is a buyer may go in and pick up a ticket and find out what that load of cattle sold for; know who the buyer is, and knowing that you say the larger buyer knows what the cost of that beef will be to the smaller buyer?—A. Yes.

The CHAIRMAN: Are you getting all those answers, Mr. Reporter; they are merely whispers?

The REPORTER: I have been able to get them all so far; they are barely audible.

*By Mr. Sommerville:*

Q. And, knowing the cost of that beef to the small buyer, the large buyer then goes to that man's customers and offer their beef?—A. At something less.

Q. What is that?—A. At slightly less than this beef cost the individual.

Q. By knowing the cost to the small buyer, they can in that way attract his trade and eliminate him?—A. Yes.

Q. That is one way in which this publication of prices, you say, works; what effect has this publication of prices as between larger buyers, can the one packing plant go in and see what the other packing plant has paid for the very first load of cattle they buy in the morning?—A. Absolutely.

Q. And thus they get a line on the price being paid?—A. Yes, they see the cattle, and they see the ticket with the price on it.

Q. And then do I understand that through the stockyards these buyers have runners, men who are running back and forth from the various pens,

who bring information to the buyers that so and so has bought a certain load of cattle, and then the particulars with respect to that load of cattle as soon as weighed over the scale is available to that buyer?—A. That is available to the general public, anybody can get it.

*By the Chairman:*

Q. That is, everywhere except Montreal?—A. Yes.

*By Mr. Factor:*

Q. How many packers are operating in Montreal?—A. Well, there is Canada Packers, Wilsil's, Swift's, George McGarry, Dominion Packing and several others; men who handle from 50 to 150 hogs.

*By Mr. Sommerville:*

Q. I think what Mr. Factor wanted to know was the large ones, and they are Canada Packers, Wilsil?—A. And Swift's.

Q. They are the large ones?—A. You might call the Dominion Packing Company a large one, they handle as much as 2,000 hogs a week and we would not call them a small one; McGarry would buy up to 1,000 hogs a week, and you can't call that one a small one either; and some of these others will take around 500 a week.

Q. Are these the same butchers or packers who were taken off the market for a time, by the sale from the big plants?—A. Yes.

Q. And you have been able to get some of these back during the last few weeks?—A. Yes.

*By Mr. Young:*

Q. How did you get them back?—A. Well, we called a meeting of our Exchange and had them present, and explained to them that we wanted to get their business, and that now that the government and the packing houses had ordered us to take a cut of \$1 per hog on butchers that it might be possible that we could sell them the hogs with a 40-cent or 50-cent cut on the butchers, if they would come around and buy them, and in that way they would save ten or fifteen cents more than the 31 cents they were saving by buying dressed hogs.

Q. You underbid the packer?—A. We sold the hogs on the market for more than the packer would give us.

Q. I say that in selling to these people you underbid the packer, didn't you; he was offering them for 31 cents, or less than the cost of dressing at the public abattoir, and now you are offering them at 40 cents?—A. We were offering the butchers 50 to 60 cents a head more than the packers would give us for them.

*By Mr. Sommerville:*

Q. And still saving from 40 to 50 cents on the differential?—A. Yes.

Q. On the fixed differential the packer would require you to take?—A. On the fixed differential the packer was requiring us to take a dollar per head off; and we were trying to give these men the same hogs for 25 cents or 35 cents less to them.

*By Mr. Young:*

Q. But the packer got these men away from you by giving them the 31 cents, and you would bring them back by offering them 40 cents?—A. No, we did not offer them 40 cents a hog; we got 60 cents more than the packer was giving us for the hog.

Q. I am looking at it from the standpoint of the wholesale butchers; you offered them an inducement to come back?—A. No, not an inducement; we asked him to come and buy these butcher hogs, and that butcher told us that these butcher hogs suited him just as well as any other hog he could buy, and he came back to buy it.

Q. Did you sell him that hog for as high a price as the packer was selling it for?—A. I have no way of telling what the packer asked him; but I do know that we sold the hogs for anywhere from 60 cents to \$1 a head more than the packer would give us for that hog.

*By Mr. Sommerville:*

Q. For the same butcher hog?—A. For the same butcher hog.

*By Mr. Kennedy (Peace River):*

Q. Did you say that the packers and the government tried to force a differential on you?—A. Yes.

MR. SOMMERVILLE: I am going to bring that out right now in full.

*By Mr. Sommerville:*

Q. With reference to this price on the ticket, how does that operate between markets, between the Winnipeg market and the Toronto market? What effect has the fact that the price on the ticket is known to the packer-buyer at Winnipeg?—A. Well, the live stock interests have a trader who is called a speculator. He is under government supervision, bonded and registered with the Department of Agriculture. He makes his living, as a rule, by buying on one market and shipping to another. Take for example a speculator in Winnipeg who sees a load of cattle that possibly the buyers are bidding 4 cents for. He happens to know the Toronto trade or Montreal trade, and he figures he can make a little money on those cattle by giving 10 cents a hundred more and shipping them out. He will probably give \$4.10 or \$4.15 for them in Winnipeg, and ship to Toronto or Montreal, wherever he wishes to. The trouble with it is that by putting the price on this ticket, the man whom he ships to is sometimes notified by the larger packer that John Brown or John Black shipped you last night a load of cattle from Winnipeg that cost \$4.15 a hundred; and before the man who owns the cattle has time to notify the consignee of the cattle, some of the larger packing houses can tell you exactly what they cost. When these cattle arrive in Toronto or Montreal, they know exactly what they cost. It makes it pretty hard trying to get that amount.

*By the Chairman:*

Q. It handicaps the commission man, the seller as against the buyer in that case?—A. It handicaps the producer, the speculator and the commission man; all three are handicapped.

*By Mr. Sommerville:*

Q. In other words, the packer that may have refused to pay more than 4 cents a pound at Winnipeg for these cattle may be the same packer who will be buying them at the Montreal market?—A. Yes.

Q. But he knows what the price paid at Winnipeg is?—A. Yes.

Q. And he communicates to his own buyer at Montreal that information, and that information is then in the hands of his own buyer at Montreal when he comes to deal with you. That has happened with yourself, has it not?—A. Yes.

Q. And on numerous occasions?—A. Yes.

Q. And the first intimation you had of the shipment of cattle to you came from the packer-buyer?—A. Yes.

Q. Who told you they were coming, and the price that had been paid for them by the shipper at Winnipeg?—A. Yes.

Q. And you say that operates in that way, the price on the ticket. May I ask just at this point if there is any arrangement on the Montreal market by which any one packer has a preference in getting into the alleys? We had some statements of that?—A. Not in Montreal.

Q. First come first served?—A. Yes.

Q. As it ought to be?—A. Yes.

*By the Chairman:*

Q. As it ought to be, do you agree with that?—A. Yes.

*By Mr. Sommerville:*

Q. That is, they bid openly and everybody has the same chance?—  
A. Everybody.

Mr. SENN: Could you not carry that a little further, Mr. Sommerville?

*By Mr. Senn:*

Q. There is no arrangement between commission men; is there ever any evidence of arrangement between packers, as to one man going down one alley, or otherwise?—A. No, not outside of their own buyers, where a packing house might have two buyers on the market, and they would arrange for one man to take this alley and another man to take that alley. That is quite all right. But I have no evidence or no knowledge of two individual packing houses making arrangements to buy certain lots of stuff in Montreal.

*By Mr. Sommerville:*

Q. You limit that to Montreal?—A. I limit it to Montreal.

Q. Do you know of it happening on other markets?—A. It is just rumours; I have not got definite evidence of it.

Q. What do you know of the packer-buyers discussing prices before going on the market in the morning? What have you seen?—A. Well, I have seen them talk amongst themselves. They might come at a quarter to eight or ten to eight, the buyers from one packing house and another; but whether they discuss prices or not, I don't know.

Q. That is just before the market opens?—A. We all stand around. I would not say they did discuss prices. We would probably all be ready to go to work at a quarter to eight, and the law does not permit us to start to sell until eight o'clock. Some of those buyers may stand talking to a commission man or may stand talking to another buyer.

*By Mr. Kennedy (Winnipeg):*

Q. Do you suggest there was anything wrong about them discussing prices?—A. No.

*By Mr. Sommerville:*

Q. Now, on the question of grading, settlement by fixed differential has not been the practice on the Montreal exchange?—A. No.

Q. It has been the practice on the other exchanges throughout Canada for some years?—A. The other markets, yes.

Q. What has been the practice of selling on the Montreal market, if it has not been by the fixed differential?—A. Well, we have been in the habit of selling our hogs—all the hogs were sold and everybody received \$1 per head premium on the select bacon hog. With the balance of the hogs, we always claimed the privilege of selling them for the best price we possibly could.

Q. For each grade?—A. For each grade or in bulk, outside of the selects being sold at \$1 premium. If we could sell a whole load for a straight price that netted back more to the producer, we did it.

Mr. FACTOR: Who established that fixed differential?

Mr. SOMMERVILLE: I am going to come to that and bring it out in detail. I just want to get the system.

*By Mr. Sommerville:*

Q. Then your system in Montreal has been selling at a flat rate plus a dollar for the selects, or selling each individual grade as you saw fit, to the best buyer in each grade?—A. Right.

Q. And that has been your practice steadily?—A. Yes.

Q. And how does that compare with the system of selling for a fixed differential, in the return that it makes to the producer?—A. Well, I would say that it returns anywhere from \$10 to as much as \$40 or \$50 per load more to the producer.

Q. Perhaps you could illustrate that with some of your experiences this very week. Take some of Monday's sales, Monday of this week, your own sales?—A. Well, on Monday of this week, I can state offhand that I had one lot of 46 hogs that were all butchers. The packer's price was 8 cents a pound for that bunch of hogs, but I sold them to a local butcher who asked for a bunch of butcher hogs, for 8½ cents a pound.

Q. And on that load the producer got what?—A. Well, \$46 instead of \$1 a head cut. He got that dollar in there, half a cent a pound. They averaged about 200 pounds.

Q. What was the bacon price?—A. 8½ cents. But some of the packers would not buy bacons and selects unless they got the butchers that were in that load, that they had a cut of one dollar per hog.

Q. That is what your trouble has been with the packer recently?—A. Yes.

Q. We will come to that in a minute, but I am just dealing now with this question of differential, the advantage of the method you adopt over the fixed differential of the packer. Can you give us some other experience in your sales on Monday?—A. The same thing applies to all my sales. I had 487 hogs for sale on Monday; and I would say the same thing applies on all the hogs, except probably 120 hogs that I had to clean out in the afternoon to one of the packers, with the dollar per head cut on the butchers.

*By the Chairman:*

Q. You had to do that, did you?—A. It was a case where my customer was there and wanted them sold, and the local trade was filled up for that day, and the only outlet I had for them was to sell them to one of the packers.

Q. And the packer would only buy upon a fixed differential cut?—A. Of one dollar per hog on the butchers.

Q. He was imposing that system on you?—A. Yes.

*By Mr. Sommerville:*

Q. And you say that when you sold your butchers, with the exception of those that remained at the close of the day, you got as good a price for your butchers as you did for your bacons?—A. Yes.

Q. And is that generally the experience on the Montreal market, that your butchers bring practically the same price as your bacons?—A. Butchers have always brought the same price as bacons up until March 12.

Q. March 12 of this year?—A. Yes.

Q. What happened on March 12?—A. Well, about two weeks previous to that, both packers asked our exchange to call a meeting at which they wished to be present.

*By the Chairman:*

Q. You say "both packers"; who are they?—A. Wilsil's and Canada Packers. Mr. Groundwater, representing Canada Packers, and Mr. Law, representing Wilsil's Limited, came to the meeting and advised us that they wanted to put a new scheme of hog-grading in operation in Montreal, on the same principle that it was in all the other markets in Canada.

Q. When you say "hog grading," are you quite correct? You mean differentials?—A. Yes, differentials.

Q. Of course, we know what you mean?—A. Yes, I understand what you mean, differentials in price.

Q. That prevailed on other markets?—A. On other markets.

Q. To be put in force on your market?—A. Yes, on our market.

*By Mr. Sommerville:*

Q. Yes, will you continue?—A. And their suggestion was that the commission men could decide whether they would fix the differential at 50 cents per 100 pounds less for butchers, or to save sorting, one dollar per hog on butcher hogs. Our exchange questioned them about it, and Mr. Law made the statement that he was quite satisfied. We asked him if he was satisfied with the way we had been selling hogs.

Q. Who?—A. Mr. Law.

Q. Representing Wilsil's?—A. Yes. He said "yes." He had no objections to find with the system that we had of selling hogs up to the present, but said that he had been interviewed by an official of the Department of Agriculture who had given him a set of figures to show that the quality of hogs from the province of Quebec had deteriorated and that the quantity had decreased.

Q. Who was this official?—A. As I understand it, it was Mr. Pearsall.

Q. Mr. Pearsall?—A. Yes, and that Mr. Pearsall suggested that this deterioration in quality and decrease in production had been due to the fact that there was no set differential on the butchers.

Q. In Montreal?—A. Yes; and that Mr. Pearsall suggested that they put this in force, and that they had given their word to do it and had intended to try it out. We, as an exchange, felt that the hogs coming to Montreal had not deteriorated but had improved in quality; and we were also of the opinion that when anybody made a statement that the quantity had considerably decreased in the past year, that there was something wrong with it. We made an investigation of it, and this letter here, which was sent to Mr. Weir—it is rather lengthy—covers the investigation that we made.

Q. Will you just read that letter; that sets out the results of your inquiry?

*By Mr. Senn:*

Q. May I ask one question there: Are the hogs actually graded by a government grader on the market?—A. Yes, 100 per cent.

MR. SOMMERVILLE: They are graded, but settlement does not take place on the grade.

MR. SENN: I was referring to the grading itself.

THE WITNESS: Yes.

*By Mr. Sommerville:*

Q. And that grading has been in operation for some time?—A. Since 1921 or 1922.

Q. So that you have always had grading, but the grading was not used for settlement on the fixed differential?—A. No, sir.

Q. You don't object to grading at all?—A. No.

Q. But to the settlement on the fixed differential. Will you just read the letter, please?—A. This is in answer to a letter we got from Mr. Weir, and is as follows:

We have for acknowledgment yours of February 27 and note with interest the explanation put forth regarding the quality and quantity of hogs produced in eastern Ontario and Quebec, and one not familiar with the actual conditions in this part of the country might be inclined to accept same as being correct.

The conditions in western Canada which shows an increase in hog production were such that farmers in the west had millions of bushels of grain which could not be turned into cash in any other way than feeding live stock.

The conditions in eastern Ontario and Quebec which is principally a dairy country were exactly the opposite. The fodder and grain crops have been below average of two or three years and the low prices of hogs was anything but an inducement to increase production. The low prices of other farm products certainly would not permit farmers to buy western grain that might be shipped east.

The banking situation prohibited farmers borrowing to buy feed for live stock and many cases can be listed showing where drovers, rather than ship unfinished hogs which were offered by the farmers, financed the farmer for two or three tons of grain to permit him to properly finish his hogs.

Then again, the farmers of eastern Ontario and Quebec showed an industrious spirit which has to be taken into account, by slaughtering their hogs and marketing them in this way. We contend that they found this a more profitable way to do business owing to the big spread between the price paid the farmer for live hogs and the selling price of pork and pork products.

The total hogs marketed in the province of Quebec for 1932 were 74,457, and for 1933 were 65,760, a decrease of only 8,697 hogs; yet in the city of Montreal alone the farmers of Quebec sold 47,000, country killed hogs in 1933; and while figures are not available, it has been variously estimated that between 75,000 and 100,000 country dressed hogs have been marketed in the province of Quebec during 1933. Therefore we concluded that Quebec has not had a decrease in hog production, but a slight increase; and while figures are not available for eastern Ontario, we believe the same to be true of this district.

At a meeting of our exchange held yesterday morning, Messrs. Law and Groundwater representing Wilsil's Ltd. and Canada Packers Ltd., respectively, informed us that they had no objections to our present system of marketing hogs, but that the Department of Agriculture officials had been forcing them for some time to put the cut on butchers into effect, and that they had given the same officials their word to do this, and for this reason they had to try and live up to their word.

From their attitude one is led to the conclusion that through a verbal agreement between Wilsil's Ltd. and Canada Packers Ltd., Montreal, and the federal Department of Agriculture they had decided to cut all butcher

hogs marketed in Montreal 50 cents per hundred or \$1 per head. The contention put forth to us by the packers and the Department of Agriculture representative that other grades would raise in price does not hold, as proven by sales and bids made to-day.

It is a simple matter here to-day to sell hogs at \$9.50 fed and watered for delivery Saturday, March 10, but to sell them for delivery Monday, March 12, the same buyers offer the same price for bacons and selects, but \$1 per head discount on the butchers. We contend that hog grading as in force has given the packers a hold on the price to be paid the farmer throughout Canada and that there has been but one missing link in the chain and that the Montreal market is that link; and that once Montreal is held down by agreement brought on by the Department of Agriculture, all the hog producers in Canada will certainly be in the hands of a few packers.

In order to get Montreal markets in line, packers here are turning over their invoices covering several loads of hogs purchased in western Canada and allowing local wholesalers to take what they wish; this in order to keep the local wholesalers off the open market here and give the packers the opportunity to lower prices.

The argument put forth by our leading packers practically condemning our hogs as produced in Canada as compared with the hogs produced in Denmark and elsewhere, there may be some ground for their argument when low prices or lack of feed or other causes forced our farmers to market their hogs unfinished; but our farmer is not wholly to blame as was recently proven when the Danish bacon exporters got the jump on our Canadian packers by putting on the market (British) a product demanding the highest price principally because they trimmed their products better and cured their meats to the English taste.

We are striving to equal the price of Danish bacon in Britain, a country which has always demanded a very mild cured product; yet, when one takes into consideration our Canadian products are in transit approximately ten to fifteen days, our Canadian products must have a heavier cure and can hardly be expected to have the same enticing appearance as Danish bacon, which is a mere thirty-six hours in transit.

If your department has no verbal agreement with the above packers to cut butcher hogs, might we ask your department to notify said packers and this exchange to this effect.

Q. Following that letter, did you have a conference with the minister, or what happened, may I ask as a result of that letter?—A. We had a conference with the Minister of Agriculture, yes.

Q. Did he advise you that the department did not have anything to do with the fixing of the differentials below the bacon grade of hog?—A. Yes.

Q. And that the department had nothing whatever to do with the fixed differentials below that grade?—A. That is right.

Q. And that they did not approve of or sanction any official of the department taking any such responsibility?—A. That is right.

Mr. ILSLEY: Have you a letter to that effect?

*By Mr. Sommerville:*

Q. Have you any letter indicating what Mr. Ilsley asked you? What letter have you covering that, Mr. Donovan?—A. I have a letter here from Mr. Barton.

Q. That is a letter from Doctor H. Barton, deputy minister of Agriculture. The letter is dated Ottawa, March 16, 1934, and reads as follows:—

Dear Messrs. Ryan and Donovan.

You two gentlemen apparently interviewed the minister and the deputy minister on behalf of the Montreal Live Stock Exchange?—A. Yes.

Dear Messrs. Ryan and Donovan: This will confirm my conversation with you to-day in regard to hog marketing in Montreal.

It is understood that butcher hogs and other grades can be sold and bought separately, the option to sell any grade of hogs resting with the seller, and the option to buy resting with the purchaser.

Q. That is all you wanted?—A. Yes.

Q. That is everything you wanted?—A. That is all we wanted, the privilege of selling each grade of hogs for all we could possibly get.

Q. The department evidently takes the view that that is your right?—A. Yes.

Q. Then, continuing the letter:—

I am assured that the packers subscribed to this undertaking.

In accordance with the hog grading regulations, differentials are required, but apart from the payment of \$1 per head for select bacon hogs, this department does not determine differentials.

In the interests of the hog industry, this department feels that full advantage should be taken of the provisions for hog grading in Montreal, and the intention is that insofar as may be possible, every effort shall be made to make it effective, in order that the results obtained elsewhere throughout Canada may be reflected in the hog production districts served by the Montreal market.

I gathered that you were in sympathy with hog grading, and I would request your co-operation in this endeavour to improve the hog industry.

Yours very truly,

H. BARTON,  
*Deputy Minister*

That was on March 16. From March 12, when the announcement was made that the packers would buy only on the fixed differential—

The CHAIRMAN: And in lots?

*By Mr. Sommerville:*

Q. And the whole lot. Did they come on the market on the 12th of March?—A. Yes.

Q. And did they agree to buy separate grades, butchers at separate grades, and lights at separate grades?—A. Providing you gave them the whole load.

The CHAIRMAN: And the differential?—A. The differential.

*By Mr. Sommerville:*

Q. What was the differential that they demanded on the 12th March?—A. \$1 per head on butcher hogs or 50 cents per hundred.

Q. What did they demand on the lights?—A. Twenty-five cents a hundred, or 35 cents a head.

Q. A light being about 150 pounds?—A. Yes.

Q. What on the heavies?—A. Half a cent per pound.

Q. Fifty cents a hundred and \$1 a head?—A. No, not \$1 a head; it would come to about \$1.25.

Q. About \$1.25 per head on heavies?—A. Yes.

Mr. ILSLEY: Why do you take March 12?

Mr. SOMMERVILLE: That was the date that the packers announced they would buy hogs only on the basis of a fixed differential. Up to that time they had been buying on the basis that you have been operating on for years?

The WITNESS: Yes.

*By Mr. Sommerville:*

Q. On that date they notified you they would make a change?—A. Notified us about ten days previously that on that day they were making the change.

Q. Notwithstanding the representations of your exchange, they stuck to their resolution?—A. Yes.

*By Mr. Ilsley:*

Q. I do not know whether this is an important matter or not, but there is a matter of credibility here. According to your story, the packers say that an official of the Department of Agriculture advised them to take this step?—A. Yes.

Q. I asked you whether there was any letter which stated that was not the case? Have you any? This letter does not make any reference to that, does it?

The CHAIRMAN: Except it says definitely that the Department of Agriculture does not fix the differential.

Mr. ILSLEY: That is consistent with the decision arrived at on that date, which is March 16.

The WITNESS: I do not just get your question.

*By Mr. Ilsley:*

Q. Let me make it clearer, if I can. You say you were advised at this conference by the packers' buyers that they had been advised by an official of the federal Department of Agriculture to make this change in their buying methods on the Montreal market, for the purpose, as I gathered it, of encouraging the production of better hogs, mainly. Now, you stated in your evidence that the Minister of Agriculture denied it, and I asked you whether you had a letter from him denying that any official of his department had taken that stand. You have not produced any letter up to this moment?

Mr. RYAN: We took that as the answer.

*By Mr. Sommerville:*

Q. I want to clear this point up. Following your letter, you had a conference with the minister?—A. Yes.

Q. And that conference with the minister was on March 16, or the day before, was it?—A. The day before.

Q. And as a result of this conference, the minister intimated to you that the Department of Agriculture took no such stand as to recommend the differential by the packers?—A. No, the Minister of Agriculture and the Deputy Minister were both there, and they took the stand that the Department of Agriculture were in favour of hog grading, and in so far as the \$1 premium on selects is concerned, they must be paid; but they were no party to any case of any of the other grades.

Q. Below the bacon?

*By Mr. Ilsley:*

Q. Did any official of the department so advise them; did they say that?—A. No, we didn't say.

Q. That was your evidence a while ago, or I am greatly mistaken?

Mr. SOMMERVILLE: What he says is the packers told him the official had said that.

Mr. ILSLEY: Yes.

Mr. SOMMERVILLE: They went straight to the minister and the minister said our department does not wish—

Mr. RYAN: Is no party to it.

Mr. SOMMERVILLE: To fix all differentials below bacon?

Mr. ILSLEY: Did the Minister say that any official of their department had taken that stand, or had so advised the packers? That is what I want to know. The effect of your evidence is to make it appear that the packers misrepresented the facts, I would say, fraudulently. They came to you and said they were encouraged to take this course, or told to take this course by the department. As I understood your evidence, you then went to the minister and asked if that was so. The minister said no, it is not so, no official of my department ever told them that, and if they told you that story, they must have been telling what is untrue. Is that the fact? I am trying to get at it, as your correspondence does not appear to have it.

Mr. DONOVAN: As I understand it, a member of the Department of Agriculture admitted to the minister that it was his suggestion to the packer that the buying of these hogs flat had the tendency to decrease the number and deteriorate quality, and it was on his suggestion this new regulation was being put in force.

*By Mr. Ilsley:*

Q. So therefore the packers were not falsifying the facts?—A. No.

Q. When they made those representations to you?—A. No; I would not want to bring that out.

*By Mr. Sommerville:*

Q. I want to follow that through. When it was brought to the attention of the minister, I understood from you, that the minister said that the Department of Agriculture was no party to any such arrangement?—A. No party to any arrangement to discount any grade of hogs.

Q. In other words, the Minister did not agree with any suggestion of any member of his staff; is that the fact?—A. You may take that conclusion. That is the conclusion we came to.

Q. And as a result you subsequently got this letter from Barton?—A. Yes.

Q. From the deputy minister, Dr. Barton?—A. Yes.

Q. Which cleared the air for you?—A. Yes.

Q. That you could sell your hogs on the actual grades on their own value?—A. Right.

Q. And that there was no differential as far as the department was concerned?—A. Yes.

Q. And that is the conclusion you came to as the result of your conference?—A. Yes.

*By Mr. Factor:*

Q. Although an official of his department did actually advise the packers to exact a differential?—A. Not advised them, but suggested that this differential would improve the quality and increase the quantity.

Mr. ILSLEY: Does it do that?

Mr. DONOVAN: No.

*By Mr. Sommerville:*

Q. When this was brought to the attention of the minister in conference, the minister repudiated any such responsibility?—A. Yes.

Q. Or the authority of any member of his staff to do any such thing as that?—A. If you let me explain a little further, I think we can clear this up. At the meeting with the minister and the deputy minister and Mr. Pearsall, we got to the point that the minister explained to his deputy minister and Mr. Pearsall and ourselves, that zero was as much a differential as 50 cents or a dollar. Zero was a numeral, and it was a differential, if you would, or one was a differential. Whether it was zero or \$1 a hog, it was still a differential, and complied with the letter of the law. Now, the minister had an appointment; there was a caucus that morning at 11 o'clock, and it was 11.45 then. He left to go and said he would get in touch with us later. We came back to the hotel, and we did get in touch with Mr. Barton about it, and this is the letter. Then, the next day, after our meeting, I do know, the Department of Agriculture called in the packers from Montreal for another meeting, and then they gave us this letter after that.

Mr. FACTOR: In other words, they changed their minds apparently.

Mr. DONOVAN: I don't know.

Mr. RYAN: Partially changed their mind.

*By Mr. Sommerville:*

Q. The minister, at any rate, repudiated any responsibility?—A. Yes.

Q. From the very outset?—A. Yes.

Q. When he learned that during the week you were at cross purposes with the packers, and the commission men were at loggerheads, somebody called in the packers?—A. Yes.

Q. And as a result this letter was written?—A. Yes.

Q. In which the air was cleared so far as your exchange was concerned?—A. Yes.

Mr. FACTOR: In other words the Minister of Agriculture repudiated the action of his officials?

The CHAIRMAN: Do you not think we have had enough on that phase of the question?

*By the Chairman:*

Q. Mr. Donovan, what is going on now; are the packers still insisting on the differential?—A. Sure. They came on Monday after we got this letter, which was on a Friday. On Monday at eight o'clock, they came to the market to buy hogs, and the price was \$9.50 for bacons and 9 cents for butchers, providing they got full lots. Our understanding with Mr. Barton was when a packer bid us for both selects and bacons and for the butchers, that we could keep the butchers and give him the selects and bacons. We endeavoured to do that on Monday morning, but the packers refused to take them.

Q. Following this letter?—A. Yes.

*By Mr. Sommerville:*

Q. Have they refused to take bacons and selects from you since, unless they got the whole?—A. In some cases yes, but they do make a pretence of it. After they refused on Monday morning, I immediately got in touch with Dr. Barton on the phone, and his department then got in touch with one of the packers in Montreal, and they came out in the market and bought 20 or 30 select bacons from one commission man, and 40 from another, and 50 from another. That did not by any means clear up the market. They made a pretence of following the agreement.

*By the Chairman:*

Q. Have they brought in any from outside Montreal?—A. Yes; since this happened, Wilsil's, who used to buy anywhere from 1,000 to 2,000 hogs on our market, in the three weeks, have not bought 300 hogs.

*By Mr. Sommerville:*

Q. They brought their hogs in from other markets?—A. Where they could get the cuts.

Q. Has that happened also with regard to Canada Packers?—A. They have not been as big a buyer as they were, on our market.

Q. What do you say as to whether or not this differential that has been mentioned does improve the quality or increase the grade of the hogs?—A. I do not believe it has; from my experience, I cannot see how it has.

*By Mr. Senn:*

Q. I should like to ask you this question, along that line. Don't you think that if an inducement were offered to a farmer to bring up his hogs to the grade of selects, or bacon hogs, that he would be more likely to do it if he were getting a lower price for his butchers?—A. I believe that an inducement, a premium might induce the farmer to, and I do not think that a punishment would induce him.

Q. Well then, what is your suggestion? Is it that a price should be set on butchers, and a premium given for bacon and another premium for selects?—A. No. I think each grade of hogs should be allowed to sell for all the farmer can get for them.

The CHAIRMAN: If all the trade using that class is willing to pay for it?

Mr. DONOVAN: Absolutely.

Mr. YOUNG: You say these packers pulled out of your market. What are you doing with your hogs now?

*By Mr. Sommerville:*

Q. When these packers drew out from your market, what did you do? Did you go ahead and sell your butchers?—A. We went ahead and sold what butchers we could to local men who we could get to buy them.

Q. You got a price as good as the bacon price for these butchers?—A. No, 75 per cent of the cases—

Q. You kept the selects and bacons for packers?—A. Yes.

Q. Did the packers leave the selects and bacons with you in any instances for a week or ten days?—A. Yes.

Mr. YOUNG: That does not quite clear it up, Mr. Sommerville.

Mr. SOMMERVILLE: You do not think I have stopped?

Mr. YOUNG: All right.

*By Mr. Sommerville:*

Q. Although we had assurance that they wanted selects and bacons? How did you dispose of the hogs on your market when the packers refused to buy them except on that basis?—A. We started selling them straight. We got some local wholesale butchers who would buy a lot straight, without giving us premiums on selects, and we had to go against the laws of the country, I presume, to sell them straight without premium. We could not keep feeding them.

Q. The packer was fighting, trying to make you come to his terms, and you did the best you could with the hogs on your market?—A. Yes.

*By Mr. Senn:*

Q. I suppose these packers were supplying only the domestic trade?—A. No; Wilsil's export a lot, I understand.

Q. I mean the packers that came in when you were in trouble?—A. Yes, they supplied just the domestic trade.

*By Mr. Sommerville:*

Q. You have been able to clear up your butchers at the price you suggested?—A. Yes.

Q. With respect to bacons and selects, you have kept them for the packers, and have had this difficulty in disposing of them?—A. Yes.

Q. And it continues to this day?—A. Yes.

Q. The packers are bringing in hogs from outside?—A. Yes.

Q. Why do you object to taking a discount on light hogs? You are an experienced man. You have been in the packing business yourself; why do you object to taking a discount on the lights?—A. Probably—I object to the principle of fixing a straight differential on any thing, but a light hog, is worth less, people will tell you; but if you take a packing house list and look it over, my experience—I have worked in a packing house and I have looked all through their lists practically weekly or monthly at least, since, then, and find the product from a light hog is always priced from one to two cents a pound more than the product from what we call a bacon or select.

Q. What do you mean by that, just amplify that?—A. If you take a price list and weed it down you find that light ham is 2 or 3 cents a pound more than the heavier one; the ham that comes from light pork.

*By Mr. Senn:*

Q. You are referring to the fresh meat entirely?—A. Yes, in this country.

*By Mr. Sommerville:*

Q. For the local domestic market?—A. You can take the price of the pork with the foot on—that is the ham before it is trimmed—and this light leg of pork sells for the highest price; if it is trimmed and put into a ham, that ham is still marked up on the price list 2 or 3 cents per pound more than the heavier one.

Q. So that the packer is not passing on to the consumer the differential which he is taking out of the producer?—A. That is what it would appear like.

Q. What objection have you to take to the discount on the heavies?—A. Well, the heavy hog yields from 3 to 5 per cent more than the butcher or bacon hog, being fatter and bigger.

*By the Chairman:*

Q. That is, there is that much less waste in it?—A. Yes, much less waste in the killing process there too, 5 pounds per hundred, in the process of killing.

*By Mr. Sommerville:*

Q. Yes?—A. Then there is the—I do not know how to explain it—trimming of that pork; the butcher hog or the bacon hog will all be light pork, with the skin thin—trims less, as they call it—when they trim these butcher or bacon hogs the strip of skin of fat they take off is from a quarter to half an inch thick, and the only purpose that can be used for is the lard tank, where it is worth from 2 to 3 cents a pound. When you trim a heavy fat hog, you trim off up to 3 inches thick, and instead of that being worth only 2 or 3 cents a pound, and going into the large tank, as in the case of the bacon, or butcher, there is a big demand for fat pork in Quebec and it sells for 18 cents, 22 cents and 25 cents a pound.

Q. That is what you call fat pork?—A. Yes.

Q. And that is in demand throughout the Province of Quebec?—A. Yes.

Q. And that comes from the heavy pork?—A. From the heavy pork.

Q. And it comes from that portion of the heavy which in the light hog, the bacon or butcher, goes into the lard tank?—A. Yes.

Q. And it sells, as you say, for from 15 to 25 cents a pound?—A. From 15 to 25 cents a pound.

Q. As against?—A. Three to four cents a pound for that which goes into the tank.

Q. So that, in the killing there is less waste, and in the product of the hog you get a larger return?—A. Yes.

Q. And that is your objection to taking the discount on the heavies?—A. Yes.

Q. And the advantage of the discount is in favour of the buyer, is it?—A. Yes.

Q. That is your experience?—A. Yes.

Q. With reference to these cuts from these various grades, lights and heavies, do you know anything about a "Cumberland" cut?—A. There is a cut shipped to the Old Country called the Cumberland cut.

Q. And is not that a high grade cut?—A. Presumably so, it is shipped to the Old Country.

Q. And that Cumberland cut, does that not come from the light hog?—A. As I remember it they come from hogs weighing from 140 to 160 pounds, a light hog.

Q. So that the Cumberland cut, both the hams and the sides, come from these light hogs that they now want to discount?—A. Yes.

Q. And is that a further reason for your feeling that the light hog ought to sell on its merits, and not on the fixed differential?—A. Yes.

Q. By the way, do the packers themselves buy quantities of these butchers and heavies; have they bought from you, or asked you to get these for them, or where they could get it on other markets?—A. Yes.

Q. And they have bought them on other markets through you?—A. We have bought them.

Q. You have supplied them, and they used them in their domestic trade?—A. I could not say in what trade they used them.

*By the Chairman:*

Q. I am afraid you did not get all your answers in there, you were merely nodding your head and the reporter couldn't see that?—A. I will speak louder.

Yes, I have been requested by the packers to buy for them—on more than one occasion I have bought for them from 3 to 5 carloads of what we term "cutter hogs" from Western Canada.

*By Mr. Sommerville:*

Q. That is a hog below the bacon grade?—A. That is a hog below the bacon grade.

Q. And you refer to them as "cutters"?—A. Yes.

Q. And apparently they use these in their trade?—A. For their trade in general—for what purpose they use them I do not know.

Q. Now then, what effect did your method of selling hogs on the Montreal exchange previous to March 12 have upon the other hog markets in Canada?—A. Well, the fact that we were selling hogs in Montreal without a cut on butchers had a tendency to divert some of the shipments that were going to plants throughout Ontario to Montreal.

Q. Would that have the effect of raising the price for the producer?—A. It would have the effect of saving them \$1 a head on every butcher hog that they had.

Q. Yes, and you found quantities coming to your Montreal market because of that?—A. Yes.

Q. And now if the differential comes into effect the Montreal market will be in the same case as the other markets?—A. Absolutely. It also had the effect that any producer who might be in the habit of shipping to Montreal, if he put his hog into the packing house in Hull or in Toronto, or different points in Ontario, he then got settled on the Montreal grade; the packers on the other markets would give him the Montreal grade, or in other words would not deduct the dollar on butchers, to keep these from going through to Montreal.

Q. Was that action in favour of the producer?—A. Yes.

Q. What effect have these new regulations had, the sale by fixed differentials, upon the trade and upon you commission men?—A. Well, due to the natural turmoil which is now in effect with our own large buyers, as I stated before, Wilsil Limited have not bought over 300 hogs in the last three weeks on our market, whereas he used to buy from 1,000 to 2,000 hogs a week.

*By the Chairman:*

Q. Does it appear to you, Mr. Donovan—or perhaps Mr. Ryan, who is President; I might ask him this question—does it appear to you, Mr. Ryan, as President of the Montreal Live Stock Exchange, that the packers are seeking to force you to accept this practice of sale on a fixed differential.

Mr. RYAN: It does, Mr. Stevens, it is quite obvious.

*By Mr. Sommerville:*

Q. Perhaps Mr. Ryan could tell us, I understand you were present at a conference of the—what was the council, the Live Stock Council?

The CHAIRMAN: The Swine Council.

Mr. SOMMERVILLE: The Council that appointed the Swine Committee.

Mr. SENN: The Joint Swine Committee.

*By Mr. Sommerville:*

Q. No, the Council that appointed the Joint Swine Committee. You were present, at any rate, at the Council of Agriculture at which the Joint Swine Committee was appointed in 1927; both you and Mr. Donovan were there?—A. Yes.

Q. And at that time the question of the differential did come up; that is, when the differential was changed from \$2 on selects to \$1 on selects?—A. Exactly.

Q. Will you tell us on whose motion was this, or how did it come about; or what was the resolution that was passed by that conference?—A. I have before me here a resolution, No. 5, and it reads this way; that the Canadian Council of Agriculture be asked to name two delegates to be added to the membership of the Joint Swine Committee; consideration was now given to the amount of the differential or spread, and the following resolution was moved by Mr. McLean, seconded by Mr. Wade.

Q. That was Mr. McLean of Canada Packers?—A. Yes. Resolution No. 6: Resolved that the initial fixed differential between the heavy and the thick smooth prices be one half cent per pound.

Q. Yes. Now, was that the only differential that was settled at that council meeting?—A. He said it was.

Q. Was there any other that was proposed, or dealt with at that Council sitting?—A. I do not think so.

Q. You were both present, did you hear of any?—A. No.

Q. We had the suggestion made that the differential was fixed by the Joint Swine Committee, the suggestion was made to us by Mr. McLean; what do you say as to whether or not that is a fact?

Mr. DONOVAN: I questioned one or two members of the Joint Swine Committee and they disowned the baby, they say they had nothing to do with it.

Mr. ILSLEY: Who are the Joint Swine Committee?

Mr. SOMMERVILLE: I have the minutes of the Joint Swine Committee here. The members of the Joint Swine Committee were: Mr. W. A. Amos, representing the United Farmers of Ontario; F. M. Baker, I do not know who he represents; Mr. J. D. Bryan, who represents the Eastern Canada Live Stock Union; Mr. C. M. Learmont, who represents the Western Canada Live Stock Union; R. McPhail, who represents the United Farmers of Manitoba; S. E. Todd, of the Industrial Council of the Packers; Mr. A. W. Peterson, now the Department of Agriculture, Secretary of the Council; and Mr. L. W. Pearsall, the Assistant Chief of the Division of Market Services in the Live Stock Branch, is Chairman of the Joint Swine Committee.

Mr. SENN: Were those the members of 1927?

Mr. SOMMERVILLE: Those are the present members. There seems to be a very peculiar situation with respect to this committee; when the Council met in 1921, they appointed a committee; that committee never had the power to add to, or change its membership in any way, and the committee functioned as a committee until 1927 when another council meeting was held, and at that council meeting these men were appointed, and while applications have been made to have changes made in that Joint Swine Committee, the position has been taken that the council that appointed the committee gave them no authority to add to their numbers, or change, so there are, more or less, permanent officials.

Mr. ILSLEY: What was this committee that appointed them, my memory is that it was designated as a conference.

*By Mr. Sommerville:*

Q. It was a conference; can you give us the name of that, Mr. Donovan?  
—A. It was a conference.

Mr. KENNEDY (*Peace River*): It was a conference called by the Minister of Agriculture in 1927, and held in the Chateau Laurier. Various live stock organizations, and others interested in the marking of these products, were sent there as members.

Mr. ILSLEY: But the first conference was in 1921, wasn't it?

Mr. SOMMERVILLE: The first conference was in 1921, and that was similar in character to the conference of 1927 that appointed this committee. Who constituted the majority of the members there, Mr. Donovan?

Mr. DONOVAN: I would say it was the government officials and the packing house men; about four or five men representing the salesmen throughout the country.

*By Mr. Sommerville:*

Q. About four or five men representing the salesmen?—A. The live stock exchanges.

Q. And the conference consisted of about how many people, 75 or 100?—  
A. I would say between 60 and 75.

Q. And the rest were made up you say of government officials of the Federal and Provincial Departments?—A. And two or three members of the Association.

Q. And the members of the Associations?—A. Yes.

Q. And the packers?—A. Yes.

*By Mr. Ilsley:*

Q. Are there any records anywhere referring to this differential except that resolution you read?—A. There is a reference where they changed it previous to that time; the premium used to be \$2 per head—I had the minutes of that meeting in Montreal.

Mr. SOMMERVILLE: I would like to have the minutes of that conference in 1927. I would like to say, for the information of the committee, that the Joint Swine Committee have never at any time fixed the differential on hogs below the bacon grade; they have been interested in, and have fixed only the question of the premium to be paid for the selects; neither the Joint Swine Committee, nor the Department of Agriculture, have at any time taken any responsibility for, or had anything to do with, the fixing of the differential; that these are entirely the fixed differentials imposed by the buyers, the packing interest.

Mr. ILSLEY: Yes.

Mr. SOMMERVILLE: And they have not, the Committee on Swine, the Joint Swine Committee, or any governmental body in Canada; that is the exact situation, there was some doubt and I am making that statement.

Mr. ILSLEY: That statement you have just made is not what Mr. McLean said, according to my recollection.

Mr. SOMMERVILLE: Mr. McLean, you remember, said it was the Joint Swine Committee which set these differentials; that is not the fact, because we have verified that, not only from the officials of the Joint Swine Committee, but from the governments themselves; it is entirely the imposition of the buyer, it is the buyer's terms upon which he will buy, and he will buy nothing unless he buys them all.

Mr. KENNEDY (*Winnipeg*): Would it not be desirable to call a member of that Joint Swine Committee, and put it on record.

Mr. SOMMERVILLE: That is what we intend to do, Mr. Kennedy, have it cleared up in that way.

Mr. RYAN: I would like to add, before the Committee adjourns, that the commission houses and the members of our Montreal exchange endorse what Mr. Donovan has given as evidence here to-day.

The CHAIRMAN: Thank you, Mr. Ryan.

*By Mr. Sommerville:*

Q. And is the evidence that he gives consistent with your personal experience in the trade, Mr. Ryan?—A. So far as my experience goes, yes.

Q. And when you say that, what limitation is there to that?—A. I have had some 20 years' experience, from the bottom to pretty near the top.

Q. Yes, thank you.

*By Mr. Mullins:*

Q. With your permission I would like to ask the witness a question, Mr. Chairman. How many times have you seen the grades taken on one car of hogs?—A. How many times—what was that?

Q. How many times have you seen one car of hogs graded?

The CHAIRMAN: I think what Colonel Mullins means is, how frequently have you noted that a car of hogs consisting of a number of different grades has been split up into these various grades, and sold in different grades.

Mr. MULLINS: No, I mean one straight car of hogs; how many times has this gentleman seen the grades taken on a car of hogs, by moving it from one point to another?

Mr. SOMMERVILLE: I suppose, Mr. Donovan, we are interested in the differentials more particularly, you are not questioning the grades so much.

The CHAIRMAN: The question which Colonel Mullins has asked is one really which I do not think this Committee is competent to deal with, either in our order of reference, or perhaps the composition of the committee. The question of grades, Colonel Mullins, whether they are justified or not, whether it is properly done or not, or whether any official is competent or incompetent, is something that we cannot deal with; I am sorry.

May I thank you, Mr. Donovan, and Mr. Ryan, for your kindness in coming before us.

The witnesses were discharged.

The Committee adjourned at 1 p.m. to meet again at the call of the chair.

HOUSE OF COMMONS, ROOM 368,

April 10, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock, a.m., the Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C. of Toronto, appeared as counsel for the committee.

The CHAIRMAN: The minutes of the last meeting record merely the witnesses heard, and the usual routine matters. I declare the minutes adopted. Certain documents have been filed and I do not think it is necessary for the Clerk to read them. They are merely formal. The Canadian Packers filed as an exhibit a list of their payrolls as requested by us. In reply to a request by the counsel of the committee, the stockyards filed certain financial statements. There are two letters filed, one from Mr. Neill, M.P., and the other from Mr. McIntosh, M.P., dealing with matters in connection with the routine work of the committee. These letters have been referred to the committee counsel. A summary of livestock marketing by provinces of origin, 1933, was submitted as supplementary evidence by Mr. McCallum as he promised. This will be included in the evidence as if it were given by Mr. McCallum to-day.

Mr. HEAPS: Will these communications be incorporated in the record?

The CHAIRMAN: No. One of these communications includes an advertisement. I do not think we should clutter up the record with that. The advertisement to which I just referred is that of a chain store advertising eggs.

Mr. HEAPS: I thought you said you had received communications in connection with the financial set-up.

The CHAIRMAN: We are placing that in the hands of the investigators and auditors for rechecking. Mr. Kennedy of Peace River has submitted a motion, and before placing the motion before the committee I shall explain the circumstances. Major Douglas is to be a witness before the Banking committee next week, and Mr. Kennedy suggests and makes a motion to the effect that he be called before this committee for the purpose of giving evidence on his theory of price control and its relation to the currency question. I see no reason at all to object to hearing Major Douglas, but I should not think it would be advisable to send for him to come specially before this committee; but inasmuch as he will be in the city attending another committee, I think it would be alright to call him. Mr. Kennedy's motion reads as follows: That Major Douglas be called before the committee on price spreads and mass buying on Wednesday, April 18th.

What is the pleasure of the committee?

Mr. SOMMERVILLE: I was wondering whether we would be able to hear him on that date or not.

Mr. KENNEDY (*Peace River*): He is to be here from Tuesday to Thursday on the Banking committee.

Mr. SOMMERVILLE: I have this in mind: the representatives of the Departments of Agriculture of Manitoba, Saskatchewan and Alberta are meeting to-day in Regina to prepare a united brief, which I expect will be presented next Tuesday and Wednesday to this committee on livestock matters.

Mr. KENNEDY (*Peace River*): Try to work him in.

Mr. SOMMERVILLE: We shall endeavour to arrange some time when it is convenient.

Motion carried.

Mr. H. P. KENNEDY, Toronto, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Kennedy, you are engaged in the livestock industry?—A. Yes.

Q. And you have been engaged in that industry for forty years or more?—

A. Over forty years.

Q. Devoting your entire time to the question of livestock and livestock marketing?—A. Yes.

Q. In that industry you have operated as an exporter?—A. Yes.

Q. To the old country?—A. Yes.

Q. And you have shipped large quantities of cattle to that market from Canada?—A. Yes.

Q. What would be the gross volume of your shipments in any one year?—

A. Practically 30,000, the maximum.

Q. Maximum of 30,000 head a year to the old country?—A. From 10,000 to 30,000 from 1919 to 1926.

The CHAIRMAN: Cattle?

The WITNESS: Cattle, and some one or two shipments of hogs.

*By Mr. Sommerville:*

Q. I understand you made some experimental shipments of live hogs?—A. Yes.

Q. It is rather an unusual thing to ship live hogs to the old country?—A. Yes.

Q. In that connection you have had substantial experience in the export market of Great Britain in relation to cattle?—A. Yes.

Q. Have you also shipped to the continent?—A. Yes, shipped to Belgium, Switzerland and France.

Q. You are familiar with the European market and its needs?—A. Yes.

Q. In addition to your exports to the old country have you engaged in the export business to the United States when that market was open?—A. Quite largely from the year 1897 to the year 1927.

Q. What was your volume run in shipments to the United States, gross?—A. In many years I ran 20,000 to 25,000 head a year.

Q. You had then, a continuous export trade with the United States during those years?—A. Over that period.

Q. Until the market was closed in— —A. 1928.

Q. In addition to that you have operated in Canada and sold largely livestock here?—A. Yes.

Q. You are operating as a livestock commission man on the Toronto market?—A. Yes.

Q. And you have been for some years?—A. Yes.

Q. As the head of a firm there?—A. Yes.

Q. Then, I understand you had something to do with the opening of stockyards in the west for the purpose of central marketing facilities for cattle, had you?—A. Yes; we were instrumental in opening a market in Edmonton in 1916 and in Saskatoon in 1927.

The CHAIRMAN: Stockyards?

The WITNESS: Public stockyards.

*By Mr. Sommerville:*

Q. These are private enterprises, operated by private capital?—A. Private capital.

The CHAIRMAN: Under the Livestock Act?

The WITNESS: Under the Livestock and Products Act.

*By Mr. Sommerville:*

Q. They are still operated as such?—A. Yes.

Q. You are president of these stockyards?—A. Yes.

Q. In these two cities?—A. Yes, president and managing director of each company.

Q. Operating at Toronto, with your headquarters in the commission business in Toronto?—A. Yes.

Q. Then you have had rather a varied experience?—A. Quite varied.

Q. Covering the last thirty or forty years. Now, we have asked you to come and give us the benefit of your knowledge and experience with respect to livestock marketing, and any suggestions you have to make with respect to improvements in the same. Mr. Kennedy, will you be good enough to give to the committee the benefit of your experience and knowledge of the livestock industry, which is now being investigated by this committee?—A. Hon. Mr. Stevens, members of the parliamentary committee and gentlemen, I will be glad to relate any of the experience that you might like to hear *re* present practices in the marketing of livestock and I will endeavour to give you some suggestions which might be helpful in improving the situation as it exists at the present time. I have prepared a brief, Mr. Chairman, and if it is the wish of the committee I would be glad to read this brief first, and then we can discuss it clause by clause later.

Q. Yes. Have you copies for the members?—A. Yes. The cattle industry of Canada is in peril. During the year 1933 prices of all cattle on the different stockyards in Canada were at the lowest point in the history of the trade, and the net return to the farmers was in most cases not more than 50 per cent the cost of production, and in very many cases not even 25 per cent the cost of production.

According to the official government report for 1933, in the month of November the average price per one hundred pounds was \$2.95 on the Union stockyards, Toronto. This would mean to the Ontario farmers, after paying freight and other charges, that they would be receiving for an average beef animal, three years old, weighing 1,000 pounds from twenty dollars to twenty-five dollars, and for a choice butcher steer or heifer 1,000 pounds, thirty dollars to thirty-five dollars.

During the month of October on the Winnipeg market, the average price, according to the government report, was \$1.65 per one hundred pounds, freight and charges from the prairies to Winnipeg would mean, including market charges, that the average net return to the farmer would not be more than one cent per pound, and the farmers for a three years old bullock, weighing 1,000 pounds to 1,100 pounds would not receive over ten dollars to eleven dollars per head, and for the choicest butcher steers and heifers twenty-five to thirty dollars per head. We can quote many other instances where the farmers, after paying transportation and market charges, received less than a half cent per pound back at the farm. On all other markets prices were practically in keeping with Toronto and Winnipeg, allowing for the differences in freight. The reason I quote Toronto and Winnipeg is that they are the two principal markets.

*By Mr. Young:*

Q. On all other markets in Canada?—A. Yes. As it takes four years for farmers to breed and get ready the right class of cattle for the market, it is

self evident that some drastic change must take place in the marketing of cattle in Canada or the farmers will be ruined, and in a great many cases they are in distress to-day. We believe the prices paid by the consumers in Canada during the year 1933 for meat products were not in keeping with the extreme low prices the farmers were receiving. We are convinced that no general prosperity can come to Canada until such time as the farmers are placed in a position, whereby they can receive a reasonable profit on their production. If the farmers are prosperous they are in a position to pay their bills to the country, to town and city merchants, and the circulation of money is increased through every Department of Trade and Commerce. The farmers' and consumers' interests are identical. The consumers realize that the farmers' net returns on all classes of live stock must be such as to give them a minimum wage for their production. We desire to submit certain suggestions with a view to improving conditions as they existed in the year 1933.

The Live Stock and Live Stock Products Act, when adopted, was a progressive measure to insure proper marketing for live stock in Canada through stockyards established at strategic points across the continent, and at that time a very large percentage of the cattle was sold through these public markets by expert live stock commission men, representing the producers.

The legislation was adopted to protect the producers, and was expected to affect the price of all live stock sold in Canada. In order to protect the farmers, regulations provided that commission men should be bonded to the Dominion government; that all cattle should be weighed over a government scale on a type-registering beam; that all weights and prices should be shown on the weigh-ticket at the time of sale; that such information should be made available to the Dominion government representative, through whom it is made available to all markets in Canada immediately.

This information so forwarded contains only the available supply of live stock on the market, which is far from being a true picture of the total available supply. In connection with this we attach Appendix A showing the percentage of live stock marketed direct to packing plants in each province, and the percentage marketed through public stockyards. We also attach Appendix B showing the percentage of live stock bought direct by the two large packers in Toronto, and the percentage through the public stockyards.

You will note by these appendices that the trend recently has been to increase shipments of live stock to packing plants. This is largely accounted for by the development of truck shipments, the truckers not being subject to the same legislation as the commission firms on the public market. Another reason for the trend toward direct shipments to plants has been the eliminating of several plants and the merging of others, so at the present time the buying power of live stock in Canada is largely controlled by a very limited number of packers.

The present method of purchasing live stock in operation by all packing plants contemplates two sources of supply; (a) Private purchase; (b) Public market.

We, therefore, submit that direct buying may be called a method of securing live stock supplies designed to favour the buyer. When the processor resorts to this method he does not patronize the method of marketing which the producers of live stock industry have built up for the sale of their products, and he avoids the bargaining power which has been created for the producers on the competitive market. By direct purchases the buyer avoids the competition of other buyers, and as a rule the shipper accepts the price marked on the sale ticket at the plant where he delivers his live stock direct.

If the salesman on the market knew the size of the packers' private purchases and prices paid for the same, he could, knowing the total available supply, use his expert judgment in getting the best price possible for the

producer. Not knowing the quantity already purchased by the packer, the expert salesman is handicapped. The packer has the advantage.

The percentage of live stock marketed through public stockyards, and the percentage marketed direct, is available in the government reports; but the approximate percentages of the different classes of live stock bought direct by the two large packers in Toronto for the years 1932 and 1933 are shown on the attached Appendix B.

In Edmonton in the year 1932, over 95 per cent of all live hogs slaughtered in Edmonton were bought direct in the packing plants, and less than 5 per cent of their slaughter bought on the public market. For the year 1933 in Edmonton, approximately 70 per cent of all cattle and calves slaughtered were bought direct by the packing plants and only 30 per cent upon the public market. The public market is the only place that official prices are published daily.

The farmer is an individual who is not an organized unit either for buying or selling, and therefore has never been able to cope with an organized buyer. Governments have all recognized this, and the Department of Agriculture have been most anxious to protect the farmer by establishing markets where he might meet the buyer on a competitive basis. The public market has always been the farmers' best friend. There his organized selling agency, the live stock commission firms, can and do use their expert knowledge of conditions to bargain with and offset the effort of the organized buyer. An organized buyer going direct to the country to buy live stock is always at an advantage, and his intimate knowledge of market conditions is used to his benefit and not to the benefit of the farmer.

The live stock bought in this way, shipped direct to the packing plants, places the buyer in the independent position of not needing to be an active buyer on the public market, and the price established on the public market under these conditions does not reflect the competitive prices that would be secured if all available live stock were offered in open competition. If the live stock that is moved each week end direct to the packing plants were moved through the open competitive markets and the buyers did not have any supplies in direct to their plants, and the expert salesman had the latest information as to values in all outside markets, the competition would be such on the open market each Monday that, in our judgment, 1933, price levels would have been at least \$1 per hundred pounds higher on all classes of live stock over the entire period.

It is absolutely useless to attempt to provide aid for agriculture and live stock unless you safeguard at the same time a fair competitive market to our producers, in which all interests must compete on a fair basis for the quality of live stock that they have need for.

The public market must be conducted in such a way as to reduce charges to the minimum, both as to stockyard charges and charges by commission firms. These charges will always be based on the volume passing through the public market, as neither stockyard company nor commission firm have anything to sell but service. The public market may either be controlled by the Dominion government as a public utility or by private ownership with charges controlled by the government, and all operations on the market must be conducted in such a way as to give the farmer the best competition on all the grades of live stock.

Anything which reduces or impairs competition reduces the value of that market. What are the things which, under the present system, militate against that public market? The most serious are: (1) The fixed differential on live hogs, which automatically reduces competition on the separate grades of hogs as is noticed by the statement furnished to your committee.

*By Mr. Sommerville:*

Q. When you say, "as is noticed by the statement furnished to your committee," you refer to a statement you have?—A. Yes, I have a statement.

Q. And which you will furnish?—A. Yes, I will refer to that. I will refer to it now, Mr. Chairman, if you like.

The CHAIRMAN: No, just go ahead, Mr. Kennedy.

The WITNESS: (2) Direct buying at country points for shipment to packing plants. With approximately 75 per cent of the hogs marketed in Toronto going direct to the packing plants, what chance has the salesman, representing the farmer, to influence the price on the public market? If all hogs being marketed in Toronto were offered through the public market and sold on a quality basis by expert salesmen, the farmers would get the value of their hogs in keeping with a much greater competition than under the present system.

In our recommendation we have stated that sale of all live stock by public auction should be made optional on any market and before putting the system into operation that it simply need the approval of the commission and co-operative salesmen, representing the producers, and the stockyard proprietors. At the end of October, 1933, all commission salesmen and proprietors at the stockyards, Edmonton, decided to have live hogs sold by public auction. It was decided not to interfere in any way with the government grade, but as the hogs were graded that each grade be weighed and yarded separately under the heading of the commission firm selling the hogs; that these numbers of each grade be placed on the bulletin board in the Livestock Exchange building and that a sale by public auction be conducted in the exchange building commencing at a certain hour in the afternoon each day. Attached is Appendix D, showing just how this system would be carried out.

Because of the fact that the commission salesmen and proprietors of the stockyard company did not have the controlling vote of the Livestock Exchange, this system of selling has been held in abeyance.

The system was explained to the head of one of the large packing companies, and the first comment of the packer was that if we established that system of selling on the Edmonton market, the stockyard company would not have facilities to accommodate the trade. The present increased facilities which were provided at the request of the Dominion government are only being used to about 25 per cent of the daily capacity. While the change of system would mean considerably more work to the stockyard company and also to the commission firms, there would be no additional charge to the farmers for the extra services rendered.

The system of selling hogs under any kind of fixed differential is entirely wrong. Under such a system the almost universal practice has been that the packers on every yard have insisted that they must have all the grades in a shipment, if they take any. This is the best evidence that the fixed differential operates in favour of the packer; otherwise, he would be content to buy the grades that he actually needed from time to time, and leave other grades to other buyers whose competition would improve the prices of these other grades. The system of selling by fixed differential makes possible three results: (1) It concentrates buying in the hands of the large packers who have the facilities to use all grades, as against the smaller packer and local wholesale butcher who will only use some grades but does not want and cannot use all the grades; (2) The small buyer and wholesale butcher who can use butchers and lights for domestic trade has no place now to go for his requirements, unless he takes all the grades in the shipment. These, he cannot use to the same advantage as the large packers. The result is that the large packers have the advantage over the local buyer and wholesale butcher, who has to come to the packer for his products which are sold to him as dressed pork or pork products or cuts

without any regard to this fixed differential grading. (3) It operates to perpetuate direct shipments to plants as against selling in the public markets on a graded basis. The farmer, under the present system, is encouraged to believe that, however the hogs are graded out, he must accept the fixed differential, and that there is no competition in the public markets for those grades below bacon grade hogs.

On March 19th I wired from Ottawa to the manager of the Edmonton stockyards to find how the differentials were fixed on the Edmonton market. The reply was as follows:

EDMONTON, ALTA., 19th March, 1934.

H. P. KENNEDY,  
OTTAWA

Differentials Edmonton same as Calgary and are set by Alberta packers and changed by them whenever they think fit without regard any particular time but governed by price bacons (stop) If commission firms have coast orders not wanting sows and heavies they can always get premium over local packers cuts, if cuts are sold to outside packers and butchers, but, if local packers buy the hogs they demand all including cuts at their differential.

The foregoing three results may be entirely altered by a very slight change in the system of selling hogs. The government have very properly encouraged the development of select hogs, and in order to take full advantage of the quota granted in Great Britain further encouragement, we believe, should be given especially in the marketing end of the select and bacon hogs suitable for the English market. Under the present grading system the bacon hog establishes the basic price, and the select hog is paid a premium of \$1. All grading under bacon are sold at the fixed differential.

We believe that, when hogs are graded ready for sale, each grade should be sold separately; and we do not believe that, after hogs are graded, they should be again mixed so that the select and bacon lose their identity as to grade. If the select hogs were sold as selects in open competition separately from all other grades, they undoubtedly should bring more than the present premium. I have been informed by a large packing company that frequently, if selects could be secured as selects, the premium could easily run at times \$3 per hog. As practically 90 per cent of the hogs marketed are used for domestic use, we believe the buyers who buy for domestic use only should have the privilege on the open competitive market of buying the grade of hog suitable for their particular trade. (See quotations Appendix C.)

I would urge, therefore, that every grade be sold on its grade on a quality basis in open competition; further, that the salesmen on the public markets be put in a position under a revised system of marketing to make use of the competition for each separate grade to get the best possible price for the farmers for each grade. It is evident that under such a system each grade would prove its own value being sold in open competition, and would bring much more than they do in the present fixed differential system.

We recommend in conclusion the following:

1. The creation of a livestock marketing board to control the entire marketing of live stock from the farmers to the final markets, and to protect the interests of both the farmers and the consumers, this board to have power to fix a minimum price on best grades of live stock which would give the farmers a minimum wage.

2. The board could arrange for continuity of export shipments, which would tend to stabilize domestic prices and also ensure that only cattle of the standard and type required in Great Britain be exported; the same regulations to apply to bacon hogs.

3. That all buyers of live stock within a radius of twenty miles of established stockyards purchase their supplies in open competition on public markets. This regulation does not apply to farmers and ranchmen who wish to export their cattle direct to markets outside of Canada.

4. That all commission firms holding licenses be required to sell all their live stock on the public markets.

5. That commission firms and co-operative salesmen, representing the producers, be organized as a separate body that they might be able to function in the interests of the producers without their powers being nullified by other members of the Live Stock Exchange who control the majority vote, and are not representing the interests of the live stock producers.

6. (a). That where packing plants are at present established in cities where no stockyards exist, the same regulations as apply to stockyard companies and commission companies as to providing facilities for the competitive buying and selling of live stock, weighing, publishing of receipts and prices at time of purchase, be applied.

(b). That all truckers handling farmers' funds and all export agents be bonded to the Dominion government, the same as live stock commission salesmen.

7. That sale of all live stock by public auction be made optional, and when put into operation in any market that it be only necessary to be approved by stockyard proprietors, and commission salesmen representing the producers.

Under the agreement with Great Britain whereby Canada is given a certain quota in the exporting of bacon, we can still increase our export shipments by the bacon from approximately 2,000,000 hogs over the 1933 figures. Therefore the marketing board, if appointed, should be given the power, if they see fit, in checking the spread from the farmers to the ultimate consumers, to establish new units for the processing of all classes of live stock. If an economical unit were established—one in each province on the public competitive market—from figures given by experts these units could be established at a conservative estimate of \$200,000 each, each unit taking care of 2,000 hogs and 500 cattle per week. These plants could process the exact quality of bacon required for the British market, and see that the net return would only provide the actual cost of processing and reasonable interest on capital invested. These plants would also take care of all by-products.

The establishing of these units under the most efficient management, and operated in the interest of the producers on the public competitive markets, would give the farmers a competitive price at the time of purchase and would create a feeling of confidence throughout the entire country that they were getting the fullest net returns for their product.

These plants, under the control of the marketing board, could arrange to remove surpluses from the market by handling the canners and inferior grades of live stock and marketing the product through other sources.

*By the Chairman:*

Q. In that paragraph, you are speaking of cattle as distinct from hogs?—

A. Yes, as distinct from hogs. This class of meat should be segregated completely from regular packing house products and sold exclusively as concentrates for animal and poultry food for domestic and export trade. If this were done the general public would also have the confidence that inferior grades of meats had been removed from the consumers' market.

That a live stock commissioner under the marketing board, who is experienced in the marketing of live stock, be appointed at each of these five markets, whose duties would be to consult daily with the trade; and that the commissioner hold a conference on Thursday of each week with the representatives of packing companies, wholesale butchers and commission companies and co-

operative salesmen representing the farmers, in order to discuss the latest prices, prospective demand and supplies, and get the fullest co-operation of all interests for the orderly marketing of live stock for the coming week.

The CHAIRMAN: Now, Just a minute; I think the best plan would be, Mr. Sommerville, to have brought out the substance and the meaning of these appendices.

*By Mr. Sommerville:*

Q. First of all, with Appendix A, I understand that this is a summary of live stock marketing by provinces of origin for the year 1933, as applied by Mr. MacCallum to this committee?—A. Yes.

Q. This report shows

—	Alberta	Saskatche- wan	Manitoba	Ontario	Quebec	Total

Q. There are packing plants in Alberta?—A. Several.

Q. And they are located, two at Edmonton?—A. Edmonton and Calgary.

Q. Therefore, these shipments would be shipments largely to the packing plants in Alberta?—A. Yes.

Q. Now, with respect to Saskatchewan; I observe that in the matter of direct shipments to packers for cattle in 1933 that these amounted to 5.74 per cent?—A. That is correct.

Q. Is it a fact that there is only one packing plant in Saskatchewan?—A. Well, there are more; there is one large packing plant in Moose Jaw, and there is a packing plant in Prince Albert; they are the two principal plants.

Q. None of the large packing plants in Saskatchewan, such as there are in Alberta?—A. No.

Q. That would mean that a smaller number of cattle were shipped direct to packing plants in Saskatchewan?—A. Well, the surplus of cattle in Saskatchewan moves to Winnipeg and Eastern markets.

Q. And they may have gone through Winnipeg direct to packing plants?—A. They may have.

Q. I observe that Mr. MacCallum adds this statement to these figures:—

“Figures for Cattle, Calves and Sheep direct to Packers are below the actual totals of these shipments as all Plants were not reporting their direct

purchases to the Live Stock Branch in 1933?"—A. It has been very difficult to get "direct shipments" in many cases, of cattle and other classes of livestock outside of hogs.

Q. Because they were arriving direct?—A. Because they were not graded, hogs were graded, therefore we could get those figures.

Q. Mr. MacCallum goes on to say: "Figures for Hogs are, of course, complete by reason of the fact that Hog graders report all Hogs graded at yards and plants?"—A. That is correct.

Q. And therefore, you will observe the shipments of hogs are complete, and are very large direct shipments to packing plants?—A. The percentage in all cases is much larger than for other classes of livestock.

Q. Yes, that is the total hogs for the whole of Canada shipped direct to plants, 63·26 per cent, apparently went to the packers and not to the stockyards?—A. Not through the markets.

Q. Almost two-thirds of the entire production of hogs slaughtered in the packing plants?—A. Approximately.

Q. Now, let us take schedule B: this is a statement, at Toronto, showing the approximate percentage of the different classes of livestock bought direct by the two large packers in Toronto for the entire year 1932?—A. Yes, the figures for 1932 were taken because they show the increase of direct shipments in 1933.

Q. There has been a substantial increase, has there?—A. The figures show that.

Q. Appendix B shows—

#### LIVESTOCK BOUGHT DIRECT BY TWO LARGE PACKERS IN TORONTO

The approximate percentage of the different classes of livestock bought direct by the two large packers in Toronto for the entire year 1932 are as follows:—

Cattle	Calves	Hogs	Sheep
14·2/5%	24·2/5%	64·4/5%	37·3/10%

The balance was bought on the *open market*, as follows:—

85·3/5%	75·3/5%	35·1/5%	62·7/10%
---------	---------	---------	----------

The approximate percentages of the different classes of livestock bought direct by the two large packers in Toronto for the entire year 1933 are as follows:—

#### Canada Packers—(Direct)—

	Head	
Cattle.. . . .	52,300.. . . .	..33·60%
Calves.. . . .	35,300.. . . .	..54·81%
Hogs.. . . .	306,000.. . . .	..74·17%
Sheep and Lambs.. . . .	76,000.. . . .	..46·20%

#### Canada Packers—(Through Stockyards)—

	Head	
Cattle.. . . .	103,300.. . . .	..66·40%
Calves.. . . .	29,100.. . . .	..45·19%
Hogs.. . . .	106,500.. . . .	..25·83%
Sheep and Lambs.. . . .	88,500.. . . .	..53·80%

#### Swift & Company—(Direct)—

	Head	
Cattle.. . . .	15,000.. . . .	..18·09%
Calves.. . . .	9,000.. . . .	..27·19%
Hogs.. . . .	90,100.. . . .	..60·69%
Sheep and Lambs.. . . .	58,700.. . . .	..51·62%

#### Swift & Company—(Through Stockyards)—

	Head	
Cattle.. . . .	67,900.. . . .	..81·91%
Calves.. . . .	24,100.. . . .	..72·81%
Hogs.. . . .	58,400.. . . .	..39·31%
Sheep and Lambs.. . . .	55,000.. . . .	..48·38%

Q. I observe that there were larger direct shipments to Canada Packers than to Swift and Company?—A. Yes.

Q. Is there any difference in the policy of these two packers with respect to the encouragement of direct shipments?—A. I would say yes.

Q. From your knowledge of the packers themselves, and their attitude towards the stockyard?—A. Yes, at Toronto.

Q. Would you say that Swifts are more favourable to buying on the public stockyards than Canada Packers?—A. They apparently are.

Q. Dealing with Appendix C, you might just go ahead and show us the significance of this appendix, Mr. Kennedy; perhaps you will explain to this committee the significance of that appendix?—A. I say in my brief at page 7, "As practically 90 per cent of the hogs marketed are used for domestic use, we believe the buyers who buy for domestic use only should have the privilege of the open competitive market of buying the grade of hog suitable for their particular trade." Now, I have the original letters (which are confidential) which were sent out by the commission houses in Edmonton, asking their opinion as to selling hogs on separate grades.

Q. Asking whose opinion?—A. Asking the opinion of the independent packers and the wholesale butchers. These are paragraphs from the replies received:

## APPENDIX C

### QUOTATIONS FROM SUBSTANTIAL PACKING HOUSE BUYERS IN REPLY TO QUERY RE SELLING EACH GRADE OF HOGS SEPARATELY ON THE EDMONTON MARKET

#### *Montreal*

For our purposes butchers, bacons and heavies are most suitable.

#### *Hamilton*

We see no reason why this should not work out, as in the case of ourselves there are some weeks when we are in the market for heavy and extra heavy hogs, and there are other weeks when we are in the market for light butcher hogs. If at any time you have a surplus of these kind of hogs we would be very glad to submit a bid if you will get in touch with us.

#### *Vancouver*

We must say the suggestion of selling hogs on grade certainly appeals to us as is probable in the case of most other buyers. We would only be in the market for butcher and bacon grades, in the proportion of three cars of butchers to one car of bacons, and in this case we would like to get your view on the probable market for the select grade. If we could be sure of getting a straight car of butcher hogs, we would even consider paying a small premium on them.

#### *Vancouver*

The proposition of sorting out the hogs into the different grades—selects, bacons, butchers, shops, etc., is strictly first class. I often wondered why this was not done before.

#### *By Mr. Factor:*

Q. With respect to the Hamilton letter, you say that you see no reason why this should not work out; what do you mean by this "work out"?—A. We had decided to put in an auction system in Edmonton, the commission men had all agreed to it, and then the commission men sent these letters out to the trade to get their opinions.

*By Mr. Sommerville:*

Q. That is, to sell each grade separately?—A. By separate grades.

Q. On the true quality and at a competitive price?—A. At a competitive price.

*By the Chairman:*

Q. And this packing firm in Hamilton stated that they would be willing to buy from the Edmonton yards if that system were inaugurated?—A. If they could get just what they wanted for their particular trade.

*By Mr. Sommerville:*

Q. Now, in addition to the letters to which you have referred in discussing this matter with the trade and with the independent purchasers, what do you say as to the merits of selling hogs on a quality basis by separate grades as against the fixed differential?—A. Well, gentlemen, I think the salesmen on all markets are a unit that when the farmer has live stock to move to the market he should be able to get the last dollar for that live stock, whatever grade of live stock it was, sort it out and sell it on a quality basis and give the last net return possible to the farmer. That is the salesman's job, we should not be tied by any strings of fixed differentials. Take on the Toronto market, we are only getting 25 per cent of the total receipts of hogs coming to Toronto on the public market, and of that 25 per cent I would say over 20 per cent—considerably over 20 per cent—goes to the large packers on the market. The salesman has no opportunity to sort out butchers, lights or any grades under bacons, and sell them because the packer demands all the hogs.

Q. What do you mean by all the hogs?—A. All in the load.

Q. All the different grades?—A. Yes.

*By the Chairman:*

Q. Or he won't buy?—A. Or he won't buy.

Q. Now, Mr. Kennedy, in your brief you made the statement—correct me if I am mis-stating it—that these butcher buyers and ordinary distributors other than packers find it difficult to get what they want on the market, and because of that they were compelled to buy the slaughtered hogs off the rail from the packer; could you elaborate that just a little?—A. Well, this system of selling live hogs on the fixed differential has been in practice so long that the salesmen on the public market, as far as selling live hogs is concerned, has to do the best he can under the circumstances. The salesmen all the way along the line disagreed with the policy of selling hogs under bacon grade at a fixed differential, but they were doing so much business with the packers they could not off-set the present system.

Q. Well now, just a moment ago you said that 75 per cent went to the packers direct; that 25 per cent came with the market; and that of the 25 per cent which came to the market, 20 per cent was taken by the packers, leaving 5 per cent?—A. That is approximate, I would say over 20 per cent.

Q. Now, if the other buyers only take 5 per cent of the available supplies of hogs coming into Toronto, they don't amount to much. Now, the question I asked a moment ago would apply to this; do the butchers and the distributors buy very much larger quantities than that 5 per cent?—A. They buy largely from the packers.

Q. That is what I am getting at, and I would like for you to elucidate that a bit; for instance, is it because of the packers' practice that the ordinary butcher cannot buy on the central market?—A. I would make this statement, that the selling of live hogs on a fixed differential is in the interests of the large packers who have a market for all grades, and because they have a market for all grades they insist on getting all grades; and they say to the wholesale butcher, you

come to the plant and we can sell you all your dressed pork instead of you buying it and having to have it slaughtered, we can sell you dressed pork as cheaply as you can buy it on the market.

Q. As a matter of practice, does the butcher do that?—A. Yes.

Q. To a large extent?—A. To a large extent, in Toronto.

*By Mr. Sommerville:*

Q. That takes the competition of the wholesale butcher from the stock-yard?—A. Yes.

Q. And thereby reduces the amount of competition for the hogs that are remaining on the market?—A. That is quite right.

Q. And that is to the advantage of the large buyer again?—A. Yes. The situation in Edmonton is entirely different because there are a great number of wholesale butchers and small packers in British Columbia, and they are keenly anxious to buy just what suits their trade.

Q. They are not interested in the British export trade?—A. No, I think there are none of them—I am not sure, but I think not.

Q. Therefore, they are not as much interested in selects which would be required for export trade?—A. No.

Q. And they require grades for domestic use?—A. That is right.

Q. And for the domestic fresh pork trade they can use heavies and lights to just as good advantage as bacons?—A. That is right.

Q. And therefore, you say, they would be willing to pay more for the heavies and lights and these other grades than the packers who demand to get them all at the fixed differential?—A. That is their testimony in all of the letters which we have received.

Q. In the course of your brief you refer to the fact that you had had some discussion with one large packer about the new system in Edmonton; would you just indicate what that was?—A. I had explained the system in Chicago to the head officials of Swift, what we intended to do in Edmonton. You will notice by the statistics that Alberta is the second producing province in Canada as far as live stock is concerned; last year they produced and marketed over 1,000,000 live hogs. The officials that I discussed the matter with, when in Chicago, I explained that we would sort them out into the separate grades and sell each one on their grades. I said, what do you think about it. The reply was, there is no one, as far as we could see, who could object to that system. Our buyers would be glad to bid on each grade and take all the grades, if our bid was the best. I said yes. Well then, we cannot object to the system, but we do not dictate the policy of buying in Canada from Chicago. That is determined by the Canadian management. Therefore, I discussed it with the head of Swift's, in Edmonton. He would not commit himself as to what he thought of the system, except to say that if we did that, we would not have facilities to accommodate the market.

Q. What does that mean; what facilities are there now?—A. Our capacity for hogs is 40 cars daily; our capacity for cattle is 200 cars.

Q. What does 40 cars of hogs represent?—A. Practically 3,000 or 3,500.

Q. A day?—A. A day, but we can increase that very materially at very little additional expense. We are only using about 25 per cent of the capacity of the hog plant at the present time.

Q. And the impression that was given you by this official was with that system in operation, it would increase the shipments to your stockyards to such an extent that it would use your whole available supply, or you would not have accommodation for them?—A. We would have to increase the facilities.

*By Mr. Kennedy (Peace River):*

Q. Is it your opinion that the wholesale butchers would rather buy at the yards than work through the packers provided they could buy the kind of hogs they want?—A. No question in my mind.

*By Mr. Sommerville:*

Q. Is it a fact that the wholesale butcher who buys in the packing plant is in competition with the packing plant in selling to the retail trade?—A. Yes.

Q. Do you know, or would you be in a position to tell us whether or not the packers' salesmen say to the retailer, why don't you buy from us, because the wholesaler has to buy from us direct?—A. There are other witnesses that are operating, smaller wholesale men, who if they were called to give evidence here, could explain that much better than I can.

*By the Chairman:*

Q. It is hardly a fair question to put to you?—A. No, my business is finding the best market possible for livestock.

*By Mr. Sommerville:*

Q. At any rate, the wholesale butcher who buys from the packer and sells to the retail trade, is competing with the packer in the same trade?—A. Yes.

Q. The effect of the business is to remove the competition from the market?—A. Yes.

Q. You say that is due to the fixed differential that is now in force upon the market?—A. Yes. If you just allow me to refer to this other part of the brief at this time, I will explain it to you.

Q. You have an addition to the first brief?—A. Yes. I am not going into the figures, but I wish to say that in preparing this statement—there are three commission firms operating on the Edmonton market—I am referring now to the Edmonton market and comparing Edmonton with Montreal.

Q. The statement that you are now submitting will be read into the record as a comparison of the sale of live hogs month by month from November 1932 to January 1934, between the Edmonton market and the Montreal market?—A. Yes, I think January 10th was the time that this was prepared.

Q. And this is a comparative statement? Perhaps you will explain it in your own way.—A. I will explain just what I did. In preparing the evidence for this committee, as far as figures are concerned, I wanted to get the actual facts in order to give a true picture to every member of this committee, of just what takes place over a period of a year or fourteen months. Therefore I wrote to three commission firms in Edmonton, and asked them to send me two representative carloads of hogs, an actual sale copy of their concerns from November 1932, to January 10th, 1934.

Q. Every month?—A. Each month. That gives me six different months from the three.

Q. Then, you got these representative sales of hogs from these firms on the Montreal markets, as sold by them according to the fixed differential?—A. That is right.

Q. Which has been referred to?—A. That is right.

The CHAIRMAN: May I interrupt here? In order to make the record clear, we shall insert at this point the witness' comparative statement and then ask the witness to make his comments so that when we turn up the record we will know what he is talking about.

*By Mr. Sommerville:*

Q. What do you say with respect to the Montreal market for the purpose of comparison?—A. I did the same. I wrote to commission firms in Montreal, and asked them to send me two representative loads each month over the period. I am not quite sure that there are two for each month, but they sent some covering the entire period.

Q. In the Montreal market, they do not sell on the fixed differential?—A. They were not, during this period.

Q. You have compared the results of sales of hogs on the fixed differential with the sales of hogs on the flat basis?—A. Yes.

Q. Or according to the Montreal market method of selling?—A. What they call an open market in Montreal.

Q. Will you just explain then?—A. Comparison in the sale of live hogs month by month from November, 1932, to January, 1934, between Edmonton market and Montreal market. Figures given are compiled from responsible commission firms on each market. The purpose of this statement is to show that the farmers of Alberta suffered serious loss by being compelled to sell their live hogs on a fixed differential as to grade. Expert information given by the packers to the effect that no matter what the system of selling hogs might be, the price on the different markets is generally equalized with the exception of freight differentials. Therefore for the purpose of this comparison, it is well to know the freight from Edmonton to Montreal is \$1.14½ per cwt. I think there have been several witnesses who have testified here on hogs level to freight differential.

Q. The price should be the same at Edmonton as at Montreal less the \$1.14½ per cwt.?—A. If the surplus was moving east. If the surplus was moving west, Edmonton might be higher than Montreal. During this period the bulk of the stuff moves east.

Q. The difference between these two prices should be \$1.14½—A. \$1.14½, the fixed differential, not freight. The bacon hog is the basic price and we will show the bacon price right through in Edmonton and against that either the bacon price Montreal, or the bacon price, including all grades under "bacon." We will then show the loss sustained by the farmers, and apply that loss to the total receipts of live hogs by the province of Alberta, which gives a very fair and accurate picture of the grievances of the present system.

*By Mr. Kennedy (Peace River):*

Q. At that point, I should like to ask this question: Does the freight cover all the cost of moving from one market to another?—A. No. There is this difference. For instance, in Toronto, if we have an order for a load of butcher hogs, and we were short in Toronto and they had a surplus in Edmonton, and we were selling them on the Edmonton way, we would pay them \$1.14½ or \$1.15 for the Edmonton hogs; to fill that order we figure on the freight differential.

*By Mr. Sommerville:*

Q. Take one or two of those samples and explain to us just what the statement shows. Take the centre column.—A. The reason I gave it here was that every member of the committee could see at a glance just what is taking place. Take January 5, 1934, as an example. You have bacon, 200 pounds in a load, \$1.10, in the centre column.

Q. You are referring now to January 5, 1934?—A. Yes, centre column.

Q. You are referring to a sale first of all in Edmonton of a carload of 52 hogs?—A. Yes.

Q. And in that load of 52 hogs you had no selects, one bacon, five butchers, 43 lights, one No. 1 sow and 2 No. 2 sows?—A. Yes.

Q. And for the bacon you got \$6.15?—A. Yes.

Q. For the butchers \$5.65, which is a differential of \$0.50?—A. Yes.

Q. For the lights you received \$4.25, which is \$1.90 of a difference; and for No. 1 sows there was a differential of \$2. You received \$4.15 for them?—A. Yes.

Q. And for the No. 2 sows you received \$3.65, or a differential of \$2.50 from the basic price of bacons. That shows a total weight of 4,940 pounds?—A. Yes.

Q. And the price received for each of those grades?—A. Yes.

Q. Now, in Montreal— —A. I show the spread there on the bacon as \$1.10.

Q. Just before you come to that, I should like to ask you this question. In Montreal in the same week, January 2, 1934, there were 72 hogs, no selects and they sold at \$7.25. They were bacons and butchers?—A. Yes.

Q. Thirteen lights sold at \$7 a hundred?—A. Yes.

Q. The lights at Edmonton sold at \$4.25?—A. Yes.

Q. A hundred, but in Montreal \$7?—A. Yes.

Q. And the No. 1 sows sold at Montreal at \$6 as against \$4.15 in Edmonton?—A. That is correct.

Q. Your centre column shows the difference in each case between those two sales?—A. Yes.

Q. In the case of the sale on January 5, you show that the one bacon hog sold at Montreal brought \$1.10 a hundred more than the same hog at Edmonton?—A. Yes.

The CHAIRMAN: You have to take \$1.14½ off that?

The WITNESS: No, the spread per hundred pounds—yes, you take \$1.14½ off.

The CHAIRMAN: In regard to one bacon?

The WITNESS: That is right.

*By Mr. Sommerville:*

Q. On the five butchers they did better at Montreal by \$1.60 a hundred less \$1.14?—A. Yes.

Q. On the 43 lights they did \$2.75 per hundred better at Montreal than at Edmonton, less \$1.14?—A. That is right.

Q. And the sows did \$1.85 better at Montreal than at Edmonton?—A. Yes.

Q. And these figures throughout the centre column show the difference or the advantage of the Montreal method of selling on the open market according to quality and grade?—A. It shows the gross spread on each grade between Edmonton and Montreal.

Q. From that gross spread you must take first of all \$1.14½ for the freight?—A. I did it in the last page.

Q. In addition to the \$1.14½ you deduct additional expenses of 6¼ cents, do you not?—A. I take all the loads—

Q. Let us have it?—A. I will explain in the last page. This is a summary.

Q. You take the last page, and you say it summarizes the whole thing?

A. The following summary shows the total of 42 representative carloads of live hogs sold on the fixed differential in Edmonton during the period from November, 1932 to January, 1934. You will notice the average spread per hundred pounds on each grade between the Edmonton price and the Montreal price as follows:—

Grade	No.	Weight	Spread per 100 pounds	Freight per 100 pounds	Additional spread over freight differential per 100 pounds
Selects and Bacons.. . .	1,193	244,230	\$1.20	\$1.14½	\$0.05½
Butchers.. . . .	1,463	281,730	1.72	1.14½	0.57½
Lights.. . . .	340	38,320	1.85	1.14½	0.70½
Heavies.. . . .	56	14,590	2.01	1.14½	0.86½
Extra Heavies.. . . .	15	4,560	1.96	1.14½	0.81½
Sows No. 1.. . . .	49	14,320	1.72	1.14½	0.57½

The additional spread over the freight differential on all grades under

Selects and Bacon is.. . . . \$0.642

The freight differential between Edmonton and Montreal is \$1.14½ per hundred pounds. Therefore, deduct the freight from the gross spread to get the net spread. You will notice the selects and bacons, in the spread, are a trifle over the freight differential but all other grades under bacons show a very material differential in spread over the freight differential. It is our opinion that if an entirely different system of selling hogs at Edmonton had been established, whereby, the hogs after they were graded, were sold on grade and offered in open competition that all grades under bacons would have found a ready market at the freight differential, and not only that but with all separate grades sold in open competition this would have meant real competition in buying for the farmers in Alberta.

We submit the following:—

The number of hogs marketed in the Province of Alberta, 1933, according to the statement shown by the Minister of Agriculture for Alberta, is as follows:—

Direct to Packing Plants. . .	687,848 hogs
Stockyards. . . . .	344,321 hogs
Total. . . . .	1,032,169 hogs for the year
Less Selects and Bacons (40.4%) . . . . .	416,996 (as shown by Government Report)
	<u>615,173</u>

Taking an average weight per hog of all hogs under "bacon" of the representative carloads as shown above, namely, 184 pounds per hog, and the average increased spread over the freight differential of \$1.14½ per hundred pounds and apply it to the total number of hogs marketed in Alberta, it would produce the following results:—

615 hogs at an average weight of 184 pounds. . . . .	113,181,832 pounds
113,181,832 pounds at the average spread of \$0.642. . .	\$726,627.36

In other words, the Alberta farmers received \$726,627.36 less by selling on the fixed differential than similar hogs brought at Montreal where they were not on the same fixed differential.

*By Mr. Sommerville:*

Q. And the per cent of this representative load bears out your statement that there is a very large advantage which the farmers of Alberta lose through the sale of the hogs at Endmonton on a fixed differential?—A. Yes.

*By Mr. Young:*

Q. Before you leave that point, we had a witness the other day who told us that there was a special market in Quebec for heavy hogs, hogs that were different from select and bacon, which did not exist elsewhere. Can you tell us where the market for those various grades is found?—A. It is found from the order buyers in Montreal. The orders come to the Montreal market, and they wire to the western market to get the orders filled, if they can. It would come from the wholesale butchers in Quebec.

Q. A witness the other day gave the impression that heavy hogs were sold for higher prices in Montreal because there was a market for that kind of pork in Quebec, but that the same advantage did not obtain at Toronto or other marketing points?—A. The letter I have read, or a paragraph of that letter from a Hamilton packer, shows at times they are anxious for heavy hogs; they have a demand there, if they could get them.

*By Mr. Sommerville:*

Q. That is to say, you say there is the demand if there was the supply?—  
A. Yes.

Q. But under the present system there is not the supply in any of these markets outside of Montreal?—A. That is quite right.

Q. And Montreal which does supply the demand, shows this difference in value?—A. Yes.

Q. And that the various grades below bacon therefore seek their own level of values?—A. Yes.

Q. And obtain higher prices than are paid on the other markets through the fixed differential?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. In paragraph 4 of page 1 of this brief, is not that the point you are dealing with there, regarding the equalization of prices?—A. In the brief?

Q. Yes, in this paragraph (showing Witness)? I was going to ask that question Mr. Young asked, and then I ran across this.—A. Yes. The testimony that the packers have given, and that others have given, is that hogs in every market in Canada practically level, except freight differential. That is what they gave here.

Q. That is all classes of hogs?—A. Yes. If bacons were selling for the sake of argument at 6 cents a pound in Edmonton, and bacons were selling in Montreal at 7·25 or 7·20 or 7·15, the Montreal packer would place an order at Edmonton at \$6.

*By Mr. Young:*

Q. Where is the market for the light hogs; is that in all cities?—A. In all cities.

Q. Quebec takes the heavy hogs?—A. And Quebec takes light hogs.

Q. And the export market takes the select hogs?

The CHAIRMAN: It is supposed to.

The WITNESS: In Toronto—in fact in every city the light hog, which is the hog that will dress from 120 to 150 pounds, is frequently the most desirable, for the domestic trade.

*By Mr. Young:*

Q. That is for the domestic trade in fresh pork?—A. Yes.

*By Mr. Sommerville:*

Q. And there is more of that sold than bacon?—A. Well, I can't give you the statistics on that.

*By Mr. Young:*

Q. Under free marketing conditions, the light hog would bring a better price than the select, would it?—A. Frequently the light hog might bring a premium.

*By Mr. Sommerville:*

Q. In any event, it would bring a better price than under the fixed differential now prevailing?—A. I will just say again that with regard to a salesman representing the farmer, it is his duty to sell the hogs when they are ready for market, or that come to market, to the best advantage. It is his duty if he is allowed to do it, to sort out the hogs and sell them on a quality basis, just the same as a load of cattle. A load of cattle comes in, and there are two heavy steers, there are three or four cows, there are six or seven butcher

cattle, there is half a dozen baby beef; we would not attempt to sell that load of live stock to one buyer, to one packer. We grade it, put the baby beef by itself, put the butchers by themselves, put the heavy steers by themselves and sell them to the man that wants that class of cattle.

*By Mr. Young:*

Q. In the case of cattle, the packer does not insist on the whole car?—A. He could not.

Q. He does it only in the case of hogs. What I want to get at is this: I understand that the price paid for select hogs and bacon hogs is determined from day to day by the price of bacon in England, and that under the practice of a fixed differential, the prices of other grades of hogs are graded down from that base; but because of local conditions, because of the fact that the light hog and the heavy hog is sometimes in demand here, the price of this kind of hog should be determined by Canadian market conditions and not by the price in Liverpool; is that the point?—A. That testimony has been given. As salesmen, we would say that the price that would determine what we would get for any grade of hogs or any grade of cattle would depend upon the demand for that grade of stock in Canada or any place else that we can get the market. For instance, in Edmonton the tide has turned. There has been a shortage of hogs in the last month or two in the west. There has been a keen demand from the west. There has been a keen demand in the domestic trade, and the Edmonton market in February went quite a bit above the Winnipeg market. I have letters here that I could read or; part of a letter here which would explain it, if I might read it at this time.

*By Mr. Sommerville:*

Q. All right, go ahead?—A. It is just to give you the exact story.

Q. I think Mr. Young would be interested in that?—A. These hogs came from Peace River. It would be just as well if I did not read the names.

The CHAIRMAN: That is all right, Mr. Kennedy, go ahead and read the letter.

The WITNESS: All right.

The story of the price secured on the Peace River hogs of 8·90 fed and watered on February 20, when Winnipeg was only 8·60—

I got a wire that the Edmonton price was 8·90; there was quite a run of hogs, 2,200 hogs. I knew that the eastern market was out of line with Edmonton. I immediately wired them to tell me the cause, to find out what happened, and this is the reply. The salesman reports as follows:

It was known that there was going to be a fair number of hogs coming down on Monday 19th, from Peace River, and as one of the large packers locally always guaranteed the price to drovers on the Thursday previous to shipping day which is Saturday, the salesman knowing that the packers were keen for hogs, thought he would try to get some of the drovers' hogs to go to the market.

*By Mr. Sommerville:*

Q. The commission salesman?—A. Yes, the commission salesman.

He asked another packer-buyer if he would guarantee an f.o.b. price where there were scales in the country, and this buyer guaranteed the price of 8.25 f.o.b. and any advance, provided the head office in Winnipeg would agree to an advance; and if Winnipeg would not, then the commission salesman if he could do better than 8.25, he could sell to the better bid.

That was the commission salesman's right, to get the last dollar he could for the consignment of hogs coming from Peace River. "The salesman accordingly wired the drovers a guaranteed price of 8.25 f.o.b. This apparently was relayed to the local packer. The head buyer asked the salesman on Friday if the hogs that he had bid on at that figure were sold." The local buyer knew that the commission salesman was getting a fair run of hogs. He got a wire from some of his men; therefore he wanted to find out if he could get in on them.

Q. At this time the commission salesman was free to sell to the highest bidder?—A. Yes. That is his job, to sell to the highest bidder.

Q. And he had a bid from a large packer at 8.25?—A. Yes.

Q. The buyer wanted to find out if they have been sold to anyone?—A. Yes.

Q. Will you proceed?—A. "The commission salesman told him that the hogs were sold at that price if no better price could be realized. The local packer asked for a chance on them on arrival. At 9 a.m. on Tuesday morning these Peace River hogs were sold. The local packer bid 8.40 for the f.o.b. and 8.75 for the fed and watered stockyards weight hogs. That is a 15 cents advance on what the other packer had bid. The commission salesman held him off until he saw the other buyer. The other buyer would not raise his bid of 8.25, so the salesman sold them to the local buyer at 8.40 for the f.o.b. Then they started trading for the fed and watered hogs on the market, the salesman asking \$9. The local buyer kept running to the telephone to talk to the head office, and came back three different times raising a nickel each time until he got to 8.90, when he finally said that 8.90 was the best the local buyer would do. The salesman sold to him as he had no other bids, and so prices were set for all hogs on the train, the ones that were going direct, all were set by that price, for all the hogs on the train, and they all went to the local packer. The next day, Wednesday, Winnipeg, had advanced to \$9, a raise of 40 cents per 100 pounds over their Tuesday price."

Q. On the strength of the Edmonton advance?—A. Naturally, when they could not get the hogs at Edmonton.

Q. You say the price is fixed by the local demand, and that there is a local demand for heavies and lights and the prices for these would be fixed by the competition for these various grades?—A. In our judgment, the price of all live stock is set by the published price on the open competitive market.

Q. The published price?—A. The public price on that market.

Q. Take Alberta; you say in your brief that 95 per cent of the hogs slaughtered in Edmonton, went direct to the plants while 5 per cent went to the market? A. That is approximately; the figures show a larger percentage went direct.

Q. And the price of the 5 per cent sold on the public market was the only price that was published as the market price for hogs?—A. The only official price.

Q. And that would be used for fixing the price in buying hogs through the country, on all the rest?—A. Yes.

Q. So that if there was any factor which tended to reduce or depress the prices on the Edmonton market of the 5 per cent, that would have an effect on the entire 95 per cent throughout the province?—A. Absolutely.

Q. With respect to the sale of these hogs by fixed differential, the commission man is representing the producer?—A. Yes.

Q. I suppose he gets the same commission whether he sells at a fixed differential or whether he sells by grades?—A. Yes, just the same.

Q. But the matter of sale by grades involves a good deal more trouble and time taken in the operation?—A. The salesman has nothing to sell by service. He is not out just for his commission; he is out to serve the farmer, the producer; and the competition in selling on the market where there are several commission firms is very keen, as each commission man wants to get the highest possible return for his farmer, as against the other commission firms.

Q. You say this system of selling by separate grade was agreed upon at Edmonton, that it would be put into operation and sales by auction made of these grades?—A. Yes.

Q. Sale by auction is not necessarily a part of the system of selling by separate grades?—A. Yes.

Q. You could sell by separate grades by the present system?—A. Absolutely.

Q. On their quality?—A. Absolutely.

Q. And you went further than that at Edmonton, and you proposed selling them by public auction?—A. Well, there is a reason for that.

Q. What is it?—A. Under the present system of selling in western markets, the local packer has frequently been at a disadvantage in this way, that commission salesmen are also order buyers. A commission salesman having 1,000 or 1,500 hogs for sale and having in his pocket an order from Montreal for 500 or 600 hogs, for him to determine the price, leaving it open practically, the local packers claim that they frequently cannot get in on those hogs, that the commission salesman gives the advantage to the outside order. That is the reason that we suggested having the auction system, so that the bids would be open, so that the moment an order came in from Vancouver or Montreal and they bid for local butcher hogs at a certain price, it is open to the local packer if he wants to bid 5 cents a hundred more, it is his privilege to do so, and if nobody raises his bid, he gets the stock.

Q. Then the competition on the local market at Edmonton, we will say, or on any market, comes from first of all the packers, and secondly from the order buyers?—A. Yes.

Q. And thirdly from the wholesale butchers?—A. Yes.

Q. If there are a number of order buyers or number of orders to buy, then that forms competition with the local packer?—A. Yes.

Q. And the commission merchant or commission agent uses that in raising or improving the market in hogs?—A. Yes.

Q. Or cattle?—A. Yes.

Q. And the suggestion of auction was to give the local buyer, the local packer, an equal chance?—A. To give all buyers equal chances.

Q. You said you were not able to put it into operation, for while the commission men agreed and the stockyard company agreed that it should be tried, you did not have the controlling vote. Just amplify that, please. What do you mean?—A. In the Live Stock and Live Stock Products Act—I have not got the exact wording of it—there is a clause which states that there is nothing in this act that will prohibit sale by public auction, except that the regulations must be approved by the minister.

Q. All right?—A. We called the commission firms together, who were the only ones representing these firms, and the stock yard proprietors, and we decided under the Act as we thought that we could put that into force immediately; and it was the intention at the end of October that the commission firms and stockyard companies would notify every wholesale butcher and packer in Canada that this system was going to be put into effect in Edmonton on a certain day. According to some technicality in the regulations which state, as I understand it, a change of policy like that would have to be approved by the members of the local live stock exchange. The members of the local live stock exchange, or of any exchange, are not only the commission firms, but the packers' buyers and the wholesale butchers, the employees of the packers and the employees of the commission men—in other words, in Toronto I think—

The CHAIRMAN: Stick to Edmonton.

The WITNESS: Speaking of Edmonton, the commission firms and stockyard company would only represent five per cent of the vote.

*By the Chairman:*

Q. Out of how many?—A. I have not got the total number in Edmonton, but I would say it would be four or five times that number—the members of the exchange—therefore, the five votes which were the votes representing the market—the commission firms that represented the producers—they had no power to pass that regulation, and it is held in abeyance at the present time.

Q. But you have made an attempt to do it?—A. Yes.

Q. It was turned down?—A. It was shelved.

*By Mr. Kennedy (Peace River):*

Q. Were the packers opposed to it?—A. We could not get it passed—I remember the packers' buyers were at the meeting.

Q. Were they against it?—A. There wasn't a vote either for or against at the meeting, it was just set aside to be taken up again.

*By Mr. Sommerville:*

Q. It was delayed?—A. It was delayed.

Q. That is the situation at Edmonton. What is the situation with respect to the vote on the Toronto live stock exchange; how many firms are there there on the stockyard?—A. Ten firms.

Q. And what is the representation on the live stock exchange?—A. Approximately one-tenth of the total vote.

*By the Chairman:*

Q. Just a minute, you mean that the commission men on the Toronto live stock exchange, plus the stockyard company, only represent about ten per cent of the vote of the live stock exchange?—A. I am speaking of members of the commission firms.

Q. I am asking about the total voting strength?—A. The voting strength—I could not answer that question correctly; that is the voting strength of the commission firms' employees. I cannot answer that without looking up the packers. I will get that for you and let you have it.

*By Mr. Sommerville:*

Q. But there were the outside interests, such as packers' buyers; are there speculators?—A. Yes.

Q. And others operating on the market, who are members of the live stock exchange?—A. No one can operate on the public market unless they become a member of the exchange; that is, they cannot buy or sell—except a farmer coming in to buy for himself.

*By the Chairman:*

Q. Have you any idea of the total membership?—A. The total membership in Toronto was slightly over 100.

*By Mr. Factor:*

Q. What qualifications do you have to possess to become a member of the live stock exchange; what are the regulations?—A. The regulations at the present time provide for a fee of \$500.

Q. Can anybody join?—A. Anyone of good character and who will put up the necessary security. You have got to take out a bond if you go into the commission business of \$10,000 to the Dominion Government.

*By the Chairman:*

Q. If they are just a buyer they don't have any bond?—A. They have a bond as a buyer.

*By Mr. Kennedy (Peace River):*

Q. Every one of these 100 people who have votes did not pay \$500, they are not members?—A. Not all, originally it did not cost that much.

The CHAIRMAN: But each paid a membership fee.

*By Mr. Kennedy (Peace River):*

Q. What actually brought about opposition to this proposal; I think you said it was because of some of the local packers and butchers who wanted to buy outside; that that was one of the reasons, at least, why it was suggested that there should be a public auction system in Edmonton?—A. Well, Mr. Chairman, I will answer that in this way; the small packers and wholesale butchers who want to buy on the Edmonton market are from Vancouver, from Montreal and from long distances, and they place their orders—their order-buyers are the commission firm—in Edmonton it happens to be the commission firm selling is also the order-buyer.

Q. Yes, I get that, but who is opposed to the public auction?—A. Apparently the packers were not anxious to have this put in force.

Q. The packers throughout Canada, or Edmonton?—A. The packers at Edmonton and throughout Canada, I think—I don't think they want it.

*By Mr. Sommerville:*

Q. If it were introduced at Edmonton the system might spread to other markets?—A. It might spread to all markets.

Q. And it would affect all the packers?—A. Yes.

Q. And whether it spread to other markets or not, it would affect the packers at Edmonton?—A. Yes.

Q. And, of course, that might attract shipments now going direct to their plants to the stockyards?—A. Yes.

*By Mr. Young:*

Q. And the packers in Canada would have an influence on Edmonton; who was it killed it?—A. It was not voted on at all.

Q. Was no motion made?—A. No, it was simply discussed.

*By Mr. Factor:*

Q. Well, who spoke against it?—A. They just moved that the motion be deferred.

*By Mr. Kennedy (Peace River):*

Q. Are the minutes of that meeting here?—A. I will get you the particulars.

The CHAIRMAN: Get the minutes of that meeting.

The WITNESS: I will be glad to, Mr. Chairman.

The CHAIRMAN: Also, a statement of the membership of the exchange.

The WITNESS: All right, I will be glad to do that.

The CHAIRMAN: I was just going to suggest, there are a number of other questions, I presume, which the committee will wish to ask; supposing we adjourn now for lunch and we will have Mr. Kennedy come back after lunch.

The Committee adjourned at 11.47 a.m., to meet again this day at 3.30 p.m.

The committee resumed at 3.30 p.m.

The CHAIRMAN: Before we proceed with a further examination of Mr. Kennedy on the brief he submitted this morning, I think I ought to read to the committee and into the record a letter I received from the Swift Canadian Company Limited. It will be recalled that on March 21, Mr. A. E. Jamieson, Chairman of the Committee on Agriculture and Colonization of the Ontario Legislature, in giving his evidence, as appears on page 588 referred to a case where a lot of five cattle was purchased on the exchange, and upon which occasion two of Swift's buyers bid one against the other, seemingly without knowledge, and later the latter bid was repudiated, although, according to the rules of the live stock exchange, the last bid was bound to be accepted. The latter bid, however, from the second Swift buyer, was repudiated. This bid was four cents; and the exchange having closed at that moment, the farmer selling the stock was forced to accept the lower bid of  $3\frac{3}{4}$  cents.

Now, Swift's have written. By the way, Mr. Kennedy, you had better take the stand, because your firm is mentioned, and you may then make whatever observation you wish to make. I think in justice to Swift's, I should read the letter; but at the same time it does bear out the evidence given here. This letter is addressed to me and is dated April 9, 1934. It is signed by the Swift Canadian Company, Limited, J. H. Tapley:

DEAR SIR: Attached please note copy of our letter April 4, to Mr. George Day, Creemore, Ontario, covering additional payment  $\frac{1}{4}$  cent per pound on five steers purchased by us from him December 20, 1933.

The further letter is a copy of a letter sent by Mr. Tapley of the Swift Canadian Company to Mr. George Day, Creemore, Ontario, and is as follows:

It has come to the writer's attention for the first time that our Live Stock Buying Division, following a controversy regarding the method of offering the stock to us, finally paid you  $3\frac{3}{4}$  cents per pound for five steers weighing 5,100 pounds whereas the purchase price when the deal was originally made was 4 cents per pound, regarding which, after considerable discussion with the commission firm, an agreement was reached to settle at price of  $3\frac{3}{4}$  cents per pound.

We have reviewed all the circumstances and wish to advise now that our conclusion is, after weighing all the facts, that you are entitled to the 4 cent price, because we feel that a deal is a deal, and as our buyer finally bid 4 cents, then that is the price you should receive, regardless of any difference of opinion in respect to how they were offered to us.

Your commission firm—Messrs. H. P. Kennedy and Co.—suggest that as the transaction has been closed on their books, it would simplify the matter to send you the cheque direct, which we are doing herewith for the amount of \$12.75.

We regret the difficulty in this particular case and feel sure any future deals will be mutually satisfactory.

Yours respectfully,

SWIFT CANADIAN COMPANY, LIMITED,

(Sgd.) J. H. TAPLEY.

P.S.—Since writing above, we are pleased to learn from our buyers that we are buying your cattle to-day.

Q. Now, Mr. Kennedy, it is not that I wish to prolong the matter, but having placed this on record, which action was taken because of the statement made in the evidence on March 21st last, and your firm being mentioned, I should like to know if you have anything you wish to add to that or anything

you wish to say in regard to the practice or the incident which occurred at that time?—A. I was surprised when I heard the evidence given. I was here when the evidence was given regarding that transaction, because very seldom, if ever, does a packer on the Toronto market agree to buy stock at a certain price, and repudiate the deal. That is one thing a packer does; once they agree, that settles it. In this case apparently there was a difference of opinion between the Swift buyers themselves. What they call the unwritten law says when one buyer of a packing company bids on a certain shipment of cattle, another buyer for the same firm is not supposed to bid without letting the first buyer know. The first buyer may even raise the price of his first bid; in other words, two buyers from the same packing company should not compete.

*By Mr. Sommerville:*

Q. That is their rule?—A. That is the order on the market. In this case, that is what happened. It was between our salesmen and the Swift buyers, and the matter neither came to the attention of Mr. Tapley, the head of the Swift Company, nor myself, as the principal of H. P. Kennedy, Commission company; so that we knew nothing of it until I asked the question when I went home. Mr. Tapley, the moment he saw it, asked the question. I think he has explained it fully. I do not think there is anything to complain of as far as Swift's are concerned. It was a misunderstanding.

The CHAIRMAN: It is not an incident that would frequently occur?

The WITNESS: No, very very seldom.

Mr. SOMMERVILLE: An isolated incident.

The WITNESS: Yes.

The CHAIRMAN: I think that clears it up. I do not know that we need to worry much more about it. It was mentioned as if it might be a common occurrence.

Mr. BOULANGER: Who mentioned it?

The CHAIRMAN: It was given in evidence by Mr. Jamieson on March 21, at page 588.

*By Mr. Sommerville:*

Q. You knew nothing about it until you heard it here?—A. I knew nothing of it, and as the chairman has already intimated by reading the postscript on the letter, they are buying that farmer's cattle to-day, so there was no hard feeling so far as the farmer was concerned.

Q. Let us proceed with your brief. We were dealing this morning with your observation on the comparison between the sale of hogs on the Edmonton market and the Montreal market?—A. Yes.

Q. Perhaps at this stage you would be good enough to tell us what was the total number of select hogs marketed in Canada during the year 1933?—A. On the last page of the brief you will find that memo, which is taken from government records. The total number of select hogs marketed in Canada during the year 1933 was as follows: Alberta, 81,541; Saskatchewan, 57,855; Manitoba, 42,032; Ontario, 328,379; Quebec, 10,026, or a total of 519,833 hogs during the year 1933.

Q. And the total premium paid by the buyers of those select hogs for that year would amount to what?—A. \$1 per head.

Q. Or a total of \$519,833?—A. Yes.

Q. Now you have already indicated that by selling Edmonton hogs on the differential as against the open market in Montreal, there was a saving to the buyer on that one market of over \$615,000?—A. No, over \$726,000.

Q. \$726,627.36?—A. Yes.

Q. So that a saving affected on that one market by the sale by differential below the bacon hog largely exceeded the total premiums paid by the buyers for all premium hogs sold in Canada?—A. That is right.

Q. Now, referring to the last page on this brief on hogs, will you just explain what this page illustrates?—A. This page indicates the top price paid for bacon hogs, live weight, month by month, in Edmonton, from November, 1932, to December, 1933. The next is the government report on the top price of Wiltshire bacon to the 10th January, 1934. There is a memo on the bottom explaining. The next column is the value of the pound sterling at Edmonton month by month. The next is the value of the shilling, month by month. Then the net price per hundred pounds of this sale price of Wiltshire bacon. Then, the spread between the live cost of the bacon hog per hundred pounds, and the sale price of 100 pounds of Wiltshire bacon.

Q. That is to say you have taken the top price of your bacon hogs in Edmonton month by month from November, 1932, to December, 1933, 13 months?—A. Yes.

Q. And you show the spread between that top price of live hogs?—A. Yes.

Q. And the net price per 100 pounds of Wiltshire bacon?—A. Yes.

Q. For the month of November, 1932, the top price for hogs at Edmonton was \$2.90?—A. Yes, for the bacon hog. I have not mentioned the select hogs because the fixed differential took away more than the premium from the farmer, the premium they got on the select hogs.

The CHAIRMAN: They have lower grades?

The WITNESS: Yes.

*By Mr. Sommerville:*

Q. You have taken the bacon variety?—A. I have taken bacon.

Q. The top price for bacon was \$2.90?—A. Yes.

Q. Per hundred pounds?—A. Yes.

Q. So that a 200-pound bacon hog would be \$5.80, and the top Canadian Wiltshire price for the British market was 57s. 6d. for 112 pounds?—A. Yes.

Q. Is that right?—A. That is right.

Q. Then the value of the pound sterling at that time was \$3.81?—A. Yes.

Q. So that the shilling was worth 19 cents?—A. 19 cents.

Q. Then the net price per 100 pounds of Wiltshire bacon was \$9.75?—

A. Yes. You multiply 19 cents by 57s. 6d. and divide it by 112.

Q. You are reducing it from the English cwt. of 112 pounds to the 100 pounds Canadian weight?—A. Yes.

Q. And the difference between the \$2.90 and the \$9.75 you show as the spread of \$6.85?—A. Yes.

Mr. FACTOR: Subject to the qualification on the bottom?

The WITNESS: Yes.

*By Mr. Sommerville:*

Q. That is to say in the month of November, hogs bought at \$2.90 would be marketed the following month in England as bacon?—A. Yes.

Mr. YOUNG: What was the change in the market at that time?

Mr. SOMMERVILLE: It is indicated here.

Mr. YOUNG: The next line would indicate that?

Mr. SOMMERVILLE: The next line would indicate the price in England.

*By Mr. Sommerville:*

Q. In other words, on the \$2.90 hog there was a spread of \$6?—A. On 100 pounds.

Q. In December, \$2.90, and a spread of \$5.60?—A. Yes.

Q. In January, 1933, \$2.80 per cwt. of hogs, and the spread was \$8.45?—A. Yes.

Q. February, 1933, the top price was \$3.15, and the spread was \$9.80?—A. Yes.

Q. In March, 1933, the top price for hogs was \$5.25 and the spread was \$7.85. In April, 1933, the top price was \$5.25, and the spread was \$8.30. In May, 1933, the top price was \$5.40 and the spread was \$7.25. In June, 1933, the top price was \$5.30 and the spread was \$8. In July, 1933, the top price was \$5.70 and the spread was \$11.45. In August, 1933, the price of hogs was \$6.10, and the spread was \$9.95. In September, 1933, the top price for hogs was \$6.35 and the spread was \$7.55.

Mr. FACTOR: Why the difference of \$11.45 in July, 1933?

Mr. SOMMERVILLE: The top price of bacon had dropped from 80s. in July to 75s. in August, and that accounts for the difference in spread between \$11.45 and \$9.95 in August and July. September, the top price of hogs was \$6.35, and the spread was \$7.55. In October, the price was \$5.25 and the spread was \$9.55. In November, the price was \$5.85 and the spread was \$10.85. In December, 1933, the price was \$6.25 and the spread was \$12.85. We have already had the evidence of Mr. McLean, that the cost of processing a \$2.90 hog is the same as the \$6.25 hog?—A. I understood that by the evidence.

*By Mr. Kennedy (Peace River):*

Q. Why should the spread fluctuate like that? One would think the price would be fairly steady?

Mr. FACTOR: The price of bacon fluctuated.

The WITNESS: Evidence has been already given from the buying standpoint that the buyer after processing, sells his product as high as he can sell it, and after taking off a reasonable profit, processing costs, etc., he pays the farmer, he sets the price that the farmer should get.

Q. That has been the evidence?—A. Yes. In other words, the price the farmer gets is practically in the hands of the buyer of the packer.

*By the Chairman:*

Q. Does this statement of yours, Mr. Kennedy, indicate, in your opinion that there really is little relation between the price of bacon in Great Britain and the price that is paid for the hogs?—A. I would not want to state that, Mr. Chairman. I have not got the facts of the exact cost of processing bacon for the old country market.

Mr. FACTOR: We have not got that yet.

The WITNESS: You will get that in your investigation.

*By the Chairman:*

Q. If the price paid for live hogs in Toronto was related to the price that is received for bacon in the London market, ought not the spread then to show a fairly uniform rate?—A. Yes, and I will—

Q. And if the spread shows rather wide fluctuations, is not it sound reasoning to say that the relation between the market price of bacon in London and the price paid for hogs, has not been maintained?—A. That is right.

*By Mr. Ilsley:*

Q. Does not that spread depend upon the rapidity with which the market is going up?—A. I will answer that in this way, that if all hogs were on the public market, and all hogs were being sold to the packers on the public market,

and this daily and weekly information came to the salesmen, representing producers as well as representing the packers, there would be an entirely different story so far as what the farmer gets is concerned.

*By Mr. Sommerville:*

Q. The producer would get more returns?—A. No question at all.

*By Mr. Ilsley:*

Q. Now, come back to my question. I notice the big spread is when there is a rapid jump in the price of Canadian Wiltshire bacon on the British market. You have here the live weight price for the month previous to the bacon price as shown in your table. It is only sensible that if bacon is going up there is going to be a big spread between what the packer pays for live hogs this month and what he gets for bacon the next month; and therefore you cannot say there is any relation between the price of bacon on the British market and the price paid for live hogs. The wide variation in spread depends upon the rapidity of the jumps or the rise in the market; is not that correct?—A. I would answer that in this way, that I will present to the committee material giving the price in the old country and at the same time, the price of the live hog in Edmonton, and there will be very little change from this statement.

Q. The spread, you say, will be the same?—A. Practically.

Q. Well, that cannot be so, with deference; you know more about it than I do, but if you take the figures—you have figures here, have you not?

*By the Chairman:*

Q. How do you account for the variation in the figures for September, 1933, where the top price for bacon hogs was 6.35 and the Wiltshire sides was 65 shillings, and the next month, October, Wiltshire sides rose to 69 shillings but the price of hogs fell to \$5.25? What is the explanation of that?—A. I cannot explain the packers' practices.

*By Mr. Ilsley:*

Q. Was it not due to the drop in bacon from 75 to 65?

The CHAIRMAN: No, no; follow the figures through there. There is a rise in bacon to 69 shillings, and in the same month when the bacon in Wiltshire sides rose to 69 shillings the price of live hogs fell to \$5.25.

Mr. ILSLEY: He says that is the month before, Mr. Chairman, in his explanatory note; that for the month before would correspond to the drop.

The CHAIRMAN: All right, follow along. The next month Wiltshire sides is 72 shillings, but taking it on your argument you still have the low price of \$5.25.

Mr. ILSLEY: No, when there is a rise from 69 to 72 there is a rise from \$5.85 to \$6.25 in the price of live hogs.

Mr. FACTOR: A zig-zag price.

Mr. ILSLEY: Is that not correct; they seem to be varying, when you take into account that difference in the month.

Mr. FACTOR: Take the month of November; the price of hogs was \$2.90 and 57 shillings sixpence for bacon, and the next month the price of live hogs is \$2.90 and 50 shillings for the bacon. How do you account for that?

*By Mr. Sommerville:*

Q. Does this table not reflect but one thing, that in your judgment the packing company were not returning to the farmer an adequate proportion of the spread?—A. I have already said that if the salesmen representing the producers had this daily information, and all hogs were on the public market, that there would not have been this spread.

*By the Chairman:*

Q. That is, the spread would have been more uniform?—A. Yes, more uniform.

Q. And there would be a closer relation between the price of Wiltshire sides and the price of hogs on the Toronto market?—A. Yes.

MR. FACTOR: What do you mean by a more uniform spread? You mean irrespective of the price of the Wiltshire bacon?

THE CHAIRMAN: No, but the price of the hogs would be more closely reflected.

*By Mr. Factor:*

Q. Does it not really depend upon the price the packer gets for his products, the Wiltshire bacon?—A. 90 per cent of all the hogs slaughtered in Canada was consumed within Canada.

Q. That is a different picture?—A. Only 10 per cent not.

Q. I am talking about the export business; does not the spread, or in this statement does it not entirely depend upon the price the packer receives for his bacon in the British market?—A. Yes.

Q. So that the statement that the spread would be more uniform if the farmer got a greater price for his live hogs does not necessarily follow?—A. Yes. The farmer should get a greater price for his live hogs when the market advances. But the price that the farmer gets is in the hands of a few buyers and they have practically 75 per cent of their purchases direct to their plant, and we have only on the public market practically 25 per cent which may be influenced in any way by salesmen representing the producers.

*By Mr. Young:*

Q. On your stock market in the yards have you any way of determining what the price of bacon is in England; do your commission men know?—A. The commission men do not get the cables, except as a cable comes in from the government at the end of the week.

Q. Could the commission men get cables if they made an effort to do so, and know what is happening on the British market from day to day?—A. When I was exporting cattle heavily, I got cables every day and sometimes two or three times a day.

Q. What is to stop you from getting these cables now?—A. No reason that we should not.

*By Mr. Sommerville:*

Q. The fact is the packer is interested and gets cables from his agents in England?—A. Yes.

Q. These cables are not handed out to the commission men?—A. No; and the commission men cannot influence to any great extent the price that will be paid for live hogs, when a packer has 75 per cent coming in direct.

*By Mr. Young:*

Q. What is to stop the commission men on the Toronto market, for instance, from clubbing together and collectively getting a cable from England every day quoting the prices?—A. Nothing.

Q. Nothing at all?—A. No.

Q. And if they did that, they would then be in a better position to say to the packer: "This is the price of hogs to-day"?—A. They would, if the hogs were all coming there.

Q. You told us the packer gets the prices and the commission man is in the dark?—A. Yes.

Q. Give the commission man that light; you say he is not getting all the hogs. He is getting 25 per cent of the hogs?—A. Yes.

Q. The packer wants that 25 per cent to keep his plant going: he would want one hundred per cent if they were all going through the yards?—A. No matter what information the commission man had, under the present system it would have very little effect because the packers practically control the situation in hogs.

*By the Chairman:*

Q. Because nearly 25 per cent go to the market?—A. Yes.

Q. And 75 per cent go direct?—A. You can't influence the market with 25 per cent.

*By Mr. Young:*

Q. Let us suppose 100 per cent goes through the yards, the packers are still the only buyers, and you are still in their hands, are you not?—A. Then they have got to operate their plant.

Q. They have to operate their plant anyway, whether the hogs come through you or direct?—A. Take the case like Toronto yesterday as an example, with a fairly heavy run of live stock at the market, with heavy runs coming in by truck going to the plant and to the stockyards. At some time, one of the hours in the forenoon yesterday, the trucks lined up, ten, fifteen trucks at the plant, waiting to get unloaded, with one man weighing or putting prices on that stock, grading it et cetera. How could any salesman influence the price that that man would mark those tickets at?

Q. What was there to stop the driver of, we will say, No. 10 truck, from leaving the truck and going up into the packing house and finding out what they were paying; and while he was waiting his turn to be unloaded, getting in touch with the stockyard to find out what they are paying there?—A. Nothing in the world. The packer pays the same as the market.

Q. You are in the hands of the packer whether you sell direct to the packing house or through the yard?—A. We are in the hands of the packer, but if we have the total available supply—90 per cent of their slaughter is sold in Canada and they have got to keep the consumers fed; they have got to carry on.

*By Mr. Sommerville:*

Q. At the present time Mr. McLean has given us evidence that the system is as you indicate, that they get what they can, take what they require and give the farmer the balance?—A. Absolutely.

Mr. FACTOR: You mean the stockyards?

Mr. SOMMERVILLE: No, the producer.

Mr. YOUNG: The balance of what?

Mr. SOMMERVILLE: The balance of the price they have paid.

Mr. FACTOR: Less their cost.

Mr. SOMMERVILLE: Mr. McLean's evidence was that they got what they could from the consumer, that they took out a reasonable profit for their services, the cost of processing, and whatever is left is the price that goes to the producer.

Mr. YOUNG: As I recollect it, Mr. McLean's evidence was this, that every day they got a cable from England as to the price of bacon and other hog products, and that cable influences the price that they pay by a fraction of a cent.

Mr. SOMMERVILLE: There was evidence to the effect that they were getting cables steadily, but I am dealing with the question of live stock sold to the packing plant; and you will remember that Mr. McLean's statement was to

the effect that it didn't make any difference by what means you disposed of your live stock, the net result was the same whether you sold them by grades or whether you sold them by the fixed differential. The result was the same, and the producer would not get a dollar of benefit more, because what they paid the producer was what they got from the consumer less the charges for processing, plus a profit, and the balance represented what went to the farmer.

*By Mr. Sommerville:*

Q. I ask you, Mr. Kennedy, what do you say as to that system of marketing?—A. Mr. Chairman and gentlemen, there is the crux of the whole situation; the system of the marketing of live stock in Canada is entirely wrong, and it operates to the advantage of the buyer.

*By Mr. Factor:*

Q. How?—A. In this way: The first is the producer that produces the live stock; the next is the market where he can offer his live stock for sale, the public market. Located on that market are the commission firms representing the farmers. Then there are the packer buyers buying. Next are the distributors, between the packer and the consumer. Then there is the consumer. The two important bodies are the producers and the consumers. The stockyard company and the commission agent are under government control and simply service organizations.

Q. You would not put it as altruistically as that with regard to the commission men, would you; that is their business?—A. They are service organizations under the Live Stock and Live Stock Products Act; they can only do certain things, are under certain regulations. Mr. Packer-Buyer and the distributors between commission firms and consumers are free agents and operating for profit, and not under the same legislation as the commission firms are.

*By Mr. Ilsley:*

Q. Your stockyard companies are operating for profit?—A. Under the government.

Mr. SOMMERVILLE: They are not free agents; that is the point.

The WITNESS: The stockyard company is simply a utility.

*By Mr. Young:*

Q. Not operating for profit at all?—A. They are operating for profit, a fixed profit I said, by the government.

*By Mr. Ilsley:*

Q. Under a fixed profit?—A. A fixed margin, a fixed margin on feed and a fixed margin on yardage.

Q. I understand?—A. The definition of a stockyards company is an hotel for live stock. They rent the space to the shipper or to the farmer at so much per head, and they sell them the hay and feed a la carte.

Mr. FACTOR: I'll say it is a la carte.

The WITNESS: That is the position of the stockyard company,—the stockyard companies in Canada. When the stockyard companies' representatives are here you will get it; our manager is ready to come any time the committee wish to have him, and he will explain where the earnings of the stockyards companies come from. The majority of the earnings of the stockyards companies do not come from the producers. They come in working for the railroad companies, for cleaning cars, for weighing and matters of that kind.

*By Mr. Young:*

Q. I don't understand it?—A. The stockyards company is not interested in any way in the price that the farmer gets for his live stock.

Q. You say they do not get anything out of the producers; don't they charge so much a head or so much a car?—A. I didn't say they didn't get anything out of the producers. I said they get the bulk of their revenue from the railway companies, and matters of that kind; rentals from the commission firms and rentals from the packer-buyers.

*By Mr. Sommerville:*

Q. Now, Mr. Kennedy, we are getting off onto a side track at the present time. We are going to come to that. Let me get to the point I had in mind. The basic principles of marketing were laid down for us by Mr. McLean. He says at page 272: "You will probably concede this, that the packer gets all he can for the stuff he has to sell. I think we get all we can for the stuff we have to sell both here and abroad. I think the fundamental consideration in this thing that we have been discussing this afternoon is that if you take it for granted that the packer is getting all he can, I do not see how you can increase the total price that is paid the farmer except by reducing the expense to which the packer is put." In other words, the farmer is getting what is left after the profit of the packer and the cost of processing and the other charges are taken from the proceeds. What do you say as to that system, as a system?—A. In my judgment, that system is entirely wrong.

Mr. FACTOR: How do you account for it that 75 per cent of the producers seem to be satisfied and are shipping direct to the packers?

*By Mr. Sommerville:*

Q. Now, just explain what is the result of that system?—A. Mr. Chairman and gentlemen, I will say this, that I often wonder why the other 25 per cent of the hogs come to the market. I often wonder why they come to the market.

*By the Chairman:*

Q. Explain that, will you? We are wondering too?—A. With hogs going in direct, the man going in direct unloads his hogs. There is a man there at some of the plants who grades and marks the price on the tickets, the same as for the other classes of live stock. As a rule, with the stock going in by truck, it is the trucker that is working for transportation charges. He is not an expert salesman. He has gone to the farmer and loaded his stock at the farm, and he is anxious to make all the revenue he can for his truck. Therefore he goes direct to the plant. He says, "Now, get me unloaded quick, and I will go back and get you another load in this afternoon." If he came to the stockyards he could not get back for his second load, because he would wait until the commission man would try and put a competitive price on that live stock. Therefore he could only make one trip instead of two. That is the first. The next is this, that the purchasing man representing the packer has no competition whatever. Whatever price he puts on that ticket, that is the price.

*By Mr. Young:*

Q. That is at the packing plant?—A. Yes, that is at the packing plant. That is the price. At 12 o'clock yesterday—the market opened at 9 o'clock, and there are ten expert commission firms on the Toronto market,—very few cattle had been sold at 12 o'clock. The packer-buyers had been there, had been bidding. Why didn't the salesmen sell? Because they were expert in selling as

well as the buyers were expert in buying, and they would not take the first price that was bid. Frequently the first bid of the packer on a market, when they get through selling is from a quarter to a half a cent a pound higher than the first bid.

*By Mr. Sommerville:*

Q. Wait a minute, I think the notes do not correctly show what you intend. You say when you get through buying—A. When we get through selling.

Q. When you get through selling, the price you get is frequently a quarter to a half a cent a pound more than the first bid?—A. Yes.

Q. When the man goes to the packing plant, the bid is there and that is the first and last bid?—A. Yes.

Q. That is the point?—A. No competition.

Q. Yes, will you proceed? That was your second point. What else is there in that system that you find that is wrong?—A. Well, from the standpoint of the packer, you cannot blame the packer for buying as cheaply as he can buy. He is in the business to make money.

*By Mr. Factor:*

Q. How do you account for the farmer going to the packer direct? How do you account for 75 per cent of the producers, in spite of this disadvantage, still keep going direct to the packers?—A. I have already explained that the trucker is largely accountable for the increase in the percentage going direct to the packing plant.

*By Mr. Sommerville:*

Q. What effect has the differential in inducing the farmer to send to the packer?—A. In hogs, a fixed differential sets the price. In other words, the salesmen of hogs—it may not be complimentary to some of us as salesmen—but the salesmen of hogs on the Toronto market are practically rubber stamps.

Q. That is to say, when the price of bacon hogs is set, you cannot use your judgment in getting higher prices for the lower grades?—A. Because we can't sell the grades separately.

*By the Chairman:*

Q. Salesmanship is eliminated?—A. It is eliminated.

*By Mr. Sommerville:*

Q. And everything follows the bacon grades?—A. Yes, absolutely.

Q. The farmer knows that when he ships his hogs?—A. No question about that.

Q. And you say that has a tendency to help the packer get his shipments direct?—A. Yes.

Q. So that competition in hogs on the Toronto market is with respect to bacon prices?—A. Yes.

Q. And not the prices of these other grades?—A. Yes.

Q. And the working of that fixed differential you say has a tendency to throw hogs into plants?—A. That is why the percentage of live stock going to plants is so much greater than your percentage of cattle. With cattle it is entirely different. The salesmen sort out cattle and sell them on their grade.

Q. Entirely; and 75 per cent of live hogs go to the packers, and you say that the large reason for that is the fixed differential as applied to them?—Yes.

Q. But that there being no fixed differential on cattle they belong to the market and are graded and sold on the market?—A. Yes.

Q. And I think your figures show that over 80 per cent of the cattle go to the market at the present time?—A. Yes.

*By Mr. Young:*

Q. Do you attribute that entirely to the differential?—A. Largely to salesmanship.

Q. Are there any hogs go to the packing house direct by rail?—A. Yes.

Q. Many?—A. Yes, quite a number.

Q. There must be another explanation there?—A. That is a private arrangement between the salesman and the packer; the salesman that buys car lots feels he can get just as much money by going direct to the plant and then he will ship to the plant.

Q. The salesmen; you mean, the farmer?—A. No, the man buying from the farmer—the drover.

Q. And the drover finds it profitable to ship direct to the plant?—A. Frequently.

*By Mr. Sommerville:*

Q. Following up the question of the drover shipping direct to the plants; what is your experience as to the proportion of drovers who ship to the stockyard as against those who ship to the plants?—A. On cattle there are very few drovers, as far as Toronto is concerned, that ship their cattle direct to the plants.

Q. They are experienced buyers?—A. There are drovers who have been practically agents of the packers for years, or have been dealing with the packers for years, that are still shipping their stock direct to the plant—cattle; the percentage is very much smaller than it is in hogs.

Q. But in the case of drovers you say very few of them ship to the plants, they ship to the stockyards, and at the stockyards do they sell the cattle themselves or do they employ the selling agents?—A. Selling agents.

Q. They employ agents?—A. Yes.

Q. Why? They are experienced cattle men themselves, why? Will you tell us?—A. The selling agent is in touch with local conditions; the selling agent is bonded to the dominion government, and there is no chance whatever of any losses so far as sales are concerned; they know local conditions, they care for the cattle, they look after the collection.

Q. Are they able to get better prices for the drover than he would otherwise be able to get?—A. No question. In reply to that question I might speak of my own experience in other markets, that would let the committee know.

Q. That would show the practice as you know it, at any rate?—A. From the year 1897 to the year 1927 I traded in nearly all the important markets of the United States, and for many years I paid in Lancaster, Pennsylvania, from \$15,000 to \$20,000 a year in commission to salesmen on the Lancaster market.

*By Mr. Young:*

Q. These were cattle, or hogs?—A. On cattle, we shipped hogs there too; but on cattle the commission for selling was \$30 per car.

*By Mr. Sommerville:*

Q. Yes?—A. Frequently in the fall of the year I would have as many as 70 cars, or 80 cars, that would go on that market and I paid \$30 a car in every case for the selling of these cattle. I was there a great deal of the time myself in the fall of the year. I had my own salesmen there from Toronto to help to care for the cattle; we gave our services free and we sold a very fair percentage of the cattle ourselves; but in every case we paid the commission to the salesman. Why? Because the salesman was in touch with local conditions, he knew the people we were selling, we were sure of our money, and we simply didn't try to

do anything else. That is the answer to the question as to why the drover or the shipper will consign his stuff to a commission man on the Toronto market, or on any Canadian market; and as far as the commission that the salesman gets is concerned, it is very small in comparison with the value received by the drover.

Q. In other words, you say your own experience is on other markets that it has been profitable for you to engage a local commission agent?—A. There were different years in Great Britain that I paid from \$20,000 to \$50,000 a year in commissions, and I never sold any cattle in Great Britain, or France, or Belgium, or Switzerland that I did not pay a commission to the local man.

Q. Because of his knowledge of local conditions?—A. Absolutely.

Q. And he could get you better results?—A. Absolutely.

Mr. FACTOR: What other course could you have pursued if you had not employed commission men on these markets?

*By Mr. Sommerville:*

Q. You could have sold your own, could you not?—A. I could have sold, myself.

Q. But you would not have been in the same position?—A. I would not know the man whose credit was good, I would have had to set up all the machinery that the commission men have set up.

Q. And you would have been in much the same position as the farmer selling to the packer had been?—A. Just the same. I have brought down a few statements showing how the commission business is done. Here is an exhibit of one of our shippers. I would like to hand that in and have it passed around to the committee, it shows the amount of detail that the commission salesman and the commission office has to do to collect \$17 and be responsible for all the accounts.

Statement filed as exhibit 86.

Mr. FACTOR: Yet the department object that the price is too high, and ask that it be reduced.

*By Mr. Sommerville:*

Q. This is a list of 31 cattle sold to Swifts, all of varying grades and at varying prices; a total of \$2,975.61; and the commission on that was how much?—A. \$34.

*By the Chairman:*

Q. That is for two grades. Have you a similar statement showing a broken lot; that is, where you sell to a number of buyers—could you file one of those as an exhibit as well?—A. This statement shows a broken lot.

The statement filed as exhibit 87.

Mr. SOMMERVILLE: This is an exhibit showing five sales to different people for a total of 24 cattle; 24 cattle, 14 calves, 3 sheep and 7 cows.

The CHAIRMAN: How many sales altogether?

Mr. SOMMERVILLE: The total number of sales shown is 6; total proceeds \$1,050; commission \$17. And then you must report on each of these firms.

The WITNESS: You have to figure out every ticket separately, and you have to collect.

*By Mr. Sommerville:*

Q. From each of these different firms?—A. Yes. Now I will give you a statement showing 15 separate sales involving 15 separate statements; 18 cattle sold, total commission collected \$6.25. Now, can the man who goes direct to the plant, could the trucker get that service at the plant direct?

*By Mr. Factor:*

Q. Why did the department ask you to reduce your charges?—A. We don't know; we have not consented, we are having it investigated.

*By Mr. Young:*

Q. I notice on the statement there is nothing for market fee and feed?—

A. We collect all that; there is just market fee on the trucks. Market fee and feed is there, is it not?

Q. Yes.

The CHAIRMAN: That statement will be exhibit 89.

The WITNESS: Here is another for 2 cattle and 17 calves; total commission collected, \$6.25; twelve separate cheques and statements issued.

*By Mr. Sommerville:*

Q. Twelve different consignees?—A. Yes.

*By Mr. Factor:*

Q. You are apparently giving value for the producers?—A. Not only giving value but selling individuals each separately for the benefit of the producer.

Q. That takes in the sale of all the live stock on the market?—A. In our recommendations we state that all live stock should be marketed on public stockyards in open competition.

Q. That would create a sort of monopoly of the commission merchants at the stock markets, wouldn't it?—A. You could not have any monopoly with commission men on the stockyard.

Q. I mean any commission firm that was lucky enough to have a seat on the stock exchange would have an advantage, wouldn't it?—A. Again I will quote my experience in shipping to Pennsylvania; there were ten to twelve commission firms and we would have anywhere from seventy to eighty cars of cattle there to sell; I would distribute these cattle through the different commission men, and each commission man would try to get a better sale than the other commission man. That is my experience over a period of thirty years.

*By Mr. Sommerville:*

Q. Increasing the number of commission men increases the competition in selling?—A. In my judgment. As far as Toronto is concerned, or any market in Canada, if all the live stock centred on the public market there should be more competition among the men on every market.

*By Mr. Factor:*

Q. That is what I wanted to get at?—A. And in my judgment you can only go so far in the selling of live stock until you have to increase your salesmanship, and increase your yard help, and increase your office staff; you cannot go beyond a certain point of volume without increasing your overhead.

*By the Chairman:*

Q. One other question before you leave that; in addition to the competition of salesmanship among the commission firms, the shipper is permitted to sell his own live stock on the public market if he so desires?—A. Absolutely, we have shippers—I think every commission firm has—who are right there and lots of times make their own sale.

*By Mr. Factor:*

Q. You are really asking us to recommend legislation to compel the 75 per cent of the producers of hogs who are now selling to the packers to sell them through no other source than the stockyards; is not that what it amounts to?—A. We are asking for legislation to compel buyers to buy on the open competitive market.

*By Mr. Sommerville:*

Q. Now, I am going to ask you, you have had a great deal of experience on the markets of the United States, are the same conditions and the same problems arising in the stockyards, between stockyard sales and packing house sales in the United States as here?—A. They are having practically the same trouble; in fact there is a bill before the Senate at the present time which the committee might like to have filed as an exhibit.

*By the Chairman:*

Q. Before you leave that, do they have a direct shipment problem over there too?—A. Yes, I would like to read some of the evidence in this investigation, which is at the present time considering this bill.

*By Mr. Sommerville:*

Q. Yes, and these are the bills?—A. The bills that are before the Senate in the United States at the present time.

Q. And are these bills to prohibit direct shipments to packing plants?—A. Yes.

Q. And to regulate the packing plants in the United States?—A. Yes, and to put all direct shipments under the same legislation as applies at these central points.

Mr. FACTOR: You are not suggesting that we copy American patterns, are you?

Mr. SOMMERVILLE: If they do find that some of this trouble is the same as our trouble here it may be that some of the information will be of interest to us. By the way, this bill may have been copied from Canada, because I observe that this Senate bill was introduced on the 15th March, and I think we had started our work by that time.

Mr. FACTOR: We are not ready to frame our legislation yet, I hope.

The CHAIRMAN: Not yet.

United States Senate bill and related evidence filed as Exhibits 90, 91, and 92.

The WITNESS: I feel that the system of selling live stock should be entirely changed, should be on a cost plus basis.

*By Mr. Young:*

Q. Cost plus?—A. Yes. Why should the farmer produce live stock unless he can get a living by producing it?

Q. You advocate cost plus to the farmer, cost plus to the commission man, and cost plus to the packers and everybody?—A. What other system could we work on?

Q. Put all your cost plus together, and you find that the total is more than the consumer will pay; what are you going to do next?—A. I would say that system is much better than putting the pressure on the sales end, that is where the whole pressure is put on now, all the profit is put on the farmer and he gets what is left—he is the goat. I could read you case after case here. Here is a letter of March 23, 1934.

*By Mr. Sommerville:*

Q. When you say cost plus, you mean that the farmer should be paid the cost of production?—A. Plus a minimum wage, that should be the basis.

Q. Plus a profit?—A. Yes.

Q. That is, the farmer and any producer of live stock ought to be able to market it at a profit; that ought to be the basis in your judgment?—A. In my judgment.

Mr. FACTOR: Why not extend that principle to every other commodity?

Mr. SOMMERVILLE: I wonder if it is not extended to every other commodity?

Mr. FACTOR: A Utopian scheme.

Mr. SOMMERVILLE: Is not that what the manufacturer does?

The CHAIRMAN: I think we are getting into an argument; will the witness proceed with his statement.

The WITNESS: If I might at this time cite some of the instances of the distress in Canada to-day among the farmers, the absolute distress.

*By Mr. Sommerville:*

Q. From the present system?—A. From the present system. In every province, it is worse in the West, because the consuming market is in the East, and the live stock must move East. Here is a letter dated January 31st, where the farmers shipped through their co-operative association in Peace River during last January showing a return of 86·8 cents per hundredweight. You will note that eleven hogs netted to the farmer \$26.35, eleven of the finest hogs; while on the fixed differential thirteen hogs net \$37.89.

*By Mr. Ilsley:*

Q. What date is this?—A. January 31, 1933.

*By Mr. Sommerville:*

Q. And it was referring to?—A. These show that in January of 1933 eight hogs net \$19.69; and ten hogs net \$16.98.

*By Mr. Ilsley:*

Q. That is below the cost of production, of course?—A. It is not half of the cost of production.

Mr. KENNEDY (*Peace River*): It would not pay the cost of grinding the feed.

*By Mr. Ilsley:*

Q. Assuming that the price went away up, as it has sometimes in the past, would you hold the farmer down somewhere near his cost of production?—A. When this investigation is completed it will have, I expect, from the Department of Agriculture from every Province in Canada what the cost is of producing the live stock. You should also have what the net return to the farmer was in 1933. You will have the charges that the commission firms made in the selling of that live stock, you will have the earnings of the stockyard companies, and you will have the earnings of the packing plants, and the earnings of the distributors between the packing plants and the consumers; and it should be up to this committee to decide whether the consumer's dollar was adequately distributed during the year 1933.

Q. Perhaps my question was not a fair question?

The CHAIRMAN: Just repeat it, Mr. Ilsley.

*By Mr. Ilsley:*

Q. I was saying, you suggest that the cost of production should be guaranteed to the producer, that the amount he gets should be based on his cost of production; now, I am asking you to take a time when due to the variable conditions of the market his return goes up a lot beyond his cost of production, would you in that case keep him down somewhere near his cost of production?—A. Absolutely not.

*By Mr. Young:*

Q. Well, you have one way but you would not have the other way; it is the consumer then who is going to pay beyond what the market would justify at one time, and yet he is not going to get the benefit of low prices which would be justified at another. Well there should be some neutral body between the highly organized selling power that there is in Canada at the present time, and the highly organized buying power of live stock and the producer. The trade cannot do it. The trade are dealing with the public and the only power that can remedy the present situation is the power of the Dominion government.

*By Mr. Sommerville:*

Q. You made a suggestion?—A. Under present conditions. This is the time when something wants to be done for the farmers of Canada. This is the time, gentlemen, to make men in Canada, not make fortunes.

*By the Chairman:*

Q. Do I gather from your arguments that you propose in any system of production processing and distribution that the first consideration should be given to the individual who produces the article?—A. There is no question at all in my mind about that.

Q. And that largely the territory of distribution should be built upon that?—A. Absolutely

Q. Instead of dealing with the selling end, or starting with the selling end?—A. Absolutely.

Q. And working backwards, so that the producer gets what is left?—A. Just reverse the system.

*By Mr. Factor:*

Q. Where would the consumer come in?—A. I do not believe the consumer would pay any more.

Q. In answering Mr. Ilsley's question, you state if the natural law of supply and demand is such that the farmer can get a high price for his production, a fixed price, you would not pin him down to a fixed price, but let him get a higher price; naturally the consumer will have to pay that higher price?—A. No, the farmer should not be allowed—may I at this juncture read this letter, Mr. Chairman?

The CHAIRMAN: Finish what you were going to say.

The WITNESS: This is right on this line. This shows the position of the farmer where his capital has been eliminated. This letter is written by a lawyer and Mr. Factor will appreciate it. It is from Edmonton, Mr. Sommerville, and represents the interests in Edmonton. He is in close touch with the situation in the west. I asked him for an expression of opinion, and you might just as well have it on the record. It is addressed to Mr. H. P. Kennedy, and is as follows:

DEAR MR. KENNEDY,—You suggested that I write you a letter pertaining to the financial distress amongst the farmers of Northern Alberta; this having been the subject matter of our conversation yesterday.

I have lived over twenty-four years in Alberta, and have been engaged in the practice of law since 1914. Edmonton, where I reside, is of course the centre of the Garden of Eden of the west, but even at that the agricultural situation is very unsatisfactory. Generally speaking, the farmers in that territory have plenty to eat, but since 1929 have not been able to make sufficient revenue to pay any debts. The farmer with a good unencumbered half section of land is in a fairly good position to-day, as he can make a revenue and get by without being able however to create

any reserve or to make capital expenditures to any extent. The farmer however whose lands is encumbered and owes other debts, and I believe that the majority of the farmers are in this category, is going behind every day. It is all he can do to pay his expenses which by the way have been cut to the bone and eke out a bare living. He cannot, however, pay debts such as mortgages, farm machinery notes, old machinery accounts, doctors bills, etc., and these debts are increasing by way of interest.

As I see it there are thousands of cases where farms will eventually pass to mortgages, unless the farmer's revenue is increased and interest rates reduced and debts cut down. His equity in his assets is disappearing rapidly.

It is highly important in my opinion to make an adjustment of the debts incurred by the farmers when times were normal. Interest rates are too high under present conditions. The farmer cannot even afford to pay 5 per cent interest, but in many cases he is paying eight and nine per cent and sometimes even ten per cent.

If something can be done to materially increase the revenue of the farmer through better prices for livestock whereby the grain can be marketed through these channels, the situation may be saved. Apart from other considerations the farmers morale needs pepping up. Just think of the advantages that will accrue to Canada as a whole if the farmer has a substantial purchasing power. Right now much is needed by way of lumber, building materials new farm machinery, radio sets, batteries, household furniture and equipment, clothes and other articles required. In many cases these people need the service of a dentist or a doctor, but cannot afford to pay for proper medical attention. During the last few years the agricultural community has been unable to make capital expenditures and has to economize in every direction. This affects everybody. If the farmer has a chance he will certainly spend his money on necessities and replacements. There is plenty of farm machinery being held together with hay wire, but this cannot go on forever and yet how can new farm machinery be purchased at present prices.

I know of many instances of financial distress as I have a great deal to do with farmers and travel around the country considerably during the summer and fall. I am not giving you details in each case, but have merely dealt above with my general findings.

Even with the increased revenues I see a problem facing us—how can the agriculturists purchase new goods and at the same time pay off past debts and accumulated interest? There has been plenty of discussion regarding war debts and the purchasing power of nations. If the nations are obliged to pay these old war debts they will be unable to make new purchases, and the same principle applies to the farmers in western Canada.

Mr. FACTOR: Why didn't you send him the Prime Minister's speech on the cutting down of interest rates?

*By Mr. Sommerville:*

Q. Mr. Kennedy, what do you say.—A. There has been a lot of pressure put on the government to cut interest rates down.

Q. What would you say would be the improvement in the price of livestock if the system of open sale on the open market that you advocate had been in operation during 1933?—A. In my judgment, as stated in my brief, if all livestock had been sold through public market, in open competition in the year 1933, the values of livestock, net to the farmer, would have been \$1 per hundred higher.

Q. All the way along the line?—A. Yes.

*By Mr. Young:*

Q. How do you arrive at that figure?—A. I might read another letter, if I may, which will explain it. I will answer by this letter. It is from a farmer in Alberta. The letter is addressed to me, and is as follows:

DEAR MR. KENNEDY: I notice by the papers that Mr. Stevens' Commission is taking up the marketing of livestock, and this matter will be on very shortly. For this reason I am writing you.

To-day, on the Edmonton stockyards, a rail shipment of 559 mixed cattle came in from Peace River. There will be probably a dozen different grades of these cattle, consisting of different grades of fat cattle, feeders and stockers. These cattle, to fetch the best price, will have to be sold to at least a dozen different buyers. We will suppose that the owners of these cattle shipped them to a packing plant. You, being a cattleman, will have some idea of what would happen to these cattle regarding the price, if it were possible for any one packing plant to handle them all. Of course the packing plant can handle the fat cattle, but what about the feeders and stockers? Wouldn't they have to buy them at a reduced price in order to find a market for them, as a considerable number of these cattle cannot be slaughtered.

Edmonton is the centre of a large territory in which there are many pioneer farmers, who are often compelled to sell their cattle before they are ready for slaughter, and it is absolutely necessary that there be a public market which can dispose of each and every kind of cattle, whether they are fat, feeders or stockers. If there is no such public market there is always the danger that cattle which are not fit for slaughter are put on the market in the form of beef of such a quality that when it reaches the hands of the consumer it reduces the price for meat of a higher quality. In other words satisfying the demand for meat with a lower quality than the consumer should be served.

That is what I suggested in my brief should be changed.

To one who is acquainted with farming conditions in this province, it would seem ridiculous that at this time there would be any question as to the necessity of a public live stock market, which, of necessity, must find a cash market at any time for any quality and quantity of livestock that may be offered for sale. It is ridiculous to suppose that in this western country that every animal going to market is fit for slaughter, and while naturally, the packing plants have their place, I believe that the major part of livestock handling must always take place at the stockyards.

This was brought home to me very clearly last winter. I fed some cattle which were sold December last, through the Edmonton stockyards, at four cents per pound. Last January, a farmer owing us an account, sent two fat heifers through his local truck driver to a packing plant in Edmonton, the proceeds of the sale to be turned over to us. One of these heifers fetched two cents per pound and the other 2.60. Competition at stockyards, no competition at packing plants.

Mr. FACTOR: I received a letter this morning from a farmer in Ontario, who said in that letter that those who advocate the sale of live stock through stock markets do not know what they are talking about. It is just a matter of opinion.

*By Mr. Young:*

Q. Let us go back to those figures. Those cattle sold through the yard brought four cents, and those two heifers brought 2 cents and 2.60. Will you

tell us what the market was for those two different classes of cattle on those different dates? Let us try to get the whole picture.—A. Practically this much difference, a month's difference. The market was advancing. Steers sold in December and heifers in January.

Q. Can you give us figures?—A. I can get the exact difference. There was a confidential letter sent to me at the time the heifers sold for 2.60 to the effect that they were a better quality carcass of beef than the steers that sold for four cents at the stockyards.

Q. Any other description given of the stock?—A. None whatever.

*By Mr. Sommerville:*

Q. You mean, they ship direct to the packing plant, no competition?—

A. Direct to the packing plant, no competition.

Q. And the man who weighs them in marks the ticket?—A. Yes.

Q. Weighs them, puts the price on them, and the trucker takes back the money?—A. Yes.

Q. You say that system would militate against the farming community?—A. Yes.

Q. And that the price they would get on the open market, where the farmer has an experienced salesman as his representative, would amount to at least \$1 a hundred?—A. In my judgment.

Q. Over a period of years?—A. Yes.

Mr. YOUNG: Is it on this letter you base your statement?

Mr. SOMMERVILLE: I think Mr. Kennedy said on his judgment.

The WITNESS: On my judgment.

Mr. YOUNG: I asked him how he arrived at that conclusion and he read this letter.

Mr. SOMMERVILLE: He gave you this incident.

The WITNESS: In my judgment, yesterday morning, if I had had an order as I used to have in the United States, if I had some outside market and stepped on the Toronto market to buy 500 head of cattle or 1,000 head of cattle, the market would have easily advanced \$1 a hundred.

*By Mr. Young:*

Q. The reason it did not was because you had no market in the United States to ship your cattle to?—A. Well, that might be part of the reason, but I should like to say this—

*By Mr. Sommerville:*

Q. If you have the packer on the market instead of the states, your point is the market would have advanced?—A. Absolutely, the packer would be the buyer. Why should the packer, if the trucker will come and keep running in and crowding the scale all the time on Monday and Tuesday and Wednesday morning, to get rid of the stock market, then let him worry. Why should the packer, without any competition, pay higher prices?

*By Mr. Young:*

Q. The point I want to make is this: You made a statement a moment ago, that if you had an order for 1,000 head of cattle in the States, you could have gone on the market to buy them and the price would have advanced 1 cent a pound as a consequence. Without that order from the States, the price did not advance?—A. If all cattle were on the market, and everything were sold in open competition, all cattle slaughtered in Canada—at least 97 to 98 per cent of all cattle slaughtered in Canada are consumed within Canada. It is the demand from the consuming public that sets the price.

Q. In relation to the supply?—A. From the consuming public, and the order buyer of that market that is selling outside of the big packers altogether; if they had a chance to be there to bid on every different grade and every different quality of live stock, that competition would raise the price.

Q. Let me follow this up. You say if you have an order for 1,000 head of cattle on the State and you had gone into the market to buy the 1,000 head of cattle, you would have raised the price one cent. Now, Mr. Sommerville said that if a packer were compelled to go on the open market and buy their supplies instead of buying them at their plant, it would have the same effect. Would it?—A. It would have practically the same effect, if all the stock were on the market.

Q. But if you are going to ship 1,000 to the States, you are going to move 1,000 right off the Canadian market?—A. That is always a benefit.

Q. Without that outlet are they going to have the advantage of this 1,000 head of cattle lifted off the market?—A. I have answered that in my brief where I say that if 5 to 10 per cent of the low grade cattle in Canada were moved from the market through the regular channels, going to the packing industry to the trade, if they were moved, there would be a shortage of the right class of cattle in Canada.

Q. How do you propose to move them?

MR. SOMMERVILLE: I will bring that out, Mr. Young, because that is one of the points I have to examine Mr. Kennedy on.

THE WITNESS: May I read some of this evidence?

MR. SOMMERVILLE: In support of the statement that the price would be in your judgment, at least \$1 a cwt. more, you want to read some evidence given, I understand, before the Senate committee in the United States on exactly the same point?

THE WITNESS: On exactly the same point.

MR. SOMMERVILLE: Let us have the statement. Given by whom?

THE WITNESS: It is given by D. M. Hildebrand, president of the United States Livestock Association.

*By Mr. Sommerville:*

Q. Given when?—A. Given on March 28th.

Q. Last Week?—A. Yes. This is the Drovers' Journal from Chicago. Here is his statement on that particular point:

"I feel safe in saying—" This man, I may say, is a big raiser of Livestock; raises and sells 700 to 800 a year, and about 2,000 hogs a year off his own place. Here is his statement.

I fell safe in saying at this time that if all interests had been and were now competing for their raw material on a fair basis of at least \$2 per cwt. higher than they are now and the cost to the consumer would be no more than present prices.

This is his statement. May I file this whole statement?

THE CHAIRMAN: Yes.

*By Mr. Sommerville:*

Q. What other statement do you desire to refer to in support of what you say with respect to direct shipments?—A. "I want to say at this point—"

THE CHAIRMAN: Is that the same individual?

THE WITNESS: The same man.

I want to say at this point that when I started shipping hogs to Omaha, some 25 years ago, at that time Mr. Packer-Buyer was right

there at eight o'clock in the morning when the gong rang in order to start his killing crews going. What do I find when I go down there to-day? Mr. Packer-Buyer is not there. He is not there until after the shipper-buyers have cleaned up their needs. They clean up the market in whatever price they can buy them for so much off. It is simply because they are enabled with the large amount of hogs they have in their backyard ready to start their killing crews to be in a position where they do not have to compete for the hogs that they might have need for that day.

I am sure that each and every one of you men, if you were a packer and you had need for 20,000 hogs a day, and you had approximately 50 per cent of those hogs in your yard ready to start your killing crews going, you would not be a bull on the market, but by having those hogs there it would permit you without any question to depress the market on that day in order that you could buy your hogs lower the next day out in the country, which are the selected hogs from the farmer who is no position to combat you or dictate to you in any way as to what price he is going to receive from those hogs direct.

*By Mr. Factor:*

Q. You subscribe to that?—A. Yes, I subscribe to that.

*By Mr. Sommerville:*

Q. From your experience?—A. From my dealings in the United States market.

*By the Chairman:*

Q. And you subscribe to it from your experience in the Canadian market?—A. Yes, in the Canadian markets.

*By Mr. Sommerville:*

Q. What do you say as to this statement? Do you subscribe to this, or what is your opinion upon it from your experience? Mr. Hildebrand, in his sworn statement goes on to say: "The old argument that in marketing your hogs direct that you save certain marketing expenses is erroneous, for it certainly should be clear to everyone that the producer pays the freight regardless of the fact whether it is purchased direct or at the terminal market. And if we will only compare the methods employed by the packer in direct buying, we learn that some man is employed on a salary or he is paid a commission for his services, or designated as a selected shipper, consequently the producer sells his hogs through a middleman instead of through his agent on a terminal market, but is denied the benefit of a competitive market." What do you say to that, as to conditions in Canada?—A. As far as freight charges and other charges in country buying, the packer must pay the same whether it comes direct or whether it comes to the plant. As far as expenses of salaried men is concerned, I could not answer that question.

*By Mr. Young:*

Q. That is to say, the producer pays freight; you told us a moment ago about some carload that went into Edmonton and the charges were 86 cents a hundred. How much of that was freight? Let us get at the cost?

*By Mr. Sommerville:*

Q. Before we come to that, let me finish this statement. I have got some exact statement?—A. I have the exact figures here.

Q. At any rate, the packer sets up an organization to take care of buying direct; he pays for that organization?—A. Yes.

Q. And that is part of his expenses of buying?—A. Yes.

Q. And I presume that it must come out of somebody?—A. Well, there are similar cases in Canada where the packers operate what they call concentration centres through the country, and they must keep men to look after these collecting agencies in the country; that is the same system.

Q. Give me a case of a concentration plant in Toronto now; tell me what you know about the Davies plant, for instance?—A. That is a concentration plant at the present time; I have not got the exact figures.

*By Mr. Young:*

Q. Tell us exactly what a concentration plant is?—A. Where they centre shipments from the country to a certain plant.

*By Mr. Sommerville:*

Q. That is to say, the Davies plant in Toronto was one of the plants that was given up as a packing plant?—A. Yes.

Q. When the merger took place?—A. Yes.

Q. It is located in the east end of Toronto?—A. Yes.

Q. And to that Davies plant the truckers bring their supplies of hogs and cattle?—A. Yes.

Q. And they are collected there?—A. Yes.

Q. That saves the trucker from carting them across the city to the—  
A. To the stockyards.

Q. To the packing plant?—A. Yes.

Q. And the packing plant gathers them up at this concentration plant,—  
at these plants?—A. Yes.

*By Mr. Young:*

Q. Do all the hogs going to this plant belong to this company?—A. Yes.

Mr. SOMMERVILLE: They belong to the Canada Packing Company, the private collecting place.

*By Mr. Sommerville:*

Q. And then they are shipped from this place to the packing plant out at the stockyards?—A. Yes.

Q. And the man who takes them in, as I understand it, weighs them, grades them and pays for them?—A. That is as I understand it. Some of the commission men that are familiar with every detail, when they are giving evidence will tell you exactly.

Q. Do you know whether the quantity which is gathered there and sent to the packing plant will amount to as much as 1,000 cars a year? Do you know the quantity?—A. I understand from the stockyard people that the approximate total was 1,000 cars for 1933.

Q. So that it must pay the plant to buy these hogs, to assemble them at these places, to pay the cost of transporting them from the assembling point by rail out to the packing plant, rather than go across the road and buy them on the open market?—A. Yes.

Q. That is the situation, is it not?—A. I will make this statement: The commission firms in Toronto have tried on many occasions to co-operate with the packers and to have them send their live stock, particularly all live stock outside of hogs—calves, sheep and cattle—to the public stockyards; and the answer given by one of the packers was: "We would not subscribe to that, because that is the cheapest stock we get." That answers the question.

Q. That is the packer's statement?—A. Yes, that is the packer's statement.

Q. That the stock that he brought in direct is the cheapest stock he gets?—A. Yes.

*By Mr. Factor:*

Q. Well, I suppose the producers know that too, don't they?—A. The producer is out on the farm, and to a large extent he does not know what the trucker is going to get for his stock. With the highways to-day, the farmer cannot drive his livestock like he could in the early days, and he is anxious to get rid of his stock at the farm. He spends six or seven months getting his hogs ready for market. He spends two or three years getting his cattle ready for market; and he decides in half an hour how to sell them, just by turning them over to a trucker and saying, "take them in and get what you can for them and bring back the check."

Q. And you want us to tell the producer how to sell for a better price; is that the situation?—A. We want the buyers to buy on the open competitive market. Then the producers will go where they can get the best prices.

*By Mr. Sommerville:*

Q. At the present time they cannot get the best prices because of the want of competition?—A. Lack of competition.

*By Mr. Factor:*

Q. Why do 75 per cent of the producers there in the case of hogs still go to the plant? I have not yet received an explanation of that?—A. That letter that I read showed that that producer, on one shipment, because it was a broken load, had to get a trucker to take them in, and the trucker wanted to go to the plant, and he took them to the plant. On the other lot, he sent them in a car and sent them to the stockyard.

*By Mr. Young:*

Q. Why does the trucker go to the concentration plant instead of direct to the plant? You say it saves him hauling them through the city?—A. That is it.

Q. How much saving is that; what does it amount to?—A. It is practically six to seven miles from the Davies plant to the stockyards.

*By Mr. Sommerville:*

Q. Six or seven miles, you say?—A. Yes, about that.

Q. From the Davies plant?—A. Yes.

Q. And it is saving driving across the city a few miles in traffic?—A. Yes.

*By Mr. Young:*

Q. Does that make any difference to the rate he charges for hauling them in, if you are a farmer?—A. I don't think so. I don't think that the trucker takes any less rate. I don't know.

*By the Chairman:*

Q. The trucker gets more out of it?—A. Yes, the trucker is out for all the earnings he can get.

Mr. SOMMERVILLE: It saves the trucker some time in carting them across the city.

*By Mr. Young:*

Q. If you are a farmer selling stock through this trucker and you say, "I don't want you to stop at the concentration plant, I want you to go right through to the packing plant or stockyard," will he say that it will cost you more?—A. We had a law put in a little over a year ago whereby for all stock brought in by truck from farmers, they were to bring a bill of lading; but for some reason or another that has not been enforced.

Q. A bill of lading; you mean billed to a definite point?—A. Yes, billed to a definite point, billed to a definite salesman or to a definite packing plant; and that bill of lading would accompany the stock with the truck. That would be a great improvement over the present system.

*By the Chairman:*

Q. But that is not in practice?—A. That is not being enforced. I stated in my brief that all truckers and all agents handling farmers' funds should be placed in the same position as salesmen representing the producer. In other words, gentlemen, you cannot expect to have anything but grievances when one-half of the people in the trade are tied with fixed legislation, and the other half are free. You cannot expect anything else but grievances.

*By Mr. Young:*

Q. You are getting away from my question?—A. No.

Q. I want to know why the packing companies want these hogs delivered at these concentration camps and then later have to pay freight on them to their packing houses?—A. My feeling is that the net cost by rail will be less to them than if they bought on the public market.

Q. But the trucker may go right through to their packing plant?—A. That is my answer. I feel the net cost by rail would be less to the packer. That is the reason he buys in that way.

MR. SOMMERVILLE: If the trucker does not have to drive from the east end of the city to the west end, he is likely to get more from the truck; is not that the answer?

MR. YOUNG: No.

MR. SOMMERVILLE: That is the practice.

MR. YOUNG: Why does not the trucker sail right through the city and deliver to the packing plant?

MR. SOMMERVILLE: Because he gets no more, and he takes an hour or more longer at the job.

*By Mr. Young:*

Q. Why does not the packer give him more if he can save more by doing so?—A. We have a case in point practically similar. In Edmonton there is what they call north Edmonton and south Edmonton. There is a packer located in south Edmonton at one of these yards. He is not as large a packer as the other packers, and he was getting more surplus of hogs coming to his plant than he could use. He has applied for a commission man's licence and secured it. He is now filling orders from that concentration plant to Toronto packers.

*By Mr. Sommerville:*

Q. One packer selling to another?—A. Yes.

*By Mr. Young:*

Q. In other words, it is a reservoir where he puts the stock until he is able to use it?—A. Yes.

Q. Suppose there were no such reservoir and it had to go on into the stockyard or direct to the plant, and the plant was not able to handle it at the time, then what would happen to your market?—A. Might I answer that by quoting a personal experience which will illustrate the point?

Q. You can try to?—A. In the year 1920, shortly after the war, cattle were selling fairly high. I had bought that week in Toronto 102 carloads of live stock, the bulk of it moving to Pennsylvania. They would not arrive at destination for six or seven days. I was remaining in Winnipeg. On Monday morning the banks in Chicago announced that they would not advance money to feeders unless there was a break in the market of \$3 per hundredweight. This big break of \$3 per hundredweight on this 102 cars would have meant a \$75,000 loss. I am putting myself in the position of the man you are asking me about. The machinery stopped. The commission men would not sell in Toronto. I wired immediately to Pennsylvania to take all the stock off the market and hold off. I got on the train that night. I arrived in Lancaster on Thursday morning, a beautiful, sunshiny day. The stock was all being well fed, well cared for, well bedded, and the cattle knew nothing about the break of \$3 per hundredweight in the market. I went round and spoke to the salesmen. I said, "What do you think?" I got their ideas. I said, "Now, we won't offer anything until next week. We will keep them off the market." Practical men all over the States, in every market, and in Canada, did the same thing, held the stock and kept it off the market in that glut or break of \$3 per hundredweight. The following Monday morning Chicago came out with \$1.50 a hundredweight up. They had decided they could not break the market \$3 a hundredweight; they broke it \$1.50. My cattle in Pennsylvania had gained from 1,000 to 1,200 pounds per car over what they would have weighed the previous week. With that 1,000 to 1,200 pounds per car, and the price at that time was 13 to 14 cents a pound, you can figure what the difference in weight meant to me. When we got through, instead of having a loss of \$75,000 on that shipment, we took a loss of about \$10,000. Now, had those 102 cars been going to packing plants either in the United States or Canada, what would have happened? They would have been settled for at the break, and that \$75,000 loss would go back to the producers in western Canada, and the producer would eventually have to pay the bill.

*By Mr. Sommerville:*

Q. In the direction of the cattle, they were in his hands?—A. Absolutely.

*By Mr. Young:*

Q. You avoided that loss because you were in a position— —A. Because I had a public stockyard to sell my stuff.

Q. You were in a position to put this cattle some place and take care of it until the market recovered?—A. Yes.

*By Mr. Sommerville:*

Q. In stockyards?—A. In stockyards.

Mr. YOUNG: He had a place to put them where he could take care of them.

*By Mr. Young:*

Q. At these concentration plants you spoke of, the packer has a place to put the surplus stock until the market can absorb it?—A. No. At these concentration points, the packer moves the stock daily from these concentration points to his packing plant.

Q. He moves them every day?—A. Yes, he moves them daily, and if there is any surplus he cannot sell, like in Edmonton, he ships them out to other packers.

Q. I understood you to say that they kept these concentration plants because they were not always in a position to handle everything that comes in?—A. No. It is collected daily, and they are shipped daily.

Q. They are shipped daily?—A. Yes.

Mr. SOMMERVILLE: We will have full evidence on that from another witness.

Mr. FACTOR: More evidence?

Mr. SOMMERVILLE: On the question of surplus.

Mr. FACTOR: When are we going to get through with live stock?

The WITNESS: It is the major industry of Canada, and it is the most serious problem to be dealt with at the present time.

*By Mr. Young:*

Q. I am not clear on this point yet?—A. I hope I can clear it up.

Q. Suppose several carloads of hogs, we will say, come to this Davies plant?—A. Yes.

Mr. SOMMERVILLE: No, no carloads go to the Davies plant at all.

Mr. YOUNG: It does not matter.

Mr. SOMMERVILLE: It is truckloads.

Mr. YOUNG: I don't care whether they come in cars or not.

Mr. SOMMERVILLE: Mr. Young, you apparently misunderstand the situation. This is a place at which truckers deliver their stock for the convenience of truckers, so that they can get back into the country, and the packers then put the collected stock into cars and transmit it to their plant.

Mr. FACTOR: Mr. Young may misunderstand; I don't understand at all.

Mr. SOMMERVILLE: Well, that is the system, at any rate, that is working at the present time.

*By Mr. Young:*

Q. What I want to get at is this: Hogs are delivered to this plant?—A. Yes.

Q. If they were not delivered there, if they were all sent directly to the packing plant, there would be a glut in the market?—A. No.

Mr. SOMMERVILLE: No glut.

The WITNESS: There is no glut. There is a shortage of hogs in Canada at the present rate of delivery.

*By Mr. Young:*

Q. I mean at times?—A. I mean last year. There is no glut.

Mr. SOMMERVILLE: If there is a glut, they won't buy them even at the concentration plant. It is on the outskirts of the east end of the city in order to help the trucker to get back to get more. That is the object of it.

*By Mr. Young:*

Q. You say it makes no difference to the rate of the trucker's charges, the fact that he does not have to haul these cattle across the city?—A. I cannot answer that question. I don't think it does. I think the same rate applies.

Q. But you don't know?—A. I don't know.

*By Mr. Sommerville:*

Q. Now, with regard to Mr. Hildebrand's statement, I ask you what you say as to this sworn statement of Mr. Hildebrand that "every hog purchased direct provides the packer with the greatest club he has ever had in depressing

the price paid the actual producer." What do you say as to that, in Canada?—A. Well, I might not use the same terms as that. I say that every hog the packer buys direct places him in a better position of not having to go on the competitive market.

Q. And staying off the competitive market destroys the market?—A. Absolutely.

Q. For the producer?—A. Yes.

*By Mr. Young:*

Q. Does it not also stop that hog from going to the competitive market?—

A. I beg your pardon?

Q. A hog sold direct to the plant—A. Yes.

Q. —without the necessity of the packer going into the yard to buy that hog, does it not also keep that hog off the market, off the stockyard?—A. Yes, but that does not affect the situation, keeping it off the market. It is demand for the greater number that creates the competition and the price.

Q. If you take half the buyers off the market, Mr. Kennedy, and also take half the hogs off the market, is the result not the same?—A. Absolutely not.

Q. It is not?—A. No, absolutely not, because there is no bargaining power at the plant at all. The bargaining power is all at the public market. There is an expert buyer against the trucker at the plant.

Mr. ILSLEY: That is a different point.

The CHAIRMAN: I really think we must try and make a little more rapid progress; might I appeal to the committee to this extent? Correct me if I am wrong, but the point that Mr. Kennedy is labouring is this, I think, that by buying direct—and it is a point we have had over and over again—

Mr. FACTOR: Yes, we have had it over and over again.

The CHAIRMAN: By buying direct, the packers are placed in a position where they are not keen competitors on the open market.

The WITNESS: Yes.

The CHAIRMAN: And therefore competition in prices is correspondingly lowered. That is really the point. I imagine we have got enough evidence on it, really.

Mr. YOUNG: We have got a lot of evidence, but none of it has been convincing, Mr. Chairman.

The WITNESS: Mr. Chairman, I might answer that in this way: This committee is investigating every branch of the industry that has anything to do with the producers of live stock, and when you get all the facts and figures in front of you, you should then be able to determine where the cheap stock is, and the whole story.

*By the Chairman:*

Q. That is your evidence, in any event?—A. That is my evidence, from experience over a period of 40 years.

*By Mr. Factor:*

Q. And the remedy you suggest is to compel the buyer or packer to buy at the public stock market?—A. All live stock should be bought on the open competitive market.

*By Mr. Ilsley:*

Q. Mr. Young's point has been mentioned before, and it is important I think to have these witnesses answer it if they can; his question is this, if you reduce the demand by 50 per cent on the stockyard and reduce the supply by

50 per cent, why is not your resulting price likely to be the same?—A. For the simple reason that there is no bargaining power at the plant, and if the packer had to buy 100 per cent on the open competitive market where he is competing with other buyers, it is a different story entirely.

*By Mr. Sommerville:*

Q. When he is not competing on the 50 per cent, he reduces the whole market?

*By the Chairman:*

Q. Anyway, Mr. Kennedy, that is your answer?—A. That is my evidence.

*By Mr. Factor:*

Q. What would happen if we eliminated the stockyards entirely and had the farmers sell direct to the packers?—A. One of two things should be done, either close the stockyards, or change the system. We are perfectly prepared to take care of ourselves, everybody in the trade, but the trade is not going to take care of itself with legislation against them and to the advantage of the packer.

*By Mr. Sommerville:*

Q. What other means is there of reducing competition on the market, that is adopted by the packing interest which you find detrimental to prices on the market?—A. The publishing of tickets and the prices on tickets on the public market.

Q. That acts in the interests of whom?—A. In the interests of the large buyer.

Q. Why do you say that, will you just explain that?—A. Any salesman, or any dealer in live stock, would tell you that on a dull market when but a few sales are going over the scales at the scale house, the buyers will all go in to find the price paid for the last car of stock gone over the scale. They will find out not only the price, they will find out the purchaser and where the stock has gone. In one stockyard in the west, where a very small percentage of live stock is bought on the open market, the highest priced buyer of the packers is practically permanently on the market reporting every hour to the head office the prices that have been paid on the public market, and the purchasers. That places the large packer in this position, that he knows immediately what the small creditor has paid for his live stock; but the small competitor does not know what the packer has paid at his plant for the large supply. And what I have said before is this, that every plant in the industry should be put on the same footing. If all stock is not marketed through the public stockyard, then the same regulations that apply to the public market and to the commission houses should apply to the packing houses, then we would all be on equal footing.

*By Mr. Young:*

Q. That is to say, you would make the packer publish his prices?—A. Absolutely.

*By Mr. Sommerville:*

Q. You say that this high priced salesman or buyer for the packing plant does not buy?—A. Absolutely.

Q. But he spends his time in watching the tickets and reporting regularly?—A. He is an expert, and he knows the quality of that load, and knows exactly how it will suit, and all that information is flashed to the head office; and that is used in direct shipments, and in settling for direct shipments.

*By Mr. Factor:*

Q. Would you be satisfied if all the regulations applying to the stockyards were applied equally to the packing plant?—A. It would be a poor substitute.

*By the Chairman:*

Q. A poor substitute for what you have been advocating?—A. Yes.

Q. But it would be an improvement on the present system?—A. It would be an improvement on the present system.

*By Mr. Sommerville:*

Q. What do you say as to the feeding of lambs and cattle by the packer, and the effect that this has upon the market. Perhaps you will explain to the committee just what is the practice at present—take with reference to lambs, for instance?—A. Well, if a packer has several hundred or a thousand lambs on feed suitable for market, and just across the street from the market, and he feels that the light supply coming in from the farmers is going to raise that market to a higher point than he would like it raised, he can easily bring over a few hundred of those lambs from his feed lot and put them into the killing pen.

*By the Chairman:*

Q. And lay off from buying?—A. He would not need to buy on the public market.

*By Mr. Sommerville:*

Q. Are lambs brought in large bodies from the west and fed in central markets?—A. Quite a number, yes.

Q. They are bought in the fall of the year and fed during the winter, and then brought out in the spring in competition with the farmer, and have the effect that you have indicated?—A. Yes.

Q. Does that same condition prevail with respect to the feed lot maintained by the packers for cattle, we heard from Mr. MacLeay something about the feed lots that were maintained?—A. There are not very many cattle fed by the packers in recent years.

*By Mr. Young:*

Q. Do you think that is a practice which should be stopped?—A. I would not like to state what should be done there. In my judgment every unit should be entirely separate; in this way, the packing company should look after the packing business, the farmer should look after the producing of live stock, the commission salesman should look after the selling of live stock, the stockyard company should be only interested as a utility in providing services for the shippers and for the trade. I do not think it is part of the business for the stockyard company to be in the commission business, or any other private business; I think if every branch is looking after its end of the business, the farmer will be better served.

Q. What provision then would you make for these thousands of lambs that come in in the fall?—A. If the farmers could get the money to feed these lambs—when I was in Edmonton last fall I saw a ticket come in on a load of feeding lambs that weighed sixty pounds and were sold at a dollar forty per hundred-weight, and the farmer got eighty-four cents per lamb for these lambs on the Edmonton market.

Q. And they were sold to the packers?—A. I do not know who they were sold to, I do not know whether the packer got them or not. If the farmers could get the money to feed the lambs I think there would be more competition. In fairness to the packer I would say this that if the farmers were taking all that off, I do not believe the packer would go into the feeding of live stock.

Q. The packer is doing it because there is no other market, his only competitor for that kind of stuff would be the farmer?—A. That might be quite true.

*By Mr. Sommerville:*

Q. You say, if he could get the money the farmer might take these lambs and feed them and bring them on the market at a time it would be profitable to him?—A. Yes.

Q. And he does not do it now because of the fact that there are large shipments in the hands of feeders, or packers, that would affect the market when he does have his own lambs ready for market?—A. They know that that has been the practice for several years.

Q. And that discourages feeding?—A. Yes.

*By Mr. Young:*

Q. You were saying that the practice should be stopped; the packer should be stopped?—A. I am not dictating what the packer should do or should not do, he is a free lance; it is for this committee to get the evidence itself, and see what legislation should be put in.

*By Mr. Sommerville:*

Q. You deal in your brief with the problem of surplus cattle. The suggestion has been made that the surplus should be taken from the bottom, the lower grade?—A. And encourage the best cattle for export, absolutely; but the removal of the inferior grades at the bottom would certainly relieve the situation very materially.

Q. And how would you remove these grades, what would you use them for?—A. Animal and poultry feed.

Q. These are what you call the canners and cutters?—A. Yes.

Q. And at the present time do these inferior grades find their way into the retail trade?—A. Yes.

Q. And are these cuts which you find advertised in some of the cut-rate butcher shops which compete with the better trade?—A. I understand so, but I believe a wholesale butcher would be the one to answer that question.

Q. Yes, and do you think that there is room for the removal for the market of a sufficient number of these to remove the surplus, and would that affect the sale?—A. I feel confident.

Q. Perhaps if you will just explain what is done with them to Mr. Factor; both he and I are lawyers, we are not in the cattle industry, and we do not understand all these things.—A. Canners are boned out and used in meat products as feed for fowl and feed for animals.

Q. Mixed with other commodities?—A. Yes, and they are used for tankage and fertilizer.

*By Mr. Factor:*

Q. You mean that source would be sufficient to remove them?—A. There is quite a percentage of these low-priced cattle.

*By Mr. Young:*

Q. What price would these cattle bring on the market now if they were going to be used for fertilizer?—A. I think the price last fall was  $\frac{3}{4}$  of a cent a pound for canners, 75 cents a cwt.

Q. Why do they call them canners?—A. The old term, putting them into canned goods, I suppose.

Q. Yes, that is for human consumption; but for fertilizer, what would you call them?—A. There is quite a large percentage.

Q. Would they bring  $\frac{3}{4}$  of a cent a pound for fertilizer?—A. I am not in a position to answer that question.

Q. Do you think anybody would pay  $\frac{3}{4}$  of a cent a pound for them to make them into fertilizer?—A. I think they would.

*By the Chairman:*

Q. There is a very interesting point there; this inferior stock—we will call them by their trade name, canners and cutters—they are the class of cattle that are not supposed to be fit for sale for human consumption?—A. They are the worn-out cows.

Q. Now, as a matter of fact, at the present time a substantial proportion of that does go into the fresh meat trade?—A. As I understand it.

Q. You are not in a position to give any definite evidence on that?—A. No, I am not in a position to give evidence; the wholesale butchers could tell you.

Q. It is obtainable but Mr. Kennedy says that he cannot give us definite evidence on this point; personally I have evidence that it is. We will assume for the moment that it is done; it has a definite effect upon the price of good beef?—A. There is no question about that.

Q. Lowering the sale price for the retailer of good beef, and it also reflects upon the price of beef on the hoof in the market?—A. That is right.

Mr. YOUNG: To whom is this meat sold?

The CHAIRMAN: To you and I, if we are foolish enough to buy it.

*By Mr. Young:*

Q. To whom is it sold?—A. If you were to take a fairly thick canner and take a good cut and bone it, you might get it as hamburg steak, I don't know. I am trying to deal with the live stock industry, I am not at that end of the business.

The CHAIRMAN: I think, Mr. Young, in view of Mr. Kennedy's answer, that he could not answer it, we will get just where that is marketed from some other witnesses; I can assure you of that.

*By Mr. Young:*

Q. The point I want to make is this, it is not sold to the man who pays 25, 30, or 35 cents a pound for his meat; it is sold to the man who buys meat at 5 and 10 cents a pound, is it not?—A. I would rather you asked this question from men who are in the wholesale meat business, who know exactly what the practice is.

The CHAIRMAN: I think that is fair.

The WITNESS: There is just one point I might mention here in talking about canners, there is quite a fair percentage of canners that are condemned and that go to the tank for tankage. Then there is condemnation insurance, that has been discussed here by different witnesses, and I am not in a position to say whether that condemnation insurance is profitable or otherwise to the packing industry; but that condemnation insurance account should be audited regularly, because the producer pays the condemnation insurance, not only on the diseased animal, but on a healthy animal, and I would say that the account should be audited regularly.

The CHAIRMAN: That is right.

The WITNESS: And if the charge is too high, it should be lowered.

*By Mr. Factor:*

Q. Is there a separate account kept?—A. As I understand it, yes.

*By Mr. Sommerville:*

Q. If all cattle were marketed through stockyards, as you say, what reduction do you believe would be possible in charges both of stockyards and of commission men in the marketing process?—A. In my judgment there would be a substantial reduction both in commission charges and in stockyard charges; as to how far that reduction would go I could not answer that definitely, because as I said before when volume gets by a certain point, all these stockyard companies and commission houses must increase their overhead to give service. In other words, the commission firms and the stockyard companies have nothing to sell but service, and if they fail to continue that service, then they lose out entirely, so they must give efficient service.

Q. You think there would be a substantial decrease?—A. There would be a substantial decrease.

Q. And that would be dependent upon the volume?—A. Absolutely. I may say this, as representing the Edmonton and Saskatoon stockyards, there was a great deal of complaint over the last couple of years about the charges for hay especially at the stockyards, and a year ago in February the stockyard specialist, Mr. MacCallum, came to my office in Toronto and asked if we would consent to a decrease of 10 per cent in feed charges. I said to Mr. MacCallum, ten per cent won't have any effect at all on a carload of cattle—a carload of cattle will eat 500 lbs of hay, which is a quarter of a ton; that would be \$2.50 profit that the stockyard would be getting—\$10 a ton profit, and 500 pounds of hay would be a quarter of \$26 which we were charging at that time; that would be \$6.50 that the 500 pounds of hay would cost the producer. Now, I said if we reduced it ten per cent, that is \$2.60 a ton, and it will have no effect at all, it will simply increase our loss and not have any effect so far as the producer is concerned. I said, I will tell you what I will do; I will recommend to our trade and we will put into effect immediately if you can get the consent of the Minister, and we will reduce the charges 25 per cent instead of 10 per cent—on hay and meal, on feed—we will reduce the charges 25 per cent and we will put it into effect for a period of six months.

*By Mr. Young:*

Q. That is, you would sell the hay at \$19.80?—A. Yes, about that—hay was selling around \$20 or \$22 a ton at the time. We got regular reports from our managers at both markets month by month.

Q. This went into effect in Saskatoon and Edmonton?—A. Yes, in February of 1933. We did it conscientiously, believing that the amount, 25 per cent, might increase the volume and offset the complaint of the producer. Month after month we got our reports and there was no appreciable increase in volume at all. It had no effect and month after month our earnings on farmers' shipments of stock simply showed a loss of that much more every month.

Q. That much more. You had been taking losses on that?—A. We were making losses on producers' stock. If we did not have revenues from the railways and from rentals and car cleaning and things like that, we could not exist in the western stockyards to-day with the volume that is moving.

*By Mr. Sommerville:*

Q. So for six months' period you made a test?—A. We made a test for six months, and it cost several thousand dollars to each company, and it had no beneficial effect so far as the producers were concerned.

*By Mr. Young:*

Q. You were selling hay at \$20 a ton? What was it costing you?—A. Our hay at the present time—the wholesale price of hay in Edmonton is \$11.

*By Mr. Sommerville:*

Q. Do you remember what the relative price was then?—A. Practically the same, from \$9 to \$11.

Q. Say an average of \$10?—A. Yes, practically.

Q. You were getting a profit of \$10 a ton on the handling of hay at that time?—A. We figure approximately—the way \$10 a ton is figured is this, so there would be no misunderstanding, it is the wholesale price in the city over the period of a month that is taken. The stockyards may pay more, and they may pay less. It is the wholesale price. I am telling what happens. It is the wholesale price month by month that is taken, and it may be approximately \$10.25 or \$10.50. To that \$9.50 is added plus \$4.50 handling charge. Now, I will say this gentlemen, being an operator for a great many years, I had to take a good many chances, and there has been a great deal of planning—

*By Mr. Factor:*

Q. What do you mean by “operator”?—A. Buying and selling live stock. The last time I was in the west I met a group of producers and stockyard people, and I said, gentlemen, I will tell you what we will do. At Edmonton or Saskatoon, if the individuals say so, we will cut out provision for hay entirely. We won't have to carry hay, and we won't have to keep it insured. It will save a great expense, and we will allow the shipper or the producer to get his hay baled and bring it in, and feed it himself in the yard, and we will charge \$4.50 for the handling charges in the yard.

*By Mr. Young:*

Q. You take it from his car to his pen?—A. Let him bring it in. We are simply taking \$4.50 for the handling charge on the feeding of the cattle and looking after the responsibility in the yards. He can take hay from the stack, have it baled and bring it in and feed it himself, and every 24 hours that the cattle are in the yards we will charge a yardage, just the same as the hotel does. When you take a room in the hotel you pay so much per day, and as soon as the 24 hours are up you pay another day. You have to buy your food either outside or in the hotel, whichever you like. Now, the stockyard is run under the same principle for live stock, exactly.

The CHAIRMAN: On the European plan?

The WITNESS: On the European plan. No man will invest in a stockyard unless there is a reasonable chance to get a return on the capital invested, because the stockyard plant depreciates very rapidly. Now, there is our position, gentlemen, in the stockyards. We do not want anything but a reasonable profit on our services in the stockyards.

*By Mr. Young:*

Q. Do you keep a separate account for your hay?—A. Absolutely.

Q. How does it stand? Does it stand you a profit or loss over the year?—A. I cannot answer that question. Our general manager will be here, and I understand he will give you all details.

Q. But you are selling hay, and you buy it by the bale, do you not?—A. We sell it by the bale, 100 pounds. That is the way we sell it in Edmonton.

Q. You call a bale 100 pounds?—A. It might be 98, and it may run to 102 or 103.

Q. Does it ever run to 110?—A. I cannot answer that question.

Q. Does it ever run as low as 70?—A. Whatever the average is, the purchaser gets the benefit. One purchaser may be a little over 100, and the other

purchaser may get a little less. If we were to check over every bale and weigh it, we could not sell it for \$10 profit.

Q. I know it would cost money, but it does not often happen that a bale of hay weighs 100 pounds?—A. Well, the hay we buy at Edmonton will average 100 pounds.

Q. How about Saskatoon?—A. I cannot answer for Saskatoon. Some Saskatoon is prairie hay, buy it in southern Alberta. We will give you all those figures, Mr. Chairman.

Mr. SOMMERVILLE: We have asked the managers of certain stockyards to come to present their answer to the charges that have been made, stockyard charges and yardage, that these charges are too high.

Mr. ILSLEY: Are they going to give the capital structure of the companies?

Mr. SOMMERVILLE: Some of the financial statements have already been filed. The secretary has already written letters, and these statements are being prepared.

Mr. YOUNG: Has Mr. Kennedy anything to do with that part of it?

The WITNESS: The whole statement will be before the committee?

*By Mr. Factor:*

Q. You are the president?—A. Of the Edmonton and Saskatoon companies.

Q. You are president of the Edmonton and Saskatoon companies?

*By Mr. Young:*

Q. You are not in a position to tell us anything about your capital structure? —A. No, that will be sent to the committee in reply to the letters.

Mr. SOMMERVILLE: We had filed his morning the capital structure and financial statement of several of the yards. The balance will be in in the course of the next week.

Mr. ILSLEY: You cannot tell much about it without having someone to answer questions.

Mr. SOMMERVILLE: The managers are to be here with their statements to answer questions in respect of them.

Mr. ILSLEY: The books often do not reflect the facts.

Mr. SOMMERVILLE: They can be examined as soon as we have all the financial statements.

Mr. ILSLEY: You see certain things carried in books which do not show the real price at all.

Mr. YOUNG: You were going to have Mr. Kennedy explain this 86 cents per hundred pounds.

Mr. SOMMERVILLE: Yes. You have attached to the brief you have prepared as statement— —A. The second last page of the brief.

*By Mr. Sommerville:*

Q. You have attached to the brief you have prepared a statement showing varied shipments of different classes of livestock, showing the market charges in respect of the same and all the cost of marketing?—A. Yes.

Q. You are referring here to 11 shipments, and the date of the shipments is March this year. You show the name of the consignor, point from which they are shipped, the miles from Edmonton, the contents, cattle, calves or hogs, the total marketing charges including railway charges?—A. Yes.

Q. Now, taking the first one, you show W. Sutton, Mallaig, 121 miles from Edmonton, the total cost \$101.28, of that 58.5 per cent was railway portion of the charge?—A. Yes.

Q. 3·5 per cent was the Alberta government brand inspection?—A. Yes.

Q. 21·3 per cent was the percentage to the stockyards?—A. Yes.

Q. And 16·7 per cent to commission firms?—A. That is right.

Q. And the same thing is true of all the other shipments in the operations given here?—A. Every load.

Mr. FACTOR: If the shipment of Sutton's had been shipped direct to the packing plant, there would be a saving on the last two items.

Mr. SOMMERVILLE: The last two items amount to 37 per cent of \$101.

The WITNESS: We put in a good many shipments from one quarter of a dollar per hundred.

Mr. SOMMERVILLE: If he got the same weights and the same prices for his cattle and the same grades?

The WITNESS: Yes, if he had.

Q. If he did, there would be that difference?

*By Mr. Young:*

Q. These figures here do not give anywhere near 86 cents a hundred pounds. The total cost here is \$101. \$125 is the highest. You spoke about a carload costing 86 cents a hundredweight. How do you explain that?—A. That would be total charges.

Mr. SOMMERVILLE: These are not on the hundredweight basis.

*By Mr. Young:*

Q. \$125 is the highest here; that would not amount to 86 cents a hundred? —A. \$105.66 on a load of cattle, if there was 20,000 pounds, that would be over 50 cents a hundredweight.

Q. That is a long way from 86?—A. I say then you add your stockyard charges and commission charges.

*By Mr. Kennedy (Peace River):*

Q. There is one charge that is not in here, and that is when a man comes in with them and he is paid something?—A. The stockyard company have nothing to do with that. I will say this, gentlemen, that any information I have given here in the way of facts will be borne out by the actual facts in the books. The charges on that particular shipment were exactly as I read them.

*By Mr. Young:*

Q. Are there any other charges in addition to this that come out of the carload of stock?—A. There are no other charges except what are shown here.

Q. We had a gentleman here one day giving us evidence of charges on a carload of stock going through the Winnipeg stockyards and we took his word for it, while a day or two afterwards another gentleman came along and said that there were other charges that he did not mention at all, and of course the man was gone and we could not question him any further?—A. These charges are what was taken off the shipper or producer at the Edmonton market, and every-one of those shipments you will note has the car number, the man that shipped them,—his name is here, the station he shipped from, and you can write any man and get a copy of his invoice, and the charge is exactly what is here.

Q. The money he received was the total selling price of the cattle, less this \$101, or whatever the figure is?—A. Less those charges.

*By Mr. Sommerville:*

Q. The commission man, when he sells the cattle, pays the railway?—A. We pay the railway.

Q. Yes; he pays the stockyards?—A. Yes.

Q. And he pays his own commission?—A. Yes.

Q. And he pays the Alberta government?—A. The commission men pay all the charges, and we settle.

Q. I mean, it looks as if the commission man's charges are very high when he makes payment to all the rest, to the railway and to the stockyard; is not that a fact?—A. I didn't get that. No, the percentage 16·7 on \$101.28 would be practically \$17 per car; and 17·6 is the proper percentage on \$96.68, all the way down.

Q. Now, you have dealt with the first 11 cars; these are shipments that came in by car. You dealt with the shipments by rail?—A. Yes.

Q. Then you give four instances of shipments by truck?—A. Yes.

Q. What do you mean by the item in the first column, 50 cents a hundred-weight; does that refer to the charges?—A. That is supposed to be the trucking rate.

Q. That is to say, on the first lot, R. H. King, Colinton, 76 miles away, shipped in 2 cattle by truck?—A. Yes.

Q. And the trucking charge is 50 cents a hundredweight?—A. Yes.

Q. The whole charges were \$13.30?—A. Yes.

Q. The percentage to the trucker was 80 per cent of that; to the Alberta government one per cent; to the stockyards, is that 5·7?—A. 5·7 per cent.

Q. And to the commission firm, 12 per cent?—A. Yes.

Q. The trucker got 80 per cent of those marketing charges?—A. Yes.

Q. Then in the next case, D. J. Cranston, Fort Saskatchewan, 14 miles away, sent in 3 cattle; the total marketing charges including trucking charges were \$10.89, of which the trucker got 63·7 per cent, the government got 2·8 per cent, the stockyard got 11·5 per cent and commission firm 22 per cent of that charge?—A. Yes.

Q. In the case of the next one, H. Phillips of Lamont, 34 miles away, shipped 14 hogs; the total charge was \$13.68, of which the trucker got 66·9 per cent, the stockyards got 12 per cent and the commission man 20·5 per cent?—A. Yes.

Q. In the case of the last one, A. St. Louis, of Pickardville, 54 miles away, the trucking charge is 40 cents a hundredweight for 7 hogs; the total charge was \$7.61, of which the trucker got 69·9 per cent, the stockyards 11·7 per cent, and the commission man 18·4 per cent?—A. Yes.

Q. That is your break-up of the proportion or way in which these charges or marketing costs are distributed?—A. Yes. In every case practically you will notice that the percentage paid to the trucker, considering the mileage, is much more than the percentage paid to the railway. There is a note at the bottom, carload rate cattle shipment, 79 miles, practically costs \$3 per head; truck shipments, 76 miles, costs \$6.65 per head.

*By Mr. Young:*

Q. Would it be practical to ship one or two heads by rail; what would it cost?—A. They could get their loads together, to a large extent.

Q. Yes, if they were neighbours sufficiently close together to get their loads together; but suppose we have a truck coming in with two cattle?—A. Yes.

Q. If you shipped 2 cattle in by rail without the trouble of getting your neighbours to come together and make up a carload, what would your rate be then?

*By Mr. Sommerville:*

Q. It would be prohibitive, would it not?—A. Yes, prohibitive.

Q. Your point is that the method of marketing is unsatisfactory by truck?—A. My point is to give you the facts, gentlemen, so that you can decide for yourselves. There is the fact.

Q. I notice a shipment from Grand Prairie, 412 miles away, cost \$5 a head?—A. Yes.

Q. Now, Mr. Kennedy, with respect to the relative prices of cattle in Canada and cattle, calves and sheep in the United States in the last few months, have you any figures upon that subject which would be of help to this committee?—

A. I prepared a statement for October, November and December of 1933, and part of January, 1934, comparing the prices on Chicago with Montreal, and St. Paul with Toronto, Winnipeg, and Western Canadian markets.

*By Mr. Factor:*

Q. For what purpose?—A. The purpose was to show whether the net return to the farmer in Canada was very much below what they were getting in the United States. I wanted to know for this reason; in Edmonton at the end of October the best cattle were selling from 2 to 2½ cents per pound on the Edmonton market, the choicest young stockers for feeding purposes were selling at 2 cents per pound. They were a class of stock that we used to ship a lot of to Pennsylvania, and to find out the conditions ruling in Pennsylvania—I knew it was prohibited—but I wired from Edmonton and asked them what these young steers would sell for for feeding purposes to the farmers, the same as I used to ship; they wired back, from 5½ to 6 cents per pound.

*By Mr. Ilsley:*

Q. What does that show?—A. That was to show that the price had gone lower in Canada on the farm than it had in the United States; that is what I wanted to show.

*By Mr. Young:*

Q. What date was this?—A. This was in October, 1933.

Q. And how do you explain the fact that prices were lower here in October than they were over there?—A. The prices here were the lowest on record, and when I was out in October in Winnipeg, and Saskatoon, and Edmonton, and different places in the West, it was pathetic.

Q. What is your explanation of that?—A. What the producers were up against and the low prices.

Q. How do you explain that they went so much lower here than over there; can you give us any reason for it?—A. I have explained it already; lack of competition on the public market, and lack of money to have these cattle fed.

*By Mr. Ilsley:*

Q. I expect the difference would be due to very much more fundamental causes than mere marketing methods; it might be due to other causes?—A. There is no question about that at all, but the marketing methods—instead of the farmer getting 25 per cent of the cost of production, if the marketing methods had been changed, he might have got 50 per cent of the cost of production.

*By Mr. Sommerville:*

Q. Have you that statement?—A. If I might quote one statement here, the benefit of public markets, public competitive markets—as against direct shipments: the Saskatoon market was opened in the year 1927; we had for years no open competitive market in Saskatoon.

*By Mr. Young:*

Q. That is, no competition for the packing houses?—A. No competition for the producer when he had his stock for sale.

Q. No competition with the packers?—A. No open competition. At that time the spread—Winnipeg set the prices as a rule for Western Canada—everything was based on Winnipeg prices; and the prices that were ruling on hogs in the Saskatoon area before the Saskatoon market was opened was from 75 cents to \$1.50 per cwt. under the Winnipeg price. The largest buyers in this district prior to the establishment, and who continually bought from 500 to 700 hogs as their output, offered 50 cents to 75 cents per cwt. under Winnipeg, according to the prevailing price in Winnipeg.

Q. That is, in addition to the freight?—A. No, that was the spread to allow for freight and shipping, that was the spread between the Saskatoon price and the Winnipeg price. And then what happened: the market was opened in Saskatoon at this place where the packers could go and buy, and compete with each other, and other buyers; they started in as soon as the market was opened at a spread of 50 cents per hundred pounds between Saskatoon and Edmonton. That was a distinct advantage to the farmers all around the Saskatoon area. It was I think about a month after the market was opened that they agreed on a 30 cent differential between Saskatoon and Winnipeg, so that the opening of the Saskatoon market in giving competition, where producers of live stock could come and offer their stock for sale, the farmer was getting the difference between 30 cents and 75 cents per hundred, 45 cents per hundred pounds. Now, you can figure out what that means to the farmer.

*By Mr. Sommerville:*

Q. And that was the effect on hogs?—A. That was the effect in that district.

Q. Whether they came on the market or not?—A. Yes. I think you will have other witnesses here that are buying on these western markets; the local freight rate alone from Saskatoon to Winnipeg is 37 cents per hundred pounds. Why is the differential set at 30 cents?

Q. It should be  $37\frac{1}{2}$  at least?—A. 37 is the freight. You will have other witnesses here that will do it right along, because they can get stock to fill their orders on that market within 20 cents of the Winnipeg price.

Q. And that is because of competition?—A. Because of the competitive market, they can go there and fill their orders.

Q. And that local market then has created a situation where the farmer can get more for his hogs?—A. Than he could under the old system.

The CHAIRMAN: Now, I think that is all to-day, gentlemen. This statement of comparative prices in the United States will be filed as exhibit No. 94. Do you want Mr. Kennedy back here to-morrow?

Mr. YOUNG: I want to ask him a few questions; I might ask them now for that matter.

The CHAIRMAN: All right, go ahead.

*By Mr. Young:*

Q. You told us, Mr. Kennedy, that you had been in the export business?—A. Yes.

Q. And you exported to the United States, and to Great Britain?—A. Yes.

Q. And at that time there was considerable competition in the market?—A. Yes.

Q. Who were your competitors when you were exporting, the packers?—A. There were other exporters exporting as well as myself, quite a number.

Q. That is to say, the exporter was an effective competitor with the packer, was he not?—A. Yes, they were competitors with the packer.

Q. Why did you stop shipping to Britain?—A. Well, that is a long story; in the year 1926—

*By Mr. Sommerville:*

Q. There was a war on at any rate?—A. There was a war on in Great Britain. A war broke out between the investors in Great Britain and the large companies in the Argentine. Beef was sold in London and Liverpool at practically the cost of transportation.

Q. That is, Argentine beef?—A. Yes.

Q. And that affected the price of all beef?—A. That put practically everybody in the export business out of business. When that war started we had 14,000 spaces contracted at \$20 per head over a period of six months with the Steamship companies in Canada; that was \$280,000 of contracts out.

Q. For space?—A. For steamer space alone. We did not expect that that particular war would last over six or seven months; we had been hoping that the war would be over and that we would get back some of our losses. We had to continue filling that space month after month, and paying this heavy loss. We went out of the export business, and from that time to the present I have never seen, looking ahead for three months, any time, when an exporter could with safety contract heavy shipments, heavy space shipments, figuring that he could get a profit buying and selling on the open market. There have been times when we have got far more than they could get on the local market, and we are encouraging it all we can. We are buying from several farmers, but we have not gone back to the export business.

*By Mr. Young:*

Q. Since the export business was discontinued, the Canadian packers have had the market pretty much to themselves?—A. Export started again, I think, in 1931.

Q. In your opinion, is the exporter, coming on the market, the most effective competitor of the packer?—A. The exporter is a good competitor of the packer. The exporter yesterday in Toronto was buying on practically a higher price, except a few odd choice butcher cattle that got as high as \$6.25.

Q. He competes with the packer; they compete with each other?—A. They compete with each other.

Q. They make effective competition?—A. Yes.

Q. In your brief you make some very drastic recommendations. I do not know whether we should take up the time to-night to discuss them—

The CHAIRMAN: Would you like to call him again in the morning?

Mr. YOUNG: Yes.

Committee adjourned at 6.05 p.m., to meet again on Wednesday, April 11th, at 11 a.m.

## APPENDIX

Supplementary evidence submitted by Mr. J. M. McCallum, Chief of the  
Market Services, Live Stock Branch

(See printed record No. 11, March 20)

## SUMMARY OF LIVE STOCK MARKETINGS BY PROVINCES OF ORIGIN, 1933

—	Alta.	Sask.	Man.	Ont.	Que.	Total
<b>CATTLE*</b> —						
Shipped to stockyards....	85,042	111,824	77,398	289,167	24,614	588,045
Direct to packers.....	37,713	6,807	8,266	40,982	7,598	101,366
Total.....	122,755	118,631	85,664	330,149	32,212	689,411
Per cent direct.....	30.72	5.74	9.65	12.41	23.59	14.70
<b>CALVES*</b> —						
Shipped to stockyards...	13,703	30,092	27,502	149,963	89,429	310,689
Direct to packers.....	21,492	1,237	6,552	36,352	10,630	76,263
Total.....	35,195	31,329	34,054	186,315	100,059	386,952
Per cent direct.....	61.06	3.95	19.24	19.51	10.62	19.71
<b>HOGS</b> —						
Shipped to stockyards...	344,321	285,754	122,175	375,447	44,270	1,171,967
Direct to packers.....	687,848	204,545	122,202	981,492	21,498	2,017,585
Total.....	1,032,169	490,299	244,377	1,356,939	65,768	3,189,552
Per cent direct.....	66.64	41.72	50.00	72.33	32.69	63.26
<b>SHEEP*</b> —						
Shipped to stockyards...	68,566	54,216	40,643	184,343	124,218	471,986
Direct to packers.....	90,513	10,947	21,158	56,716	21,210	200,544
Total.....	159,079	65,163	61,801	241,059	145,428	672,530
Per cent direct.....	56.90	16.80	34.23	23.53	14.58	29.82

\*Figures for cattle, calves and sheep direct to packers are below the actual totals of these shipments as all plants were not reporting their direct purchases to the Live Stock Branch in 1933.

Figures for hogs are, of course, complete by reason of the fact that hog graders report all hogs graded at yards and plants.

HOUSE OF COMMONS, ROOM 368,

April 11, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock, the Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., of Toronto, appeared as Counsel for the Committee.

The CHAIRMAN: The Minutes of yesterday contain a record of certain documents filed, letters that were presented, the resolution to call Mr. Douglas, the names of witnesses and about a dozen exhibits which were filed; unless there is some question we will declare the Minutes adopted. Now, yesterday, we were not quite through with Mr. Kennedy, we were virtually through with him, but Mr. Young desired to ask a few questions. We will call Mr. Kennedy again.

Mr. H. P. KENNEDY, recalled.

*By Mr. Young:*

Q. Mr. Kennedy, in the brief which you presented yesterday you make certain recommendations which I would like to have you enlarge upon. You recommend the creation of a live stock marketing board to control the entire marketing of live stock from the farmer to the final markets, and to protect the interests of both the farmers and the consumers. This Board has power to fix a minimum price on best grades of live stock which would give the farmers a minimum wage. And then you go on to add, the Board could arrange for continuity of export shipment, which would tend to stabilize domestic prices, and also ensure that only cattle of the standard and type required in Great Britain be exported. The same regulations will apply to bacon hogs. I would like you, Mr. Kennedy, to explain in detail as far as you can how this marketing board is going to work?—A. In my judgment the live stock industry is the major industry of agriculture. Under present conditions relief must come from the marketing end; therefore, the most experienced men available in the marketing of live stock and live stock products should comprise an independent board with full power to put into effect whatever are the findings of this parliamentary committee.

Q. Is that the marketing board you have in mind?—A. The live stock marketing board.

Q. With power to put into effect whatever the findings of this committee are; and then if this committee find that we will stop shipments direct to the packing house and send them direct to the yards, are you going to appoint a board to see that this is done—is that what you have in mind?—A. We have in mind that there should be a live stock marketing board standing between the producer and the people who distribute the products. This is the major industry of agriculture, it is most important, and we feel it demands an independent board with the authority of the Dominion Government to follow stock through from the farm to the final market, and see that the spread between the price paid to the farmer and the price received in the final markets is in keeping.

Q. Is this board to do the marketing?—A. This board would supervise the marketing, would supervise practices.

Q. Is it to do any marketing of either live stock, or live stock products?  
—A. We have suggested that if it is in the wisdom of the board that independent units be established, one in each province, that they have the power to do that.

Q. That is, processing plants?—A. To take the low grade live stock off the market; to stabilize prices for the benefit of the producer and the consumer.

Q. The board is not to undertake the task of selling bacon in Britain?—A. Absolutely not.

Q. That is to be left to the trade?—A. That is for the trade.

Q. And is the board to undertake the task of buying cattle and hogs from the farmer?—A. Absolutely not.

Q. The board is to undertake the task of picking up classes of stock that the packers don't want?—A. The function of the board would be to segregate entirely inferior grades of live stock from regular trade channels, disposing of the product for animal and poultry feed; and that they have the power to do that.

Q. And in order to dispose of these classes they pick up, they are to ship them into the provincial packing plants?—A. Yes, and if the board feel that the spread between the price received for bacon hogs—for select bacon hogs—and the price in the final market is not in keeping, that this board will have the power to establish independent units for the processing of select bacon, which would establish confidence in the minds of the farmer for the whole country. That would take only 2,000 hogs weekly per plant; according to the packers we could increase our exports to Great Britain by two million hogs, so that the packing industry could still increase their business by a million and a half for export.

Q. That is, the packing plants you are going to establish in each of the provinces are going to do two things: one is to buy a sufficient number of bacon hogs to steady prices; the other is to take these poor classes off the market and make fertilizer, or anything like that, out of them?—A. That is correct.

Q. That is to be done at the public expense?—A. Not at the public expense; at a profit on capital invested.

*By Mr. Boulanger:*

Q. Who would supply the capital?—A. That is for the government to decide.

Mr. FACTOR: It being a small matter, you will just leave it to the government.

*By Mr. Sommerville:*

Q. Your thought there apparently is that these plants being built for a definite purpose will require a minimum amount of overhead in operation?—A. That is right.

Q. And being constructed for the purpose of producing bacon for the English market will produce it at a minimum of cost?—A. That is right.

Q. And will not have to meet by way of overhead some of the charges that may be involved in the larger plants now existing?—A. That is the thought.

Q. Yes, it is an economical unit for the producing of bacon for the English market under the quota?—A. Yes.

Q. And whether the money is to be provided by the government, or from private sources, is a question to be worked out?—A. And the management of the plants under government control.

*By Mr. Young:*

Q. And it is your idea that these plants, established and operated by the marketing board, should be located in each of the nine provinces?—A. In the five producing provinces.

Q. Just elaborate that, if you will; you think it will give the farmers a better price, and enable them to sell bacon to better advantage, than they will obtain from the plants of the packers which are privately owned?—A. It has been stated by the packers in evidence that there is not a feeling of confidence at the present time between the farmers of Canada and the trade.

Mr. FACTOR: Mr. MacLean made that statement.

The WITNESS: That confidence would be established under this system in the minds of the farmers.

*By Mr. Young:*

Q. You think then that if we had half a dozen, or five, publicly owned packing plants in this country, and the farmers were still getting deplorable prices for their products, that they would be satisfied at least that there was nobody making a rake-off out of it, and they would be content to take what they got?—A. They would be better satisfied than under the present system.

Q. That has not been my experience?—A. Yes, I feel they would be satisfied.

Q. You spoke yesterday about the basic fixing of prices on a cost-plus basis; that is to say you were going to have I suppose this marketing board dictate the price that the farmer could get for his hogs on a cost-plus basis; why not put the packer on a cost-plus basis also—the yard was to get its services rewarded on a cost-plus basis; the packing plant was to get rewarded for its services on a cost-plus basis; and then the product was to be sold on the British market, or whatever market we have, at the market price. Now let us suppose you fix the price of the bacon hog at 6 cents a pound at cost-plus to the farmer; and add your cost-plus to the railways, the yards, the packers and all the other chief handlers; and then you find that the British market will not pay sufficient for that hog to give you this price—what are you going to do then.

*By Mr. Sommerville:*

Q. You are not going to pass it all on to the farmer, are you?—A. There is no question about that, it will not be passed on to the farmer.

*By Mr. Young:*

Q. Who is going to absorb the loss?—A. The principle I stated was that the principle of marketing live stock in Canada should be that the farmer should get a living, a small profit at least.

Q. That is not what I am asking you, what I am asking you is this: when you have put all of your cost-pluses together, and bring the cost of your bacon to say a shilling a pound in Britain and the British market won't pay it; what are you going to do with your bacon.

Mr. SOMMERVILLE: Mr. Young, has the witness anywhere in evidence said that he is paying cost-plus to the railways, or cost-plus to anything?

Mr. YOUNG: He said that yesterday.

Mr. SOMMERVILLE: Was it not your question that contained the statement rather than his answer?

Mr. YOUNG: If I put words in his mouth I am not the only one.

Mr. SOMMERVILLE: I do not think that is correct Mr. Young; the statement of the witness was that the principle was wrong that the farmer should take what is left and that therefore it ought to be changed; because he suggests a cost-plus basis for the farmer that does not involve that the railway shall be

cost-plus, that the packer shall be cost-plus, and that everybody shall be cost-plus added to that. His statement simply was that the farmer, in order to encourage production of basic commodities, ought to be placed in a position where he does not produce at a loss, and that system worked by which everybody else got a cost-plus except the farmer.

Mr. FACTOR: What a splendid witness you would make, Mr. Sommerville.

Mr. SOMMERVILLE: I want to be fair to the witness, and I think you want to be fair too, Mr. Young; but you do not want theories about something that is not contemplated, or not covered by his brief at all.

Mr. ILSLEY: He contemplates fixing prices to the producers, and the next question is what are you going to do.

Mr. KENNEDY (*Peace River*): And then the recommendation is perfectly plain; fix the market price on the best grades of live stock so as to give the farmer a minimum wage.

The CHAIRMAN: The witness is giving us his opinion. I would suggest to Mr. Young that he let the witness offer his opinion; and let us get on. I appeal to Mr. Young to accept the witnesses evidence for what it is worth, and then we will discuss it later.

*By Mr. Young:*

Q. I might ask the witness if Mr. Sommerville stated the case correctly; is it your idea then that the farmer get cost-plus and then, if there is a shortage, the other interests involved absorb the shortage?—A. My statement was I was comparing the present system which the packers said was that they sold the product at the last dollar they could sell it for: that they have what they consider a reasonable profit and all the charges down to the bottom and gave the farmer what was left. My statement was that that was not the correct system, that the correct system was to start with the producer, and if it can be worked out, I say that the committee should have power to fix a minimum price. It is not necessary that they do establish a minimum price.

*By the Chairman:*

Q. You mean the proposed board?—A. Yes, the proposed board; I say compare one system against the other.

*By Mr. Sommerville:*

Q. At the present time there is no controlling factor in the present system?—A. None whatever.

Q. And therefore the loss is passed on to the farmer?—A. Absolutely.

Q. Your thought was that if there is some controlling factor that that loss might not be passed on to the farmer?—A. That is my thought.

*By Mr. Factor:*

Q. Who would sustain that loss?—A. When all your investigations are complete, you will have a true picture of the net return to the farmer during 1933 for his production, and you will have the net return of every firm or of every unit between the farmer and the final market before the committee, and you will know whether the producer under the system in existence in 1933—whether it was the fair system for the producer of live stock in Canada.

*By Mr. Sommerville:*

Q. May I ask you this, Mr. Kennedy: If the results of this system show the packers to have made millions last year and the farmers to have lost, you

say then there should have been another adjustment?—A. I say this, that the marketing board co-operating with all the units of the industry would raise the market price, without the necessity of establishing a minimum price.

*By Mr. Young:*

Q. In western Canada at the moment we have this picture thousands of farmers are raising live stock and losing money on them, going broke on it. We have also the largest packing establishment in the country going broke at the same time, and the only people engaged in the live stock industry as far as I have been able to discover in the west are the stockyard people, who are making a profit?—A. My answer to that is that you will have all the figures when the investigation is completed, and then you can determine by the facts that are before you.

Mr. SOMMERVILLE: We will have the auditor's statement of the various packers, Mr. Young.

*By Mr. Factor:*

Q. Suppose Mr. Young's contention is correct, what would the remedy be, if the stockyards were the only people making money in the western provinces?—A. If the stockyards companies are making more than a reasonable profit, the board would soon see that they did not make more than a reasonable profit. At the present time the Dominion government are controlling the earnings of the stockyards companies and they are not controlling the earnings of the packing industry.

Q. They are not controlling the earnings; they are merely fixing—A. They are not controlling the spread.

*By Mr. Young:*

Q. Your idea, summed up in a sentence, is this, that this marketing board would be a sort of umpire; they will not market stock unless they build these packing plants you spoke of; they will simply see that fair practices are carried on through the industry?—A. That is my thought.

Q. But they are not going to market any stock, either live or dead?—A. Unless these units are established.

Q. Yes, unless these units are established.

*By Mr. Ilsley:*

Q. One question, and I think it is a practical one; you have thought this proposal through, this proposal of setting up a board which will guarantee a fair return to the producer. You have given some thought to that, I presume?—A. I have given it some thought.

Q. Yes, that is in your recommendations?—A. Yes.

Q. With regard to the exportable surplus, where the export market would not return a price sufficient to pay the middleman and the producer that guaranteed price, is there any alternative to a government contribution to the producer or to the government interests? Is there any alternative to that? Do you understand, do you follow me?—A. Yes.

Q. I have not put it very well, perhaps, but Mr. Young led you right up to that point and said what would you do if you are guaranteeing the producer 6 cents, because that is his cost of production plus a fair profit, and guaranteeing the middlemen and transportation agencies something which is fair for what they do—they would have to have that; but then you find that when you get a foreign market which does not pay all that, where is the money coming from? You must have given some thought to that?—A. Well, my statistics show that 97 to 98 per cent of the cattle marketed in Canada in 1932 and 1933

were consumed in the domestic market. My recommendation to-day was—I have not got statistics to show the exact percentage of the inferior animals, canners, cutters, et cetera, but for the sake of argument say it was 10 per cent, and that 10 per cent was removed off the bottom of the market and taken out of the regular channels you would have a better quality of meat to offer to the consuming public, and you would have created a shortage between production and demand of practically four or five or six per cent.

Q. So that you would have no exportable surplus?—A. We would have no exportable surplus.

Q. And you could fix the price to the consumer in Canada, the board could?—A. Yes.

Q. A sufficient price to pay everybody?—A. That is what should be done.

Q. That would not apply in the case of hogs where you have a big exportable surplus?—A. No.

The CHAIRMAN: Only 10 per cent.

Mr. ILSLEY: That is a lot of hogs.

*By Mr. Young:*

Q. But Mr. Kennedy proposes to increase that by 2,000,000 hogs?—A. Well, the quota provides for an increase.

*By Mr. Ilsley:*

Q. I think you have made that pretty clear with respect to the domestic market, but without an exportable surplus, what would you do? Would you not have to have something like the Patterson scheme, where there is a fund, get it from some source?—A. That would have to be worked out by this committee.

*By Mr. Sommerville:*

Q. By the board?—A. By the board, which would be appointed by the Dominion government. I might say, gentlemen, as far as the consumers are concerned in case nothing is done, these recommendations may appear drastic. They are not as drastic as 1933 conditions for the Canadian farmers, and if cattle prices are allowed to go down in the fall of 1934 to the low levels of 1933 whereby the western Canadian farmers only net back  $1\frac{1}{2}$  to 2 cents per pound for their choicest young stock, which is not half the cost of production, the situation would be tragic. Gentlemen, let us take a forward, constructive step and remedy present conditions. Looking at it from the consumers' point of view alone, it is a protective measure, for if the farmers are put out of the production of cattle, many cents per pound would have to be added to present prices paid by the consumers over an extended period before you could get the farmer again producing the best grades of beef ready for the market. Those are my findings.

*By Mr. Kennedy (Peace River):*

Q. Mr. Kennedy, do you feel or do you think there is need for some supervision, in addition to what we now have, over the cattle that are now being exported to Great Britain?—A. That is in the recommendation, Mr. Kennedy.

*By Mr. Sommerville:*

Q. You suggest that that board have authority to regulate or arrange for the continuity of export shipments?—A. Yes.

Q. That is your second recommendation?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. Is that because you think the quality of all the cattle going forward is not suitable for the British market?—A. I am confident there has been cattle that has been exported that was not suitable for the British market.

Q. With regard to the bacon exports—I don't know whether you will want to answer this question or not; you can answer it or say that you don't want to, just as you choose—do you know or do you think that the bacon going forward is nearly all the best quality of bacon that can be sent forward to the British market?—A. Well, government statistics show that in the year 1933 there was only a little over one-half million select hogs, according to government grade, in Canada. Testimony from the packers has shown that the domestic trade takes quite a large percentage of those select hogs. Testimony already given was—I am not posted on these statistics—that the exports of bacon last year were 600,000 hogs. Now, gentlemen, you can decide. I don't know what has been going forward to the old country.

The CHAIRMAN: As a matter of fact, Mr. Kennedy, we can get the precise information on that, if you wish.

Mr. KENNEDY (*Peace River*): I would like that.

The CHAIRMAN: I will ask that a note be taken of that. Would you do that, Mr. Parry, and we will get the precise information on that. I don't know that Mr. Kennedy here could give any more direct answer than he has.

Mr. FACTOR: We are also getting the financial structure of the stockyards, are we not?

Mr. SOMMERVILLE: Yes, and the exchange men too.

The CHAIRMAN: Are you through with Mr. Kennedy?

*By Mr. Sommerville:*

Q. You were going to file with the committee a report showing the decline in the shipments, as well as the stockyards in Canada for the last ten years?—A. Yes, these are printed statements, public statements, for the past ten years, for the seven prominent stockyards in Canada, which will show the total receipts for the information of the committee.

Q. Showing the total receipts of all classes of cattle and live stock?—A. Marketed in Canada.

Q. On those various markets during the last ten years?—A. Yes.  
(Statements of live stock receipts filed, marked Exhibit No. 95.)

Mr. FACTOR: You have given us a large fund of information; I hope I will be able to digest it.

The WITNESS: Thank you. Any service we can render to help out the industry, we are always ready to do our best.

The witness was discharged.

GORDON OSWIN, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Oswin, you are a salesman at Toronto, are you not?—A. Yes.

Q. And you are employed by whom?—A. The United Farmers live stock department.

Q. As a salesman in what class of live stock?—A. Hogs.

Q. And you have been dealing exclusively in hogs for how long?—A. For the last eleven years.

Q. You are a specialist?—A. Mr. Chairman, just before you go any further, after hearing the discussion on it the first thing this morning, and you have heard so much evidence on hogs, probably you could make the questions just as short as possible and we can get on with the next witness. There has been a lot of discussion; there is no doubt about that.

Q. All right, we will ask you a few very direct questions, Mr. Oswin. On the Toronto market, I understand that about 30 per cent of the hogs slaughtered in Toronto go through the stockyards, approximately?—A. That is right.

Q. And about 70 per cent go direct to the plant?—A. That is correct.

Q. What is the effect on the stockyard of direct shipments to the packing plant?—A. Well, it helps to keep the market down.

Q. And do you sell your hogs on the Toronto market on a fixed differential?—A. Yes, I do.

Q. Who fixes the differential?—A. The packer fixes the differential on cuts and the government on the selects.

Q. What are the differentials on the cuts?—A. The differentials—the basic price is bacon hogs. The differential on butchers is a dollar a hog, and on a heavy hog a dollar and a half and on the light hog a dollar per head.

Q. And on sows?—A. \$2.50 and \$3.

*By Mr. Young:*

Q. There is just one of these differentials fixed by the government, is that right?—A. Just the select hogs.

*By Mr. Sommerville:*

Q. That is, the premium is fixed by the government?—A. By the government.

Q. That must be paid, that dollar a head, on all selects?—A. Yes.

Q. And all other differentials are fixed by the packer?—A. Absolutely.

*By Mr. Young:*

Q. What is the meaning of "fixed by the packer"?—A. They set the price.

MR. YOUNG: I thought we had evidence here that there was some association in which representatives met—

MR. SOMMERVILLE: No, that is not so.

THE WITNESS: The swine committee fixes the premium of one dollar a hog; that is for the select hog.

*By Mr. Boulanger:*

Q. That is a dollar above the market price?—A. A dollar above the bacon hog price.

*By Mr. Sommerville:*

Q. How do you learn of your differentials?—A. How do we learn of our differentials?

Q. Yes, on the cuts?—A. The packer notifies any time when he feels that the cut should be larger.

*By Mr. Young:*

Q. The differential changes from time to time?—A. It has changed since it was first started.

Q. It does not change from day to day?—A. No, not the differential.

*By Mr. Sommerville:*

Q. The differential changes; how long ago since any change took place in the differential?—A. Maybe two or three years ago.

Q. Since there has been any change in the differential?—A. Yes.

Q. And when you get notice of the change of differential, whom do you get it from?—A. From the packer buyer.

Q. From the packer buyer?—A. Yes.

Q. From both of them?—A. Yes.

Q. And at the same time?—A. Mostly—the same day or a day after.

Q. So you say this differential is fixed by the packer?—A. Yes.

Q. Do you agree that sale by the fixed differential is the best method of selling hogs?—A. No, I don't think so. The method of selling hogs in Toronto is different from what it is in Montreal. We sell our hogs in Toronto chiefly on the weight-off-car basis, and f.o.b. feeders and truck hogs. In Montreal they are selling chiefly fed and watered.

Q. How do you think hogs ought to be sold?—A. On the fed and watered basis, with no fixed differential.

Q. On grades?—A. On grades.

Q. And each grade sold?—A. Each grade kept separate.

Q. And sold on its merits?—A. Yes.

*By Mr. Factor:*

Q. By auction, you mean?—A. Well, that has to be worked out. We have never worked under the auction system in Toronto.

*By Mr. Sommerville:*

Q. That is to say, you can grade your hogs out and sell them by separate grades just as you sell them now, without auction?—A. Absolutely.

Q. Or another method might be, after the grades are separated out, to sell those grades by auction?—A. If the auction was in effect, yes.

Q. But your thought is that following your present system, you would sell your grades as grades?—A. Yes.

Q. The heavies as heavies and the lights as lights?—A. As grades; and I think it would have a tendency to give the producer more money for his hogs.

Q. Why would it give the producer more money for his hogs?—A. Because you could get outside orders for the different grades in carload lots.

Q. Do they use those various hogs in domestic trade, on these outside orders?—A. Yes, I have had orders from outside plants.

Q. From whom?—A. Outside plants. There are two plants in Kitchener, two in Hamilton and one in Stratford. We could get orders for these out-grades in carload lots.

*By Mr. Factor:*

Q. When was this differential first brought into force?—A. When hog grading started.

Q. How long ago is that?—A. That is about thirteen years ago.

Mr. SOMMERVILLE: In 1921.

*By Mr. Factor:*

Q. It has been fixed by the packer ever since?—A. Yes. We have been working on a fixed differential ever since hog grading started.

*By Mr. Sommerville:*

Q. Up to that time, hogs were sold on a flat basis, were they not?—A. Yes.

Q. The buyer and the seller went in together and looked over a lot of hogs?—A. And bought them, all lights and heavies there.

Q. They bought them according to?—A. On quality.

Q. On quality?—A. Yes.

Q. And they bought them on their own inspection?—A. Yes.

Q. And as between the two of them, they settled on what they regarded as the price for them?—A. Yes, that is correct.

*By Mr. Boulanger:*

Q. That is the practice in force in Montreal yet?—A. Yes, that is the practice in force in Montreal. They sell their hogs on the fed and watered basis.

*By Mr. Sommerville:*

Q. Except that the selects must get a dollar more than what the bacon gets in Montreal. Do you have any wholesale butchers on your market?—A. We had had such few wholesale butchers on the market that is really not worth while mentioning.

Q. Lately?—A. Well, at any time.

Q. What became of the wholesale butchers that you did have?—A. Well, they suddenly disappeared.

Q. Where did they get their supply?—A. From the processor.

Q. From the packer?—A. Yes, from the packer.

Q. Why does the packer sell to the wholesaler?—A. There is only one reason I can see myself, to take them off the market, see that we don't have too many of them.

*By Mr. Factor:*

Q. Could he sell cheaper to the wholesaler?—A. They must sell cheaper to keep them from buying hogs to kill themselves.

*By Mr. Sommerville:*

Q. That keeps that competition off the market?—A. Yes.

*By Mr. Ilsley:*

Q. I thought there was another reason—from Mr. Kennedy's brief—and that was where you have this differential system, with lights sold as lights, that butchers do not want to bid on them?—A. With no set differential, a small butcher could go on the yard and bid for your under-grades; but that is not the system we are working under. We are working under the fixed differential system, and have been for thirteen years.

Q. That is one reason why he is not there?—A. Yes.

*By Mr. Sommerville:*

Q. What increased direct shipments to the plants in the last few years?—A. Well, I would say trucks and the set differential.

Q. The set differential?—A. Yes.

Q. Have the packers encouraged the truckers to bring direct shipments to their plants?—A. Well, they keep in touch with all the truckers, and advise them as to what the markets are.

Q. Have they established receiving stations for them at which to deliver their stuff?—A. Yes, they have receiving stations. There is one at the Don. There is one at Swifts' plant. There is one at Gunns' plant. There is one at the Canada Packing Company plant. There is one at Ingersoll and there is one at Brantford.

Q. Take the one at the Don in Toronto; where is it located?—A. It is in the east end of Toronto.

Q. Is that in the old Davies plant?—A. Yes.

Q. And the truckers from the east bring in their supplies of live stock there?—A. Not necessarily truckers from the east, but it is chiefly truckers from the east that come in there.

Q. And when they come to that plant, they deliver their live stock to that receiving station?—A. Yes.

Q. At that receiving station who is there to buy them?—A. There is one man employed by the packing company. He buys the stock. He weighs the stock; and if it is hogs, he grades the hogs. There is no government grader at those plants, outside of Harris's. There is one at Harris's.

Q. Then he issues the tickets for these purchases which he makes?—A. He makes out a slip with the weight of the live stock that he is buying and hands it to the trucker.

Q. And the trucker cashes that at the bank?—A. And the trucker in turn can go and cash that at the bank, and pay the farmer in cash, or have a separate bill made out for him, if he wants to.

Q. The trucker may have a separate bill?—A. When the truck is delivering live stock, the party that is buying it does not know whether it belongs to him or an individual farmer.

Q. And the payment is made to the trucker?—A. Yes.

Q. Unless he directs otherwise?—A. Unless he directs otherwise.

*By the Chairman:*

Q. Are these truckers bonded as are the commission men?—A. No. There was a law passed here, I think it was about a year and a half ago, in regards to a bill of lading. The bill of lading was directing the live stock as to where it should go, but it was never carried out. I think that that tendency did take quite a bit of our live stock off the market.

*By Mr. Sommerville:*

Q. Have you had instances where farmers inquired from you as to what price was obtained for the hogs, when you found they did not go to your market at all?—A. Yes, oftentimes they have been there, probably outside of the gate.

Q. And you found they had been sold to the packer and have gone to the plant?—A. They have been sold to the packer and not come to the market at all.

Q. Do you know the extent of the receipts at the receiving station at the Don?—A. I would say it is somewhere around 1,000 cars a year.

Q. Around 1,000 cars a year at this one receiving station?—A. Yes.

Q. And do they clear every day?

*By Mr. Young:*

Q. How long do they stay there?—A. They are cleared at noon and night. There is a shunt comes up every day at noon, and there is another one comes up in the evening.

Q. And clears them right out?—A. Clears them right out. They go from the Don to west Toronto, and the shunt costs \$6 a car.

*By Mr. Sommerville:*

Q. And that is paid by the packer?—A. Yes. And the buyer is paid by them.

*By Mr. Young:*

Q. How many truck loads would there be in a car?—A. They could put 80 hogs in a car, which would be from two to four trucks.

Q. Well, say three trucks?—A. Yes, three trucks.

Q. How much would it cost to take three truck loads of hogs across Toronto?—A. It is about six to seven miles from the Don across Toronto. The way I would answer that is that any trucker going into this plant charges the Toronto rate, whatever the rate may be. I don't know what he charges to go across Toronto.

*By Mr. Sommerville:*

Q. He gets the same rate to the plant as to the receiving station?—A. The way I find the trucker at the present time, competition is so strong that they work on a flat rate, and in order to keep their truck up and to cut the other man off, he brings his stock in to the plant. That is on account of the strong competition in trucking.

Q. Let me get that clear. Will you just amplify that; he works on a flat rate?—A. A flat rate.

Q. That is, he agrees to market the farmer's cattle for so much?—A. Yes, for so much. For instance, a man coming in to the stockyards may be charging 35 cents flat.

*By Mr. Factor:*

Q. 35 cents a head?—A. No, 35 cents a hundred, flat rate. Out of that he pays all the charges, that is commission, yardage and 5 cents insurance. That is fire insurance.

*By Mr. Young:*

Q. Do you mean to say he does not charge any more for hauling that all the way through Toronto than he does for hauling to this assembling point at the Don?—A. I would not say that he does, no. I don't think so.

Q. You would not say that he does not?—A. I don't think he does, that is in Toronto, at the east end of the city, about 6 miles away.

Q. There is a difference of 6 miles in the haul through the city, and I want to know if the truckers will do that 6-mile haul for the same money?—A. Here is the way I have answered that; I am trying to answer it now. Truck competition is so strong at the present time that there is no set rate, but they are working on a flat rate. Probably the man who is coming in to the Don is working at a 20 cent rate, for his own benefit. The farmer does not realize any more if he comes in to the Don at a 20 cent rate and his opponent goes to the stockyards at a 30 cent rate. The farmer just gets the same price.

Q. You say "probably," but you don't know that; there must be a difference in the cost of hauling hogs from the east of Toronto to the Don and hauling them all the way through the city?—A. No, I don't think there is.

*By Mr. Sommerville:*

Q. That is your judgment on that?—A. Yes, that is my judgment. I don't think there is.

Q. And you have a lot of these truckers in daily with you?—A. I have talked to them.

*By Mr. Factor:*

Q. Are these truckers individuals, or are there any companies operating?—  
A. There are transport companies operating. There is the Maguire Transport at Stayner. I don't know how many trucks they have.

*By Mr. Sommerville:*

Q. Are they not mostly individuals?—A. Chiefly.

Q. Chiefly individuals?—A. Yes.

Q. Do you know of packers that pay any bonuses to truckers to bring stock in there?—A. I don't know of any Toronto packer paying a bonus, but I do know of one outside plant paying a bonus.

Q. What do they pay?—A. They pay 10 cents a hundred on live stock, on hogs, at the end of each month.

Q. What is that for?—A. Well, after consulting the buyer of that plant and asking him why he paid that 10 cents a hundred he answered me by this, he said, "We pay our trucker 10 cents bonus at the end of each month to look after our interests." I says, "In what way?" He says, "Well, when our trucker goes to the farmer's yard, he sees that the hogs are not overfed and not bruised loading them into the truck." That is his answer to me. That accounts for the 10 cents a hundred bonus.

Q. He gets that additional 10 cents a hundred; that does not go to the farmer?—A. No, that goes to the trucker. He gets that at the end of each month.

*By Mr. Young:*

Q. Is there a stockyard at the point where this packing plant is located?—  
A. No, it is outside. It is at Hamilton.

Q. He can't be paying out that 10 cents a hundred for stock in order to have them bring it to the plant; it must be for some service?—A. I gave you his answer to me. I consulted him on it, and not only that, I consulted two or three of his truckers going in there to really find out if they were paying 10 cents a hundred bonus.

*By Mr. Sommerville:*

Q. By reason of the operation of this flat system, of marketing by a trucker, he saves the marketing fee?—A. Yes.

Q. That would otherwise be paid if he brought them to the market?—A. And he knows his rate of trucking.

Q. And the result is he gets the benefit of that saving?—A. Yes, he gets the benefit.

*By Mr. Factor:*

Q. Who gets the benefit?—A. The trucker.

*By Mr. Sommerville:*

Q. The trucker gets the benefit of it; the farmer would expect him to pay the market fees if he comes to the market?—A. Well, there is often times when the trucker will leave the farmer's yard and he looks for his stuff to go on the market, and the trucker will take him the cash back to pay it to him, and he does not know where it goes to.

*By Mr. Factor:*

Q. Does the farmer make any arrangement with the trucker as to where that cattle goes?—A. He may tell him to go to the stockyard. We have had, at times, letters coming in to our office inquiring about live stock that a certain

trucker brought in for us to sell, and they never arrived to our company at all. In fact, they didn't arrive on the stockyard.

*By Mr. Sommerville:*

Q. Went to the plant?—A. Yes.

*By Mr. Young:*

Q. Are there any truckers going direct and going to the yards?—A. Going direct and going to the yards, yes, we have a big truck business.

Q. Some of the truckers go to the yards as a matter of practice and some go to the plants as a matter of practice?—A. Yes.

Q. Depending on the fancy of the truckers?—A. We have on Monday, Tuesday, and Wednesday, I would say, maybe 1,800 cattle off trucks.

*By the Chairman:*

Q. In the yard?—A. In the yard.

*By Mr. Sommerville:*

Q. And frequently that is because the farmer has directed them to go to the stockyards?—A. Go to the yards; and oftentimes they come with them and other times they do not.

Q. Now, when these truckers take this stock to the plants, whether it be to receiving plants or to packing plants, the grading you say is not done by the man who buys them?—A. We are under government grading at the stockyards, and government weighing; our weighmaster is under government control.

Q. That does not exist in all these plants?—A. No.

Q. It does not exist at these receiving stations?—A. The plant employees do all their own weighing and grading, but, as I said before, Canada Packers have a grader there grading hogs.

*By Mr. Young:*

Q. Is there any complaint about the grading at the plant?—A. There are times when you have complaints on both sides.

Q. You don't have complaints on the government graders?—A. Yes; not a couple of weeks ago I had a load of hogs come into me. The man came in with fifteen hogs, put them over the scale and had them graded. The farmer was with him and they were both dissatisfied. The farmer came to me and said, "Gordon, I am to take these hogs out." I said, "What is the trouble"; and I asked him to bring them in. It appears they were dissatisfied with their grades. I said, "I have an outside order for them on which I can give you"—the market price was  $9\frac{1}{4}$ —"I can give you \$9.40 for the hogs, with your butchers at 50 cents apiece off." He said he had better take them out because he was dissatisfied with the grade. So the farmer goes back and takes them to the plant and they give him \$9.25, with the butchers \$1 a hog off.

Q. That is, the plant gave him under the fixed differential a dollar off, and gave him \$9.25 instead of \$9.40, which you were willing to give him?—A. Yes, \$9.40, less 50 cents off for butchers.

*By Mr. Factor:*

Q. Do you hear any complaints about weighing at the plants?—A. No, I have heard complaints, but I could not really say that there is anything the matter; in fact, there has been live stock come back from the plants and it has weighed more in the market. They read their beams at the plants and we have the automatics which print a ticket. They just read their beam, and it is quite possible that the man reading it might make a mistake.

*By Mr. Young:*

Q. You mean, that when the shipper is not satisfied with the weight, he brings the stock over to the yard and gets a better weight?—A. Yes; I would not say there is anything wrong with it. I was a weighmaster myself at one time, so perhaps I have a better idea of just what chance there is for error; plenty of mistakes are made.

Q. Does it ever happen the other way, that they take their load to the plant and get a better weight?—A. I have never heard of it.

*By Mr. Sommerville:*

Q. How do you get your prices for hogs, Mr. Oswin?—A. We get prices from the packer-buyer from day to day.

Q. From the packer-buyer—now, let me take last week, last Thursday; what was the price given by the packer-buyer?—A. The price given to me last Thursday for Saturday's load, \$7 f.o.b.

Q. And that was given to you by the different packers?—A. Yes.

Q. That was the price given to you by both buyers?—A. Practically the same thing.

Q. And are they practically the same all the time, or do they vary?—A. Generally always the same.

Q. That is, they bid you 7 cents for a hog loading on Saturday?—A. Loaded Saturday, to arrive on the market on Sunday.

Q. They are available for market on Monday?—A. Yes.

Q. Then you notify your drovers in the country?—A. We notify our shippers and drovers in the country what the guaranteed price is.

Q. And seven cents is the guaranteed price?—A. Yes.

Q. And then they load their hogs?—A. They ship their hogs to the market, and when they arrive, we try to get the best we can for them.

Q. But when they get on the market you have guaranteed seven cents?—A. Yes.

Q. And you endeavour to improve that?—A. Yes, I try. There was a little discussion yesterday in regard to cables from the Old Country. I might say I have known occasions for the Old Country bacon price to drop no more than once a week. The packer as a rule gets his at the yard Friday, and the government office in the Live Stock Exchange get their cable the same day, and by them getting it, we are able to get in touch with the government officials, and find out whether the market is strong or weak; and in doing that, it enables us to base our ideas on whether the market is going to be strong or weak.

*By Mr. Young:*

Q. The British price varies once a week; your price varies, how often?—A. Our prices may vary three times a week, it all depends on how far down the export market goes.

*By Mr. Sommerville:*

Q. When these particulars are received, they have an effect on the market?—A. Yes. It depends on whether the other markets are strong or weak. I base my judgment as to what I should ask on conditions; of course I do not always get what I ask.

Q. It would be an ideal market, if you could?—A. I was getting 25 cents a hundred over on Monday before I came down.

Q. Before you came down on Monday what did you sell at?—A. From \$7.15 to \$7.25; that is, on an f.o.b. basis. I might state here that the difference between f.o.b. and truck hogs is 35 cents a hundred; and the difference between f.o.b. and weighed-off-car hogs is 75 cents a hundred.

Q. Which is the higher?—A. F.o.b. is lowest; f.o.b. is \$7.15, \$7.45 or \$7.50.

Q. Hogs f.o.b. are usually a little inferior to hogs arriving by truck?—

A. On f.o.b. hogs the packer pays country weights and freight. Weighed-off-car hogs are hogs arriving during the night which are weighed off the cars on arrival.

*By Mr. Factor:*

Q. Are they weighed at the farm?—A. No, they are weighed at the station.

*By Mr. Young:*

Q. And the packer will accept these weights?—A. Absolutely, yes.

Q. Who is at the stations to do the weighing?—A. Sometimes the drover himself; at other stations they have an official weighmaster.

Q. And the packer will accept the drover's figures; not put them over his own scale?—A. Yes, he will most likely weigh them at the railway station.

Q. And the railway scale means weighing the car and after that subtracting?—A. No, they have an unloading chute where they unload their stock and then drive it on to the scale.

*By Mr. Sommerville:*

Q. You say you get \$7.15, so you don't have to take the guaranteed price; you don't have to take what is offered?—A. No.

Q. And in that way you raise the price?—A. I think it raises the price; I ask from \$7.15 to \$7.25.

Q. And in this way it really improves the bid that you receive on all hogs?—A. On all hogs that are on the market; and that would also include the price on truck hogs for that day.

Q. So that all your hogs would be improved by those prices?—A. Yes.

Q. And 15 cents a cwt. would mean?—A. There were 2,000 hogs on the market on Monday.

Q. That would amount to about 30 cents a hog?—A. Yes.

*By Mr. Factor:*

Q. How do you succeed in getting that price 25 cents higher; you have said it was 40 cents below?—A. The quotation at the close on Thursday of the previous week; \$7.40, and our guaranteed price Saturday was 7 cents.

Q. And you got from \$7.15 to \$7.25?—A. From \$7.15 to \$7.25.

*By Mr. Sommerville:*

Q. Where did the demand come from?—A. It came from outside competition, from the small packer.

Q. That is, you worked on outside competition?—A. No, outside competition is worked up by the small buyer; this competition is between the small buyer and the big packer.

Q. You got in touch with your customers at the outside points?—A. Yes.

Q. And then you have this outside competition to use as a lever?—A. I do ship hogs to J. M. Snyder & Sons of Kitchener.

Q. And you use these outside orders to raise the price?—A. Oh, yes, if I can get an outside order at \$7.25 I will go to the packer and say, I can sell so many cars at \$7.25, and ship them in to J. M. Snyder—they will say, well, we want our hogs, ship them in. If they don't want them, they let them go.

Q. What do you say as to the competition on the Toronto market on hogs?—A. We have only two buyers there, the Canada Packers' buyers and Swift's buyer; and one market buyer—that is our competition.

*By Mr. Factor:*

Q. What about the small butcher?—A. There are very few of them going there. I do not think there would be more than two or three times a week that you might get ten or twenty there; nothing to mention.

The CHAIRMAN: Have you any other questions?

*By Mr. Kennedy (Peace River):*

Q. Do you think you could raise the price if you had the wholesale butchers coming in?—A. If we had—up to 1927 before Canada Packers amalgamated there was Gunns, the Canadian Packing Company, the William Davies Company at that time; and we had other buyers on the market. We had a very good market, and we had competition. One of them might be long on hogs while another might be short; you could go out and do business with them.

Q. In your judgment then it was better to have more buyers—A. Absolutely, it was a pleasure doing business then.

*By Mr. Sommerville:*

Q. If you had all the buyers and all the hogs on the market, that would make a better market?—A. Absolutely. It would mean money to the producer, there is no doubt about that; because with these buyers on the market it would be like the old days when the market would jump from 25 cents to 50 cents in a day.

Q. Have you ever learned from the packers why they have their hogs shipped direct, is it cheaper?—A. It might be cheaper at times, and it might be dearer: it varies.

Q. What have they said to you as to direct buying?—A. I have never questioned them.

*By Mr. Young:*

Q. Do you know anything about stockyard charges, commission charges, and things of that sort?

*By Mr. Kennedy (Peace River):*

Q. What is your opinion about the percentage of hogs going through the yards, and the percentage of stock; do you think you can get better prices if you had a larger percentage going through the yard?—A. I think if we had a larger percentage going through the yard, and more buyers—we have to have the buyers—we would get more money for the producers.

*By Mr. Young:*

Q. You mean that unless the large buyer is on the market it does not matter much where you sell them, they are going to have their own price anyway?—A. They are going to have their own price anyway; the cheaper they buy their hogs on the market the cheaper hogs in Ontario are—they base their price on the Toronto market.

*By Mr. Sommerville:*

Q. That is, for all the hogs in Ontario, the base price is that paid on the public market?—A. Yes.

*By Mr. Factor:*

Q. How are you going to get more buyers?—A. The man outside, the small packers in Kitchener and so on; that is the only way by which we could get more competition.

Q. And you are a buyer?—A. I am a commission man—he just gives me the order—I am working as a commission man.

Q. All the outside buyers would be represented by some commission man there?—A. Not necessarily, we do not sell a great many hogs direct to outside points.

*By Mr. Sommerville:*

Q. Because they are buying direct?—A. Yes—plants such as at Kitchener, Hamilton and Stratford; their consignments are practically all direct hogs delivered to their yards.

*By Mr. Young:*

Q. From their own localities, it would not be economical to bring them in to Toronto and ship them out again?—A. Well, of course they could get used to it.

Q. Yes, but it would cost more, would it not?—A. They have not the overhead that the big fellow has.

Q. I mean, to bring all the hogs into Toronto, then have them bought by the Kitchener packer and shipped back to him?—A. It really does not sound feasible.

The CHAIRMAN: Thank you, Mr. Oswin.

The witness was discharged.

Mr. OSWALD FREER, called and sworn.

*By Mr. Sommerville:*

Q. You are a live stock salesman on the Winnipeg market, the St. Boniface Yards?—A. Not entirely a salesman, at the present time; I have been connected with the live stock industry there for sixteen years.

Q. And the firm you are connected with is the United Stockmen Limited?—A. That is correct.

Q. And you are the representative of that Live Stock Commission firm on the St. Boniface Yards?—A. Yes.

Q. And have been connected with that trade for some sixteen years?—A. Yes.

Q. And you are familiar with the live stock conditions on the Winnipeg yards?—A. Yes.

Q. Now, Mr. Freer, will you be good enough to give us the benefit of your observations as to market conditions and what improvement can be made. I understand you prepared a statement but that unfortunately you have no copies of it. Mr. Freer just came in this morning, and it is rather a brief statement, I would suggest that he be permitted to present it?—A. I came down here on rather short notice, but on turning over in my mind just what would be the best information I could give you I came to the conclusion that possibly if I presented to you the same information that I gave to a gathering at Winnipeg called by the Minister of Agriculture, at which all the different interests of the live stock industry were represented, it would be the quickest way to get over to you my thoughts in connection with our present live stock problem.

Q. When did that conference take place?—A. On December 21st, 1933.

Q. And that represented producers and packers?—A. Producers, packers, railways, commission men, stockyard representatives and retailers; every branch of the industry that we could think of.

Q. Well then, if you will be good enough to let us have that statement, Mr. Freer?—A. I might perhaps just preface my remarks by saying that I appreciate in full having the opportunity of coming down here, and endeavour

to contribute something towards the solution of this common problem. And I would further preface my remarks with this, that I would like to point out for you that many years ago, at great expense, marketing stockyard centres were built and railroads transportation systems developed, packing and processing plants built, and economical marketing services and systems developed. Many of these great marketing services were accomplished by the expenditure of tremendous amounts of public and private funds. All this machinery was built up because there was a definite need to provide the producer with a sound, competitive marketing service, one that could be used efficiently and cheaply to place his products, both in the raw and manufactured state, on the markets of the world.

These great services are needed today, as much, if not more than ever before. But the driving force of high pressure, unsound competition—indeed unfair competition—plus the tremendous increase in service demanded during days of high prices, services that are still demanded, has resulted in the physical marketing of live stock costing too much money. This high pressure competition—the unsound and unfair competition referred to—has led to certain shipping and marketing methods which are not getting back to the producer the best in the way of net return.

Leading up to these methods to which I refer, may I outline some of the complex problems that those of us engaged in the business of marketing, transporting and processing of live stock have to contend with. First, let me refer to the change in the west from the old range days to the mixed farming days. You see, in many sections it has been most regrettable that these old range days have been done away with because it has been replaced by the type of farmer who finds it impossible to grow wheat, and who now finds it impossible to raise cattle. I mention the latter particularly, because it has a very direct bearing on present stockyard market costs and charges.

Briefly, those of you who know anything about the physical handling and marketing of live stock will appreciate the added costs that are incurred to the commission firms, to the stockyard management, in the handling of shipments containing one owner as compared with the carload shipment that contained from 12 to 25 owners. This change alone in shipping costs more money to handle because it takes more salesmen, more yard help, more yard and scale equipment, more office help, more stationery, more postage, and generally slows up the speed at which we were able at one time to do the work.

Higher freight rates than we had a few years ago also enter into the picture of increased marketing costs. Our governments have certain clearly defined responsibilities by providing highways and keeping them open during the winter, thus making it possible for trucks to offer unfair competition to the railway.

I would like to elaborate at that point just a little. The competition between the shipping agent or drover who uses the truck service, and the shipping agent or drover who uses the railway service, is so keen that in order to show a lower handling cost per hundredweight to his clients, the truck shipper delivers his stock direct to abattoirs in order to avoid stockyard and sales or market-service charges.

*By Mr. Young:*

Q. You mean by that that he is cutting his rates, and that he has to do this to make ends meet?—A. No, I mean that he keeps his rate low in order to get the business.

Q. And then in order to recoup himself he has to evade the stockyard charges?—A. Yes, that is it.

Q. In reality then the farmer is getting a lower freight rate?—A. No, it does not apply to the farmer at all; it is not passed on to him.

Q. You say he is cutting his rate—he must give the benefit of that to the farmer?—A. Yes, in that case it would be passed on to the farmer.

This practice has a much more far-reaching effect to the producer than appears on the surface. In the first place it removes from the central market a volume of business that the market sorely needs to keep overhead and handling costs low, further the supplying direct to the processing plants of this volume of business makes them less active buyers on the central markets, and thus part of the volume that makes up legitimate competition is eliminated.

I would also like you to bear in mind this fact, that in many cases the producer who ships by truck knows nothing of the fact that when it goes to the packing plants it is sold without feed and water, a concession that was got for the producer years ago only after a hard fight. Hogs trucked in from a radius of 100 miles would show a full gain of 10 pounds per hog, on today's market this fill represents enough in increased value to the producer to pay marketing and stockyard service charges twice over.

*By the Chairman:*

Q. That is, if it is fed and watered?—A. Yes. In other words, truck shippers to plants only keep the producer informed on reduced marketing cost per hundredweight on shipments to plants; the information in regard to lack of competition in selling and loss in weight and possible loss of price is covered up.

Then there is another angle even more pernicious than the one I have just drawn your attention to, and it is this: what truck driver is qualified to say that the producer is getting a proper price for stock delivered at the abattoirs.

*By Mr. Sommerville:*

Q. Do you mean by that, whether he is competent to know the grade that he is delivering?—A. Yes, in other words a mechanical man is hardly a judge of live stock values.

Q. That is, the price is dependent upon the grade?—A. Yes.

Q. And there are a great number of grades in live stock and cattle?—A. Yes.

Q. And a small variation in grade would make a substantial difference in price?—A. A very large difference.

*By Mr. Factor:*

Q. You mean that an expert buyer at the packing plant could put it over him?—A. Well, the opportunity is there, yes.

I would like to quote you three glaring examples of direct to-plant shipments. I can give you the names and dates of these, and more of them if wanted, but three should suffice to illustrate my point. These may be labelled extreme cases, but they are at least authentic. A truck driver took a load of hogs and one heifer to a certain packing plant in Winnipeg. The hogs were disposed of in the usual way by being graded at the plant, and the price paid was the price established by the central market on that day.

*By Mr. Young:*

Q. On the established basis?—A. Yes.

*By Mr. Sommerville:*

Q. By the public markets?—A. Yes.

*By Mr. Young:*

Q. We have evidence here that the public market get their prices from the packer?—A. I might say this, that the packers there do not buy hogs until

they find what price has been established on the central market. The price that is established on the stockyard is the price that covers all trading for that particular day in the west.

Q. How do you establish it?—A. Well, it is established as has already been explained by the witness who preceded me—.

Q. Going to the packers?—A. Turning backwards and forwards among the packers' buyers and finally deciding what they will accept for their hogs; the same principle applies as that which has been explained here.

*By Mr. Sommerville:*

Q. Mr. Oswin explained that through competition they succeeded in raising their guaranteed 7 cent price to 7.15 and 7.25, by reason of their trading?—A. Yes.

Q. That would be the means of establishing that price?—A. In other words, the same things applies out there as Mr. Oswin suggested. When the market opens in the early morning hours we might get seven cents from the packer, and then orders might come in from the East offering to buy hogs at 7.10, 7.15, or 7.20.

Q. And you use these to boost the local price?—A. Yes, that is really what establishes our market. To get back to where I was speaking of: on the heifer the driver was only bid \$1.50 per hundredweight. He reloaded the heifer, realizing that it was not her value, and brought her to the stockyards, where she was eventually sold in our alley at \$3.50 per hundredweight.

A certain shipper shipped a mixed load of stock by rail. Everything was sold at the packing plant except eight light bulls on which the best bid he could get was \$1.15 per hundredweight. He brought these bulls over to the stockyard, where he sold them at from \$1.25 to \$1.65 per hundredweight, an increase in value sufficiently large not only to pay all marketing costs, but the freight from shipping points.

Then I would like to give you one illustration in regard to lambs. A truck driver took 24 lambs to a plant, the owner happened to be with the driver and refused the best bid which was offered, a bid of \$4; these lambs were reloaded and brought to our yard and sold to the stockyard buyer for the same packing firm at \$5 per hundredweight; not the same buyer, but a different buyer from the same plant.

Now, if there is one thing I wish to see in connection with this discussion, and this evidence, it is to be fair; and I would like to say at this time that I have heard of many cases where exactly opposite results have been obtained; but the point I want to make is this, that the lack of competition and skillful, experienced salesmanship makes for unevenness in values than in the majority of cases, I submit, is bound to result in an injustice to the producer. My point is that when the producer is dealing with skilled buyers, there is need for equally as much skill and experience on the part of the party responsible for the sale of same on direct plant shipment, the skill is very one-sided, to the detriment of the producer.

*By Mr. Factor:*

Q. In other words, you say that the trucker should merely do trucking and not have anything to do with the selling of live stock?—A. Yes. That is really what is in the back of my mind.

Q. That is what it amounts to?—A. Yes. Another thing has developed in recent years and has, in my opinion, a very detrimental effect on the establishing and maintaining of a good, steady price tone to our live stock values, values free from violent fluctuations; I am now referring to the direct buying at country points on the part of the packers. This practice has grown very greatly during the past two years. The producers themselves and their representatives,

and we commission men, are partly responsible for this situation, and it has come about as the result of what I referred to under my opening remarks as a result of high pressure and unsound competition. In justice to the packers, let me say this: that at times they been forced to go to the country and buy in order to combat the action of commission firms in refusing to show or sell them what we call through billed hogs, selling these through billed hogs only to eastern buyers in order to secure the billing advantage for the shipping agent or the producer.

*By Mr. Young:*

Q. That is to say, a carload of hogs comes in to you at Winnipeg, billed right through, we will say, to Toronto or Montreal, and the packers want to see the billing, is that it?—A. No. I might illustrate that in this way: Take North Battleford for instance, as a point to illustrate from. You bill a load of hogs to Montreal on a through billing. There is a differential between through billing and local billing from North Battleford to Winnipeg where the hogs are sold and from Winnipeg to Montreal. For example an order that might use these hogs, that differential might be 12 cents a hundred—I am not just sure what it is—but there is 12 cents that the buyer in Montreal can pay more for these hogs than the buyer in Winnipeg.

*By the Chairman:*

Q. On the through bill?—A. Yes, on the through bill. The point is this: There is possibly two agents at Battleford, one man bidding against another, going to perhaps different commission firms, one man with a through load of hogs, the other man has not got a through load of hogs. If the load can be sold on a through billing, he can either keep for himself the 12 cents differential, or whatever it might be, or pass that increased value back to his customers; and there you have one of the evils of what I term as high pressure competition. I will enlarge on that a little bit further on.

*By Mr. Sommerville:*

Q. Will you continue?—A. While this practice without doubt shows an immediate advantage in net returns on the small percentage of through billed hogs that come to this market, the point that must not be lost sight of is that it is not giving our local packers a fair break, and this is one of the unfair practices I spoke of. In my opinion this through billing could and should be done away with by a new set of freight rates, providing of course, that the new set-up would take nothing from the producer and would take care of the present differential. This, in my opinion, would go a long way towards improving the feeling of the packers towards stockyard trading, speaking for western Canada, and incidentally, I believe would improve the whole tenor of our hog trade.

*By the Chairman:*

Q. Let me get that clearly. What you propose is that there should be a permit where a car is billed through, that it stop in Winnipeg and be sold there if convenient, and yet enjoy the proportionate through billed rate?—A. I would go further than that. I would say that the time has come when the whole freight rate structure, as it affects live stock, should be gone very thoroughly into.

Q. Did you see Mr. McLeay's evidence on that?—A. No, I have not.

Q. Well, let me get the point clear; you believe that the present rail rates on live stock as they are, through to the east, are too high?—A. Yes, under the present returns to the producer.

*By Mr. Sommerville:*

Q. As against the local rate?—A. Yes.

Q. It is the differential that you are speaking of?

The CHAIRMAN: No, he is talking about the whole rate.

The WITNESS: Yes, I think our rate structure is wrong. I think we should have something in the nature of a market to market rate, consolidation of which would give us our through rate.

*By the Chairman:*

Q. Have you any evidence to give, or any that you can give on the subject, as regards what the rate should be?—A. No, I am not in a position to. I am not a tariff man.

Q. Well, Mr. McLeay gave us a very good statement on that.

*By Mr. Sommerville:*

Q. The system of a market to market rate is the system that is in force on the United States railways?—A. That is how the United States rates are made up, yes.

Q. And they make up their through rate by adding together the market to market rates?—A. Yes.

Q. Will you continue?—A. I think a very sound and safe statement may be made to this effect, that if any packer, it matters not whether he is operating on the Toronto, Montreal, Winnipeg or Edmonton market, makes heavy purchases of hogs at country points, naturally they are then weak buyers on the central stock yard markets that week. In other words, their support to the market that establishes the price is gone, and in consequence the market works lower. Yet the price established on the central stock market is the basis on which they buy their next week's f.o.b. country hogs. It simply means this, that the man who sells on an f.o.b. basis, and thinks he is beating the game, is only fooling himself and not the packer; because as a result of this policy, eventually the lower scale of prices is reflected on his sales the following week. In other words, the system of f.o.b. buying gives the producer nothing in the way of permanent price protection, and no permanent advantage over the central market system.

I am endeavouring to be fair, and trying to place responsibility where it belongs, because only in this way can we gain a true perspective of our common problem.

*By the Chairman:*

Q. Mr. Freer, have you any endorsement of that particular point in your observations from, we will say, experienced representatives of producers?—A. I would say yes; I could get you plenty of them, plenty of them.

Q. I would be interested, frankly, if that point were supported by some evidence?—A. The unfortunate part, Mr. Stevens, in trying to get information of this nature in shape that you can use, is to get hold of the right party that will give it to you. For instance, the man in the country does not know. The man coming to the stock yards and who understands trading and the system that is carried on, he can see the picture.

Q. That is the producer?—A. Yes.

Q. Who is operating for himself?—A. Yes, and who will come to the market.

*By Mr. Young:*

Q. Do any producers who are in the habit of coming in with their stock make a practice of going direct to the plants, or do they all go to the yards?—A. There are some that go direct to the plant, but not very many; because very few producers have a sufficient volume to make a direct plant shipment.

Q. Are there any who go sometimes to the plants and sometimes to the yards?

—A. There are very few.

Q. It is pretty hard to find a man who has had experience of both ways?

—A. Yes, that is the trouble; it is rather difficult.

*By Mr. Sommerville:*

Q. If you do not get the producer, then the next man who would have experience would be the drover, would it not?—A. Yes.

Q. What do you find with the drovers? Do a majority of them go to the packer or do a majority of them go to the stockyards?—A. In the west, the majority go to the stockyards.

Q. Is that a very large majority?—A. Not a very large majority. Of course, you want to remember this, that what affects the direct shipment to the plant is whether or not they have got a suitable shipment to go; that is, a man with a straight car of hogs would consider going to the plant, while a man with a mixed load, with perhaps feeder cattle in his load, would not dream of going there.

Q. But, generally speaking, the majority of drovers go to the market rather than to the packing plant?—A. Yes.

*By Mr. Young:*

Q. Have any of the drovers been hired on salary by the plants to go out and buy for them, men who used to be drovers on their own account?—A. I can't speak with any authority on that point.

Q. You spoke about plants buying out at country points; they must have buyers there?—A. I think you will find that most of the buying that I mention has been done through co-operative shipping agents at these different points, and drovers who have collected stock may or may not be on salary. I don't know on that point.

*By Mr. Factor:*

Q. Who represents the buyers at this point?—A. Well, the drover in this particular case would be the buyer for the packing plant.

*By the Chairman:*

Q. He would be the middleman, as it were, between the packing plant and the producer?—A. Yes.

*By Mr. Young:*

Q. He would be either on salary, or so much a head or something?—A. Yes.

Mr. YOUNG: He would be in the employ of the plant, in some way or another.

*By the Chairman:*

Q. All right, Mr. Freer, will you proceed?—A. May I for a moment go back to the basic principle I raised. That was that there can be no permanent recovery in general economic conditions in this country until we get agriculture on its feet, until its products are being marketed on a profitable basis to the producer. The question is how are we going to do it, and on the shoulders of each one of us rests the responsibility of finding the answer.

There are certain very great responsibilities that lie at the door of the railway companies, of the truck drivers, of the packing plants, of the governments, of the stockyards managements and of the commission firms. I long ago came to this conclusion, that to solve this problem we have all got to work together on it. I do not think any one of us should be critical of any business or any system unless, in the first place, we are prepared to be fair in our criticism; and in the

second place, prepared to offer something constructive in the way of a solution or improvement.

May I then offer to you one or two thoughts indicating from what direction we might, with a certain amount of hope, look for a solution. I think most of us will agree that, in a general way, world prices are reasonably well reflected on our central markets, that competition is sufficiently keen to see to that. Anything, however, that we can do to increase and improve keen, healthy and fair competition in buying and selling is, and always has been, fundamentally sound. Therefore we should work along that line.

If you analyse the reason why feed charges and yardage charges at stock-yards are high, why commission charges cannot be reduced, why freight rates are high, I think your deduction will be the same as mine: simply because of lack of volume through the proper channels. If all the commercial live stock marketed in Canada came through the channels organized for it, and organized at such tremendous expenditure of public and private funds, an immediate increase in price would, in my opinion, result; and marketing charges of all kinds could positively be reduced. If the railway companies, who maintain at their own expense a 365-day service throughout the year, day in and day out under all kinds of weather conditions, had the handling of all the marketward live stock, there is no reason that I can see why certain freight rate concessions cannot be made, and I believe branch line services improved by smaller units and possibly by more frequent services.

In regard to the packers, my contention is that in the interests of the producer and of improved markets and better net returns to the producer, the packers should be asked to eliminate country buying and fill their requirements on the open competitive market.

In regard to our governments, theirs is the responsibility of creating all-weather highways and maintaining them, keeping them open and under repair under all kinds of weather conditions so that fleets of heavy trucks can use them. It is therefore up to them to so regulate this truck service to a point where it cannot develop into unfair competition to our railroads. Possibly the solution of the truck problem might come about by co-operation between them and the railways, by having the present truck systems localized and becoming feeders to our present railroad system within certain zones.

While I am not here to represent any particular branch of the industry, I would like to say this on behalf of the Winnipeg Live Stock Exchange of which I am a member, that I know it stands four-square behind any movement that has for its objective the increasing of net returns to the producer. The cutting off of a dollar or two per car on the selling commission, or reduction of a few cents on feed and yardage charges and so on, will not get anybody anywhere. We have got to look at the problem in a bigger and broadened way than that. In my opinion it all boils down to getting a bigger volume of better quality stock flowing through proper marketing channels. This, in my opinion, will make it possible to reduce handling costs all along the line, and what is far more important and far more vital, it will tend to increase and stabilize live stock price levels.

Now, I would like to follow that up, before we have any further discussion, by completing my story about the meeting at Winnipeg on December 21. At that particular meeting, as I have already stated, all the various component parts of the industry were represented. As a matter of fact, one of the largest packers on that market made the statement, when the discussion got pretty warm around the question as to whether we should ask for legislation compelling live stock to go through these markets, that if the government has got courage enough to put in legislation to that effect, we have got courage enough to comply with it. I don't think that he made that statement in a jocular sense. I think possibly there was something behind it. While I hesitate, and always have

hesitated, at anything that smacks of compulsion, I frankly believe that there is no other way of getting this problem solved. As a result of this meeting, the following resolution was passed:—

That the findings of this meeting be brought to the attention of departments of agriculture of the other western provinces, with the hope that they may arrange for similar meetings to this being held in their respective provinces, and general accord be found with the action suggested here in the interest of the live stock industry as a whole;

And that should such accord be attained, that the eastern provincial and Dominion authorities be approached in the hope that there may be formed a national organization for the promotion of the live stock industry;

And that the functions of such a Dominion-wide organization shall be:—

- (a) The distribution of authoritative information to farmers as to the type of all species of live stock required to comply with the requirements of our various export markets;
- (b) The collection of information as to the available markets, requirements in processing, packing, et cetera, of live stock products for the information of the packing interests;
- (c) To lend every effort possible to the securing of adequate markets.

So far as that goes, I personally stand four-square behind it.

*By Mr. Sommerville:*

Q. That is the resolution?—A. Yes.

The CHAIRMAN: That has been a very interesting statement, Mr. Freer. Have you any questions, gentlemen, that you wish to ask? Well, thank you, Mr. Freer, very much. I think you gave us your opinions very clearly and concisely, and it is very helpful.

We will not meet this afternoon, but we will meet at 11 o'clock to-morrow morning.

The witness was discharged.

The committee adjourned at 12.50 p.m., to meet on Thursday, April 12, at 11 a.m.

HOUSE OF COMMONS, ROOM 368,

April 12, 1934.

The special committee appointed to inquire into Price Spreads and Mass Buying met at 11 o'clock a.m., Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., of Toronto and Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. The minutes of yesterday contain the record of the exhibits filed, the witnesses called, and the procedure. Unless anyone has any observations to make, I declare the minutes approved.

Now, a letter has been received from the Saskatchewan Live Stock Board which, perhaps, it might be well to read. It is addressed to me as chairman of the committee. It is dated Regina, April 6, 1934, and reads as follows:—

DEAR SIR,—The Saskatchewan Live Stock Board, which represents all live stock interests in this province, considered the question of presenting evidence before your commission investigating the marketing of live stock and other items. They felt, however, that the matter had been fairly brought to your attention through the efforts of other western stockmen, ranging from the rancher on the one hand to the Live Stock Pool on the other, and for the time being have passed the following resolution and are not presenting evidence at the present moment:

'Be it resolved that we, the Saskatchewan Live Stock Board, record our appreciation of the action of the Federal government in instituting the parliamentary inquiry respecting the marketing of live stock and other matters and in introducing legislation to provide a National Board for the marketing of national products and recommend:—

(a) That a Federal Commission be appointed to enlarge the enquiry regarding live stock marketing and afford persons throughout Canada interested in live stock an opportunity to present facts and opinions regarding live stock marketing;

(b) That we inform the Saskatchewan government of our desire that legislation be introduced at the present session of the Legislature to provide for the marketing of agricultural products from Saskatchewan under the new Federal marketing legislation.'

This resolution is fairly definite and I think expresses the views of our Board.

I would be glad to be advised as to how long the commission will be sitting in order that if an opportunity presents itself we can make further representations in the interests of the Saskatchewan live stock industry.

The letter is signed by J. G. Robertson, secretary, Saskatchewan Live Stock Board.

There is another letter which does not deal with the business of this committee; it deals with the questions of exporting live stock through Churchill, so it does not interest this committee.

Now, I would ask the opinion of the committee on another point. The Winnipeg Live Stock Exchange has sent forward a rather interesting and well studied letter giving their views on the question effecting the reduction in commission rates charged by commission firms, and they have sent with it a brief setting forth their views. Now, the question arises: Can we accept a statement of that kind and include it in the records, or should we call these people as witnesses with all the attendant expense and trouble of calling them, merely for the purpose of presenting this brief in the form of evidence?

Mr. KENNEDY (*Peace River*): Is there a sworn affidavit with it?

The CHAIRMAN: No.

Mr. ILSLEY: I do not see why it is not all right to put it in.

The CHAIRMAN: If we went to the expense of bringing them here they would only come here and read this brief, and, after all, they are a responsible body.

Mr. KENNEDY (*Peace River*): Is there anything in the letter that will need explaining; or is it pretty clear.

The CHAIRMAN: We will go over it pretty carefully, and we can bring the matter up at a subsequent meeting.

Mr. FACTOR: We have been doing this right along; witnesses have been presenting briefs, and they have been sworn.

Mr. SOMMERVILLE: It might be apropos to have it read now because we are having evidence from the Toronto Stock Exchange, and they might be examined upon some of the questions that are raised in this brief.

The CHAIRMAN: Suppose we have it read now?

Mr. YOUNG: We can call witnesses if we want them.

The CHAIRMAN: If the committee, subsequent to hearing the brief, desire to call witnesses for examination we can call them, and I think we should avoid expense if we can do so.

Mr. SOMMERVILLE: (Reads): Modified Rates of Commission, imposed by the Department of Agriculture of the Dominion of Canada and effective 9th April, 1934.—Arguments presented by Eight Commission Firms of the Winnipeg Livestock Exchange Inc., against putting into effect such modified rates of commission.

#### HISTORY OF WINNIPEG LIVESTOCK EXCHANGE INC., AND ROUTINE FUNCTIONS OF COMMISSION FIRMS

Before proceeding with the argument, may we comment briefly on the history of the Winnipeg Livestock Exchange Inc., and the routine functions carried out by the member Commission firms.

#### HISTORY OF EXCHANGE

The Winnipeg Livestock Exchange was formed in 1914 and incorporated in the year 1920. The objects of the Exchange were, among other things, to provide a central market place where supply could meet demand and daily and hourly prices for livestock could be established for the benefit of the producer as well as for the consumer. The Exchange is governed by "The Livestock and Livestock Products Act" a Dominion Act and by enabling legislation passed by the province of Manitoba. Under these Acts, the rules, regulations and by-laws of the Exchange are subject to confirmation by the Minister of Agriculture, whose department maintains a constant supervision of all the activities of the Exchange, with the result that everything possible is done in that respect to protect the Shipper and Producer.

# ROUTINE FUNCTIONS NECESSARY TO PROVIDE SAFEGUARDS AND EFFICIENT SERVICE TO THE PRODUCER

The Commission firms comply with the many and necessary regulations laid down by the Department of Agriculture as to grading, weighing, sorting, selling, etc.—all for the protection of the producer.

The Winnipeg Exchange is the only livestock exchange in Canada where a clearing house is maintained, which requires that all purchases and sales must be settled for within twenty-four hours. This institution is supported by the members who pay .03 cents per cheque. In 1932 over 17,000 cheques passed through the clearing house. Whilst this obviously is a protection for the Commission firms, it also automatically protects the producer. In 1932, the total value of livestock sold through the Exchange approximated 7 million dollars, with no loss to the producer. The advisability of a clearing house would therefore seem evident.

The shippers are further protected through the bonding of commission firms, charges for which are paid by the firms themselves.

The Shippers Trust Account, which entails further office work, is maintained so that the firms' position in respect of Trust Funds is readily ascertainable by departmental inspectors. In short, Commission Firms endeavour to comply with all regulations and provide the best service possible for their clients.

The following schedule gives some indication of the work entailed in handling and selling a co-operative shipment of mixed livestock for which the commission varies at present from \$17 to \$22 per car—depending upon the number of owners interested.

Shipments that arrive during day:—

1. A man must be on hand to cut out calves and bulls.
2. Stock must be sorted. Sorting is very essential as it is of great benefit to have the stock properly classified so that the animals may be sold to the best advantage.
3. Stock must be well fed and watered.
4. When stock has been weighed tickets must be delivered to office.
5. Tickets must be checked with Manifest.
6. Tickets must be checked with Scaleman's cards.
7. Extend tickets and check extensions.
8. Invoice to buyers.
9. Mail or deliver invoices.
10. Main statement to be made.
11. Pro-rate statements for 3 to 70 owners.
12. Issuing of cheque or cheques.
13. Many statements delivered to hotels, others need special delivery to post office in order to make train connections, this being due to curtailed train service and also postal collections at yards. These trips cost 25 cents.

The following staff is required to carry out the above mentioned duties viz:

A salesman for each different species of livestock: e.g., cows and heifers, steers, calves and bulls, sheep and lambs and hogs.

Office staff.

Feedmen.

Weighmen.

Gatemen.

## IT IS CONTENDED

That whilst the maximum benefit that could possibly accrue to each producer, through the modified rates of commission is \$1 per annum, in fact there is no assurance that this saving of \$1 will reach his hands.

In support of this it is submitted that the loss of revenue to the Commission Firms of \$17,500 represents an apparent saving of a similar amount to the producer. Whilst this sum may loom large, the auditor's report clearly indicates that this saving means on an average:—\$1.73 on each carload shipped; or .03 cents on each head of livestock sold, or .25 cents on each \$100 of livestock sold.

It is a reasonable assumption that each producer will sell an average of \$400 of livestock annually, at 1932 price levels. The reduced rates of commission therefore can only benefit him to the extent of One Dollar (\$1) per annum—and will be received by him in sums varying from .03 cents up.

It is further submitted that there is no definite assurance that this saving of \$1 per annum will reach the hands of the producer.

Experience indicates that only 20 per cent of the producers deal directly with the Commission Firms. The livestock of the remaining 80 per cent is handled through the Exchange by shipping agents, who in their turn deal directly with the producer. The shipping agent is employed by the producer for an agreed upon price per 100 pounds (say, .60 cents per 100). From the remuneration paid to him by the producer he pays all expenses of shipping and selling (including, of course, the selling commission). Were he to pass on to the producer the saving in selling commission expense he would reduce his charge from .60 cents to approximately .59 cents per 100 pounds.

It is further contended, that, in fact, the maximum possible benefit to the producer of \$1 per annum is more than completely nullified because the services rendered by, and even the permanent existence of his own public market are threatened.

In support of this it is submitted: The routine functions of the Commission Firms and the safeguards instituted for their carrying out have been furnished to you. Your attention is now directed to the outstanding benefits derived by the producer through the establishment of a public market for his use.

The Commission man acts as a buffer between the producer and the buying market and through a special training is able to obtain the best possible prices for the producer.

The producer is thus provided with a reliable market and is kept advised constantly of market conditions and prices through the daily newspapers, or by direct communication with the Commission firms, by way of telephone, wire or daily market letter. Efforts are being made continuously by the Commission firms to find new markets and buyers for livestock and the producer is kept constantly advised thereof.

The employees, including principals and salesmen and office help, may be considered as engaged in the profession of handling and selling livestock. It is a profession which requires training and long apprenticeship in order to acquire the knowledge necessary to efficient bargaining. The Winnipeg Livestock Exchange does not hold a selling monopoly of livestock sold through it. According to the "Dominion Act" any owner has the privilege of selling his livestock on the Exchange and has the use of every facility for so doing. No advantage of this provision is taken by shippers or producers. They realize the necessity of having trained, professional salesmen to barter with trained, professional buyers. Through this means only may they be assured of obtaining the best possible prices for their livestock.

It is therefore submitted: If the reduction in wages, which the reduced commission would make inevitable, become effective, the wage—already at a minimum figure—would be set at discouraging levels. This would depress the morale

of the personnel of the selling organization of the producer—having the effect of taking away the keen edge of ambition so essential to effective bargaining. To illustrate: A minimum car is 20,000 pounds. A keen salesman will endeavour to obtain the last .05 cents per 100 pounds possible—an indifferent salesman will not be too concerned. Five cents per 100 means \$10 on a minimum car. The saving through modified rates is \$1.73 per car.

This is one important instance where efficiency is impaired. Other instances may be readily had e.g. market reports, prompt dispatch of remittances to producers; sorting and grading livestock to the best advantage, etc.

It is further submitted that: The Commission firms are the selling agents of the producer. Their interests are identical, viz:—to obtain the best possible prices for livestock. If one suffers a hardship it is bound to react to the detriment of the other—if not immediately, then ultimately. The Union Stock Yards is a public market serving some 17,500 producers in Alberta, Saskatchewan, and Manitoba. Had the modified rates been in force in 1932—the continuance of operations showing a loss of \$13,500 would have been impossible, with the result that the continuance of the Union Stock Yards as a public market operated by experienced Commission men would become seriously endangered.

It is further contended: That, based upon 1932 statistics, the reduced rates will cause:—

- (a) A loss of revenue to the Commission firms of \$17,500.
- (b) Resulting in the 1932 operations being carried on at a loss of \$13,500.
- (c) Loss of revenue would have to be borne by the 75 employees of the Commission firms.

In support of this it is submitted: that the modified rates will work an unwarranted and unjustified hardship on a small group of society—with benefit to none.

For the year ended December 31, 1932, the combined net profits of the Commission firms, as shown by our auditor's statements, amounted to \$4,000. When the modified Commission rates are applied to the same year, the loss of revenue amounts to \$17,500—thus converting the small profit to a loss of \$13,500.

The Commission firms cannot operate at a loss.

It is further submitted that:—the personnel of the Commission Firms comprises 75 principals—salesmen; office staff and yard help. During 1932, principals and salesmen received an average yearly wage of \$2,690; office staff \$1,490; yard help \$890. The only methods by which it is possible to recoup the loss of revenue of \$17,500 are by either reducing wages or discharging employees or both. If a general reduction is made this will mean a 12½ per cent reduction of wages already at a minimum.

Unfavourable business conditions have already been felt by them during the past few years and business and personal reserves have been called upon to effect the reductions in net profits and wages—in a real effort to keep their organizations intact and efficiency unimpaired. Past records indicate that no abnormal profits have ever been earned. The principals and the majority of the salesmen of the present day Commission houses are over fifty years of age and have been engaged in the business most of their lives. True—they have made a fair living—but they are still working.

The 75 employees of the Commission firms are engaged in serving approximately 17,500 producers residing in the three western provinces. By the modified rates a group of 75 are forced to contribute from \$112 to \$336 per annum—not from any excess of earnings but by hardship—for the extremely doubtful benefit (of \$1 per annum) of approximately 17,500 producers.

This appears as a futile gesture.

It may be argued that an increase in volume of live stock handled will replace the loss of revenue of \$17,500. As against this it is contended that there is no definite assurance as to when or whence this increased volume will come.

As has been pointed out, the saving in commission charges to the producer which the reduced rates would bring about, is so small that it is inconceivable that it would induce increased production and volume. There is no warrant for anticipating an increased volume for any other reason.

It may be further argued that through a reduction in the number of firms, economies will be effected sufficient to replace the loss of revenue of \$17,500. As against this it is contended:

That these economies will again be effected chiefly at the expense of the employees, whose discharge makes them eligible for the unemployed lists;

That the competition of the eight firms amongst themselves in bidding for the producer's business works to the benefit of the producer in the matter of prices obtained, market reports, prompt remittances, et cetera.

The selling organization will become a monopoly, and its interests tend to divorce themselves from those of the producer, its employer.

Governments are not earnestly concerning themselves with the evils of monopoly such as a reduction in the number of firms would establish. The larger the number of competitive sellers and buyers, the better the market for the producer.

It may be further argued that the drastic decrease in live stock prices to the producer has not been shared by the commission firms, as commission rates have remained the same since 1921. As against this it is contended that the present revenue from selling commissions is not in itself sufficient to support the commission firms. Prior to 1930 clearance charges on through shipments of export cattle to the United States provided a lucrative source of income. This revenue was of benefit to the producer in that it enabled the firm to carry on with a minimum rate of selling commission. With the passing of the Fordney-McCumber tariff in 1929, the export business to the United States ceased abruptly and that source of revenue vanished. No increase was made in the rates of selling commission. On the other hand, efforts were put forth to replace this loss of revenue through canvassing the eastern buyers to trade through commission firms on the Winnipeg exchange. This trade has been built up as a result of earnest endeavours and has had a two-fold effect, viz: It has created a more active market for the producer and resulted in gross earnings to the commission firms in 1932 of over \$24,000. The importance of this revenue is evident.

Commission rates have remained the same since 1921 up to the 1st October, 1932, when some reductions were made. These reductions were made at the instigation of your department, and although they were accepted by the exchange in a public-spirited way, they caused an actual loss of revenue in 1932 estimated at from \$3,000 to \$4,000. In view of this loss of revenue, the commission men consider and submit that the proposal that they should sustain a further loss of revenue, based on 1932 figures of \$17,500, is unjust. It is more particularly unjust because it injures them and cannot possibly benefit the producer.

It is further contended that the producer has, in effect, received additional reductions in commission rates. There has been a steady rise in live stock prices during the year 1934, due to the widening of the producers' market. This is resultant from the Ottawa agreements and generally improved business conditions, and has automatically reduced his selling commission from \$2.50 to \$1.50 for each \$100 of live stock sold. The modified rates reduce his selling commission by 25 cents per \$100 of live stock sold. In point of fact the commission charge is the smallest item of the producer's shipping and selling expenses.

## CONCLUSION

In conclusion may we state that we have endeavoured to present the case of the commission firms fairly and frankly, and may we emphasize that they are the employees of the producer. The producer's interests and their own are identical, and when one suffers the other suffers. Hardships worked on them by way of the present enforced economies threaten the permanent existence of the producer's own public market, and thus the apparent benefit of \$1 per annum accruing to the producer is more than nullified."

That was accompanied by a letter, the second paragraph of which reads:

We submit that the proposed reduction is unjustified for the reasons, based upon the 1932 statistics:

The effect on the producer is:

- (a) That whilst the maximum average benefit possibly accruing to the producer through these reduced rates is one dollar per annum, in fact there is no assurance that this saving of one dollar will reach his hands.
- (b) That in fact this maximum benefit of one dollar per annum to the producer is more than completely nullified because of the services rendered by, and even the permanent existence of, his own public market are threatened.

The effect on the commission firms and their seventy-five employees is urged in the letter, and they intimate that they are furnishing an auditor's statement showing the combined result of the 1932 operations of eight commission firms, members of the exchange, and that is to be forwarded and filed with the statement.

Mr. YOUNG: Do they say what the reduction is that the department has asked for?

Mr. SOMMERVILLE: I think it is \$2 a car.

Mr. FACTOR: I was wondering what jurisdiction this committee has to go into this question of commissions. It appears rather a matter for the Department of Agriculture.

The CHAIRMAN: We will probably have to say, when we make our report, whether or not the charges in the yards are reasonable or unreasonable, as part of the spread in the cost of marketing live stock. That is where it really comes in.

Mr. SOMMERVILLE: It arises through the evidence that has been given that marketing charges and stockyard charges and exchange charges are high. This is the statement furnished.

The CHAIRMAN: Who is the witness this morning?

Mr. SOMMERVILLE: We have Mr. Quinn, Mr. Chaplin and Mr. Talbott, representing the Toronto Live Stock Exchange. I will call on Mr. Quinn first.

A. B. QUINN, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Quinn, you are a member of the Toronto Live Stock Exchange?—A. Yes, I am.

Q. And you are engaged in selling live stock as a member of the exchange on the Toronto stockyards—A. Yes.

Q. How long have you been in the cattle business?—A. I have been in the cattle business about 35 years; on the stockyards about 25 years.

Q. How many firms are there upon the stockyards?—A. At the present time there are ten.

Q. Ten commission firms?—A. Yes.

Q. And those ten commission firms compose the selling organization on the yards?—A. Yes, they do.

Q. And those ten firms represent the producer in the sale of live stock?—A. Absolutely.

Q. And your firm is under what name?—A. A. B. Quinn & Son.

Q. It has been operating on that market for many years?—A. Yes.

Q. What is the volume of business that passes through that market, I mean volume in dollars? Can you give me any idea approximately just what the volume of business is, not of the earnings, just the volume of business handled?—A. Yes.

Mr. FACTOR: You mean of all live stock?

*By Mr. Sommerville:*

Q. All live stock passing through the stockyards?—A. In the year 1932 we had \$15,285,108.07.

Q. And have you got the figures for 1933?

The CHAIRMAN: That is sales, is it?

Mr. SOMMERVILLE: Sales, \$15,000,000 odd.

*By Mr. Factor:*

Q. Is that net?—A. No, that is gross—gross sales. The gross sales in 1933 were \$13,869,900.94.

*By Mr. Sommerville:*

Q. Sales of live stock on the Toronto market?—A. Yes, on the Toronto market.

Q. Through the stockyards?—A. Yes, through the stockyards.

Q. I understand you have prepared a statement showing some facts with reference to the establishment of the live stock commission agents. Have you a number of copies of that?—A. Yes, we have.

Q. I would like to have a number of copies of this for the members?—A. There will be enough for each one, if you wish.

Q. Just when you are giving us the figures on the total sales of live stock in each of these years, perhaps you would give us the figures on the total commissions in each of these years, earned by the live stock selling agents?

Mr. FACTOR: You mean commission agents?

*By Mr. Sommerville:*

Q. Commission agents, yes?—A. At the time the 1932 statement was made, there were just nine commission houses, and the gross income was \$300,821.83.

*By the Chairman:*

Q. That is in 1932?—A. Yes.

Q. What is it for 1933?—A. The gross income from commissions in 1933 was \$298,081.77.

*By Mr. Sommerville:*

Q. I understand one of the members of your delegation is to present to the committee the question with respect to the sufficiency, or adequacy or inadequacy of the charges that are made; but I want to ask you particularly, Mr. Quinn, with respect to market practices in live stock marketing. You say you have been on the market for 25 years. I understand the market has been established some 50 odd years and has been progressively the public market for the province of Ontario?—A. Since 1873.

Q. And on that market each of the firms maintain a staff of expert salesmen and handle all the stock that arrives at the market?—A. Yes.

Q. What is the basis of the commission that you get for handling the various kinds of live stock?—A. \$17 per car for cattle, or mixed cars.

Q. This statement that you have handed me is a comparative statement—you have got some copies of this, have you, for the members of the committee?—A. Yes, we have.

Q. This is a comparative statement of commission charges, showing the commissions that are paid at Toronto and at other markets, both for carload shipments and truckload shipments?—A. Yes.

Mr. FACTOR: Those are fixed by the act, are they not?

*By Mr. Sommerville:*

Q. Those are fixed under the regulation of the department?—A. Of the department?—A. Of the department, yes.

Q. That is at Toronto the charge is \$17 for a carload of cattle?—A. Yes.

Q. And \$13 for a carload of calves?—A. Yes.

Q. How many cattle are there in a carload?—A. They may run anywhere from 20 to 40, depending on their size. Sometimes you get more than 40 in a car.

Q. That is cattle?—A. Yes.

Q. And calves, how many?—A. From 70 to 100.

Q. From 70 to 100 calves in a car?—A. Yes.

Q. And the commission is \$13?—A. Yes.

Q. How many sheep—A. An average of about 90 to 100, sometimes 110.

Q. 90 to 100 in a car?—A. Yes.

Q. And the charge is \$10 a car?—A. Yes.

Q. What about hogs?—A. We would average them at 80.

Q. You average them at 80 hogs a car?—A. Yes.

Q. And the charge is \$10 a car?—A. Yes.

Q. You give the relative charges at other markets in the United States?—A. Yes.

Q. Buffalo, Jersey City, Chicago, Lancaster and England?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. What about England; I don't quite understand that.

*By Mr. Sommerville:*

Q. Would you explain these charges with reference to England?—A. It is charged on a percentage basis there.

*By Mr. Kennedy (Peace River):*

Q. The percentage?—A. Yes, so much percentage, works out at \$2.60 each for any individual, the percentage.

Q. Is that the percentage on the price?—A. My price, but there is a set minimum.

*By Mr. Sommerville:*

Q. There is a set minimum of \$52 for 20 head?—A. Yes.

Q. And a set minimum of \$2.60 for any additional head?—A. Yes.

*By Mr. Factor:*

Q. That is cattle?—A. Yes, cattle.

*By Mr. Sommerville:*

Q. At all markets, excepting Toronto, a service and pro-rating charge is made, ranging from \$1 to \$5 per carload?—A. Yes.

Q. At all other markets that you have referred to there, or in Canada do you mean?—A. Well, Winnipeg especially.

Q. There are service and pro-rating charges?—A. Yes.

Q. What is a pro-rating charge?—A. Would you care to read the section that covers that?

*By Mr. Factor:*

Q. Is that fixed by regulation?—A. That is fixed by regulation. I will give a little explanation of it, when that is read.

Mr. SOMMERVILLE: This is reading from the regulations of the Toronto Live Stock Exchange, approved by the Department of Agriculture, section 11:

In addition to the regular commission, the charge for pro-rating a car of live stock consisting of more than two owners, shall not exceed the following:—

Less than three owners—nil.

Three owners—one dollar and a half.

Four to six owners—two dollars.

Seven to nine owners—three dollars.

Ten to twelve owners—four dollars.

Thirteen or more owners—five dollars.

On a shipment of live stock consisting of more than one car and more than two owners, to ascertain the average number of owners per car divide the number of cars into the number of owners, and where the average is less than three owners per car, the said shipment shall be considered a one-car shipment and charged for as such.

*By Mr. Sommerville:*

Q. Have you any pro-rating charges on the Toronto yards?—A. Well, there are eight commission firms, or nine now, that never put that into effect, due to the low prices of the stock and everything. We co-operated with the producer as much as possible and we waived that. We waived that privilege which we had.

Q. Although that is provided for in your regulations, you say?—A. Yes.

Q. And approved by the department?—A. Yes.

Q. You say it has never been collected by your nine firms?—A. Yes; but the U.F.O., I understand do charge 10 cents per cheque or per statement on car stock.

Q. On car stock one firm charges 10 cents per cheque?—A. Per cheque.

Q. That is if there are five owners in a car, they get 50 cents?—A. Yes; for 15 they get \$1.50.

Q. For 15 owners they get \$1.50?—A. Yes.

Q. That is even less than what is given by the regulations?—

*By Mr. Kennedy (Winnipeg):*

Q. Mr. Quinn, are these charges waived at all at the Winnipeg exchange, do you know?—A. I believe not. I think they carry those charges out.

*By Mr. Sommerville:*

Q. Apparently, according to the statement read from Winnipeg, the charges at Winnipeg being from \$17 a car to \$22 a car?—A. Yes.

Q. And I presume anything over the \$17 is due to the pro-rating charge?—A. Yes, which we have the privilege of charging also, but we have never done it.

*By Mr. Factor:*

Q. You have never done it?—A. We have never done it; we have never put it into effect.

*By Mr. Kennedy (Winnipeg):*

Q. The \$5 pro-rating charge is the maximum, no matter how many owners are represented?—A. Yes.

*By Mr. Sommerville:*

Q. Then with reference to the truckload shipments, I see your statement shows charges at Toronto: for cattle, one dollar each, calves 25 cents each, sheep, 20 cents each and hogs 20 cents each; and Buffalo, Jersey City and Chicago rates are given in comparison. Those are the rates that are charged?—A. Those are the rates that are charged on our market and on the other markets named there, showing that our charges of commission are lower than any of those others.

The CHAIRMAN: We might probably just include that statement, with the brief statement that it is put in evidence, to show that the Toronto charges are lower than the others.

The WITNESS: Yes, our charges are lower.

COMPARATIVE STATEMENT OF COMMISSION CHARGES AT OTHER MARKETS—  
COMPARED WITH TORONTO—

Carload shipments	Cattle	Calves	Sheep	Hogs
Toronto.....	\$17.00	\$13.00	\$10.00	\$10.00
Buffalo.....	\$18.00 to \$22.00	\$16.00	\$14.00	\$14.00
Jersey City.....	\$20.00 to \$25.00	\$15.00 to \$20.00	\$12.00 to \$15.00	2% on gross sale
Chicago.....	\$17.00	\$17.00	\$13.00	\$14.00
Lancaster.....	\$30.00	—	—	—
England.....	\$52.00 for 20 head—\$2.60 each for any additional.			

At all Markets, excepting Toronto, a Service and Pro-Rating Charge is made, ranging from \$1.00 to \$5.00 per Carload

Truckload shipments	Cattle	Calves	Sheep	Hogs
Toronto.....	\$1.00 ea.	.25c. ea.	.20c. ea.	.20c. ea.
Buffalo.....	\$1.25 ea.	.35c. ea.	.30c. ea.	.35c. ea.
Jersey City.....	\$1.25 ea.	.40c. ea.	.20c. ea.	2% on gross sale
Chicago.....	.90 ea.	.40c. ea.	.20c. ea.	.30c. ea.

*By Mr. Sommerville:*

Q. Now then, perhaps you would be good enough to tell the committee what is the service rendered by the commission agent?—A. Shall I read it just as it is.

Q. I think that might be most convenient?—A. A short sketch of the service as rendered by the commission agent:

We would like to give you a short sketch of our operations on the market, showing what we do to convert live stock into as many dollars and cents, as it is possible to secure for them. It is our desire to protect the producer in every possible way so far as the marketing of his live stock is concerned, besides our

keen interest in keeping him posted on marketing conditions, and encouraging him to ship his live stock to the public market, where it will be sold in competition by experienced live stock salesmen, who are well able to cope with the organized buyers of live stock.

Shipments arrive at the market either by rail or truck, there being very few driven in on hoof. When shipped by rail, the cars are unloaded by the Union Stock Yards Company, who are responsible for the count of the animals and the delivery of the animals to the sales pens of the Commission Firm to whom they are consigned, after which the Commission Firm is responsible. When shipments arrive by truck, the Commission Firm is responsible for the animals from the time the truck arrives until they are disposed of, and which service must be maintained 24 hours each day, 6 days each week in the case of trucked-in animals, and 7 days each week for carload deliveries.

Might I say there, in regard to trucks, that the commission trade receive them at the unloading chute and take them down the sales alley. The stockyards don't touch them there.

Q. Just at that point, has there been a large increase in the trucking in of live stock of late years?—A. Oh yes, considerable.

Q. What number of additional men would be required at the gates to receive the trucked in stock?—A. I believe it would take about 30 men to receive that stock coming in by truck.

Q. Thirty additional men to receive the stock?—A. Yes.

As soon as the animals are in the care of the Commission Firm, it is the duty of their yard staff to see that the animals are comfortably bedded with plenty of feed and water, besides the cleaning of the animals, in order that they may have their best possible appearance before being offered for sale. The animals are also sorted as to different type and quality in order to sell to best advantage.

*By Mr. Isley:*

Q. Does this statement relate to the sale of hogs or of cattle?—A. This is cattle, just on that.

The market opens at 9 o'clock, by which time Commission Men have a fair line on the receipts at other markets, besides who are to be the most active buyers, as regards to their different needs and requirements. After testing out certain of the early buyers, it does not take long for a salesman to know whether or not the market is going to be slow, steady or higher. The salesman must use his best judgment as to whether or not he is to accept his early bids or keep working along either endeavouring to raise the market or secure bids from other buyers.

Finally when the deals are consummated, the animals are turned over to the Commission Firms yard staff, who drive them carefully to the weighing scales, where they are weighed in accordance with the instructions from the salesman, according to ownership, prices and name of buyer, after which the animals are in the hands of the Stock Yards Company until they are delivered to the buyer.

From the scale, the weigh tickets are taken to the office of the Commission Firm, where they are computed, and credited up to their respective owners or consignments and where all records, statements and invoices to buyers are rendered. Pro-rations of different owners animals are made, and separate statements and cheques issued to each owner, whether it be for a single animal or a carload. This detail can hardly be explained, without one being in actual attendance to see the whole matter being taken care of by an expert staff, equipped with up-to-date office equipment and accounting systems.

*By Mr. Sommerville:*

Q. You say direct shipments have increased substantially of late; will you kindly give to the committee your observations on the effect of these truck shipments?—A. Well, I don't just get your question there; do you mean the truck shipments, or to the stockyards.

Q. What has been happening with the movement of live stock by truck of late?—A. Of late there has been a great increase in the percentage of live stock which has been delivered to the packing plants, with the packing plants having 50 per cent of their live stock come direct, with 68 to 70 per cent of calves alone in 1933.

Q. Perhaps you could give me exact figures now on direct shipments during 1933 on the various kinds of live stock?

*By the Chairman:*

Q. You are speaking of Toronto??—A. It is only Toronto I am speaking of.

*By Mr. Sommerville:*

Q. Yes?—A. In hogs, Canada Packers received 415,000 hogs; 106,500 of these were on the market, which made their direct buying 74 per cent.

*By Mr. Factor:*

Q. How did you get these figures as to Canada Packers' volume?—A. We might give you the names, but you will understand that we do not care to make them public.

Q. No. Is it published?—A. Through the hog graders.

*By the Chairman:*

Q. The total figures are published?—A. The government issued these figures.

*By Mr. Factor:*

Q. But not on cattle?—A. No. At the Swift Plant they received 147,300, which were cattle, and 58,400 were bought on the market; that made 61 per cent on their cattle were direct.

*By Mr. Sommerville:*

Q. Sixty-one per cent of Swift's cattle are direct shipments, and 74 per cent of Canada Packers?—A. Right.

Q. And White's?—A. The White Packing Company killed 93,500, their market purchases were 49,300, which made 47 per cent direct.

Q. Forty-seven per cent to White Packing Company direct; that would mean 53 per cent bought on the market?—A. Yes.

*By Mr. Edwards:*

Q. And you say Canada Packers bought 74 per cent?—A. Yes. Swifts, 61; and Whites, 47 per cent. Now in cattle I have not got the number of head, but I have the percentage of their kill direct, Canada Packers 33 per cent direct.

*By Mr. Sommerville:*

Q. Thirty-three per cent of the cattle of Canada Packers was shipped?—A. Direct.

Q. That meant 67 per cent of their cattle bought on the market?—A. Yes. With Swifts 18 per cent of their kill was direct.

Q. Of cattle?—A. Of cattle, which left 82 per cent purchased on the market. In calves Canada Packers figures were 75 per cent direct, and 41 per

cent purchased on the market; Swifts bought 27 per cent of their calves direct, and that left 73 per cent on the market. On sheep and lambs, Canada Packers 45 per cent of their kill direct; Swifts 47 per cent of their kill direct.

Q. Have you the figures with respect to White's as well?—A. White's do not kill sheep and lambs, calves either, to speak of; very little if any.

Q. Perhaps you will tell us about the movement of truck shipments as set out in your statement?—A. With respect to truck shipments:

The movement of live stock to plants by truck has been, in our opinion, one of the greatest points of weakness to the value of all classes of live stock.

The trucker is, primarily, interested in the transportation of live stock from the farm to the market, and with all due honour and respect to a large number of honest-to-goodness truckers, it is a very potent fact that many of these men are by no means capable of selling the producers live stock by unloading it at a plant, where there is only one buyer to bid on it. The buyers at the plants are picked men, and smooth working, shrewd in their dealing. You can imagine what chance a young man from the country has in dealing with these clever people. Even in our capacity, we would hesitate to say that we could sell the producers live stock at any plant, and be able to say that we had got all it is worth, and conscientiously collect our commission for doing so.

*By Mr. Kennedy (Peace River):*

Q. What do you mean by that?—A. Because there would be no competition, there is only one man to bid on the stock and his bid is final. You can either take it, or take your stuff away.

Q. But you are an expert cattle man?—A. True, but the man goes to that buyer and he gets only the one bid.

Q. But on the market he would get more than one bid?—A. Well, there is the chance that some other fellow would come along and bid beyond him, and it is a different thing altogether.

Q. And when you are not on the public market you are only in the hands of this one man?—A. Yes.

Q. And you would not know whether you were getting the same price as on the market, or not; the situation is that at the packing plant the man is not in touch with the market itself, with his seller?—A. Absolutely not, he knows nothing about the market.

Q. That is what you mean then when you say he don't know?

Mr. KENNEDY (Winnipeg): Will you develop the matter a bit further, whether in direct shipments the price paid by the plant is lower than that paid on the market.

Mr. SOMMERVILLE: I will do that with all of these gentlemen.

Mr. ILSLEY: Before he leaves that: the question is whether or not the packer has an interest in keeping the sellers satisfied about their direct shipments to the plant; therefore, I suppose they take advantage of their superior cleverness and shrewdness, do they?

*By Mr. Sommerville:*

Q. What do you say as to that, Mr. Quinn?—A. I do not believe they altogether care whether they satisfy the man who comes on his own, the volume is not very great.

*By Mr. Ilsley:*

Q. I gather from your figures that Canada Packers are running to direct purchasing of everything except sheep, that Swift's buy a little more from the market than Canada Packers—Canada Packers are buying a larger quantity direct on all stock except sheep. Apparently they consider that is an advan-

tageous way in which to buy and would like to get the farmer better sold on that idea. Do they not have an interest in making the seller satisfied with the prices they pay?—A. The seller who takes supplies there is only interested in one thing, he is a trucker, and he is not much interested in anything other than delivering stock at the receiving places.

Q. What about the man back home, the bottom would drop out of the whole thing if you didn't give him some money for his stock?—A. A good many truckers take back the money to these farmers, and the farmer don't know but what his stock has been sold on the market; they leave the impression they have been. They take back the cheque to the farmer and then they cash that cheque for the farmer.

*By Mr. Kennedy (Winnipeg):*

Q. Won't the farmer find out whether he is getting the going price or not?—A. Not entirely, a great percentage of the farmers do not know the grade of their stock.

Mr. EDWARDS: I think the answer there is in the fact that the trucker can make two or more trips a day.

*By Mr. Young:*

Q. Is there any competition between these truckers?—A. I would say that there was, they are interested in getting all they can.

Q. If there are two truckers competing in the same district for stock, will not one establish a reputation for getting a few cents more than the other, that he is a better salesman?—A. I think the answer to that is that the farmer does not know the grade of his stock.

Q. Does that make much difference?—A. A great amount of difference.

Q. But suppose one trucker in buying stock brings back a cent or a cent and a half more for the stock than the other; won't he get the business?—A. He might, but there are very few localities in which there are two or three truckers working.

Q. Do you mean to argue then that the packers have apparently persuaded the farmers that this system of shipping their stuff direct to them and taking a lower price than they could get otherwise is a good thing?—A. The packer is not asking them to take a lower price, he is giving them all the encouragement he can to ship direct.

Q. They are persuading them to come and take a lower price?—A. Yes.

Q. How are they doing that?—A. They haven't got a man with knowledge of values, that knows the values of these animals; they have not the advantage of a commission salesman who knows values.

*By Mr. Edwards:*

Q. There is only one bill, is not that another reason?—A. That is another reason—they receive the stock, weigh it, and put a price on it.

*By Mr. Sommerville:*

Q. Who grades it?—A. He grades it.

*By Mr. Factor:*

Q. Does not the producer know all these facts; is he so ignorant of these things that he continues to ship his products direct to the plant?—A. Some of them may, some of them are mighty shrewd.

*By Mr. Sommerville:*

Q. Some of these truckers when they have their own stock to sell—where do they take it?—A. Oh, they just take it to the market.

Q. Do they ever bring it to you?—A. I have had a trucker bring his stock to me, and I would ask him why he did not take it over to the packing plant, and he would say, I do not feel capable of selling my stock. I would rather take it to the market, and have you sell it there.

*By Mr. Kennedy (Peace River):*

Q. You think he would get better results through the services of an experienced salesman?—A. I would think so.

Q. And having one man who has no interest in the sale or purchase of the hogs is bound to be better in the long run?—A. Absolutely.

Q. Here is another point, do you know of anybody who can be sure about the weight he is getting; is there anybody there who knows whether he is getting the proper weights on his live stock or not?—A. There might possibly be.

Q. Do you think any man is capable of looking at a load of hogs, or an individual animal, and telling what its weight would be?—A. Not exactly, no.

*By Mr. Sommerville:*

Q. Before you leave that question of weights; what equipment have you at the stockyards for weighing, does it vary from the equipment for weighing at the plant?—A. On the sheep and lamb scale we have a five-pound notch.

Q. What does that mean?—A. They weigh to 5 pounds. We will say a calf weighs 98 pounds, for example; at the stockyards he would get 95 pounds—that three pounds don't count one way or the other; at the packing plant he would get only 90 pounds.

Q. That is to say, the scale at the packing plant has what is called in the vernacular a ten-pound notch, that is, they weigh in units of 10 pounds?—A. Every ten pounds.

Q. Does this amount to very much with every lot being weighed as a lot?—A. No, but with present conditions when deliveries are only small—take calves and lambs—there are many lots of one, two or three. With a big lot the difference would not amount to much, but where you have just a few, or one animal, it does mean something; I will just illustrate it now. You take on a car on which we have 17 drafts, it might amount to quite a lot on each draft.

Q. What do you mean by 17 drafts?—A. Seventeen cheques.

*By Mr. Edwards:*

Q. You mean, different consignees?—A. Yes. And if that lot had been weighed on the packers' scales, these men would have lost about \$5.

*By Mr. Young:*

Q. The packer always takes the break-down?—A. Naturally, any one does. They do nothing that is out of the way. You must have a break-down or you are not going to get weight. They are only human, the same as the rest of us. We have always advocated a law under which every person would be on the same footing with weigh scales and a weighmaster under supervision the same as the stockyards are.

*By Mr. Sommerville:*

Q. I understand from your evidence that you are not charging, or suggesting, that there is deliberate underweighing at the plants?—A. Oh, no.

Q. I would not expect that, you are dealing with the packers every day, and you would not make any such charge as that.

*By Mr. Kennedy (Winnipeg):*

Q. Is it impractical to weigh by the pound?—A. Yes.

*By Mr. Edwards:*

Q. Do I understand you to say that at the packing plants the weighing unit is ten pounds, and that at the stockyards the unit is 5 pounds?—A. Yes.

*By Mr. Sommerville:*

Q. That is, the unit of 5 pounds is on the scale for sheep and calves in the stockyards; but the unit on the large scale for cattle is ten pounds?—A. Yes.

Q. So that the system with respect to the weighing of cattle at the stockyards and at the plants is to use the 10-pound scale?—A. Because of heavy weights and we do not figure it makes very much difference.

Q. But with respect to small stock—sheep and calves—the stockyard has a 5-pound notch, as against the 10-pound notch scale of the packer?—A. They are all registered beams.

*By Mr. Young:*

Q. When you sell stock you sell to the packer?—A. Not always.

Q. But frequently?—A. Oh, yes.

Q. Does he weigh it on his own scale?—A. On the yard scale, everything that is sold on the yard is weighed on the yard scale.

Q. Does he not reweigh it on his own scale?—A. He could reweigh it as much as he liked, but settlement is made on the basis of the stockyard scale weight.

*By Mr. Factor:*

Q. Have you ever discussed the advantage of selling through the expert commission agent with the producer?—A. Yes, two years ago this spring the commission men put on a series of meetings through the country in order to meet conditions, and to acquaint the farmers with the advantage of selling through the market. I think it had some effect. We pointed out the advantage to them, and dealt with the truck situation, and how it works a hardship on them. We showed them that where the cattle come to the yards they get a chance at least to drink water, and doing that they would take on weight as much as ten to 30 pounds to one animal—the amount of weight the animal gains in the yard is sufficient to fully cover the charges they pay there.

Q. It requires more or less of an educational campaign among the producers to point these advantages out?—A. Yes.

Q. Have you pursued that to any degree?—A. Well, a year ago we dropped it off. The exchange went to the expense of the meetings, and carried it on until it got late in the season, about haying time. You can't get the farmers to attend meetings in a busy season like that.

Q. Are there any advantages in selling direct to the packer?—A. Not apparently for the producer, it is a better argument for the trucker than it is for the producer.

*By Mr. Sommerville:*

Q. Who is the chief factor in increasing shipments directly to the plant?—A. The trucker.

Q. And why?—A. Because he can go direct to the plant, make his deal, get unloaded and get away quickly; he gets back and gets his second load in, and he is interested in getting as much in as he can. That is the way he makes a lot of money, regardless of price.

*By Mr. Young:*

Q. Just before you leave that, you spoke about the gain in weight in cattle that are put in the yard, and fed and watered—does not that make a difference in the price?—A. It might, in certain cases.

Q. Is there not a fed-and-watered price and an off-car price?—A. Not in particular—not in Toronto.

*By Mr. Sommerville:*

Q. In Toronto you sell on the basis of the fed-and-watered price?—A. Yes, hogs are the only things sold off cars.

Q. The animal sold off cars does not bring any extra price over the other?—A. It is our experience it doesn't.

Q. Now, will you continue your statement?—A. It is rather an interesting fact—

Q. No, you say your commission firms are in agreement on this point; it simply cannot be done, nor will they accept a commission for doing so?—A. Oh, yes. Now, would you like me to give you an exhibit of the agreement of the commission men.

Q. The commission men are in agreement on the point that they will not sell to packing plants with reference to cattle?—A. No, would you like to see that?

Q. As long as you state that is the fact.

*By Mr. Factor:*

Q. The commission men are in agreement that they will not sell to the plants, is that it?—A. They will not have anything to do with any stuff going direct.

*By Mr. Young:*

Q. You would not have any chance to have anything to do with it, would you?—A. Yes.

Q. If it was shipped direct to the plant, the commission man would not get a look in?—A. Not at present; but there are shippers who would like us to go over and handle that, particularly the carlots.

Q. Go to the plant and bargain for them?—A. Go to the plant and sell it there. We saw what was coming was a disadvantage to us, and we made an agreement that we would not have anything to do with stock going direct to the plant.

Q. Why did you do that?—A. Because we saw it was undermining our growth; that when the packer had 50 per cent or 20 or 25 per cent of his purchases at the packing plant it would move that buying power over there. If commission men encouraged that they would soon have all their business over at the packing plant.

*By Mr. Sommerville:*

Q. You say: "Our entire trading of each week in the buying and selling of live stock on commission, except on hogs, will take place only at the Union Stockyards at West Toronto in accordance with the hours of business as regulated by the Toronto Live Stock Exchange, and that no commission firm nor any of its employees be allowed to buy live stock in the country except for consignment to the Union Stockyards in Toronto, and that all commission firms and their employees be allowed to canvass for consignments in the country subject to the provisions as set forth in the rules and regulations of the Toronto Stock Exchange"? In other words, there was a temptation on the part of some firms to canvass for cattle in the country and ship them direct to the plant and collect commission; and there is an exception with respect to hogs. Why is there an exception with respect to hogs?—A. At that time, and it still exists, the great habit of the packers was buying their hogs f.o.b., and they tried to secure the biggest share of their deliveries, say, 74 per cent, in the country, and buy them f.o.b. and pay for them that way.

*By Mr. Edwards:*

Q. F.o.b. shipping point?—A. Yes, f.o.b. shipping point.

*By Mr. Sommerville:*

Q. And with 74 per cent of their buying direct on an f.o.b. basis they would control that situation?—A. It puts them in a position they scarcely need, to go off the market and play with the 74 per cent.

*By the Chairman:*

Q. Why do you relax your opposition to that? You said a moment ago, when you were reciting your opposition to direct shipments, that you excepted hogs; why do you except hogs?—A. We do not except any hogs at the plant.

Q. Do you resist or condemn the practice with hogs the same as with cattle?—A. I said we do not receive; we do sell some hogs direct to the plant. An expert salesman comes along, and they do not have to stay at the plant; they are bartered the same as on the market.

*By Mr. Sommerville:*

Q. You do that because of the fact that the plants already control 74 per cent of the hog shipments?—A. Yes. We have either got to lose that end or—

The CHAIRMAN: You succumbed in that case?

The WITNESS: Yes, we always feel we were capable of selling to them. We are not like the truckers.

*By Mr. Young:*

Q. The object of the agreement was to discourage the practice of shipping direct?—A. Yes.

Q. And you find it is not working; they are shipping direct anyway?—A. The car stuff is not nearly as much.

Q. Do you find stuff is going back to the yards instead of to the plants?—A. Yes.

Q. They are not gaining ground there?—A. They are not gaining ground on their truckage. Take the drovers—some of the men who have been in the business for years and have been putting their own money in their stock, they prefer to ship and do ship 90 per cent of both sheep and other stock to the commission firms.

Q. You have not been able to discourage the shipment of hogs direct to the plant by refusing to sell, but you go over there and sell?—A. No, we do not go over; we sell hogs f.o.b. in the country.

*By Mr. Sommerville:*

Q. And your fear is that you would not sell them any hogs if you did not sell on that basis?—A. Yes, they would take our customers away from us.

Q. And as a consequence you have succumbed on hogs?—A. Yes.

Q. Your proportion of sheep and lambs seems to be growing?—A. Yes.

Q. What is the proportion there?—A. Canada Packers, 55, Swift, 27.

Q. And with calves about?—A. 33 per cent of calves Canada Packers, and Swifts 18 per cent.

*By Mr. Young:*

Q. Before you drew up this agreement among yourselves, refusing to sell at the plant, had you been in conference with the stockyard people?—A. With the stockyard people?

Q. Had you discussed the matter with the people who control the stockyards?—A. No. The stockyards and the Commission men are separate.

Q. They are, I know. The stockyard men have been coming here and asking us to stop direct shipments. Now, you come here and you say you are encouraging the stopping of direct shipments by refusing to sell anywhere but in the stockyards. Was that an agreement with the stockyard people?—A. No. It was for our own benefit.

Q. You have never discussed the matter with the stockyard people?—A. No. I do not think we ever discussed it with them. We never had any meetings to discuss the situation.

*By Mr. Sommerville:*

Q. Will you proceed?—A. It is rather an interesting factor in Toronto to watch the operations of one of the plants in the east end of the city, the old Davies plant. Apparently it did not pay as a processing establishment, as the whole of it has been closed up with the exception of the truck deliveries equipment, where there is a tremendous volume of live stock literally dumped there by the truckers from eastern Ontario, and which apparently is very keenly solicited. It is certain that it must be bought at prices low enough to stand the packer's expense of operating this private plant, and their paying the expense of freighting it up to west Toronto plant for processing, which is usually not done until the day after purchase. Shrinkage must be heavy, which means added costs and yet it must be cheaper in the end, otherwise this operation would not have continued to the extent of over 1,000 carloads in the past year. Now, it would not cost the producer another cent to have this live stock delivered at the market, which could be done in a very little more time by the trucker, who would not dare raise his fee of trucking, because of the keen competition he is up against in the transportation of animals. Instead of selling the animals on empty weights off trucks, they would have every opportunity to feed and water, and more than recover in weight the cost of market expenses, besides having them sold in competition, weighed on scales by certified weighmaster in accordance with The Livestock and Livestock Products Act, scales with a type-registering beam, tested daily, full returns made to owners with a clear statement of the sale and his own personal cheque in payment of the best returns the market can possibly hand him. Cheques issued from a "shippers trust account" under the supervision of the Department of Agriculture. Besides all this, the Commission firm keeps their shippers posted as to market conditions, and endeavours to regulate the marketing of trucked-in animals, just as much as in the case of carload shipments.

All live stock should be shipped to the public markets. The processing of animals into meat products by the abattoirs is no different to the operations of any manufacturing plant. Their whole aim must be to make money for their shareholders. Therefore, besides maintaining a plant in which they endeavour to process live stock as cheaply as possible, they must also maintain competent staffs of salesmen to sell their meat products for as high a price as it is possible to sell them for; also it is extremely important that they enlist the services of shrewd capable buyers to secure their requirements just as cheaply as it is possible to do.

Q. Are there any bonds at all on truckers who carry stock?—A. None whatever.

Q. Your men are bonded?—A. For \$10,000.

*By Mr. Young:*

Q. Now, you say it would not cost the producer another cent to have this stuff delivered at the market, and we were told yesterday that this stuff comes from the east, and to deliver it at the market the trucker will have to haul it another six or seven miles. Do you mean to say he would not charge a cent to do it?—A. No.

Q. Are you sure of that?—A. I am sure of it. The same as the railway. They drop off a car at the Don and the rate is the same as if they bring it to west Toronto. We have truckers from the east that go right by.

Q. If you were a farmer or producer and a trucker came to you to take a car of hogs, and you said, "I want you to take them through to the market," would he not charge you any more for it?—A. No.

Q. Why do not the farmers insist on them doing it?—A. I cannot answer that.

Q. If there is any disadvantage in dumping it off at the Davies plant, and he can get it delivered at the market for the same price, I cannot understand why he does not insist on it?—A. It leads you right back to the trucker.

Q. Surely, the farmer has some say. If competition is keen, the trucker will say, "I will take your stuff right to the market"?—A. We will clear that up a little later on in the committee with a letter that has been sent on from a producer.

*By Mr. Kennedy (Winnipeg):*

Q. I suppose the reason that the farmer is not inclined to send it through the yards is because of what he considers as the expense of marketing through the yards, commission, etc.?—A. Exactly.

Q. Can you tell us what that expense amounts to?—A. On cattle about \$1.30 per head. That is made up of \$1 commission, 25 per cent market fees, 5 cents insurance.

Q. What is it on hogs?—A. Five cents market fees and 20 cents for selling.

Q. Twenty-five cents?—A. Yes.

Q. What is it on calves?—A. Ten cents market fees and 25 cents for selling.

Q. Sheep?—A. Twenty cents for selling and I think, offhand, it is 6 cents for fees. I may be a cent wrong.

Q. I suppose the farmer has in his mind that by shipping direct to the packers he saves that?—A. Yes.

Q. And your argument is that you give him service?—A. Yes, we more than offset that.

The CHAIRMAN: Feed and water—added weight offsets those charges; is that your argument?

The WITNESS: Yes.

*By Mr. Kennedy (Winnipeg):*

Q. Does the farmer pay anything for that feed?—A. For the hay.

Q. Would the farmer pay for any feed he might need?—A. Yes, he would pay for the feed, in one way; in another way, that stuff goes into the yards from which there has been a load of cattle removed and there is, perhaps, 25 pounds of hay left there which has already been paid for by the previous shipper, and that load gets the advantage of it.

*By Mr. Sommerville:*

Q. Trucked-in stuff does not pay the same as stuff brought in the previous night?—A. No. We figure if they come off the truck and they are warm and get a drink of water, that is all.

*By Mr. Edwards:*

Q. I suppose if he is charged for the hay the price that is paid he will not gain anything in regard to the weight of the animals?—A. Oh, yes, between the hay and water, naturally an animal would weigh more.

*By Mr. Sommerville:*

Q. Would your feed and water weight increase cover not only the market charges but freight as well in many instances; would the increased weight from your feed and water pay not only the market charges but the freight as well?—A. Absolutely. For instance, if you have a bullock it is quite usual for them to drink anywhere from 20 to 30 pounds, and 20 pounds is a pail of water, and anybody who knows anything of stock knows they will drink up a pail of water. Many of them will drink two pails. If cattle are 4 cents a pound, 20 pounds at 4 cents makes 80 cents. The higher the price the more it is. That is based on 4 cent cattle.

The CHAIRMAN: I really do not think the witness got your point, and probably it might embarrass him later. You do not really mean to say that feed and water would offset the freight?

The WITNESS: The freight in on the truck?

The CHAIRMAN: Yes.

The WITNESS: Oh, no; not the total charge.

*By Mr. Sommerville:*

Q. I was asking you about the total charge?—A. Oh, no; not an average case; but we figure that nine times out of ten we are capable of getting much more for that farmer that would later offset all the charges, much more.

Q. That is to say, the feed and water increased weight will pay all the market charges?—A. Yes.

Q. And you say that the increased price that you get will more than offset all the charges, freight as well as market charges?—A. Would you like me to give you a little example?

Q. If you will?—A. Here is one bull, not a high priced one, I am sorry to say. On March 28 it had been sent to a packing plant and he was bid  $2\frac{1}{2}$  cents for the bull and he would not accept it. He brought it to the market and sold the bull for \$2.80 a hundred. It weighed 1,280 pounds. That came to \$35.84. Yardage 30 cents, commission \$1, expense at yards \$1.30, a gain of 30 cents per pound over price at plant—1,280 pounds at 30 cents, \$3.84 less \$1.30, which made a gain of \$2.54 on one bullock. It looks like a fair profit on one bullock.

Mr. ILSLEY: There was a gain in weight?

The WITNESS: We will say nothing about the gain in weight at all; it is just the gain in price. I was informed by my boys that the animal took a good drink of water. I cannot say anything about gain in weight.

*By Mr. Kennedy (Winnipeg):*

Q. Do you ever hear of cases where there is a gain by selling direct to the packers?—A. Do you mean taking them from the yards there?

Q. Taking them away?—A. Yes.

Q. And where they get a better price selling direct to the packers?—A. Yes, he may. If I take over a bullock in my truck—

Q. You have just given a profit of \$2 by selling through your yards. Have cases come to your knowledge where farmers have been getting a profit by selling direct to the packers?—A. We have been told that. I do not know for certain. They sold at \$5.25, and three heifers weighing 2,050 pounds at \$5.80. The yardage cost was \$1.30, commission \$5. The total for them all was \$208.15. Now, the total increased expense cost them \$6.30. The increase in the price was 75 cents per hundred, which left them \$21.70.

*By the Chairman:*

Q. Over what?—A. At the plant.

Q. And had he refused at the plant?—A. He refused, and after paying market expenses, which is \$6.30, he had \$21.70.

*By Mr. Sommerville:*

Q. How would you remedy the effect of this direct shipment to the plants?—A. Well, that is a pretty large question. I have studied it, thought it out, I suppose much bigger men than I am have. There is only one way, and that is legislation to bring all the stocks through the yards where plants are located within a reasonable distance of the yards.

Q. You deal with that in your brief. You have made that statement. Will you read that statement?

With the present system of their securing requirements from country points, where they can secure certain of their needs at prices slightly lower than can be obtained on the market, thereby enabling them to undersell their competitors who are operating on the open market, where they must endeavour to buy their supplies as near as possible to the prices of their competitors in order to meet this competition, making the net returns to the producer somewhat less.

If all live stock was dealt with on the public market, the producers would then meet with the buyers through the able services of the commission men, who are all men of long experience, who have devoted their entire life to the live stock business and who are equally capable of dealing with the highly trained shrewd buyers of live stock. Instead of the packers dictating the prices of live stock, the farmers would then be in a position to be the dictator, and with the concentrated buying power of all the abattoirs and small wholesalers, there would immediately develop a market that would be on a sound competitive basis, arriving at the true values of live stock from day to day. Packing houses would be on an equal footing in securing their supplies, and the confidence of the producers would be revived instead of having such an unsatisfactory condition as now exists, not only in the matter of doing business but also in maintaining their interest in the production of live stock. We are confident that with all shipments being offered on public markets that prices would be fully restored to a satisfactory level, commensurate at least with the cost of production.

Q. You say, "Packing houses would be on an equal footing in securing their supplies, and the confidence of the producers would be revived." What do you mean by that?—A. Well, they would feel then they were dealing with capable men that knew the value of their stock, and that there was competition on the market, there were different buyers. They would place confidence in the men that were handling their stock, and I think there would be a great deal different feeling. They would not always think the packer was taking advantage of them. They would have a say in the price of their stock, or handling it on the market, could say, "There is the stock, we want so and so, take it or leave it."

Q. We have evidence from Mr. McLean that there was want of confidence?—A. Yes.

Q. How do you account for that, from your angle, or your knowledge of it?—A. As regards the packer, sorry to say, the farmer never has seemed to have confidence in him. They always think he is taking advantage of them, whether he is or not. But putting it through the market channels, we feel it would remove all that.

*By Mr. Factor:*

Q. How do you explain that 67 per cent of them still ship to the packers direct?—A. I believe I mentioned that before. It is the dominating power their

truckers have over them. They simply go and buy their hogs f.o.b., which increases their flow of hogs there, from men that are capable, the drovers; these hogs are not just bought from the farmer. They are assembled by the drover and they are quite capable of making the deal and getting probably the value of their stock.

*By Mr. Kennedy (Winnipeg):*

Q. Surely when the farmer ships such a large percentage direct, there must be a feeling on his part that he is being dealt with reasonably fairly?—A. Well, you would think so, but where the farmer has got only two or three cattle, and that only occurs in such long spaces, he has got to get them to market, get them wherever he can, and get his money for them. It is not like a dealer dealing direct. I think the best illustration of that is the drover who goes up to market with his stock. He buys his stock every week. He comes to market. He would not have the confidence, though he is a shrewd buyer, to go over and deal with the men at the plant.

*By Mr. Sommerville:*

Q. That is to say the drover who is dealing in cattle, calves and sheep?—A. Yes.

Q. But you say the drover, when he is dealing in hogs, does sell direct?—A. Yes.

Q. They fix the price at the station?—A. Yes.

Q. And he knows the prices that are paid?—A. Yes, before it leaves. If it is not a satisfactory price, he ships to the market.

Q. And the large shipments of hogs, do they go through these drovers or through these collecting stations?—A. Quite a large percentage.

Q. But otherwise you say the farmer has just a few head from time to time?—A. Yes.

Q. And that the dominating factor is the trucker?—A. Yes.

Q. The man who carries it in?—A. Yes.

*By Mr. Young:*

Q. Take the last sentence of this paragraph, Mr. Quinn: "We are confident that with all shipments being offered on public markets that prices would be fully restored to a satisfactory level, commensurate at least with the cost of production". Is there not a little exaggeration in that?—A. I don't think so. I think the producer would have a big say in the price of his goods, the same as any other man has. If you had to walk into the stockyards and buy your stock, and we know that there is no supply standing over at the abattoirs, we could stand up there and get a price for the producer there. We could dictate.

Q. What is the price of cattle to-day, butcher steers?—A. Butcher steers are running anywhere from  $4\frac{3}{4}$  to 6 cents a pound.

Q. What would you call a price commensurate at least with the cost of production?—A. Well, I think the majority of the cattle are selling away below the production cost.

Q. Below cost of production?—A. Yes.

Q. You say if they were sold through the yard, that would bring back prices?—A. They would gradually get back. There would be nothing to hinder it, if purchasers had to go out and buy their stock, that the commission men and the farmers would have a say in their goods, the same as a man has got anywhere else.

Q. We have a lot of evidence of steers being sold for seven to ten dollars apiece. You don't mean to tell this committee by shipping through the yard and not to the plant, that would bring the price back up to the cost of pro-

duction?—A. Probably not. They would have brought a great deal more of the cost of production than what they did.

*By the Chairman:*

Q. And if practically all of them were passed through the market, all of them would get a better chance for a higher competitive price; that is your argument?—A. Absolutely.

*By Mr. Sommerville:*

Q. I ask you a question that the committee have asked of others: Suppose you had, as you have now, in the case of the packer, 50 per cent of the supply taken off the market and in the hands of the packer, and 50 per cent of the buying taken off the market, would the result not be the same?—A. Absolutely, the condition would be just the same. They have got their 50 per cent of the supply off there.

Q. But what would be the effect upon the market itself?—A. Well, those buyers would be removed, and there would be a depressing effect.

Mr. YOUNG: Stock would be removed.

Mr. SOMMERVILLE: I am going to carry it through to a conclusion.

*By Mr. Sommerville:*

Q. Stock would be removed, but would the stock be in the same hands as the buyers that are now on the market?—A. Absolutely.

Q. That would be the effect of that 50 per cent of the stock being in the same buyers' hands that are on the market, on the balance?—A. They would not have to go on the market to buy?—A. They have got 50 per cent of their stuff, no matter where it is. If it is plants, it is at their plant. It don't make any difference. They have got it in their hands. If it was in the market, they would have to go into the yards and buy in competition.

*By Mr. Factor:*

Q. Well, I am not yet convinced about the lack of exaggeration in that last statement, that if all the stock was offered on the public market, you would get a price commensurate with the cost of production. Are there no other elements entering into the low cost of live stock?

*By Mr. Kennedy (Winnipeg):*

Q. Such as supply and demand on the market?—A. Well, yes.

*By Mr. Factor:*

Q. World conditions and world depression?—A. They all come in; they must come in.

*By Mr. Ilsley:*

Q. They are the main ones?—A. Yes. You must get into your mind that a packing plant processing your meat, if they have got 50 per cent or 70 per cent of their stock at their door, driving up there and unloaded, and they put the price on it, they are not going to put it too high, are they? They are going to go over to the market then and try to buy stock cheaper at the market, and they can slow it up. They can say to the trucker, "Here is the market price." For instance, if I drove up to your place in an automobile and ran up in the yard and said, "Here, give me what you like for this automobile. I am going home," and you send me a cheque next week, you are not going to give me any more, or anything like that, than what you think is fair, are you?

*By Mr. Sommerville:*

Q. What you say is that if the stock were all at the one market, if the processor had to buy at the one market, the butcher had to buy at the one market and the wholesaler had to buy at the one market, there would be competition?—A. Absolutely.

Q. And that competition would result in a better price for the producer?—A. Yes.

*By Mr. Factor:*

Q. According to the evidence produced, no one doubts that; but I mean it does not necessarily prove that it would be fully restored to a satisfactory level by this?—A. It would in time.

*By the Chairman:*

Q. I think there is a good deal in the statement made by a couple of my colleagues, Mr. Quinn. It is a pretty large statement to say, "We are confident that with all shipments being offered on public markets that prices would be fully restored." I would suggest to you that it might be advisable to moderate it a little?—A. It might be a little strong to say it would be fully restored.

Q. It is rather a selling point. As a matter of fact, I do not think it would be accepted as a statement of fact.

*By Mr. Young:*

Q. When you are selling stock on the market, Mr. Quinn, do you ever make any attempt to find out what they are paying at the plants?—A. We have no opportunity.

Q. Do you care?—A. Absolutely.

Q. Why do you care?—A. Well, because it would help us. If we know they have got a certain number of head of stock over at the market, they might be a little short on that class of stock, and if we knew they needed so much, we would be able to stand up a little stiffer.

Q. You do care?—A. Yes, we would like to see the producer get the value of his stock and not have them depress the market down there. If they depress the market there at their plant, they come over and depress it on the market.

Q. But if you see a lot of stock going to the plant and not much coming to the yard, does the thought ever cross your mind that possibly they are paying a little more over there?—A. No.

Q. It never does?—A. No. We are quite aware they are not going to.

*By Mr. Sommerville:*

Q. You are quite aware they are not going to?—A. Yes.

*By Mr. Young:*

Q. You don't consider them as competitors at all in the matter of prices?—A. If they could buy their cattle cheaper on the market, they would go over and buy it on the market.

Q. You don't consider them competitors then?—A. Why, yes, we consider them competitors. Why not?

Q. They are competitors with the yard?—A. Yes.

Q. There is competition between the plant and the yard?—A. It is not between the plants and the yards. It is the plants alone are bidding to depress the price at the plant. That is their main idea. Then they can go over to the market, and slow it up down there. For an illustration, you usually see by Wednesday the packers send out their prices on hogs less than what they are at the beginning of the week—usually.

Q. You say there is no competition between the plants and the yard?—A. There is competition in selling, trying to get more money. Then these packers are going over there, and we have still got these individuals to deal with that have got their 50 per cent.

*By Mr. Boulanger:*

Q. Is there competition between the plants?—A. Well, there is supposed to be.

*By Mr. Young:*

Q. Where do you get your price every day, that you are willing to buy at—that you expect to get?—A. The supply and the demand, and the price of beef around the city and such-like. It is all a regulating factor.

Q. But when you come down in the morning and start the day's business, if a farmer comes in with a load of stock and asks you how the market is, and you say butcher steers are so much, where did you get that price?—A. We form our idea that we will get that much.

Q. Where did you get the idea?—A. Beef is selling at a certain price; live cattle must be a certain price.

Q. Didn't that price come from the plant in the first place?—A. Do they come from the plant?

Q. Didn't that price come from the plant?—A. No.

Q. You don't get it from the plant?—A. We don't get no price from the plant.

*By Mr. Sommerville:*

Q. Mr. Quinn, do you get your idea from other markets, the run of other markets?—A. We get a wire from Montreal, and we get a wire from Winnipeg that they have got a certain run. If they are short there, then it would strengthen our market.

Q. So you first of all know something of the run of the cattle?—A. Yes.

Q. Then do you know something of the needs?—A. We try to find out as much of that as we can.

Q. If you knew what was the need of the packing plant—if you knew what they had on hand at the packing plant, and could size up the needs, would that put you in any better position?—A. A great deal better position.

Q. To bargain with your cattle?—A. A great deal better position.

Q. And at the present time you are not able to tell what they have got in?—A. We know nothing about it.

Q. By the way, the price is not marked on the ticket?—A. No.

Q. No public information?—A. No.

Q. At the plant?—A. But the stockyards do.

Q. What do you say as to the principle of putting the price on the tickets at the stockyards?—A. It has a very depressing effect on the market. Every packer can go in there and see what the other fellow is paying, exactly, for his stock.

Q. You think it has a definite depressing effect?—A. Yes. It is an injury to the market.

*By Mr. Young:*

Q. Most of your stock is sold to the packer in the end, is it not?—A. Well, yes, most of it; but we can give you a comparison. For instance, you would think there were only two buyers at our market. We have about, in the month of October—if you will allow me, we will take a couple of months, a month with a heavy run, and another month with a shorter run. For example, in the month of October we had 213 buyers in one week at our market. The Canada Packers

bought 2,507 cattle, which was 33 $\frac{1}{2}$  per cent of the cattle. Swifts bought 1,018, which is 13·5 per cent. Hunnisett bought 541, which is 7·2 per cent. Fifty other butchers bought 872 cattle, which is 11·6 per cent. Two exporters bought 257, which is 2·4 per cent, and 147 country buyers bought 2,008 cattle, which is 26·9 per cent.

Q. These country buyers were buying feeders?—A. Feeders, mostly.

Q. Mostly going to do the feeding in the country?—A. You see, we have around 200 buyers or suchlike for the month of October.

Q. That is when you have had a heavy run of feeders?—A. Yes, we took that from a heavy run. Here is a week in January—January 15—with probably a light run. Canada Packers bought 1,720 cattle, that is 36·1 per cent. Swift Canadian bought 1,062, which is 22 per cent. Hunnisett bought 421, which is 9 per cent. Forty-five butchers bought 761, which is 16 per cent. Three exporters bought 229 cattle, which is 4·3 per cent. Nine speculators bought 159, which is 3·3 per cent. Fifty country buyers bought 396, which is 8·3 per cent. So that we are not in the hands of the packers altogether, as some people have the idea. But when you speak of the 50 per cent of cattle and such like that are going directly in, these are removed; these buyers here which I have just mentioned never having had an opportunity to bid on that stock. There is no competition. If they were on the market, approximately two hundred and some odd buyers would have had an opportunity to buy. In January 100 buyers were on the market that week. If they had had an opportunity to bid on that 50 per cent more stock, it looks reasonable there would have been more money paid for them.

*By Mr. Sommerville:*

Q. That is an inducement to the increase in price?—A. Yes.

Q. Is that one of the reasons that you say the packers encourage direct shipments?—A. Sure.

Q. To remove those cattle from competition?—A. Yes, from competition.

*By Mr. Ilsley:*

Q. The more there are, the higher the price is—it does not seem reasonable?—A. These other 108 buyers didn't have an opportunity on them, against the other two at all.

*By Mr. Sommerville:*

Q. What you are saying is if the packer came for his cattle on to the market, and everybody had the same chance at it, the packer would pay more for his cattle on that market?—A. Certainly.

Q. Is not this what happens? Your two big packers get half of their supplies direct at the plant and they withdraw from the market then for part of the day; there is only half of the supply on the market, but only two of the buyers are holding off; would not these 108 other buyers then force the market up higher than it was?—A. It would seem so.

Q. Then when the plants do come in they would have to pay a higher price?—A. That might happen.

Q. That being the case then, the fact that the plants get their stock direct at the plant is going to force the price up, instead of down?—A. No.

Q. Why yes?—A. If they had to go out in the morning and bid with these other buyers, and bid in the morning, the result of that would be that the packer might bid a nickel here or ten cents there more than the other man—.

Q. But you have taken two buyers out of the market, and you have taken half of the stock off of the market; you have left on the market half of the stock and 106 buyers—there are more buyers on the market, are there not?—A. Yes.

*By Mr. Sommerville:*

Q. Now, in the morning you say that the market opens and the packer is not on the market; when does the information go out to other markets in Canada from Toronto?—A. Well, I believe the packers get their wires out quite early; the government is supposed to send out wires as early as they can, probably eight, or nine, or ten o'clock; then there may be a wire follow a little later, around eleven o'clock, giving the condition of the market.

Q. And if the buyer stays off the Toronto market, what is likely to be the effect?—A. There is likely to be a draggy market.

Q. And when sales take place on these other markets out west, they come back to you?—A. We get wires from all points, Winnipeg, Montreal—on the action there.

Q. And if the effect of the draggy Toronto market has been to make the other market?—A. It is apt to be draggy too.

Q. And it has an effect upon the price?—A. They may go out there and purchase their supplies, if that market is draggy.

*By Mr. Young:*

Q. Could you not repeat that process two or three times and get prices down to zero through doing it?—A. I do not know how much good repeating would do.

*By Mr. Kennedy (Winnipeg):*

Q. Without in any way reflecting upon the service that you, and those you represent, may give to the farmer, is it not a fact that so far as money returns are concerned, that for you and those you represent, your money returns are based almost entirely upon the stock being marketed through the yard?—A. Oh yes.

Q. So the money interest that you, and those you represent, have is tied up with marketing through the yard?—A. Yes.

*By Mr. Sommerville:*

Q. What reduction could take place in marketing charges if you had more stock marketed through the yards?—A. I think that if all stock was marketed through the yards there could be quite a readjustment made in charges—commission charges.

Q. And also in stockyard charges?—A. You would have to ask the stockyards for that.

*By Mr. Young:*

Q. What do you mean by quite a reduction in commission charges—\$1 or \$2 a car?—A. I think there would be a substantial reduction made.

Q. We had evidence this morning that a reduction of two dollars a car would not mean a cent to the farmer—he would not get it anyway?—A. If you want to follow it back to the farmer, possibly it might not.

*By Mr. Kennedy (Peace River):*

Q. Do you think the packers would have any difficulty in getting supplies if all the stock went through the yards?—A. They might have difficulty getting it at the cheap prices at which they are getting it now.

Q. What disadvantages would the packers suffer if they were not allowed to buy directly at the plant?—A. I cannot see where they would suffer any disadvantage, because their selling cost is based on their buying cost.

Q. Do you think they keep up this practice for the good of the producer?—A. Absolutely not.

Q. I imagine that this service they are rendering is costing them something?—A. They are charging it back to the producer, if it is.

Q. If the packers could not buy stock any cheaper by direct shipments, what would be the object in keeping up this practice?—A. They would not keep it up.

*By Mr. Sommerville:*

Q. As a matter of fact, would the packers' buyers tell you, when trying to buy your stock, that they could buy to better advantage on direct shipments than with you?—A. They always claimed that their direct shipments were cheaper; and they say, that is the cheapest stock we can buy.

*By Mr. Kennedy (Winnipeg):*

Q. Would the witness be more specific on that; is that the fact, have you the name of the packer who said that?—A. Yes.

*By Mr. Sommerville:*

Q. Now, Mr. Quinn, on your market you sell hogs on fixed differentials—at Toronto?—A. Yes.

Q. Do you approve of that basis for selling hogs?—A. Certainly not.

Q. How would you sell hogs?—A. On their grades.

Q. And why do you not sell them on those grades now?—A. Because the man who buys the loads, the packer, requests that he get everything in the load.

Q. And you are not able to sell them on grade?—A. No.

*By the Chairman:*

Q. You say "requests"—do you mean he "requests" or insists?—A. Insists or demands, you might say.

Q. He won't buy otherwise?—A. No.

*By Mr. Ilsley:*

Q. "Dictate" is the word we have been using?—A. I stand corrected.

*By Mr. Kennedy (Peace River):*

Q. I meant to ask the witness what is the chief reason for the growth in direct shipments and in the trucking in of stock?

The CHAIRMAN: Good roads.

The WITNESS: Roads have improved so; and there are many young fellows who don't want to work back on the farm; so they get a truck and start trucking stock, and they are in business.

*By Mr. Boulanger:*

Q. Has not the farmer got the feeling when he ships direct to plants that he is evading paying what he considers unnecessary charges and commission?—A. He has that feeling, yes.

Q. Is it justified?—A. I do not think so.

*By Mr. Ilsley:*

Q. Just a question or two about this question of hog differentials; it is not that the packer insists that he gets each man's shipment as a unit, it is not he insists that he gets the whole carload as a unit—is that correct?—A. Yes.

Q. I want to get that straight, because I got the other impression?—A. Yes.

Q. Just a little further on that: the fact that there is a fixed differential rather does away to some extent—in its result it does away—with the necessity for a commission man, does it not? That is the impression I got from one of the witnesses here yesterday or the day before. One price is offered, and that is the price for bacon hogs; and that fixes the price on every animal in the whole car?—A. That is all set.

Q. On the system of the fixed differentials?—A. Set on the bacon price, and then the differentials work both ways from that.

Q. So if you know the price of the bacon hog there is then no particular need for salesmanship on the part of a skilled salesman to sell them—these lower grades?—A. No.

Q. That is correct?—A. You have no opportunity to take them out and sell them and get their value.

Q. So that is the reason, that with this fixed differential they don't go through the stockyards—that is one of the important reasons it goes direct to the packing plants?—A. Yes.

Q. Therefore, the commission men have a very vital financial interest in doing away with the system of the fixed differential?—A. Yes, that is the main point.

*By Mr. Sommerville:*

Q. There is no question that the commission man would be better off if the fixed differential was done away with?—A. We would get an opportunity to trade on the different grades.

*By Mr. Ilsley:*

Q. It would mean that there would be a tremendous volume of business done by the commission men?—A. Yes.

Q. One other thing; you do not sell hogs by auction, as I understand it?—A. We do not sell any stock by auction.

Q. The normal method of selling cattle is by auction?—A. No private bidding; no auction.

Q. There are no auction sales at all?—A. No.

*By Mr. Sommerville:*

Q. But if you had other grades you could sell them either by private bidding or by auction?—A. Sure.

Q. But you say that if they were not using the fixed differentials for the lower grades, you could get better prices for lower grades?—A. Absolutely.

Q. Why?—A. Because they are hogs which are in demand.

Q. For what purposes?—A. For the domestic trade.

Q. And are they used by the packers for the domestic trade?—A. Yes, that is the reason they are so anxious for them.

Q. Does the packer pass on to the domestic trade the differential that is charged?—A. We don't think so.

Q. So you say there is a demand for these lower grades, and you would get more for them?—A. Yes.

*By Mr. Ilsley:*

Q. What was the reason the system of a fixed differential was put into use, nobody seems to say a good word for this practice at all?

The CHAIRMAN: The people who will say the good word have yet to come.

*By Mr. Sommerville:*

Q. When you come to the question of hogs you get your bids from the two packers?—A. Yes.

Q. Largely?—A. Yes.

Q. And how do they vary, when you ask one packer for a bid and then the other?—A. Well, as a usual thing they are pretty close.

Q. When you say pretty close, what do you mean?—A. Well, the same.

Q. And do you know whether or not there is any fixing of bids between them?—A. I could not say that.

Q. What about the fixing of differentials—have you any information upon that score?—A. I think I have, somewhere—it may take just a moment to find it.

Q. On this question of differentials, are they fixed at different times, or at the same time?—A. Well, we get the notices not very far apart—practically at the same time.

*By the Chairman:*

Q. Do they vary very often; I mean, do they change the fixed differential?—A. No.

Q. They rarely change?—A. Very rarely change—we will locate that directly.

*By Mr. Kennedy (Peace River):*

Q. They have changed at various times—?

*By the Chairman:*

Q. Excuse me just a moment, Mr. Kennedy; who gives you notice of that?—A. The packers.

Q. The different packers?—A. Yes, the government department sets the select differential.

*By Mr. Factor:*

Q. You mean, the premium?—A. Then the packers set the differentials.

The CHAIRMAN: Well, that is all there is to that; we know that.

*By Mr. Kennedy (Peace River):*

Q. There have been various changes, have there not, as to what hogs would be regarded as selects, bacons, butchers, and so on?—A. Yes, at one time the differential was set on the thick-smooth. I think you and I sat in on that once before, a number of years ago. They lowered the differential on select hogs at that time and changed the price differential.

Q. Have you ever been able to see the sense of these changes?—A. Well, I have not—I could see the benefit that some people might derive from it.

*By Mr. Sommerville:*

Q. Who might derive a benefit from that?—A. The killer, the processor.

The CHAIRMAN: Well now, gentlemen, I think there are still some questions to be asked of this witness, and we had better have him come back this afternoon. We will adjourn now and come back here again at half-past three.

The committee adjourned at 12.55 p.m. to meet again this day at 3.30 p.m.

The committee resumed at 3.30 p.m.

Mr. A. B. QUINN, recalled.

*By Mr. Sommerville:*

Q. Now, before we adjourned we were dealing with the question of the differentials and you said you could get a better price for the producer if you

could sell your hogs on grade. Do you get just as much commission by selling a car by differential as by grade?—A. Just the same.

Q. Is there a great deal more work selling by grade?—A. Much more work.

Q. Why insist upon selling by grades?—A. Because we have the interest of the producer at heart, and it will bring him back more money. There would be no more money for the commission men, but I know there is more work.

*By Mr. Ilsley:*

Q. It would bring a few more animals to the stockyards, and more business too?—A. Yes. It would not increase our commission on any individual car.

*By Mr. Sommerville:*

Q. This morning you were looking for a couple of letters which you have since handed to me. They are notices relating to the changes of the differentials. You have handed me here, first of all, a notice of September 11, 1929, headed "Government Hog Grading." Is this a notice which was received from the Canada Packers through P. M. Doyle, hog buyer?—A. Yes. If he signed it, that is the one.

Q. And this is the notice changing the grading from thick smooth hogs, dividing that class up into butchers and bacons?—A. Yes, that is right.

Q. And that was the commencement of the division into butchers and bacons rather than thick smooths?—A. Yes.

Q. Then, following that, you have handed me here two notices, one dated January 25, from the Swift Canadian company:—

Gentlemen, the heavy season for the sale of pork products cut from sows has expired, and the future demand will be limited; therefore, effective with loading Saturday, January 27, we will purchase all smooth, well fattened sows, weighing within government weight regulations, at a differential of \$3 per hundredweight under bacon hogs.

Thin and unfinished sows are not desirable for slaughtering and will be valued according to quality on arrival.

Did that change the differential on sows?—A. Yes.

Q. From what price?—A. They were either \$2 or \$2.50.

Q. And this changed it to \$3?—A. Yes.

The CHAIRMAN: What is the date of that?

Mr. SOMMERVILLE: January 25, 1934, from the Swift Canadian Company.

*By Mr. Sommerville:*

Q. And then you have one from the Canada Packers Limited, January 26, 1934:—

DEAR SIR,—Owing to the high price for bacon hogs in the British market, a discount of \$2 per hundred on sows from bacon price has put them at a price where they cannot be sold to the trade at a profit.

Commencing with Saturday loading, January 27, our price on well finished sows will be \$3 per hundredweight under bacon price. Thin sows and stags not wanted, and will be settled for according to market value—  
Yours Truly,

CANADA PACKERS,

A. McLEAN, *Buyer.*

Q. Now, those were the notices?—A. Notices sent out to the Commission firms.

Q. And they were received on the 25th and 26th of January?—A. Yes.

Mr. KENNEDY (Peace River): Did you say there was something from the Department of Agriculture?

Mr. SOMMERVILLE: No, there is nothing from the Department of Agriculture; but there is a notice signed by P. M. Doyle, hog buyer. He is hog buyer for Canada Packers.

WITNESS: Yes.

Mr. SOMMERVILLE: And that is dated September 11, 1929, and that is a notice to the trade that they changed the grade from thick smooths, dividing that grade up into bacons and butchers.

Mr. KENNEDY (Peace River): That is from the Department of Agriculture?

Mr. SOMMERVILLE: No. This was a notice from the packers to become effective Monday, September 16, 1929, fixing the differential on these grades.

WITNESS: Yes. That states it there.

*By Mr. Young:*

Q. Did these notices affect the price if you were selling hogs for yourself?—A. It rearranged the price. It used to be thick smooth was our set price; then we worked differentials from that.

Q. When they widened the spread between the bacon hog and the lower grades, did not that affect the price you paid?—A. Yes, they would take a butcher hog then or a bacon hog and get a reduction.

Q. Didn't you tell us this morning that you fixed your prices quite independently of the packers?—A. No.

The CHAIRMAN: I am afraid you and the witness are confusing two points. The differential is what is dealt with in this correspondence, that is, the classification and the reduction from the standard bacon price to these others, which is increased in these notices on sows from \$2 to \$3; but this morning the witness in his answer had regard to general factors that entered into the fixing of price, which, I think, is a different point. If you wish to pursue it, do so.

*By Mr. Sommerville:*

Q. I want to bring this point up; by changing this grade of thick smooths by dividing it up into bacons and butchers, did that reduce the price on some of the hogs?—A. Up to that time it was—

Q. —Included in thick smooths?—A. It reduced the price of butchers which were necessarily in thick smooths; it took \$1 per hog off that class.

Q. That is to say it took \$1 per hog off that class which was formerly thick smooths?—A. Yes.

Q. And also, inasmuch as thick smooths were basic hogs it left bacons as the basic hog and butchers as being sold at a reduction or a cut.

*By Mr. Young:*

Q. In this matter you were entirely in the hands of the packers?—A. Yes. They set the differentials.

Q. They do control the price then.

Mr. SOMMERVILLE: On all the cuts.

The CHAIRMAN: They control the differential.

Mr. YOUNG: Yes; and I think we had some evidence that they control the other prices too.

The WITNESS: They try to.

The CHAIRMAN: But I think the point the witness is making is that they control the differential, and in rearranging this differential there was a loss on a certain proportion of a class that previously had been a higher class.

Mr. ILSLEY: Are these animals called thick smooths the hogs that were basic hogs before 1929?

The WITNESS: Yes.

Mr. ILSLEY: They were not bacons at all?

The WITNESS: No. They were the same hog, but they were named differently, and they have a certain class.

*By the Chairman:*

Q. There is only one point before you leave that. Having in mind these notices, is this correct; that the packers still persist in buying the carload of all grades?—A. Absolutely.

Q. At a fixed differential?—A. Yes, at a fixed differential.

Q. That is the point, I think, in all this that appeals to me.

*By Mr. Sommerville:*

Q. You have not an opportunity to bargain on the lower grades?—A. No opportunity whatever.

Witness discharged.

Mr. FACTOR: I would like to ask, before you call the next witness, this question: we are spending a lot of time on the matter of marketing live stock products. Now, the government has introduced the marketing bill, making some provision. I wanted to know if that is anticipating the findings of this committee, or what object are we serving in getting all this evidence now?

The CHAIRMAN: Well, I could not answer that question, of course in any positive way. I could not say that the introduction of the bill was in the terms you say—in anticipation of the findings of this committee; but I do apprehend this, that the committee, I assume, from the evidence we have received, might be justified in its recommendations in pointing out how the proposed marketing board, if it were to pass parliament, might be used in connection with the solution of some of these problems. That is a matter for us to consider.

Mr. FACTOR: The marketing bill provides a scheme for bringing into operation the marketing of certain live stock. No matter what we propose, if it is going to be contrary to the legislation that is introduced we are at cross-purposes here.

The CHAIRMAN: Not necessarily. Suppose we wait until we get to the point where we are making a finding. You handicap me in this way, Mr. Factor. I am not in a position at the moment, as the chairman of this committee, to intimate what the finding of this committee may be. I have ideas; you have ideas. Later we will sit down and thrash them out, and we will make a finding; but I do not want to be put in the position where I now assume a finding.

Mr. FACTOR: I am not trying to put you in any position.

The CHAIRMAN: I know; but that is what I virtually would do were I to add my own views in answer to your question.

Mr. FACTOR: Assuming that we find a certain finding which will be contrary to legislation which is now being introduced in parliament, where are we at?

The CHAIRMAN: We cannot assume that until we come to a point where we are making a finding. That is my point. As a matter of fact, I should think that, possibly, some of our findings would be in harmony with the powers that are set forth in that bill.

Mr. FACTOR: Would it not be advisable to withhold that marketing bill until we have an opportunity of bringing in a recommendation on the very subject that the marketing bill covers?

The CHAIRMAN: That is a fair question. I think we should take time to consider that. I would like to give an answer. I think it is perfectly proper to bring that up. I will take this opportunity of suggesting that we have an executive session next Monday afternoon if that is agreeable to the committee. The clerk will notify you of the time, and we will discuss all these matters.

ROSS CHAPMAN, called.

*By Mr. Sommerville:*

Q. You are a member of the firm of Dunn & Levack, and they are commission agents on the Live Stock Exchange at Toronto?—A. Yes.

Q. And you have been a member of that firm for a number of years?—A. Yes.

Q. And you have been on that market for a number of years?—A. Yes, twenty years.

Q. And as such you are familiar with the practices of marketing live stock upon that market?—A. Yes, sir.

Q. And you have seen the changes that have taken place in the last number of years?—A. Yes, sir.

Q. What do you say, Mr. Chaplin, as to the effect of trucking on the market?—A. Following the reference that has already been made in this respect, we can only come to the conclusion that there should be some regulation protecting the producer in the returns of the sale of his live stock. I have some examples of statements which I would like to pass around, which will give the committee some idea of just what I mean by that.

*By the Chairman:*

Q. Before you go on. Have you a copy for each member?—A. Yes, I have certain copies here. On the corner of each one is noted some of the particulars setting out just what these statements mean.

Q. Now, then, since we have these, you can elucidate them?—A. You will notice some of the details on the corners, setting up the direct benefits of the 5-pound beam which was mentioned this morning, on our sheep scale, in the case of lambs and calves, and also some of the other details.

Q. Is this an actual statement before us?—A. Yes, sir. These are simply statements to give you a picture of the selling of our live stock, the number of buyers in certain instances—in one case there were ten animals arrived and eight different buyers in one truck load. The same is true in the case of hogs. Instead of one load of hogs being sold and one buyer, we have some leverage on our market by selling truck hogs and sorting them according to grade. Some shop hogs are sold to some smaller buyers, in certain instances, as you will notice by these statements, with the result that we are able to secure more money for them because truck hogs are weighed immediately after they arrive at the market, and are graded at the same time.

*By Mr. Sommerville:*

Q. When you have had an opportunity of grading the truck hogs that come to you as commission men and sell them out to various buyers, do you get a better price for the grades than when you sell to the packing plants?—A. Yes, sir; that is it.

Q. Take, for instance, this case of the truck shipment from Streetsville, March 26, what is the significance of the statement here?—A. Sixteen hogs arrived by truck, three different buyers, six hogs were sold for only a 50 cent cut instead of a dollar cut which the abattoir would have taken off those hogs, which is a net gain in that case of \$3.

Q. Yes?—A. That is what that one means.

*By Mr. Young:*

Q. What was the grade of those hogs? Why was the dollar cut off? You say you took a 50 cent cut?—A. Yes, they were classed as light hogs—what we call shop hogs.

Q. Was the differential carried from there? You say you took off 50 cents, and the packing house would have taken off \$1. Is that a variation in the differential? Are you departing from it in that case?

*By Mr. Sommerville:*

Q. You were not selling to the packing plant?—A. We were selling hogs for all we could get. This small butcher said, "I will buy these hogs with only a 50 cent cut instead of \$1 cut."

Q. And the differential provided for a dollar cut?—A. The differential provided for a dollar cut if it was sold to the abattoir, but not sold to whom we might sell otherwise.

Q. Selling outside you have to waive the 50 cent cut.

*By the Chairman:*

Q. This is by way of illustration, or in support of the contention, that it is to the advantage of the producer if you sell the grade separately instead of en bloc or in lots?—A. Yes.

*By Mr. Sommerville:*

Q. What is the significance of this truck load from Priceville?—A. This statement shows the arrival of 29 sheep and lambs and 10 calves. In that load there were 13 sales made. There were eight owners, and nine cheques issued. There was a gain of 35 pounds on the load because of the 5-pound beam on our sheep and hog scale. In the case of the lambs that really meant, at 6 cents a pound, 30 cents a lamb.

Q. How did that compare with the commission you would get for selling lambs?—A. We received 20 cents for selling them.

Q. So that the gain on the 5-pound beam would more than pay for the commission on selling the lambs?—A. Not in the whole load, sir. It was just to point out that was a gain on the shipment, as a rule, and helped to reduce expenses in reality.

Q. The gain was 30 cents a lamb. What is the significance of that?—A. I should like you to ask me about that?

Q. What is the significance of the statement of the shipment that you now hand me—a truck shipment of 17 calves from InnisSKIP, February 7, 1934; what is the significance of that one?—A. Now, this shipment, gentlemen, shows the disposal of 17 calves, which is quite a common sample of our work. In the first case, the trucker tags every calf as he receives it from the farmer. I suppose you will notice the tag numbers on each calf and the name of the owner beside that.

*By Mr. Young:*

Q. This is a professional trucker?—A. A regular transportation of live stock.

Q. And that is their practice—to tag each animal?—A. Yes, sir. A good many of them coming to market do that, which we feel should be embodied in the price bill of lading if that can be brought into legislation. It so happens that this is one of the first class truckers. He does his business in a very efficient way.

*By the Chairman:*

Q. But all truckers do not do that; is that the point?—A. No, sir; all truckers do not tag them in just the same way this gentleman does, and a great many do. It is a very simple matter for our yard staff and salesmen to find these calves. They are not interested in the tag number—only in selling them. They are selling them and sorting them on their merits. You notice these calves are sold at different prices, and when they enter the scale, they are sold, grade, ticket number—these are the scale tickets showing the weight of each animal along with the ticket number of the calf. You will see on certain tickets where there is a difference in price as they have passed over the scale. When these records are computed it is our duty to issue a separate statement from this mass statement to each owner. This is quite a complete account, showing just what our service is, and which is mailed direct to him—not passing into the hands of the trucker. A further feature of this account is the fact that they were 17 separate drafts in sorting and selling.

*By Mr. Sommerville:*

Q. You mean weights?—A. Yes, sir—upon which the 5-pound beam meant an extra 5·11, which could not possibly exist over a 10-pound beam scale. There were 11 different owners in the account.

Q. And your commission on that was \$4.25?—A. That is it, sir.

Q. Which is more than taken up by the difference in the 5-pound beam?

*By Mr. Young:*

Q. There is quite a little work for you in making out separate accounts. Is that service rendered by the packing houses when the farmers ship there?—A. My knowledge of the packing houses, sir, is that they will scale them separately, but so far as I know they do not pay the farmers separately; that the trucker will receive these weigh slips and take them to a nearby bank which computes the extension, and no doubt, for which the packing house pays them for that service. The trucker takes all the money.

Q. In cash?—A. In cash, and pays it to him.

Q. And he gets a statement from the bank, does he, of how much is coming to each man?—A. He will get a copy of each draft, possibly, or he may get them all shown on one statement.

Q. The farmer does not get a statement; each individual farmer does not get a statement when he ships direct to the packing houses, as he does when he ships to the yard?—A. Not that I know. They are made out to the trucker.

*By Mr. Sommerville:*

Q. It may be that the trucker does not give any statement to the farmer: just the cash?—A. Quite so, sir.

Q. In a number of instances, is not that the fact, you know?—A. Yes, sir; it is.

Q. How do you find that out?—A. More or less through some of the contacts we have made from farmers complaining about not having received returns from us where we found that the animals have been sold elsewhere.

Q. That is, animals have been given to the trucker to bring to the yards to you, and they have been sold elsewhere? When you say sold elsewhere, what do you mean?—A. Well, the packing house.

*By Mr. Young:*

Q. You say this is a professional trucker; that in one of those cases he was a professional trucker who tagged all the stuff and brought the load to you?—A.

He is an example of a good many truckers on the market that are trying to do business as transporters of live stock and nothing else. He does not enter into the selling of the animals at all. He simply delivers them at our handling dock. We take care of them from there. All we are interested in is to have the markings of these calves, cattle or any other class of stock, and we sell them for all we can, and the money is turned over to the producer.

Q. Now, does this trucker make a practice of going to the yard?—A. Yes. I would say in this case—he is only an example of a great many—that he always comes to the market. I have never known him to go elsewhere.

Q. Could he not make better time and take two loads a day instead of one by going over to the packing plant?—A. No, sir; he could not; because I believe he could make quicker time bringing them to the market.

Q. Why do you think he could?—A. Because of the fact that all he has to do is take his truck into the market. Our men are there to take delivery of the animals. If they are cattle, they are sent to the cattle sales pens; if they are hogs they are sent to the hog scale, if they are sheep, calves or lambs they are driven to the sheep house. We have to provide men to unload a truck, and as soon as the trucker arrives at the dock he is quite free to go along as soon as the unloading of his truck is completed. All that is necessary for him to do is to hand us a bill of lading. It bears the farmer's name, his address, and the markings of his animals. We follow it out from that and see that he collects his trucking. We usually do that the same as in the case of freight.

Q. This is quite different evidence from what we have been getting. We have been getting evidence from others that the trucker wants to get his money and go back and get a second load by going direct to the plant; you say that is not the case?—A. I would say so, sir.

*By Mr. Sommerville:*

Q. Why does he go to the plant, Mr. Chaplin, instead of to the stockyards? Why, for instance, does he go to the Don receiving station of the Davies company instead of to the stockyards?—A. Well, in that case, he could handle it—this gentleman is referring to speed on his part. If he is coming from the east end of the city, naturally there would be a saving of time in that case; but if he is coming from west Toronto there would be no saving of time because our service takes care of shipments even quicker than it might be done at the plant; but it is quite a common practice of truckers to lie around the market until the animals are sold. It is quite unnecessary.

Q. They do stay around and wait until the animals are sold, and they do take back the money?—A. Many times they bring the farmers along with them. They like to see the animals sold, and that causes delay.

Q. You say the farmers coming with them remain on the market until the animals are sold, and that causes delay?—A. Many times it takes from one to three hours.

*By Mr. Kennedy (Winnipeg):*

Q. Have you in any case paid the truckers?—A. Yes sir.

Q. Do you pay the farmers' money to the truckers?—A. Yes, because of the fact that we are relying on him for information at the moment.

Q. I gathered that you got the names of the owners of the stock and made out your cheques and returns direct to the farmer. You don't do that?—A. Yes, sir; we do.

Q. You do both?—A. We do both. Whether they come on a bill of lading at the moment or not, we rely on the trucker for the information. Sometimes he will take a number of statements and take the cheque for the whole thing.

*By Mr. Young:*

Q. Do you ever give the trucker any consideration for coming to you?—A. None whatever, sir. We could not afford to do it.

Q. We are told that some of the packing houses will give them a small consideration. You do not do that?—A. None whatever.

*By Mr. Sommerville:*

Q. Do you know of the encouragement to the trucker by the packing house through the payment of bonuses, Mr. Chaplin?—A. I could not say definitely about our local packers, but I do know that there is some arrangement that exists at one or two of the Hamilton plants. That is the only definite payment that I know of.

Q. What is the amount of bonus paid at Hamilton?—A. 20 cents a head. It works out to about 10 cents a hundred.

Q. 10 cents a hundred?—A. Yes.

Q. Have you seen the statement showing the payment of this bonus?—A. Yes.

The CHAIRMAN: That is paid to the trucker?

*By Mr. Sommerville:*

Q. That is paid to the trucker?—A. Yes, that goes to the trucker at the end of the month, as an encouragement to him to bring these hogs to their plant.

Q. While you are dealing with that question of the trucker, I observe in the statement you gentlemen produced here to-day there is some reference to bills of lading for truck shipments. Will you explain just what you are referring to there?

Mr. FACTOR: I think that is a very important recommendation.

Mr. SOMMERVILLE: Yes. Will you read that?

Mr. KENNEDY: Before he goes on, with regard to the last point made by the witness, of packers paying bonuses to truckers, it seems to me that that is tremendously important, and a vicious principle, if true.

Mr. SOMMERVILLE: We have had evidence of it.

*By Mr. Kennedy (Winnipeg):*

Q. Is that practice widespread?—A. I know of it in one case. That is all I can speak of in a definite way. I will be glad to give further information on that case, if the committee so desire.

Mr. SOMMERVILLE: That is the only one he knows of.

Mr. KENNEDY (Winnipeg): You have the agent of the producer being paid by the other party.

Mr. SOMMERVILLE: We had evidence yesterday from one witness, on this particular packing plant; the packer's buyer said they paid him 10 cents a hundred to look out for their interests.

Mr. YOUNG: That was to take care that the animals were not bruised in shipment.

Mr. SOMMERVILLE: And to see that they were not filled up with feed before they left the farm.

Mr. KENNEDY (Winnipeg): It is a very strong incentive for the trucker to get stock.

The WITNESS: I might say that, of course, the trucker has already collected his trucking fee, and this comes to him as a bonus. It did have, and has had a very definite effect in diverting hogs in the Hamilton area.

*By Mr. Ilsley:*

Q. Is there any secrecy about it?—A. I don't know that there is.

Q. If there is not any secrecy about it, I would say there is no impropriety in it; if the shippers know that the man that they are entrusting their hogs to is being paid by the packer so much a hog, they take their chance?—A. Upon that aspect, I would doubt whether the producer knows about it. But as far as our trade connection is concerned, we have heard of it many times.

*By Mr. Sommerville:*

Q. In the trade, you have heard of it?—A. Yes.

Q. But you don't know whether the shipper of cattle or of hogs would know of any such practice?—A. The producer does not know about it, generally speaking.

*By Mr. Factor:*

Q. Don't you tell him that that thing is being done, to get him a little interested?—A. We don't get a chance to do it, from that area.

*By Mr. Sommerville:*

Q. You don't see him?—A. Because he goes to Hamilton.

*By Mr. Young:*

Q. There is no yard in Hamilton, is there?—A. There are two packing houses.

Q. But there is no stockyard there?—A. No, only private markets or an abattoir, receiving areas.

*By Mr. Sommerville:*

Q. Now, dealing with the question of this bill of lading, what have you to say to that?—A. Well, this explains itself very nicely.

The CHAIRMAN: Read it.

The WITNESS: The importance of a bill of lading covering the producer's shipment of live stock cannot be too greatly emphasized.

*By the Chairman:*

Q. That is by truck that you are talking of?—A. Yes, by truck.

Prior to the advent of the truck, when live stock was generally moved by rail, the shipper's interests were protected by a bill of lading—that is referring more or less to movement by carload. More recently, however, with a great part of live stock shipping being effected by truck, the farmer has to depend in many cases on the integrity of the trucker, which too often has resulted in dispute, with the farmer sustaining a serious loss.

It is not an uncommon experience to have a producer call at the office of a commission house, requesting payment for his live stock, which he had fully expected had been sold by the commission firm, to find that it had been disposed of by the trucker, and that he had not as yet made returns to the owner.

*By Mr. Factor:*

Q. You mean shippers to the packing plant by truck, is that what you mean?—A. Yes, generally speaking.

At the moment there is known to be hundreds of dollars owing to farmers from truckers, which has not as yet been turned over to them.

MR. FACTOR: That is very serious.

*By Mr. Kennedy (Peace River):*

Q. Is some of that in arrears for any length of time?—A. Yes; some of them the farmers have not got for the last two years.

Q. Two years?—A. Yes. I might say that the Department of Agriculture in Ontario have statistics to show that the thing I show here is absolutely correct. They have already investigated it.

*By Mr. Factor:*

Q. You mean dishonest truckers?—A. Yes.

Q. They have omitted to pay the farmer for his stuff?—A. Simply a matter of trust between the farmer and the trucker, as it stands to-day. Even though it makes more work for us and more responsibility on our part, we are anxious to see that the producers do not have any opportunity of losing a dollar on their stock. Through the medium of the present system, it is wide open.

Q. Are these truckers licensed, I mean by the provincial authority?—A. Yes, they are licensed carriers.

Q. Is there no provision made for cancellation of the licence?—A. They endeavoured to do that, through a bill of lading, in the provincial house in Ontario, but it was only in force for a very short time. For some reason unknown it was immediately eased off, and it did not function the way we had hoped it would.

*By Mr. Ilsley:*

Q. How would the bill of lading correct the abuse you have mentioned, that is, the trucker keeping the money?—A. Well, if we knew that shipments arriving there belonged to certain farmers, and that the contents of his truck were composed of that class of shipment, we would not make the returns to him. We would want to know to whom they belonged, and to whom we should send the money.

Q. The trucker would not get the money at all?—A. No.

*By Mr. Factor:*

Q. You mean you would send it direct to the producer?—A. Yes, to the farmer.

*By Mr. Sommerville:*

Q. That is the object of the bill of lading?—A. Yes.

Q. But certain interests apparently succeeded in having it stayed?—A. Yes.

Q. And it was not the agents, the commission men?—A. No, sir. We are quite anxious about it.

Mr. FACTOR: They have had what stayed, the legislation?

Mr. SOMMERVILLE: No, the operation of the bill of lading.

Mr. ILSLEY: The law is disregarded, is it?

Mr. YOUNG: Or is it a practice that has grown up?

Mr. SOMMERVILLE: No, the law was passed in the province of Ontario requiring it.

*By Mr. Sommerville:*

Q. Is that not a fact?—A. Correct.

Q. And it was put into operation for a time, and truckers were required to have bills of lading when delivering their stock either at the packing plant or at the stockyards?—A. Yes.

Q. And then for some reason, some pressure was applied, or some reason was given for the withholding of the enforcement of the provision?—A. Yes.

Mr. YOUNG: Was the law repealed?

Mr. SOMMERVILLE: No.

*By Mr. Young:*

Q. If the law is there, how can you withhold enforcement, if the farmer asks for a bill of lading?—A. They have done it for some reason unknown.

*By Mr. Kennedy (Peace River):*

Q. What session was this law passed at?—A. It would be some two years ago, I believe.

*By Mr. Factor:*

Q. In the Ontario legislature?—A. Yes.

Q. And there is a law now on the statute books?—A. I believe so. The Ontario Marketing Board are quite anxious about it, and I understand are endeavouring to press the Department of Highways to enforce that law.

Q. That is a very serious allegation. I cannot understand it. There is a law, and it is not being enforced by the authorities; is that your contention?—A. Yes.

Q. Under pressure by someone?—A. Yes. We believe it should be a Dominion law, if it is passed.

*By Mr. Young:*

Q. Have you any case where a man has asked for a bill of lading and has been refused?—A. The farmers are not acquainted with the fact that they should be getting a bill of lading or receipt for their goods.

Mr. ILSLEY: Perhaps that is all the law is, that he is to be given it if he asks for it.

The WITNESS: They have not enforced it.

Mr. ILSLEY: It is a mysterious law.

Mr. FACTOR: Where is that statute, Mr. Sommerville? Do you know.

Mr. SOMMERVILLE: I understand it is in the Ontario statutes.

The CHAIRMAN: Gentlemen, we are getting into another vague discussion around here.

Mr. FACTOR: No, I think we are getting into some practical politics.

The CHAIRMAN: No, no, excuse me. I have no reference to anything from a political standpoint at all. What I was going to say was this: We are talking about a statute. Apparently no one knows just what this statute is. The witness told us that he understands that there is a statute. We will make an effort to get a copy of that statute, and go into this matter.

Mr. FACTOR: It could be got in five minutes.

The CHAIRMAN: He thinks it is in 1932. See if you can get that, Mr. Parry. We will get the statute and we will know what we are talking about.

*By the Chairman:*

Q. So far as your opinion is concerned, the statute is not now effective, or rather it is not now being enforced?—A. It is not not being enforced.

Q. That is your statement?—A. That is quite absolute.

*By Mr. Sommerville:*

Q. I see here that you say, "One farmer writes . . . ." Will you continue?—A. Yes.

One farmer writes: I guess we will have to abide by it (meaning the trucker's decision), for you know when they take your stock down, you are at their mercy. But if he goes to the yard, which I would like him to, they will go to your care.

There is a letter that came to hand in that respect.

Recently another farmer writes objecting to the sale of his calf—

I bring these in simply because they are recent happenings. While there are a great many of them, this is quite recent.

—for which he was paid 230 pounds at 7 cents, less marketing and trucking expenses. This sale had been made at 8½ cents, making a difference due the producer of \$3.45.

I submit, sir, showing our original account of sale for the payment of that calf to the trucker. At that time we did not know the owner's name. That sets the sale out,—giving him a cheque for \$19.20, from which he should have only deducted his trucking expenses and handed the farmer the balance. Here is a corner of the original statement made out by the trucker, showing the sale of that calf for 230 pounds at 7 cents, less yardage, he says,—yardage, 10 cents; commission 25 cents; trucking 50 cents. He gives him a cheque for \$15.25, or the cash in some way. That is only a very small instance of some of the larger ones that have come to our notice.

*By Mr. Young:*

Q. It is a case of straight dishonesty?—A. Yes.

Q. Well, not straight dishonesty—

*By Mr. Boulanger:*

Q. Plain stealing?—A. Yes.

(Letter and statement filed, and marked Exhibit No. 98).

*By Mr. Sommerville:*

Q. Will you proceed, Mr. Chaplin?—A. All that seems necessary is to bring forth definite legislation requiring that every trucker transporting live stock for hire furnish a bill of lading to the shipper.

Mr. FACTOR: There is provincial legislation now.

Mr. KENNEDY (Winnipeg): He is not sure.

*By Mr. Young:*

Q. Along with this bill of lading you want an ear tag on each animal, do you?—A. Our concern now is that we are dealing with the federal department.

*By Mr. Sommerville:*

Q. You want Dominion legislation?—A. It exists now provincially; we think it should be federal, just the same as the bill of lading for a carload of stuff is Dominion-wide.

*By the Chairman:*

Q. Really, your point is that the same safeguards that are applied now under the Live Stock Act to commission merchants, live stock exchanges and live stock yards should be applied to the trucker that carries the goods to either the packing house or the yard?—A. Correct. That set sit out pretty well there.

*By Mr. Sommerville:*

Q. Now, Mr. Chaplin, can you give us the benefit of your experience on the question of the shipment of live stock to the packing plant, as against the

stockyards, the question of the abuses and the benefits and advantages, if any, that come from shipment to the stockyards?—A. Yes, I will do that as quickly as possible. There are a couple of copies of this. I bring in some very recent cases.

On Friday evening, March 31, 1934, 407 lambs arrived in two stock cars from Alberta. There was no market for them on Saturday. They were carefully yarded in some good comfortable sales pens, where they rested and fed over Sunday, and were sold on Monday, April 2, last.

The following will give one some idea as to how this works out in the sale weights of the animals as against the off-car weights on arrival, showing the cost of feeding almost three days. There is an improvement in weight from the off-car weights to the fed and watered weights of 2,415 pounds, which amounts to 6 pounds each. The gain in money, multiplying that by the selling price of  $8\frac{1}{2}$  cents per pound, amounted to \$205.27, or 50 cents each.

*By Mr. Young:*

Q. You said there was no market for these lambs when they arrived?—A. There was no market on Saturday.

Q. If there had been a market, you would have sold them then?—A. Yes.

Q. And would they have been fed and watered just the same?—A. Yes, and their gain would be almost identical, in our experience, even though we have had to spend more money to feed them over Sunday. It is just unfortunate that they arrived at that time.

Q. Is it a fact that the packers will pay just as much per pound for animals fed and watered as they will for the same animals before they are fed and watered?—A. Yes, I would say so, in reply to that question, and I would refer further in a moment to a direct example of just how that works out.

Mr. KENNEDY (Winnipeg): We had evidence to the contrary, that there was a differential in the price as between off-car stuff and fed and watered stuff.

Mr. SOMMERVILLE: That is on hogs. We are dealing now with sheep and lambs.

*By Mr. Sommerville:*

Q. Will you complete your analysis there, Mr. Chaplin? Your gain in money was what?—A. \$205.27, on account of the gain in weights. To feed 407 lambs for three days it cost \$74.49, or 18 cents each, dropping the net gain in money to \$130.78, or 32 cents each. Had these lambs been sold elsewhere on off-car weights the prices would have had to be much higher. It works out to over 9 cents per pound.

Now, I would like to bring in this example at the moment, showing what effect the selling of lambs on off-car weights would have in the cost of a shipment on October 25 last. I have a letter from the Canada Packers to a drover, offering " $6\frac{1}{4}$  cents for good ewes and wethers, on all lambs weighing up to 100 pounds. Over this weight we can only pay  $5\frac{1}{4}$  cents. On culls we will pay  $4\frac{3}{4}$  cents and on bucks  $4\frac{1}{4}$  cents. The above prices are weighed off cars our siding." As I showed you gentlemen, in this case it would have had to be over 9 cents. Now at that time lambs were selling on our market at  $6\frac{1}{2}$  cents, fed and watered.

Q. And this was the offer from the Canada Packers for a shipment direct, off-car weight, at  $6\frac{1}{4}$  cents?—A. Correct.

Q. Instead of  $6\frac{1}{2}$  cents, fed and watered as on your market that day?—A. Yes.

Mr. YOUNG: One was October, the other was March.

Mr. SOMMERVILLE: No.

The WITNESS: They are both March that I am dealing with now.

*By Mr. Sommerville:*

Q. Perhaps you will let me have the original letter?—A. Yes, I have the original here.

Mr. SOMMERVILLE: This original letter is dated October 25, 1933, addressed to these drovers, in which they say:—

DEAR SIRs,—We have for acknowledgment your letter of October 14, in which you state you have a carload of lambs, ewes and wethers, weighing 80 to 100 pounds, which you want us to handle.

We would be glad to handle this carload of lambs for you. We will pay you full market price which is  $6\frac{1}{4}$  cents for good ewes and wethers, on all lambs weighing up to 100 pounds. Over this weight we can only pay  $5\frac{1}{4}$  cents. On culls we will pay  $4\frac{3}{4}$  cents and on bucks  $4\frac{1}{4}$  cents. The above prices are weighed off cars our siding.

We can assure you that we will treat you right on the sort, and the prices quoted you above give you a much better return than if you send them to the market, because you save yarding and market fee.

This is one of the ways they encourage direct shipment.

We would be very much obliged to you if you would advise us whether or not you are shipping, so that we can make arrangements to handle them immediately the car is placed on our siding.

Yours truly,

CANADA PACKERS LIMITED,

J. H. DAVIS,

*Manager, Small Stock Dept.*

*By Mr. Sommerville:*

Q. On that day, October 25, what was the price at which good ewes and wethers were selling on the market?—A.  $6\frac{1}{2}$  cents, fed and watered.

*By the Chairman:*

Q. Have you got that worked out?—A. Yes.

Q. You might put it on record, how that would be worked out on a stock-yard basis, a live stock basis.

*By Mr. Factor:*

Q. To be in the report?—A. Yes, I have it here.

*By the Chairman:*

Q. Just give us that?—A. Presuming that a 100-pound lamb in the country may shrink 10 pounds from the time of loading until the time it arrives in the plant, on which basis they were quoting, the lambs would weigh 90 pounds. A fair gain after being fed and watered on our market would be from 5 to 7 pounds, but I have only taken 5 pounds gain as a basis in working it out. It would mean a difference on the ordinary carload of lambs, we will say, of 90 head, of 33 cents a lamb, which would be \$29.70 a carload, or on 100 head it would be \$33, at 33 cents a lamb. That is, they would gain that much by having them put on the market and sold at that time.

*By Mr. Factor:*

Q. That is included in the difference of the half a cent price?—A. Quarter of a cent; 5 pounds gain, and after taking off the marketing expenses, there would be 33 cents gain on each lamb.

*By the Chairman:*

Q. That is net gain?—A. Yes, net gain.

*By Mr. Sommerville:*

Q. After deducting all marketing expenses?—A. Yes.

*By Mr. Young:*

Q. You are paying, or you can get on the market  $6\frac{1}{2}$  cents for those lambs; to whom will you sell them for that price?—A. We will sell them to the best bidder.

Q. Will you sell them to that same packer?—A. If he is bidding more than the other packers, he will get them by all means.

Q. What I mean is, would he go in and buy those lambs, despite the fact that he has offered  $6\frac{1}{4}$  cents for the same lambs by mail?—A. That was our market that day,  $6\frac{1}{2}$  cents.

*By Mr. Sommerville:*

Q. Whoever bought lambs that day paid  $6\frac{1}{2}$  cents?—A. Yes. Good lambs, the kind he is quoting on, sold at  $6\frac{1}{2}$  cents at that time.

*By Mr. Young:*

Q. Something was said here yesterday about a guaranteed price, and whatever more the market would bring. Was this  $6\frac{1}{4}$  cents a guaranteed price plus what the market would bring, or was that the ultimate price?—A. They didn't say so in the letter.

Q. Do you get a guaranteed price every Monday morning, or every so often?

MR. SOMMERVILLE: The guaranteed price only applies to hogs.

*By Mr. Young:*

Q. It does not apply to anything else?—A. No.

*By the Chairman:*

Q. This was a specific offer?—A. Yes.

Q. For a specific shipment?—A. Yes. We want you to see what it means for the producer to get a market for his goods on the market at a fed and watered basis, whether it comes by truck or by cars.

*By Mr. Kennedy (Winnipeg):*

Q. In the figure you have given, is the expense of feed and water included?—A. Yes, I have taken 22 cents a head off for that.

*By Mr. Young:*

Q. We are forced to this conclusion then, that the packer will pay you a quarter of a cent more per pound for animals fed and watered than he will pay the farmer, if he ships direct to him, for the same animals not fed and watered?—A. It simply shows the value of competition on the market, that we press hard to get as much as we can, whereas he is bidding for as little as he can get them for. It is a plain case of buying live stock or anything else just as cheap as you can, and that is what they are doing.

*By Mr. Ilsley:*

Q. I am rather interested in his letter. Did you ever receive any letters like this where he is making a definite statement that he is offering the producers

more than they can get if they put them through the market?—A. I cannot say that we have, simply because these things do not come to our notice as a general rule; but we know they are very keen on getting their supplies direct, if they can. This is quite a definite case. That sets it out.

Q. Yes. I notice that he says, "give you a much better return than if you send them to the market."

Mr. SOMMERVILLE: Yes, "because you save yarding and market fee."

*By Mr. Young:*

Q. He wrote a letter on October 25. Suppose the man had accepted his offer. How long would it be before the ewes or sheep were delivered at the packing house?—A. It might be a day.

Q. Only one day?—A. Yes. It is near Toronto, about 125 miles away.

*By Mr. Sommerville:*

Q. And could be trucked in quickly?—A. Would likely come in by carload.

Q. Yes, they referred to carload?—A. By rail.

*By Mr. Young:*

Q. There is no time limit set on the offer, is there?—A. No.

Mr. YOUNG: He does not say how long it is good for.

*By Mr. Sommerville:*

Q. The point is, he is quoting to this market?—A. That is what they could pay at that time.

Q. What is the next example you have?—A. I want to show you this case. On Monday last a shipment of 23 cattle arrived from Mount Forest, Ontario, and were sold the day following, Tuesday, April 11, after having rested and fed during the night. The following will give one some idea as to how this shipment worked out, similar to the one I already quoted. There was a gain in weight on these 23 cattle—which, by the way, gentlemen, is very moderate—of 690 pounds. As a matter of fact, after having tested the off-car weights as against the fed and watered weights of cattle, the railway company has seen fit to allow us 1,000 pounds for an allowance in gain of weights from off-car weights to fed and watered.

Q. For 20 cattle?—A. For 20 cattle or over, or 50 pounds a head. I am only showing you an example where these cattle gained 30 pounds a head on what we call an overnight rest. The gain in money on the 690 pounds, at the average selling price of \$4.88 per hundred, amounted to \$33.67, or \$1.46 each. The cost feeding the cattle overnight, 270 pounds of hay at \$1.30 per hundred, was \$3.51, or 15 cents each. The net gain in money was \$30.16 or \$1.31 each.

Q. After paying the feed cost?—A. Yes; showing that the gain was made a great deal in the drinking of water and so on, whatever feed they got.

*By Mr. Young:*

Q. Would you think it a good plan if the packing plants were required also to feed and water before they weighed them up, the same as they do at the yard?—A. Yes, sir; I would say so, in fairness to the producer.

Q. And everybody would be on the same footing?—A. Yes. That would put us on the same footing in that respect; there would not be any anomaly in the selling price, and it is very important in setting the price of hogs. On truck shipments many times—we have noticed that truck shipments are weighed in the morning, but no price until the market is settled; usually we don't settle the price on our truck hogs until after dinner, and sometimes they do not pay for these hogs or set their prices until the market really sets it for them.

Mr. YOUNG: You say they are weighed in the morning; are they weighed before they are fed and watered?

*By Mr. Sommerville:*

Q. This is not a question of feeding and watering—you are referring to another matter, are you not?—A. Yes, sir.

Q. These trucks deliver their hogs to the plants and they are weighed in; that is what you mean by weighing in?—A. Yes.

Q. The hogs are weighed in, but the price is not set until after your market price is fixed for the day?—A. That is it, sir.

Q. And then when your market price is fixed, these truck hog prices are fixed by the plant?—A. That is it, sir.

Q. And fixed in such a manner?—A. To show just enough below to be able to say to the owner that you had saved marketing expense.

Q. And the market prices are fixed by whom?—A. The commission men, sir.

Q. And who are the buyers of the bulk of the hogs?—A. There may be four or five buyers for these truck hogs; there may be ten buyers at some time.

Q. Yes, but are the majority of the hogs that fix the price on the market not bought by the same packers who are waiting until the market settles before settling for their truck hogs?—A. They are, usually.

Q. So that one price is reflected in the other?—A. Yes.

*By Mr. Young:*

Q. When these truck hogs are weighed in the morning and not priced until the afternoon, is that by mutual agreement between the seller and the packer-buyer; or does the packer simply say, I will weigh this now and tell you what they are worth this afternoon?—A. Our knowledge is to this effect, that we have trucks come over to the market who have already delivered their hogs into the plants, and they show us their statement for so many hogs delivered in the plant, but there is no price on them yet. The packer did not know what price to pay him; he has to wait until the market is settled—he might underpay him, or he might overpay him otherwise.

Q. Do you mean that the packer is not buying hogs at that time?—A. He won't price them at that time, until the market is settled.

Q. I know, but take the case of a farmer selling his wheat; the farmer would take in his load of wheat, the buyer will say the price at present is so much, we will get the new prices at noon; if you like I will weigh the wheat in now and give you the price that comes over the wire at noon. Is that what happens?—A. More or less, we set the price, anyway.

Q. You set it yourself, the yard sets the price—A. We have competition on our market because of the hog buyers on these truck hogs; that is one place where we feel we can give the producer 100 per cent service, because we have an opportunity to sell them on their merits.

Q. But you say then that the packer refuses to buy these hogs in the morning, until he gets this price; or will he say, this is the price now which you can take, at noon it may be higher or lower and you can take that if you like, but you will have to take a chance on what happens?—A. At noon there is no settled price made on these hogs.

*By Mr. Sommerville:*

Q. The same packer who has 75 per cent of the hogs in his yard comes over to your market and deals with you?—A. Yes.

Q. And if he stays off your yard it may depress your market?—A. Absolutely.

Q. And if he stays off until the afternoon, it may depress your prices?—A. Sure.

Q. But at any rate when the price is actually fixed he goes back and pays for the hogs, and when he pays the price is just sufficient to satisfy the man that he has saved market fees?—A. Absolutely.

Q. And that is in most cases on direct loads?—A. I have been referring mostly to truck shipments.

*By Mr. Kennedy (Winnipeg):*

Q. You say that the price is fixed on the yards; do you mean that the first sale fixes it, or does it vary?—A. Usually we do not offer our hogs until after dinner, until we can get some idea of how many we are going to have to offer, and we have them placed over the scale—they are graded and weighed and put in pens—and we show them to the different buyers. There may be smaller buyers who are able to take care of 40 or 50 hogs. We test them out and arrive at the best price we can, which sets the price of the market more or less.

Q. Well now, just let us get that; it is the first deal on the market which sets the price. Is that the price for which the packer is waiting, or is it fixed by subsequent deals, or what deal is it which sets the price?—A. It would be the first deal.

Q. And the packer will pay the price set by the first deal?—A. Yes.

*By Mr. Sommerville:*

Q. Yet the first deal is not necessarily the first bid, Mr. Chaplin?—A. No.

*By Mr. Ilsley:*

Q. Is that the general practice? This is the first suggestion of it in the evidence. I got the impression that these sales were settled prices themselves. That is the whole effect of all the evidence so far. Now you say they do not settle, they wait and pay them later—pay a different fixed price in the latter part of the day—what the market fixes?—A. In answer to that, sir, what you say is quite right in the case of carload movements. I am dealing at the moment with truck shipments. It is in this class of shipments that we feel we can give the producers 100 per cent service, because we have an opportunity to sell them on their merits.

*By Mr. Sommerville:*

Q. You mean, on grades?—A. Yes.

*By the Chairman:*

Q. You can break lots?—A. Yes, we break them, because they are sold on weights off trucks. With a carload of eighty hogs arriving in the car it makes quite a difference whether they are sold on f.o.b. weights, or weighed-off-car weights; you can't split them up, they must take the whole thing, because there is only one scale for weighing the car lot.

*By Mr. Sommerville:*

Q. Can you explain the difference that makes in the matter of your breaking up lots; I think you referred to that in one of the statements you handed to me?—A. Here is a very recent case: on Tuesday of this week, April 10, the packers were bidding \$7.40 per hundred for truck hogs on the market; and the salesmen were asking \$7.60; finally certain sales were made at from \$7.50 to \$7.60—pardon me, I guess that is not the answer to that question.

Q. That is one of them?—A. I will deal with this right now, if you wish. Finally, certain sales were made at \$7.50 to \$7.60, to one of the packers, and to

which one of the other packers complained to the buyer for raising the market unnecessarily. At the same time they were endeavouring to pay \$7.35 to \$7.45 at their plant. The same day in Kitchener the farmers were receiving \$7.10 for their hogs, and at Guelph 7 cents.

Q. And you sold on the market \$7.50?—A. We sold our hogs at \$7.50 to \$7.60.

Q. And the packers bid \$7.40?—A. They were bearing down at \$7.40 until we persuaded one buyer to break loose and we secured \$7.50 to \$7.60 for our hogs.

*By Mr. Kennedy (Winnipeg):*

Q. Would that difference in price normally take care of the extra selling charge?—A. Yes, it would; it would cost around 11 to 17 cents a hundred to put a hog through the market where he is graded officially and put over a government scale.

Q. But the difference between \$7.40 and \$7.50 is only ten cents?—A. On the short run hogs it would bear down to \$7.35. There is about 15 cents in spread there, enough to take care of the marketing expense.

*By Mr. Young:*

Q. You attribute this to the competition of the yard versus the plant?—A. Yes.

Q. As we have had considerable evidence here to the effect that the packers are getting their supplies by direct shipment—but you say you do not offer any hogs for sale until after dinner?—A. That is in the case of cattle—we usually withhold our direct shipments until we know how many we are going to have to sell. If the run is light we will try to raise our prices, but if the run is heavy we have not the same chance to do it.

Q. This is in hogs?—A. Hogs only.

Mr. SOMMERVILLE: Only hogs are bought direct.

*By Mr. Young:*

Q. You attribute that to the buyers of market cattle, they do not do it in the case of buying hogs; is that the idea?—A. No, not identically.

Mr. FACTOR: I thought it was just the other way around.

*By Mr. Sommerville:*

Q. What was the other instance that you referred to, Mr. Chaplin?—A. On Tuesday of this week, April 10, a shipper brought four hogs to market on which he had been offered  $7\frac{1}{4}$  cents, less \$4. This is the same as the bids that were made for truck hogs at the plant— $7\frac{1}{4}$  less \$4.

Q. Seven and a quarter cents for the bacons?—A. They were four butcher hogs.

Q. Less \$4 off on the four butcher hogs?—A. That would be correct on the way they had delivered on the grades.

Q. On the differentials?—A. Yes. Another plant offered \$7.35 less \$4. These hogs were sold on the market at \$7.50, with a discount of only \$2 on the four hogs; making a net gain to the owner of \$1.87 after paying marketing expenses.

*By the Chairman:*

Q. That is a case where the hogs came in direct and you were able to sell them by grade; the fixed differential did not apply in that case?—A. Correct.

*By Mr. Factor:*

Q. If you refer to the evidence given by Mr. Jamieson here at page 578 of the evidence of March 21st—

Mr. SOMMERVILLE: He was the representative for the Agricultural Committee of the Ontario Legislature.

Mr. FACTOR: Yes, his evidence was:—

Q. Now, first of all as to marketing conditions what observations have you to make to this committee as to the competition in the local stockyards?—A. Well, the general report of the committee indicates that competition has fallen down.

Q. Yes, and how do you account for that, Mr. Jamieson?—A. We attribute that to the percentage of stock purchases going direct to the packer, and the packer controlling the conditions that prevailed.

Q. That is, through the proportion of stock that went to the packer direct; he was in a position to control the conditions on the market?—A. Yes.

Q. How could he control the conditions on the market, Mr. Jamieson?—A. Well, our observations and reports are that the buyer does not appear till late in the forenoon, possibly eleven o'clock in some cases, and we had evidence where they did not appear until even four o'clock in the afternoon; and not even bidding on the stock that was in the yards.

Q. Yes, and the result on the market was what?—A. Draggy.

Q. Draggy; and the effect upon the price?—A. Low.

Q. And that was the basic condition that you found?—A. Yes.

Mr. SOMMERVILLE: That is referring to cattle, as against hogs.

Mr. FACTOR: That does not refer to hogs at all.

Mr. SOMMERVILLE: No, there is a different situation under differentials there. That is the situation with reference to cattle, is it not?

The WITNESS: At times, if they have sufficient cattle at their plant naturally they are not very anxious buyers.

*By Mr. Young:*

Q. Now, Mr. Chaplin, tell us; if that scheme works so well with cattle why don't they apply it to hogs—if your market is draggy and that is wired to Winnipeg, that makes the Winnipeg market draggy, then if the Winnipeg market being draggy is wired back to Toronto, that makes the Toronto market worse; if that works with cattle, why doesn't it work with hogs?—A. So far as hogs are concerned we know that already there are a greater number at the plants.

Q. Seventy-five per cent, you say?—A. Yes, and they are paid for on an f.o.b. basis.

Q. Therefore you would be in a much better position to work the scheme?—A. That is what I have been trying to point out, in the marketing of hogs at our market, in taking care of direct shipment, that is where real salesmanship comes in.

*By Mr. Sommerville:*

Q. You say if you had the same opportunity on all shipments you could do more for the producer?—A. It would establish the true value of hog prices.

*By Mr. Young:*

Q. Have you ever tried it with cattle, not offering any for sale until after dinner?—A. It works differently in the cattle market, because of our yard situation; there are animals for sale at nine o'clock, and our salesmen endeavour to test out the different buyers, they have some idea of where the animals should sell, as to grade and quality. They do not accept the first bid. Many times they hold the cattle back till later on in the day because they feel they are not bid enough. In the meantime the different buyers appear—and right this week we had an instance where cattle was sold for half a cent a pound more than our

first bid was for. That is our duty, to get as much as we can; and if we had everything on the market we would be able to establish a still greater value on cattle.

Q. Does it ever happen this way; that the packer stays out of the market for half a day and then when he comes in he finds that the best cattle have been disposed of and he is out of luck?—A. That might happen.

Q. Then he has to bid up the others, that raises the market price?—A. If he is short of cattle, he will certainly have to bid, because the commission man soon knows when he is short by his attitude.

*By Mr. Sommerville:*

Q. As a matter of fact, Mr. Chapman, he has runners all the time watching what sales are taking place?—A. Yes, and he is watching the scales all the time.

Q. He is watching what is going on there in the scale house, the prices, the quantities, the grades, and all that; and they are reported to him all the time?—A. They know the other fellow's business, but he does not know theirs.

Q. And if you know what quantity the packer required to buy you would be in a better position to function for the producer?—A. Yes, absolutely.

*By Mr. Young:*

Q. If the packer found there were other buyers on the market, he would not stay out of it?—A. No, he would want to get in there and get his share.

Q. If he needed them?—A. If he needed them.

The CHAIRMAN: Thank you, Mr. Chaplin.

The witness was discharged.

Mr. HARRY TALBOT, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Talbot, you have been a member?—

The CHAIRMAN: Sit down, Mr. Talbot.

The WITNESS: May I have a drink, Mr. Chairman.

The CHAIRMAN: Certainly, but I might warn you that it is only water.

The WITNESS: That is all I want, thank you very much.

Mr. SOMMERVILLE: Now, he is "fed-and-watered," as it were.

*By Mr. Sommerville:*

Q. You have been a member of the Toronto Live Stock Exchange for a good many years?—A. Yes, a good many years.

Q. And you have been in the cattle business on that market for how long?—A. My experience has been widely versed; I have not been on that market all of my life.

Q. You have been there for a great many years.—A. I have been in the commission business since 1924 only on that market, but I have been on that market buying.

Q. You were a buyer before that?—A. I bought, yes, for a packing company for about two years. I spent eight years in Winnipeg on the Winnipeg market.

Q. Well, you are familiar at any rate with marketing practices and the live stock business?—A. I profess to be.

Q. Yes?—A. Just at the moment, Mr. Sommerville, I wonder if I may be permitted before you start questioning me to make one correction in Mr. Quinn's evidence, and probably enlarge on another item.

Q. Yes, Mr. Talbot, what is that?—A. In the matter of setting out the commissions there; in his evidence, what Mr. Quinn states insofar as England is concerned, is not exactly correct. The commission charges in England at the present time, and always have been—I have been an exporter and I have exported cattle—the commission is 10 shillings straight, which works out no matter whether there is one head, or a hundred or a thousand, it is ten shillings a head—it works out at the present time in our currency at \$2.60 a head.

*By Mr. Kennedy (Peace River):*

Q. And that includes yardage, and so on?—A. Everything that is done over there in addition to that is charged, they even charge you over there for driving the cattle.

*By Mr. Sommerville:*

Q. That is the salesman's commission?—A. The salesman gets that, and when he sends you a bill you are charged for it; and they write on their sales accounts, they have a place there for everything—they even include "gifts"; they give your money away and charge you for it.

*By Mr. Young:*

Q. The ten shillings is just the commission alone?—A. The commission.

*By Mr. Sommerville:*

Q. What is the other matter you wished to enlarge upon?—A. That is the matter of where we agreed amongst ourselves to confine our operations to the stockyards only. Prior to the time of that agreement coming into being some of us commission men—practically all of them—used to go to the country with the packer-buyer and sell a considerable amount of our clients' cattle—I am speaking now of cattle only—to the buyer, and received the same commission for our services as we did through the yards. That was a time when there was a great deal of beef being exported to the United States, and for a period of time it was a very profitable business for the packer, and they bought through us in very large numbers.

Q. To ship to the United States?—A. They processed them, killed them at their plants and shipped the beef to the United States. But there came a time when that was not so profitable, and on account of the activity that we took in that business with our clients, our clients rather liked the idea of being able as it were to get away from the marketing expense, the feeding and one thing and another, what there was of it; but after a period they stopped going to the country with us and began to buy stock and cattle sent direct into the plants through us. They would not make any price on them, but they would come into the plant and we would do business sometimes on the dressed weight or percentage—so much per hundred pounds. As that thing went along some of our clients began getting some very bad deals through us on which we could not do anything—they would just say, there is the price, that is all we will give for them, the cattle are not as they were represented to be; and that is what you can do with them. Well, that was the outcome of the commission men coming together and agreeing that we would have nothing at all to do with the packers insofar as shipments direct to their plants were concerned.

Q. That is, your experience was that you were not getting a good return for your customers on the dressed basis?—A. We were not satisfying our customers.

Q. Therefore, you agreed not to deal with them on these direct shipments?—A. Yes.

*By Mr. Kennedy (Winnipeg):*

Q. You were buying on their grade, instead of them coming to you?—  
A. Yes, they had us; we were the ones through our customers that were getting the blame.

*By Mr. Sommerville:*

Q. Before the merger, did you have more competition on your market than afterwards?—A. Before the merger?

Q. You had a merger of four or five plants?—A. Yes we had more buyers before the merger; the four plants, Canada Packers, Davies, Gunns, and Harris's, had cattle buyers—all told, 16.

Q. 16 buyers?—A. On the market.

Q. For cattle?—A. Cattle buyers.

Q. And as a result of the merger they had how many?—A. Six—Swifts had four at that time, and they have four at the present time.

Q. So that the number of buyers has been reduced by the merger and now there is only one big buyer instead of buyers for the four firms?—A. At the present time we lack very much four buyers from these firms, on account that now Swifts have only two what you would call butcher buyers—that is, steers and heifers—and they have two cow buyers, but they do not buy as many cows as they did.

Q. Then, your competition is more restricted than it was before the merger was effected.

*By the Chairman:*

Q. What is the answer to that, yes or no?—A. Yes.

*By Mr. Sommerville:*

Q. What effect has the increase in shipments direct to the plant had upon the competition on your market?—A. Direct shipments to the plants cause this advantage that they have we will say 30 to 35 per cent in cattle in their plants of their requirements; and that takes that 35 per cent of competition off the yard, and it makes them so that they do not have to hurry themselves in their buying operations—they can come along and buy just as they see fit.

Q. Has this any effect upon the market?—A. It has a depressing effect upon the market, yes.

Q. What effect has the trucking, developed of late, had upon the market—speaking of cattle?—A. Draggy.

Q. Has it been on the increase lately?—A. To the market.

Q. No, to the packing plants?—A. I have no figures to show whether it has or not.

Q. We will have to find that out then. There is another feature of marketing there that I want to ask you about; the feeding of lambs by the packers. What effect has that upon the market?—A. It has this effect, that they are always at all times—after a certain period when their lambs are ready to kill—they are always in a position that they can use out of their feed lots rather than buy them and raise the general market.

*By Mr. Factor:*

Q. Where do they buy these lambs, and when?—A. Most of these lambs are bought in the fall of the year, along in the early part of October or November, in the West.

Q. And then they are brought down here and fed at the packing plants at Toronto, are they not?—A. Yes.

Q. In large numbers?—A. Yes, very large numbers.

*By Mr. Sommerville:*

Q. Would you say there would be five or ten thousand?—A. I would say in one case more than that.

Q. More than that. And then they are fed, and you say when the farmers bring their lambs in—what effect has this reserve supply of lambs on the market?—A. I might say in all due respect to the packers that a few years prior to now—the Ontario farmer has of late, this last year or two years begun to get into the feeding of lambs—but prior to that there was not any great amount of these western lambs fed in Ontario. It was the packers who practically started that business, so far as Toronto was concerned. There are a lot of these lambs fed at Fort William and Winnipeg.

Q. What would happen if these lambs were not fed by the packers?—A. The Ontario farmer would go into the business and feed them himself.

Q. The Ontario farmer would take them?—A. Yes.

Q. And then bring them on to the market at the time when they were finished?—A. Yes.

Q. But if he brings them on the market now he meets this reserve supply?—A. He meets this reserve supply, yes.

*By Mr. Ilsley:*

Q. But the Ontario farmer did not do it, the packers had to go into it; is not that what you say?—A. I would say yes, that the packer was the first one to go into that in Ontario.

*By Mr. Sommerville:*

Q. Well then, when you are buying your lambs, or selling your sheep and lambs, I understand you have culls in your various shipments of sheep and lambs?—A. Yes.

Q. And the farmers can buy back these culls and take them to the country for feeding?—A. Last fall we had orders from two or three different farmers we were unable to fill because we could not get the cull lambs out because the packers wanted them all.

*By the Chairman:*

Q. That is the same as their practice with respect to carloads of hogs?—A. Yes.

Q. You had to sell them all or none?—A. Yes.

*By Mr. Sommerville:*

Q. And these culls could be fed and brought up to good finished lambs—were they fed by the packers?—A. I do not think so, so far as the packers are concerned. I think these culls were killed at the time. These were Ontario lambs and the packer's feeding stock is pretty much western lambs.

Q. They will not allow the culls to be taken out to be fed?—A. Not to any extent.

*By Mr. Young:*

Q. What remedy would you suggest for that situation?—A. I do not know whether or not it is possible to stop a packer from going into the feed business or not. If he has a farm I think it would be much better; if he was a farmer it would be better; but it does seem it is a little hard on the whole industry to have a monopoly of a business which has been a fairly paying business. The feeding of lambs on the whole, over a period of years, has been a fairly good paying business.

Q. Suppose the packer were stopped from doing it, and these lambs still continued to come down, what would happen to them?—A. The Ontario farmer would feed them.

Q. Would he take them all?—A. Yes.

Q. Would he take them in at as good a price as the packer takes them?—  
A. Yes. They do not give much for them anyway.

*By Mr. Sommerville:*

Q. What do you say is the effect of the practice of marking the price on the ticket at the scale?—A. I say it is one of the most disastrous things that there is to the producer in the whole of Canada.

Q. Why?—A. Because everybody knows what the other person is doing. The packers have men to do nothing else but make sure that they know everything that is being done. If a small butcher should buy a load of cattle, the packer knows it. He pretty well knows as far as the meat trade of Toronto is concerned where the small butcher is liable to try to sell these calves. He knows what they cost, and he has an advantage.

Q. What advantage has he?—A. There is no advantage from the small butcher knowing about the packers, but the packer is in such a big way that the small butcher might have one load of cattle—

Q. What advantage could the packer take of that?—A. They might under-sell him.

Q. In the local trade?—A. Yes.

*By Mr. Kennedy (Winnipeg):*

Q. Regarding this marking of the tickets, is that because of some regulation in force?—A. Yes, because of the regulation.

Q. Of what?—A. Of the Department of Agriculture.

*By Mr. Kennedy (Peace River):*

Q. What was the purpose of that regulation?—A. For the purpose of being sure there was no misconduct and for statistical purposes for the department, and so that anybody and everybody could know—could go and see what the different grades of stock were selling for.

Q. If the price was not on the ticket how would you protect the producer?

The CHAIRMAN: Give him a separate ticket.

WITNESS: You have mentioned hogs. That is a matter which seems a funny thing to me on account of the way hogs are being sold. Parliament does not enforce that in as far as hogs are concerned.

*By Mr. Sommerville:*

Q. Do you mean there is no price on the ticket on the sale of hogs over the scale?—A. Yes.

Q. That applies to all the rest of live stock. That was a regulation which went into effect before the time when the department had bonded all the commission men?—A. No, I would not say so.

Q. You think not?—A. No.

Q. You think the \$10,000 bond existed at the time it went into effect?—A. About the same time.

Q. Did it go into effect before the department had power to go in and examine the books of the commission men?—A. No. I do not think so.

Q. About the same time? You think they were all put in about the same time?

*By the Chairman:*

Q. Witness, if a separate ticket for price were issued would it not give the same protection without disclosing to the competitors the price?—A. A separate ticket?

Q. For price. Instead of putting it on the weight ticket?—A. It would still be in the hands of the scale man. Is that what you mean?

Q. I mean that instead of putting the price on the weight ticket, which you complain of. There is the weight, the name of the owner and all the rest of it, and the price, and you complain that the putting of that price on the ticket discloses to competitor buyers what price is being paid. Now, suppose a separate ticket were given for the price, it would carry the same protection to the farmer selling the stock, but it would not disclose the price to the competitor?

Mr. EDWARDS: Do you mean a serial number?

The CHAIRMAN: Yes.

WITNESS: The way live stock is handled and weighed that would incur considerably more detail and more expense in handling.

The CHAIRMAN: What protection are you going to give to the man whose stock is being sold if you do not have a record of that kind?

WITNESS: You have a record of it, and the department has full access to all your records. Those tickets could come back and be marked in the office, and in that way there is nobody, only the commission firm and the buyer, that would know. Now, for advertising purposes, the Department of Agriculture has an office and they could get those prices—the varied prices.

*By Mr. Sommerville:*

Q. Without disclosing the actual purchase?—A. Yes, without disclosing the actual purchase.

Q. You think that ticket should go back to the firm and the price be put on it then?—A. Yes, sir.

Q. And you have no difficulties about the omission of the price from the hog ticket?—A. No.

Q. And you say you would have no difficulties about the omission of the price from the cattle ticket if it were later put on in the office of the agent?—A. No. I have seen examples of that, where there might be an exceptionally good load of cattle and you could not get the packer's buyer to go any higher, and he was not backward in telling you. Supposing the general price was 6 cents a pound for good cattle, you could not get that packer to go 6¼. He says, "everybody would be wanting 6¼ for cattle," although that grade of cattle might be as cheap at 6¼ as the average would be at 6 cents. That is one detriment. The packer is very careful.

Q. The packer is afraid to pay the higher price for the better cattle because every other agent on the market would know and would expect a similar price for his cattle?—A. Yes.

*By Mr. Young:*

Q. How would it work the other way? If you kept all those prices secret and a man comes in with a load of cattle and does not know what the prices are, and he is not in a position to compare his cattle with other cattle, and does not know the relative prices?—A. He would entrust those cattle to somebody and trust the judgment of whoever he consigned them to who would be working in his interest.

*By Mr. Sommerville:*

Q. Cattle are sold by the commission men, are they not?—A. Yes.

*By Mr. Ilsley:*

Q. That is the advantage of a public market; it fixes a public price?—A. There is no such thing as a fixed public price in as far as cattle are concerned,

because there are so many different grades. Now, talk about grades in hogs, there might be ten different grades in the same weight of steers—ten different values, I mean.

*By Mr. Sommerville:*

Q. You could have your price settled by the trading of the day, as to the price of the various grades without disclosing individual transactions?—A. That is it.

Mr. YOUNG: Yes, but the farmer comes in with a load of cattle and he does not know what the market is. He wants to look around before he sells, and he sees similar cattle. He wants to know what they are bringing in, and if nobody will tell him how does he know that he is getting a fair price?

Mr. FACTOR: Are there any farmers who bring their own cattle to the market?

The WITNESS: There are some.

Mr. KENNEDY (Winnipeg): Cannot they get the information from the commission men?

The WITNESS: That is what he is for. He discloses all the information to his client.

Mr. SOMMERVILLE: There is no question about getting prices from commission men even if you are not a client?

The WITNESS: No.

Mr. FACTOR: Can a farmer sell his own cattle without going to the commission man?

The WITNESS: He can.

*By Mr. Sommerville:*

Q. Now, as a matter of practice, do the drovers come to your market in large numbers?—A. I would say the drovers come to our market over 90 per cent.

Q. And they are dealing with live stock all the time?—A. Yes, sir.

Q. And do they sell them themselves, or do they send them to the commission agents?—A. 100 per cent to the commission agents.

Q. And the drovers are experienced cattle buyers?—A. Yes.

Q. One would expect that they would make use of their own knowledge in selling their cattle on the market?—A. Yes.

Q. But they do not do so?—A. No, sir.

Q. Now, you have come down with a statement of the earnings of the Exchange—the members of the Exchange—A. Yes, sir.

Q. Mr. Quinn has given us the basis of the charges that have been fixed by the regulations. You have no other source of revenue except the basis given by Mr. Quinn in the regulations?—A. None whatever.

Q. And what does the statement from your auditor show as to the financial result of the operations of your live stock exchange during the year 1932? Would you let me have that?—A. Yes, sir.

Q. I understand this is a statement prepared by an auditor, and contains a consolidated report of all the live stock commission men on the Toronto Live Stock Exchange?—A. For 1932, nine firms.

Q. And for 1933?—A. This one is for 1933. This is the expense sheet for 1932.

Q. And this is the consolidated statement of income and expenditures for the year 1932 and shows the effect of the proposed reduction in Commission rates when applied to that year?—A. Yes, sir.

Q. And it contains a statement of net income and net loss per head of live stock received on that basis?—A. Yes.

Q. I see that the net earnings per head of live stock received at the Union Stock Yards for the year 1932 was procured from a bulletin published by the Union Stock Yards of Toronto, and the net profit per head, without taking into account the proposed modification of commission rates, was  $2\frac{1}{5}$  cents?—A. That is correct.

Q. And this statement shows the net loss per head of cattle received for the year 1932, which would be sustained by the commission brokers if the proposed modification of commission rates was put into effect that year—the net loss per head as reported on this statement is  $2\frac{2}{5}$  cents?—A. That is correct.

Q. If the proposed changes were made.

Mr. ILSLEY: They would have made a loss?

Mr. SOMMERVILLE: They would have sustained an actual loss on the year's operation.

Mr. FACTOR: If it was reduced by \$2?

*By Mr. Sommerville:*

Q. If there was a reduction of \$2 per car?—A. And 25 cents per head on truck cattle and 5 cents a head on lambs.

Q. I see you have given a list of the employees: principals and salesmen 45, yard staff 58, office and management 25, occasional help 18, total 146. The gross income from commissions reported by live stock commission brokers for the year 1932 is \$300,821.83, and decreased income if modified commission rates were applicable for the year 1932 is \$38,210.19. Gross income reduced would be \$262,611.64. Expenses, including salaries, stationery, telephone, telegraph, postage, rent, bad debts, etc., \$282,798.13. The net excess of expenditures over income is \$20,186.49?—A. Yes, sir.

Q. That is the statement you're submitting?—A. Yes.

(Report Toronto Live Stock Commission Brokers, 1932. Report Toronto Live Stock Commission Brokers, 1933. Filed, marked Exhibit 99).

*By Mr. Kennedy (Winnipeg):*

Q. Where do bad debts come in in the commission business?—A. Bad debts? They would come in through N.S.F. cheques and we have had occasion for someone to come in and buy stuff off us and never pay for it at all.

*By the Chairman:*

Q. Feed and so forth?—A. Not feed, no.

Q. What then?—A. Buy goods.

Q. Which you had to make good under your \$10,000 bond?—A. Absolutely.

*By Mr. Sommerville:*

Q. As a matter of fact, you have given a statement of the gross sales of your exchange. Has there ever been a loss on your exchange in a period of ten or fifteen years?—A. No, sir. Through the commission firms? No, sir.

Q. At any time?—A. No, sir.

*By Mr. Sommerville:*

Q. 817,985 head of live stock received in the year 1932 on the Union Stock Yards, Toronto, as reported by Union Stock Yards, Limited, net profit per head  $2\frac{1}{5}$  cents; and if this proposed cut were made, these figures show that your net loss per head would be  $2\frac{2}{5}$  cents?—A. That is correct.

Q. That is for 1932. For 1933 you submit a similar statement?—A. Yes.

Q. And that would show that the gross sales for the year were \$13,869,-900.94; you had a net income of \$14,204.92?—A. Yes.

Q. And with the cut, the profit per head during 1933 was 1-4/5 cents?—A. Yes.

Q. While the net excess of expenditure, if the new rate went into force, would show a net loss per head of 3-4/5 cents; that is your contention?—A. That is correct.

Q. For nine firms as shown?—A. Nine firms.

Mr. ILSLEY: What about this story that there is another firm?

Mr. SOMMERVILLE: I am just going to bring that out. These will be filed as exhibits.

*By Mr. Sommerville:*

Q. You are also filing a statement of expenditures for 1933?—A. That is 1932, I believe.

Q. Yes, 1932?—A. 1933 is attached in that.

Q. It is in there?—A. Yes.

Q. This shows that the average yearly wage of 45 principals and salesmen was \$2,959; the average yearly wage of 58 yard staff was \$851.33 each; the average yearly wage of 25 office and management employees was \$1,570.24, and the average wage of the occasional help was \$223.45?

Mr. FACTOR: That is part time.

Mr. SOMMERVILLE: Part time, yes. That is for 1932.

*By Mr. Ilsley:*

Q. All these commission concerns are limited companies, are they?—A. Some of them. The company I am with is a limited company, yes.

Q. Those expenditures include salaries for the officers of the limited company, don't they?—A. No, there is no salaries outside of what is in this statement.

*By Mr. Sommerville:*

Q. The officers of the limited companies are operating as salesmen on the market?—A. Yes.

Mr. ILSLEY: Yes, now I understand.

*By Mr. Sommerville:*

Q. They are limited companies, except in the case of the U.F.O.; that does not operate as a limited company. Are there any employees of that that are not operating on the market?—A. That I could not answer.

*By the Chairman:*

Q. All these employees are operating?—A. Are active.

Q. On this market, in connection with your business on the market?—A. Yes, and there are no other charges outside of what is there.

*By Mr. Kennedy (Winnipeg):*

Q. There is no official drawing a salary but what is actually working on the market?—A. No.

*By Mr. Factor:*

Q. In other words, Mr. Talbot, the highest salary that any officer or employee of any of the concerns receives is \$2,958?—A. That is the average.

Q. That is the average?—A. Yes.

Mr. SOMMERVILLE: The average of the management.

*By Mr. Ilsley:*

Q. What is this profit? Let us get a little clearer picture. This profit of so much an animal, what does that go against? What does it cover? Is that your return on capital investment?—A. Yes.

MR. YOUNG: What is your capital, desks?

*By Mr. Ilsley:*

Q. What does that amount to, your capital?—A. The capital investment in the live stock commission business is not great, but it has to be enough to carry on business.

Q. That is to say you all get your pay, and then you have so much per head to remunerate you as a return upon your capital investment?—A. Yes.

Q. It is only small?—A. In other words, fourteen commission firms—at least nine commission firms in 1933 got \$14,000 to go against doubtful debts that might be on their books, and no interest for the capital investment.

*By Mr. Young:*

Q. No depreciation on your office equipment or anything?—A. There might be some depreciation taken in, like there would be in any business.

*By Mr. Sommerville:*

Q. You have only got a few desks in your rooms?—A. Yes, that is all.

Q. And your equipment does not amount to very much on the way of equipment?—A. No.

*By Mr. Ilsley:*

Q. I thought you had taken bad debts into account there?—A. There is still accounts on your books that may prove bad debts.

Q. I know, but that goes on from year to year?—A. We have not taken into account anything of that.

Q. What dividend could you declare on your capital investment?—A. Dividend?

The CHAIRMAN: Not very much.

*By Mr. Ilsley:*

Q. Yes, what dividend?—A. My dear sir, we have never had no dividend to declare.

Q. I know you have not; I know you are not operating as one concern. You are operating as nine concerns?—A. We are operating separately; every firm is separately. There is nine firms. We are not collectively operating.

Q. That is what I say, you are operating as nine companies, not as one company. You don't have any share capital on the live stock exchange. I know that. How much should you be making per head on this cattle? Would it not be all right if you came out exactly even, after you have all got your pay, and take care of bad debts and so on? How much should you be making? What do you want us to allow you to make, in other words?—A. I would be satisfied if you would set what we should make.

Q. No, I am asking you. You know about it and I don't. I want to get some sort of an idea.

The CHAIRMAN: The point they are making in these two statements is, Mr. Ilsley, that if the suggested reduction is made they would actually make a loss. At the present time they say they are making a gain in one year of  $1\frac{1}{2}$  cents and in the other year  $2\frac{1}{2}$  cents, over and above expenses.

*By Mr. Ilsley:*

Q. The profit is small?—A. Yes, we are not running a profitable business.

Q. If it were on a profitable basis, a fair, profitable basis, how much per head of live stock should you be making?—A. Oh, I don't know that I could tell you so much per head; but I would say that an individual firm or company paying the small salaries that are paid to the principals—I don't mind telling you that I draw \$60 a week myself, and I am a principal. I am vice-president of the company, and I draw \$60 a week. I think that after everything is paid that there surely ought to be another \$1,000 left for me. There is just the two to divide it, that would be \$2,000 our firm should make in a year. I think that would be reasonable.

*By Mr. Factor:*

Q. You don't make that now?—A. They are not making anything now.

*By Mr. Young:*

Q. The firm consists of two men?—A. Yes.

*By Mr. Kennedy (Winnipeg):*

Q. How long have you been in business?—A. I have been in the commission business in Toronto since 1924.

*By Mr. Sommerville:*

Q. It is suggested that there are others who are willing to go into this business, though you say it is in this condition. What do you say as to that?—A. Well, the new firm that has gone into the business is really, as it were, not a new firm. It is composed of three brothers that were in two other firms, and their business was practically their own. How they were working with those other firms I am not prepared to say. I do not know.

Q. That is to say, three men that were drawing a salary out of another firm, have set up in a separate live stock firm on the exchange?—A. Yes.

Q. They were drawing a salary from some other firm that was one of the nine?—A. If I would be allowed to presume, I would presume that they were not drawing a salary. The business that they were doing was on a commission basis, and the business that they had, they considered was practically their own business, and it was practically a 100 per cent truck business, and they amalgamated with that another gentleman.

Q. And went into business?—A. And went into business.

Q. So that while they are organized as a separate firm, you say they were carrying on the same similar business in the firm to which they formerly belonged?—A. Yes. I don't know that for a fact.

The CHAIRMAN: Do we care about that?

The WITNESS: No, I don't think so.

*By Mr. Sommerville:*

Q. At any rate, you have no other explanation to offer for anyone desiring to get into this business that you say is not profitable?—A. No, sir. Anybody that understood it, who knew it all, would never want to get into it. Those that are in it, if they knew anything else to do—they say, "Why don't you get out?" But a live stock man is a live stock man. He is not a lawyer and he is not a politician.

The CHAIRMAN: We don't care very much about that. I don't think I would waste time on it.

*By Mr. Sommerville:*

Q. Then what you say is that the rates could not be reduced as suggested?—A. No, they could not.

Q. Without loss?—A. Without disastrous loss.

The CHAIRMAN: I think what we are mainly concerned about is that, apparently from the evidence so far, the rates are not of the character that can be looked upon as excessive. We will pass our own decision on that later on.

Mr. FACTOR: His evidence is a loss would be sustained if the rates were reduced.

Mr. SOMMERVILLE: Yes. Well, thank you, Mr. Talbot.

The witness was discharged.

The CHAIRMAN: Call it a day. We will meet on Monday afternoon, an executive session.

Mr. FACTOR: You don't know what the program is?

The CHAIRMAN: No. I have a brief report on the Ontario matter. It seems there are some regulations. We have not got the full particulars, but we find some regulations were passed in connection with the Public Vehicles Act, and it involved licensing, but it seemingly was not made obligatory. However, we are not sufficiently informed yet.

The committee adjourned at 5.25 p.m.

HOUSE OF COMMONS, ROOM 368,

April 17, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock a.m., the Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., of Toronto, and Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. The minutes of the last meeting indicate certain exhibits filed, and three witnesses, Messrs. Quinn, Chapman, and Talbot, heard. I will declare the minutes approved, unless there are some objections. I understand there are certain documents to be filed this morning.

The CLERK: Yes, there are filed two copies of the report on an alleged tobacco combine.

(Two copies of report on an alleged tobacco combine filed and marked Exhibit No. 100.)

There is also a list of shareholders and the financial structure of the North Battleford Stockyards Co., Ltd., and a letter from Mr. Reid, member of Parliament.

The CHAIRMAN: Before we call the witness to-day, I would like to mention a question which arose at the close of last session regarding certain highway regulations, and an Ontario statute providing for bills of lading for truckers. The counsel for the committee has secured certain information. He will file this; but I think it might be well just to read the accompanying letter and file, if he will, the regulations which are attached to the letter.

Mr. FACTOR: It is under the Public Vehicles Act, is it not?

Mr. SOMMERVILLE: Yes. These are addressed to the counsel of the committee. This one is dated April 14, 1934, and is signed by L. Macaulay, Minister of Highways, for the province of Ontario. It reads as follows:—

Referring to the statement made before your committee on the 12th instant by Mr. Ross Chapman of Toronto, I am forwarding herewith for the information of your committee a memorandum prepared by Mr. J. P. Bickell, Registrar of Motor Vehicles, to whose branch the administration of the Ontario Public Commercial Vehicle Act is attached, which I trust will be of interest to the commission.

This is the memorandum:—

Memorandum for the Honourable Mr. Macaulay from the Registrar of Motor Vehicles, *re* the Public Commercial Vehicle Act and Live Stock Hauling:—

Since the 1st of September, 1928, there has been in effect in the province of Ontario an Act known as the Public Commercial Vehicles Act. Under this act motor vehicles or trailers operated for hire, pay or gain for the transportation of goods, wares and merchandise, other than those operating solely within the corporate limits of one urban municipality, are required to be licensed by the Department of Highways.

Provision is made in the act for the making of regulations by the Lieutenant-Governor in Council respecting the issue of licences, and the fees to be paid therefor. Under this authority regulations are in effect which divide the vehicles coming within the act into five classes. Vehicles operated for the transportation of farm and dairy produce or live stock exclusively are classed as "E". Under the regulations such vehicles are required to display a plate indicating the class of licence under which they are operated, and the operators are required to carry what is known as cargo insurance, the amount of which is based upon the gross weight of the vehicle, the minimum amount of insurance being \$500 for a vehicle up to 5 tons gross weight, the maximum \$1,000 for a vehicle up to 10 tons gross weight.

Owners and operators of public commercial vehicles are required to use a form of bill of lading as provided in the regulations and a copy of such bill of lading must be carried by the driver, which bill must contain full particulars of the load. Until 1932 exception was made to the use of a standard form of bill of lading by class "E" operators. In May, 1932, as a result of representations made to the department, a special form of bill of lading was prescribed for those engaged in the transportation of live stock. When this regulation became effective a supply of forms of bill of lading was issued to class "E" operator without charge, and on the 8th of June, 1932, a letter was addressed to the manager of each packing house, in which it was pointed out that a uniform bill of lading had been prescribed and their co-operation was sought in securing an enforcement of this regulation. Officers of the department enforcing the regulation have devoted considerable time to this particular regulation and since the meat packers were written upon the subject, they have been called upon by officers of the department and urged to co-operate by refusing to accept from public commercial vehicle operators live stock not accompanied by the prescribed form of bill of lading. It is apparent from investigation made by the department that there is not the desire on the part of the shippers of live stock, nor the receivers, to co-operate with the department in the enforcement of this regulation. The producers apparently prefer to allow the hauler to dispose of their live stock at the market or packing house at which he can secure the best price, rather than to consign the shipment to a particular packer or commission agent.

Instances came to the attention of our inspectors where bills of lading describing the cattle being carried were used but the name of the consignee was omitted. A considerable quantity of live stock delivered by a motor truck to the markets and packing houses is delivered by the producer or by the owner of the live stock who has purchased same from the producer. In such cases, of course, even though the owner of the vehicle may be a licensed public commercial vehicle operator, the stock being his own, he is not required to use a bill of lading, such operation of his vehicle not bringing him within the meaning of the Public Commercial Vehicle Act. This is the only reason advanced by the packers for their inability to co-operate in the enforcement of this regulation, but in the opinion of the department, the packers and commission agents are in much the preferable position to ascertain whether or not a person delivering the live stock is the owner or is transporting same for the owner.

It is a fact that the enforcement of any act or regulation which has not the sympathetic support of those concerned is difficult, if not impossible, and the lack of co-operation of the farmer producer of the live stock, and the live stock commission agent or meat packer, has made exceed-

ingly difficult the enforcement of this particular regulation which was promulgated in the interests of the producer on one hand and the packing houses or commission agents on the other.

The statement of Mr. Ross Chapman of Toronto, who testified before the House of Commons committee on mass buying on the 12th instant, that "under pressure of somebody" this department had failed to enforce the act is, of course, ridiculous. There have been no representations made to the department by any parties concerned with a view to a relaxation of our efforts to enforce this regulation but as stated, we have not received the co-operation necessary to make it wholly effective.

Respectively submitted,

J. P. BICKELL,  
*Registrar of Motor Vehicles.*

Accompanying that is a copy of the letter written by the department to the various packing houses, dated June 8, 1932, which reads as follows:—

DEAR SIRs,—I beg to call your attention to a recent amendment to the regulations passed pursuant to the Public Commercial Vehicle Act, which requires that owners of vehicles operated for hire for the transportation of live stock shall use a form of bill of lading as prescribed in schedule "C" of the regulations, a copy of which is enclosed herewith.

This regulation was enacted as a measure of protection to shippers of live stock, and in order to eliminate certain irregularities and undesirable practices of operators engaged in this business. In order that this regulation may be effectively enforced the department earnestly requests your co-operation.

In the first instance the department has provided free of cost to those carriers engaged in hauling live stock a supply of bills of lading, but further supplies, however, must be procured by the carrier at his own cost. There is no good reason why each carrier should not comply with this regulation, but in the enforcement of this provision you will assist this department if you insist that each shipment accepted by your company is accompanied by the bill of lading properly completed.

Yours truly,

J. P. BICKELL,  
*Registrar of Motor Vehicles.*

Along with it is filed the bill covering the Public Commercial Vehicle Act of 1934 which has just been passed, which slightly amends but still carries through this regulation, and the regulations themselves covering the licensing of public commercial vehicles.

(Letter of April 14, 1934, copy of letter of June 8, 1932, Memorandum, Bill and Regulations re Public Commercial Vehicle Act, filed and marked Exhibit No. 101.)

Mr. FACTOR: Apparently the act did not go far enough to cover owners shipping direct by truck.

Mr. SOMMERVILLE: No, it does not cover that, a man bringing his own deliveries. There is no object in having a bill of lading in those circumstances.

The CHAIRMAN: Now, gentlemen, our witness to-day is Mr. McKenzie, Minister of Agriculture of the Province of Manitoba. I understand that Mr. McKenzie comes from a conference between the agriculture departments of the

three prairie provinces, and will indicate, I think, to some extent at least, that he is speaking for the three, and also speaking particularly for himself as Minister of Agriculture. I am sure we appreciate very much having Mr. McKenzie with us and we shall welcome his evidence this morning.

Hon. D. G. McKENZIE, called and sworn.

*By Mr. Sommerville:*

Q. You are Hon. D. G. McKenzie; the initials stand for what?—A. Donald Gordon McKenzie.

Q. Minister of Agriculture and Immigration of the province of Manitoba?—A. Yes.

Hon. Mr. Stevens and gentlemen of the committee, may I just, by way of a word of explanation, say that in approaching our brief to-day, I am presenting to you the situation as we see it in Manitoba, and also embodying in my memorandum the report adopted by the agriculture committee of the legislature of Manitoba, and quoting a series of recommendations that was jointly agreed upon by the Department of Agriculture of the three western provinces, Manitoba, Alberta and Saskatchewan.

*By the Chairman:*

Q. If you wish to sit down, Mr. McKenzie, it will be quite all right with us?—A. Well, if you don't mind, I think I will stand for a while; I have to use my charts anyway.

I appreciate this opportunity of appearing before you on behalf of the live stock producers and also the government of the province of Manitoba. We welcome this investigation, and are greatly encouraged in the hope that the findings in your report will result in some measure of relief to the producers of live stock.

The man on the land is strenuously endeavouring to secure sufficient revenue from the sale of his farm products to meet his obligations and provide a living for his family and himself. I respectfully submit that, unless some adjustment can be made between costs of production and net prices received by the producer on the land, a large proportion of the men now engaged in the production of live stock will be forced to discontinue. Credit is becoming increasing difficult to arrange. This, coupled with the fact that any surplus reserves which farmers may have had have now disappeared, will ultimately compel farmers to discontinue the production of live stock.

I am not appearing before this committee with any "ready made" or pre-conceived conviction as to a remedy. I sincerely appreciate the magnitude of the task you are undertaking. I am also conscious of the problems facing those concerned with the merchandising of live stock and live stock products, particularly organizations merchandising live stock products in the markets of the world. I am, however, before you to suggest especially that some change will have to take place in our merchandising practices, which will reserve a larger share of the consumer's dollar for the primary producer. This is basic and fundamental.

There is a real difference between the position of the primary producer and those who handle the farmer's product. The farmer's price is arrived at after all marketing charges—based on costs—are deducted. The farmer has little or nothing to say about the price he receives. For that reason his prices are not definitely related to his costs of production. My plea to this committee is, that unless a larger share of the consumer's dollar can be segregated for the primary producer in order to enable him to at least meet his costs of production.

he cannot continue in business. That, Mr. Chairman, is the challenge which all connected with the merchandising of livestock and livestock products have to accept. Marketing farm products at a loss is an untenable position for any producer to be placed in, and is a matter of great national consequence.

In 1931, the total number of people in the three prairie provinces making their living directly off our farms was 1,195,414 or 50·7 per cent of the total population of these provinces. May I interject that the figures we use are all taken from the Dominion Bureau of Statistics, and we have included no figures that we had in our own provinces. If to this is added all those who make their living out of processing agricultural products, the number becomes much more impressive, and anything affecting the lives of such a percentage of our people is a matter of great moment. It should here be noted that the value of agricultural products in the provinces of Manitoba, Saskatchewan and Alberta during the five-year period 1928-1932, was as follows, and I will just read the millions:

1928.. . . . .	\$843,153,000
1929.. . . . .	642,022,000
1930.. . . . .	445,916,000
1931.. . . . .	296,323,000
1932.. . . . .	272,738,000

It is at once apparent that the agricultural people of these three provinces have suffered a diminution of approximately 67·6 per cent of their purchasing power in the five-year period, 1928-1932. Their inability to purchase the ordinary necessities of life and the equipment necessary in the operation of their farms has contributed much to the difficulties experienced by the factories of Canada in the same period, and has meant a material reduction in the amount of commodities hauled by our transportation companies. These two facts, in turn, have meant substantial additions to the number of unemployed in Canada, resulting in additional heavy burdens being imposed upon governments.

It may be argued with some force, I think, that the reverse of this is equally true and that the restoration of the purchasing power of the agricultural people of Canada will do more than any other single factor to again stimulate industry generally and secure employment for many of those now unemployed. This, sir, is perhaps the greatest problem. I wish to suggest that it should receive the attention of your committee.

Manitoba farmers are asked to-day, in common with the farmers elsewhere in Western Canada, to reduce their production of wheat. The present world's surplus of wheat has been largely accumulated in the last few years. But it should be noted that wheat production in the Province of Manitoba has steadily decreased since 1915, as will be clearly indicated in charts which I shall submit for your consideration. On the other hand the combined acreages sown to oats and barley, as will also be indicated, have not been reduced, but show substantial increases.

Farmers have been encouraged to market their coarse grains in the form of livestock, and the urge to do so is now being particularly stressed because a considerable outlet for our livestock is available on the British market. Particularly is this the case with hogs.

If we must now further decrease our acreage in wheat, livestock production in any western farm program is more fundamental than ever before. Especially is this true if possible surpluses in wheat must be marketed through livestock.

The farming situation becomes increasingly difficult if, with a forced reduction in wheat production, we cannot procure for our livestock producers sufficient to compensate them for the costs of their labours. The relationship of price to production is well illustrated by a chart that I shall submit, indicating the decrease in production following sharp declines in livestock prices.

Farmers are frequently urged to engage in livestock production because constant grain growing is unprofitable. Those who advocate such practices as a substitute for grain growing often attempt to justify their position by computing profits made on livestock on the basis of prevailing low grain prices, even when such price represents a loss to the farmer who produces the grain. Livestock production under these conditions may represent the lesser of two evils, but a permanent livestock policy cannot be based on a program which involves the production of grain on a losing basis.

Again, profits computed on steer feeding are generally based on the buying of feeders at sacrifice prices; for example, last fall light weight cattle were sold on our public markets at prices ranging as low as \$10 and \$12 per head. Will any one suggest that cattle can be raised to weigh 600 or 700 pounds at a cost of \$10 or \$12? Without any regard to the cost of raising the animal and the pasturage, the cost of hay alone for wintering it would equal the \$12 received for it.

It is very apparent that any computation of profits on such a basis is entirely erroneous and cannot lead to the successful establishment of the livestock industry. Rather would I suggest that the same methods of cost accounting followed by other lines of business be applied here, so that farmers and all others may ascertain what can be produced profitably. Nothing short of this will ever place farming on a sound business basis.

Yet even in face of these uncertainties great progress has been made. The total production of beef cattle, swine, and sheep, of the three western provinces, in comparison to our total Canadian production, is as follows:—

	Three Western Provinces	Balance of Canada
Beef cattle.. . . .	56%	44%
Swine.. . . .	50%	50%
Sheep.. . . .	40%	60%

Manitoba farmers are annually planning more and more to adjust their grain acreage to meet the needs of their livestock production program. Two major reasons for this gradual change in farm practice are the low financial returns from straight grain growing and the difficulty they have experienced in weed control. Coupled with these two reasons is the recognition of the constant drain upon virgin soil fertility from continued grain growing. Manitoba farmers have been forced by stress of circumstances to milk cows in order to secure a cream cheque to obtain the bare necessities of life. That, briefly stated, is the back ground responsible for the present position of the average Manitoba farmer and his outlook on his program of production.

May I read into my memorandum here, Mr. Chairman, a letter I received from a farmer living at St. Norbert, Manitoba. This is in the vicinity of Winnipeg, and it outlines the general picture I am trying to set forth. This letter is dated April 10, 1934, and is addressed to myself, it says:—

Reading that you were going to Ottawa to represent western farmers before the Stevens' Committee it occurred to me that some of my experience might shed light on the picture.

As you know, my farming activities have been in the direction of producing quality hogs—(I have had as many as 200 pure-bred Yorkshire at one time)—growing seed grain and garden produce.

I have grown no wheat for three years as even with the premiums obtainable for good seed, it is not sufficient to pay production costs, especially during the period when we were only allowed to realize in Canadian currency two-thirds of the value of the British pound which was paid for our wheat and on which discounted value the price was

based. I presume the same basis was used to determine hog prices in Canada notwithstanding the very small percentage exported. A year ago I fed 140 head and the following figures tell the story:—

On February 3, 1933, I sold 13 head at \$2.85 per 100 pounds.

On February 7, 1933, I sold 14 head at the same price,  
70% grading selects.

On the same day I went in to a retail butcher shop to inquire the price of pork and was quoted 13 cents per pound for roasts or chops. Remarking that I had just sold some live hogs at \$2.85 and that the price seemed disproportionate, the butcher agreed, but maintained that it was the abbatoirs—the “big fellows” who were responsible.

On February 14, I received \$3 per 100 pounds for 20 head.

On March 13, I received \$4.25 per 100 pounds for 32 head.

At those prices I did not receive the value of the feed consumed, and the pleasure of their company did not compensate for six months' care and labour.

*By Mr. Sommerville:*

Q. Even with selects?—A. Even with selects.

Vegetable prices to farmers for some time have also been below the cost of production and compared with retail prices, most unfair. I sold three tons of parsnips last month at \$10 per ton, the highest price obtainable from any dealer, which will barely pay wages for harvesting and storing. On July 4 last I sold 265 pounds green peas at 3 cents per pound, which retailed at 3 pounds for 25 cents. On July 6, 345 pounds at 2 cents, selling at 4 pounds for 25 cents, and on July 8, 400 pounds at 1½ cents, selling at 6 pounds for 25 cents. At the same time I sold beets put up in bunches of 6 at 1¼ cents per bunch, which retailed at 3¼ cents per bunch. I have sold ripe tomatoes at 4 cents per pound, which were leaving the store at 10 cents per pound before I got my check cashed.

I have been growing several thousand bushels of potatoes every year, which I used to deliver to the store, emptying them in their bins. Then they wanted them put up in 90 pound bags, sometimes in 60 pounds, when special sales were advertised, the bags being exchanged or returned. For the last two years they insist in addition that the farmer furnish the bags, which means that he does all the work of merchandising, except distribution. Sometimes the bags cost nearly 50 per cent of the net price received for the potatoes. On May 9, 1932, I delivered 72 bushels in 72 bags, for which I received 20 cents each. The bags cost 6 cents each, leaving me 14 cents per bushel, and they were retailed at 30 cents.

The condition of the vegetable market here seems to be growing steadily worse and the tactics employed by some of the produce dealers are to my mind most reprehensible. This is particularly true in the fall of the year when very many, especially the foreign born who have no storage accommodation, bring in large quantities which they must sell or lose by frost damage. No interest is manifested in anything that is offered in the early part of the day. Towards evening, faced with the prospect of taking the load home again, a price is accepted that is ruinous to producers and much below what the general public are able and even willing to pay. The Vegetable Growers' Association has made

an effort to stabilize prices but the extension of good highways and the advent of motor trucks has made the area supplying the city now so large, it is difficult to effect a remedy.

Trusting to see you sometime soon and that this may be of some value to you,

I am, Yours truly,

(Signed) T. TURNBULL.

I come now to a discussion of the charts. This first chart is really intended to indicate the trend in cereal crop production. The top line (solid line) shows the trend in wheat production from 1915, down to 1933 inclusive, and indicates a shrinkage in the volume of acreage devoted to wheat production. The second line (short dash line) shows the tendency in oat production; and the third line (long dash line) shows the tendency in barley production.

*By Mr. Sommerville:*

Q. Is this for the Prairie Provinces?—A. It applies to the Province of Manitoba only.

The trend of this production is well illustrated in Chart No. 1. This chart presents acreages seeded to wheat, oats and barley in the years 1915 to 1933 inclusive. The relation between these three cereal crops in 1915, as compared with 1933, is as follows:

	1915	1933
Wheat. . . . .	3.6	2.4
Oats. . . . .	2.1	1.6
Barley. . . . .	1.0	1.6

*By Mr. Kennedy (Winnipeg):*

Q. Do these figures show the relationship between these three cereal crops in 1915, as compared with 1933; what does the 3.6 and so on show?—A. It is not 3.6 of anything; it is just a relative number.

*By Mr. Sommerville:*

Q. Yes. The decrease is from 3.6 to 2.4; or decrease of about 30 per cent?—A. In wheat, the decrease in wheat was from 3.6 in 1915 to 2.4 in 1933; this is just a yardstick by which to indicate relative values.

*By Mr. Kennedy (Peace River):*

Q. It applies to the figures on the chart?—A. Yes.

A decrease of over one million acres in a total acreage seeded to grain, amounting to 15 per cent. This decrease has occurred entirely in acreage seeded to wheat. This being so—and the present trend is to accentuate this difference in acreage seeded to wheat as compared with acreage seeded to four strains—the importance each year of livestock on Manitoba farms is obviously becoming increasingly apparent.

That will be further emphasized in the second chart. (Chart No. 2, indicating Numbers of Cattle, Sheep, Swine, and Cattle, Sheep and Swine combined, Manitoba—1915-1933 inclusive). The top line indicates the total livestock—cattle, sheep and swine—for the same period, rising from this point (marked 1,000,000) on the chart up to that (a point on the upper right hand side just under the number 1,300,000). This shows a general trend upwards in livestock production corresponding with the trend downwards in cereal grain.

# ACREAGES WHEAT, OATS AND BARLEY SOWN IN MANITOBA. 1915-1933 (inclusive)

DEPARTMENT OF AGRICULTURE - PROVINCE OF MANITOBA

## NUMBERS of CATTLE, SHEEP, SWINE, AND CATTLE SHEEP AND SWINE COMBINED, MANITOBA

1915-1933, INCLUSIVE

DEPARTMENT OF AGRICULTURE, PROVINCE OF MANITOBA

*By the Chairman:*

Q. Between the years 1915 and 1933?—A. Yes, the same years. Then there is the "cattle" line, the second line, which is comparatively steady; the third line indicates "hogs," and there is more variation; the fourth line shows sheep, and there the trend is apparently fairly regularly upwards.

*By Mr. Sommerville:*

Q. And the line for cattle is also fairly regularly upwards?—A. Fairly regularly.

Chart 2: The top line of Chart No. 2 illustrates totals of Manitoba cattle, swine and sheep. Horses have not been included, since there is a shortage of horses for use as farm power and horses present no marketing problem. Supply and demand, with an open competitive market, is making horse production profitable and farmers are breeding more mares to satisfy this demand. The return from the tractor to the horse as a source of farm power is the reason for a shortage in horses and will add to the reasons given in support of changes illustrated in Chart No. 2 why there will be a continued increase in acreage seeded to oats. That is to say, the increase in horse population is altogether likely to accentuate the increase in oat production. On the other hand, Manitoba's combined total of cattle, sheep and swine is 287,000 head over 1915 totals, an increase of 28 per cent, in our total livestock production. These increases are not the result of war time prices. They are the result of a growing recognition that livestock are an indispensable part of any permanent farm program for reasons already given.

*By the Chairman:*

Q. You submit that, I presume, evidence that your farmers are earnestly trying to take advantage of livestock production as against the old tendency for straight grain?—A. Quite positively, sir.

The second line deals with cattle. The trend of this line is fairly gradual, but mostly upward. 1933 represents an increase over 1915—the initial year of the graph—of 27.5 per cent. This increase is not spectacular, but is steady and appears to be on a fairly permanent basis.

The third line deals with swine. It fluctuates conspicuously, production varying in sympathy with prevailing market prices. One would logically conclude from this chart that farmers can and are anxious to produce hogs. The sudden increase in sows bred during periods of peak prices is proof of this statement. The hog population in Manitoba has represented much higher totals than our 1933 figures. Low price levels, coupled with sudden and unexplainable fluctuations in price, periodically make hog production unprofitable and invariably destroy public confidence. The desire to produce hogs is ever present, but erratic price fluctuations not only destroy confidence, but create fear bordering on panic among producers. I shall make further and more detailed reference to this later.

Manitoba's sheep population in 1915 was 76,577 whereas in 1933 it was 212,800, an increase of 178 per cent. While this percentage increase is extremely imposing, viewed in terms of actual figures it does not remotely suggest overproduction. Manitoba can still increase its lamb production considerably without very seriously affecting the total sheep production of Canada.

Chart 3. We now come to Chart No. 3, which shows "Hogs Produced and Marketed 1923-1933." This, Mr. Chairman, I think is a rather interesting chart, and just as a preliminary to the discussion in the memorandum, I would say that the columns here on the left-hand side of the chart—the parallel columns—represent the annual yearly production of hogs. The solid line across

the centre of the page indicates the fluctuation in price levels, and if you will notice, production follows very closely the fluctuation in that price line; as prices go up you get an increase in production, and as prices go down you get a decrease in production.

*By Mr. Kennedy (Winnipeg):*

Q. They respond very quickly?—A. They respond very quickly, and they follow these price fluctuations.

Q. Much more quickly than cattle?—A. Yes. Then the double bars in the centre of the column indicate the percentage that goes to packing plants, and the percentage that is sold through the general market.

Q. Which is which?—A. The column on the left hand side,—the lower portion,—indicates the percentage each year that is going direct to the packing plants; the upper portion of the column indicates the proportion that is sold through the public yards. Then the column to the right hand side in each year indicates the progress made in quality production. The lower portion indicates the percentage of selects; the middle portion indicates the second grade in hog production, or bacons; and the upper portion, the other grades.

Q. Just to be quite sure that the notes are right; this graph number 3 covers what years?—A. 1923 to 1933.

Q. And the other graphs were for the years 1915-1933.

The CHAIRMAN: Are you quite sure of that, I thought they were all the same; I beg your pardon, you are quite right.

This chart deals exclusively with production and marketing of hogs in Manitoba, 1923 to 1933, inclusive.

On the left side of the chart is indicated, by vertical columns, yearly production of hogs. The variations in production shows a remarkably close relationship to price levels. 1933 production is the lowest of any year recorded on the chart. The body of the chart gives the total marketings of hogs under two columns, "A" and "B." In column "A" the lower portion gives the volume shipped direct to processing plants, while the upper portion indicates the volume marketed through the public stock yards.

You will note the gradual increase in the volume shipped direct to processing plants. The parallel column indicates the volume in the various grades. Here, it will be noted, that there is a steady improvement in quality throughout the period indicated on the chart. There is quite a considerable improvement as shown across the chart.

The solid line which traverses the chart gives average prices paid annually per hundredweight for all grades of hogs marketed through the Union stock yards, St. Boniface, Manitoba.

To summarize. Column "A" shows that, whereas there was only 21.1 per cent of the marketed hogs which reached processing plants direct in 1923, 50.05 per cent of the hogs marketed in 1933 were shipped direct to processing plants. I shall give some of the expressions of opinions for the growth in direct shipments to plants later on.

Column "B" indicates a steady improvement in quality notwithstanding variations in production and prices paid. It is significant that prices range from \$12 per cwt. in 1926 to \$3.60 per cwt. in 1932, a decrease of approximately 70 per cent or, submitted in another way, the price paid for hogs in 1926 is nearly 3½ times as great as the average price paid in 1932.

*By Mr. Young:*

Q. I notice the number of bacon hogs increased materially up till 1929, and then it dropped. In 1930 they were down, and then began to increase. What is the reason for that?

# AVERAGE MONTHLY PRICES OF CATTLE, HOGS & LAMBS 1923-1933.

DEPARTMENT OF AGRICULTURE, PROVINCE OF MANITOBA

Mr. SOMMERVILLE: In the proportion of production you will notice the whole production decreased.

The WITNESS: Your total production goes down. There is another difference, too. There was a change in the grade.

Mr. ILSLEY: I do not see how you can make a chart for 1931, when the thick smooths were divided.

The CHAIRMAN: It seems to me to be rather strikingly illustrated there, when the thick smooths were taken out of bacon and put into lower grades. When that happened a large differential applied. There seems to be quite a narrowing of the bacon hog type, which received a higher price.

Mr. ILSLEY: What did they do with the fixed smooths?

Mr. SOMMERVILLE: They were taken out. A standard price was put on the bacon variety. It is down there. They made a cut on the balance, which were called butchers. You will observe a reduction on butchers. Butchers greatly exceed the quantity of selects.

*By Mr. Senn:*

Q. As a matter of fact, is it not true that the bacon hog to-day is practically the same as the designation "thick smooth" was before the change was made?—

A. There is a further explanation of the chart later on, which I shall give you on that.

This gives the average monthly prices paid for certain classes of beef cattle, sheep and swine during the years 1923 to 1933 inclusive. The top line deals with the prices of good lambs, and you will notice there appears to be a certain degree of regularity each year as to where the peak prices come on the lambs.

The top line of the chart—deals with prices of good lambs. The high point is reached in June, 1928, with \$14.20 per cwt., whereas the lowest point is reached in 1932 (October) with \$3.64 per cwt.

During each year it will be noted the peak prices occur during May and June, illustrating market reaction to supply and demand, whereas correspondingly low prices occur generally during the fall months.

Q. The prices you are quoting are on the Winnipeg market?—A. All on the St. Boniface market. This is attributable to over burdening of the domestic market during the fall months, and a corresponding scarcity during May and June, arising from the previous fall liquidation.

This is largely a domestic marketing problem and not to any serious extent a reflection of world price levels. Another factor, however, does affect price levels, namely, the relative market values in the fall of beef, pork and poultry. The consuming public is quick to discern differences in prices asked for different classes of meat and poultry and transfers its purchasing from one class of meat to another on the basis of prices asked. And to that extent there is a close sympathy between price levels of the classes of livestock dealt with in this chart. This fact is very clearly illustrated on this chart.

The second line—illustrating hog prices for thick smooth (which grade was changed to bacon in September, 1929) is more erratic. I do not know whether you can distinguish it or not from where you are, but you will notice that there is none of that periodical peak in this line; there is not the same degree of regularity. There is a very interrupted line, with neither rhyme nor reason for it. Here, prices, as already stated, extend from a peak of \$14.46 per cwt. in June, 1926, to a low of \$2.85 in January, 1933.

The hog market is influenced by market trends outside the boundaries of Canada. Furthermore, the prevailing rates of exchange of money are also a contributing factor. Even allowing for these two forces beyond Canadian control, the charted fluctuations do suggest very definitely that the fluctuations have been

more extreme and sudden than could be attributed solely to fluctuations on either foreign markets or rates of exchange. I shall refrain from further comment here on fluctuations until another chart (No. 5) is presented, which deals with weekly fluctuations.

The remaining lines on the chart deal with the classes of cattle which represent the bulk of marketing.

*Cattle.*

(Blue) steers — good —	over 1,000 lbs. to 1,200 lbs.
(Green) steers — good	" 700 lbs. to 1,000 lbs.
(Yellow) heifers—fair	
(Purple) stockers—good	" 450 lbs. to 800 lbs.
(Buff) feeders — good	" 800 lbs. to 1,000 lbs.

Might I just draw your attention for a moment to a rather interesting fact. The solid line and the dotted line, you will notice, run almost parallel all the way through, the solid line representing steers weighing 1,200 lbs. and the dotted line representing good steers, in both cases, 700 to 1,000 lbs. I mention that, sir, only for one reason. The farmers to-day in the west, at least, are being persuaded to grow what they call baby beef or good animals up to 1,000 lbs; and the incentive held out is that it sells better than the heavier weight steers. Yet a study of the records has revealed, as the chart indicates, that the price for the heavy steers slightly exceeds the price paid for baby beef practically all the way through.

*By the Chairman:*

Q. Good finished steers?—A. Good finished steers in both cases.

Q. The chart covers the period from 1923?—A. Yes.

Q. The tendency for baby beef is more recent than 1923; it would start about 1929 or 1930, would it not?—A. Yes, that is true. If you read across the line you will find that to be so.

Q. I notice that, and it is rather a striking fact?—A. We were amazed ourselves, when we discovered it.

Q. Your point is the chart shows clearly that baby beef or light well finished baby beef parallels the heavy well finished steer?—A. Quite so.

*By Mr. Kennedy (Winnipeg):*

Q. Insofar as price is concerned?—A. As indicated here, they run almost parallel.

*By Mr. Kennedy (Peace River):*

Q. The weight of these animals runs up to 1,200 pounds?—A. From 1,000 to 1,200 pounds.

*By Mr. Senn:*

Q. They are really export steers, are they not?—A. Most of them would be, by reason of the fact that they are well finished.

The CHAIRMAN: I think the point is well worth noting. Mr. McKenzie is drawing attention to the cold facts, showing that the prices do not vary as between the heavier steer and the lighter, so-called baby beef.

Mr. KENNEDY (*Peace River*): This would be the finished heavier steer.

The WITNESS: Yes. I may just interject here that in the conference we had in our own province last fall, at which were representatives of all the interests concerned with the marketing of livestock, the packers at that conference emphasized rather strongly the fact that the farmers should produce more baby beef.

*By Mr. Senn:*

Q. Suppose the market for export cattle were suddenly to be cut off, what would you say would be the result in the cost of baby beef? It is commonly understood that baby beef commands a higher price, beyond any question?—A. I think in that case the price of all beef would go to a point where there would be no profit—

Q. The fact that heavier beef to-day is commanding as high a price as baby beef, is probably due to the fact that we are exporting cattle, is it not?—A. It may be, but I think in both cases—

Q. Because of the cattle that fills the export trade?—A. I think in both cases the premium secured is by reason of the quality of the beef.

The CHAIRMAN: Mr. Senn, a reference to the chart would rather contradict that view, because in 1929 and 1930 there was practically no export at all, and yet the lines synchronize. Two years ago, 1931 and 1932 the export was very light, and yet the lines synchronize, just the same as they did last year. However, that is a very interesting point.

*By Mr. Kennedy (Peace River):*

Q. What governs the production of baby beef?—A. I imagine it is based on the satisfaction of a demand.

*By Mr. Factor:*

Q. Do you get a higher price for it?—A. No higher.

Q. Popular opinion is that baby beef is supposed to be more expensive?—A. I think probably that is true in respect of retail prices; but it might arise partly from the fact that small families to-day are asking for smaller cuts of well finished beef.

The classification or grading of livestock on public markets during the period under review was altered on several occasions. However, the price lines have been continued throughout by a joining up of comparable grades.

In March, 1927, the classification of stockers and feeders changed to "stockers" (good under 800 pounds) and "feeders" (good) 800 pounds and up. Again in March, 1930, the classification of these grades was changed and for charting purposes average monthly prices of "stockers and feeders" (good) are used.

Likewise in April, 1930, the classification of steers, heifers and stockers and feeders changed and for comparable purposes the average monthly price of steers, medium, over 1,050 pounds, steers, medium, up to 1,050 pounds heifers, medium and stockers and feeders (good) are charted and joined to the grades used at the outset of the chart.

Hog grades were revised in 1929. Consequently from September, 1929, the average monthly price for bacon hogs is charted.

While Canada has a small annual exportable surplus of cattle, this exportable surplus undoubtedly exercises an influence on domestic prices. Losing the United States market for stockers and feeders has no doubt had an influence, not only on stocker and feeder prices, but relatively on prices of all beef cattle offered for sale. Additional markets always tend to more active competitive buying and generally serve to maintain, if not raise, price levels. Cattle prices are victims of much the same seasonal offering which occurs in lamb marketings and for much the same reasons.

Again I say, on the chart you will notice there is a certain degree of regularity each year as to when the peak price in cattle is obtained.

One does not reasonably expect prices for any commodity to remain constantly at definite specific levels. All markets normally react to supply and demand. The disturbing element in the market fluctuations on livestock prices

is their sudden and, quite frequently, drastic changes in prices, either up or down. These sudden changes are not understandable to the primary producer and frequently destroy his confidence in our marketing machinery.

This chart illustrates the weekly fluctuations in prices on bacon hogs over a five-year period, 1929 to 1933, inclusive.

*By Mr. Sommerville:*

Q. Weekly fluctuations?—A. Weekly fluctuations. In face of the tremendous fluctuations you can appreciate some of the difficulties the departments of agriculture have in trying to stimulate a hog production program.

The CHAIRMAN: You will explain that?

The WITNESS: Yes. I may however, add this, Mr. Chairman, that the shaded operations indicate the weekly fluctuations in prices. Admitting the fact that general price curves during these years on a large number of Canadian produced commodities would very closely coincide with the lines on this chart, it must be admitted that the weekly fluctuations, as represented on this chart, are somewhat extreme and severe. Farmers cannot understand why hogs should vary in values to the extent the charts indicate they have done, when much of the raw material is processed and not offered to the consumer for some weeks following the purchase of the live hog. These sudden fluctuations also affect the quality of hogs marketed and are responsible for much of the offerings of unfinished hogs on our markets. Here again we have the element of fear entering in. Particularly is this true during these difficult times, when small amounts of money mean so much to the farmer. Canada's failure to raise enough hogs to satisfy the provisions of the British quota can very largely be attributed to these fluctuations, and the lack of confidence which the producer has in our marketing practices. The farmer deals with the live forces of nature.

*By Mr. Sommerville:*

Q. The fluctuations apparently are not dependent very largely upon the old country markets—A. Apparently not.

Q. You found your fluctuations were very striking at the times when there was practically little going there?—A. It is just as striking in 1929, for instance, as it is since we have got entry to the British market.

Q. At the period of 1929, when you had a period of prosperity and before you had access to the British market, you had fluctuations that are very striking?—A. At least just as violent.

Q. Just as violent as they are to-day? Would that indicate to you any kind of local manipulation? Just speak your mind right out, Mr. McKenzie.—A. Well, I hesitate only for the fact—

*By Mr. Factor:*

Q. Perhaps I might just interrupt before you answer that question; have you any chart to show the price of processing locally, and are there any such lines of fluctuation in it?—A. Well, sir, we have not concerned ourselves past the primary producer. We felt this committee had much better opportunities to get information of that character than we had in our own Department of Agriculture.

The CHAIRMAN: What would be an interesting thing would be to transpose into that chart the finished process. We will see if we can get that done. We might be able to do it.

Mr. FACTOR: The British price of bacon?

The CHAIRMAN: Yes. We might be able to do that.

WEEKLY FLUCTUATIONS IN THE  
PRICES OF BACON HOGS IN WINNIPEG AND  
CANADIAN BACON IN LONDON  
1928-1935

(Note.—The line indicating the fluctuations in prices on the British market was added to this chart by the Bureau of Statistics at the request of the Committee).

*By the Chairman:*

Q. You were going to say something in the way of answering a point raised by Mr. Sommerville, going to express your view as to what accounts for that; if you have any, I certainly would like to hear it?—A. If you will take it only as an expression of opinion, and something that I could not perhaps prove, we do feel that there are certain influences operating that tend, at least, to influence price levels quite definitely.

Q. You mean arbitrary?—A. Arbitrary.

Q. Without necessarily being related to marketing factors?—A. Yes. And I say, I could not absolutely prove that, but it is an opinion that I hold quite strongly.

Q. Would you say that that was the buying influence on the market?—A. It could be none other.

Q. One other question there: What is the dominating buying influence on the Winnipeg market?—A. Oh, the outstanding buyers, of course, in the Winnipeg market are the packers.

*By Mr. Sommerville:*

Q. How many?—A. There are three large concerns in Winnipeg.

*By the Chairman:*

Q. Who are they,—the Canada Packers?—A. Canada Packers, Swifts and I think it is the Western.

*By Mr. Kennedy (Winnipeg):*

Q. While you are on that point, Mr. McKenzie, with reference to this so-called arbitrary control of prices, is it more noticeable since the amalgamation of a number of packing plants, or have you any observations to make as to that?—A. Well, Mr. Kennedy, I could not express any opinion, because I was not very closely tied up to the agriculture department previous to that amalgamation.

Q. You might be able to interpret that chart to indicate that?—A. The chart would indicate that it was.

MR. SOMMERVILLE: The merger took place in 1927.

MR. KENNEDY (Winnipeg): Let me get this, please.

THE WITNESS: Just as Mr. Sommerville suggests, this only goes back to 1929.

MR. KENNEDY (Winnipeg): Oh, I see.

*By Mr. Senn:*

Q. Mr. McKenzie, I would like to ask a question: Do the low prices coincide with a heavy run of hogs?—A. I don't think that necessarily follows, although perhaps in many cases that is true.

Q. There is an impression among the farmers, of Ontario at least, that that does prevail to a certain extent?—A. I suppose to some extent it would be true. It would be natural with a heavy run of hogs, particularly if the market for those hogs was limited.

*By the Chairman:*

Q. All right, Mr. McKenzie, will you continue with your brief?—A. Yes.

Prior to presenting chart 6, which deals with the return which the primary producer receives in relation to the total sales price for his stock, I desire to submit the report of the select standing committee on agriculture and immigration of the legislative assembly of Manitoba:—

The select standing committee on agriculture and immigration, being instructed by resolution of the legislative assembly of Manitoba to in-

quire into ways and means of rendering assistance to the select standing committee of eleven members of the Dominion House of Commons, who are now conducting such an investigation, begs to present to this house the following report:—

At the first sitting of the committee it was decided to approach the Department of Agriculture of the province of Saskatchewan and Alberta, through the Minister of Agriculture and Immigration for Manitoba, Hon. D. G. McKenzie, to arrange a joint presentation of the livestock producers' case before the Ottawa committee above referred to.

The suggestion was acquiesced in by Saskatchewan and Alberta, and the meetings have been held in Regina and Saskatoon of representatives of the three prairie provinces to discuss the preparation of a joint representation.

Your committee has canvassed the merchandising practices in the selling of livestock, and the Department of Agriculture and Immigration has had prepared for submission to the Ottawa committee charts illustrating pertinent phases of the production and marketing of livestock in Manitoba. These charts are based, in part on evidence submitted at hearings of your committee, and in part on records of shipments of individual farmers, as well as on statistical records prepared by the Dominion Bureau of Statistics.

Arising out of the general evidence submitted the committee recommends that the following phases of the merchandising of livestock should be carefully reviewed by the Ottawa committee, in the hope of arriving at some means of adjustment where conditions warrant.

1. General reduction in all handling and feed charges at public stock yards.

2. Application of provisions of The Live Stock and Live Stock Products Act (Dominion) to all licensed abattoirs in their purchasing of livestock.

3. Licensing and bonding of all drovers, shipping agents and packer buyers.

4. Reduction in minimum weights on carloads of swine, sheep, and also on mixed cars of cattle, sheep, and swine.

5. Establishment of an export freight rate on shipments of all livestock for export.

6. The extension to Western Canada of the "Feed in Transit" rates now in force in Eastern Canada.

7. An investigation into possible causes of violent price fluctuations and their relationship to competitive buying and selling as well as to the law of supply and demand.

8. Influence, if any, of massed purchasing on prices paid by processing plants for live animals.

9. Influence of retail prices on consumptive demands.

The Committee further recommends consideration of the feasibility of the establishment of a permanent national marketing board. Such a body could, we believe, serve a useful, nation-wide purpose, e.g., in fact finding, co-ordinating and stabilizing production programs to domestic and exportable requirements and, in addition, exercise a wholesome influence on merchandising practices.

The Committee expressed its appreciation of the services rendered to the livestock industry by those who appeared to submit evidence, by our

PROVINCE OF MANITOBA DEPARTMENT OF AGRICULTURE  
CHART SHOWING 65 TYPICAL SHIPMENTS OF LIVE STOCK  
FROM MANITOBA POINTS TO UNION STOCK YARDS ST BONIFACE MAN.  
BETWEEN THE YEARS 1920 & 1933

Department of Agriculture and Immigration, and by the Manitoba branch of the Canadian Live Stock Co-operative Western Limited, in having presented their case before the Ottawa Committee.

It was unanimously agreed that the Hon. D. G. McKenzie, Minister of Agriculture and Immigration, should appear before the Ottawa Committee to represent the livestock producers of Manitoba and present their case.

You will notice that the first recommendation was for a general reduction in all handling and feed charges at public stock yards.

That is set out in the last chart that I have (Chart 6). These lines are only relative.

*By Mr. Sommerville:*

Q. This is a chart showing 65 typical shipments of livestock from Manitoba points to the Union Stockyards at St. Boniface, Manitoba, between the years 1920 and 1933?—A. Yes. The top line indicates the net return to the producer and the bottom lines indicate the relationship of costs to the returns that the producer gets. These lines are only relative. You will notice that as the price goes down, the cost of marketing goes up, relatively.

*By Mr. Young:*

Q. That is to say, the cost of marketing is an unyielding factor?—A. Yes.

*By the Chairman:*

Q. Let me get that a little more clearly; you say the top line represents the price received?—A. By the producer.

Q. That is the price received by the producer. Then the bottom line is what?—A. That is freight cost.

Q. Freight cost?—A. It is freight cost, commission cost and yard costs.

Q. Why should freight cost fluctuate as this shows?—A. The freight itself does not fluctuate, but the relationship of freight costs to what the farmer receives fluctuates.

*By Mr. Sommerville:*

Q. This is a percentage basis?—A. Yes.

Q. It is not based on the actual value?—A. No. It just shows the relative cost of marketing as compared to the changed price the producer gets.

Q. If marketing and freight charges were based upon a proportion of the price, this picture would reflect what the producer gets in the net return?—A. Yes.

Chart 6: This chart represents the average of 65 shipments of livestock by Manitoba farmers. No attempt has been made to select shipments which would especially coincide with any particular market condition. These shipments originated at two of the best livestock shipping points and districts in Manitoba. I will be glad if the Chairman of this committee so desires, to deposit for his inspection the original vouchers—I have them with me here to-day.

*By the Chairman:*

Q. We will not question you on that at all, Mr. McKenzie.—A. I could furnish them, with the request that they be regarded as confidential. I ask this as the result of an undertaking given by the members of the staff of our department that the names of the shippers would not be publicly divulged. The reason for such a request by the shippers will be fairly obvious to every member of the committee, namely, fear of prejudicing their interests in future sales of livestock.

*By Mr. Senn:*

Q. This chart was prepared, I presume, before the recent reduction in stockyard charges took place, was it?—A. Yes, I think perhaps it was. It is based on the figures obtainable from the year 1920 to 1933.

Q. Have you any information or would you care to express an opinion as to whether these reductions that have taken place are ample or sufficient?—A. Well, I would say at once that I don't know just what interpretation you put on "ample," but using the word in the ordinary sense, I would say no, that the reduction in commission charges effected, in itself and translated back into terms of what it means to the producer, is hardly noticeable at all to the producer.

*By Mr. Sommerville:*

Q. The 10 per cent reduction would not be noticeable in the net returns of the producer?—A. No.

Q. It is only expressed in bulk?—A. Yes.

Q. And that bulk spread over 17,000 persons selling on that market would amount to practically nothing?—A. It would not be noticeable.

*By Mr. Senn:*

Q. On the other hand, would you care to say that a larger reduction would be justified and that the trade would bear it?—A. Well, I think if you will let me proceed I will discuss those things a little later. I have no hesitation to giving the committee my views with respect to that, but I would like to go through with this.

The CHAIRMAN: Yes, go ahead.

The WITNESS: The lower section of the chart deals with ordinary marketing charges. These lines on these charts represent relative costs and returns. I want to make this fact as clear as possible. Any percentages submitted are based on the price received for these particular shipments of livestock. In other words, we are analyzing these shippers' actual experience and not hypothetical cases.

This chart covers shipments 1920 to 1933, inclusive, the solid line represents the relation of freight charged based on minimum weights and rates, together with the unloading charges. The short dash line represents the relation of commission charges for selling, together with government stamp tax. The long dash line represents the relation of feed, public markets, yard charges and yard insurance while the long and short dash line represents the packers' condemnation charge, fixed at one-half of one per cent, which is stationary. That is the straight line across the bottom of the chart.

To illustrate: With prices received in 1920, the solid line is approximately 2 per cent of the gross receipts; the long dash less than 1 per cent; with the short dash line less than 1 per cent, and the long and short dash line one-half of one per cent. The total costs were only 4 per cent, leaving the shipper 96 per cent of his gross receipts, which is very unsatisfactory indeed. The explanation is that prices in 1920 were high enough to absorb marketing charges without unduly penalizing the producer. Based on 1924 prices, the solid line has reached  $4\frac{1}{3}$  per cent, short dash line  $1\frac{1}{2}$  per cent, the long dash line 1 per cent and the long and short dash line stationary at one-half of 1 per cent, raising the costs of marketing to over 6 per cent, and leaving the shipper less than 93 per cent for his stock. Here again we see the relationship of the marketing to sale receipts, and lowering prices accentuate the toll taken in marketing costs. In 1932, with further depressed price levels, what do we

find? The solid line has raised to  $5\frac{1}{4}$  per cent, the short dash line is just under 2 per cent, the long dash line over 2 per cent and the long and short dash line stationary. Now we find that the farmer receives slightly less than 90 per cent of his sale receipts, while the marketing charges have proportionately increased to slightly over 10 per cent. This does not mean that there has been any increase in these charges. That is not to be interpreted from this chart. The chart is intended to convey one thought only, namely, that there is no relationship between the basis of establishing these marketing charges and the price which the shipper receives, and that the lower the price levels become the more heavily these marketing costs bear upon the primary producer. In other words, when the primary producer is most badly in need of relief from marketing charges they are not forthcoming. This, I submit, is one of the prime reasons for the rapid increase in the number of direct shipments to processing plants. I am not to be understood as suggesting that this is a wise procedure and that in so doing the primary producer is in the long run saving any market costs or increasing his net returns.

The chart, I submit offers some measure of proof why it is argued that there should be a general reduction in marketing charges at our public stockyards.

The next recommendation in the report of our agricultural committee is: Application of provisions of the Live Stock and Live Stock Products Act.

When a packing plant becomes a primary market it should be subject to all regulations now governing primary markets. The provisions of the Live Stock and Live Stock Products Act, with regulations passed thereunder, were brought into being to satisfy a nation-wide demand from stock producers. Prior to the enactment of this act by Dominion parliament, each province essayed to regulate public stockyards within its boundary. Obvious difficulties occurred, due to lack of uniformity of legislation and regulation among the provinces of Canada, coupled with inter-provincial trading in livestock. It was then decided to operate stockyards under Dominion statute. Furthermore, it was deemed in the public interest to have public markets under some form of control. At that time direct shipments to plant were only a small percentage of the marketings at public stockyards—hence packing plants were not regarded as primary markets. Direct shipments to packing plants had increased to a point where 50 per cent of the hogs marketed last year in Manitoba went direct to the packing plants. I submit that, with the increased volume marketed direct through the packing plants, all arguments in favour of having public markets operated under the provisions of the Live Stock and Live Stock Products Act should apply with equal force to placing all purchases of livestock at packing plants under the same marketing act.

The third recommendation of the report which I am dealing with is licensing and bonding of all drovers, shipping agents and packer-buyers. Licensing of such buyers would be a very real protection to all branches of the livestock industry. It would prohibit irresponsible individuals indulging in "fly-by-night" practices in the handling of the farmer's livestock and would place every licence holder in the position where he could be properly and promptly dealt with if he indulged in any unethical and unfair trading practices. This is more urgently needed to-day than ever before, with the growth in the use of trucks as a means of moving livestock to market. The improvements in highway systems, coupled with the reduction in number of freight trains and with reduced tonnage, have encouraged the trucking practice.

While many of these truck operators are responsible citizens and are efficient truck operators, their experience in the handling of livestock is frequently quite limited and, since they are trading particularly in the case of direct shipments, with expert buyers, it does raise a question as to whether or not the farmer is enjoying as much protection in the sale of his stock as the packer enjoys in the

purchases his firm makes. Licensing and bonding of all drovers and shipping agents would have the effect of weeding out the irresponsible and inexperienced, and place the industry on a sounder basis. I cannot see any valid objection to this recommendation and would urge upon this committee its desirability.

*By Mr. Factor:*

Q. That would include truckers?—A. Yes.

*By Mr. Young:*

Q. Put the man on the basis of his ability to sell as well as his ability to buy?—A. Yes, it would have that effect.

Q. He would have to pass an examination?

Mr. SOMMERVILLE: You could not do that.

The WITNESS: I would not think there would be any examination, but the department would be in a position to check up on him if at any time any of his practices were not desirable.

*By Mr. Sommerville:*

Q. Just a whip, controlling his practices?—A. Yes.

Q. Not his experience?—A. No.

Q. You think if he were under licence, the possibility would exist that you would have men becoming more experienced?—A. I think so, beyond any doubt.

Perhaps I should say here, Mr. Chairman, you will notice that we are asking for a reduction in car-lot rates, but that it is confined almost entirely to sheep; the reason for that being that we wanted to be fair to transportation companies, and we do find that in many cases minimum weights on cars going to market for hogs and other "mixed" cars are much higher than they should be.

*Reduction in Minimum Weights on Carloads of Swine, Sheep, and also on Mixed Cars of Cattle, Sheep and Swine.*—For several years livestock organizations in Western Canada have been pressing for a reduction in minimum weights, arguing that they are too high as compared with the actual loading capacity of cars.

Particularly is this true in the case of lambs and sheep. The minimum weight in this connection is 16,000 pounds. The experience of livestock shippers, as well as the figures given by the Livestock Branch of the Dominion Department of Agriculture, establishes that the 16,000 pound minimum is far in excess of the loading capacity of our stock cars for sheep and lambs. This statement is increasingly applicable with the reduction in the weights of lambs which meet present day market requirements. The figures given by the Livestock Branch indicate that 105 lambs weighing an average of 80 pounds is all that can with safety be loaded in a car. Even increasing the number of lambs to 120 on the above basis would only represent a load of 9,600 pounds. The average weight, loaded, of the lambs coming to the market is considerably under 10,000 pounds. The assessing of the freight rates on the 16,000 pound minimum simply means that the rate is being increased approximately 60 per cent. It may be argued that, if the minimum were reduced, the rate would have to be increased and in so doing that the sheep industry would not enjoy any advantage. I submit that minimum weights should be based on the actual poundage capacity of the car. There appears to be no justification for setting the minimum so high as to make it impossible for the shipper to load a car up to the weight specified, and that is precisely the position with respect to the minimum set in connection with the shipping of sheep and lambs. I would strongly urge that the minimum of 16,000 pounds now in force covering the shipment of sheep and lambs should in all fairness be reduced to 10,000 pounds.

*Establishment of an Export Freight Rate on Shipments of all Livestock for Export.*—In view of the efforts which are being put forth by the Governments of Canada (Dominion and Provincial), and livestock organizations generally, to find an outlet for our surplus stock, that is, surplus over and above the quantity of stock required to meet the needs of our domestic market, it does appear reasonable to suggest that a reduction be made in freight rates on shipments of livestock consigned for export. While it may appear on the surface that a reduction in export rates would be a discrimination as against local shipments, it is submitted that, as a result of the export movement of livestock, thereby preventing a glut on the domestic market, the local shipper derives an indirect benefit as the result of any reduction on freight rates on livestock consigned for export.

*By the Chairman:*

Q. Just before you leave that, we have had witnesses before us asking for a reduction on local rates to be in line with the export rate, particularly for the movement of cattle from the west to the Ontario or the Montreal market. If we were to secure a reduction in export rates, and if the same appeal were to be made for the continuance of the reduction of local rates, obviously you would reach the point where the matter would be impossible of operation by the railways?—A. I appreciate that, sir.

Q. But you would prefer, I understand from your brief, that there should be a reduction in the export rates?—A. Yes. We feel that mainly because of the fact that the livestock industry in our province to-day makes a contribution to the agricultural people—including livestock products—of approximately \$23,000,000 per year as compared with \$28,000,000 from our cereal crop production. We have export rates for grain, and we think now that our livestock industry is gaining the position it enjoys in the economic structure of our province, and makes the contribution to the budgets of our farm people that it does, it is sufficient to demand that it be given some similar consideration to that now given in the form of export rates on grain.

*By Mr. Edwards:*

Q. Where you are reducing the minimum car from 16,000 pounds to 10,000 pounds, which is very light, then you are asking for a reduction in the export rates, how would that line up with the cost of hauling?—A. Of course, I realize that in any decision in respect to these things consideration has to be given to the railway situation in Canada.

Q. You think it is justified?—A. I do, from this point of view; that the railway situation in Canada can only be permanently solved by the development of industries within Canada.

Q. They cannot be very well solved by hauling freight at a rate which is less than the cost of haulage?—A. I am not in a position to say what the cost of actually hauling this live stock for the export market would be; but we do ask that in a consideration of that particular structure, cognizance be taken of the fact that live stock to-day in Western Canada has attained the position, in comparison with our grain crop production, that demands we think some consideration in the setting up of foreign rate structures.

Q. In other words, you mean that the hauls obtained from the live stock industry in western Canada would justify more or less its bonusing—it would amount to the same thing?—A. I do not know that I would ask for a bonus.

Q. That would amount to the same thing as a bonus?—A. I cannot say "yes" or "no" to that—just whether it does or does not involve a bonus.

*By Mr. Senn:*

Q. There is another question which occurs to me somewhat along those lines; when you are speaking of reduction in export freight rates, do you mean for these rates to take effect from the farm to the Winnipeg markets; or from the Winnipeg markets on?—A. From the point at which they are gathered together in the West.

Q. Then you practically could not tell from what points, for the purposes of discussion, until you get them together?—A. Well, in most cases in Manitoba it would apply from the St. Boniface yards on. So far as Alberta is concerned, I do not know the situation there, but I presume there are many shipments which go direct from ranches overseas.

*The Extension to Western Canada of the "Feed in Transit"  
Rates Now in Force in Eastern Canada.*

With the demand for a reduction in wheat acreage, quite obviously farm lands will have to be put to other uses and the logical crops to grow will be coarse grains and fodder crops. The only marketing outlet for such crops is through feeding livestock.

In the economy of western livestock raising it is recognized that cattle can be more cheaply produced under range conditions; but it is not the general practice to have these cattle finished for market on the range. These cattle are being moved to feed lots in various districts in the West, where an abundance of suitable feed is available, subsequently to be consigned for export or for immediate slaughter on domestic markets. If the feeding in transit rate now in force in Eastern Canada was made applicable in Western Canada, the reduction in freight which the feeder would enjoy would encourage the feeding of livestock and would frequently represent the difference between profit and loss.

*An Investigation into Possible Causes of Violent Price Fluctuations and Their Relationship to Competitive Buying and Selling as Well as to the Law of Supply and Demand.*—Our centralized cash markets for livestock represent the outgrowth of early attempts on the part of producers to concentrate buying and selling in order to bring supply in contact with demand so that fair prices could be determined. The establishment of prices between producer and consumer is still the principal function of the public markets. For many years these markets have been universally accepted as the machinery for the establishment of prices for our livestock industry.

Public Markets serve as producers' headquarters for sale of livestock. They are maintained by producers, who pay all charges assessed for the sale of livestock. All the services provided at these markets are intended for their benefit. Producers' livestock are prepared for sale and sold by commission men. Through the commission men such factors as sorting, grading and fill are controlled. Through commission men producers enjoy equal advantages in question of prices.

It is necessary that the producer of livestock furnish supplies of killing stock in close harmony with daily market requirements. It is in their interest to have an efficient method of adjusting the supply with the consumers' demands.

The practice of buying direct is a method of securing livestock supplies designed to favor the buyer. When a producer resorts to this method, he does not patronize the system of marketing which producers of livestock have built up for the sale of their own products. The direct buyer keeps away from the bargaining power which is created for the producer at the competitive market. Through direct shipments the producer loses the benefit of skilled salesmanship available on the competitive market. Competitive buying has been greatly reduced at Public Markets as a result of direct buying and direct shipping to plants. Bargaining power is reduced to a great extent and prevents actual supply

and demand from being weighed against each other in establishing prices. It prevents our public markets being the sole determining factor in establishing fair prices for all classes of livestock.

*By Mr. Young:*

Q. How much bargaining power is there in these alleys, when one buyer goes down one alley and another buyer goes down another alley?—A. I think, from what I have seen of the public yards in Winnipeg, that there is considerable competition among the commission houses in the sale of livestock. It is limited to-day by reason of the fact that other buyers who should go in there are not always there, because they go to the country and buy their stuff direct.

Q. I understand, but these other buyers when they do go in either have a certain alley they go down—that is, nobody else goes there?—A. I do not know as to that, I have no knowledge of alleys being allotted to any one buyer to buy.

*By the Chairman:*

Q. Your argument, I gather from this, is that to the extent that there is direct marketing it militates against competitive buying on the public market?—A. Quite, sir.

*By Mr. Sommerville:*

Q. And it therefore limits the operation of the law of supply and demand?

*By Mr. Kennedy (Winnipeg):*

Q. And is prejudicial to the interests of the producer?—A. That is my belief.

The CHAIRMAN: All right, Mr. McKenzie, will you please continue.

The WITNESS: The belief is quite prevalent that country buying, coupled with the enormous increase in direct shipments to processing plants, enables packers to abstain from being continuously an active competitive buying force on our public markets, and their absence has a price depressing influence. On the other hand settlement for all direct shipments to plants is made on the basis of the alleged depressed prices on public yards. That, Mr. Chairman, in a nutshell is the prevailing belief. I am not in a position to supply proof as to the accuracy of that assumption. On the other hand price fluctuations would lend considerable colour to such a conclusion.

*Influence, if Any, of Massed Purchasing on Prices Paid by Processing Plants for Live Animals.*—This is a very involved and vexed question—a question much more easily asked than answered. The belief is quite common in our part of the country that large buyers of dressed meats are unusually close buyers. Large orders are attractive to the packer and he dislikes to lose them. It is suggested by those who believe that mass buying depresses prices received by the packer, that he in turn has to purchase livestock on the hoof to replace those carcasses already sold, and that livestock for replacement is bought on the basis of the price the packer had received from the large retailer. That, Mr. Chairman, is briefly the reason behind this belief that mass buying ultimately has a depressing influence upon prices paid for livestock.

*By Mr. Factor:*

Q. Mass buying—by whom; the large organization?—A. By the big retailers.

*By Mr. Sommerville:*

Q. By the chain butchers, the chain stores handling meat?—A. Yes.

A producer representative is handicapped in dealing with this phase of the merchandising of livestock products owing to his somewhat remote position from

this particular link in the chain of merchandising livestock and livestock products. The producer's intimate contact with the merchandising of his livestock ends when the animal is sold to the packer. On the other hand, when he sees prices attached to cuts of meat offered for sale in the retailer's window, he ponders and wonders if these cuts really came from some of the animals he had sold the packer and, if so, what had transpired since they left his farm to so greatly enhance their value. He further inclines to the belief that, if retail prices had a closer relationship to the price he has received, it would enable consumers to purchase and consume more of what he produces and would partly solve the problem of finding outlets for our livestock.

I shall refrain from any further comment on this particular problem in the industry and express the hope that the Committee will investigate it fully.

*Influence of Retail Prices on Consumptive Demands.*—I have already touched on this question in dealing with the preceding one. Further comment is unnecessary. This question projects itself into the very heart of this whole problem, namely, the preserving of a larger share of the consumer's dollar for the primary producer.

The reaction of the consuming public to relative prices asked for classes of food which are capable of being exchanged in the arranging of meals for the home is very sensitive and prompt. Since the advance in hog prices, and the corresponding increase in prices asked for processed pork products there has been a sudden change from the use of pork products in the home to other substitutes such as beef, mutton, eggs, etc. Price levels and quality very largely determine the consumer's demand. The exchange of agricultural food products in the planning of meals for the home is desirable and helpful in maintaining a fair and reasonable basis of value between food products. I submit, however, that when retail prices for agricultural food products are unduly enhanced the consuming public either consumes lesser quantities of such products or, worse still, discontinues their use entirely and resorts to the purchase of non-agricultural or synthetic products to take their place.

The reaction of the consuming public to retail prices of agricultural food products is a very real concern to the primary producer. It directly affects the market outlet for his product. The situation is of still greater concern to the producer when he fails to relate retail prices to the net prices he receives on his farm.

Farm products are facing very strong competition from non-agricultural products, particularly synthetic products. The supremacy of wool as raw material for the manufacture of garments was first challenged by cotton. People who had worn wool garments all their lives were forced under wartime prices to purchase cotton goods to replace their woollen goods. Later on artificial or vegetable silk partly displaced both cotton and wool. Retail price levels were largely responsible for this change in habit of clothing.

Butter in many countries of the world is displaced by oleomargarine. Lard—a hog product—is very largely displaced by non-animal fats, used for cooking, under trade names such as “domestic” shortening.

When retail prices become out of line with actual values, based on prices paid for the farmers' product at the primary market, they become responsible for reduced consumption of such farm products and to that extent limit the farmers' market outlet.

Western Canada has a substantial surplus of farm products. Canada, as a whole, is striving to find, through trade agreements, quotas, etc., an outlet for our surplus products. The world at large is suffering the throes of a war for markets. And yet consumption of farm products is lessened because retail prices make it difficult, if not impossible, for a depressed consuming public to purchase on the basis of prices asked over the counter. The fullest and most

searching enquiry possible should be made to ascertain what distribution is made of difference in the prices received by the retailer and the prices received by the primary producer.

I turn now, sir, to a brief presentation of recommendations agreed upon at joint conferences of the Departments of Agriculture in Alberta, Saskatchewan and Manitoba.

The various matters already presented in this brief, together with many others, were fully considered and agreed upon. For purposes of clarity and in order that the situation may be dealt with as expeditiously as possible, our joint recommendations are summarized under two main headings:

- 1st—A number of recommendations which we would ask your Committee to consider and suggest to the House of Commons at this Session, so that immediate assistance can be secured;
- 2nd—A further number of recommendations which we believe are so important and far-reaching as to demand a most exhaustive study by a livestock commission set up for that purpose.

Turning then to the first group of proposals, livestock commission of enquiry:

*Livestock Commission of Enquiry.*—This Special Committee of the House of Commons is engaged in an extremely important investigation of the marketing of livestock in Canada, and reports of its proceedings are followed with great public interest. The terms of reference, however, are very broad and the time for enquiring fully into the several matters assigned to your Committee may prove to be insufficient for livestock marketing to be adequately investigated; whereas in our opinion it is of the utmost importance; not only to livestock producers, but to secondary industries dependent upon it for the raw material for their factories that all essential facts respecting the livestock industry in relation to production, transportation, processing and distribution be carefully studied and made available so that the difficulties involved can be more clearly understood and the appropriate remedies supplied. We propose, therefore, that your Committee recommend the appointment under Federal authority of a Commission of Enquiry to continue its investigation of the Canadian livestock industry and afford greater opportunity for interested persons throughout Canada to present evidence, with instructions to devise and recommend ways and means by which causes of grievances can be removed, so that confidence will be restored and stability provided for this important branch of Canadian agriculture.

*Markets and Marketing.*—1. That control of livestock, as well as livestock products exported to Great Britain and other countries, be undertaken at once in order to prevent the export of animal products which would not creditably represent the Canadian livestock industry. Due precautions should be taken to correlate such control to British and foreign market requirements, season or otherwise.

2. That a satisfactory understanding be reached as soon as possible with regard to a marketing quota for Canadian cattle in the British market and that every effort be made to increase the allotment for the present year and for the future.

3. The application of provisions of "The Live Stock and Live Stock Products Act" (Dominion), to all licenced abattoirs in their purchasing of livestock.

4. That there be a reduction of handling charges of livestock at all stock-yards, this to include yardage fees, commission and feed prices. Livestock shippers should receive detailed statements showing feed charged against each shipment.

*Transportation.*—1. That the railway companies be requested to grant lower export rates on livestock and livestock products from the prairie provinces to the seaboard.

2. That a downward revision of rates on domestic grain used for feeding and fattening livestock be requested. The periodic droughts and shortages of feed render this very important and it will also serve to encourage the feeding of livestock at interior points.

3. That the feeding-in-transit rate be extended to western Canada.

4. That there be a downward revision of express rates on purebred livestock, eggs and poultry so that producers in all districts have equal opportunities in this respect. Reductions have been made from competitive points, but it is felt that if this reduction were general, not only would the producers benefit but the railways as well.

*By Mr. Kennedy (Winnipeg):*

Q. You mean between the trucks and the regular carriers?—A. No. As I understand the situation, the railway companies have reduced their rates where they come in competition with truck services, but they have not done so at non-competitive points.

Q. The same thing with the country?—A. Yes. Then, there is a group of suggestions which we feel should be a matter of extensive inquiry.

It is recommended that among the problems affecting the livestock industry which require exhaustive investigation by a livestock commission are the following:—

1. The extension of our export markets. This would include the possibility of expansion in such markets as are already available, and the development of new market outlets such as the Orient.

I might interject here and say that at our conference, the people of Alberta felt that was quite a possibility in the Orient for our livestock trade.

2. The effect upon livestock prices of direct purchases by packers.

3. The function of the public market in the establishing of livestock prices. The decrease in the volume of livestock routed through stockyards renders an examination of their function in the marketing system desirable in order to determine whether changes are needed to increase their effectiveness.

4. The need and value of custom slaughtering facilities on public stockyards. The competition between public stockyards and packing plants with respect to services rendered, makes it desirable to determine whether the future of the industry requires a certain duplication of service.

*By Mr. Young:*

Q. What is the meaning of that, "The need and value of customs slaughtering facilities on public stockyards." Does not that exist now?

Mr. SOMMERVILLE: No.

The WITNESS: Yes.

The CHAIRMAN: In some places. There is one in Toronto.

The WITNESS: They exist to this extent, that the packing plants at St. Boniface, for instance, will kill stock by the payment—

The CHAIRMAN: At cost?

Mr. KENNEDY (*Peace River*): Twenty-five cents per hog at Montreal.

*By Mr. Young:*

Q. Do you consider other facilities in competition with the packing plants should be established, public abattoirs?—A. Well, you will notice, this is to be studied. We are not very sure. We are wondering if public yards for public

killing were established, if facilities were provided so that the small merchant, the small butcher, could go into the stockyards and buy his animals in competition with such other buyers as may be there, and take those animals over to the public killing plant, have them killed there and made available for him, we are wondering whether or not it would aid in the competitive purchasing of the stock.

Mr. FACTOR: We have a civic abattoir at Toronto and it is losing thousands of dollars each year.

The WITNESS: We are simply asking that the possibilities of this be investigated.

5. The value and practicability of auction selling at public stockyards as compared to the present system. The influence of packer buyers should be considered in that regard.

6. The justification of present charges by stockyards and commission agencies, and merits of commission charges per car as compared with a percentage on sales.

7. The investigation of the value of rail grading from the producer's standpoint.

8. The justification of feeding and finishing of livestock by packers.

9. The extension of beef grading. It is felt that grading should be extended as a matter of policy not only for the benefit of the consumer, but also in order that premiums on quality be reflected back to the producer. Amongst the questions to consider in this connection is whether all beef from inspected abattoirs should be graded.

*By Mr. Ilsley:*

Q. Beef is graded now, is it?—A. Yes.

Q. Cattle are not graded, but beef is?—A. Yes.

The CHAIRMAN: You are speaking of beef?

The WITNESS: Two grades.

*By Mr. Ilsley:*

Q. You think it should be extended to all?—A. All grades, all qualities.

*By Mr. Sommerville:*

Q. If canners' and cutters' beef were sold on the market as canners and cutters the public would know what they are getting?—A. Yes.

Q. That is behind that suggestion?—A. We are a little fearful now that some of the poorer qualities of cuts are sold to the consumers without the consumer knowing what he is getting, and as a consequence of that, it has a tendency to limit the consumption of beef.

The CHAIRMAN: The retail merchants from British Columbia urged the same thing.

Mr. SOMMERVILLE: Yes.

The WITNESS: 10. The advisability of reducing the minimum weights on carloads of sheep and swine and mixed cars of cattle and other kinds of livestock, to correspond to actual weights of cars loaded.

11. A complete investigation of the present system of distribution as it affects livestock products, with particular reference to the factors influencing wholesale and retail prices and the justification of the spread between the two.

The CHAIRMAN: These recommendations by the joint departments of agriculture of the joint provinces are very similar to the recommendations made by Manitoba?

The WITNESS: Very similar sir.

The CHAIRMAN: Mr. McKenzie has had a long siege, and I want to compliment him upon the excellent manner in which his brief was prepared, illustrated by charts, and upon the admirable way in which he presented it. Is it the desire of the committee to have Mr. McKenzie for further examination?

Mr. YOUNG: I do not think so.

Mr. KENNEDY (*Peace River*): I should like to ask a question.

The CHAIRMAN: If we are going to question him, let us have him back this afternoon.

Mr. KENNEDY (*Winnipeg*): I should like to make an observation relative to what you have already said, Mr. Chairman. It won't add anything to what you have said, but as a representative from Manitoba on this committee, I might presume to compliment you. I want to tell you how proud I am that such an excellent and outstanding brief has been presented to this committee from Manitoba. In every way it is most excellent.

The CHAIRMAN: Very good. Now gentlemen, I think we will adjourn until this afternoon.

Mr. SOMMERVILLE: There is no other witness for this afternoon.

The CHAIRMAN: There is a suggestion that Mr. Buckle will be here tomorrow. We might leave the examination of Mr. McKenzie until then, and not meet this afternoon at all.

Committee adjourned until Wednesday, April 18th, at 11 a.m.

HOUSE OF COMMONS, ROOM 368,

April 17, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock a.m., the Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., of Toronto appeared as Counsel for the Committee.

The CHAIRMAN: Order gentlemen, the minutes are just the usual record of the witnesses heard and certain exhibits filed; that, I think, is all. We will approve the minutes.

To-morrow we were going to hear Mr. Douglas, but I understand the Select Standing Committee on Banking and Commerce have requested that we should release Mr. Douglas so that he can continue his evidence there, and it strikes me it will be of more importance to all concerned that he should appear there where he will be thoroughly examined than to appear here; so, if the committee agrees, we will release Mr. Douglas to-morrow morning.

Are you all agreed? Carried.

Mr. FACTOR: Will we have him later on, Mr. Chairman?

The CHAIRMAN: I think not.

Yesterday the Hon. Mr. McKenzie completed his evidence and there was the suggestion from members of the committee that they wished to ask him questions. As a matter of procedure it is suggested that the Hon. Mr. Buckle should go on this morning, and that the Hon. Mr. McKenzie should be recalled for questioning later; or, if it is the wish of the committee to go on with him now, before hearing Mr. Buckle, all right.

We will proceed with the Hon. Mr. Buckle.

The Hon. W. C. BUCKLE, Minister of Agriculture for Saskatchewan, called and sworn.

The CHAIRMAN: I am sure we are all very pleased to have Mr. Buckle here. Now, Mr. Buckle, you can make yourself just as comfortable as you like; sit down, stand or do just as you please.

The WITNESS: It may be that I will fall down after a while.

Mr. Chairman and gentlemen, on behalf of the Province of Saskatchewan I appreciate the opportunity given me of being here to-day. I have a very short brief here, somewhat in the nature of Saskatchewan's preamble to the recommendations presented to you yesterday by the Hon. Mr. McKenzie from Manitoba. These recommendations, as you already no doubt know, were prepared in collaboration with the other two provinces in the West. I would like to read the brief, and when you have heard that if you desire to ask questions I will do my best to answer them.

*By the Chairman:*

Q. Have you copies of your brief, Mr. Buckle?—A. Yes.

Q. If you would just let us have them we will distribute them to our members?—A. I will be glad to. I may say that the figures of the appendix are separate from the report itself.

MEMORANDUM RE PRICE SPREADS AND MASS BUYING FOR PRESENTATION TO THE  
SELECT COMMITTEE OF THE HOUSE OF COMMONS

The people of Saskatchewan are greatly interested in the inquiry which is being held by your committee and you have already heard from the Retail Merchants' Association of Saskatchewan in connection with merchandising methods, and have had representations from the Saskatchewan Live Stock Producers Co-operative Association regarding the marketing of live stock. I am pleased to be associated on behalf of the farmers of Saskatchewan with the Ministers of Agriculture from the adjoining Prairie Provinces in presenting certain facts and opinions respecting the inquiry as it relates to agriculture. While I am associated with those gentlemen in making certain recommendations regarding the live stock industry of the Prairie Provinces, I wish also to present a resolution on live stock marketing from the Legislature of Saskatchewan, and to speak respecting the agricultural situation generally in Saskatchewan.

I regard this special inquiry relative to price spreads and mass buying with considerable satisfaction as a special committee of the Legislature of Saskatchewan devoted considerable time to a study of certain problems of agriculture during the 1933 Session and in its report, which was approved by the Assembly, included the following recommendation for the consideration of Federal authorities:—

An immediate investigation into the existing wide spread as between the price levels of farm produce and those manufactured articles required by the farmer, with special reference to the implements of production and repairs needed for same.

I desire also to submit at this time a resolution of the Saskatchewan Legislature passed a few days ago commending the work of this committee and expressing a desire for a full inquiry into the marketing of live stock in Canada. The resolution reads as follows:—

Shall we take that as read, or do you desire me to go through it?

The CHAIRMAN: Yes, I think we can take that as read; it will be extended in the record.

That, having in mind the very unsatisfactory conditions surrounding the marketing of live stock and the vital necessity of remedying those conditions to the fullest extent possible, this Legislature views with satisfaction the inquiry now under way in the Federal House to that end, but considers that it is improbable that all important phases of live stock marketing can be adequately investigated by a Parliamentary Committee in the time at its disposal.

Therefore, be it resolved, that this Legislature recommend to the Dominion Government that the marketing of live stock be made the subject of a special inquiry and report by a Commission appointed under Federal authority with adequate producer representation to investigate all matters relative to live stock marketing, including the costs of transportation and selling through public stock yards; the effect upon prices of selling and shipping live stock direct to packers; the value of auction selling of live stock as compared with existing methods and the desirability of substituting for certain classes, or all classes of live stock, on some or all of the public live stock markets, the present system of commission selling in favour of a system of auction sales; the practicability of rail grading of market hogs, and any or all other matters of importance to the live stock producer in the marketing of his product.

The WITNESS: The viewpoint of Saskatchewan before your inquiry may differ somewhat from that of other parts of Canada and this is not surprising

when it is realized that there are no large cities in Saskatchewan; the rural population greatly exceeds the urban population; industrial development so far as it has progressed is related chiefly to products of agriculture, the bulk of which, however, are processed outside of Saskatchewan and the prices received by farmers for the chief products are established in relation to world values rather than to domestic demand.

Saskatchewan has a two-fold interest in your inquiry,—first, the interest of the producer and seller of agricultural products in large volume; and secondly, that of a purchaser of industrial products to meet consumptive demand; both of which are closely related.

The position of Saskatchewan as central of the three Prairie Provinces creates a geographical handicap which affects both our selling and our purchasing. A considerable portion of Saskatchewan is practically equidistant from Vancouver, Churchill and Fort William—Port Arthur, where shipping facilities are available for export products. This position imposes a handicap on the sale of agricultural products not shared by any other part of Canada except the Peace River District of Alberta. This Saskatchewan region is similarly, if to a lesser degree, handicapped in the cost of importing industrial products. Because of this geographical position, Saskatchewan people are greatly interested in the possibilities of effecting a saving in the transportation of their agricultural products to world markets, as well as in the importation of industrial products at lower cost; and it is not surprising that they are more than any other group interested in the fullest operation of the Hudson Bay Route.

Some brief facts respecting the development of Agriculture and the extent of agricultural production in Saskatchewan may be permitted. Saskatchewan is the third province in Canada in population and more rural than any other province, except Prince Edward Island. The main agricultural development has taken place largely since 1900. The most important phase is the growing of grain, an enterprise which contributed largely to business expansion in other parts of Canada and furnished huge traffic volume and income to our railways during the years when crop yields were normal and agricultural income provided substantial purchasing power.

It would be a great mistake, however, to suppose that Saskatchewan produces nothing but grain. Saskatchewan is the leading producer of horses in Canada and stands second amongst the provinces of Canada in poultry production, third in milk production, third in production of pigs and fourth in the number of cattle.

The next paragraph, gentlemen, refers to the efforts of our government to provide a suitable commodity from our own domestic and the export markets.

In an effort to improve the quality of Saskatchewan live stock and to produce cattle, sheep and pigs of the type required for our domestic and export markets, Saskatchewan has proceeded farther than any other province in its development of Pure Bred Sire Areas, and in about one-fifth of the rural municipalities it is unlawful to own or use grade or scrub sires. Saskatchewan is the one western province participating with the Federal Government in the payment of premiums for outstanding stallions and, in common with other provinces, co-operates with the Dominion Government in paying premiums for high quality boars. Dairy Herd Improvement Associations have been organized under provincial auspices and are accomplishing worthwhile results. Large numbers of flocks of standard bred poultry have been culled by specialists for a number of years and the province has done a lot of effective work in the testing of flocks for the control of pullorum. Under a specialist in swine production, financed entirely from provincial funds, every possible effort is being made to extend the use of approved types of pigs for breeding purposes, so that

export requirements can be more fully met and the quota obtained under the agreement with the British Government in 1932, used to its fullest possible extent. During the past three or four years, when credit for financing the purchase of feeder cattle was not otherwise available, the Saskatchewan Government provided short term credits for this purpose, in order to encourage the fattening of cattle on a larger scale, every dollar of which has been repaid to the government by the borrowers.

I wonder if there is any place, gentlemen, where I could put up these graphs for your consideration. There is only one to which I wish to make particular reference this morning, which I think may be of interest to you, and that is the one showing the number of live stock in the Province of Saskatchewan. I may say that Mr. Wright, President of the Western Live Stock Union, will present graphs with respect to the number of stock in three provinces.

That Chart shows the acreage of wheat, oats and barley in the province.

Mr. SOMMERVILLE: What is the significance of it?

The CHAIRMAN: Just state the figures in interpretation of the graph.

The WITNESS: These are millions of acres.

*By Mr. Factor:*

Q. That is the same as we had in this memoranda?—A. Yes, that is all covered there.

*By the Chairman:*

Q. Perhaps at this point you might just file that memorandum?—A. Yes, the figures cover that very well.

The CHAIRMAN: I will tell you what we will do: at this point we will insert in your evidence these schedules showing the acreage yield and production of wheat, and farm live stock in Saskatchewan.

The schedules submitted as an appendix to the Saskatchewan brief are as follows:—

ESTIMATED ACREAGE, YIELD AND PRODUCTION OF WHEAT, OATS AND BARLEY  
IN SASKATCHEWAN, 1924 TO 1933

WHEAT			
Year	Acreage	Yield	Production
1924.. . . . .	13,033,000	10.2	132,918,000
1925.. . . . .	13,002,741	18.5	240,551,000
1926.. . . . .	13,558,384	16.2	219,646,000
1927.. . . . .	12,979,279	19.5	262,500,300
1928.. . . . .	13,790,854	23.3	321,215,000
1929.. . . . .	14,445,286	11.1	160,565,000
1930.. . . . .	14,326,000	14.4	206,700,000
1931.. . . . .	14,961,000	8.9	132,466,000
1932.. . . . .	15,543,000	13.6	211,551,000
1933.. . . . .	14,743,000	8.4	123,841,000
OATS			
1924.. . . . .	4,942,465	19.7	97,345,000
1925.. . . . .	5,071,507	34.5	174,967,000
1926.. . . . .	3,921,461	28.1	110,193,000
1927.. . . . .	4,412,556	32.3	142,526,000
1928.. . . . .	4,358,747	35.8	156,043,000
1929.. . . . .	4,255,789	16.2	68,944,000
1930.. . . . .	4,531,000	27.7	125,509,000
1931.. . . . .	4,368,735	15.5	67,700,000
1932.. . . . .	4,364,700	24.6	107,400,000
1933.. . . . .	4,571,000	16.5	75,422,000

## BARLEY

Year	Acreage	Yield	Production
1924.. . . . .	953,851	18.2	17,360,000
1925.. . . . .	1,065,398	25.4	27,061,000
1926.. . . . .	872,140	25.1	21,891,000
1927.. . . . .	925,889	29.3	27,129,000
1928.. . . . .	1,621,463	27.3	44,266,000
1929.. . . . .	2,228,604	13.8	30,755,000
1930.. . . . .	2,016,000	20.1	40,522,000
1931.. . . . .	1,366,092	10.5	14,340,000
1932.. . . . .	1,329,500	17.6	23,400,000
1933.. . . . .	1,228,000	14.3	17,560,000

A number of statistical tables are appended hereto, showing the production of live stock in Saskatchewan, and I am presenting a number of graphs to show the expansion of acreage of cereal grains, the increases in the production of live stock and poultry and the cash value of crops and live stock during the past decade.

There is one point to which I wish to draw the attention of the committee particularly, to indicate to you the tremendous drop in gross value in the production of grain and farm animals in Saskatchewan.

*By Mr. Sommerville:*

Q. What does that chart indicate?—A. The drop in the gross value of the agricultural production in the province, from the high point of 360 in 1925, dropping down to possibly 65 in 1931.

*By Mr. Young:*

Q. That shows a fairly continuous drop?—A. That was from 1928 to 1931, that would be the drop in five years.

*By Mr. Sommerville:*

Q. That was a continuous drop; what was the peak in 1928?—A. 340,000,000.

Q. And there has been a steady drop to what?—A. 65, in 1931—approximately.

*By Mr. Factor:*

Q. What is that?—A. That is grain production. Animal production has kept a fairly steady line, as you will notice from the chart.

Mr. SOMMERVILLE: That covers only grain production then?

*By the Chairman:*

Q. And when you say grain production, you mean value?—A. Gross value.

*By Mr. Sommerville:*

Q. And the lower line on that chart indicates the gross value of animal production?—A. Yes.

Q. And that has kept a comparatively steady line until the year 1929, and it began to drop then from what to what?—A. From around 20,000,000 down to approximately 10,000,000 I would say, in 1932; despite, of course, the increase in the number of animals.

Q. Despite the increase in volume there was this decrease in value; and that is indicated by the table on farm live stock in Saskatchewan which you now produce?—A. Yes, that is indicated in the table in the appendix.

The table referred to is as follows:—

#### FARM LIVE STOCK IN SASKATCHEWAN

Year	Cattle	Swine	Sheep
1924.. . . . .	1,528,867	872,819	123,326
1925.. . . . .	1,499,411	610,973	131,359
1926.. . . . .	1,160,125	597,660	161,831
1927.. . . . .	1,304,290	616,603	170,035
1928.. . . . .	1,181,379	602,156	183,098
1929.. . . . .	1,166,913	599,909	207,551
1930.. . . . .	1,214,900	497,900	209,900
1931.. . . . .	1,188,884	949,055	281,013
1932.. . . . .	1,327,600	898,000	313,700
1933.. . . . .	1,446,100	648,600	360,000

#### HORSES

1924.. . . . .	1,179,782	1,929	1,122,757
1925.. . . . .	1,177,599	1,930	1,077,234
1926.. . . . .	1,109,516	1,931	1,000,397
1927.. . . . .	1,168,314	1,932	963,000
1928.. . . . .	1,141,281	1,933	946,900

*By Mr. Senn:*

Q. Does that include your dairy products as well?—A. No, that does not include dairy products.

Q. Just animals?—A. Just animal production, yes.

These records are related to a period of agricultural development which has probably never been surpassed.

While mixed farming has been encouraged and much has been accomplished, there are limits to the application of a program of diversification. Extreme weather variations and periods of drought, such as those experienced during the past five years, impose a tremendous handicap upon the development of mixed farming in parts of the open plains portion of Saskatchewan. Further development of mixed farming in the park belt is not only possible but is highly probable if sufficient price inducements are provided to attract people to this form of diversification. The higher prices of pigs which have prevailed during the past few months, have stimulated greatly this form of agricultural activity in Saskatchewan.

Before control measures were adopted in Britain about a year ago, prices of Canadian swine and bacon fell so low that Canadian consumption of pork products in 1931 increased by more than 100,000,000 pounds over that of the previous year, while export trade was of small volume. In 1933, with fewer pigs in Canada, domestic pig prices climbed and exports of pig products were about doubled, while prices of cattle were largely unaffected. These developments indicate what price reactions may be expected when effective control is applied to a product, whether the ultimate market is within the country of origin or beyond its borders. This particular development in swine prices is an outstanding feature in marked contrast with the prices of most agricultural commodities.

In spite of this fortunate exception, however, which was shared to some extent by wool, due to a better statistical position, practically all of the commodities produced on Saskatchewan farms realize extremely low prices and bring to our farmers a very meagre return for their labour and enterprise.

The seriousness of this price condition for Saskatchewan farmers is indicated by surveys made by the Department of Farm Management of the University of Saskatchewan during the past three years. It was found, for instance, in 1933 that 238 farmers located in one of the oldest farming districts in Saskatchewan had obligations amounting to \$7,298,000 per farm or \$18.64 per acre of crop land. For the whole of Saskatchewan, on the basis of surveys in recent years,

it was calculated that it would require four-fifths of all the wheat available for sale in Saskatchewan from the 1933 crop to pay the interest on the present farm debt and two-fifths of this wheat would be required for the payment of farm taxes. The decline of wheat prices and yields has been so great that the 1929 crop was worth only two-thirds of the 1928 crop; the 1930 crop, two-fifths the small crop of 1931, one-fifth; the 1932 crop, one-quarter and the crop of 1933, one-fifth of the 1928 values.

Possibly a better illustration of that would be to state that in 1931 we set out certain areas in the province for the administration of relief. We had our A, B, C areas. Now A area represented around 86 municipalities. The gross value of agricultural production in 1928 was around \$145,000,000, and in 1931 that had dropped to a value of \$13,000,000; so that will indicate to you to some extent the tremendous problem that our farmers in Saskatchewan have had to deal with.

A chart which I will show you indicates clearly the very drastic change which took place in the values of Saskatchewan grain crops and live stock in recent years and the need of our farmers for obtaining a greater income from farm products.

The "home market" should be a valuable market for our farmers and it does undoubtedly absorb the bulk of our entire agricultural production with the exception of wheat and cheese. Exports of swine and cattle picked up last year, but with the two exceptions of wheat and cheese, the bulk of the production of Canadian farms is still marketed in Canada, but at prices so low that the whole business life of Canada is disastrously affected. This condition of low domestic prices is due to the fact that a small percentage of our cattle, swine, poultry products and butter is available for world markets after domestic needs are supplied, and world values force down the price of the major part of our agricultural production consumed in Canada.

In 1932, for instance, Canada exported less than seven million dollars worth of live stock and live stock products in the form of meats, while the domestic consumption of meats was about fifteen hundred million pounds. By selling less than seven million dollars worth, which placed our domestic market on an export price basis, the purchasing power of our Saskatchewan farmers was practically wiped out with a consequent disastrous reaction upon industry, unemployment and relief.

This, I believe to be of fundamental importance. The welfare of other classes of producers in Canada is related in a very intimate way to the prosperity and welfare of agriculturists. It may appear at the moment as a great lessening of the national burden of relief and a direct benefit to those who are unemployed, that agricultural products can be purchased so cheaply. We are learning, however, that food can be too cheap and it would seem that national prosperity will remain beyond our reach so long as agriculture continues to fill the role of a provider of cheap food instead of regaining a greater measure of independence and thus becoming again a full-time partner in our national domestic economy as a purchaser and user of the products of industry.

And in connection with the farm-management survey that I mentioned a few minutes ago, this indicates in some way what it would mean even in our Province to industrial Canada if the purchasing power of the farmer was made a little greater. In the six districts that were investigated by this farm management branch of the university—and may I say that there is nothing of conjecture about this at all, these men go into the homes of the farmers and explore to the fullest depths their position financially—and as a result of that we found this: between 1925 and 1929 there were six districts examined and the average clothing bought in each home amounted to \$226.

*By the Chairman:*

Q. For a family?—A. For a family.

*By Mr. Young:*

Q. Per annum?—A. Yes.

*By the Chairman:*

Q. For a year, for a family?—A. Yes. And the amount for furniture was \$54. In 1930 and 1933 the same investigation disclosed the fact that the average purchase of clothing was \$92, that is it had dropped to \$134 per family; and that furniture dropped to \$6, or \$54. Now, taking the four years from 1930 to 1933, that is four crop years; and now taking three of these years—eliminating one altogether—and after allowing for a 25 per cent drop in the price of clothing and a 10 per cent drop in the price of furniture—and this is done by a professor of economics, well qualified to investigate this particular matter—it is found that the expenditure for clothing could be \$40,000,000, and for furniture \$18,000,000—and for machinery \$50,000,000, and for building material and repairs another \$40,000,000; that is allowing for a 20 per cent drop lower in the value wholesale.

*By Mr. Young:*

Q. That is, to restore them to the previous basis?—A. That is, to restore them to the 1924 basis.

*By Mr. Edwards:*

Q. That is true all over Canada?—A. That shows that \$140,000,000 could be spent in that province.

Q. But there is just the same condition in the same provinces?

The CHAIRMAN: No, I think perhaps conditions are much worse there.

The WITNESS: I think the five crop failures we have had would intensify conditions financially—losses that farmers in that province have had which others have not.

*By Mr. Kennedy (Peace River):*

Q. Have the findings of that survey been published?—A. They will be very soon. I may say also at this point that it is estimated that the debt increase on these farms since 1921 as a result of drought and drop in values has been \$707.

*By Mr. Young:*

Q. Per farm?—A. Yes.

Q. That is for what period?—A. From 1931 on—1932, 1933; and the loss of five years' crop, that is calculated on the average yield—the loss to the farmers in the province had been \$202,000,000 for that term of years.

*By the Chairman:*

Q. Now, just before you leave that point, Mr. Buckle, the debt increase; am I right in assuming that that is due to the application by the farmer of his resources to his sustenance, made necessary by the vanishing of his earnings?—A. More his inability through the lack of crop production to pay his due debts; I would imagine that would be correct, that is, increased taxes and interest, I presume it would be largely.

Q. My point is that a man in such circumstances must come to the point where he exhausts his credit; that point must be nearly reached?—A. The point of saturation, so far as debt in Saskatchewan is concerned, is about reached.

This introduces a consideration of the possibilities either of enlarging our exports so that the income of the farmer can be increased by the production and sale of products in larger volume, or of undertaking a program of domestic price-raising. Domestic price enhancement without an effective means of controlling production or marketing has always contained the possibilities of its own downfall. I may say that I recognize the great difficulties of this problem, but I cannot see that national prosperity is possible until means are found to increase farm revenues substantially without correspondingly increasing volume of product. I am hopeful that the operation of the Natural Products Marketing Act which has been introduced in the Dominion Parliament may be found to possess some value in accomplishing this purpose.

An alternative to control of prices and production would seem to be the pushing of production to the maximum, and the adoption of a national policy of effecting trade treaties under which our agricultural output could be exported even though it necessitates a greater degree of acceptance of industrial products in exchange for farm products than has been favoured in the past by industrial Canada.

*By the Chairman:*

Q. Before you leave the paragraph you have just quoted, if I might intervene here: you said, the alternative to the control of prices would seem to be the pushing of production to the maximum and the adoption of a national policy for the distribution of these through treaty arrangements abroad?—A. Yes.

Q. Now, would acceleration of production, without an increase of prices, be of any great value to-day?—A. No. I think I mentioned that in the previous paragraph, that unless revenues increase, it is hardly of much value to increase your production.

Q. Then in regard to wheat, being one of your main items of production—the price being the world price, even though we were selling more wheat abroad, it would not very greatly advantage you unless the price is raised?—A. That is right.

Q. All right, will you continue?—A. Yes. I can assure you that this would not be objectionable to the farmers of Saskatchewan—that is to get treaty arrangements.

Q. Treaty arrangements for increased export?—A. Yes, especially if they could bring their products through the Hudson bay and obtain the benefits of water transportation. Our farmers want to pay their debts; they want to buy, and in the past have bought freely to meet their physical needs; but at the present time they are not in a position to do either as they would wish. Drought and crop failure have, to some extent, brought about this condition, and a return of average yields in future would be an improvement, but when we view the condition of world markets and visualize a return of average crop yields on present acreage in Canada and the United States, it is not hard to imagine the difficulty of selling our wheat at remunerative prices.

I repeat, therefore, that we seem to be faced with a choice between scaling down production of meat animals to domestic requirements and grain to what can be sold, or of making mutually advantageous trade arrangements so that those who could use larger quantities of our surplus agricultural products would be able to pay for them with commodities useful to us. But perhaps neither of these courses offers greater difficulties than that of reconciling the view of agriculture and organized labour as to their mutual interest in bringing about higher prices of agricultural products.

I have another chart here that I would like to show you, to bring out that particular point.

Q. Could you hold it, or I will hold it for you, and you can indicate to the committee?—A. Thank you. The thing I want to point out is this: We start out

at 1914 with 100 as a basis, and I do not think that possibly labour and agriculture were ever in better agreement than they were at that particular time. We find this, at the present time the things that the farmer has to buy are 27 per cent above what they were at this time, and that the value—

Q. This time being what?—A. 1913 and 1914, one hundred. Then we find the base of our agricultural prosperity, or past prosperity, of wheat is approximately in the same position in the same period. Now, my contention is this—

*By Mr. Sommerville:*

Q. What position is that?—A. 27 below, that is what agriculture has to sell; and what he has to buy is 27 above the 1914 index.

Q. There is a difference of 54 points?—A. That is what it approximates.

Mr. EDWARDS: Is that 54 or 27?

Mr. YOUNG: Twice 27.

The WITNESS: My contention is, gentlemen, that there is where the work of this committee lies, in so far as getting the spread of prices is concerned. That is the endeavour, to bring that down to there (indicating), and that up there (indicating), or else lift them all up to there (indicating).

*By Mr. Sommerville:*

Q. We are trying to get it on the notes so it will read well, Mr. Buckle. Bringing that down to there does not mean an awful lot to the reader?—A. That is right. I didn't notice that. Pardon me.

Q. Just explain that, will you?—A. I think we will all agree, anyway to start with, that what interests the western farmer most is what he is going to get for his products, and then what he has got to pay for the things that he buys.

Q. And what he got this year is 27 points below the approximate figure of 1900?—A. Of 1913, 1914.

Q. Of 1913; and the price that he has to pay is 27 points above that basic line?—A. Yes. Then again we have this situation, that labour, which constitutes such a large proportion of what he buys, is 70 per cent above what it was in 1914.

Q. That basic line?—A. That basic line, yes.

Mr. HEAPS: Will you explain that 70 per cent? Will you explain what you mean by that 70 per cent?

The CHAIRMAN: Not 70 per cent, 70 points.

The WITNESS: 70 points.

*By the Chairman:*

Q. The base line being 1914 at 100, labour is now what?—A. 170. It is plus 70. What the farmer sells is minus 27.

*By Mr. Heaps:*

Q. I would like that explained. I don't quite get the significance of it?—A. If a man was getting \$100 a month in 1914, he is getting \$170 now. That is the man—taking transportation, in industrial wages. I think that that can be found on page 5 of Wages and Hours of Labour in Canada, No. 17 report.

*By the Chairman:*

Q. From the Bureau of Statistics?—A. The Bureau of Statistics.

*By Mr. Heaps:*

Q. You mean that the working man to-day is receiving 70 per cent more than he received in 1914?

The CHAIRMAN: Yes.

The WITNESS: That is according to the report I read. That is where I got those figures.

Mr. HEAPS: Is that your impression, that they are 70 per cent more?

The CHAIRMAN: Not 70 per cent, 70 points above the figure 100.

Mr. HEAPS: That is 170 as against 100. It is the same thing.

The CHAIRMAN: Yes, that is right.

*By Mr. Heaps:*

Q. Are you inferring that he is 70 per cent better off than he was in 1914?

—A. What I am saying is what he is getting—he is certainly better off if he is getting more.

Q. Is he getting 70 per cent more than he was in 1914?—A. According to this report he is. 100 was the index in 1914. I should have had that report here.

The CHAIRMAN: Take railway employees wages, they are to-day about that figure above 1914.

Mr. HEAPS: I think you are wrong, Mr. Chairman. I think Mr. Buckle is wrong, because if a man is working as he is to-day on the railway as everybody knows, on the basis of 30 hours per week, he is not 70 per cent better off than he was in 1914.

The CHAIRMAN: But this chart is disclosing the rates of wages, not actual earnings. You are taking it as actual revenues.

Mr. EDWARDS: It gives a very wrong impression, because I think Mr. Heaps is quite right.

The CHAIRMAN: No. Mr. Buckle's point is, and I think it can be accepted, that the things that the farmer pays for, that he buys, and the rate of wages which he must pay in the form of manufactured goods are both too high. The one, the things he buys, is 27 points above the base line of 1914, and the other 70 points above that line; whereas the things that he sells—

The WITNESS: Some of them, Mr. Chairman.

The CHAIRMAN: Yes, wheat.

The WITNESS: Yes, 27 points below.

The CHAIRMAN: Below the base line of 1914.

Mr. HEAPS: I challenge the whole statement, Mr. Chairman.

Mr. YOUNG: We will let Mr. Heaps come here as a witness and give evidence.

Mr. KENNEDY (*Peace River*): I think it is recognized that agricultural products dropped just about twice as far as other products.

Mr. EDWARDS: I don't think that is correct.

The CHAIRMAN: Well, I will tell you, this is Mr. Buckle's submission. If anyone challenges it, we can examine into it and get the facts more scientifically from the Bureau of Statistics.

Mr. KENNEDY (*Peace River*): I would suggest this to Mr. Buckle, if he shows us the low wages, he might show us interest and debts.

Mr. SENN: He also might show what labour is receiving on the farm.

Mr. KENNEDY (*Peace River*): Yes.

The WITNESS: I think some of your inquiry has been around the matter of sweated labour. If there is any industry that has been carried on with sweated labour any more than agriculture at the present time—

The CHAIRMAN: You would like to know it.

The WITNESS: —it is rather difficult to find.

Mr. HEAPS: Before you get away from that 70 points or 70 per cent, whatever you like to call it, I think the Bureau of Statistics might furnish us with a more accurate statement, or at least a more detailed statement than we have had.

The CHAIRMAN: I will tell you what we will do; we will let Mr. Buckle give his evidence, and I will ask the president of the bureau to take this chart, appear here and give us any corrections that, in his opinion, should be made.

Mr. HEAPS: I would like to do it in this way: I want to find out what the relative wage rate has been, for the total income of everyone of the railway companies over a period of years.

The CHAIRMAN: What is that?

Mr. HEAPS: The total wages and total revenue of the railway companies over a period of years.

The CHAIRMAN: I have it before me somewhere now. I was looking at that the other day.

The WITNESS: I am not saying for one moment, Mr. Chairman, that possibly some labour is not being exploited. I am not saying that at all. But there are certain forms of labour, such as transportation that I mentioned, and others as shown in this report, that do show a higher return than in 1914.

*By Mr. Heaps:*

Q. Why do you mean by transportation?—A. Well, railway.

Q. What section of the railway employees, all of them?—A. The carrier —I imagine it means transportation; that is what it comes under, and I imagine it means all employees.

Q. You mean railway employees who are working as labourers, getting 32½ cents an hour, are being overpaid?

The CHAIRMAN: No, no, he has never made that statement. The only point, Mr. Heaps, that Mr. Buckle has made is that there is a wide gap there which he considers to be unfair, and he is asking that some steps be taken to raise the price of the winnings of the farmer up to something like this level.

Mr. HEAPS: Yes, but he has made the definite statement there, according to that chart, that railway workers are earning 70 per cent now than they were in 1914.

Mr. KENNEDY (*Peace River*): Not now.

The WITNESS: Taking 100 in 1914.

Mr. HEAPS: Yes, taking 100 as the base.

The CHAIRMAN: Yes, that is it.

The WITNESS: All I have to go by is the report issued by the Department of Railways.

The CHAIRMAN: You will find Mr. Buckle is not very far out.

Mr. EDWARDS: From actual experience he is very far out.

Mr. KENNEDY (*Peace River*): These are wages in production of commodities, without reference to how many are working or what percentage.

The CHAIRMAN: Or the time worked.

Mr. KENNEDY (*Peace River*): Or wages and the cost of wheat that has been produced, whether it constitutes a correct view or anything. They are all related.

The CHAIRMAN: Yes. Whether he is dealing with total wages rates or total farm rates or any other way, the wages actually apply in the production of commodities. That is his point.

Mr. HEAPS: That is not fair. It should begin with the cost of commodities.

*By Mr. Young:*

Q. Might I ask a question in connection with that? Would the fact that labour is drawing 170 for the amount of work for which it drew 100 in 1913, while the farmer who purchases the product of labour is only getting 73 for what he got 100 for in 1914, account for the fact that so much of labour is unemployed?—A. I could not answer that question. I would not care to answer it. But here is another question that comes up at the present time in connection with the case: Will there be any dispute as to the fact that freight rates are higher than they were in 1913-1914?

*By Mr. Kennedy (Peace River):*

Q. Just explain the chart?—A. I don't know that freight rates are here.

*By Mr. Young:*

Q. Will you answer my question. I think you can answer my question. The farmer's income, you say, is down 27 per cent, the cost of the things he has to buy is up 27 per cent, and the cost of labour going into those goods is up 70 per cent?

Mr. EDWARDS: We challenge that.

*By Mr. Young:*

Q. Does the fact that the farmer has his income so greatly reduced make it impossible for him to buy the products of labour?—A. Well, could you put in this way; that a bushel of wheat in 1914 bought a flannel shirt?

Q. Yes?—A. And this year it takes two bushels. Therefore somebody is bound to lose out, one way or another.

Q. Therefore he only buys one shirt instead of two?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. Are you arguing that the rate of wages is the only factor that comes into that? You are not arguing that, are you?—A. No. I am just trying to point out what the statistical position is in regard to this chart. I might say this in regard to what the farmer produces,—here is a little phase of your freight rates and the cost,—sugar, coffee, nails, clothing, and millinery averaged 61 per cent higher than it was in 1913 and 1914. Farm implements averaged 49 per cent. That is from eastern Canada to say Regina, in Saskatchewan. It is pretty safe to say along that line that a 60 per cent increase in freight also goes into this, the cost of what the farmer has to buy.

*By the Chairman:*

Q. All of which you are submitting in support of the thesis that the commodity price of farm products is abnormally low, and that by some process the return to the farmer must be raised?—A. Yes, raised.

Q. That is what you are submitting?—A. Yes. Some people contend, and I don't quarrel with it at all, that a proper place to bring this up to is here (indicating).

*By Mr. Sommerville:*

Q. The proper place to bring the price that the farmer gets for his commodities is up to the point of the value of the things the farmer has to buy?—

A. Yes.

Q. Or the price he has to pay for the things he has to buy?—A. Yes. Taking the price of wheat, which I think averaged 67 cents per bushel, No. 1, at the country elevator in 1914, if you did that, you would have to have your wheat, the same grade at the same point, 85 cents a bushel.

*By the Chairman:*

Q. Mr. Buckle, some, shall I say, critics of the attitude of the farmer draw attention to that very handsome rise above the lines of all other commodities that we experienced in the years 1916, 1917, 1918, 1919, 1920, to 1921 and ask this question: What has the farmer to offer as to why that high price should not be advanced as a reason why the low price should not now be complained about?—A. Well, all I can say to that, Mr. Chairman, is that the farmer bought very freely of goods that are manufactured in Canada when he had that money at that point. Possibly if he had put it in the bank he might have had a little more of it now, but those who were making the goods would not possibly be in as good a position as they are to-day.

*By Mr. Edwards:*

Q. Everybody was satisfied then?—A. Apparently they were. You didn't see any commission sitting on price spreads at that time, anyway.

The CHAIRMAN: No, it was the high cost of living then.

The WITNESS: On that basis of bringing it up that I have outlined, you would have to have wheat at 85 cents.

*By the Chairman:*

Q. Winnipeg price?—A. Yes, Winnipeg; and butcher steers, for instance—they were \$6.55—approximately would have to go up to \$8.42.

Q. Toronto price?—A. No, Winnipeg price. And lambs—they were \$7 a hundred at this point—

*By Mr. Sommerville:*

Q. In 1914?—A. Yes. You would have to go up to \$8.85. I believe at the present time, that lambs not in regard to purchasing power, but the price of a lamb in so far as getting it back to the 1914 basis, has already got there. I think it has just about reached the 1914 basis in value, but not in purchasing power, because you have got this 27 per cent to contend with in there. Bacon hogs were \$8.10 approximately in 1914. The price of bacon hogs, to bring them up to that point, would have to be \$10.30, which all would be very satisfactory if it could be done. What I think is this, that this point should be brought to here (indicating).

Q. That is, the price of—A. —of the farm products should be brought to this point (indicating).

Q. To the basic line?—A. Yes. And what the farmer has to buy should be brought down to that point (indicating).

Q. Brought to that line?—A. Yes.

Mr. YOUNG: The 1914 level.

The WITNESS: Then we would be back to the fairly satisfactory position, I think, in so far as those two were concerned, of 1914.

*By Mr. Kennedy (Peace River):*

Q. That is on commodities, Mr. Buckle. But what about those other lines you have got, taxes, et cetera?—A. Well, I think they would possibly—as a matter of fact, if you notice, taxes have taken a pretty fair drop as it is, at the present time.

*By Mr. Young:*

Q. That is municipal taxes?—A. Yes, municipal and school taxes.

Q. But not other taxes?—A. Not other taxes. That just covers those two.

Mr. KENNEDY (*Peace River*): That would not cover the debt situation.

*By the Chairman:*

Q. I notice the dotted line on the chart representing wholesale commodity prices has actually gotten down to the base line of 1914, 100?—A. Yes it was that way for a while, but it has gone up again to here (indicating) now.

*By Mr. Sommerville:*

Q. Up to about 15?—A. 15 above again, now.

Q. What is the consequence of that, as compared with the dotted line of things the farmer buys; why don't they come down relatively?—A. Well, I could not explain that, Mr. Chairman. Those are the absolute positions of those, and I think that would come well within the ambit of this committee.

*By the Chairman:*

Q. Have you any definition of the things farmers have to buy?—A. Yes, I have got a list of them, if you would like to have it. There are 146 of them.

Q. That is a pretty stiff list. You might attach that list to the chart, and then the bureau can check with it, and get an idea of what it means?—A. Apparently, Mr. Chairman, our cousins to the south are endeavouring to do that very thing, that is, to bring the value of agricultural commodities up to this level.

*By Mr. Sommerville:*

Q. Up to the level of what the farmer has to pay?—A. Yes.

*By Mr. Young:*

Q. Can you tell us how they are succeeding?—A. Well, the latest reports from the trenches are not very good. That is why I say it would be better, in my opinion, to bring the two together at the common basis they were in 1914. But that is the whole question that bothers our farmers at the present time in Saskatchewan, the fact that what they have to sell is out of proportion altogether in relation to what they have to buy. Of course, there are genuine price spreads. We have read in the newspapers of certain statements that have been made by individuals as to the value of beef steak in regard to the value of the steer, the value of lamb chops and so on and so forth. But, of course, beef steak does not represent a steer. There are certain processing costs involved in that which, of course, would have to be thoroughly investigated to find out if that spread was correct or not. I am informed that in the city of Winnipeg, for instance, where a loaf of bread sells for 6 cents—

*By Mr. Heaps:*

Q. One pound? Is that a 16-ounce loaf?—A. Well, I didn't get the weight of the loaf. That is the value. The point I wish to make is this: It has been proved by figures that if the miller got the wheat for nothing, the loaf would still cost 5 cents. The point to determine, of course, would be whether that 5 cents was a legitimate processing charge or not.

*By Mr. Senn:*

Q. There is distribution, too?—A. They say iron ore in the ground does not hold much relation to the finished automobile. There are certain costs in

between, and I imagine that is the duty of this committee, to investigate to find this out. I am perfectly convinced in my own mind—I may not be right, of course—that if something can be done to bring these two lines together, agriculture in western Canada will be on a better basis than it is at the present time. I don't know, Mr. Chairman, whether or not this committee would be in a position to get that information. I imagine that what possibly will have to be done will be to set up a fact finding committee to go into these various matters, something as we have done in the province of Saskatchewan in regard to ascertaining what the farmers' debts were. A qualified home went into the farmers' homes and examined their records. It was absolutely confidential of course. As a result of that, certain figures have been produced that I don't think can be disputed.

THE CHAIRMAN: All right, Mr. Buckle, you broke off giving your brief. Will you proceed?

THE WITNESS: The great disparity between the prices of farm products and industrial products is, in my opinion, one of the most serious questions which our farmers have to face; and since it concerns not only them, but the whole industrial fabric of the country as well as the financial interests, a solution should be earnestly sought by financiers, industrialists and labour leaders, as well as farmers.

Human welfare depends ultimately upon abundance rather than scarcity; but in the final analysis industrial welfare, as well as agricultural welfare, depends upon a fair exchange of the products of agriculture for the products of other industries. Agriculture must not continue in its present helpless condition merely because it has been successful in the production of an unprecedented volume of cheap food. This adjustment, I submit, is equally a problem for finance and industry as well as for agriculture and, in the absence of an early adjustment, it is probable that the development of home handicrafts will continue at an accelerated rate because of diminished purchasing power.

You will probably suggest that these factors of agricultural production will ultimately be taken care of through the adjustment of supply to demand. May I submit that adjustment of supply to demand has been so obstructed and impeded that it seems necessary for a strong national policy to be developed to relate these factors more equitably the one to the other in Canada.

The inquiry which is being carried out by your committee is, in my judgment, of very great importance indeed, and intended to benefit the people of this Dominion; but if it results in raising wages in industrial establishments and in increasing the cost of living generally without bringing about a corresponding benefit to agriculture, in higher values of grains, live stock and live stock products, the net result to Canada will be a loss rather than a gain.

There is another important question, outside the scope of your inquiry, affecting agriculture as well as industry and finance, which I wish only to mention, if you will allow me to do so. I refer to the interest on public and private debt. A tremendous burden would be lifted from agriculture if a drastic cut in interest rates were made, taxes could be reduced and the beneficial effect upon both industry and agriculture would be almost immediate. We have heard rumours of plans for dealing with this question and I hope that some solution will be found.

In this brief statement, I have tried, Mr. Chairman and gentlemen, to indicate the forms and the degree of agricultural development in Saskatchewan and to show the efforts that have been made and are being made to provide agricultural products acceptable to our customers, both domestic and foreign. I have indicated my belief that in their own behalf both financial and labour interests should consider the plight of agriculture and endeavour to remove the disparity which prevents a fuller and a more adequate exchange of the products of the

factory for the products of the field. I have referred to these matters only because the urgency of the case impelled me to review the conditions of agriculture in my adopted province and because I believe that those conditions can only be satisfactorily met by a frank recognition of the facts by the people of Canada who are not engaged in agriculture and through an earnest effort on their part to aid in making adjustments so that not agricultural welfare alone, but Canadian welfare may be promoted.

Referring back to the matter of labour and agriculture, I heard a very pertinent remark made in the smoking car of the train the other day by an agriculturist. In the province of Saskatchewan they have an amalgamation of political thought representing both labour and agriculture. What he said was this, "As long as the hoghead on the head of a train insists on getting \$200 or \$275 a month to haul my 25 or 30 cent wheat to the head of the lakes, I don't see where he and I can agree materially."

You have heard from a number of witnesses interested in the production or in the marketing of live stock the opinions they hold respecting the industry and their recommendations regarding desirable changes in the transportation and marketing of live stock. Views have been expressed as to the effect of country buying by packers and the effects which a diminished volume of stock, passing through public stock yards, has upon live stock prices.

These matters have been discussed before you very fully by other witnesses; and once again a great deal of the information that has been submitted has been more or less a suspicion or a doubt, without the ability of the individual to lay his finger upon the exact spot. That is why I say that I think a fact-finding committee may have to be set up before this question can be adequately dealt with.

I do not propose to enlarge upon these questions at this time, although I am sharing in certain recommendations respecting the live stock industry and live stock marketing—recommendations, I may say, which were prepared in collaboration with the Ministers of Agriculture of Manitoba and Alberta, and are, therefore, joint representations of those Ministers and myself. I believe you have already heard from Hon. Mr. McKenzie of Manitoba, regarding them and are familiar with the recommendations made. I would like to say in conclusion that if your Committee is unable to make a complete inquiry into the marketings of live stock, I would strongly urge, as expressed in one of the joint recommendations, that you provide for this to be done in such a way as to clarify the situation and help restore the confidence and courage of the live stock producers of this country.

*By the Chairman.*

Q. Are the recommendations as submitted here the same as those submitted by Mr. McKenzie yesterday?—A. Yes.

Q. I do not think there is any need of reading them. Make a note in the record that they are the same.

Recommendations noted as being identical with those submitted in the brief presented by the Hon. D. G. McKenzie before this committee on Tuesday, April 17, 1934.

*By the Chairman:*

Q. Might I ask you one question before you leave these recommendations: it is suggested that further investigation should be made of the effect upon live stock prices of direct purchase figures. This is one of the subjects we have been hammering away at for some weeks. Could you give us anything out of your experience upon that particular subject?—A. I am very much in the position of other witnesses, I have no concrete evidence to support that. I may

say this, however, that it is a very short while ago that the farmers were coming to me complaining that the charges in the stockyards—and undoubtedly in my mind the deviation of live stock from the stockyards to the plants direct has been occasioned somewhat by the dissatisfaction with the treatment that they were getting at the stockyards.

*By Mr. Sommerville:*

Q. But is that a real fundamental reason for the direct shipment, do you think?—A. I am not in a position to state definitely, but I do know that that is part of the reason at any rate.

*By Mr. Young:*

Q. Do you know anything about the charges at stockyards?—A. Something—you mean commission charges.

Q. Yes?—A. Charges to the buyer.

Q. I have here a copy of the statement from Northern Saskatchewan: a farmer consigned a sow from market to the stockyards; she was sold at \$7; there was a condemnation fee of 3 cents; expenses and other charges 87 cents per hundred pounds—\$2.38, a total of \$4.59; then there was a deduction of 5 cents under clause C of a certain contract, and a deduction of 10 cents under clause D of the same contract—membership fee at \$2; so that the farmer got out of his \$7 the total sum of \$2.44.

The CHAIRMAN: That membership fee would be in a co-operative society?

Mr. YOUNG: Yes.

Mr. SOMMERVILLE: And what was the rail rate on that?

Mr. YOUNG: The railway rate would be included in the 85 cents expenses, I think.

Mr. SOMMERVILLE: The railway rate would be about 10 cents per hundred, would it not?

Mr. YOUNG: I do not know what the rate would be on that distance.

*By Mr. Sommerville:*

Q. You are talking of market charges, you are not talking about railway charges?—A. Stockyard charges; for feed, yardage, and commission on sale.

Q. And the commission fee for sales; that is what you were talking of—stockyard charges?—A. Yes. I might say this also in connection with that, that very often you get an unjustified complaint in regard to what the farmer receives for his stock. That is to say he imagines that he is getting a far different article than what it really is. I just had a communication the day before I left to come down here which serves to indicate what I mean: this man in February of 1932 had been offered \$5 per head for five animals that he had. He fed them another year and realized \$4.35 net, after his various charges had been taken off; and on checking back I found that these four animals undoubtedly must have been nearly two years old—they weighed 2,161 pounds, the four of them.

*By the Chairman:*

Q. They were scrubs?—A. Apparently—they were not what you might call quality animals; and there is no doubt, especially in Saskatchewan where we have suffered from feed shortage for a considerable time, that many of the animals have been rushed to market in an unfinished condition.

*By Mr. Sommerville:*

Q. In your recommendations I observe that both your legislature and your department join in the recommendation that packing plants should be

brought under the same regulations as now apply under the Live Stock and Live Stock Products Act—and by that you mean that there should be an independent weigh master at the packing plant to weigh the farmers' produce?—A. I think that would be a good thing, yes.

Q. And that there should be government graders to grade his products when they arrive?—A. I feel that that would be a good thing.

Q. And that the price should be put on the ticket, with its weight, at the packing plant, the same as when it is weighed at the stockyard?—A. I think that is only a natural desire on the part of the producer.

Q. And that all this information should be available to the Department of Agriculture and to the public, in ascertaining both the extent of the market and the prices that are being paid?—A. Yes.

Q. And you think that these things would be in the interests of the producer?—A. Yes. I might say this though in connection with that—I do not know whether I am correct or not—but at that meeting in Winnipeg (Mr. McKenzie can correct me if I am wrong) that Mr. Hunter who represents the packers was there, and stated that they would support legislation that would force all live stock through the stockyards normally. Is that correct?

Hon. Mr. McKENZIE: Not exactly correct, Mr. Chairman; what he suggested was that they would not oppose it.

*By Mr. Senn:*

Q. Before leaving that stockyards question, there is a question I would like to ask: the suggestion has been made that stockyards instead of being under private ownership might very well be taken over by the provincial administrations and operated by them—have you any opinion to express in regard to that?—A. Yes, I have quite a good one: we have enough business to handle now without taking over public stockyards; the government in business is pretty well occupied at the present time.

*By Mr. Sommerville:*

Q. If it is a public utility and a public service why not conduct it through public channels?—A. The legislation is there, and if it is lived up to I do not see any reason why the government should take it over.

Q. May I ask if Mr. McKenzie is of the same opinion as Mr. Buckle?

The Hon. Mr. McKENZIE: Oh, absolutely; I think it would be extremely unfortunate if you had stockyards under provincial jurisdiction, because then you would have varying conditions in every province probably.

*By Mr. Edwards:*

Q. What about Dominion jurisdiction?

Hon. Mr. McKENZIE: I am in favour of it.

Mr. EDWARDS: And Mr. Buckle too.

The WITNESS: Well, that is a good old western pastime.

*By Mr. Kennedy (Peace River):*

Q. With regard to the question of applying the provisions of the Live Stock and Live Stock Products Act, would not you simply be creating a lot of duplication that will have to be paid for by the producers. I cannot understand the value of that. Would it not be just as well to have stock going through the stockyards, where you have the application of this Act, and in that way to control prices and reduce them?—A. Well, that might be the better way, but is a

convenience to the farmer, I think—but duplication, you mean the weigh-master and things of that nature, would be unnecessary.

Q. The more duplication you have the higher the costs are going to be, and if you want the Live Stock and Live Stocks Products to be applied it would seem that the less machinery you have and still keep efficiency in operation with it, the lower your cost would be in the long run?—A. Efficiency in operation is much to be desired, of course.

*By Mr. Sommerville:*

Q. One problem has troubled all the members of this Committee and perhaps you might throw some light upon it: at the present time by direct shipment through truckers the farmers' cattle are graded by the buyer, the price is fixed by the buyer, and the buyer does the weighing at his plant—in the brief submitted yesterday by Mr. McKenzie that was the statement—that it was favourable to the buyer—well, under that system, can you tell this committee why the farmer continues to supply his live stock to the plant?—A. Well, I don't think that I can; I am not an expert on the complexities of human nature. We get the same thing in the trucking-in of eggs from merchants themselves; he goes to sell the eggs to the trucker in direct contravention of the Act itself, and then complains about it. It is probably a matter of convenience to them; but why the farmer with every facility at his control prefers to do that—I never looked inside his head to find out.

Q. It might require a surgical operation? What effect has the trucker upon that situation?—A. I cannot tell you that.

Q. Is he a factor in inducing the farmer to market his live stock in that manner—is he influenced in bringing them to market to the plant as against the stockyard?—A. It is a question of salesmanship, of his ability I suppose to haul it through the market and to get the best price he can for the farmer; and if he can convince the farmer along these lines I imagine, unless he is legislated out of existence, that these conditions will prevail.

Q. While you are here Mr. Buckle as representing the Department of Agriculture; we had some representations from Mr. McQuarry as to the effect upon farm products of the sale of farm products by chain stores as loss leaders—that is, offer them at very low price—and the effect which that had upon prices; have you any observations to offer to this committee in that regard?—A. Except that it prevails.

Q. It prevails?—A. Yes, and I do not think it is good business.

Q. Why not?—A. Well, they naturally want to buy this stuff as cheaply as they possibly can to put it on as a loss leader, so that their loss would be less; and I imagine in some instances they endeavour to beat down the price with ultimate loss to the producer.

*By Mr. Senn:*

Q. Yesterday and to-day certain charts that were shown by Mr. McKenzie and yourself, showed a heavy fluctuation in farm prices, some of them weekly fluctuations, some of them monthly, and some of them extending over longer periods. Have you, apart from the one recommendation of sending off cattle through stockyards, any other recommendations to offset these wide fluctuations?—A. I do not know whether any stabilization of currency would have any effect on that or not, it would, it seems to me no doubt.

Q. Would it be possible for any government agency to set or control prices?—A. There is no doubt that governments could possibly do what they liked—in so far as public opinion would let them.

*By Mr. Sommerville:*

Q. We have the evidence of Mr. MacLean that so far as the export of cattle was concerned, and so far as cattle production is concerned, we consumed in Canada approximately 98 or 99 per cent of the entire production. That is so. What suggestion have you to make as to whether or not a price might be fixed for the sale of cattle?—A. Do you mean in regard to export cattle, or relating to the domestic market.

Q. No, I mean fixing a minimum price for one grade of butcher cattle in Canada on the market?—A. That would depend on the price of what goes to build up the animal, as to whether or not that could be done effectively—the price of grain, and so on and so forth.

*By the Chairman:*

Q. Would you favour a minimum price—for instance, in your charts you gave figures which showed that the price of 1914 lambs was  $8\frac{1}{2}$  cents, and fat steers  $8\frac{1}{4}$  cents, and so on; would you favour a minimum price below which live stock should not go?—A. Well, I think as far as I would care to go in that regard would be this; to say that if a price could be arrived at that would be fairly stable, that would give a satisfactory return to the producer and at the same time keep the consumer satisfied, it might be good business to undertake that. But Mr. Wallace speaking of the States not so long ago, said this, that we have got the producer satisfied, we have got the distributor satisfied, but the lady on the other end is not satisfied—she is the one you have got to deal with ultimately, in the long run—that is, the housewife.

*By Mr. Heaps:*

Q. I wanted to touch on the question of wages; I think you stated you would like to see the wages of the labourer have the same relation to the farmer as what he is receiving for his product—did you make that statement?—A. I said, I would like to see the cost of what the farmer has to buy more in relation with the commodities he has to sell; and labour was of course one of the factors that came into it.

Q. Would you refer then to see a reduction to-day in the hourly rate of labour?—A. I am not saying that, no.

Q. How would you prefer to bring it about?—A. Well, it might possibly be justified—cost of food is cheap in relation to the price of food at the present time—that might be reduced, yes.

Q. That is, labour costs you say might be reduced; or the cost of goods might be reduced?—A. I am of the opinion in regard to what the farmer earns that either farm labour might be brought down, or more nearly to its relative value.

Q. You would favour reduction rates for certain classes of workers I think you said?—A. I think they have been trying for some time to get that; of course the labour unions are pretty strong and they are objecting pretty hard, but they have effected one saving in railway wages, as I understand it.

Q. Here is a chart submitted to the committee this morning. I notice that you have your index prices here on wholesale commodities for the year 1932 as 100?—A. Yes, it got down to the level of 1914 apparently at that time.

Q. You have wages here at 180 at the same time?—A. Yes.

Q. Can you explain why wages were at 180 and wholesale commodities were at 100?—A. No, I cannot; I am not expert enough for that. I have carried these lines out, but if you have an expert here who could dispute my evidence as to where the lines will end, I am willing to be shown.

The CHAIRMAN: Wait a minute, wholesale commodities in the normal sense of the word reflects the position of commodity values quite apart from wages,

and the difference between the two there fairly well reflects the situation from the commodity standpoint.

Mr. SOMMERVILLE: In other words, if labour and farm products both constitute 50 per cent of wholesale commodities then you would have it just on the basic line.

Mr. HEAPS: Here you have it coming down all the time until you get to 1933 here?

Mr. YOUNG: Wholesale prices have been brought down by the reduction in the price of raw materials, not through reduction in wages.

Mr. HEAPS: I would not accept that. If wages are as important a factor as they claim to be in determining the cost of the commodity, I cannot see how they remain at that level while commodities came down the way they did.

The CHAIRMAN: Take commodities that we do not produce except in small commodities in the West—take sugar at that point—sugar was about a cent a pound or three-quarters of a cent a pound, and in 1914 I imagine it would be around 2 cents or a cent and three-quarters—that is a tremendous factor in commodity prices, sugar alone. You could take bread products and their place in Canadian consumption.

Mr. SOMMERVILLE: That would increase everything, agricultural products included.

The CHAIRMAN: Quite so, and I am saying to you that in some of these cases they go away below that line. However, we will have Mr. Coats or one of his experts, come here after they have had an opportunity of examining that chart, and they will make any corrections or changes that an examination would disclose; but I am under the impression you will not find many things wrong with it.

The WITNESS: There is no doubt whatever that one of the important arguments against the contraction of these different lines is when you come to the fundamentals of what the farmer has to buy and what he has to sell—that spread is absolutely there.

*By Mr. Young:*

Q. Have you any figures, or have you made any investigation, as to the wages the farmer receives after his expenses are taken out of the price he is getting; what wages does he get?—A. Zero, I think.

The CHAIRMAN: That is about it?

Thank you, Mr. Buckle.

The Witness was discharged.

The Hon. D. G. McKENZIE, Minister of Agriculture for Manitoba, recalled.

*By Mr. Sommerville:*

Q. In presenting your recommendations yesterday, in dealing with the question of live stock, your very definite recommendations were that the Live Stock and Live Stock Products Act should be made to apply to all abattoirs: would that include the setting up of independent weighmasters?—A. Quite, under government supervision.

Q. And, independent of the packer?—A. Quite.

Q. Employed and paid independent of the packer?—A. Paid by the government.

Q. And the setting up of machinery to put the price on the ticket when the cattle are weighed?—A. Yes.

Q. And the setting up of independent government graders?—A. There is just one point there, in so far as hogs are concerned they are now graded at the packing plants; but it would involve the grading of all commodities in so far as it is government grading.

Q. What about the setting up of duplicate machinery such as Mr. Kennedy has referred to?—A. I would desire to suggest this, Mr. Chairman, that you will notice in the recommendations we make that in the group with respect to which we are asking for further inquiry, we suggest that the whole question of direct shipment to plants should be gone into. If I were to express a personal opinion I would say without hesitation that I would stand for direct shipments to plants (stockyards—see correction) in so far as it is possible to get it; but in the meantime we want to bring our packing plant, because of the fact that they are now functioning almost as a permanent market, under exactly the same regulations as applied to the public yards. The duplication would not be very great.

Q. What would be the effect upon the public stockyards if direct shipments continue to increase for the next five years in the same proportion as they have during the last five years?—A. I think that there you are getting at the very crux of the situation; recognizing the trend of the last five years, the fact that the trend is so definitely to the packing plants means that if it continues for another five years in the same proportion as at present, I think at the end of another five years our public yards would be put out of business.

Q. What effect would that have upon the industry?—A. Absolutely disastrous to the producer.

Q. Why?—A. Because it would eliminate the only competitive market he has.

*By Mr. Factor:*

Q. Well, you favour shipments direct to plants?—A. No, no.

*By Mr. Sommerville:*

Q. In your previous answer, Mr. McKenzie, you said you favoured direct shipments to plants—what you meant was direct shipments to the public yards?—A. I beg your pardon, if I said that, I certainly did not mean to say it.

*By Mr. Young:*

Q. I think he said they would not mind shipments direct to plants, if they had a weighmaster there?—A. As a temporary provision till the whole matter can be looked into.

*By Mr. Sommerville:*

Q. But the loss of the public stockyard you think would be a calamity to the industry?—A. Absolutely—I have no hesitation in saying that.

Q. Perhaps through your knowledge and experience you could give the committee an answer to the riddle as to why the farmer continues to ship to the buyer who weighs grades and fixes the prices; what is the dominating factor there?—A. Well I would say that the dominating factor, if we can so describe it, is the truck driver.

At the request of the Chairman, Mr. Senn took the Chair as Acting Chairman.

*By Mr. Young:*

Q. Why?—A. The truck driver goes into the farmers' yards. His business primarily is getting freight for transportation purposes. He goes into the farmer's yard and gives service to the farmer in that he loads up perhaps in the evening and removes from the farmer the necessity of delivering his stock

to the shipping point; and the farmer ordinarily is not concerned as to where he delivers it, and he leaves it largely to the trucker himself to determine where he goes. I do not want to leave the impression there that all truckers go to packing plants.

Q. I quite understand that?—A. Some of them go to the public yards, and I imagine many of them will take instructions from the shipper, but in the absence of these instructions the trucker, I think, is largely responsible for the growth of direct shipments to plants.

*By Mr. Factor:*

Q. I just want to ask this question: I received a letter from the drover on this question of direct shipments to plants and stockyards, and here is what he says, "The drovers of this country are not dumbells. They sell where they can get the most money. It is better for farmer, also for themselves, or they would not be selling direct to the plant. I have been buying shipping for twenty-five years and I think I sell at least 90 per cent of my hogs direct to the plants. My experience has been the packer will pay me as much direct as he pays on the market, and why should I pay \$10 to some commission house to sell them. When you do sell them through a commission firm, they often tell you what packing house to bill the car into. Supply and demand will rule all market prices. It is the law of nature and no man-made laws can change it." What is your reaction to that?—A. I would say that that is a perfectly valid defence for short-haul shipments, that is to say within 50 to 60 miles of the market, where the farmer can move his stuff directly within two or three hours. In cases such as that I think the defence is perfectly sound. On the longer hauls sales through the yard are on a basis of fed-and-watered, and I think the farmer then gets more by reason of the fed-and-watered basis than what he saves in yardage charges by going direct to packing plants. But apart from either of these features, I am tremendously disturbed about the present trend, and I hold the view very strongly that the maintenance of public yards is absolutely essential to the future of the industry. If the present trend keeps up, instead of 50 per cent of our hogs going to packing plants, we will find 90 per cent of our stock going direct. Our public markets can not then function, and in the absence of their functioning, the only competitive market the farmer has is lost to him entirely.

*By Mr. Young:*

Q. What do you say to the paragraph read from a letter by Mr. Factor—complaints by the shipper that the commission firm tells him to bill direct to the plants?—A. I do not know what the answer to that is, I do not know what the circumstances are.

Mr. EDWARDS: Would they not have the value of competitive prices?

*By Mr. Sommerville:*

Q. Yes. The commission man may have sold them and had them bill direct to the plant for slaughter?—A. Yes.

Q. I think that is one of the things Mr. Oswin said, that at times they were able to get better prices for the drovers and told them to ship direct to the plants. There was some reference to a conference that took place at Winnipeg with the packers on this question of direct shipments. Will you give us the benefit of the answer that was made by them to your representations?—A. The conference referred to was immediately held in Winnipeg, I think on the 20th December; a meeting called by myself, and all those interested in the live stock industry, including the packing plants, the railways, the departments of agricultural both provincial and federal, the commission firm and representatives of producers.

Q. Yes?—A. It was a conference in the strict sense of the word. It was not intended to arrive at any decisions that day; it was rather the representatives of the various branches of the industry discussing quite frankly the whole circumstances of doing business. At one stage in the afternoon, as I recall it, the question was asked of representatives of the packing plants if they would oppose or support legislation designed to force everything going directly to the yards. As I recall it now, the answer given was that they would not oppose such legislation.

*By the Acting Chairman:*

Q. You heard the question I asked Mr. Buckle in regard to price fluctuations and matters of that nature, which I think you emphasized quite strongly yesterday in your chart. Have you any suggestions to offer, other than what have been offered, regarding the stabilization of prices or control of prices by governmental agencies, public utility commissions and so on?—A. If you will take anything I say as a personal opinion only, I doubt, frankly, very much the value of any attempt to fix prices, even minimum prices. I doubt it very, very much. For instance, if you attempt to fix a minimum price for beef, the price, if it was based on the costs of production, in itself would be very desirable perhaps, but it would only have value if the beef would sell at that price. If that price was out of line with the price of other foodstuffs, you would not get any consumption of beef and consequently you would not help anybody.

Q. In a position such as this where, as you stated, the price of these farm products largely depends on the price obtained for the exportable surpluses, would you be in favour of any attempt to lift those surpluses and reimburse those who were lifting them or those who were ordered to lift them?—A. Well, as far as I have thought my way through the problem, again I have got to say that I am not convinced as to the merits of any scheme of that kind. What I do subscribe to without any hesitation is contained in the one sentence that was repeated several times in my brief, that consideration must be given to ways and means of getting back to the producer the biggest possible proportion of the dollar that the consumer pays?

Q. These questions I was asking were along that line; the means is what we want to ascertain, and we want suggestions as to what those means should be?—A. Yes.

*By Mr. Sommerville:*

Q. Mr. McKenzie, yesterday in your brief you referred to bonding shipping agents and drovers et cetera. Do I understand that under the term "shipping agents" you include truckers?—A. Yes, because most of those truckers are shipping agents.

Q. There is no reference to that in the brief?—A. Not specifically.

Q. Not to that specific point, and I just wanted to clear it up?—A. Yes.

Q. Perhaps you can give us the benefit of your advice as to whether or not there is price fixing between the limited factors on the market?—A. Again, sir, I am pretty much in the position that Mr. Buckle finds himself in. It is exceedingly difficult to prove anything in that respect, but the general circumstances of the situation would suggest that at least there is some influence operating that does definitely regulate prices.

Q. What do you mean by that, Mr. McKenzie?—A. Well, I don't know how I can make it any clearer than that.

Q. You say there are influences; influences between whom?—A. Well, influences in between the final consumer and the producer of the product.

Q. Who are your largest buyers on your market?—A. The packing plants.

Q. What do you say as to whether or not there is any measure of price fixing between the packing plants?—A. I would say there is. I think it is

extremely natural that they would endeavour to buy as closely as possible; and while at times there is, I think, competition, I am disposed to think that at other times there may not be. But again, I think your committee should examine one other factor that is related to that. I cannot just say how far the packer can influence prices in respect of certain meat commodities. Generally speaking, I think he has to buy on a replacement basis, and under the conditions that he sells to-day as compared, perhaps, with conditions that he sold under a few years ago, I am not just sure that he is in a position to determine very definitely his own selling price, because he is selling to-day perhaps to a limited number of customers that buy in large quantities, as against a very large number of customers a few years ago that were buying in relatively small quantities.

Q. Perhaps you will develop that a little further. You are referring to chain store buyers, are you?—A. Yes.

Q. Will you develop that, because I understand that may be the crux of the whole situation. Is there a price domination or price dictation or price control from that end, that reflects back through the packer on the price paid for the stock?—A. Well, may I answer it rather indirectly, and put up a suppositious case? Here is a packer with a certain quantity of meat to sell, that he can only retain for a limited period of time. If he has got two hundred buyers coming to him daily to take one or two carcasses from him, it does not mean very much to him if he is able to say to the buyers, "You can have the carcasses for such and such a price." As opposed to that, today he has perhaps ten or twelve large buyers that come to him and they say, "We are not buying two or three carcasses, we are buying two or three hundred carcasses." The quantity and the demand is such that it makes it extremely attractive to the packer and there, instead of the packer saying, "My price is so and so," the buyer, perhaps, says to the packer, "I will pay you so and so." If he does say that, the packer in turn is forced to go back to the producer and buy his replacements on the basis of the price offered by his own customers.

*By the Acting Chairman:*

Q. Do you think that that accounts for the price fluctuations, largely?—A. I would not like to say positively that it does, but I do think that it is a factor.

*By Mr. Factor:*

Q. What is the solution, Mr. McKenzie?—A. I don't know. I take it that that is the work of this committee.

*By the Acting Chairman:*

Q. That is the crux of the whole situation, and I think you will admit that, will you?—A. It is a very important factor.

Mr. SOMMERVILLE: You will remember that Mr. MacLean stated to us that they got what they could for the product; they take what is necessary for the processing, plus a reasonable profit, and whatever is left goes back to the farmer. Now, if it is as you say, the buyer who says, "This is my price," that may be the crux of the whole thing.

Mr. FACTOR: You would not expect the buyer who buys 200 carcasses to pay the same price as the buyer who buys one.

*By the Acting Chairman:*

Q. You made a statement, Mr. McKenzie, that you did think there was a certain amount of price fixing going on somewhere in there. What organization, for instance, would have a better right to fix prices than a governmental body that could exercise at least some control over it? I am not saying that they should arbitrarily fix prices, but could there not be some control exercised?—

A. Yes, I think there might be some control. I don't know just how you could exercise it, but the desire I would have is to make your market as competitive as possible, to permit within the confines of the market the greatest possible length of free competition.

Q. How are you going to have competition when there are only three or four large buyers operating on the live stock yards? Is there not too much danger of collusion there?—A. I think there are possibilities of collusion, and it may be necessary to exercise some regulative authority in there. How it will function, I cannot tell you.

*By Mr. Kennedy (Peace River):*

Q. I don't suppose it is necessary to ask you this, but maybe I had better because I want to follow it up. You agree that there must be some improvement in the price of farm products?—A. That is extremely true.

Q. You cannot go on producing at the present levels?—A. Well, I suppose they could go on.

Q. Do you think there is any real danger in fixing a minimum price on the better quality of farm cattle and hogs, for instance,—danger of interfering with someone?—A. I think it is a question of determining where your minimum should be.

Q. It should be higher than the present price, anyway?—A. Well, perhaps it should. But if you get it above too high a price—take for instance the position of pork in the Winnipeg market to-day. Pork products have gone up. The price of hogs have gone up substantially in the last few months.

Q. As compared with cattle?—A. Yes, compared to cattle. As a consequence of that, pork products sold from the packing plant have also gone up, and one of the packers told me in Winnipeg—

Q. No more than what is justified by the rise in hog prices?—A. I could not say as to that. I assume it has some relation to the hog price that is prevailing. One of the packers told me the other day before leaving Winnipeg that their sale of hog products had dropped off 50 per cent in the last two or three months, and the people were now turning to beef. I think that is so, because the general price level of beef on the Winnipeg market, taking the whole run of grades, is practically up a cent a pound.

Q. Do you think if the beef prices had been substantially raised close to pork, it would have resulted in a general decrease in the consumption of meat products?—A. Yes, they would have turned to more eggs.

*By Mr. Factor:*

Q. That is the danger?—A. Yes; and we have a lot of fish in Manitoba.

*By Mr. Kennedy (Peace River):*

Q. In order to get prices up, do you think we need to increase the consuming power of the people of Canada?—A. Yes, absolutely.

Q. Through monetary policy or any other policy?—A. I refuse to be drawn into a discussion of monetary matters.

Mr. FACTOR: I could suggest another remedy

Mr. KENNEDY (Peace River): All right, suggest any remedy.

Mr. FACTOR: A change in government. It all depends, ultimately, on the consumer.

*By Mr. Sommerville:*

Q. Mr. McKenzie, we had had a great deal of evidence voicing objections to the basis of selling hogs on the fixed differential, and favouring the selling of them on a quality basis, according to separate grades. Would you like to

express an opinion to this committee in respect to that?—A. I mean, a fixed differential on the cuts, not on the selects?—A. I was going to make that classification. I think it is necessary, in order to secure a quality product, that a premium should be paid for quality products. But I am not sure but what the producer is losing by reason of the fixed differential on the lower grades. Again I would like to suggest to your committee that you consider the possibilities of auction sale as a means of securing for the producer the full value of his lower grades of hogs.

*By the Acting Chairman:*

Q. That is in the stockyards?—A. Yes.

*By Mr. Sommerville:*

Q. As to the question of the premium, have you any observations to make as to which is the better plan, a fixed premium or selling of the hog on its merit for whatever it will bring in the matter of a premium?—A. I do think there is a real value in a fixed premium for a quality product.

Q. Have you any observations as to whether the premium of one dollar now fixed is sufficient, in view of the demand for first-class products in the British market?—A. I would like to see it a little more but for this danger, Mr. Chairman: If that premium was widened, I would like to know that it was not widened at the expense of the producer who is not fortunate in marketing a quality product.

Q. At the expense of him?—A. Yes.

Q. If the cuts were increased below that level?—A. Exactly.

*By Mr. Kennedy (Peace River):*

Q. We had some evidence here regarding lower grades of cattle being marketed through the yards. It was suggested by one witness that if five or ten per cent of the lower quality cattle were taken off the market and used for fertilizer or put in tanks or something of that sort, that it would leave the supplies of cattle in Canada substantially just about enough to meet the demand of the Canadian market. Do you know if that would create a great hardship on certain people who are putting low grades of cattle on the market through lack of feed, or do you think there is sense in the proposal?—A. Well, I don't know. It would all depend upon what the details of the proposal were. I would say this from my own observation in my own province: the problem of salesmanship is never a problem in so far as quality products are concerned. The problem is always to sell the off-grade stock. Unfortunately we have got far too great a percentage of poor grade meat products coming into our primary markets. That brings up a problem that is essentially a problem of the Department of Agriculture in the respective provinces.

Q. Could a grading system be made to apply with regard to cattle, something similar to what we have in the hog trade?—A. I think in part, yes. If you could again establish premiums for quality products, the tendency would be to encourage and secure the greater production of quality products and a smaller production of off-grade stuff.

*By Mr. Sommerville:*

Q. Would it be an improvement if your beef were classed as grades, so that the public might know when they were buying grade "C", that they were buying poor grade beef?—A. Well, again sir, accepting my answer as only personal, because that is one of the questions we have asked you to investigate, I do think it would help consumption substantially if beef were so graded that the customer knew exactly what he was buying.

*By the Acting Chairman:*

Q. Would that not entail the expense of an army of inspectors?—A. I don't think so. The beef would be stamped when it is leaving the packing plants.

The ACTING CHAIRMAN: There are complaints about this blue and red label beef being sold in Winnipeg, and the stores purporting to sell that class of beef while they only have a sample.

*By Mr. Sommerville:*

Q. But the beef is stamped?—A. It would be stamped, all of it stamped, as it left the packing plants, and they could not do that. They can do it now by reason of the fact that there is only the two top grades stamped and everything else is not stamped. Therefore when it comes onto the counter, if the merchant so desires he can say to his customer, "There is a sample of blue ribbon beef or red ribbon beef, and there it is," and he may sell that. That is one of the difficulties at the present time, because they sell inferior quality of beef as good beef, and then the reputation of our good beef is spoiled.

Mr. SOMMERVILLE: There is a great deal of dissatisfaction.

*By Mr. Edwards:*

Q. It has been drawn to my attention that in Manitoba, under the Public Utilities Act, you have fixed the price of milk, for instance?—A. Yes, fixed the spread.

Q. Would it not be possible under the same act to stabilize the price of beef?—A. I don't think the parallel is a good one, because milk is a peculiar product. The application of that provision is confined to one small district, a comparatively small district.

Q. The Winnipeg area?—A. Yes, the Winnipeg area. I don't think you could apply that legislation successfully to the province of Manitoba.

*By Mr. Sommerville:*

Q. It was made necessary by reason of the unbridled competition that existed in the milk business, reflecting back on the producer?—A. Perhaps more particularly competition in the distributing of the milk.

Q. Competition in the distributing of it?—A. Yes.

Q. That is in the sale in stores at low prices?—A. Yes. We had distributors that cut prices.

Q. The distributors cut the prices?—A. The distributors cut the price; they were making milk a leader in their stores. They cut prices to the point where the producer of the milk got no return at all comparable to his cost of production.

Q. All right, thank you.

The witness was discharged.

Mr. SOMMERVILLE: We have Mr. Wright here, president of the Western Live Stock Union, but as the committee is not meeting this afternoon, Mr. Wright will not be called until the morning.

Mr. FACTOR: What have we to go on with?

Mr. SOMMERVILLE: Mr. Wright, and a number of other witnesses on live stock.

The ACTING CHAIRMAN: We will adjourn until 11 o'clock to-morrow morning.

The committee adjourned at 12.50 p.m., to meet on Thursday, April 19, at 11 a.m.

DESCRIPTION OF ARTICLES COMPRISING THE SEARLE INDEX OF THE  
"THINGS FARMERS BUY"

## MEMORANDUM

## RE DATA USED IN CONSTRUCTING THE SEARLE FARMERS' INDEX CHART

*Submitted by the Dominion Bureau of Statistics, April 25, 1934*

1. *Wheat*.—The line shown for wheat represents the street price. It indicates values at the country elevator, and therefore does not reflect changes in transportation costs, handling charges, etc., which appear in the usual exchange quotations made upon a Fort William and Port Arthur in storage basis. The crop year ending July 31 has been used for the purpose of calculating annual average wheat indexes shown on the Searle chart, although other lines with the exception of taxes, appear to be based upon calendar year averages.

2. *Bacon Hogs*.—This index is based on Winnipeg quotations. Before September, 1929, it probably represented thick smooth hogs, since the description bacon hogs was not used prior to that time. The change in descriptions will affect the index very little.

3. *Butcher Steers*.—Yearly averages of Winnipeg prices have been used to compute this index. Its movements differ for short intervals from Bureau of Statistics records, which in 1920, for example, show an increase for cattle both at Toronto and Winnipeg, while the Searle index drops about 10 points. In more recent years, this index moves in line with other similar price series.

4. *Handyweight Lambs*.—This index also appears to have been based upon Winnipeg yearly average prices and is representative of actual market movements.

*Wholesale Commodities*.—The Dominion Bureau of Statistics index number of wholesale prices converted to the base 1913-1914 = 100 has been used to represent wholesale prices. This series contains 236 items between 1913 and 1926, and subsequently includes 502 items. It is weighted upon the basis of total amounts of commodities exchanged in the base year, which at the present time is 1926.

*Things Farmers Buy*.—It is not possible to make definite statements concerning this index without knowing more about the weighting system employed. Weights (as far as we know unpublished to date) have been computed upon the basis of estimated western farm purchases in 1914, which is a reasonable procedure. It would probably result, however, in the underweighting of such items as gasoline, kerosene, power machinery, etc., in indexes for the past fifteen years. Such comparisons as it has been possible to make, point to the conclusion that several of the sub-group indexes in recent years have been moving on too high a level (foods, clothing, household equipment, and farm machinery). The index for taxes on the other hand, which is included in "Things Farmers Buy," has declined in 1930 and subsequent years by about 30 per cent, whereas other data available would indicate that the decrease did not begin until 1931 and that it has been considerably less than 30 per cent. An index of farm taxes in Ontario constructed by the Agricultural Economics Branch of the Dominion Department of Agriculture reached a high of 115.8 in 1930 and had dropped to 99.1 in 1932 (1926 = 100). This index is corroborated by returns made to the Dominion Bureau of Statistics by 392 farmers in all parts of Canada. An index based on these returns (1928 = 100) was high

at 103·8 in 1930 and in 1932 stood at 93·3. Even a further 10 per cent decline in 1933 as indicated by the Searle index would still leave the total decrease well under 30 per cent.

These apparent discrepancies would exert an offsetting influence in the final index of "Things Farmers Buy," which otherwise seems to represent a careful piece of work.

*Labour Wages.*—This index is the work of the Dominion Department of Labour, not of the Dominion Bureau of Statistics as stated in the evidence. It is computed from unweighted averages of rates in the following trades: Building, metals, printing, electric railways, steam railways and coal mining. Since it makes no allowance for short-time, overtime, sickness, lay offs, etc., it cannot be used correctly as a measure of labours' earnings. As the output per wage earner is now much greater than it was before the war, neither is it correct to use this index as indicative of changes in the manufacturers' labour cost per unit of production. (Between 1917 and 1930 the physical output per wage earner increased 44·5 per cent—Canada Year Book, 1933—page 451.) We believe this index provides a good measurement of wage rates as such, but not of earnings or changes in manufacturers' labour costs.

## MEMORANDUM ON RAILWAY WAGES

*Submitted by the Dominion Bureau of Statistics April 25, 1934*

Department of Labour report No. 17 deals with rates of wages and not actual wages received; the element of hours worked per day, per week or per year is not included. Railway rates of labour were increased considerably during 1918, 1919 and 1920 and declined in 1921 and 1922, rising again in 1927-29 and falling in 1931-33. On page 72 of this report the average hourly and annual wages for different classes of railway employees are also shown. These averages are computed by dividing the total wages paid by the average monthly number of employees. The employees are counted each month and the sums of the 12 counts are divided by 12. Thus 18 men working 2 months and earning \$200 each would give 3 men working a year at \$1,200 per year. The same average of \$1,200 per year would be computed for 9 men working 4 months and earning \$400 each, or 4 men working 9 months earning \$900 each, or 6 men working 6 months, etc. In other words these averages are per position and not per individual.

The error in considering these averages as actual wages earned per man is indicated by a comparison of 1930 averages and the wages reported by individuals in the 1931 census. A comparison without corrections for the difference in periods covered indicates that the average wages reported by railway conductors and engineers were between 70 and 80 per cent of the annual average wage per position.

Gross earnings of Canadian railways in 1913 amounted to \$243 million and in 1932 to \$293 million. Total wages in 1914 amounted to \$112 million, in 1932 to \$174 million (wages of outside operations, on capital account, etc. not in 1914 are deducted in 1932 from total data) and the number of employees in 1914 was 159,142 and in 1932, 126,786 (1932 data are adjusted as in wages). Thus the average wage per position per year increased from \$702 in 1914 to \$1,369 in 1932, or by 95 per cent. It is not possible to compute the reduction in this due to the difference in short time worked, but it is known that the short time in 1932 was considerably greater than in 1914. If the ratio of 70 to 80 per cent be used, and possibly in 1932 it was even lower, the actual increase in average annual wages for all classes of railway employees would be from 37 per cent to 55 per cent. The ratios of operating pay roll to gross operating revenues were as follows:—

	Per cent
1914.. . . . .	46
1919.. . . . .	55
1925.. . . . .	52
1929.. . . . .	49
1932.. . . . .	56

HOUSE OF COMMONS, ROOM 368,

April 19, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock a.m., Hon. H. H. Stevens presiding.

Mr. Norman Sommerville, K.C., of Toronto, and Mr. W. W. Perry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. The minutes this morning simply refer to what took place in the committee, the witnesses we heard and the filing of certain charts which were included in the evidence of last meeting. I declare the minutes approved. The witness this morning is Mr. Alexander MacKenzie, of Toronto.

ALEXANDER MACKENZIE, called and sworn.

*By Mr. Sommerville:*

Q. Mr. MacKenzie, you are a wholesale butcher?—A. Yes, sir.

Q. Operating at Toronto?—A. Yes, sir.

Q. And you do your killing at the Toronto Civic Abattoir?—A. Yes, sir.

Q. And how long have you been engaged in that business as an independent?—A. Since the first of June last year.

Q. Since the first of June last year?—A. Yes.

Q. Prior to that time whom were you with?—A. Canada Packers.

Q. And how long had you been with Canada Packers?—A. Five years.

Q. From the date of the merger?—A. I could not exactly give you the date.

Q. Were you there at the time of the merger?—A. Yes, sir.

Q. And you had been with them until the 1st of May last?—A. The 1st of June last.

Mr. FACTOR: Were you with them before the merger?

Mr. SOMMERVILLE: I am going to carry that further.

*By Mr. Sommerville:*

Q. Prior to the merger, whom were you with?—A. Gunn's Limited.

Q. How long were you with Gunn's Limited?—A. Twenty-two years.

Q. So that you had been twenty-two years in Gunn's and then some five or six years with the merger, since the date of the merger?—A. Yes, sir.

Q. And what was your position in Gunn's Limited at the time of the merger?—A. Manager of the beef department.

Q. In that department did you have charge of the buying of beef or cattle for Gunn's Limited?—A. Yes, sir.

Q. And had for a large number of years?—A. Yes.

Q. And in that capacity did you have the buyers under your direction?—A. Yes, sir.

Q. That is to say, in each packing plant the head of the beef department has charge of the buyers for that department?—A. Yes, sir.

Q. And he gives directions as to the quantities to be purchased, and his requirements?—A. Yes, sir.

Q. And does he settle on the prices that are to be paid?—A. As a rule, yes.

Q. That is he gives instructions to the buyers?—A. Yes.

Q. So it is from the head of the beef department that the beef buyers would get instructions?—A. Yes, sir.

Q. And I suppose from the head of the hog department the hog buyers would get their instructions?—A. Absolutely.

Q. And when you were in charge of the beef department in Gunn's, were you also in charge after the merger; did you remain in charge at Gunn's after the merger while Gunn's was operated as a separate unit?—A. Yes, sir.

Q. And how long after it was operated as a separate unit did you continue to be in charge of the plant, as a unit—would it be a year or two, after the merger?—A. After the merger? About two or three years.

Q. And then what position did you take in Canada Packers?—A. I was manager over the live stock buying.

Q. With the merger?—A. Yes, sir.

Q. And you continued in that position for some years?—A. Yes, sir.

Q. And in that position you had charge of the buyers of cattle who were under you?—A. Yes, sir.

Q. Did you have any control or direction over the hog buyers?—A. No, sir; none whatever.

Q. You were limited to beef and sheep?—A. And lambs and calves.

Q. How many buyers would you have under you in the merger?—A. Over the system or in Toronto?

Q. In Toronto?—A. About eight, more or less; I do not remember offhand.

Q. And when you are referring to the system, how many would you have in the system?—A. Oh, it is hard for me to give you that correctly, sir; they are spread all over the Dominion.

Q. But they all report to headquarters—the various departments of Canada Packers throughout Canada would report to headquarters their daily purchases, would they?—A. Pretty well, yes.

*By Mr. Senn:*

Q. Did the buyers buy cattle alone? Get my question clearly: did the same buyer buy cattle and sheep?—A. No, sir.

Q. There was one buyer for cattle and one buyer for sheep?—A. Yes.

*By Mr. Sommerville:*

Q. Let me understand this matter. There are certain buyers who definitely buy cattle and cattle alone?—A. Yes.

Q. And there are certain buyers that buy sheep and sheep alone?—A. Yes, sir.

Q. And there are certain buyers that buy hogs alone?—A. Yes, sir.

Q. And there are certain buyers who buy calves alone?—A. No, the same buyers buy sheep, lambs and calves.

Q. So that these are now in fairly separate departments as far as buying is concerned?—A. Yes, sir.

Q. You were in charge of all except the hogs?—A. Yes.

Q. You operated then on the Toronto market—or rather the men under you operated on the Toronto market?—A. Yes.

Q. Which is, I understand, across the road from the plant of Canada Packers?—A. Yes, sir.

Q. Canada Packers are on the north side of St. Clair avenue opposite the Union Stock Yards?—A. Yes, sir.

Q. And I understand there are two plants there—Gunn's plant which was an independent plant prior to the merger?—A. Yes, sir.

Q. And the Harris plant was an independent plant prior to the merger?—  
A. Yes, sir.

Q. And were those the only two plants that had formed part of the merger now that were located on St. Clair avenue?—A. Yes, sir.

Q. Those two. Then, Mr. MacKenzie, how did you arrive at the price to be paid for cattle at the Toronto stockyards? What was your procedure? How did you arrive at the price?—A. It all depended on what we had on hand by that day before we went on the market on Monday morning.

Q. And before going on the market on Monday morning did you have a meeting at your plant?—A. Always.

Q. To consider the price to be paid that day?—A. Pretty well, sir.

Q. And that meeting would consider the price to be paid that day, and the quantity to be purchased?—A. Yes.

Q. And would take into consideration all your requirements?—A. Yes, sir.

Q. Who would be present at that meeting?—A. The head buyer, the head of the beef department, the head of the small stock department and the head of the small stock buying department.

Q. And yourself?—A. And myself.

Q. And at that time would you settle on a price to be paid for various classes of stock to be bought?—A. Pretty well, yes.

Q. And then, following that meeting, did you ever have any communication with any other packer before you went on the market?—A. Yes, sir.

Q. What communication did you have?—A. Talked things over in general and decided on a policy sometimes.

Q. Yes, you talked things over in general and decided on a policy, with whom?—A. Swift Canadian Company.

Q. And did you discuss prices to be paid that day at that time?—A. Sometimes we did, sometimes we did not. We talked about the trend of the market, if the trend of the market should fall.

Q. These meetings took place after the merger?—A. Yes.

Q. Had you any such meetings prior to the merger?—A. Never.

Q. Was there any communication by your company with Swift's prior to the merger?—A. Never.

The CHAIRMAN: You are referring to Gunn's?

WITNESS: Yes.

Mr. SOMMERVILLE: That is when you were in charge of the beef department at Gunn's?

WITNESS: Yes.

The CHAIRMAN: There was never any conference then?

WITNESS: Never.

Mr. FACTOR: Was there any conference with Harris or anybody else?

WITNESS: No, sir; no, it was good open competition then.

*By Mr. Sommerville:*

Q. Then you say that at those discussions that took place when you got in touch with Swift's you would discuss the trend of the market; and would you settle on the price, or intimate to them the prices you were going to pay that day?—A. Not always; on some classes of cattle, yes.

Q. And would you have any agreement with them as to the price that was to be paid by both of you when going on the market?—A. Not always; sometimes we would.

Q. And would you discuss with them the proportion of cattle that were to be bought by each of you each day—the percentage of cattle?—A. That was pretty well understood as to what percentage each house killed, Mr. Sommerville.

Q. It was pretty well understood what proportion each house would kill?  
—A. Yes, sir.

Q. What were the proportions that were killed?—A. That used to figure about 68 per cent and 32 per cent.

Q. 68 per cent for Canada Packers?—A. Yes.

Q. And about 32 per cent for Swift's?—A. Yes.

Mr. FACTOR: Are Canada Packers and Swift's the only packing plants you take into consideration in that figure?

The WITNESS: They were at that time, yes. That is large packers, I mean.

Mr. SOMMERVILLE: As between the two of them, at any rate, that was the proportion of your respective kills?

The CHAIRMAN: Mr. Factor's question was a proper one, but not quite clear. I think you had better make your question clear.

*By Mr. Factor:*

Q. There are other packing plants besides Swift's and Canada Packers, are there not?—A. Not in Toronto, there isn't. There is now. There was not then.

Q. What time are you speaking of when you fixed the proportion at 68 per cent and 32 per cent?—A. We did not fix it at all, but that was considered—it was not fixed, no, but that was considered the basis of buying for each plant.

Q. What year are you speaking of now?—A. What year?

Q. Yes?—A. I am speaking of 1931 and 1932.

Q. And during those two years, you say, in Toronto there were only two packers—Canada Packers, the merger, and the Swift Canadian?—A. Yes, the packers, yes; that is in the beef business.

Q. Were there no other packers in the beef business?—A. There were some small operators, municipal abattoirs.

*By Mr. Senn:*

Q. Independent packers?—A. Yes, independent packers. They were not straight packers. They were just small wholesalers.

*By Mr. Factor:*

Q. When you speak of 68 per cent and 32 per cent between the Canada Packers and Swift's, you mean of the total number killed by the two?—A. Yes.

Q. There was a certain volume killed by the independent small ones?—A. Yes.

Mr. SENN: Mr. Sommerville, would you call attention to that, and ask if the proportion of grades bought by the different packers were considered?

Mr. SOMMERVILLE: Yes.

*By Mr. Sommerville:*

Q. Will you tell us, Mr. MacKenzie, if the question of the grades bought by the different packers was considered?—A. No.

Q. That was left to the independent buyers?—A. Yes.

*By Mr. Young:*

Q. One company is going to take 68 per cent and the other 32 per cent of the market?—A. No.

Q. Have you any understanding that you will take those proportions?

The CHAIRMAN: Of the market?

*By Mr. Young:*

Q. No, what they purchased?—A. No.

Q. You have no understanding?

The CHAIRMAN: You have got the witness mixed up.

Mr. SOMMERVILLE: Let me explain this.

*By Mr. Sommerville:*

Q. Mr. MacKenzie, what you say is that the relative position between Canada Packers on the one hand, and Swift's on the other, was that Canada Packers' kill represented 68 per cent and Swifts' represented 32 per cent?—A. Yes.

Q. The two, between them, made up 100 per cent of the kill?—A. Yes.

Q. Of the two?—A. Yes, of the two.

Q. And between the two, that was the proportion in which they had been buying?—A. Yes.

Mr. YOUNG: There was no understanding that that proportion must be maintained.

*By Mr. Sommerville:*

Q. That represented the numbers, did it, of cattle killed?—A. Yes.

Q. It didn't necessarily represent the value?—A. No.

Q. Was this proportion watched, as between Canada Packers and Swift's, to see that each was living within or keeping within its proportions?—A. Naturally.

*By Mr. Young:*

Q. You said a moment ago that there was no understanding that that was to be maintained—that there was no understanding about that?—A. Well, I didn't. You didn't get me right. I didn't say that.

Q. What I want to know is this: was there an understanding between Canada Packers and Swifts that Canada Packers would take 68 per cent to Swifts' 32 per cent?—A. There was no understanding, but it was quite understood through the killings that that was their actual killings from time to time. They always wanted to maintain their volume, their percentage.

*By Mr. Sommerville:*

Q. Each of them wanted to maintain their own volume?—A. Yes.

Q. Each watched the purchases from hour to hour, to see how you were maintaining your volume?—A. Yes.

Q. How was that done? How were you made acquainted with that?—A. We had what we considered a runner there, getting the number of cattle weighed at certain hours, for each house.

Q. For each house?—A. Yes.

Q. That is, you had a runner at the weigh scales?—A. Yes.

Q. And as the cattle went over the weigh scales, he kept track of them?—A. Yes.

Q. And he reported to you, every hour or so, the purchases made by Swifts and the purchases made by your own plant?—A. The purchases made by everybody in the market, pretty well.

Q. And the prices at which they were purchased?—A. No.

Q. He didn't report that to you at that time?—A. No.

Q. Was that with a view to maintaining your volume on the market?—A. Yes, pretty well.

Q. And if you were getting more than say 68 per cent, as a result of the report after the end of an hour's operations, what then would you do?—A. We would naturally lay back and give them a chance.

Q. You would lie back and let the other fellow get a chance to get his percentage?—A. Yes.

Q. And if he was getting more than his percentage, what would he do? Well, there was only one thing to do, that is for the other fellow to go out and bring his up, and you lay back for a while.

*By Mr. Young:*

Q. Had your prospective sales nothing to do with your purchases? Didn't you consider what meat you could sell when you were buying?—A. That was all arranged before the cattle buyer went on the market, if you have any understanding of live stock buying.

Q. Well, I have not. Explain that, please?

Mr. SOMMERVILLE: I will clear that up, Mr. Young.

*By Mr. Sommerville:*

Q. Before ever you went on the market, you set out what your purchases would amount to, what your total purchases would amount to in your plant?—A. For the day and for the week, yes.

Q. And in arriving at that amount, you took into consideration what your prospective sales were?—A. Absolutely.

Q. And that was a fundamental factor with you?—A. Yes.

Q. And then having settled on that, you say you then went on the market and bought whatever quantity you required?—A. Yes.

Q. And bought in the proportion of 68 per cent of yours to 32 per cent of Swifts?—A. As nearly as possible.

*By Mr. Factor:*

Q. Did you ever discuss with Swifts your requirements; I mean, in regard to your selling capacity?—A. No.

Mr. SOMMERVILLE: That was a recognized figure on the market, and had been for some years.

*By Mr. Senn:*

Q. Just one other question there, Mr. Sommerville; was that same procedure followed whether there was a surplus of cattle on the market or a shortage?—A. Pretty well, yes, sir.

*By Mr. Sommerville:*

Q. In addition to discussing the prices with Swifts before you went on the market, did you discuss with Swifts the percentage of cattle that would be bought to-day and the percentage that would be bought to-morrow, at any time?—A. No, sir.

Q. You didn't arrive at the amount that would be bought each day?—A. No, sir.

Q. You just arrived at the prices that you were going to pay on the market?—A. Not quite concrete, Mr. Sommerville; not quite concrete prices to be paid, but as near that point as possible.

Q. As near what?—A. As near what the market demanded or what the trade would demand, what the outlet would demand, would stand for.

Q. Then before you instructed your buyers to go on the market, you had some kind of understanding with Swifts as to general prices that would prevail.

Q. On the market that day?—A. Yes.

Q. And you would instruct your buyer to keep as close to that price as possible?—A. Yes.

Q. How often were those meetings held that you have referred to? How often each week would they be held, the meetings inside your plant?—A. Every market day.

Q. Every market day?—A. Every market morning.

Q. How often would you communicate with Swifts? Or shall I put it this way: Did you communicate with Swifts after practically all of these meetings?—A. Pretty much, sir.

Q. Was it a generally accepted practice in the merger while you were there?—A. Yes.

Mr. ILSLEY: Whom did he communicate with?

*By Mr. Sommerville:*

Q. How was the information or the decision that you had arrived at in these meetings indicated to Swifts?—A. By telephone.

Q. By telephone?—A. Yes.

Q. To what official in Swifts would it be communicated?—A. Their head buyer.

Q. Their head buyer—A. Yes.

Q. And would you get from Swifts their intimation as to their views on the market?—A. Pretty well, yes, sir.

Q. And their understanding as to the price to be paid?—A. Yes.

*By Mr. Factor:*

Q. Was the process ever reversed? Did Swifts ever communicate with you?—A. Not as a rule.

Q. As a rule you would initiate the procedure?—A. Take the initiative.

Q. And communicate with Swifts?—A. Yes.

Mr. ILSLEY: Is there any significance to be attached to that? Does it make any difference who makes the approaches?

Mr. SOMMERVILLE: I don't suppose it does.

*By Mr. Ilsley:*

Q. They were a heavy buyer. Does that mean they were fixing the price and Swifts were following?—A. I can't answer that.

*By Mr. Sommerville:*

Q. I beg your pardon?—A. I would not like to answer that question.

*By Mr. Ilsley:*

Q. You said you did the calling up?—A. Yes, we did.

Q. Would it amount to this, that you called up Swifts and said, "Now, Swifts, what we are going to pay to-day is so much," and were able to give them orders? Is that what it amounted to, that Canada Packers were fixing the price and telling Swifts what to pay?—A. I don't know that anybody could tell the Swift Canadian Company what to do. We talked the matter over pretty well.

Q. Was there an understanding that Swifts were to follow Canada Packers in the price that Canada Packers fixed?—A. Not always.

Q. Was it the understanding as to the general course to be pursued, that Canada Packers by this conference in the morning would fix the price, and then notify Swifts by telephone message, and Swifts would govern themselves accordingly in their bidding on the market? Was that the understanding?—A. Pretty well, unless there was any cross buying going on.

*By Mr. Sommerville:*

Q. You say, "Unless there was any cross buying going on"?—A. Yes.

Q. What do you mean by cross buying?—A. Well, one trying to gyp the other a little bit on certain grades of cattle.

Q. At times that did happen?—A. Yes.

Q. Even among the best of friends?—A. Yes.

Mr. FACTOR: In spite of the little love feast.

*By Mr. Sommerville:*

Q. Then that would be smoothed out, I suppose?—A. Yes.

*By Mr. Senn:*

Q. In general practice, I suppose they did follow the procedure you have outlined?—A. Pretty well, yes.

*By Mr. Sommerville:*

Q. As a general rule, is it a fact that the price which was communicated by Canada Packers to Swifts was followed on the market by the buyers of both companies?—A. I would like to say, Mr. Sommerville, that the prices were not altogether fixed, as regards what they were going to pay. It is just how they would operate—without fixing any prices as to the amount of cattle—as to how they would act on certain grades of cattle. Not altogether prices agreed on, but that they would not raise or lower the market against the previous week.

Q. They would not raise or lower it?—A. No.

Q. Would there be an understanding that the market would be lowered a bit?—A. Sometimes, yes, sir.

Q. And at other times that the market would be raised a bit?—A. Of necessity, yes.

*By Mr. Young:*

Q. Could you recite a conversation that took place when that was done, a typical conversation between you and the Swift's man? What would you say? Would you ask the Swift's man what he would do?

The CHAIRMAN: The language might not be parliamentary.

Mr. EDWARDS: We had better not ask that.

The WITNESS: Is it necessary?

Mr. YOUNG: Yes, we want to know that.

The WITNESS: I don't care to—I would not care to do that.

Mr. EDWARDS: No, I should say not.

*By Mr. Factor:*

Q. Who would be talking, you and the head buyer or the head buyer and the head buyer of Swifts?—A. Our head buyer and Swifts buyer.

Q. You head buyer and the head buyer of Swifts would be talking, would carry on the conversation?—A. Yes.

Q. Can you tell me this: what is the total volume of beef cattle purchased by Swifts and Canada Packers on the Toronto market?

Mr. SOMMERVILLE: We had those exact figures given to us. It is in the evidence.

The WITNESS: I just can't tell you off-hand very well. I used to have it.

Mr. YOUNG: Would the witness mind telling us why he does not want to repeat a conversation, a typical conversation?

The CHAIRMAN: Well, I think the witness has given us the facts, the essential facts, but you want him to sort of reproduce or re-enact it.

Mr. YOUNG: Yes, give us a picture.

The CHAIRMAN: I can understand a rugged cattleman having some diffidence about it.

Mr. YOUNG: We will let him leave the cuss words out.

Mr. EDWARDS: As I understand it, this was not Mr. MacKenzie's conversation. It is the two chief buyers.

The CHAIRMAN: He was one.

*By Mr. Sommerville:*

Q. You would be present when the conversation took place?—A. Yes.

*By Mr. Young:*

Q. You were one of the conversationalists?—A. Yes.

Mr. KENNEDY (*Peace River*): I notice Mr. MacKenzie shaking his head in answer. I don't know whether that is going down or not.

Mr. SOMMERVILLE: I think the stenographer is getting it. However, if you will just say "yes," or "no," it will be better.

The WITNESS: I am a pretty good talker. I can say "yes."

*By the Chairman:*

Q. Well, Mr. MacKenzie, the long and short of it is this, that after you and your officials talked over the situation, then a Canada Packers man—yourself or one of them—would ring up Swifts and discuss the situation as you understood it, and intimate one to the other the general policy to be adopted in buying on the Toronto market?—A. Yes.

*By Mr. Factor:*

Q. Whether you would raise or lower the prices?—A. Yes.

*By the Chairman:*

Q. You would have what we might call an informal understanding that a certain price would prevail?—A. Yes.

Q. As far as possible?—A. Yes.

Q. Without having any specific agreement on the subject?—A. That is right, sir.

Mr. FACTOR: A gentleman's understanding.

*By Mr. Senn:*

Q. You said that your requirements were considered in setting the price or in determining the price. Did you also take into account whether there was likely to be a surplus or a shortage of cattle on the market that day, in determining the price?—A. Yes.

Q. And if there was a surplus, the price would necessarily be lower?—A. Naturally, yes.

Q. If there was a shortage, what about that?—A. The natural thing, it would be higher.

Q. But I think you said that the proportion was maintained between the packing houses in case of both surplus and shortage. If you maintained your proportion in case of a shortage, was it necessary to raise the price? That is,

if you got your proportion of what was on the market, 68 per cent to 32 per cent, would that not have the effect of keeping the price at a level, instead of raising it?—A. No, not always.

Q. Would it not have that influence, to a certain extent?—A. No.

*By Mr. Sommerville:*

Q. If this practice had not prevailed, and there had been open and free competition between the two companies on the public market in Toronto, what would you say would have been the advantage to the producer per hundred on his live stock, that is cattle? How much more would he have gotten?—A. It is hard to estimate, Mr. Sommerville; it might be a half a dollar, it might be a dollar a hundred.

Q. But was the general effect of this conversation to keep the market down? Was the general effect of these conversations that you have had to keep the market fifty cents to a dollar a hundred less?—A. Not always.

Q. Not always?—A. It would depend on the supply.

Q. But is that the general effect, I am asking?—A. Yes.

Mr. SENN: In other words, did it limit competition or eliminate competition in buying?

*By Mr. Sommerville:*

Q. It could not have any other effect, could it, Mr. MacKenzie?—A. No.

*By Mr. Ilsley:*

Q. Mr. Senn asked a question there that interests me. If you were going to get your share anyway, why would you have to pay higher on a bare market, a market that didn't have any cattle on it? Why would you have to pay a higher price if you were going to get your share of the cattle anyway?—A. I did not say we would get our share anyway on a short market.

Q. But as between you and Swifts, you were going to get twice as many cattle as Swifts because Swifts were going to retire and let you have them?—A. No, I would not say we were going to get our percentage that we always should have on a short market, we would either have to go outside to get that percentage, or raise the market too high.

Q. What is the arrangement being followed then? I hope you will bear with me, I do not understand this business very well. I understood that your arrangement was, whether there was a large number or a small number of cattle offering, that the arrangements between you and Swifts was that you were to get about two to Swift's one, and that that proportion would be maintained. If you were going to get two to Swift's one anyway, why would you need to have more on a short market?—A. There was outside competition that would take more of these cattle away by these other buyers.

Q. I would like to hear a little about that, is that a very effective factor in the situation?—A. On a short market, yes.

*By Mr. Sommerville:*

Q. If there is an outside market; that is, if an exporter came in to buy cattle for export, that would affect the situation?—A. Absolutely.

*By the Chairman:*

Q. Or, if there was no understanding whatever between the buyers of the big companies and there was a short market, then the two big buyers would go on the market and raise the price to get what they required working against each other?—A. Yes, sir.

Q. And that is now largely eliminated?—A. Yes, sir.

*By Mr. Senn:*

Q. But Mr. McKenzie made the distinct statement that that proportion was maintained both in the case of surpluses and shortages?—A. Percentage of kill, I meant, no matter where they got the cattle from.

Q. Not the percentage bought on the market?—A. No. We did not rely on the market for all our purchases.

*By Mr. Sommerville:*

Q. From where did you get your other requirements to maintain your proportion of the kill?—A. Off trucks.

Q. Was direct shipment to plants by trucks encouraged?—A. Pretty well, yes.

Q. What would you have by way of volume of direct shipment in the course of a year, speaking of cattle; about how many a week?—A. My last recollection was about 900 a week, or 33 per cent of the cattle—I would not say that is actual, but it is approximate.

Q. Thirty to thirty-three per cent of the cattle you think came by truck?—A. Not by truck alone, by direct shipment.

Q. And then what was the effect on your buying on the stockyards of having this supply of 30 to 33 per cent of your kill coming direct; what effect did it have upon you as a buyer, did that make you a keen or a slow buyer?—A. That all depends on how many cattle I had in over the week-end to start with on Monday morning.

Q. If you had a quantity of cattle to start with on Monday morning, we will say 33 per cent of your kill?—A. You would not have that on Monday morning to start off with, that would be for the week days.

Q. I quite appreciate that, but supposing you had that number of cattle in on Monday morning; would that have the effect of keeping you off the market for a time?—A. Naturally it would make us a little careless.

Q. And what would the effect of that be on the market, would it make it a little draggy?—A. Naturally, yes.

Q. And the prices would be depressed somewhat?—A. Yes.

Q. And then perhaps in the afternoon you would become a little more careful of the market; and step on the market and buy some supplies?—A. Yes.

Q. Was that about the procedure, when you had a quantity of cattle in over on a Monday morning?—A. Yes.

*By the Chairman:*

Q. Might I interject just there: last night I read the live stock report, as I read it every night—here is one which may be taken as typical. I will read it and ask you to give us an explanation of the factors that are operating in this situation. This is, Toronto, April 18: the cattle division of the Toronto Live Stock Market continued at the opening today where it left off at yesterday's close, with trading very slow and prices unchanged, with a supply of 1,220 head—800 hold-overs; buyers took a few butcher cows at \$2.50 to \$4.25, but these were the only sales registered. This refers to cattle on the Toronto market yesterday, and one often sees that; and particularly on a Monday will you see this. This happens to be Wednesday, but particularly on Monday or Tuesday will you see this sort of report. What I want to ask you is this: here are 800 hold-overs, and buyers take a few butcher cows at these low prices; that was the only sale, and trading was very slow. Can you give us your explanation as to that condition of the market?—A. At the time that report goes in, Mr. Stevens, they don't get the proper trend of the market, I don't think. These reports have to go in early in order to get into the night's paper. That

is one thing about it, it does not treat the market squarely—it is not fair to the packer nor is it fair to the producer, because it does not give the right picture.

Q. I see?—A. After eleven o'clock trading on a very short market is as a rule snappy—you understand what I mean by snappy, there is a snap to trade, everybody wants to secure cattle—but if there are quite a few cattle there and receipts are coming in very heavy, it is the natural thing for the buyer to lay back and see what comes in before he starts operating. Now, I don't think that picture of that live stock market is right, it is not sound, because they can't get the right picture at that time in the morning.

*By Mr. Sommerville:*

Q. But if you have that quantity of cattle coming in direct, would these direct shipments have the tendency to create the market conditions which Mr. Stevens has read from the paper?—A. Naturally, yes.

Q. In view of your experience as a buyer for the packing plants I am going to ask you this question: In the interests of the producer do you think that he gets as good a price on the market by reason of the direct shipments of cattle to plants?—A. I do not, sir.

*By Mr. Factor:*

Q. But there is only 30 per cent which goes direct to plants?—A. That is only the one plant, sir—30 per cent of our kill.

Q. 30 per cent of your kill; and that is enough to affect the price on the market, is it not?—A. A certain percentage goes to Swifts' plant.

*By Mr. Young:*

Q. Thirty per cent of their cattle?—A. I did not say 30 per cent of their cattle, I do not know.

Q. But would 30 per cent of the stock coming in go to the two plants?—A. I said there was about 30 per cent of Canada Packers kill came in direct; that was my answer.

MR. FACTOR: 30 per cent of Canada Packers kill was bought on the stock-yards.

MR. ILSLEY: Before you leave this matter—

MR. SENN: I do not know, Mr. Sommerville, whether you intend to question the witness at all as to how the price is determined on that 30 per cent.

MR. SOMMERVILLE: I am going to ask him that.

*By Mr. Ilsley:*

Q. If you don't mind, I will ask my question now. This system of daily conferences between Canada Packers and Swifts began immediately after the merger of the various companies to make up Canada Packers, did it?—A. Pretty well, yes, sir.

Q. That was in 1927?—A. Wait a minute, don't misunderstand this; they were not merged into Canada Packers in 1927, that is when the merger between Gunns and Harris's took place—Feb. 28, 1927. Up till a few years ago the plants were operating separately, as separate units.

Q. When did this system of daily conferences between Canada Packers and Swifts by telephone begin?—A. After we were merged as Canada Packers.

Q. What date was that?—A. I can't give you the date.

*By the Chairman:*

Q 1928, was it not?—A. August 10, I think.

*By Mr. Sommerville:*

Q. Let us get this cleared up: at the first, when Canada Packers acquired Gunns, Gunns still continued as a separate unit for a period of time?—A. Yes, sir.

Q. Then they acquired Harris's, and that continued as a separate unit for a while; is that the fact?—A. I just don't understand you, as they acquired Harris's, what do you mean by that?

Q. Did they have Harris's?—A. It was the Harris Abattoir that acquired Gunn's business.

Q. It was the Harris Abattoir that acquired the Gunn business?—A. Yes.

Q. And Canada Packers were in control of Harris Abattoir.

The CHAIRMAN: They became the Harris Abattoir.

The WITNESS: They became Canada Packers when the four packing houses were united as one—William Davies and one other called the C.P.C.

Mr. FACTOR: That was in August of 1927, according to the evidence.

Mr. SOMMERVILLE: Legally, they acquired the control.

The CHAIRMAN: MacLean shows that in his evidence; he is asked "these four companies are merged? When? In August of 1927." So we can take that.

The WITNESS: That is right, August 10, I think.

Mr. ILSLEY: Was it continuous?

*By Mr. Sommerville:*

Q. This series of conferences with Swifts, to which you have referred, began some short time after the merger?—A. After all the plants were merged into one.

*By Mr. Factor:*

Q. There is a misunderstanding on that. They were legally merged in 1927, but they continued, as I understand it, to operate separate independent plants for a long time; Davies operated an independent plant until 1932—that is right, isn't it?—A. I could not say.

Q. But they continued to operate as separate units?—A. Yes.

*By Mr. Sommerville:*

Q. But when Harris's and Gunns were taken into the big merger, all the plants were operated as one?—A. From one head.

Q. From one head, that is when these meetings took place?—A. Yes, sir.

Q. And they continued for some years, up till the time you left in June of 1933?—A. Yes.

Mr. ILSLEY: If Mr. Factor is right about these plants being separate up until 1932, or one of them even being separate, these may not have begun until 1932.

*By Mr. Sommerville:*

Q. Let me understand: the Davies Plant and the Harris Plant—do you remember roughly the year in which these plants were merged and operated under one head; do you recall that?—A. I just can't at the present moment.

Q. Was that several years before you left, in June, 1933?—A. It was some years, I would not say several; it was some years, I just can't remember.

Q. Well then, let me understand it then from this angle, when the Canada Packers acquired the various plants each of them operated independently for a time?—A. Yes.

Q. Gunns operated, Harris's operated, and Davies operated?—A. Yes, sir.

Q. And the Canadian Packing Company, did it operate?—A. Not very long after the purchase of that plant. It was closed down and moved down to the William Davies Company—that business.

Q. And that plant was taken over by the city of Toronto, for the extension of Bathurst street, as I recall it?—A. Yes.

Q. And the Davies plant subsequently closed and everything moved up to the St. Clair Avenue plant?—A. Yes.

Q. And they were all put under the one direct head?—A. Yes, sir.

*By Mr. Young:*

Q. And that was the time you started to buy for them all?—A. Yes, sir.

Q. Until then they had separate buyers?—A. Yes, sir, don't misunderstand me, they were all directed from head office—from one head.

*By Mr. Ilsley:*

Q. What I understand then was when this system of daily conferences started—that is a very important thing, and one which I think we should get clear?

*By the Chairman:*

Q. Let us try to get somewhere. Do you recall whether it was in practice in 1930, during the year 1930?—A. It was about the end of 1930.

*By Mr. Sommerville:*

Q. It was about the end of 1930 when this began?—A. Yes, that is as near as I can remember.

*By Mr. Ilsley:*

Q. It is still going on as far as you know.

The CHAIRMAN: Up until June of 1933, when you left, it was going on?—A. Yes, sir.

*By Mr. Sommerville:*

Q. Now then, you have this buying practice, and you have described to us what happened; you were also in charge of the beef department—you were in charge of the sales of beef, were you not?—A. Yes, sir.

Q. I want to ask you about some of the selling practices. Did you have different prices in selling your beef for different buyers?—A. It all depended on what the volume of buying they did was; that is, it all depended on who was doing the buying—whether it was a large organization or a small one.

Q. Now, take a large organization; you sold a considerable quantity to chain stores, did you not?—A. Yes, sir.

Q. And they bought in large volume?—A. Yes.

Q. And what advantage did the chain stores get over the independent retailer—what would it amount to?—A. You mean, how much cheaper he bought his requirements?

Q. Yes, how much cheaper he bought?—A. As far as my memory brings me back, sir, around 85 cents to \$1 a hundred.

Q. On the same grade of beef?—A. Yes, sir.

*By the Chairman:*

Q. That is, the chain store got a preference over the ordinary retailer of from 85 cents to \$1 a hundred?—A. Yes, sir.

Mr. FACTOR: Because they bought more.

*By Mr. Sommerville:*

Q. They bought large quantities. That would mean about 200 carcasses, approximately \$1,000 would it not?—A. Yes, sir, figuring it at 500 pounds.

Q. I suppose the chain stores would buy as much as from 100 to 200 carcasses from time to time?—A. Oh, yes.

*By Mr. Young:*

Q. Eighty-five cents a hundred pounds on beef would be 2 cents a pound on live cattle, approximately, wouldn't it?—A. Two cents a pound on live cattle—oh, no.

Mr. SOMMERVILLE: A thousand pound beef animal would dress out about five hundred pounds of beef.

The CHAIRMAN: Eighty-five cents would be a little less; a dollar would be half a cent less on the hoof.

Mr. SENN: Would you mind asking the witness as to the quality of beef purchased by these larger concerns in comparison with that purchased by the smaller dealers?

The CHAIRMAN: That is canners and cutters, we had better get that later.

*By Mr. Factor:*

Q. Just one question: were there any other advantages given to the large buyers in addition to the reduction in price because of the volume purchased?—A. I do not think so, I think that was enough, wasn't it?

Q. Are there any amounts paid for advertising?—A. I could not say, that did not come under my jurisdiction.

Q. That would not be under your department?—A. No, sir.

*By Mr. Sommerville:*

Q. Then, Mr. McKenzie, this amount of 85 cents to \$1 a hundred which was given to the Chain Stores as an advantage—how was that made up?—A. Well, the only place for it to be made up was everywhere it could be made up on individual sales.

Q. On the independents?—A. Yes. Sometimes it was never made up.

Q. Did you make sales at times to these large buyers at cost, or less than cost?—A. Yes, sir, often.

Q. And when that was done, what happened in your purchasing of cattle to replace the beef that was sold in this way?—A. That all depends on conditions, Mr. Sommerville; you would have to go out and buy as many cattle as you could and you would have to go out and buy them as cheap—cheaper than the sale was made for.

Q. So that the price paid by the Chain Store would have a direct bearing upon the price which you paid the producer of these cattle?—A. Naturally.

*By Mr. Factor:*

Q. Did I understand the witness to say they often sold at the Chain Stores at less than cost?—A. Yes, sir.

Q. You sold at less than cost?—A. Yes, sir.

*By Mr. Sommerville:*

Q. Will you tell me why you sold at less than cost?—A. It all depended on what system they bid on, Mr. Sommerville. If they were very anxious to make a sale and wanted volume—

Q. You wanted the volume. Would volume be a substantial factor in trying to keep that trade?—A. Yes, sir.

Q. Then, let me follow the procedure a little further. Having gone out and purchased your cattle at a little less than the price at which you had sold to the chain store, what happened when the buyer of the chain store came in next week and found the price of live cattle was down 50 cents a hundred?—A. Well, he would try to still hold the price of the previous week, if at all possible, to make up for his last loss.

Q. Would he try to get it cheaper because he had succeeded in getting the price of live cattle down?—A. Naturally.

Q. And would you sometimes have to meet him on that price again?—A. Sometimes.

Mr. KENNEDY (*Peace River*): Were the chain stores the only large buyers that got those advantages?

WITNESS: Pretty much, yes.

*By Mr. Young:*

Q. When there was a scarcity of cattle on the market would you give them the same discount as when there was a surplus?—A. Not if you could help yourself.

Q. If there was a scarcity you could help yourself?—A. Not always.

Q. How would they get supplies if you did not cut the price and there was a scarcity?—A. There are lots of ways that could be reacted, because sometimes they would go pretty close to their buying and perhaps not buy that week and work nearer their fresh beef. This packing house business has got to be understood.

*By Mr. Factor:*

Q. What percentage of the beef in your plant is sold to large organizations?—A. I do not know at the present time.

Q. I mean when you were there?—A. I do not just remember.

*By Mr. Sommerville:*

Q. It forms quite a substantial portion of the entire sales?—A. Yes.

*By Mr. Ilsley:*

Q. Tell the committee how you know it was sold beneath cost?—A. If you were running a department for a packing house you have to run your business very carefully and very closely to know every sale made and what it lost you and what it made you.

*By Mr. Sommerville:*

Q. And you knew that on every sale?—A. On every sale.

*By Mr. Factor:*

Q. Surely you know the volume of the beef that sold to large organizations if you were in charge of a department?—A. I do not—I do not remember offhand what the volume was.

The CHAIRMAN: Could you give Mr. Factor just an idea of the volume, if you could, from recollection. I can understand that you could not give it exactly?

WITNESS: No. I could not give it exactly. I could give the number of cattle. They were not all sold as straight cattle; they were sold on cuts. There are a lot of cuts sold.

Mr. FACTOR: What was the total volume of the beef?

WITNESS: I would not care to give that; you can get that through the examining board.

The CHAIRMAN: I suppose what Mr. Factor has in mind is this: was it, say, 30 or 40 per cent.

WITNESS: It would not be that much.

The CHAIRMAN: Was it 30 per cent?

WITNESS: Not 40 per cent.

The CHAIRMAN: Say 30 per cent.

WITNESS: It might be.

The CHAIRMAN: That is an estimate.

WITNESS: That is an estimate.

Mr. ILSLEY: What were your duties?

Mr. SOMMERVILLE: He was manager of the beef department—the buying of beef, the killing of it and the selling of it.

WITNESS: Yes.

Mr. ILSLEY: For Canada Packers?

Mr. SOMMERVILLE: For Canada Packers. And you had under your control, Mr. MacKenzie, the buying staff and also the selling staff in the beef department, had you?

WITNESS: Yes, sir.

*By Mr. Factor:*

Q. Whom would a buyer from a chain organization deal with in your plant? Yourself?—A. The salesmen, as a rule, in the plant.

Q. In your department?—A. Under my jurisdiction, yes. That is, during the time I was in charge of the department.

*By Mr. Ilsley:*

Q. You knew, did you, just how much you must get at a particular time on a particular grade or class of beef in order to come out even?—A. Yes.

Q. You knew that, did you?—A. Yes, sir.

*By Mr. Senn:*

Q. Mr. MacKenzie, where did you get your instructions, if any, to sell below cost to those larger organizations? Did you do that of your own responsibility?—A. It was already understood. The margins were pretty well known by the heads of the company, and what the margins were on the sales, and they still kept on taking them.

Mr. SOMMERVILLE: It is a matter of conference frequently with the executives, is it not, as to the prices that were being obtained from the large buyers?

The WITNESS: Yes.

*By Mr. Young:*

Q. When you gave a large buyer a discount on his beef, did you increase the price to the small buyers to make up your loss?—A. Wherever you could, yes, sir.

Q. Could you always do it?—A. Not always, no.

Q. You could do it only with the very small buyer, is that it?—A. I would not like to say the very small buyer; you tried to do it with everybody you could—make up that loss as you went along.

*By Mr. Kennedy (Peace River):*

Q. Would it depend on how good a business man you are?—A. It all depends on what kind of a salesman made the deal if he was a good man.

*By Mr. Factor:*

Q. The large buyer having bought the meat cheaper at your packing plant, would he sell it cheaper to the consumer through his organization?—A. I do not know anything about that, sir, I could not tell you.

*By Mr. Sommerville:*

Q. Mr. MacKenzie, will you tell me this: what was the practice with respect to giving the prices to the salesmen who were selling beef in those cities or towns where there was a small independent or wholesale butcher? Did you give that salesman any special prices for competitive purposes?—A. We never tied his hands very tight, Mr. Sommerville.

Q. What do you mean by that?—A. I thought that was quite clear enough.

Mr. FACTOR: We cannot understand.

The CHAIRMAN: We are realists.

*By Mr. Sommerville:*

Q. Did you have any policy by which you were after that business even if it should be business at cost or less?—A. In some cases, yes, sir.

Q. In competition with local butchers or operators?—A. Yes, sir.

Q. And was that a regular policy or practice of your department in dealing with such situations?—A. Providing our volume was less than it ought to be, sir, we certainly went out and got all we could; it did not matter where we got it. We had to get it.

Mr. FACTOR: Would there be any objection to asking the witness who were the large chain organizations who bought from the packing plant?

Mr. SOMMERVILLE: No, I suppose not.

The CHAIRMAN: What is that?

Mr. SOMMERVILLE: I think we will get the story given to us by index letters from the auditors.

The CHAIRMAN: I have no objection at all. It is a question if the witness is in a position to tell you.

*By Mr. Factor:*

Q. Do you know who the large chain organization buyers of beef were at your plant?—A. There was Dominion Stores, Stop and Shop, Loblaw's, A. & P.

Mr. SOMMERVILLE: Did not A. & P. buy most of their supplies from Swift's?

The WITNESS: No, not always; they bought quite a lot from Hunnisett, a small operator.

*By Mr. Young:*

Q. Did they all get the same discount from you?—A. Not the same. We tried to cut it down as much as possible.

Q. Did the biggest buyers get the biggest discount?—A. It depends on how hard a buyer he was.

*By Mr. Ilsley:*

Q. Was there competition between you and Swift's in selling to the buyers?—A. Naturally, yes.

Q. There was no daily conference about that?—A. None whatever.

*By Mr. Sommerville:*

Q. Now, Mr. MacKenzie, following through this policy of getting the business wherever it could be obtained, what was the effect of that policy upon the local operator?—A. Oh, it had a deepened effect on the small operator, because if he was a wise small operator, naturally when he found such prices prevailing he would go down and lie in bed and quit for a few days. That is what I would do in his shoes.

The CHAIRMAN: And then come to life again.

The WITNESS: Yes, sir, when he got his breath he would come up again.

The CHAIRMAN: The point is that there was pressure brought to bear upon local markets, where you had competition, to destroy that competition?

The WITNESS: Yes, sir.

*By Mr. Ilsley:*

Q. But not for that purpose, from your evidence. Your purpose was your volume. When your volume was down you got your volume up by any method that you could adopt. That is what you were trying to do, rather than destroy the local buyer; is not that correct?—A. Well, I did not put it in such words, perhaps. I do not know. Do I have to?

Q. No, you do not, of course; but I think that is the purport of your evidence. Is that what you meant to say?—A. I did not say, no.

*By Mr. Young:*

Q. Is this what you accomplish: that you eliminate competition in buying cattle, but you do not eliminate it in selling the beef?—A. You eliminate competition, naturally, when you buy them direct, in buying cattle.

Q. In the yards; but you had a certain understanding. You had a certain understanding in the yards that you would not raise prices?—A. I made that quite clear.

Q. Yes, but you did not succeed in doing that in the sale of your beef?—A. No.

*By Mr. Ilsley:*

Q. Was it your settled policy to wipe out these small competitors in the selling of meat, or did you just resort to this law at times temporarily to get your volume of sales?—A. It is a hard question to answer.

Q. I do not know why.

*By Mr. Sommerville:*

Q. Was the effect of this price cutting to put your competitors out of business for the time being at any rate?—A. Yes.

Q. And you knew that?—A. Yes.

Mr. FACTOR: How did you compete outside of Swift's?

Mr. SOMMERVILLE: He is referring to the towns and cities in Ontario.

Mr. FACTOR: What other policy can be pursued in the case of a large buyer or organization that buys 200 carcasses? You would not expect them to buy and pay the same price as the small fellow who buys one or two carcasses?

The WITNESS: That is the custom nowadays. It used to be the custom that they would have to pay as much as the other fellow, but not lately.

*By Mr. Ilsley:*

Q. I think you could answer my question. I do not see why you could not. Take the instance of where large sellers deliberately entered competition with small sellers of meat with the idea of driving them to the wall and wiping them out. Do you pursue that policy? That is what is called cutthroat competition. Did you try eliminating him, driving him into bankruptcy, erasing him out, getting him out of the world altogether? Did you do that? That would mean you would have to keep on until he was gone. Did you do that?—A. We did not exactly do it that rough.

Mr. SOMMERVILLE: You are Scotch.

The WITNESS: Yes, and I am proud of it.

*By Mr. Senn:*

Q. I would like to ask you two questions. First of all, how does the quality of the sales of beef which were made to the chain stores compare with the quality sold to independent cutters on the whole?—A. I just answered that question a few moments ago.

Q. I asked it, but I did not hear the answer?—A. The difference in price on the same grade of beef?

Q. Oh, no. The public have the opinion that on the whole the larger chain stores are selling a poorer quality of beef than the independent cutters. That is that they buy the cheaper grades of beef?

The CHAIRMAN: Cutters and canners.

The WITNESS: No, no. I would not say that. That is not right. The chain stores buy a good quality of beef.

*By Mr. Senn:*

Q. Now, there is another question. Thirty per cent of your kill, approximately, came direct to the abattoir?—A. It did at that time. I am not talking about the present day. I am talking about up to the time I left them.

Q. How do your prices obtained for these cattle compare with the prices of stock through the stockyards?—A. We do not feel we would do very good work in buying them unless we bought them a little cheaper.

Q. On the whole you buy your cattle a little cheaper at the abattoir?—A. Than through the stockyards, as the figures are there to prove.

Mr. YOUNG: How much? Half a cent cheaper?

The WITNESS: I would not like to say.

*By the Chairman:*

Q. Did you, in your practice, slaughter for retail business many of what are known as cutters and canners?—A. Retail business?

Q. Yes?—A. Canners—never for retail business, no.

Q. Cutters?—A. Cutters, sometimes; yes, sir.

Q. Was that inferior beef?—A. They were the next grade to canners. That is the way they are graded.

*By Mr. Young:*

Q. What is a cutter?—A. Just the next thing to a canner.

Q. A canner is an old cow?—A. So is a cutter. Any cow is an old cow that comes on the market for sale. Unless she has something the matter with her no farmer wants to sell a good cow if she is producing until she gets old.

*By the Chairman:*

Q. Would the elimination of that class of beef, or a more strict inspection and grading of it so as to eliminate the poorer parts from the retail market, assist in restoring the price of good beef?—A. It would to a large extent, sir.

Q. As an experienced handler of beef, would you advise it?—A. I would, strongly.

*By Mr. Young:*

Q. What is the objection to that kind of beef except that it is tough; is it not good food?—A. It might appeal to some people. It tastes all right.

Q. I am not talking of the taste?—A. There is no taste to it.

Q. Is it not nourishing?—A. No. It cannot be nourishing; an old cow twenty-five years old cannot be nourishing.

*By Mr. Factor:*

Q. Your evidences discloses that a large chain organization bought a good quality of beef in large quantities and paid a smaller price than the smaller buyer?—A. Yes.

Q. What is the objection to that?—A. Well, I want you to repeat that.

The CHAIRMAN: I do not think the witness said that.

Mr. SOMMERVILLE: I asked him what effect that chain store price had on the producer—that was the object of getting the information—and if they were selling at less than cost; and he said they had to go out and replace it at a lower figure on the market and that tended to reduce the price to the producer.

*By Mr. Factor:*

Q. As a matter of fact, the large chain organization does sell its product cheaper to the consumer does it?—A. I do not know. I could not answer that.

*By Mr. Edwards:*

Q. Just on that point. Regarding the chain store, buying a first-class product at a low price—I mean at a price below your cost—you endeavour, as I understand it, to make that loss up by selling to the independent buyers, who are not as keen buyers and not so well acquainted with the market? You endeavour to make up that loss from the independent buyers?

The CHAIRMAN: The retailer.

WITNESS: Yes.

*By Mr. Edwards:*

Q. In other words, the independent is not in as good a position to cater to the general trade and to give as good a product as the chain store buyer on account of the way he buys? He can give the product, but not at the price?—A. Yes. Of course, his overhead is not as big as the chain store so he can give the price.

Q. He starts off with the initial cost of the product at a dollar higher than the chain store?—A. Yes.

Q. Consequently, he is at that disadvantage in catering to the general public?—A. I would answer that question in this way. As a rule, the man in business for himself can get a better percentage. That is, cut more out of a carcass of beef than the man hired by the chain store.

Q. I see that. That applies in any line. He is giving his own individual attention to it, but he starts off—A. Yes, at that disadvantage.

Witness discharged.

The CHAIRMAN: We will call on Mr. Wright.

ROBERT A. WRIGHT, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Wright, you are president of the Western Canada Live Stock Union?—A. Yes.

Q. And that union covers the four western provinces, Manitoba, Saskatchewan, Alberta and British Columbia.—A. Yes, it has a membership of all the horse, cattle, sheep and swine organizations of the four western provinces.

Q. Yours is purely and completely a producers' organization?—A. Purely so; no selling agency.

Q. There are no selling agencies in your organization?—A. No, sir.

Q. And no co-operative agencies?—A. No. We are interested from the producers' standpoint entirely.

Q. You desire now to present the opinions of this producers' organization?

—A. Yes, I so desire. I desire to express our appreciation of the opportunity afforded us to appear before your committee and make a presentation of the live stock problems of western Canada. I shall limit my remarks to the order of reference "D," "the method and system prevailing in the marketing of live stock and animal production for domestic consumption and export, and the extent to which the present system affords or restricts fair returns for production. I may say there is very keen interest in the working of this committee. We in western Canada expect great things from it, because there is a limit to which any industry, such as the live stock industry, can operate below the cost of production without reflecting to the detriment of the whole economic structure of the country. You know the difficulties of the live stock industry at the present time, and for the past few years, and we are looking for the correction of some of the evils in the live stock business, which is long overdue.

Q. You yourself are a producer of live stock?—A. Yes, I am. I am a farmer, and my sole source of revenue is farming. This organization which I represent remunerates me in no way.

Q. It is a voluntary organization, from your standpoint?—A. Yes.

Primarily we desire to state that we represent a strictly producers organization that has no selling agencies, and we are vitally concerned in the whole problem from a producers' standpoint only. I am a farmer myself and farming is my only source of revenue.

The Western Canada Live Stock Union of which I am the president, is composed of a membership of the horse, cattle, sheep and swine associations of the four western provinces, and by resolution passed two years ago, limits its membership to producer organizations or associations, who are primarily interested in the welfare of their industries. This organization has been in existence since 1913, and we believe that its recommendations carry with it the true producers' viewpoint and the wishes that they may have for improvements.

We shall not burden you with an elaborate array of detailed figures—there are others that have that responsibility—but will confine our statement to a brief recital of facts as we know them.

Furthermore, we desire to support the statement of the two western Ministers of Agriculture—as you have heard Mr. MacKenzie and Mr. Buckle state, we were invited to sit in at their conference when preparing their respective briefs—in their general recommendation already submitted, and request your committee to consider more carefully the recommendations as outlined, which are attached to this statement as appendix "A."

In order to understand the live stock industry of western Canada, it is necessary to get a composite view of the numbers of live stock on the farms. I herewith submit a chart, appendix "B," which shows the development of live stock in graph form for the three western provinces, Manitoba, Saskatchewan and Alberta. I will hold it up for a moment. It shows that we have more in 1924 than at any time. These fluctuation are primarily due to market demand; that is, this was a deflation period following 1919 to 1920. It extended up to practically 1926 when the Fordney-McCumber tariff was put on cattle. Then there was a period from about 1925 that we could jump that tariff barrier, and that extended practically to 1928, when prices in the United States fell, and then our line carries along. The increase here is due primarily to holding off that is due to low prices. Ranchers particularly have withheld their marketings. Our swine line runs along pretty evenly until low grain prices, which are reflected in that it has been more profitable to put our coarse grains in western Canada through hogs and market them in that manner. The Imperial Conference agreement has benefited producers very well. The sheep line runs pretty well straight. The table showing how these figures are compiled on the graph is attached to this statement, and marked appendix "C."

Climatic conditions divide western Canada into two definite areas. Just to refresh your mind, I have a map of western Canada here. Our agriculture is being confined, and becoming more and more regional. I want to bring that point out. If one were to draw a line from Estevan to Lloydminster on the Saskatchewan-Alberta boundary, and southward from Lloydminster to Lethbridge in Alberta, and bounded on the south by the 49th parallel of latitude, the boundary, a triangle would be formed which on the outside portion, through Manitoba and the northern areas, generally speaking, would show the park belt in which there is the heaviest grain production. Inside this triangle are grain growing and ranching areas to the west of it. Inside this triangle mixed farming is most precarious, and it is not thought that we can get very far away from the climatic conditions that greatly influence the type of farming that is conducted in any given area. It is true that the grain growing areas, when good crops follow inside the triangle, are capable of producing increased live stock; but when we have drought periods like we have had in the past few years, these areas immediately have to decrease live stock and are therefore not a constant factor in production. On the other hand, the superior quality of grain grown within this triangle very largely offsets the advantages which are enjoyed outside the triangle through increased yields per acre of a somewhat lower grade of grain. That is, the amount of grain produced per acre within the triangle, which is approximately 15 bushels of very excellent grain, while outside it is approximately 24 bushels per acre of inferior grade, over a period of years would probably not equal in value the grain grown within the triangle. Broadly speaking, the area in which diversification will ultimately develop is outside of this triangle. Inside of the triangle diversification will depend very much more upon seasonal climatic conditions, and also to some extent on farm practices of individual farmers. As agricultural practices adjust themselves, such practices will automatically zone themselves within definite areas. We would refer you to a recent statement of Dean Shaw of the University of Saskatchewan, one of the leading authorities on western agriculture. I will leave a copy of his remarks with you, which deals with this problem. The prairie provinces are cognizant of some of the readjustments that will have to take place.

Suggested market restrictions on wheat production compel the consideration of ways and means of utilizing an increased portion of the surplus. Particularly does this apply with respect to the lower grades of grain as feed for live-stock. Proclaimed uncertainties of wheat marketing render it necessary to supplement the farmers' income by increasing the acreage of coarse grains for feeding and finishing live stock, or in other words a conversion of these coarse grains into meat and meat products.

If this is western Canada's ultimatum, then steps must be taken to place our live stock producers nearer their ultimate market and lessen and modify geographic and climatic handicaps. Manitoba has gone through this development and is fast becoming a mixed farming area. Mr. McKenzie's chart showed now wheat acreage had not increased while live stock had increased. In the past our agriculture has been going through possibly an exploitation of land. We are now beginning permanent agriculture, and that might be illustrated by the fact that our grain exports in 1929, in comparison with our live stock or animal products exports, amounted to one-eighth, while last year they were approximately one-fifth.

To illustrate, in the production of marketing of our hogs, we have to compete with Denmark and the Baltic States. These countries have the following advantages: first, more rainfall; second, they can purchase their feeds at world's prices which are low as compared to the actual cost of production; third, are closer to import markets, Great Britain in particular; fourth, they have short

rail hauls and are dependent on relatively cheaper water hauls. In the case of our beef cattle production, we have the Argentine as our foremost competitor with their natural advantages both as to climate and haul; in dairy production, mutton and lamb, New Zealand and Australia.

It not only seems logical, but to us imperative, that a real effort must be put forth to place our producers in a better position to meet the above referred to competition on a more helpful and equitable basis.

Western Canada, viewed from its productive capacity, is a vast interior empire within itself. The only limit to our production capacity is our ability to produce profitably.

To substantiate the preceding paragraph, Canada in 1932 exported only 19,542 head of beef cattle over a year old, whereas western Canada's surplus was 107,253 head. Net exports of beef and veal from Canada in 1932 were 4,055,078 pounds, whereas the surplus from western Canada was 29,454,157 pounds. Net exports of pork were 43,535,723 pounds, while the surplus production in the three prairie provinces was 103,716,627 pounds. Exports of mutton and lamb in 1932 were less than imports by 353,716 pounds, whereas the surplus produced in the prairie provinces was 5,579,525 pounds. Net egg exports were 232,840 dozen in 1932, but a surplus of 8,133,150 dozen was shipped from the prairies. In addition, a large surplus of butter, approximately 31,000,000 pounds and 7,500,000 pounds of dressed poultry was produced in western Canada for consumption outside of western Canada.

Q. That is mostly in the rest of Canada?—A. Yes.

Total shipments from western Canada in 1932 included 659,955 live animals and 128,447,241 pounds of meat of all kinds. These figures show that if it were not for the surplus produced in the prairie provinces, large quantities would have to be imported annually by this Dominion.

This data illustrates the extreme importance of our live stock industry to all sections of Canada, not only in relation to the nation's food supply but also because of the secondary industries that are dependent upon it for raw material for their factories.

We submit that the extent to which diversification has already been established in western Canada should not be underestimated; the live stock industry should be recognized by all governments as a vital part of our domestic economic system, which must be correctly related to other phases of agricultural production as well as the industrial life of Canada as a whole.

I think it has been amply shown by the two western Ministers of Agriculture—and I believe, Mr. Chairman, that Mr. Hoadley will follow some time later—that each province has some slight difference in production problems, both as to grain and live stock. Beyond any doubt, we western farmers must continue to produce if we are to maintain our farms and homes. That then brings me to the direct problem as to what we shall do with our production of live stock and live stock products.

Markets: The annual meetings of the Western Canada Live Stock Union held from year to year have continually stressed the importance of markets, and our wishes have been placed before governments from time to time. It may be safely stated that the producers of live stock are not convinced that all efforts have yet been made to secure markets for their products. We have requested trade commissioners with agricultural experience and education, who would have as their specific duty the securing of more markets for live stock and live stock products, and we are still of the opinion that many new outlets for our products could be found if concentrated efforts were made along that line. At the last meeting held in Moose Jaw this January, the following recommendation was passed:—

That steps be taken to develop to its normal capacity the consuming power of the domestic market, to increase our empire markets, and establish foreign markets by favourable tariff and trade agreements.

To secure additional outlets for Canada's live stock production is the pressing need of the producers of western Canada, as well as Canada's obligation to the live stock industry as a whole.

The western live stock producer realizes that although he has steadily improved the quality of his products, he must continue its improvement and is prepared to do so. He must, however, be given some reasonable assurance of satisfactory and profitable markets. He has reached the limit of his own resources. He is unable to secure further credits to propel an industry which has vastly proven unprofitable, and unless some national adjustment is forthcoming he will be forced out of business.

We commend the bankers when they stated that the keynote to national recovery was more trade, which could most likely be brought about by governments getting together and arranging a more favourable basis for international trade.

One of Canada's leading packer representatives stated before one of our meetings that unless Canada could find markets for her surplus cattle, it would leave the cattle industry in a very precarious situation, on the other hand that additional profitable market outlets would considerably raise the price of live cattle to Canadian producers.

#### CREDITS

The achievements, stability and strength of the Canadian banking system has been constantly put forth by representative bankers. Despite their statement to the contrary, there has been an equally constant refusal, almost to the point of restriction, to supply credit to farmers desirous of financing their live stock feeding operations. It is a well known fact in Western Canada among farmers that credits cannot be secured and notwithstanding reasons given to the contrary banking institutions must accept their share of responsibility for producing the present stagnation in the business of feeding live stock. Our understanding is that Section 88 of the Bank Act was inserted to make it possible for banks to make such loans. Our experience, however, very clearly indicates that Section 88 is not so interpreted in general banking practices. The feeling is so general among farmers as the result of refusals for renewed credit from the banks that farmers have come to the conclusion that further credit for live stock feeding is not in existence.

The reaction of the live stock men to present credit facilities is revealed in the following recommendation:—

*Credits*—that active steps, by legislation or otherwise, should be taken to make live stock credits more accessible and at lower interest rates, on short, intermediate and long term credits; such credits being used for the retention of breeding herds, the development and building up of feeding areas, and the feeding and finishing for market with a view to consuming surplus grains.

The producer of cattle and sheep on the range has not the feed and facilities to finish his stock, whereas grain farmers throughout the West have a surplus of roughage and coarse grain which can only be profitably disposed of as feed for live stock. These farmers have not the ready cash to purchase the rancher's stock and unless credit can be arranged for, two things happen, the rancher loses an outlet for his stock and the farmer an outlet for his grain. A clean cut example of where with a reasonable and adequate credit it would be an advantage to the producer on the range and the farmer who has feed and the money loaning institutions.

There is a financial company in Western Canada known as the Dominion Agricultural Credit Company Limited with a capital of \$5,000,000 which has been subscribed by many of the financial corporations in Canada. It was brought into being by a sincere desire on the part of its originators to give assistance in various ways to the live stock industry. To date, it has failed in carrying out its original purpose. We have been told that it is the function of the banks to supply these necessary credits, but we hope that there will soon be evolved by this company a credit system that will function more closely in harmony with its original purpose

*By Mr. Ilsley:*

Q. Mr. Wright, what is your idea of the reason why the Dominion Agricultural Credit Company has not carried out its original purposes? I remember that when it was brought into existence everybody thought they were going to try to help the live stock industry?—A. I know nothing of the inner workings of the company. I simply know Mr. Beatty's statement, and the originators of the plan. It is evidently a matter of management and policy within the corporation.

Q. They would lend the money if the credit risk was good, would they not?—A. They are loaning money primarily today on sheep loans; and it is just unfortunate for the man who goes into one of their sheep schemes, he pays an enormous rate of interest; that is, it is on a share basis, and he pays a high rate of interest on a share basis. That is primarily the way they are working at the present time. They are not interested in the feeding of cattle or lambs by making loans to the feeder. We have no desire to further increase herds, but there are certain ways they could help the rancher by loaning money to the feeder for the farmer to buy feeders and utilize his coarse grain.

Q. Do you know what the rate of interest charged by this Dominion Agricultural Credit Company Limited is when everything is taken into account?—A. I believe on their cow loans it is 6 per cent.

Q. Well, what do you mean by share basis?—A. Sheep loans are on a share basis.

Q. What do you mean by that?—A. Well, over a term of years the lambs are marketed, and they deduct a portion—I cannot tell you what portion—each year on the lambs when they are marketed; that sum is deducted from his loan.

Q. Do they take the proceeds of the product and apply it on the loan?—A. Yes, sir, over term of years.

Q. You mean, a share of the proceeds?—A. Yes, sir, I cannot tell you what it is.

*By Mr. Sommerville:*

Q. Would not their basic rate on sheep be somewhat the same as the 6 per cent in the case of cows?—A. Well, when taken over a period of years it tends to compound, that is why the sheep men pay a high rate—it tends to compound.

*By Mr. Young:*

Q. Are there any expenses added?—A. Yes, there are some expenses added; I cannot tell you just what they are, there is a supervising charge.

*By Mr. Kennedy (Peace River):*

Q. Is not the chief reason for the failure of the general application of this scheme the fact that live stock prices have been falling practically continuously since the scheme was commenced?—A. That has been a factor; yes, sir.

*By Mr. Sommerville:*

Q. The risk has been more uncertain than in the case of sheep?—A. I think their policy has been a very cautious one.

Q. I would expect it would be?—A. As far as loans go, I think it has been an attempt on the part of the management to maintain that capital without losses.

*By Mr. Young:*

Q. But your idea is, Mr. Wright, that they would do better not to loan money to increase herds, but rather to loan money to improve what there are, and to assist in feeding and finishing?—A. Yes, sir, that should be the aim of the company, rather than getting more men in the live stock business.

*By Mr. Kennedy (Peace River):*

Q. I think, Mr. Wright, though, that the purpose behind this credit organization is to distribute live stock around among the small farmers?—A. I think that was one of the purposes.

Q. But you are advocating that they should help the man who is in the feeding business?—A. Yes.

Q. Your position is that the financial interests in the country do not loan when there is any risk?—A. Yes, it is very difficult to get the banks to loan on a feeding operation.

Q. We have been given to understand that there is plenty of money, and that they will loan when the credit risk is not too great?—A. The producers have the opposite experience.

The CHAIRMAN: I think the difficulty is a narrowing of the interpretation of the bank's application of section 88.

Mr. EDWARDS: Does section 88 apply in these cases?

The CHAIRMAN: Oh, yes, to live stock and farm products. But I think the banks interpret that as applying to the movement of cattle to market, rather than to the process of feeding or fattening cattle.

The WITNESS: That is quite right.

The CHAIRMAN: Or else, it should be broadened.

The WITNESS: It should be broadened to apply.

*By Mr. Young:*

Q. Have they changed their policy any of late; I mean, are they worse than they were?—A. It is worse, yes, sir.

Mr. FACTOR: That is a matter which might be referred to the Banking Committee.

*By Mr. Young:*

Q. But you do not know what added cost by way of expenses this corporation imposes?—A. I cannot tell you, no, sir.

#### TRANSPORTATION:

In presenting our recommendations with regard to transportation, I am fully cognizant of the difficulties in connection with our transportation problems with which our railways to-day are faced.

Transportation costs are too high in relation to the farmers' net returns to allow successful competition with our more favourably situated competitors. If reductions were made in the freight tariff on cattle and lambs in the movement to feeding areas from districts where crops are deficient there would not only be the possibility of more profitable traffic for the railways but encouragement for the feeders and ranchers to get raw materials converted into finished products.

Our organization recommends the following:—

*Transportation*—for legislation in reference to transportation rates which would provide:

- (1) inclusion of a stop in transit rate for feeding and fattening live stock for market;

As an illustration of the problem involved, let us take a practical case: A rancher at Maple Creek, Sask., sells a carload of feeder calves (40 head) to a farmer at Melfort, Sask., who has the grain and roughage for finishing; the rate on the carload (minimum 20,000 pounds) is 37½ cents which at a three-quarter rate would amount in freight to \$56.25 (this three-quarter rate is not in the regular tariff schedule but has to be specially arranged for with each shipment). The farmer at Melfort finished these calves and now has two carloads to ship out. The rate on two cars from Melfort to Montreal is \$1.12½ per hundred pounds and amounts in freight charges to \$450. This makes a total of \$506.25 in freight from original point of shipment, Maple Creek, through Melfort to Montreal. Suppose now the feeder was in Eastern Canada, and the rancher sells the Toronto feeder a similar car of calves the rate from Maple Creek to Toronto is \$1.12½ per hundred pounds, which makes a total freight bill of \$225. The Toronto feeder finishes these calves and now has two cars. They are shipped from Toronto to Montreal and the rate is 29 cents per hundredweight or a total freight of \$116 but the feeding in transit rate applies on Eastern movements for exports and the actual freight paid is one-half this amount of \$58. The total cost in freight to the Toronto feeder is therefore \$285 while the total cost in freight to the Melfort feeder was \$506.25 in an endeavour to perform a similar feeding operation. A straight example of flagrant discrimination against the western feeder.

In view of the present high rate, it would be actually sounder economics for the rancher to ship his cattle direct to the United Kingdom for feeding and finishing than to ship to areas in the West where feed is available for finishing. Lower domestic and export rates on cattle are, therefore, necessary in order to encourage finishing at interior points.

The CHAIRMAN: At this point the witness refers to Appendix D which is attached to this statement. It seems to me that this is a rather important appendix, and that we might ask if it should be inserted here in the evidence so that it will show at this point. What do you think of that, do you think it should go in here?

Some Hon. MEMBERS: Yes.

The CHAIRMAN: Appendix D will be inserted in the record at this point.

FREIGHT RATES ON LIVE CATTLE, SHEEP AND HOGS IN CARLOADS, FROM VARIOUS STATIONS IN WESTERN CANADA TO POINTS IN EASTERN CANADA, MONTREAL AND WEST THEREOF.

From	Rate in Cents per 100 lb.					
	Sept. 1914	Mar. 15, 1918	Aug. 12, 1918	Sept. 13, 1920	Jan. 1, 1921	Aug. 15, 1921 to date

NOTE.—Eastern shippers only pay half rate for export shipments.

- (2) Revision downward on domestic consumed grain used for feeding and fattening live stock for markets;

As an example of the inequalities of the freight rate structure on grains moved within the province, the rate on grain from Maple Creek to Moose Jaw is 20 cents per hundred pounds for a distance of 194.9 miles whereas the rate from Moose Jaw to Fort William a distance of 817.1 miles is the same. This is a transportation difficulty that faces every farmer who has to purchase grain for finishing live stock. Furthermore the rate on screenings which are most readily available from Fort William is 25 cents per hundred pounds from Fort William to Moose Jaw while if grain has to be backhauled it is on a straight mileage which is 41 cents from Fort William to Moose Jaw. This backhaul movement would, of course, be an unusual occurrence but we have seen the spectacle of millions of bushels of barley piled up at Fort William which could not be profitably returned for feeding purposes.

(See attached Appendix E of freight rates on grain).

- (3) reduction on live stock and live stock products (including chilled meats) by truck, rail or ocean;

Transportation is one of the vital factors in the net returns the producer receives for his live stock. We believe that a revision of the rates as suggested would overcome many difficulties and ultimately would produce more revenue business for the railways. The antiquated facilities of handling live stock are readily shown when comparison is made with the up-to-date equipment used in the transportation of manufactured products.

(See schedule attached for freight rates on export of meats).

Here may I say that many charges aggravate the live stock shippers, such as differential charges, loading and unloading. There are many of these minor charges that aggravate the live stock shipper exceedingly.

The CHAIRMAN: Now, I think this is as good a point at which to stop as any. There are some of you gentlemen present, I have no doubt, who would like to attend the luncheon which the Prime Minister is giving to the Postmaster General of Australia. I think we will stop at this point, and if it is agreeable to the members of the committee, we will meet again at four o'clock this afternoon.

The Committee adjourned at 12.50 p.m. to meet again this day at 4 o'clock p.m.

The committee resumed at 4 o'clock p.m.

Mr. MARK SENN, Acting Chairman.

Mr. WRIGHT, recalled.

Mr. FACTOR: I would like to file with the committee a statement showing the cost of handling and distributing retail milk. It was made to me by Mr. Frawley. I suppose the reason it was sent to me was because I asked him for it during the investigation.

The Acting CHAIRMAN: Mr. Frayley?

Mr. FACTOR: No. Mr. Frawley of Alberta?  
(Statement filed marked Exhibit 102.)

The WITNESS: I was discussing, before adjournment, matters relative to transportation, and I had got to page 13 of my brief. I again wish to impress upon the committee the difficulties which producer organizations had in getting correct matters that we feel will not only affect the wellbeing of the livestock industry, but Canada as a whole.

The organization which I represent, since its inception, urged before constituted authority a readjustment of our whole freight tariff structure in so far as it applies to shipping of live stock and live stock products. Our efforts have been unavailing. The receptions which our organization have received have not only been discouraging to the Western Canada Live Stock Union, but to live stock industry of Western Canada. As a last resort, we are pressing our recommendation before the members of this committee in the hope of their receiving your sympathetic consideration, and provision made in your report for some measure of relief which we regard as long overdue.

We have taken council as to the advisability of carrying this matter to the Railway Board and higher courts but in each instance we have found that owing to the complexity of our railway problem we have been advised not to prosecute or carry these matters to this extent. We are, therefore, making these recommendations to you with the hope of securing action both in the interest of the live stock industry and the railways.

Mr. FACTOR: Of course, the difficulty is that the railway board is the only body that has the jurisdiction to reconsider the freight rate structure.

The WITNESS: Yes, Mr. Factor.

Mr. SOMMERVILLE: Your argument is that by placing the problem before this committee you want this committee to take some steps toward bringing the matter before the railway board?

The WITNESS: To bring co-ordination of interests so that they will take some steps to give relief.

Permanent fact-finding commission: Again do I refer to the recommendations of the live stock producers of this organization who passed the following resolution:—

“Be it resolved that this annual meeting of the Western Canada Live-stock Union recommends to the government of Canada the appointment of an investigating commission representative of all important phases of the live stock industry and authorized and directed to enquire into the production and marketing of Canadian live stock and to recommend such action as they may deem necessary, and

“Further that it is the opinion of this meeting that it is desirable that a permanent board be appointed clothed with Federal authority and concerned with the marketing of Canadian live stock.”

It is of the utmost importance that all essential facts respecting the live stock industry in relation to production, transportation, processing and marketing, be carefully studied and made public so that the difficulties involved may more clearly be understood and corrective measures can be taken. That uncertainty, quite beyond the producer's understanding, is what should be cleared.

*By the Acting Chairman:*

Q. Your recommendation is for a permanent fact-finding commission, or a permanent board. Would you consider that the marketing board which would probably be set up by the legislation now before the House would be sufficient for your purpose?—A. Well, in as far as that is concerned, in my opinion, the marketing act is not yet legislation.

Q. No, not yet?—A. I have not taken that into consideration.

*By Mr. Sommerville:*

Q. Your argument is that, at any rate, there should be a marketing board for Canadian live stock?—A. There should be a fact-finding body set up.

Q. That is the first reason; and secondly, a permanent board should be appointed, clothed with Federal authority and concerned with the marketing of Canadian live stock?—A. Yes.

*By Mr. Kennedy (Winnipeg):*

Q. Have you any views as to whether or not grain should be included in that?—A. In the marketing act?

The Acting CHAIRMAN: We have now a grain act and a board of grain commissioners.

*By Mr. Kennedy (Winnipeg):*

Q. In view of the present regulations covering the marketing of grain, would you care to express any views as to whether or not that should be included in the marketing legislation?—A. Well, I am in a rather difficult position. I really have not correlated the marketing act; but what I have in mind—and I so state further on—I am just a little bit dubious in regard to all compulsory or regulating measures in as far as our export products are concerned—agricultural products.

Q. I realize it is asking you a difficult question?—A. I am interested purely as an agriculturist. In my answer there is no partisanship. I am interested purely as a producer, an agriculturist, and I am opposed to those measures that in any way interfere with price fixing, because they react to the detriment of the producer.

Q. You see you are suggesting that inasfar as live stock products are concerned there should be some such control?—A. Not control; but we are asking for a fact-finding body.

*By Mr. Sommerville:*

Q. This is the first request: "it is the opinion of this meeting that it is desirable that a permanent board be appointed clothed with Federal authority and concerned with the marketing—"—A. If you will allow me to go on I will further explain that point. That is from a producer's standpoint.

We are inclined to believe that some of the evidence submitted to your committee has been biased—I wish to say here that I in no way wish to depreciate any of the evidence; that is farthest from my mind—but I do feel that it has been biased and although stating that the producers' interests came foremost, we must point out the basic reason for some submissions. For example, the co-operative organizations are directly in the business of commission selling, are operators of public stock yards and until recently were in the packing business and even now a large part of the revenue in the province of Saskatchewan is received from custom killing. Naturally we must dismiss their avowed attitude when their very business depends upon charging the producer all the charges the traffic will bear.

Furthermore you have had representations that again insisted upon the welfare of the producer being paramount but we know their spokesman has the control of two stockyards in western Canada and is directly dependent upon charges made on the producers for profitable business.

Individual effort to bring matters to governmental attention is usually non-fruitful and western Canada has gradually been asking more insistently for Board of various descriptions. Behind the suggestion of our Board is that this Board would study all the problems in relation to the industry, investigate complaints and make definite recommendations to the government, as to ways and means of enacting legislation to right these injustices and to place the live stock industry on a similar footing with the export grain industry in Canada.

The thought behind the Board as suggested by the Union is that it be a permanent fact finding institution set up to function for the live stock industry in much the same way as the grain Board functions for the grain industry. However, it will immediately become apparent to everyone that if this Board could do for a live stock industry all that its exponents hope for, it would have more power than the government and if it has no power other than in making recommendations it can have limited assistance for the live stock industry. We now have a department of agriculture set up to do the work as outlined for the Board in the recommendations of the Union. It would seem then that if our Departments of Agriculture would function as we wish them to, there would be no need for superimposing further expense on the country for a Board.

We recognized the Departments of Agriculture have highly trained technical men, most efficient in their work and we believe capable of giving the necessary guidance. In other words, Departments of Agriculture appear to be set up to serve governmental policies which may be a vastly different thing from serving the farmers. If departmental officials can function freely with the one objective in view, viz., that of aiding the industry, it does not appear necessary to establish any additional board. On the other hand Canada is badly in need of some authority to direct the industry which authority could function unhampered by political considerations.

*By Mr. Young:*

Q. In other words, you want a board similar to the Board of Grain Commissioners?—A. That is what is in my mind—to administer the Live Stock and Live Stock Products Act.

Q. You do not want a board who shall dictate who shall export and who shall not, or who shall sell stock and who shall not?—A. That is not what is in the mind of the producer or the thought behind the effort as suggested by the Union.

*By the Acting Chairman:*

Q. I see you are president of the Western Live Stock Union?—A. Yes.

Q. Have you had any communication with the Eastern Live Stock Union in respect to this matter?—A. We have not. As a rule we work in conjunction with them. At the time of the Imperial Conference we prepared a draft jointly, but in this instance we submitted our case without consulting them.

Q. And you have no idea what their opinions on this matter are?—A. No, sir. We looked on this purely from a western viewpoint.

*By Mr. Sommerville:*

Q. You were speaking of the export trade. Do you find that one of the difficulties with establishing the cattle industry on the markets of England is the irregularity of shipment or the want of continuity?—A. Well, they go together. There is an irregularity.

Q. Does that not affect the market that Canada has in England?—A. Decidedly.

Q. Would a marketing board not be in the position to do something towards providing for a more continuous flow to that market?—A. I think its efforts would be largely educational. I do not see how they could go into the feeding of cattle and holding them back and keeping a continuous supply.

Q. You think the Board's efforts would be educational?—A. I think trade regulates that pretty well. We market our cattle in western Canada as they are ripe off the range into the feed lots, either of western Canada or eastern Canada, and from there to the export market.

*By Mr. Kennedy (Winnipeg):*

Q. We have had considerable evidence in relation to the desirability or otherwise of the marketing of live stock through public yards or direct to the plants, and I think evidence was submitted by the Hon. Mr. McKenzie, Minister of Agriculture in Manitoba, to the effect that so far as the western provinces were concerned at the present time the ratio has increased whereby about 50 per cent of the livestock is marketed direct to the plants and 50 per cent through the yards. Have you considered that question? Have you any views to express as to the desirability of some regulation being passed whereby it would all be marketed through public yards, or leave the avenues open as they are?—A. Well, the Honourable Mr. McKenzie's charts were very graphic. They showed in western Canada markets the increase during these periods of low prices—the increase in direct shipments to plant, and I think, possibly, it is due, first, to the excessive marketing costs or charges during these periods of low prices. I think that is the first factor.

Q. You mean relatively high as compared to the prices they get?—A. To the prices received. Then there is, possibly, the development in truck shipping and good roads which have contributed to it. There is also the decentralization of our packing plants—that is the small plants—Moose Jaw ten years ago had ten plants, Winnipeg has always had an abundance of plants. It has been our live stock centre; but we now have them scattered all over the west; Moose

Jaw has two, Calgary has two, Edmonton, I believe, has three, Saskatoon has a small killing plant, a co-operative plant. So that there has been a decentralization. That, probably, has been one of the reasons. By that I mean the big packer has been forced, to get his run, to go to the country for it or to encourage it to come direct to his plant. I think those are the reasons for it. So far as compulsory measures are concerned, there again I am averse to any form of compulsion in our marketing system. It just is not Canadianism; it is Sovietism.

Q. It is your considered opinion that there should be no regulation which would force the marketing of live stock through the public yards?—A. I maintain that the producer cannot—Honourable Mr. McKenzie's chart showed a little over 50 per cent going direct—these producers cannot all be wrong. Mind you, I am not speaking insipidly, because I am not so sure that is why we are asking. I am one of those producers who is very doubtful as to whether or not it is for good or ill in our marketing system. I want to be fair.

Q. Then you have not come to any definite conclusion as to whether or not the gradual development of direct sale to packers has a depressing effect upon the market?—A. Personally, I think it has, yes; but, on the other hand I market my own hogs and cattle direct to the plant. There is that paradox.

Q. I am not interested one way or the other, other than to get information.

*By the Acting Chairman:*

Q. Are there any exceptional circumstances why you should do that? I am in the same position—A. For the same reason that probably the farmer does it—due to excessive marketing charges and the low prices. I am very anxious to get everything I can.

*By Mr. Sommerville:*

Q. Do you think you are getting that when you are shipping direct to the plant, or would you get more on a competitive market?—A. That is one of the things I want a fact-finding body to tell me.

Q. For instance, I read of this situation on February 20, 1934: "With 2,200 hogs offered on the public market of Edmonton stockyards Tuesday, keener competition shot prices to \$8.90 for carlots of bacon grade, fed and watered. This is a jump of 50 cents from Saturday and makes a new season high. It also made a western record for Edmonton. It put Edmonton market above Winnipeg where hogs sold at \$8.60 off car weights." Do you think that such a condition would be possible if you were shipping direct to the plants as against a public market, where they would offer and get a higher price in Edmonton than they were getting on the Winnipeg market?—A. I don't know all the factors entering into that case. May I state it in another way? Over a period—and I am not stating the packers' case—but over a period of time, the packers get all the live stock products. Whether the fluctuations are greater because we are giving them the product direct or not, I am unable to answer. But my point is with the average line of prices, I believe it does not make very much difference. That is the argument I put up to myself in marketing direct to the plant.

Q. Do you agree with Mr. McKenzie, that if this direct shipment continues in the ratio in which it has been developed, the loss of our stockyards is likely and will be calamitous to the industry?—A. Yes. I am very much concerned over that.

Q. Is it not a fact that the price that you get is very much regulated by the only published price, namely that upon the public stockyards?—A. That is the way the price is established at the present time, by the yards price.

Q. And shipment direct to the plant—I suppose you agree with Mr. McKenzie—puts the packer in a position of having a quantity, which may make him not quite so keen a buyer on the public market at the establishment price?—A. There is that factor entering into the case that concerns us.

Q. You being a farmer, we are very anxious to get the view of a man who does ship to the plants and who knows that when he ships the cattle are weighed by the plant, graded by the plant and the price fixed by the plant. You don't sell everything that way, do you?—A. Well, I study my market. I market most of my hogs, for instance, at Moose Jaw, and they are sold at a flat rate, 25 cents under Winnipeg.

*By Mr. Kennedy (Peace River):*

Q. At the public stockyards?—A. At Moose Jaw. I sell direct to the swift Canadian plant at Moose Jaw, but the yard hogs are the same.

*By Mr. Sommerville:*

Q. A flat rate?—A. Yes.

Q. 25 cents less than at Winnipeg?—A. Yes.

Q. What do you mean by a flat rate—not on the fixed differential?—A. Oh yes, there is a fixed differential.

Q. But your bacon hog is sold at— —A. 25 cents.

Q. —25 cents less than Winnipeg?—A. Yes, than that price.

*By the Acting Chairman:*

Q. Is there a grader there?—A. At the Swift plant or where?

Q. Where you go?—A. I have the privilege of having a government grader come to the plant if I am dissatisfied with any grade, yes.

*By Mr. Kennedy (Winnipeg):*

Q. What are your views as to the fixed differential?—A. Well, the fixed differential is put in practice—

Q. I know what it is.

MR. SOMMERVILLE: He is asking what your views are about it.

MR. KENNEDY (Winnipeg): Yes.

*By Mr. Sommerville:*

Q. Should you not be able to sell your grades on their respective merits?—A. That is a contentious point in the stockyards world throughout Canada. As a producer, I look upon it favourably, because I think it is the one point. Those of us who are in the hog game are interested in this export market, and we have been making a real attempt to raise and breed a quality product for that market. That fixed differential has impressed upon the producer as no other way or means could have done, the necessity of producing a quality product.

Q. On the other hand, you have a very large number of butchers and lights still produced that have to be marketed?—A. Quite true.

Q. And while from the breeders' standpoint it may be desirable to increase the quality of the breed, the fact remains that the farmers are producing a lot of butchers and lights and heavies?—A. Quite true. Our domestic market consumes those pretty well.

Q. The domestic market for those grades is not affected, surely, by the export market on the select bacon hogs?—A. No, but it is showing the man who gets these off-grade hogs the necessity—particularly in low prices—of producing a quality product. I think this hog game, this whole swine industry, should be looked at from a national standpoint, not from a local one.

*By Mr. Young:*

Q. Now, Mr. Wright, Mr. Sommerville gave us some figures a minute ago, showing that a certain condition arose which caused the price of hogs to go higher in Edmonton than in Winnipeg. At Edmonton you have got stockyards and packing houses. At Winnipeg you have both stockyards and packing houses. Can you tell us what would likely happen at a point where there is a packing house alone? Would there be a case like that which arose at Edmonton? I mean would the advance in price at Edmonton be reflected at a point like Regina where there is no stockyard?—A. Oh, there is a stockyard at Regina. The Co-operative have a stockyard.

Q. Is there a point where there is a packing house and no stockyard?—A. Not that I recall, Mr. Young.

Q. Coming back to Mr. Sommerville's question of a while ago, in regard to the influence of the marketing board in maintaining a continuity of flow on the British market, suppose we had a marketing board and that board discovered that we had a market for, we will say, 100,000 steers a year on the British market, and made arrangements to move that number forward. Then suppose conditions in Canada changed so that the price realized for domestic consumption here would be higher than the price realized on the British market; the impulse of our farmers, of course, would be to sell them at home for domestic consumption. Would not the marketing board be in a position to force us to sell them to the British market and take a lower price?

MR. SOMMERVILLE: That would depend upon the power your marketing board had.

MR. YOUNG: Powers the same as in the bill before the House.

The ACTING CHAIRMAN: Yes, but they have to be indemnified.

MR. YOUNG: That is to say, the board could force us to sell at a lower price on the British market, and then compensate us for the loss; that is the idea.

The ACTING CHAIRMAN: I think only if there is a surplus on our market.

MR. SOMMERVILLE: However, that is not the kind of board that is suggested by the brief.

MR. YOUNG: I was trying to get an answer to Mr. Sommerville's question, whether the board could force a continuous supply, whether we consent or not.

MR. SOMMERVILLE: I didn't suggest forcing.

MR. KENNEDY (*Peace River*): You asked, "How could the board—"

MR. SOMMERVILLE: I didn't suggest the board could force anybody.

MR. YOUNG: The question you asked was "Could not the board undertake to supply the market with continuity?"

MR. SOMMERVILLE: My question was, "Would not the board have an effect in providing for a more continuous supply?"

MR. YOUNG: Yes. I was asking Mr. Wright if it could not be done that way.

MR. SOMMERVILLE: I didn't suggest any forcing policy. I am afraid Mr. Wright didn't understand me as suggesting such. However, that is the question.

The WITNESS: I think it is quite inconsistent to attempt to force the price of agricultural commodities above the world price, and still hope to secure further world markets. I think that answers your question.

MR. YOUNG: I am quite with you in being against trying to force it. What I was trying to get at was whether the marketing board would be in a position to do as Mr. Sommerville says, to force it, the supplying of that market.

MR. SOMMERVILLE: I didn't say that. Please don't put that into my mouth. I didn't even ask if it could be forced. Mr. Wright himself has said that the board, by educational means, would be very helpful. That may be the limita-

tion of the board. But certainly the suggestion was made that it would be better than nothing in the way of regulating or directing the shipments to the old country.

Mr. YOUNG: All right, we will drop the matter at that.

Mr. FACTOR: I want to make this general observation again, as I have made it in the past. My colleagues may not agree with me, but I cannot see the sense of this committee wasting so much time on listening to briefs and representations on the marketing of live stock when, at this very moment, the House is considering a bill which fixes the whole *modus operandi* of marketing.

Mr. KENNEDY (Winnipeg): Surely there is virtue in getting the facts as they are from those directly familiar with conditions, like Mr. Wright whom we have before us, who is a prominent producer. Any facts that he can give us of his own knowledge is the best evidence that we can get, and I think it is very valuable.

Mr. FACTOR: I agree with you, Mr. Kennedy.

Mr. KENNEDY (Winnipeg): Any facts we get here will be valuable in discussion in the house on the marketing board.

Mr. FACTOR: Before we get a chance to present our views to the house, the Marketing Act may be passed and become the law of the land.

Mr. KENNEDY (Winnipeg): This information you get here may give us the necessary information for amending it. If it is concrete information dealing with an important national industry, to my mind, it is highly desirable.

Mr. FACTOR: I agree with you. But don't you think it would be advisable to hold off the Marketing Act, at least until this committee has an opportunity of forming some idea?

Mr. KENNEDY (Winnipeg): My answer to that is that unfortunately we have no control as to holding off the Marketing Act, but we have some control as to getting evidence and finding facts here.

The ACTING CHAIRMAN: I would suggest to the members of the committee that it might be better if we discuss this matter in camera.

Mr. FACTOR: I think it would be advisable to discuss it some time. I am very anxious to get the viewpoint of Mr. Wright and other witnesses, but I do feel, as I have felt on other occasions. I fail to see what sense there is in forcing legislation upon the house, and having this committee, perhaps later on, find facts which would be contrary to the legislation that will have been passed in the meantime.

Mr. SOMMERVILLE: In any event, is this not the position: Parliament has referred to this committee a certain inquiry as to the live stock marketing of Canada. We are conferring with the interests that are closest to live stock, the Departments of Agriculture of the western provinces, Mr. Wright who is interested as a producer and so on. They are making their suggestions. One has to do with the question of a marketing board. It is only one. There is a question of a fact-finding body or a marketing board. Surely we could receive that.

Mr. FACTOR: Oh, yes, I am not arguing against receiving the representations. What I am arguing about is the advisability, almost the necessity, of withholding that legislation until this committee makes a report.

Mr. SOMMERVILLE: I think that is a matter to submit to the house, and there is nothing this committee can do.

By Mr. Kennedy (Peace River):

Q. On page 7 there is a resolution recorded asking that steps be taken to develop, to its normal capacity, the consuming power of the domestic market.

What have you in mind there?—A. Well, Mr. Kennedy, that may be somewhat vague. I do not mean the advertising of beef against poultry or mutton. I realize the difficulty of any such program, that the normal stomach can consume just so much in Canada. But I do think by raising our whole purchasing power, that is by bringing farm purchasing power up to its buying capacity, that we will stimulate a demand in the industrial centres, and in that way develop a normal capacity of consuming power. That was my thought.

Q. I want to ask you a few questions about those public stockyards. I think possibly you heard the question I asked Mr. McKenzie yesterday. I notice in your recommendations that you deal with the question of applying the Live Stock and Live Stock Marketing Act to the abattoirs and packing plants. Would that not be largely a duplication of services that are now in existence in the public stockyards? What have you in mind?—A. I think it is highly necessary that shipments—the packing plants are in the stockyard business, and I think that there should be a definite control, that is in scale and weigh tickets, and the price on those scale tickets, as in the yards.

*By Mr. Sommerville:*

Q. And publication of the figures?—A. And the publication, through the department, on the stockyards of those figures.

*By Mr. Kennedy (Peace River):*

Q. Do you agree that the farmer pays all the costs between the farm and the plant?—A. Yes.

Q. If you have duplication in this way, would that not come out of the farmer? I can see the force in it if they had no present marketing facilities?—A. In this instance we are not asking that there be any charges. It will simply be a weighing, and that weighing at the stockyards now goes in, of course, as yardage. Packing houses charge yardage which I do not think they would do. I think that would be opposed to the interest they have in getting direct shipments. What we want is those figures. We want to know the price and the quality of the live stock that goes direct to the plant.

*By Mr. Young:*

Q. What do you think of the suggestion that was made this morning, that perhaps we should forbid the butchering of old cows and third-grade beef, as beef?—A. Well, all our beef supply must be consumed; and whether we like it or not, the lower grades of beef—there are some people with low purchasing power, and that beef fits their needs, it is the best that they can buy. It is unfortunate. It goes into the channels of trade. If it could be boned and canned, and a market found for it in the Orient, it would be a splendid thing. It would raise the price level of our good beef. There is no question about that.

Q. If people cannot afford to buy good beef, you think they should be allowed to buy what they can?—A. I don't see how, at the present time, you can do otherwise.

*By the Acting Chairman:*

Q. Is it true that a good many of that class of cattle recently have been sold at prices that are comparable with tank prices?—A. Yes.

The ACTING CHAIRMAN: Then why not consign them to the tank and be done with it?

Mr. YOUNG: That would not supply hungry mouths.

*By Mr. Sommerville:*

Q. Would you consider the question as to whether or not they should be sold in grades, indicating the grade of beef that is being sold?—A. Grade all cattle.

Q. Grade all beef, you mean?—A. Grade all beef. I am rather inclined to think that that would help our beef business. It would let the consumers know exactly what they are getting. Now, with the two grades of beef, there is a possibility of the retailer merchandising a low quality product for a better product.

*By Mr. Kennedy (Winnipeg):*

Q. Would grading of it stop that?—A. The consumer would then know what he or she were buying on the market. Now, with two grades, red and blue ribbon, an unscrupulous retailer may say, "I have no graded meat, but I have a quality here that is equally good."

Q. At present, does the average purchaser who goes to the butcher shop buy meat on the basis of grade, or do they just phone up and ask for a piece of meat?—A. You would be surprised how few do. Our intelligent people do, yes, but the general run that go to the shops just buy meat.

Q. Few do. That is why I asked. Would the fact that they are graded really prevent the selling of inferior meats?—A. Well, we think it has brought up the consumption in eggs in this country, by the grading of eggs.

Q. While it may be a great confession of ignorance on my part, but I have lived in Winnipeg for more than a quarter of a century, and I have never bought beef at a shop on grade. I have asked for good meat—or as the case might be?—A. Yes.

Q. I never thought of asking for red or blue ribbon?—A. Try a few steaks from red ribbon beef, and you will stay with it.

*By Mr. Young:*

Q. Now, Mr. Wright, last summer I went into the butcher shop and in the show case I saw a cut of beef marked 18 cents a pound, and only a few feet away I saw exactly the same cut at 10 cents a pound, and I asked the merchant the explanation. He said it was all in the grade of the beef. Would the ten cent stuff probably be an old cow?—A. It might have been a cow, yes, sir.

Q. I was getting what I was paying for?—A. Probably.

Q. Do you think that at any time during the last two or three years there would be any such spread between good and poor beef, on the basis of what live stock sold for on the yards?—A. Do you mean between the beef cuts priced at 18 cents and 10 cents in the store?

Q. Yes?—A. It would be quite apparent, certainly—if they were two loin cuts.

Q. And you think that with good cattle selling around 5 cents a pound, that the difference in the grade of the stock would account for such a spread as that in the butcher shop?—A. Prices of good cattle in relation to beef in the shop—there has not been that drop in the price to the consumer; he has not been affected as the producer is suffering. That is one of the grievances that we have, and hope you will correct.

Q. Do you know anything about the marketing of poultry?—A. Very little.

Q. I understand that none of that goes to the stock yards, it all goes to the plants?—A. I know that my wife takes all of her stuff to the plant direct.

The ACTING CHAIRMAN: Thank you, Mr. Wright.

The Witness was discharged.

The Hon. D. G. McKENZIE, recalled.

*By Mr. Sommerville:*

Q. There are a number of questions which members desire to have asked in reference to the brief you presented. You were suggesting that the function of this committee was to find the high lights of prices for the producer, if it

were at all possible. The question asked was this: Have you in Manitoba considered at all the placing of beef in the same category as milk, under your Public Utility Act, and thus fixing the price for beef, just as you fixed the price for milk?—A. Do you mean, whether our government has considered it?

Q. Yes?—A. Not at all.

Q. Well, is that not a problem that could be handled in that particular manner?—A. I do not think so.

Q. You think not?—A. Not at all.

Q. Why not?—A. I do not think the commodities are parallel at all, or that the problem of handling these commodities is parallel. You have a supply of milk coming to a local market, which is a very perishable product; it is not moved outside of that local market. Beef is drawn in from all over the province and moved to all parts of Canada. I do not think you could exercise anything like the same amount of control.

Q. You think that would be an insuperable problem for the Public Utilities Board?—A. To begin with, I do not see how our own Public Utilities Board would have any authority outside of Manitoba.

*By Mr. Kennedy (Winnipeg):*

Q. As far as Manitoba is concerned Greater Winnipeg would have about one-third of the total population?—A. Approximately.

Q. Now, under the Public Utilities Act you have fixed the price to the consumer and also the price to the producer for milk distributed in Greater Winnipeg; that is correct?—A. Yes.

Q. Why would it not be possible to fix in the same way the price of feed in the Greater Winnipeg area; we will say, in the same area as you have milk—not outside of Manitoba, but in the same area?—A. Well, again I have got to say I do not think the cases are parallel at all; you have several grades of meats but you have only one grade of milk—you have several foodstuffs.

Q. No, there is your milk with different percentages of butterfat?—A. I know, but the regulations demand a certain butterfat content, and it is sold as whole milk.

*By the Chairman:*

Q. Do you fix the price of cream?—A. No, we do not touch it at all. In beef you have a multiplicity of qualities according to the different grades—I should not say grades, it is not graded in the sense of government grades—in respect to beef you have all kinds of competitive food stuffs; you have pork, you have poultry, you have fish, you have eggs, and so on and so on; so that I do not think in any sense whatever that the cases are parallel.

Q. Apart from their being parallel, you would not think it desirable to attempt to fix prices?—A. Personally I think it is quite impracticable.

*By Mr. Sommerville:*

Q. Because of its being a local matter?—A. Because of its being more than a local matter.

Q. Then, do you suggest that it could be fixed on a national or an international basis—a minimum price for beef of a certain grade?—A. No, I think the question of fixing minimum prices for farm commodities that are to be sold on a national or international market is a very doubtful one from the point of view of policy; and I think almost an impossible one from the point of view of that administration.

Q. Notwithstanding the fact that we had Mr. MacLean's statement that 98 per cent of our beef products was consumed in Canada?—A. Yes, notwithstanding that.

The ACTING CHAIRMAN: Thank you, Mr. McKenzie.  
The Witness was discharged.

Mr. E. J. SMITH, Stratford, Ontario, called and sworn.

*By Mr. Sommerville:*

- Q. You represent the White Packing Company of Stratford?—A. Yes, sir.  
Q. And you are in charge of the hog department?—A. Yes.  
Q. Your company has been in the export business for a period I believe of some 30 years or more—A. Yes, sir.  
Q. And you have been associated with them for a long time?—A. Yes.  
Q. Your plant is located at Stratford?—A. Yes.  
Q. And there is no stockyard located at Stratford?—A. No.  
Q. And you buy your live stock direct?—A. Yes.  
Q. All your shipments come in direct?—A. Yes, sir.  
Q. And you have established a clientele among the farmers in the neighbourhood?—A. Yes.  
Q. Within what area do you get all your hogs?—A. The majority within 50 miles of the plant.  
Q. And how is the price that you pay for your hogs regulated—by what markets?—A. It is regulated partly by the prices we get from Great Britain each week. Our business has been recently about 50 per cent export, and we, of course, are influenced by other markets, chiefly the Toronto market—and the price being paid by other packers in that vicinity.  
Q. Yes, but the basic price is the price paid on the Toronto market, is it not?—A. Very largely the f.o.b. price that is being paid at country points.  
Q. Then you take that as the basis of the prices for your plant?—A. Yes, sir.  
Q. Then you have quite active competition in your area?—A. Very active.  
Q. Among the packers for the live stock in that area?—A. Yes, sir.  
Q. I understand there are a number of independent packers; you have plants at Kitchener?—A. Two at Kitchener and two at Hamilton.  
Q. And your own at Stratford?—A. Our own at Stratford.

*By Mr. Young:*

- Q. What effect has the British cablegram on your prices?—A. We may exceed the prices being paid f.o.b. by Toronto packers if we consider it is in our interest to buy hogs with the prospect of exporting the bacon. We are in the business to try to make a little profit, and if we think it is advantageous to buy hogs and pay a little above the Toronto price, we do so.  
Q. And if our cables are favourable, you raise your prices?—A. Yes.  
Q. And if the cables are adverse, you lower your price?—A. Yes.  
Q. Would not the British price be your basic price?—A. Not altogether, it is partially so. We follow it to some extent, but the export trade—50 per cent of our bacon will go for export, and the balance will be used domestically.

*By the Acting Chairman:*

- Q. How long is it from the time you purchase your hogs until the bacon reaches England?—A. About one month.

*By Mr. Sommerville:*

- Q. Perhaps you will give us the periodic process; from the time it is killed until it leaves your plant processed, how long is it?—A. The hogs we get in one day we kill the next day. Sometimes we kill the same day as we get them in. They are cut up ready for the cure the next day, or after they are really

cooled; and it takes about ten days for the curing process. After that time it may take from one to three days for draining before the sides are shipped for export. Practically two weeks from the time they are killed, until they are ready for export shipment.

*By the Acting Chairman:*

Q. Your cables that come in you say would influence the price; are they the cables of to-day's price of bacon in England, or are they cables of the prices that would likely be paid for bacon when it reaches there?—A. The cables come in weekly on Thursday for Canadian bacon.

Q. How can you determine the price that you are to receive for bacon a month from now; how does that determine the price you pay for hogs to-day?—A. We can't determine it, but we can tell from the advices we get whether the market is likely to be firm, or what their opinion is. It is only a matter of opinion and judgment.

*By Mr. Sommerville:*

Q. That is, on Thursdays you get the opinion of your British agents as to the likely course of the market?—A. We not only get their opinion, but we get the actual price that has been arranged by the Canadian Committee—the Committee on Canadian Bacon—stating what the official price is for Canadian bacon. I have not here the price for to-day, the price for last week was 70 shillings—their official top price.

*By the Acting Chairman:*

Q. The price of hogs has dropped considerably the last month?—A. Considerably.

Q. Is that due largely to the cables you have received?—A. It is due to a decline in the English market of 20 shillings; one week there was a drop of six shillings; the following week 4 shillings; the following week 5 shillings, and the week following that 5 shillings; a drop of 20 shillings within four weeks.

*By Mr. Sommerville:*

Q. You say that about 50 per cent of your product goes to the Old Country?—A. Yes.

Q. What proportion of the hogs that you get are selects?—A. Most of our hogs come from the Counties of Huron and Perth, which are the two counties which have the largest number of bacon and select bacon hogs in Canada. Our percentage of select bacon hogs would be about 20 per cent—these are called premium hogs, on which we pay \$1 per hog above the basic price for bacon hogs; the discount hogs are butchers, lights and heavies. We get about 7 per cent among that—showing that we get 20 per cent selects, 7 per cent discount hogs, and the balance of about 62 or 63 per cent, bacon hogs; so that we have a total of 92 per cent select and bacon that are suitable for the export trade.

Q. That is your average purchase?—A. Yes.

Q. That means you are getting a very high class of hogs in your district?—A. Yes.

Q. There are not many districts which would run anything like that average?—A. According to the government reports I do not think there are any that run equal to that.

*By Mr. Edwards:*

Q. How does that compare with the Kitchener district?—A. The same. The Kitchener Packing Houses draw a great portion of their hogs from the very same district that we cover.

Q. And a little East as well?—A. We take very few from the East to the West, that is west of Kitchener; there are some which come from midway points.

*By the Acting Chairman:*

Q. Is that government grading, or your own private grading?—A. That is government grading.

*By Mr. Sommerville:*

Q. What quantity of your select hogs are used for domestic purposes?—A. I would judge that we use about 50 per cent. About 92 or 93 per cent of that are select bacon, and we export about 50 per cent at the present time; that of course depends on the Old Country market—we may reduce our exports, especially during the summer when there is a larger domestic trade.

*By Mr. Young:*

Q. Is it only bacon you export, or do you export ham?—A. We export only a few hams at certain times of the year when we have hams cured, and there is no demand for them locally, as has been the case in the past two or three weeks, we would export the ham; but it is not our practice ordinarily to export hams, because of the demand that we have here.

Q. There is more demand here for hams, and a greater demand over there for bacon?—A. I do not think that is the case, but I know we have an exceptional demand for our specially cured hams in some of the larger centres.

*By Mr. Sommerville:*

Q. You have made a specialty of buying Canadian hams in your business, and you have a large demand for them?—A. Yes.

Q. Out of your hogs you make your Wiltshire sides from both the select, the bacons, the butchers and the lights?—A. Yes.

Q. Then they are sent over to the Old Country in the form of Wiltshire sides?—A. Yes.

Q. And the Wiltshire side consists of practically one-half of the carcass with the head removed?—A. With the head off.

Q. And trimmed; is that the description of the Wiltshire side?—A. Yes.

Q. And the prices you receive in England are affected by the weights of these Wiltshire sides; there are certain weights, are there not?—A. Weights and grades.

Q. Would you just look over that list and tell me if that is not a list of the requirements of weights and grades of the British market?—A. These are the selections and leanness of No. 1 Selection, 50 to 55 pounds; 55 to 60 pounds; 60 to 65 pounds; and 65 to 70 pounds. Perhaps the greater portion of the sides will come within these ranges. There are some at times that are less than 50 pounds, and some at times more than 70 pounds.

Q. Yes, but we will keep to this range at this time. I observe that No. 1 selection consists of four different classes, weight 50 to 55 pounds; that could be made from a light hog?—A. A light hog.

Q. And 55 to 60 pounds could be made from a select or bacon?—A. Yes.

Q. And 60 to 65 pounds from a select or bacon; and 65 to 70 pounds could be made from a bacon or a butcher hog; and 65 to 70 pounds could also be made from a heavy?—A. Yes.

Q. So that you may have in the first grade of hogs that range from 50 pounds to 70 pounds, Wiltshire sides that may be made from either selects, bacons, butchers, lights or heavies?—A. Yes, sir.

Q. Then, prices are affected by the weights of the sides, are they not?—A. To a certain extent they are.

Q. And the most desirable sizes are from 55 to 60, and 60 to 65 pounds?—A. Yes, sir.

Q. Those are the sizes that are most in demand. Is it not a fact that at times the 50 to 55 pound Wiltshire made from the light hog is in demand, and the price is as high as that of the others?—A. That is so.

Q. And that that serves a certain trade in England?—A. Yes, sir.

Q. Now, then there is a number 2 selection in the British requirements which covers a similar division of weights; is that not a fact?—A. Yes, sir.

Q. And this similar division of weights in the number 2 division can be made from the similar type of hogs I have mentioned?—A. Yes.

Q. What is the distinction between number 1 selection and number 2 selection?—A. One has been called leanest and the other lean. These are just now grade names that have been adopted within the last six months or so.

The Acting CHAIRMAN: Are they identical for Danish and British bacon?

The WITNESS: I think they are practically the same.

*By Mr. Sommerville:*

Q. The prices on this number 2 selection, or lean, I observe are the same as number 1 selection or leanest?—A. Yes, sir.

Q. So that this same condition applies to these two classes?—A. Yes.

Q. Then there is a third class divided into some four classes of weights called prime?—A. Yes.

Q. And how do you describe them?—A. We call them number 1 prime.

Q. And they are also quoted at the same prices as the other Wiltshires in number 1 and number 2 selection?—A. They are quoted the same sizes. Differentials in fat and so on.

Q. Yes?—A. Yes.

Q. Is there any distinction when you are making up your quantities of Wiltshires in sending them overseas—is there any care taken to pick out only the selects from one group and only the bacons for another and only the butchers for another?—A. There is not. We try to send over practically all bacon and select. We do not think it is advantageous to send over the sides from butchers at the present time, although in the grading of heavy hogs on the foot it is always possible that butcher hogs that may have been graded butchers, live weight, may turn out to be just a little better and may be bacon hogs when they are on the rail.

Q. Yes. Now, you put all these Wiltshires together into what are called sixes?—A. They are baled four sides to a bale.

Q. And in the one bale you may have Wiltshire from a select or from a bacon or from a butcher or from a light?—A. No. We try to have the same selection all the way through.

Q. That is the same weights?—A. The same weights. A certain selection of leanest or lean or prime—they all go together; they are not mixed with each other at all.

Q. Now, take it this way, for instance. You may have a sixty-five or seventy weight from one selection and that may contain some Wiltshires from bacons and some Wiltshires from butchers?—A. It may.

Q. In the one bale. And they are sold in that way?—A. Yes, sir. That term "butchers" does not carry through after the hogs are killed; they were butchers before they were killed.

Q. I quite appreciate that. That is to say, that the name that is given to the hogs by grade as live weights does not go through?—A. No.

Q. They lose their identity after they are killed, do they not?—A. Yes.

Q. And the differential does not exist beyond the killing?—A. No.

Q. Now, you have a very large quantity of your product that reaches the top price in England, does it not?—A. Yes.

Q. Perhaps you would be good enough to tell us whether or not it would be desirable to sell the select hogs without the fixed differential of \$1, and whether at times when the demand is for bacons for overseas you could not get more for the select than \$1?—A. We do not get any higher price in England for a select bacon hog than we do for bacon hog—that is, the side; it is according to those selections of the bacon that we get the high price, not the selection of the hog.

Q. Would it be that you might always be assured of a top price for your highest grade if you segregated the select hogs in your ship?—A. I think not. I think it depends on the market over there.

Q. And it may not be carried through?—A. No.

*By Mr. Young:*

Q. When do you get your \$1 premium on the hog back?—A. We think that the whole tendency is to produce a better hog, and the select bacon hog is lost in the process.

Q. And you have paid a dollar more for it?—A. Yes. We have paid a dollar more, and we have a larger quantity that is suitable for export, or it may be more satisfactory for domestic trade.

Q. Will you get a larger percentage of bacon out of a select than out of a bacon hog?—A. I think it is preferable.

Q. What bacon is the highest priced?

The ACTING CHAIRMAN: And you get better quality?

WITNESS: Yes, we get a better quality and better conformation.

Mr. ILSLEY: I do not see the difference between selects, bacons and butchers. If they make the same bacon you get the same price. That is the whole effect of Mr. Sommerville's question.

Mr. EDWARDS: I do not think they get the same price.

Mr. SOMMERVILLE: Yes. That is what I am coming to. As far as the quality is concerned, it may be exactly the same in select or bacon or butcher in the Wiltshire you send over?

WITNESS: It may be.

*By Mr. Sommerville:*

Q. You may send a bale with select, bacon or butcher sides—the sides that come from these animals—and they will have the same quality over there?—A. I hope I have not given the wrong impression that all butchers can be made into bacons.

Q. Oh, no.—A. There are some butchers that when killed will show they are bacon sides.

Q. And there are some bacons that when killed may show they are not bacon sides?—A. Absolutely.

*By Mr. Ilsley:*

Q. In other words, grading alive is an inaccurate way of grading?—A. Yes.

Q. But it is the best that can be done with them when they are alive?—A. Exactly.

*By Mr. Sommerville:*

Q. Now, Mr. Smith, can you tell me this: we had the statement of Mr. McLean that the price to the farmer is regulated by what the packer gets from the consumer; that he gets what he can, takes what is necessary for processing

with a reasonable profit, and the balance goes to the farmer. Will you give the committee the benefit of your views upon the theory of fixing the price?—A. I think that is the theory on which some of the packers work. Personally, I do not like it. In that district we come so closely in contact with the farmer that we feel that on his success depends ours, and if he is not getting enough for his product to pay him he will not stay in the business. And we would prefer, knowing the conditions and what the hogs cost him, to see that he gets the cost, and then try to have that as the basic price and then work out a selling price on what it costs after they get that price. We cannot always work it out, but we think the best thing is to have a satisfied farmer.

Q. Yes, in other words, you would put the farmer in the same class as the packer in getting his cost?—A. If we get a processing charge out of it that pleases us.

*By Mr. Young:*

Q. You say you would like to do it, why don't you? What prevents you from doing that?—A. We cannot sell at the price we think we ought to get.

Mr. ILSLEY: Exactly. You and Mr. McLean are in the same boat then.

*By Mr. Sommerville:*

Q. Now, I want to come to that. Who are the people that largely affect the price that you get for your product—domestically, I am talking of?—A. We do not try to sell a great deal to chain stores. They claim they can buy for so much less than our regular price to the independent store. We feel we are practically out of that business, and it is only occasionally that we can sell, when we have some surplus product and have to sacrifice it to the chain stores. We feel that our customers chiefly are the independents and that they ought to be given any consideration we can give them if they are going to stay in business and we are going to still have them for our customers.

Q. And does the chain store have a very decided effect upon the prices that are paid to the producer for his hogs?—A. I think so.

*By Mr. Young:*

Q. Does he know? You do not sell to them?—A. We cannot sell our product to the independent for two or three cents more—

Q. You sell to your customers for the same price as the chain store buys elsewhere, do you not?—A. No, we do not, but we sell it—we have to compete with the quotations of other packers to these same independent stores. We are only a small packing house and we could not supply the large quantities that these chain stores demand for their various branches that are scattered throughout the provinces.

Q. We had evidence from a witness that the discounts given to the chain stores were made up by extra charges to others?—A. That is not our policy, because we feel that the independent stores are our customers, the only customers we can depend on.

Q. Yes, but if the independent store has to pay a higher price to the packing house and then you have to compete with the packing house in selling to the independent, you do not have to sell as cheaply as the packer sells to the chain store?—A. Oh, we cannot compete with them.

The ACTING CHAIRMAN: Could you say, Mr. Smith, what percentage of the domestic trade is in the fresh meat business? Is there any great proportion?

WITNESS: I am not sure, but I do not think we have over 15 per cent.

*By Mr. Sommerville:*

Q. In fresh meat?—A. Yes, in fresh meat.

Q. And the rest would be in processed meats?—A. Yes.

Q. And you deal largely in hog products?—A. Yes.

Q. Not so largely in beef?—A. Not so largely.

Q. Following up this question about your trade with the retailers. The largest portion of your trade is done with the retailers, is it?—A. The independent retailers.

Q. What proportion would you say?—A. I would say over 90 per cent.

Q. And you find that that enables you to get a better return and to pay a better return to the farmer than to attempt to sell to the chain stores?—A. I am not sure that it enables us to pay a better price to the farmer, but considering the price we pay to the farmer and the cost of the bacon we cannot sell at lower prices, and we find that the other packers, especially the smaller packers, are on the same basis as we are ourselves and so we are competitors with them all the time.

Q. That is the smaller packers in Ontario?—A. Yes. I think the larger packers too.

Q. How many of the smaller packers are there?—A. There are four chiefly—Duff's, Freeman's of Hamilton, and Snyder's and Dumarts of Kitchener.

Mr. EDWARDS: What about Kincardine?

The WITNESS It is not operating. They have closed again.

*By Mr. Young:*

Q. Now, I did not get that quite clear. In buying hogs you do not pay any more than the big packers do. You attempt to pay about the same price?—A. We take that as the basic price. We think we pay more in some cases, but I do not think we pay very much more in the district where we are buying. That is the district where the best hogs are produced for export trade. We think that they do sometimes consider it good policy to pay a little higher price in that district than in some other districts. They are buying from there as well as the packers from Hamilton and Kitchener and ourselves.

Q. And you meet that competition?—A. We have to meet that competition or else we cannot continue to buy these hogs. We have to satisfy both the drovers and the farmers or they will not bring them in.

Q. Then in selling your bacon you have to get a little better price than their average price because it cost you a little more?—A. I think, perhaps, our costs will not be very much higher than theirs for the quality of bacon we have.

Q. Your quality is a little better; it cost you a little more, and you sell for a little more, is that it?—A. Yes. And I think we ship a larger quantity in proportion for export.

Mr. SOMMERVILLE: Of the best quality?

The WITNESS: Yes.

*By Mr. Young:*

Q. Do you get a better price on the British market than they do?—A. I do not think we always do.

Q. You would have to make up the additional price on it from the additional price you get on what you sell at home, and you make it up by selling directly to the individual trader instead of to the chain store?—A. The larger share of our business is to the individual retailer. We do not have to take lower prices for the great proportion of our product.

The ACTING CHAIRMAN: You follow the same practice as Freeman and Duff in having your agents make regular trips to the small towns?

WITNESS: Yes, sir.

*By Mr. Sommerville:*

Q. Do you have truckers who are in your service bringing hogs to the plant all the time?—A. We have not in our employ, but we have a great many truckers who are bringing their hogs exclusively to us.

Q. We have heard some evidence of some plants paying bonuses to truckers to bring in hogs. Is there any such practice in your plant?—A. We do not pay any bonuses at all, but we give the truckers an allowance for bringing the hogs in. To-day our basic price is \$7.50 for bacon hogs. Farmers who bring the hogs in themselves get 10 cents per hundredweight additional—that is if they come in just adjoining the city of Stratford, five or ten miles they get that extra allowance. Those who are regular truckers bringing their hogs will get from 15 to 40 cents per hundredweight depending on the distance they come.

Q. Then you pay the trucker's charges?—A. Yes, we pay the trucker's charges.

Mr. YOUNG: That 15 to 40 cents is not freight, is it?

WITNESS: Yes, that is freight.

Mr. YOUNG: The farmer does not pay that?

The ACTING CHAIRMAN: Is that per hundredweight?

WITNESS: Per hundredweight.

*By Mr. Young:*

Q. Do you make any allowance to the trucker for taking care that the hogs are not bruised in rough handling?—We come in contact with the truckers and try to advise them in every way possible. We try to get the truckers to bring in the farmers themselves so that they can see the grading and see the hogs killed and graded on the rail. We are fortunate in having a government grader who does a great deal of field work when he is not engaged in the plant, and he goes out to see how the farmers are breeding hogs and how they are feeding them and caring for them; and that applies, I think, to the Kitchener houses also; and that is responsible, I think, very largely for the improvement in the quality of the bacon hogs in those adjoining counties—Huron and Perth are the largest—and there is Wellington and Waterloo and the other counties around Kitchener.

Q. You do not make any monetary allowance to the trucker for careful handling?—A. No.

Q. Nothing of that nature at all.

*By Mr. Edwards:*

Q. Take the districts of Stratford and Waterloo where the packing plants are, I would like to have your opinion as to what reaction the farmers would have in that district to marketing their hogs in this way; it has been suggested here time and time again that all hogs be marketed through the stockyard. Now, I know the territory, and my own opinion is that it would be a very great hardship to those farmers to market through the stockyards?—A. They would consider such control, or such regulations, as nothing but an imposition. The idea of them or of us having to pay the freight there and the freight back and the commission charges for handling would make them feel that they were not being treated honestly or justly.

Q. That is my reaction; but I wanted you to say it.

The ACTING CHAIRMAN: What would you say if there was a stockyard in Stratford?

WITNESS: It would be impracticable when there is only one packing house to have a stockyard in Stratford.

Mr. YOUNG: And only one buyer.

*By Mr. Sommerville:*

Q. How is the farmer sure that he is getting a competitive price?—A. He knows the competitive price before he brings his stuff in, on account of the broadcasting.

Q. He has learned it from the Toronto market?—A. Yes, from the Toronto market, and from the broadcasting every day at noon. Very often the hogs are not marketed until they find out if there is any change in the price; they do not market them until they hear the broadcast price.

Q. But supposing you had a continuance of the increase in direct shipments to the plant and the dropping away of shipments to the stockyards, where would you have your competitive price established for the farmers?—A. May I ask you to repeat that?

Q. If you had a continuance of the increase in direct shipments to the plant and away from the stockyards that would undoubtedly have an effect upon the stockyards?—A. Certainly.

Q. And that effect on the stockyards would be to make the market draggy and the price depressed; is that right?—A. Yes, sir.

Q. And that would react upon, not only the hogs on the stockyard, but all the hogs in the country; is that right?—A. Yes, sir.

Q. And if you have a continuance of these shipments away from the stockyards, is not that the very thing that depreciates the value of competitive prices of the hogs to the farmer?—A. If the quantity is not going to the stockyard, the price would soon advance in that part of the country at least; they would add on 25 or 50 cents per hundredweight. They are insisting on getting their share of the good bacon hogs from Western Ontario.

Q. Who? The packers?—A. The packers in Toronto. There is very keen competition in all Western Ontario for that class of hog.

Q. Now, Mr. Smith, the suggestion has been made with respect to packing plants which are located at stockyards, that these packing plants ought to be required to buy their requirements upon the public stockyards, and thus set the price for the whole country. What do you say as to that suggestion?—A. I can't say. Those who are shipping at different points—we are only on the Canadian National, and we can't get any hogs from C.P.R. points, but we have drovers who are shipping from both points, and they ship to Toronto as well as to Stratford, and they tell us that they are getting an equal and sometimes higher price than we are quoting. I think they realize that there are some advantages in shipping to Stratford, and so they continue with their shipments from C.N.R. points.

Q. From some of these points?—A. Yes. But they say they are getting—whether these are getting it or not I don't know—but they say they are getting equal to our price and sometimes a little higher.

Q. Getting it where, on the public stockyards at Toronto?—A. Well, they are selling them through commission agents.

*By the Acting Chairman:*

Q. Do you get any of your supplies from the stockyards?—A. We don't get any.

Q. You derive them locally?—A. Yes. I know Kitchener is getting some from the stockyards now.

Q. I think the same is true of Hamilton.—A. Yes, I know it is.

*By Mr. Ilsley:*

Q. You would not be much averse to having Toronto packing plants obliged to go to the stockyards for their supplies? Well, I think that is a sort of unfair position to put you in.

Mr. SOMMERVILLE: Well, I don't know.

The WITNESS: I don't know. The men who come in contact with us tell us they are being used very well when they go direct to the plant.

Mr. ILSLEY: Exactly.

The WITNESS: I have not any other information.

*By Mr. Sommerville:*

Q. In your relationships, there is the utmost confidence between you and the farmer?—A. Unless we have that confidence we cannot get our supply and we are dependent entirely on that district for it.

Q. You have got a peculiarly good district?—A. Yes.

Q. And apparently have had happy relationships, for many years, with the farmers?—A. Yes. We cannot use all the hogs from that district.

*By Mr. Ilsley:*

Q. Do you have any understanding with each other about the price?—A. No, we have not any understanding. If we have an outlet for a larger quantity, that we are going to make a profit on, we just dig in a little bit harder. We have a limited quantity. We can use about, on an average, 1,800 to 2,000 hogs per week. That is sufficient for our little family that we have there. We only have one hundred or some employees, and we have branches elsewhere. But that one hundred employees would just have enough to do if they processed 2,000 hogs a week. We sometimes will have 3,200, but we can't do that regularly.

*By Mr. Ilsley:*

Q. In Toronto they seem to use the telephone quite a bit between the packing plants. I was wondering whether you did that in western Ontario?—A. No. We do; we are in touch with other packers. The chief thing that we do,—knowing that this is a fact finding investigation,—is this: The Toronto packers have some system of knowing what hogs we are getting before the government reports are out. They frequently—not regularly, but occasionally—will call up to find out what kind of a run we are having. They will know in three or four days anyway, so we may just as well tell them.

Q. The other plants?—A. The Toronto packers. It is not a matter of price, but it is a matter of what kind of run you are having. I think they try to get that information throughout the entire country to know what is going forward, and that helps to decide what price they are going to send out in the following week.

Q. By the word "run," you mean how many?—A. Yes, how many. The same thing applies at Kitchener and Hamilton.

*By Mr. Kennedy (Peace River):*

Q. Can you get as good a price for your bacon on the British market as Denmark?—A. No.

Q. What is the reason for that?—A. We were out of the English bacon market for quite a long time, and we have been taking the lowest price of any of the countries that have been exporting bacon to Great Britain. Even the Balkan States have been getting a higher price than we have.

*By Mr. Sommerville:*

Q. The Baltic States, you mean?—A. Yes, the Baltic States.

Q. Estonia, Lithuania and so on?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. They are nearer to the British market?—A. Yes. But they got in before we had any quantity to export.

*By Mr. Sommerville:*

Q. You mentioned the Baltic States; they are what countries?—A. Poland, Lithuania, Latvia.

Mr. KENNEDY (Winnipeg): Finland.

The WITNESS: Last week our prices were about the same. 70 shillings was the top price being paid for Baltic and Canadian. The week before their top price was 72 and ours was 70.

*By Mr. Kennedy (Peace River):*

Q. I notice here that up until May, 1933, the Canadian price was ruling just a little above the Baltic, but from June on the Baltic price was ahead of the Canadian price?—A. That is correct.

Q. What would be the reason for that change? It is not so recent as the beginning of 1933, for instance, that that situation developed in the British markets as far as Canada is concerned?—A. It started on June 3, last year.

Mr. KENNEDY (Peace River): It seems to me a strange thing that the Baltic States can beat us after about fifteen years of hog raising in this country.

*By the Acting Chairman:*

Q. Is that due to the quality or is it due to the continuity of supply?—A. I think it has a good deal to do with the continuity of supply.

Mr. SOMMERVILLE: I think, perhaps, we can have that question fully answered in a few minutes by Mr. Wilson, who is the Dominion livestock commissioner.

Mr. KENNEDY (Peace River): This continuity of supply comes up, Mr. Sommerville. It is a funny thing to me that a country that went through the European war and all the unsettled conditions arising out of it, can still beat us on the British market on bacon.

*By Mr. Young:*

Q. We had one witness here who told us that the reason was that our hog was not as good as the Danish hog, and we had another witness who said that our hog was just as good as the Danish hog but was not as well cured. He said the time it takes to get bacon across the ocean might make a difference in the quality. Would there be anything in that?—A. We find it depends a good deal on the mental attitude of the Englishman when he is selling bacon. There are times when our bacon is just as good as the Danish, but there are other times when he says the Danish—there is a demand for the Danish, and they can get a higher price for it.

Q. Will the time it takes to cross the ocean make any difference?—A. I think it makes some difference, yes.

*By Mr. Kennedy (Peace River):*

Q. I notice in this letter from the Industrial Development Bureau that the Canadian figures for 1933 are just a little lower. In 1931 and 1932 all six countries included in the Baltic, Lithuania, Estonia, Finland, Latvia and Soviet Russia, the average shipment is 234,000 hundredweight to the British market, and the Canadian is 500,000, so that that argument does not very well meet the situation, as far as I can see it?—A. It is quite possible to get a little better price in small quantities, sometimes. If they had larger quantities on the market, they might not be able to get quite that much. I don't know, however, about that. Mr. Wilson will be able to tell you.

Mr. SOMMERVILLE: Thank you, Mr. Smith.

The witness was discharged.

Mr. SOMMERVILLE: We will call Mr. Wilson. I think we can complete Mr. Wilson's evidence this evening, and get the record of the British situation cleared up.

W. A. WILSON, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Wilson, what is your official position in the service?—A. Animal Products Trade Commissioner.

Q. Animal Products Trade Commissioner in England?—A. Yes.

Q. How long have you been handling the animal products branch in England?—A. I have been in the old country now for eleven years.

Q. For eleven years?—A. Yes.

Q. And connected with that service?—A. Yes.

Q. And you ought, therefore, to be somewhat familiar with the British market and British conditions?—A. Yes.

Q. Will you be good enough to just review the bacon market situation in the United Kingdom for us, please?—A. Mr. Chairman, in the first place may I say that the position of the United Kingdom bacon market, coupled with the various activities that are associated with it as a result of the British government's policy, lends itself to a wide scope of comment. In my endeavour to give you a brief description of it, I hope, my question or otherwise, if I do wander a little and get out of the field of comment that is relevant to the inquiry, I would like you to guide me. I thought in the first place it would be interesting to make some reference to the statistical position, past and present, and that it would be more fitting at the opening than in any other place. I have information in different forms. I would be glad to know just which you would like. I have it in rather detailed form, which includes and segregates all the exporting countries who are doing business with the United Kingdom, and then I have it in a form which only lists separately those countries which in a year's business, have more than 100,000 hundredweight.

Q. I would think that perhaps the latter compilation would be sufficient, because that would give us the main countries that export bacon to England, would it not?—A. It would leave out, Mr. Sommerville, all of the Baltic States that you have been just discussing.

Q. That would not do. We would like to have the Baltic States in. Perhaps you could give us the figures, not in extended form, but if you would just refer—

*By the Acting Chairman:*

Q. Would it not be possible to refer to the more important ones, and file that statement as you have it there, and it could be printed in the minutes?—A. Yes, I could do that.

*By Mr. Sommerville:*

Q. If you would do that, we would appreciate it. Give to the reporter the extended notes, and refer to the more important ones and their bearing upon the trade?—A. If I might, in view of that ruling, just give a comparison of all of these countries, stating the figures of their business with the United Kingdom for the years 1925 and 1931. I have selected those years because, in the first place, I did not have the 1932 figures when I left. The reason I have taken 1925 is because that was the peak year for Canada's business, before the decline started in our bacon exports.

## BACON AND HAM IMPORTS

(Quantities in 000 cwt.)

	1925		1931	
	Bacon	Hams	Bacon	Hams
Total.....	7,486	1,517	11,138	831
Denmark.....	3,739	1	7,339	3
U.S.A.....	1,490	1,309	198	601
Canada.....	1,267	188	50	72
Irish Free State.....	462	12	297	17
Holland.....	276	.....	1,001	.....
Sweden.....	150	.....	578	.....

Other countries.....	9	6	69	6

\*Russian—Export to the United Kingdom increased to 209,000 cwt. in 1929 dropped to 50,000 in 1930

†Latvia—Volume expanded to 164,000 cwt. in 1927, 145,000 in 1928, and declined rapidly following—Germany absorbed her supplies.

*By the Acting Chairman:*

Q. Have you the totals there?—A. These are shown at the top of the table of imports just given.

Q. From just reading them, it would seem to me that a great deal more was imported in 1931 to Great Britain than in 1925?—A. Very much so, an increase from 7,000,000 to 11,000,000 cwt.

Just to clear up a matter that was discussed a moment ago, the Baltic States are Esthonia, Latvia and Lithuania. Poland and Russia, of course, are not included in the Baltic States.

*By Mr. Sommerville:*

Q. Poland and Russia are considered as separate exporting countries?—

A. Yes.

Q. The Baltic States consist of those three?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. Dealing with that, we want to hear about this bacon?—A. In those years that I have spoken of, with the tremendous increase in the imports of bacon to the United Kingdom, the competition for sales became very keen. Price consideration with the buyer over there is just the same as it is here. Consequently, the prices declined very rapidly and the only thing that saved the situation was the tremendous increase in consumption which naturally followed; but it became so acute that in 1931, the most of the bacon in the United Kingdom was selling in between 30, 35 and 42 shillings a hundredweight, which was a calamity to everybody that was exporting. Apparently it seemed to be a question of who could stand the competition longest. In any case, it became quite impossible to compete, so far as Canada was concerned, and also the United Kingdom and it was that acuteness in competition that led to the British government adopting the hog and bacon policy which is now in operation.

Actually, it became a question of competition between a foreigner on the one hand and the United Kingdom and Canada upon the other; but it is pictured clearly in the fact that Canada's dropped bacon exports from 1,267,000 cwt. in 1925 to 50,000 cwt. in 1931.

I have the figures on bacon and ham, if you care to have them.

*By Mr. Sommerville:*

Q. If you will give them to the reporter they will be taken into the record at this point.

### BACON

The WITNESS: The quota arrangement under the Ottawa agreement saved the situation for Canada undoubtedly, and it was at that time that we saw hope; and with the consecutive deductions in the quotas from foreign countries, that the British Government made, an opening was partially made for Canadian bacon. I have these—the successive quota deductions that have been made—which I believe would be interesting to have on record.

Mr. SOMMERVILLE: If you will give those successive quota reductions to the reporter he will insert them at this point.

#### RE QUOTA ON BACON—FOREIGN

The initial cut in foreign becon imports made by the Government of the United Kingdom under the quota scheme was approximately 15 per cent and operated as from the 23rd of November 1932. Cuts of  $2\frac{1}{2}$  per cent each were made as and from the 23rd of February, March, April, May, June and July 1933. These cuts were basic reductions subject to seasonal and other adjustments from time to time in certain cases. Further reductions followed of about 11 per cent on September 15th and of 16 per cent on November 10th, 1933. In each case after the first the percentage reductions were made on the reduced quantities permitted to be imported in the immediately preceding period.

For the five months beginning March 1934 the permitted imports will be increased  $3\frac{1}{2}$  per cent and for the succeeding five months they will be cut  $4\frac{1}{2}$  per cent below present current rates.

The United Kingdom farmers are profiting by their big industry scheme, and I would just like to mention the basis of these operations. The Pig Commission Report which was issued by a royal commission in 1932, took as a basis for the annual requirements for the United Kingdom that they estimated would bring the price to what would be remunerative to the home producer at an amount of 8,920,000 cwts., for imports; and that the home production at that time was equivalent to 1,750,000 cwts; making a total of 10,670,000 cwts. They also figured that in their scheme they would allow for a 10 per cent increase every four months in the home production, and that would be provided for by further reductions in foreign imports. The supervisory machinery of the scheme is in five bodies; they have what they call a quota advisory committee; a quota import advisory committee; a pig industry development board; a pig marketing board and a bacon marketing board; and these are the bodies that supervise the scheme and advise the government. They fixed the price of bacon on a graded basis, on feeds at a certain cost, and this price will vary as the feed cost varies.

*By the Acting Chairman:*

Q. Who fixes this price?—A. It was fixed originally in a scheme that was submitted to the government and prepared by the bacon curers and farmers themselves, and the basic price was fixed at 12. 0. per score of 20 pounds; they also fixed the variations in price for the respective grades up and down from the basic price and based on quality.

Q. And this price varies from time to time to meet changing conditions?—A. The variations are based on the variations in the price of feeds which are revived from time to time.

*By Mr. Sommerville:*

Q. And these prices were arranged between the packers and the farmers, and then submitted to and approved of by the government?—A. That is right.

Q. And when the packers by local hogs they pay on this basis from time to time?—A. That is right. So far as the "curers"—that is what they call them there—were concerned, they were not given a guarantee of any price for their bacon, but they accepted the assurance of the government that the imports

would be regulated to the extent that the price of bacon would rise in the British market, so as to leave a profit to the curer after paying the agreed prices to the farmer.

Q. And the object of that was to keep the price of the home-produced bacon up over the price paid for bacon from other countries?—A. The British bacon—that is the English bacon—is usually (I am speaking now of the official price, that is the only basis upon which I can go) listed at the top—it sells for more money than any other bacon. The pig and bacon has worked very well, although for the first few months of the contract period, the curer did not realize a profit, and arrangements were made that a government loan to be repaid in 2 years would be given to them to cover their estimated losses.

Q. No provision on prices for import bacon?—A. No, none whatever.

*By Mr. Sommerville:*

Q. No governmental provision, there is a provision by the trade?—A. It is on a competitive basis pure and simple.

*By the Acting Chairman:*

Q. Supply is governed, that is what I want to get at?—A. Imports from all foreign countries are regulated.

The ACTING CHAIRMAN: On what basis is that determined, that is what I want to know.

MR. SOMMERVILLE: Mr. Wilson is going to give you the details on that.

The WITNESS: I would like to give you a review of the general bacon market. For several years the market has actually been over-supplied with bacon. That was indicated by the very low price it had reached in 1931, when the British government first considered the quota policy. May I say this first: that when the quota in one sense was made for Canada under the Ottawa agreement at 2,500,000 cwts. annually, the trade did not take it seriously because they knew our past record, of being in and out of the market and they took it for granted that our hog industry was declining. They do not take that view now, they realize Canada can produce hogs, ship bacon, and become a competitor. Our shipments increased very rapidly and we went on to a market that was already over supplied with bacon. No one can get into the British market, or any market for that matter, but more particularly the British market, without paying the price; and particularly when the market is full and you are trying to get in. In England that was more pronounced because of the rapid increase in our export volume. I might explain that insofar as the wide differential in prices that you referred to in Mr. Smith's case. It developed into what you might call "forced" selling. Broadly stated there are two classes of producers—viz, order customers and outright buyers. Getting into the market with a big supply in a short time, it is the latter class with whom the selling effort is chiefly pressed but the order customers are never neglected.

Q. The outright buyer, as against the order buyer?—A. We had very few order buyers when the increase in our exports commenced because we did not have the supply of bacon coming forward. Secondly, it was a hard job for the agents of Canadian bacon to dispose of these supplies in a market already filled; and where the price normally ruling in 1931 was about 4 shillings underneath the Danish price, that differential gradually widened until at one period we were about 16 shillings under the Danish price. It has been improved, fortunately. When I left London our bacon price was only 8 shillings under the Danish price. There are several reasons in explanation of that. First might I mention that the buyers commenced to realize that Canada was going to be a factor in the bacon trade. They also next realized that the bacon from the foreign countries which they had been purchasing regularly was being cut down consistently by

the British government, and that their regular weekly supply might not be forthcoming, so they gave more attention to the Canadian bacon.

The standard of quality of bacon in the United Kingdom is higher than it ever was, as these new continental suppliers have developed their volume considerably since 1925, and have concentrated on the development of uniformity in bacon in all respects, both with respect to type of side, trim and cure; and they have succeeded marvellously. It was their only hope. Our greater volume—in that respect had very severe competition. Referring to Canadian bacon itself, and relating to its quality. The exports expanded so rapidly that it was inevitable the variation in types of side, trim and general quality would be wider. I presume too it was only human that each Canadian exporter was anxious, in the changed relative positions of foreign import bacon, to develop his clientele in the Old Country as rapidly as possible, with a view to bettering his selling connection in the future; and that may have led to leniency in shipping qualities of bacon such as were described by Mr. Smith this afternoon. Might I also mention, that there were several Canadian packing houses who started to export bacon as well, and not being familiar with conditions in the United Kingdom, they had something to learn. Within the short period of from eight to fifteen months in which these respective new shippers have been sending forward their bacon, they have made very nice progress in improving its quality.

*By the Acting Chairman:*

Q. Has the fact that a certain amount of inferior bacon has gone over there destroyed to any extent the reputation of Canadian bacon?—A. It has affected it, there is no doubt about that; because, quite irrespective of merits of particular brands, all our bacon is looked on as Canadian bacon, and the higher the percentage is of shall we say number 2 bacon—because some of it goes over—and the greater the irregularity in the type of sides, the greater will be the depressing effect upon Canadian bacon prices. There are some exceptions among buyers. They know that particular brands are satisfactory to their trade—they disregard the position relating to the general quality and they take their supplies from the selections that are giving satisfaction, but the official price governs their payments.

I think that describes the situation pretty well in general; perhaps you would now like to have me particularize with respect to methods of sale—

Q. Yes, that is what we would like to have you do. First of all, the bacon that reaches England is shipped green, or cured?—A. Yes.

Q. And it is sold to the curer?—A. Yes.

Q. And is marketed by them?—A. Yes.

Q. I think that describes adequately the procedure in selling. Now then, the method of arriving at prices and the governing bodies?—A. Broadly stated, as already mentioned, there are two groups of buyers; what are described as order buyers, and those who purchase outright. The order buyers give their weekly volume requirements to their respective customers, with the understanding that the price paid will be the official price. I am talking of London now, because that is the big Wiltshire market. The official price is fixed by a committee of the exchange on Thursday of every week; and that price covers the purchases for the preceding week, not the following week.

Q. Yes, the current week?—A. Let me say, the seven days before the Thursday—we will make it quite clear.

Q. That price governs the seven days before the Thursday on which the price is fixed?—A. That is right. The order customers do most of their business that way.

Q. The order customers are those who order their supplies regularly, consistently and continuously from commission houses?—A. That is right.

Q. And these are regular orders from the commission houses, billed from week to week?—A. That is right.

Q. With great regularity, and they ship as the product comes in each week to the order house, the requirements of the order house?—A. That is right.

Q. On the basis of the price to be fixed on the Thursday following the date of shipment to the order house?—A. That is right. The other class of customers bargain for their bacon and buy it at the best price they can, and pay for it at the time, irrespective of what the official Thursday price may be.

Q. And the order buyer forms the bulk of the trade?—A. I would say yes, but I would say that the order customers may vary the volume of their orders any week, depending on the trend or prospect of British market price. If they think the market is going down they will probably only give half their order at the beginning of the week, and if they think the market is going up, they may buy more freely; there is some variation in this respect in the order customers.

For the purposes of fixing the official price on the London Provision exchange, there is a committee for each exporting country and the number sitting on it varies with the respective countries, determined mostly by the respective volume—from two to ten in number. The price is calculated on the basis of sales which have been made by these men who sit on the committee, to buyers who purchase outright. They have their invoices of sales thus made and these determine the basis of a frank discussion. The system has been in operation for so many years that a degree of confidence has now been established and a member's statement of sale is accepted. As a result of these meetings every Thursday agreement is reached on prices for the week for Canadian bacon, by a Canadian committee, for Danish by a Danish committee, and for Swedish by a Swedish committee, and so on.

Q. And the men who sit on these committees are the commission agents who represent the Canadian firms in the case of Canada?—A. Plus one or two buyers, as the case may be, on the various committees, for instance, on the Canadian committee you might possibly have four commission agents and two buyers.

Q. The large buyers?—A. Yes, buyers always sit in with the commission agents on all these committees.

Q. And then in arriving at the prices they take into consideration the prices that have been paid by cash buyers during the week?—A. That is right.

Q. And fix the price that should be charged to the order buyers for that same week?—A. That is it, and that is what is termed the official price.

Q. The price arrived at is known as the official price?—A. Yes, and those are the prices that are published and reported in the press and in this country.

Q. And these prices vary according to weights?—A. Yes, there are other conditions that enter into it, but weight has a bearing on it. The description of bacon, I think that is what you are referring to?

Q. Yes, I want to get a description of bacon?—A. The description of bacon as used in the trade and on the exchange are these: light sizable, which means bacon—Wiltshire's—weighing 51 to 55 pounds; sizeable weighing 56 to 65 pounds per side; heavy, weighing 66 to 75 pounds per side; heavies, weighing 76 pounds and over.

Q. Per side?—A. Yes. There is also the term "sixes" which relates to weights of 49 pounds per side and under. In offering sixes to the trade the description is given in weights of 5 pounds; that is, forty to forty-five pounds and so on.

Q. And that is what is called sixes?—A. Yes. The term sixes is used because they are usually packed in bales of six.

Q. Six sides in the bale?—A. Yes.

Q. And otherwise, the other sides which you have mentioned are packed four to the bale?—A. Yes, in weights from 50 to 55 pounds up to 66 to 75

pounds; they are offered as No. 1, No. 2 and No. 3 bacon; except in Irish which are described differently.

Q. We do not want to get into Irish descriptions?—A. These grades are not determined in the United Kingdom. Every exporting country ships its ones or twos, and the shippers in the exporting countries do the classifying. They have their official classifications and descriptions of these grades. They are not uniform, but made to fit the conditions in the respective countries, the method of supervision of the classification and the grading also varies. I have not got the details of this, Mr. Chairman. I do not think it is material and it is rather complicated.

Q. But in Canada, the definition of grades has been set out in order-in-council P.C. 1901 of September 16, 1933?—A. That is right.

Q. And are to be found in this statement from the Minister of Agriculture?—A. Yes, I believe that came into operation on the 5th March this year.

Under and by virtue of authority conferred upon me by the regulations governing the grading, marking and sale of bacon for export to Great Britain as established by Order in Council P.C. 1901 of September 16, 1933, under the provisions of Section 4 of the Live Stock and Live Stock Products Act, Chapter 120 of the Revised Statutes of Canada, 1927, I do hereby define the grades, and also the specifications of back fat covering for the various standard selections within each grade, as required under Section 4 of the said regulations, as follows:—

#### DEFINITION OF GRADES

##### Grade "A"

(a) Possess balance, bearing a good proportion of lean to fat, of meat to bone, well shaped with fore-end not out of proportion to the side, with streak reasonably thick, and with full tapering ham, and the quality and texture of the fat must be firm to the touch.

(b) Be neatly butchered and trimmed, presenting a clean cut bright appearance, and must be reasonably free from scratches, bruises, or blemishes of any kind.

(c) The cure shall indicate freshness of flavour, and the necessary mildness of cure to indicate a satisfactory condition upon arrival in United Kingdom.

##### Grade "B"

(a) Shall be of good quality but may include sides which have imperfections in conformation and type.

(b) Be neatly butchered and trimmed and free from serious bruises.

(c) The cure shall indicate freshness of flavour and mildness necessary to good condition upon arrival in the United Kingdom.

(d) This grade shall not contain soft, oily or very thin sides.

##### Grade "C"

All bacon not eligible to be placed in Grade A or Grade B.

#### BACK FAT MEASUREMENTS

##### No. 1 SELECTION OR LEANEST

	Shoulder	Middle of Loin
50/55..	1 $\frac{1}{4}$ "	1 $\frac{1}{4}$ "
55/60..	2 "	1 $\frac{1}{4}$ "
60/65..	2 "	1 $\frac{1}{4}$ "
65/70..	2 $\frac{1}{4}$ "	1 $\frac{1}{2}$ "

##### No. 2 SELECTION OR LEAN

50/55..	2 "	1 $\frac{1}{4}$ "
55/60..	2 $\frac{1}{4}$ "	1 $\frac{1}{4}$ "
60/65..	2 $\frac{1}{4}$ "	1 $\frac{1}{4}$ "
65/70..	2 $\frac{1}{4}$ "	1 $\frac{1}{2}$ "

##### No. 3 SELECTION OR PRIME

50/55..	2 $\frac{1}{4}$ "	2 "
55/60..	2 $\frac{1}{4}$ "	2 "
60/65..	2 $\frac{3}{4}$ "	2 "
65/70..	2 $\frac{3}{4}$ "	2 $\frac{1}{4}$ "

"Shoulder" measurements are to be taken just behind the thickest point of fat on the shoulder and at a point above the first rib.

The "middle of loin" measurement is to be taken at a point above the last rib.

These measurements at shoulder and loin are maximum measurements and as a rule should not be exceeded.

(Sgd) H. BARTON,  
*For Minister of Agriculture.*

Dated at Ottawa, Canada, this 19th day of February, one thousand nine hundred and thirty-four.

So that it is the exporting country that determines the volume of No. 1 and No. 2 grades that will go in these various weights that I have just read out, and that is accepted by the trade in the offerings from the various importing commission agents. Yes, are there any points on which you would like to question me, Mr. Sommerville?

Q. I was just going to ask you, in arriving at the question of price for Canadian bacon is that because we are making our way into a market in which there are already established national customers, our price is not necessarily a reflection on quality?—A. Quite definitely, yes.

Q. Our quality may be quite as good as the Danish quality, but because we are trying to break into that market, we have got to break into it on a price basis?—A. That is quite right.

Q. That is the situation?—A. That is quite right, yes.

Q. Until we have a continuity of supply and have established ourselves in that market, the differential is likely to exist?—A. There will be a differential, yes; but I believe that it will be narrower than it has been.

Q. Yes, I understand that was reflected some years ago in the Dutch situation?—A. Yes.

Q. The Dutch were shipping fresh pork into England, and had a large trade, and then when that was shut off, they turned it into bacon?—A. Yes.

Q. And they eventually got into the British market?—A. Yes.

Q. And when they were trying to get into the British market with a fine quality bacon they found they had to take a differential of as much as 20 shillings below the Danish bacon?—A. Quite right.

Q. That is the same experience that we are going through?—A. That is the same experience that we are going through.

*By Mr. Kennedy (Peace River):*

Q. I find that in January, 1932, the Canadian bacon price was 53 shillings and Dutch 44 shillings 6 pence?—A. What date was that?

Q. January 1932—a differential of 6s. 3d.?—A. Yes.

Q. And when we get down to April, 1933, the Canadian price is 62s. per hundredweight and the Dutch price is 63s. 6d.?—A. Yes.

Q. When was this change in shipping from Holland from fresh pork to cured bacon made?—A. That was in 1925, because of an outbreak of food-and-mouth disease which was traced to a side of Dutch bacon.

Q. The point I am making is this: we had a position in 1932 which was a little better than the Dutch according to these figures, and yet we dropped off; and I do not see that your explanation really explains that because of the increase in Canadian shipments which has taken place. You do say, however, that there was some question with regard to quality of some of the shipments from Canada since the Ottawa agreements, and that, of course, has reflected back on the whole price of hogs sold in the Dominion of Canada 100 per cent?—A. It is reflected in the price of Canadian bacon on the other side.

Q. Yes, and I think we will benefit from this regulation of the grades of bacon allowed to go forward?—A. I think a start has been made in the right direction, so far as I see it.

*By Mr. Sommerville:*

Q. That is to say, the regulations which came into effect on the 5th March last require an inspection of the quality going forward?—A. Yes.

Q. And that is a step in the right direction?—A. Yes.

Q. If it protects quality and uniformity it will, you think, improve the position of Canadian bacon on the British market?—A. It will be a beginning of an improvement undoubtedly.

Q. Now, would you like in a few minutes to give us a statement of the cattle situation.

*By Mr. Edwards:*

Q. I understood the head of Canada Packers, in his evidence here, made the statement that a slight improvement in the quality of Canadian bacon would have put \$12,000,000 additional into the pockets of Canadian farmers on the basis of shipments of 1933—what would you say as to that?—A. I am afraid I cannot confirm the figures definitely, but in principle he is right, and it is borne out in the fact that at the present time, at least when I left London, the differential in price was only 8s. a cwt., as compared with the Danish bacon, and 8 months ago it was 16s. a cwt.; there is a saving of 8s. a cwt.

Q. I think Mr. Maclean brought that out, I was just wondering what you would think of that part of it?—A. I can't verify his figures, but the statement in principle is correct.

*By Mr. Sommerville:*

Q. But your observations are that the quota did save the situation; without the quota we could not have remained on the British market?—A. Without the quota we would have been out of the market entirely.

Q. Now, Mr. Wilson, can you give us in a few minutes the cattle situation?—A. Is there any kind of a lead you could give me on that as to just what you want?

Mr. KENNEDY (*Peace River*): The livestock people are asking for an increase in the quota, he might discuss that.

*By Mr. Sommerville:*

Q. I suppose you do not know just whether we are going to get that or not?—A. I do know the situation up to the time I left London; but I think that is something we should not discuss in this committee.

Q. What is the position of our cattle going on to the British market?—A. In a general way, Canadian cattle are held in very high regard from the health standpoint, it is recognized by those who know—the butchers—that there are no cattle to compare with them. They judge them and make that statement on the basis of condemnations of offal; and it is infinitesimal in Canadian cattle. It has been stated to me by an authority who was in a position to know that actual tests over a considerable period by members of the Meat Trade Federation showed losses in condemnation in offal of less than one-half of one per cent.

Q. And is that a remarkable showing?—A. There is nothing to compare with it.

Q. There is nothing to compare with it on the English market?—A. None whatever.

Q. What do you say as to the statement that last year grades were shipped which were not properly fitted for the British market and should not have been allowed to go there?—A. I have not in mind that our cattle should be graded for the Old Country market, because of the variety of the demand in various parts of the United Kingdom which is such that I am prepared to say at the moment that the grading of cattle would be impossible; but what I have in mind is that there is a small percentage of what I call "roughs," which are not beneficial to allow into the trade in the Old Country. We would profit if we had some authority in this country to say, I am sorry, you can't load that animal—there are no figures to show the percentage of those that have been shipped; but from what I have seen, and I have seen many cattle steamers arrive, I would say that the percentage would be under 5; and the elimination of that 5 per cent of rough cattle would not harm anybody on this side and the benefit to our trade on the other side would be out of all proportion to any loss that might be experienced by a producer or shipper.

*By Mr. Kennedy (Peace River):*

Q. Do you refer to feeder cattle, or to cattle for slaughter?—A. They may have been loaded as feeder cattle; certainly they were not fit for the butcher—but they were not feeders, because most of these rough cattle are aged animals; I should like to make it very clear—that aged animals or 3-year olds and upwards are not store beasts and there is no trade for such among the farmers. Whether or not they are suitable for slaughter, that is the only outlet.

Q. What type of cattle do they like there?—A. Two-year olds, or better still what they term two-teeth cattle, but they are rather light for us to ship in great numbers, although more of these are being shipped each year. Good two-year olds fit the trade very well, and are acceptable to feeders. Nine hundredweight is about right. There is a trade among butchers for the heavier cattle up to, I should say, from 15 to 20 per cent per steamer and anything from 1,100 even up to 1,300 sent of the right type, of course. I am thinking of the low set solid animal that has plenty of back and hind quarter meat.

*By Mr. Sommerville:*

Q. You think there should be somebody who would be able to say that 15 or 20 per cent of each shipment should be heavy cattle and the balance feeders, and cut out the rest?—A. No. I would leave the percentage of heavies and medium weights to the normal development of the trade, leave that undisturbed, but just prohibit the loading of the few animals that are too old and too rough. The percentage is small.

*By Mr. Kennedy (Peace River):*

Q. Is there any prejudice against our grades of cattle—the different breeds?—A. Of course, in Scotland there is a prejudice against the Herefords.

Q. Why is that?—A. Because the black animal is popular, the black Angus.

Q. Is there any tendency to overcome that prejudice as they get experience?—A. Yes, there are certain feeders in Scotland now who buy the Herefords with far less hesitation, but, at the same time, they will not pay the price they would pay for black animals of similar age and conformation. When you get to Birkenhead which is our big market, there is not any prejudice against the Hereford.

*By Mr. Sommerville:*

Q. Hereford cattle are taken freely in England?—A. Yes, in England.

The ACTING CHAIRMAN: But it is not so popular in Scotland, is that it?

The WITNESS: Yes.

Mr. KENNEDY (*Peace River*): The Scotsman likes the blue cattle—a cross between the Angus and the Shorthorn, does he not?

The WITNESS: Some of them like the blue, but the black is the description.

*By Mr. Sommerville:*

Q. Where does our chief competition come from?—A. Our chief competition comes from chilled and frozen meat, particularly frozen meat.

Q. From the Argentine?—A. Chilled meat from the Argentine, and frozen meat from the two southern Dominions—frozen meat also come from Uruguay and a small percentage from Argentine.

Mr. KENNEDY (*Peace River*): Is the Argentine trade in chilled meat?

The WITNESS: Mostly chilled.

The ACTING CHAIRMAN: What about competition in live animals from Ireland?

The WITNESS: Ireland is the only other country that ships live cattle, and I have never looked upon competition from Irish or English cattle as being comparable in severity with chilled and frozen beef. Generally speaking the price of frozen meat is about one-third that of the fresh meat.

*By Mr. Sommerville:*

Q. And there has been a large increase in shipments?—A. A tremendous increase. We shipped 52,000 head of cattle last year; New Zealand shipped about 40,000 cattle (frozen carcasses) more than we did. Australia shipped over 200,000 frozen carcasses more than we did—of live animals.

*By Mr. Young:*

Q. And that sells for about one-third the price of chilled?—A. That is about the difference in the selling price.

Q. And the chilled sells for what fraction of the price of live cattle?—A. From two-thirds to three-quarters of the fresh meat price. For nine months of last year the Argentine shipped twice as many cattle (chilled carcasses) as we shipped of live animals for the year.

Q. I am told that Argentine beef is very popular over there?—A. From the standpoint of a beautiful picture in neatness, uniformity and proper conformation the beef the Argentine have in Smithfield market is the nicest I have ever seen in my experience. They breed the right type of animal and they ship the weights that are wanted.

The ACTING CHAIRMAN: Are they largely Shorthorn?

The WITNESS: They have Shorthorn, Angus and Herefords.

Mr. YOUNG: That sells 15 per cent below?

The WITNESS: Generally about  $\frac{2}{3}$  to  $\frac{3}{4}$  less. It will vary. If we are shipping chilled beef we should only ship that which is comparable to the Argentine supply, otherwise forget it. That means it has to be selected from the best animals in this country, and these are the animals that will bring more on the hoof than any others we can sell.

Mr. YOUNG: Is it preferable to ship our live animals?

The WITNESS: We can ship the same class of animals and make more on the hoof than by shipping it chilled.

Mr. SOMMERVILLE: What are the prospects for our trade in beef, mutton and lamb?

The WITNESS: Until the Ottawa agreements expire with the southern Dominions the position as I see it is not likely to improve materially, because the increase from those two Dominions has, to a very great extent, taken up the

volume that has been cut off the Argentine; and that has been unfortunate in this respect, that the beef that sells at the higher price has been replaced by the beef that sells at the lower price. These agreements expire in June and the revision of the quotas will be subject to discussion. I imagine with the condition of the Old Country market at the present time, that prices will probably have to improve.

Mr. SOMMERVILLE: Prices of cattle—

The WITNESS: —will have to improve.

*By Mr. Kennedy* (Peace River):

Q. Is there any preference amongst the butchers in the Old Country regarding the various breeds of cattle?—A. The butchers? The preference I have stated, so far as Scotland is concerned, is wholly dictated by the butchers.

Q. What about England?—A. Well, certain markets in England in the midlands, for instance, they will take an animal in a condition of flesh that is not acceptable in Scotland and they will pay better prices .

The Committee adjourned to meet Tuesday, April 24, at 11 a.m.

HOUSE OF COMMONS, Room 368,

April 24, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock a.m., Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., of Toronto, and Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. The minutes of the last meeting indicate only the witnesses called and heard and certain communications filed. Unless there are some questions we will declare the minutes approved.

Mr. YOUNG: Before you proceed, I would like to refer to Mr. Buckle's evidence the other day, and I find that the chart he submitted has not been submitted in evidence and the evidence, as a result, is difficult to follow without the chart.

The CHAIRMAN: That was the second witness with charts?

Mr. YOUNG: Yes.

The CHAIRMAN: The difficulty was, I think, that all he had was a blueprint.

Mr. YOUNG: There was a chart of the Searle Grain Co., showing the trend of prices, and you were going to bring Dr. Coats here.

The CHAIRMAN: Oh, yes, I did not recall for a moment which chart you referred to. It will take some little time for checking and verifying.

Mr. YOUNG: But in the meantime Mr. Buckle's evidence is published and the chart is not there; it does not make sense; you cannot follow the evidence without it.

The CHAIRMAN: That is too bad. The only thing we can do is to print the chart as a supplement to that evidence, and we will do that.

Now, before the first witness is called a suggestion has been made by counsel for the committee that it would, perhaps, save a great deal of time if certain extracts from the report that was tabled on the investigation by Mr. Donald Sutherland into the tobacco business might be read, which would, shall I say, form a background to the evidence which will be submitted later, and the members of the committee could have the matter in their minds.

Mr. SOMMERVILLE: Mr. Chairman, I am filing first, in order that the tobacco situation may be before the members of the committee, a copy of the report of the Tobacco Enquiry Commission in the province of Quebec and Ontario, conducted in the year 1928 by a commission consisting of Mr. E. S. Archibald, director of the Dominion Experimental Farms, chairman, Mr. E. P. Tellier, Belle River, Ontario, and Mr. H. B. Archibald, manager of the Cooper Leaf Tobacco Company of Wallaceburg, Ontario, as an exhibit.

(Report filed, marked Exhibit 103.)

Then, in order that the information contained in that report may be brought up to date, I am filing with the members of the committee, as an exhibit, the report of the sub-committee on marketing and related problems—Mr. T. G. Major, Department of Agriculture, chairman, Mr. N. D. Sommerset, Ontario,

a member, Professor A. Leitch, a member, and Mr. Blake, Cohoe. This is a statement entitled "Development in the Tobacco Producing Industry of Canada from 1928 to 1934."

(Report filed, marked Exhibit 104.)

I am also filing as an exhibit the statistics relative to the Canadian Tobacco industry compiled by the Tobacco Division of the Department of Agriculture of Ottawa, February 12, 1934.

(Statistics filed, marked Exhibit 105.)

These three documents will give the information with respect to the present position of the tobacco industry in the Dominion of Canada.

Mr. FACTOR: All these documents appertain more or less to the growing of tobacco?

Mr. SOMMERVILLE: Yes.

Mr. FACTOR: They do not touch any of the other sides—the manufacturing or distributing of the product?

Mr. SOMMERVILLE: No, it has nothing to do with them, save only that it shows the domestic consumption and the export and also the import trade—the amount the National Revenue received from the product and, generally, the trend in various varieties of tobacco grown in the country. We have already had filed the report of Mr. Sutherland, and I think that was given the exhibit number, 100—"Investigation into an Alleged Combine of Tobacco Manufacturers and other buyers of raw leaf tobacco in the province of Ontario." The report is dated March 4, 1933. It was submitted to the Minister of Labour on that date by Mr. F. A. McGregor, registrar of the Combines Investigation Act, who forwards the report of the Commissioner, Mr. Donald Sutherland, and in forwarding the report to Hon. Mr. Gordon, which report was later filed in the House, Mr. McGregor, in his letter of the 4th of March, says, "I am in accord with the statements of fact expressed in the attached report and substantially in accord with its opinions."

At page 7 of the report, under the heading "Expansion of the Tobacco Industry," Mr. Sutherland says:—

The growing of tobacco in Canada dates back to an early period when United Empire Loyalists, who settled in Canada after the American Revolution, brought tobacco seed with them from the United States. Records show that there were shipments of tobacco from Essex County, Ontario, shortly after the war of 1812. In 1871, 399,870 pounds of tobacco were grown in Ontario, and 1,195,345 pounds in Quebec. Production continued to expand slowly until in 1901 a total of 11,267,000 pounds was grown in Canada, while in 1911 the crop amounted to 17,632,000 pounds. In 1931, the production of tobacco in Canada reached the figure of 51,300,000 pounds, of which Ontario contributed 44,770,000 pounds.

Various types of tobacco have been successfully grown in Ontario. In 1927 and 1928, the Dark Fire and Burley varieties constituted the main part of the crop. Since then, the flue-cured, otherwise known as Virginia or Bright Southern, tobacco has been in the greatest demand. This type is used chiefly in the manufacture of cigarettes and the general increase in the consumption of cigarettes is accountable, to a large extent, for the increase in the demand for the flue-cured tobacco.

The soil in what is known as the Norfolk district of Ontario is peculiarly adapted to the growing of flue-cured tobacco, and to this district, sometimes termed the New Belt, may be attributed the marked increase, in recent years, in the production of tobacco in Ontario. For some years past the acreage devoted to flue-cured tobacco has been steadily increased. 1929 and 1930 were

extremely dry years so that the increase in acreage was not reflected in the total yield. 1931 was an almost perfect growing season, which, combined with a further increase in acreage, resulted in an increase in the total yield of about one hundred per cent. The total yields of Ontario flue-cured tobacco for the above mentioned years are as follows: 1929, 10,500,000 pounds; 1930, 12,396,400 pounds; 1931, 24,500,000 pounds. As a result of the size of the crop there was a small surplus of low grade tobacco at the end of the buying season, and prices for the year were down approximately twenty-five per cent from those of the preceding year. In 1932 growing conditions were again ideal and there was another slight increase in acreage. The result was a crop of first class quality and a total yield which is estimated at about 29,000,000 pounds.

At this stage prices of flue-cured tobacco in Ontario were reaching a level at which the British market was becoming interested. In the three years prior to 1932 the United Kingdom is said to have increased its imports of Ontario flue-cured tobacco from 500,000 pounds to 5,500,000 pounds. This increase was due to the reduced price and to the preference granted on the British market to Canadian tobacco over that imported from countries outside the Empire. From the Canadian point of view the United Kingdom is the greatest present and potential market for raw leaf tobacco. Although the domestic market constitutes at present the principal outlet for Canadian leaf, the stabilizing effect of an export market appears necessary.

*Situation Preceding Application for Investigation.*—Information obtained during the course of this inquiry as to certain conditions which prevailed before application was made for an investigation may convey some idea of the feeling of suspicion which was general and widespread among tobacco growers at that time.

The rapid growth and development of the tobacco industry in Ontario has, apparently, far outstripped the obsolete and antiquated method of marketing tobacco, still practised under what is termed the "barn buying" system. This method was employed in a number of countries when the tobacco industry was in its primitive stage in those countries. While tobacco growing was a comparatively minor industry in Canada, and the total production was used for domestic purposes by one or two companies, the system fulfilled all requirements. In recent years the barn buying method of marketing tobacco has outlived its usefulness and has proved unsatisfactory to growers and to the majority of purchasers. In the words of an official of one Canadian tobacco company, "No other system lends itself to so much malpractice." Under the barn buying method, as practised in Ontario, the leaf purchasing organizations of the various companies maintain staffs of trained buyers, or field men as they are sometimes called, who inspect the crops of the individual growers several times during the growing season, during harvesting and while the crop is being cured. When buying commences, the buyers have these records to assist them in estimating the quality of the crop when stored in the barns. When purchasing tobacco in this way the usual procedure is to offer the grower a price per pound for his entire crop with the stipulation that all undesirable tobacco, green, black, burnt, frosted or otherwise damaged, must be excluded. Buyers frequently make an offer with the provision that a lower price be paid for tobacco of inferior grade that is contained in the crop.

One company in Ontario buys a large part of its tobacco under contract. (See section of this report re Consolidated Leaf Tobacco Company, Limited.) The grower contracts to sell his tobacco to this company at prices listed on the contract which are based on the grading of the crop as determined by the company. A relatively small proportion of the Ontario crop is handled in this way.

The accepted custom for a number of years has been that all the buyers waited for one of the largest companies to open the market. In 1931 the market was opened by the Imperial Tobacco Company of Canada on October 6, and in 1930 the same company opened the market on the same date, October 6. The opening price in 1930 was forty cents per pound, and in 1931 thirty cents per pound. These were top prices, offered for the best quality of tobacco, and, as would be expected, the best crops were bought first. Should an offer be refused, the almost invariable practice, up to 1932, has been that succeeding offers for that crop were lower than the original offer. This practice was innovated by the Imperial Tobacco Company of Canada, and was used as, what has been termed, a big stick to keep the growers in a position whereby that company could more readily obtain the tobacco for its requirements and thus shorten the period of time spent in purchasing tobacco. Other companies have taken advantage of the effect produced by this system. There appears to have been a fairly common practice among buyers of informing the growers that "the offer was off as soon as the buyer left the premises." This threat was usually carried out, and became so well known among growers that it was generally deemed advisable to accept the first offer made.

The opening of the Ontario market for the purchase of the 1932 crop of flue-cured tobacco took place on October 26, about three weeks later than was the case in the two preceding years. Improved methods of growing, particularly the process of priming the leaves instead of the practice followed in previous years of cutting or splitting the stalk, resulted in the crop being ready for sale ten days to two weeks earlier than in the past. (This estimate was made by Mr. H. P. Buell, of the Imperial Tobacco Company of Canada in a letter to Mr. R. C. Harrison of the British-American Tobacco Company). This tended to lengthen the period between the completion of harvesting and the commencement of buying to more than a month. No explanation or reason for the delay was advanced to the growers by the company which apparently dominated the market. As the days passed the growers quite naturally became very anxious.

The position of the tobacco growers can be readily understood. The successful achievement of their hopes and labours had been accomplished in harvesting and curing a crop which, in point of quality and yield, was even beyond their expectations. Costs for buildings, equipment and labour had been heavy, and credit had, in many instances, been used to the limit. The relatively low prices paid for the 1931 crop had caused considerable dissatisfaction in that year but the grower had no reason to believe that prices in 1932 would be any lower. In fact, due to the short crop in the United States, the fine quality of the Ontario crop, and the increasing interest that English manufacturers were displaying in Canadian tobacco, the growers were rather optimistic as to the disposal of the 1932 crop. The opening of the market was thus awaited with the keenest interest. The customary date was reached and passed, the days lengthened into weeks, and there was still no sign of the market opening. The "holding off" of the opening of the market was a severe strain on the morale of the growers.

During this period one of the hotels in the town of Tillsonburg, situated on the border of the Norfolk, Oxford, Elgin tobacco district, became the headquarters of the representatives and buyers of most of the tobacco companies in Canada. Tobacco interests in the United Kingdom and the United States were also represented. In all, about thirty of these men were registered at this hotel. With the long delay in opening the market this group became the centre of interest of the whole tobacco district. On October 26 the market was opened by the Imperial Tobacco Company of Canada with a top price of twenty-four cents, six cents below the top price of 1931. A few hours later the other companies began buying and there followed what appeared to the growers a competition in reducing prices. In no case was the top price of twenty-four cents, set

by the Imperial Tobacco Company of Canada, exceeded by any other company and comparatively few crops were bought at this price. This also appears to be an unwritten law and practice of the trade. Within a few days the price was steadily and rapidly reduced, in many instances to less than half the opening price. The reduction continued to such an extent that by the first week of November the growers were becoming demoralized and some were ready to sell at almost any price. The buyers took advantage of the situation and some crops were bought at ridiculously low prices. The fact that, in comparatively few instances, did buyers for more than one company make offers for the crops of individual growers, lent colour to rumours that were rapidly spreading. Charges of a combine and collusion on the part of the buyers to depress prices were numerous and culminated in a formal application for an investigation.

*Holding off the Market.*—It is generally acknowledged by those engaged in the purchase and processing of tobacco in Canada, both for domestic purposes and for export, that the Imperial Tobacco Company of Canada dominates the market to the extent of fixing a date for its opening and setting the top price paid. From evidence obtained it appears that the Imperial Tobacco Company of Canada were mainly responsible for a delay of nearly three weeks beyond the usual time in opening the market for the purchase of the flue-cured tobacco crop of 1932. This delay caused much uneasiness and had a very disturbing effect upon growers of tobacco. Correspondence between the Imperial Tobacco Company of Canada and the Imperial Tobacco Company of Great Britain and Ireland shows that on September 23, 1932, an order was placed with the former company by the latter for the purchase of 1,000,000 pounds of flue-cured tobacco from the 1932 crop with the probability of an order for another 1,000,000 pounds the following week. It will be observed that is upwards of a month before the purchasing began.

In a letter to Mr. Buell, Vice-President of the Imperial Tobacco Company of Canada, Mr. L. H. Reed, Manager of the Leaf Department of the Imperial Tobacco Company of Great Britain and Ireland, under date of November 16, 1932, confirmed the purchase on a commission basis of 3,500,000 pounds (green weight) of the Ontario flue-cured tobacco crop of 1932. In addition, during 1932, the Imperial Tobacco Company of Canada sold approximately 2,500,000 pounds of redried tobacco to the Imperial Tobacco Company of Great Britain and Ireland. This tobacco was taken from the 1931 crop. The correspondence shows conclusively that the Imperial Tobacco Company had instructions, before the usual time for opening the market, to purchase a substantial quantity of tobacco for the Imperial Tobacco Company of Great Britain and Ireland, yet the opening of the market was delayed.

Mr. Buell in a letter to Mr. Reed dated September 28, 1932, states,

We have not set any special date for opening the market, but in all probability it will be within the next two weeks.

On October 18, 1932, Mr. Buell wrote to Mr. Reed making arrangements for Mr. T. L. Lea, Manager of the Ontario Leaf Department of the Imperial Tobacco Company of Canada, to meet Mr. J. R. Hutson, representative of the Leaf Department of the Imperial Tobacco Company of Great Britain and Ireland at Hamilton, Ontario. He says, in part,

they (Lea and Hutson) could very well spend a day or two in making a survey of the crop, and whether I am able to be there or not, I think they should begin buying operations not later than October 26th. Our Delhi organization will only be notified of these plans a day or two in advance.

A report of the Federal Trade Commission of the United States on the tobacco industry, dated December 11, 1920, contains the following under section 7, page 58:—

According to the testimony of numerous tobacco producers, dealers, warehousemen, and buyers, as well as the correspondence of the large manufacturers and dealers, one of the most important causes of the decline in prices of leaf tobacco during the 1919-20 season was "holding off" the market and buying "under cover," indulged in by the large tobacco manufacturers. The effect of these practices varied, but was most apparent in those markets where the companies using the methods were important purchasers. As a general proposition, it is recognized by those experienced in the trade, that "holding off" the market, even temporarily, by any concern which purchases a substantial percentage of the tobacco sold on that market, will have a direct effect on the prices being paid.

The term "holding off" the market is not applicable in Canada in precisely the same sense as used in the United States. Strictly speaking there is no market in Canada. The company making the first purchase, however, has come to be considered as opening the market, and the period of buying that follows is regarded as the market. When a grower has harvested his crop he awaits the arrival of a purchaser, and when a buyer appears there ensues a process of dickering as to price, with varying results, often influenced as was the case in 1932 by financial circumstances and the eagerness of the grower to make a sale. When asked for an explanation as to the delay until October 26th in opening the market, the Imperial Tobacco Company of Canada submitted the following, under date of February 2, 1933:

In reply to your question, while we do not wish to seem argumentative yet so far as we know there is no market opening in the generally accepted sense of the word. However, if contracting the first purchase is to be considered as a market opening, we respectfully submit that by reason of the fact that we have no knowledge of purchases made other than by ourselves we are not in a position to state when the market opened. For the past seven years our first purchases were made as follows:—

1926—October 19	1930—October 6
1927—October 12	1931—October 6
1928—October 18	1932—October 26
1929—October 10	

There is no fixed date on which our first purchase is to be made in each year and we believe you will agree from the dates of purchases set out in the foregoing that there has been no undue delay in making our first purchase of the 1932 crop.

When we became aware that notwithstanding the advice given to farmers in our circular memorandum of March 18, 1932, the total production of flue-cured tobacco gave promise of being appreciably in excess of the total quantity produced in 1931, we had great anxiety as to what might be the outcome, knowing as we did at that time that we would not be justified ourselves in purchasing more than about 8,000,000 pounds of the total quantity. Our fear was that once our requirements were satisfied, the big remaining balance would be dumped on the market with the natural result that prices would decline appreciably, creating distress among the growers, and that the industry itself might suffer a serious reverse and setback.

We had been under negotiations with our British friends and saw a prospect of selling to them some quantity of our stock from previous crops, which in itself would naturally have permitted us to increase the quantity that we would then be able to purchase out of the 1932 crop. As the negotiations developed our British friends intimated that in addition to taking from us some of our older tobacco, they would also like us to purchase for them some out of the 1932 crop.

Substantially, the factors recited above were mainly responsible for delaying our purchasing until the 26th October.

In regard to the above the following extract from a letter, dated August 22, 1932, from Mr. Buell to Mr. R. C. Harrison, of the British-American Tobacco Company, addressed to London, England, may be quoted:

I will be visiting the southern markets next week and the week following. I will make it a point to see Mr. Reed, and I hope that he will let me know if the buying of their Canadian requirements will be entrusted to us.

Mr. Buell's letter also confirms the early harvesting of the 1932 crop and the fact that the quality was more suitable for the English market than heretofore. He refers to orders placed by several independent English manufacturers with local Ontario dealers for their requirements from the 1932 crop.

Mr. H. A. Freeman, of Simcoe, former Manager of the Dominion Experimental Farm at Harrow, Ontario, and the Ontario Tobacco Plantations, Limited, and at present one of the largest tobacco growers in Ontario, stated in an interview on December 21, at Simcoe:

One week approximately before the Ontario tobacco market opened, a buyer from England arrived in the Norfolk district. This buyer, who represented Gallagher's Limited, of Belfast, stated that he was prepared to take about 3,000,000 pounds of flue-cured tobacco at a price of twenty-five cents per pound. If, however, the market went down, he made it clear that he must protect himself as his company naturally was only prepared to pay the market price. He stated that his company would fill their requirements if it were necessary to pay thirty-five cents a pound.

Professor A. Leitch, of Guelph, Manager of the Windham Tobacco Plantations, Limited, said in the course of an interview on December 24, that a representative of Gallagher's Limited, of Belfast, stated before the opening of the market that he was in a position to take 2,400,000 pounds of the 1932 crop if the price did not go above twenty-five cents per pound. This quantity was taken by Gallagher's in 1931. The Windham Plantations had sold Gallagher's 1,700,000 pounds of tobacco to date (December 24), with more to follow.

The following is taken from a letter from Gallagher's Limited, of Belfast, Ireland, to the Leamington Tobacco Sales Corporation, of Leamington, Ontario, dated September 7, 1932:—

We thank you for your letter of the 24th ult. and for your crop report. Indications from Prof. Leitch and others show the crops to be much brighter in colour but lighter in body. We are, therefore, looking forward with considerable interest to the type samples representing the crop which Mr. Lynch will be sending.

We may say now that we do not know whether the thin crop is going to suit us, and we also hasten to say that if competition is keen and prices high our buying is likely to be considerably curtailed.

You are aware that our outright purchase of last year landed here at around 38 cents, which was around 1/9d, the exchange is now over 13 per cent lower so that the price might exceed 2/- all grades which

we are not prepared to pay. Another point is that with the thinner crop the loss in grading may possibly be higher.

This position is not one that affects us only but manufacturers on this side as a whole. It is not an economic proposition, particularly in view of the low prices which prevailed in America last year to pay more than 2/2 a pound for the best colonial tobacco, so that we do not believe that the competition will be as keen as you indicate.

Our position is that if we can get the right tobacco at prices not higher than our sterling average of last year we will be interested, and it is certainly our desire to buy concurrently, but we do not want you to be under any false impression as to our attitude.

The above letter confirms the statements made by Mr. Freeman and Professor Leitch. The low average price in Canada could not be attributed to the price buyers were prepared to pay in the United Kingdom. Processing, shipping, and insurance charges amount to approximately seven cents per pound.

The reference to the date of opening the market in 1926 by the Imperial Tobacco Company of Canada is hardly applicable as a comparison to the date in 1932. The total production of flue-cured leaf in Canada in 1926 was only 4,331,000 pounds, while in 1932 it amounted to about 29,000,000 pounds.

The Ontario flue-cured tobacco industry had already developed and reached an export basis in 1931 when 5,423,028 pounds were exported to the United Kingdom. It is evident from the interest early displayed by the independent British manufacturers in the Ontario flue-cured crop of 1932 that the quality of the tobacco supplied them in 1931 had created a favourable impression, that they had kept in touch with a view to securing a quantity from the 1932 crop, and that they had made their arrangements accordingly.

That the Imperial Tobacco Company of Canada was conscious of its dominating position in the past and was anxious to maintain that position is manifested in the arrangement made with the Imperial Tobacco Company of Great Britain and Ireland to supply that company with their requirements from the 1932 crop. The delay in opening the market, and the concealment of the date when decided upon, even from the company's own organization at Delhi, Ontario, evinces a desire for secrecy for which no reasonable justification has been advanced. The rights of the tobacco growers with their crops in the barns, awaiting buyers for a month or more, had apparently been lost sight of, and it would appear that the object of the delay was to utterly demoralize them and make them submissive when afforded an opportunity of disposing of their crops.

*Buying Under Cover.*—Through their office at Richmond, Virginia, the Imperial Tobacco Company of Great Britain and Ireland gave instructions to the Imperial Tobacco Company of Canada for the purchase of flue-cured tobacco in 1932 as follows:—

Date Received	Amount
Original Order, September 22, 1932.....	1,000,000 lbs. 1932 Crop
First Increase, September 27, 1932.....	500,000 lbs. 1932 Crop
....	500,000 lbs. Matured
Second Increase, November 7, 1932.....	500,000 lbs. 1932 Crop
Third Increase, November 15, 1932.....	1,000,000 lbs. 1932 Crop
....	1,000,000 lbs. Matured

The total quantity of tobacco purchased by the Imperial Tobacco Company of Canada from the 1932 crop for the Imperial Tobacco Company of Great Britain and Ireland amounted to about 3,500,000 pounds. In addition, approximately 2,500,000 pounds of redried or matured tobacco from the 1931 Ontario crop was sold by the Imperial Tobacco Company of Canada to the Imperial Tobacco Company of Great Britain and Ireland.

Correspondence shows that, without reference to prices, a commission of one dollar per hundredweight was to be paid the Imperial Tobacco Company of Canada for its services in purchasing the tobacco required by the Imperial Tobacco Company of Great Britain and Ireland.

The contract form used by the Imperial Tobacco Company of Canada in all purchases of the 1932 crop of flue-cured tobacco, irrespective of whether the crop was destined for its own requirements or for the Imperial Tobacco Company of Great Britain and Ireland, was similar to the following:—

# IMPERIAL LEAF TOBACCO COMPANY OF CANADA, LIMITED

Delhi,

Leamington, Dec. 18th, 1932.

I, .....hereinafter called the Seller, agree to sell to the Imperial Leaf Tobacco Company of Canada, Limited, hereinafter called the Company, and it agrees to purchase from me certain and definite lots of Flue Cured leaf tobacco at prices under conditions and in estimated quantities as herein specified:—

20,000 lbs. at 22c. per lb.

10,000 lbs. at 14c. per lb.

1,500 lbs. at 5c. per lb.

Balance lbs. at — per lb.

Total, 31,500 lbs.

The Seller agrees to preserve the colour and quality of said tobacco and at no time strip and pack more than 15 per cent of same prior to delivery unless otherwise advised by representative of the Company.

The above mentioned tobacco to be delivered in—our Plant, Delhi, Ontario, perfectly sound and in good keeping order, at such time or times during the shipping season as may be designated by the Company and to be paid for upon delivery, and acceptance of same, the Company being authorized to make all cheques for proceeds to person making delivery.

The tobacco is to be graded in three grades, i.e., Sand Leaves, Bright Leaf and Red and Dark Leaf—or as follows:—

All green to be thrown out of 1,500 lbs. at 5c., handled and packed according to instructions. All tobacco to be baled in good baling paper and all green, black, burnt, dead, frosted, or otherwise damaged tobacco, and suckers to be thrown out when stripping.

IMPERIAL LEAF TOBACCO COMPANY  
OF CANADA, LIMITED

Signature of the Seller

.....

per.....Buyer.

P.O.....

The Imperial Tobacco Company of Great Britain and Ireland have a subsidiary company, the British Leaf Tobacco Company of Canada, Limited, located at Chatham, Ontario, fully equipped and engaged in processing tobacco.

Tobacco purchased by the Imperial Tobacco Company of Canada for its own use and for the Imperial Tobacco Company of Great Britain and Ireland was delivered to the plant of the former company at Delhi, Ontario. All tobacco purchased for the Imperial Tobacco Company of Great Britain and Ireland had been allotted to them in the barn before delivery was made. This tobacco was shipped from Delhi to the plant of the British Leaf Tobacco Company of Canada at Chatham, and was received there in the same condition as it had been delivered at Delhi by the growers.

Arrangements were made prior to the opening of the market to have Mr. J. R. Hutson, representative of the leaf department of the Imperial Tobacco Company of Great Britain and Ireland, come to the Norfolk tobacco district from Richmond, Virginia, on October 24 to be on hand when buying commenced on October 26.

The above facts were confirmed from copies of correspondence between the two companies mentioned supplied by Mr. W. Milligan, President of the British Leaf Tobacco Company of Canada, Limited, in response to a request submitted on December 14, 1932, as follows:

Copies of all correspondence between your company and other companies buying flue-cured tobacco from growers in Ontario in 1932.

The reply of the Imperial Tobacco Company of Canada, Limited, to the same request was as follows:

We have had no correspondence whatsoever with any other company who have to our knowledge bought flue-cured tobacco from growers in Ontario in 1932.

The Imperial Tobacco Company of Canada contended that, as the British Leaf Tobacco Company of Canada did not buy tobacco directly from growers, correspondence with that company did not come within the wording of the above request.

When the market was opened, Mr. J. R. Hutson, previously mentioned, and Mr. T. L. Lea, Manager of the Ontario Leaf Department of the Imperial Tobacco Company of Canada, travelled together through the district and supervised the buying of tobacco by that company. In this way buying "under cover" took place to the extent of 3,500,000 pounds of the 1932 crop.

A report of the Federal Trade Commission of the United States on the tobacco industry, dated December 11, 1920, contains the following provision from the anti-trust decree of the United States regarding buying tobacco "under cover," Section 3, page 158:—

It is further ordered, adjudged, and decreed that British American Tobacco Company, Limited, and the Imperial Tobacco Company (of Great Britain and Ireland), Limited, shall not act as agent for each other, nor employ a common agent for the purchase of leaf tobacco in the United States.

It might be pointed out that the Imperial Tobacco Company of Canada is controlled by the above mentioned British-American Tobacco Company.

The previously mentioned report of the Federal Trade Commission of the United States, dated December 11, 1920, contains the following in regard to buying "under cover," Section 7, page 58:—

It is recognized that where a large tobacco purchaser buys its requirements "under cover" through a dealer already on the market, competition is lessened and the price is affected.

The explanation offered in justification of the method of purchase, as rendered by the British Leaf Tobacco Company of Canada, a subsidiary of the Imperial Tobacco Company of Great Britain and Ireland, is as follows:—

The reason the purchases were not made by the British Leaf Tobacco Company direct from growers is because that company has not in its employ men who are qualified to buy flue-cured tobacco, nor is it possible for it to employ any such men capable of buying the types required for the trade of the Imperial Tobacco Company (of Great Britain and Ireland) as sold in the barns in Canada. It is a fact that in time and with training experienced buyers of the Imperial Tobacco Company (of

Great Britain and Ireland) may be able to buy Canadian flue-cured tobacco in the barn.

The reasons advanced by the Imperial Tobacco Company of Canada for having made such purchases of tobacco for the Imperial Tobacco Company of Great Britain and Ireland were substantially the same as those rendered by the British Leaf Tobacco Company of Canada, and in addition thereto the following:—

We think it pertinent at this time to state that the British Leaf Tobacco Company, Limited, may be said to be indirectly related to this Company. The relationship is as follows:—

The British Leaf Tobacco Company, Limited, is an operating subsidiary of the Imperial Tobacco Company (of Great Britain and Ireland) Limited.

The Imperial Tobacco Company (of Great Britain and Ireland) Limited, as a substantial interest in the capital stock of the British-American Tobacco Company, Limited.

The British-American Tobacco Company, Limited, has a substantial interest in the capital stock of the Imperial Tobacco Company of Canada, Limited.

If the relationships referred to, based on an interlocking of interests through capital stock held by the companies mentioned, can be held to justify the methods pursued by the Imperial Tobacco Company of Canada in removing from the market what might otherwise have been a strong competitor, then the relationships of all tobacco companies operating in Canada might well be inquired into.

It appears that the Canadian Leaf Tobacco Company, of Chatham, Ontario, a subsidiary of the Universal Leaf Tobacco Company, of the United States, purchased about 5,000,000 pounds of the Ontario 1932 crop, chiefly for export. In this connection it was stated by a responsible authority that—

the Canadian Leaf Tobacco Company bought a large quantity of tobacco during 1932 at a very low price. They stepped into the market at precisely the correct time to make this possible, which may, or may not have been, merely very good judgment on their part.

The same party pointed out that it was generally conceded in the trade that there was a close relationship between the Canadian Leaf Tobacco Company and the Imperial Tobacco Company of Canada through the close relationship that existed between the parent companies in the United States, the Universal Leaf Tobacco Company and the British-American Tobacco Company. He added further that—

Mr. F. N. Harrison is Manager of the leaf department of the Universal Leaf Tobacco Company, while his brother, Mr. R. C. Harrison, is Manager of the leaf department of the British-American Tobacco Company, which fact in itself is of some significance.

In the United States, the British-American Tobacco Company and the Imperial Tobacco Company of Great Britain and Ireland are compelled by law to operate separately in the purchase of tobacco, whereas in Canada, in view of the Imperial Tobacco Company of Canada's relationship to the British-American Tobacco Company, it might be said that these companies are allowed to operate together.

In regard to the purchasing arrangement between the Imperial Tobacco Company of Great Britain and Ireland and the Imperial Tobacco Company of Canada, the following comment was made by a widely experienced tobacco man:—

It is ridiculous to assume that the biggest and strongest tobacco company in the world would be unable to secure men who could satis-

factorily purchase the relatively small amount of tobacco that was required by the Imperial Tobacco Company of Great Britain and Ireland from the Ontario 1932 crop.

It was his opinion that four or five buyers, such as were employed by Canadian tobacco companies, could make a good job of buying the Canadian requirements of the Imperial Tobacco Company of Great Britain and Ireland.

In the return submitted by the Imperial Tobacco Company of Canada, under date of January 4, 1933, it is stated, in regard to the arrangement with the Imperial Tobacco Company of Great Britain and Ireland.

In our agreeing to purchase for them we feel that we are only co-operating with a related corporation.

This is a frank admission by the Imperial Tobacco Company of Canada that buying under cover was practised in the purchase of the 1932 crop.

The fact that such a procedure has been decreed illegal in the United States indicates the objectionable features of this arrangement in Canada, tending as it does to lessen competition and depress prices to the detriment of the growers. It enabled the Imperial Tobacco Company of Canada to continue to exercise what amounts to monopolistic control of the Ontario market, although purchasing less than one-third of the crop for its own use.

*Increasing Importance of Export Market.*—There is one outstanding feature of the 1932 crop of flue-cured tobacco that has an important bearing on the whole situation and should not be lost sight of, namely, the uniformly high quality of the crop as a whole. This is acknowledged by expert judges and those qualified to express an opinion.

The 1931 crop was admittedly a good one, both as to yield and to quality. Exports from that crop to the United Kingdom, amounting to 5,423,028 pounds, had been favourably received, and had directed attention to the possibility of Canada supplying more substantial quantities of the Bright Flue-cured variety, obtained heretofore largely from the United States. The British preference of forty-nine cents per pound on Canadian tobacco over that imported from the United States was also an important factor.

The 1931 crop was harvested by the old method of cutting the stalks, the lower leaves being frequently over-ripe and the top leaves or tips somewhat green, a most objectionable feature in cigarette tobacco. On the other hand, over ninety per cent of the 1932 crop was harvested by the priming process, that is, cutting off the leaves as they ripen, and curing the same, involving in all about four primings. While this method entailed more labour and expense than the old method, it greatly increased the uniformity and improved the quality of the crop, and was responsible for an increase in its value estimated at approximately five cents per pound. Another advantage of the priming method was the fact that the uniformity of the leaf in each of the primings, which are kept separate in the barns, facilitated examination and valuation by buyers.

In confirmation of the superior quality of the 1932 crop there may be quoted the following extract from a letter dated October 5, 1932, from Mr. L. H. Read, of the Imperial Tobacco Company of Great Britain and Ireland, to Mr. H. P. Buell, of the Imperial Tobacco Company of Canada:

I am very much obliged for your letter of September 28th, and for the samples of Canadian leaf from the 1932 crop which you so kindly sent me. These samples are by far the best of this type that I have seen, and indicate that the crop is a good one, particularly for cigarette purposes; although I note that the samples which you sent were taken from the best crops.

The Imperial Tobacco Company of Canada is, and has been for a number of years, by far the largest buyer of leaf tobacco in Canada. More than 80 per cent of the entire flue-cured crop of 1928 was purchased by this company, and over 58 per cent of the crop of 1931. Its purchases from the 1932 crop, estimated at 29,000,000 pounds, amounted to 14,560,800 pounds, or approximately 50 per cent. This, however, includes 3,500,000 pounds bought for the Imperial Tobacco Company of Great Britain and Ireland, which reduces the proportion to about 38 per cent of the total. In addition, during 1932, the Imperial Tobacco Company of Canada sold 2,500,000 pounds of re-dried tobacco from the 1931 crop to the Imperial Tobacco Company of Great Britain and Ireland. This tobacco had to be replaced from the 1932 crop, which had the effect of making the purchases of the former company, for its own account, greater than would otherwise have been the case. Deducting the quantity purchased to replace the 1931 tobacco sold to the Imperial Tobacco Company of Great Britain and Ireland, the requirements of the Imperial Tobacco Company of Canada from the 1932 crop amounted to about 29 per cent of the entire crop.

The decline in the percentage of the total crop required by the Imperial Tobacco Company of Canada from 80 per cent in 1928 to 29 per cent in 1932 indicates the increase in the quantity of flue-cured tobacco produced in Ontario during recent years, and the rapidly increasing importance to the growers of the export market in the United Kingdom.

The Canadian Leaf Tobacco Company, a subsidiary of the Universal Leaf Tobacco Company of the United States, purchased approximately 5,000,000 pounds of the 1932 crop, or about 17 per cent. Nearly all this tobacco is destined for export to the United Kingdom. The Norfolk Leaf Tobacco Company, the Consolidated Leaf Tobacco Company, the China-American Tobacco Company, and the Windham and St. Williams Plantations export nearly all their tobacco to the United Kingdom. Fully 40 per cent of the 1932 crop has been purchased for export.

The total quantity of raw tobacco imported into the United Kingdom in 1931 amounted to 196,139,537 pounds, of which the United States supplied 157,188,102 pounds. Since Canadian tobacco has a preferential advantage of 49 cents per pound on the British market over that from the United States, it is but natural that there should be a strong and growing demand in that market for Canadian flue-cured tobacco.

*Domestic Prices.*—The consumption of tobacco, so universal throughout the world, is regarded, more or less, as a luxury, and is therefore recognized in many countries as a suitable and convenient source from which to derive national revenue. There is some doubt as to whether this tax was originally designed to discourage the use of tobacco, or solely for revenue purposes; if for the former, it has been a pronounced failure, if for the latter, a decided success. In any event Canada derives a substantial revenue from this source, that for the year 1930 being \$42,257,519, and for 1931 \$42,232,582. The state is therefore an interested party in both production and consumption of tobacco and there is consequently entailed a responsibility to see that prices of Canadian raw leaf tobacco are reasonably consistent and in keeping with prices paid for manufactured tobacco.

While there is no duty under the customs tariff on imports of unmanufactured leaf tobacco, there is an excise tax levied, upon removal from bond, of 40 cents per pound on unstemmed leaf and 60 cents per pound on stemmed leaf. As this tax is not levied on tobacco grown in Canada, it constitutes a preference to that extent on Canadian grown tobacco on the domestic market over imported tobacco. An additional preference of 49 cents per pound on the British market over tobacco imported into that market from the United States would indicate that the position of the Canadian tobacco grower is a most favourable one and such as would ensure a profitable and stable price for his product.

Prior to and including the year 1930 this was the case. In that year the average price paid was 32 cents per pound. In 1931 the average price had declined to 20 $\frac{1}{2}$  cents, while a further reduction in 1932 brought the average down to 16 $\frac{1}{2}$  cents. The maximum price paid on the opening of the 1930 market was 40 cents, and in 1931 30 cents. This was reduced in 1932 to 24 cents, with a relatively small proportion being bought at that price.

The depreciation in the value of sterling undoubtedly affected the price in the export market. This was offset, however, to a certain extent by the improvement in quality of the 1932 crop over that of previous years. These are factors that must be considered. The manufacturers of tobacco in Canada have profited to the full extent from the decline in prices and the improvement in quality, since no appreciable reduction has taken place in the prices charged for manufactured tobacco, although there has been a decrease of 50 per cent in the price of raw leaf tobacco since 1930. The operations of these companies are almost entirely confined to supplying the domestic market. That their business has been profitable and does not justify this reduction in leaf prices is shown by the net profits earned by the principal company operating in Canada, amounting in 1930 to \$6,512,164.18, and in 1931 to \$5,914,079.47.

The following table indicates the rate of excise on all tobacco manufactured in Canada, also that on imported raw leaf tobacco, paid when taken out of bond:

Imported raw leaf tobacco, unstemmed.. . . .	\$ 0 40 per lb.
Imported raw leaf tobacco, stemmed.. . . .	0 60 per lb.
Cigars.. . . .	3 00 per M
Cigarettes, over 3 pounds per M.. . . .	11 00 per M
Cigarettes, under 3 pounds per M.. . . .	4 00 per M
Cut tobacco.. . . .	0 20 per lb.
Canadian twist tobacco.. . . .	0 20 per lb.
Snuff.. . . .	0 20 per lb.

The Canadian Customs Tariff on imported tobacco is as follows:—

Unmanufactured tobacco (subject to excise tax) . . . . .	Free
Cigars.. . . .	\$3 90 per lb. and 25 per cent
Cigarettes.. . . .	\$4 10 per lb. and 25 per cent
British preferential tariff.. . . .	3 50 per lb. and 25 per cent
Cut tobacco.. . . .	\$0 95 per lb.
British preferential tariff.. . . .	0 80 per lb.
Manufactured tobacco, n.o.p., and snuff.. . . .	0 90 per lb.
British preferential tariff.. . . .	0 75 per lb.

The following table indicates the duty collected on imported tobacco for the fiscal year 1932:

Item	Lb.	Value	Duty per collected	Duty per lb.	% Duty of value
Tobacco unmanufactured for excise purposes.. . . .	13,075,335	\$3,861,465	.....	.....	.....
Cigars.. . . .	9,623	71,838	\$ 55,489.20	5.76	77.2
Cigarettes.. . . .	26,721	97,197	133,855.35	5.00	137.7
Snuff.. . . .	5,745	12,451	5,170.50	0.90	41.5
Tobacco, cut.. . . .	201,450	427,383	191,377.50	0.95	44.7
All other manufactures of tobacco.. . . .	64,864	161,218	58,377.60	0.90	36.2

Notwithstanding the excise tax on tobacco manufactured in Canada, the Canadian Customs Tariff on imports is sufficiently high to confine the supply for domestic consumption almost entirely to tobacco manufactured in Canada. The fact that exports of Canadian manufactured tobacco are of a negligible quantity indicates that prices in Canada for manufactured tobacco are higher than could be obtained on the export market. The constancy with which prices

for manufactured tobacco is maintained in Canada is in striking contrast to the decline in prices paid for leaf tobacco during 1931 and 1932. As long as imports of leaf tobacco exceed exports of same, it is difficult to reconcile the constant price level maintained on the one hand with the decline on the other.

Imports and exports of leaf tobacco into and from Canada for the fiscal years (ended March 31st) 1930, 1931 and 1932 were as follows:

Imports—			
1930..			17,113,472 lbs.
1931..			16,580,394 lbs.
1932..			13,075,335 lbs.
Exports—			
	All leaf tobacco	Bright flue-cured tobacco	
1930..	6,811,391 lbs.		300,000 lbs.
1931..	6,051,319 lbs.		1,515,363 lbs.
1932..	8,222,922 lbs.		5,529,340 lbs.

The following table indicates, for each of the three principal buyers of Ontario flue-cured tobacco during 1932, the dates of purchases, the total quantity purchased on each date, and the average price paid on each date:—

Imperial Tobacco Company of Canada, Ltd.			Hodge Tobacco Co. of Canada, Ltd.		Canadian Leaf Tobacco Company, Ltd.

The principal companies operating in the purchase of the Ontario 1932 crop were the Imperial Tobacco Company of Canada, which took charge of buying the requirements of the British Leaf Tobacco Company of Canada, a subsidiary of the Imperial Tobacco Company of Great Britain and Ireland; the Hodge Tobacco Company of Canada, a subsidiary of the United States Company of the same name and buying agents for W. C. MacDonald, Inc., of Montreal; and the Canadian Leaf Tobacco Company, a subsidiary of the Universal Leaf Tobacco Company, of the United States.

Difficulties were experienced, causing delay in concluding the inquiry, through the belated arrival of statements regarding purchases made and prices paid each day during the buying season, submitted by the Imperial Tobacco Company of Canada and the Canadian Leaf Tobacco Company. The statement from the latter company was received February 22nd, and although incomplete, has been included in the above table.

The following table shows the amount of Issued Capital stock and the Net Profits, for the periods indicated, of the companies engaged in purchasing and processing leaf tobacco in Ontario in 1932. With the exception of the Imperial Tobacco Company of Canada, none of these companies are engaged in the manufacture of tobacco.

British Leaf Tobacco Company of Canada, Limited

	Capital issued	Net profits

<sup>1</sup> Net profits of Imperial Tobacco Company of Canada, Limited, for the year ended December 31, 1932, were quoted at the end of February, 1933, in weekly financial newspapers at \$5,471,175.

## CONSOLIDATED LEAF TOBACCO COMPANY, LIMITED

The above mentioned company, located at Kingsville, Ontario, and formerly known as the Moss Leaf Tobacco Company, Limited, was incorporated November 28, 1931. This company, during the growing season before the tobacco was harvested, made contracts with about one hundred growers for their entire crops. The contract form was similar to the following:—

CONSOLIDATED LEAF TOBACCO COMPANY, LIMITED  
KINGSVILLE, ONTARIO

No. 532

## FLUE CONTRACT—1932 CROP

Memorandum of Contract made this .....day of .....  
A.D. 1932 between .....of the Township of .....  
County of ..... Province of Ontario, hereinafter called the  
Party of the First Part, and Consolidated Leaf Tobacco Company, Limited, of  
the Town of Kingsville, County of Essex, Province of Ontario, hereinafter called  
the Party of the Second Part.

Now this indenture witnesseth as follows:—

1. The Party of the First Part agrees to sell, and the Party of the Second Part agrees to buy at the undermentioned prices, the Flue-cured Tobacco covered by this contract, which, in the opinion of the Party of the Second Part solely, is in accordance with the following classifications and descriptions:

(a) All sound, clear, smooth, lemon leaf, at 30c. to 36c., according to quality and general character.

(b) All sound, clear, smooth, bright orange leaf, at 26c. to 30c., according to quality and general character.

(c) All sound, clear, smooth, heavy orange leaf, at 22c. to 26c. according to quality and general character.

(d) All sound, clear, smooth, extra heavy orange to dappled mahogany leaf, at 15c. to 18c., according to quality and general character.

(e) All sound, clear, smooth, mahogany leaf, at 10c. to 12c, according to quality and general character.

(f) All sound, clean, leafy, smooth, bright sand leaves, at 12c. to 15c., according to quality and general character.

2. All tobacco damaged through frost, wind, hail, or damaged in any way whatsoever, or which is green, ragged, worm eaten or dirty, is to be excluded entirely, and anything which, in the opinion of the Party of the Second Part solely, does not come within the above mentioned classifications and descriptions, including dark sand leaves, is to be excluded under this contract, and only to form part of it provided both parties can agree as to price.

3. This contract includes all Flue-cured or Virginia type tobacco grown on Lot....., Concession ....., and estimated at ..... acres, or on any other lot or concession in which the Party of the First Part has any interest whatsoever.

4. Should total acreage be in excess of acreage mentioned in this contract, then any excess is to form part of this contract under the same terms and conditions.

5. Tobacco is to be delivered free from mortgage, lien, or encumbrance of any kind, in good merchantable order, free from excess moisture, and when the Party of the Second Part has determined to its satisfaction the quantity and general character of the classifications, as above set out, of the tobacco so delivered, then payment will be made.

6. Tobacco to be delivered by the Party of the First Part to the Party of the Second Part at Kingsville, or at any shipping point near location of crop that the Party of the Second Part may decide, at a date to be arranged by the Party of the Second Part, but not later than May 31st, 1933.

7. No agent or representative of the Party of the Second Part has any authority to alter or vary this contract in any way whatsoever.

In witness whereof the parties hereunto have set their hands and seals.

Party of the First Part:

Party of the Second Part

I or We control sale of entire crop

CONSOLIDATED LEAF TOBACCO Co., LTD.

Landlord . . . . .	
Tenant . . . . .	Per . . . . .
Post office . . . . .	
Telephone . . . . .	

There were some features of the contract that appealed to the grower, namely the six classifications specified and the prices listed for these classifications, ranging from 36 cents to 10 cents per pound. The importance of the words "In the opinion of the Party of the Second Part, solely," was apparently not fully appreciated by the grower when signing the contract. He became quite aware of their significance, however, upon delivery of his crop.

For example, C. W. Glover, of Waterford, Ontario, contracted his crop from twenty-eight acres to the Consolidated Leaf Tobacco Company. This crop, amounting to 35,470 pounds, was delivered at the Kingsville plant of the company on November 5, 1932, and was there classified under twenty-four grades. Some 3,090 pounds were accepted and paid for under the contract. A further 1,100 pounds, classified under Grade 9, was sold by Mr. Glover at the price offered. As the prices offered for the remainder of the crop were far from satisfactory to Mr. Glover, the balance, at the date of interview (December 29th), was being negotiated for by the company.

After it became known how the company was grading the tobacco delivered, a number of growers who had signed contracts refused to deliver their crops and sold elsewhere, with the result that litigation ensued in some of these cases. In a number of instances, subsequent arrangements were made with the Consolidated Leaf Tobacco Company for sale at a straight price per pound.

Another case investigated was that of J. Balinsky, of Otterville, Ontario, who contracted his crop from eight acres, amounting to 9,519 pounds, to the Consolidated Leaf Tobacco Company. The crop was removed by the company to its plant at Kingsville and 1,120 pounds were accepted and paid for under the contract. A further quantity of 4,301 pounds was accepted and paid for at prices indicated on weigh sheet (see copy), and the balance, 4,098 pounds, was rejected, and was being negotiated for under different arrangements.

The following is a copy of the weigh sheet received by Mr. Balinsky, showing grades, quantity of tobacco in each grade, and the price for each grade:—

CONSOLIDATED LEAF TOBACCO CO., LTD.,  
KINGSVILLE, ONTARIO.

Date: November 15, 1932.  
Name: Joe Balinsky.  
Address: Otterville, Ontario.

Consolidated Leaf Tobacco Co., Ltd.

Weights and Prices  
Approved and Accepted

(Signed) E. S. Hogan.

The following circular letter, received by Mr. Balinsky, was sent by the Canadian Leaf Tobacco Company, of Chatham, Ontario, to those growers, of whose tobacco a quantity had been rejected by the Consolidated Leaf Tobacco Company, after being delivered according to contract:—

CANADIAN LEAF TOBACCO COMPANY, LIMITED

CHATHAM, December 13, 1932.

DEAR SIRS,—According to information received from the Consolidated Leaf Tobacco Company, Kingsville, you have contracted your 1932 crop of flue-cured tobacco to that company.

There have been a number of people who have offered their crops to us, even though they were contracted to the above-mentioned company, and we wish to advise that unless we are furnished with a statement from the Consolidated Leaf Tobacco Company, Limited, certifying that they have released said crop, we do not desire to purchase same.

We have been informed further that in numerous cases there is a considerable quantity of tobacco that falls in quality below the minimum price of 12c. (we understand that the prices range from 12c. to 36c. per pound), and in this connection we wish to state that in the case of these rejects and culls, we shall be very pleased to purchase them from you, and if you will care to deliver them to our factory at Chatham we will do our utmost to pay you a fair price.

The above applies strictly to tobacco which the Consolidated Leaf Tobacco Company considers not good enough to warrant their paying minimum contract price, viz: 12c. per pound.

Yours very truly,

CANADIAN LEAF TOBACCO COMPANY, LIMITED

(Signed) C. L. O'BRIEN,

Vice-President.

The operations of the Consolidated Leaf Tobacco Company, although on a comparatively small scale, helped materially to increase the discontent and dissatisfaction on the part of the growers with the marketing of the 1932 crop. The methods of purchase employed by this company enabled it to keep its prices at a level below those paid by other companies after the market opened. As a result of its operations, however, the Consolidated Leaf Tobacco Company could not be charged with being a party to a combine.

*Summary.*—In the foregoing pages a brief outline has been attempted as to the object and subject matter of this inquiry, with a view to determining whether or not a combine existed as alleged among the several companies operating in the purchase of flue-cured tobacco in the Province of Ontario during 1932.

Some difficulties have arisen in determining the line of demarcation between what might be regarded as legitimate business and what might be an infringement of the Act relating to combines. It is, therefore, quite possible that this inquiry may, in some respects, have been carried beyond this line, and may not have reached it in others.

It is generally supposed that where active competition prevails there are but little grounds on which to base suspicion of a combine. On the other hand, where competition does not prevail to a reasonable extent, or where by any means competition is lessened or eliminated, there are strong reasons for assuming that a combine is in operation. In the case in review there is a complete absence of any semblance to an organization of any kind on the part of the tobacco growers for an orderly marketing of leaf tobacco, except in the case of a few companies or syndicates growing tobacco on a large scale. The absolute dependence of the growers on the tobacco companies under these circumstances entitles them to open and above-board treatment and a fair price for their product. That the confidence heretofore placed in the tobacco buyers no longer exists is evident from the allegations made and the demands for an investigation, and further, from the steps taken in the movement now under way to form a co-operative marketing organization to process and dispose of future crops.

Reference has already been made to the unanimity of the tobacco companies which featured the delay in beginning buying operations, to the absolute secrecy which was maintained as to the time of opening the market, and to the inevitable effect on the morale of the growers, making them easy victims for the methods pursued whereby many crops were purchased for less than half the price paid for others.

The long delayed opening of the market which took place on October 26 had the appearance of collusion in deferring the time of buying, as the principal buyers were in the field almost simultaneously on that date. The approximate average of prices paid from day to day from the date of opening the market until November 7, when the average price had decreased to about one-half the average of the first day's purchases, together with the fact that an increase took place in prices paid from that date until November 21, when the prices were nearly as high as the average at the opening of the market, although the best quality of tobacco is usually purchased first, also suggested an understanding among buyers which was operating against the interests of the tobacco growers.

Information as to the operations of the tobacco companies was obtained through personal interviews with the growers and with officials of the various companies, also from returns submitted by the companies in response to requests made for certain information under the authority of Section 14 of the Combines Investigation Act. Correspondence between companies was a particularly important source of information, one remarkable feature of such correspondence being the absence, with one notable exception, of any reference to prices of raw leaf tobacco.

The fact that prices prevailing in Canada generally determine the price paid on the export market for Canadian tobacco has an important bearing on the whole question that must be taken into consideration. It would appear, from copies of correspondence furnished, that British tobacco manufacturers were kept well informed as to the quality and prospective yield of the Ontario 1932 flue-cured crop, in which they had shown an early interest as a result of the satisfactory quality of imports of the 1931 crop.

In confirmation of the foregoing, the following extracts from correspondence may be submitted.

A letter from the Leamington Tobacco Sales Corporation, Limited, Leamington, Ontario, under date of August 4, 1932, to Gallagher, Limited, Belfast, Ireland, contains the following:—

From information which we have received which seems to be quite reliable, the British Leaf Tobacco Company of Chatham will be in the market for five million pounds of flue-cured tobacco this year. Last year they handled about one million pounds as an experiment which seems to have proven satisfactory.

The following extract from a letter, referred to elsewhere, written by Mr. H. P. Buell, Vice-President of the Imperial Tobacco Company of Canada, to Mr. R. C. Harrison, of the British-American Tobacco Company, dated August 22, 1932, is most significant:—

I will be visiting the southern market next week and the week following. I will make it a point to see Mr. Reed, and I hope that he will let me know if the buying of their Canadian requirements will be entrusted to me . . . I have heard that several of the independent English manufacturers have already placed their orders with local Ontario dealers for purchases from the new crop.

These letters indicate that the Imperial Tobacco Company of Canada, as well as other companies, was aware two months in advance of the opening of the Canadian market that a number of British manufacturers would be in the market for Canadian tobacco. This is in rather striking contrast to the statement received from the Imperial Tobacco Company of Canada in response to a request for an explanation as to the delay in opening the Canadian market in 1932 (see section of this report entitled "Holding Off the Market"). In an interview which I had with Mr. H. P. Buell on February 27 he stated that his company's holding off the market in October last was due to the arrangements they were making to find out how much the Imperial Tobacco Company of Great Britain and Ireland intended to purchase from the 1932 crop.

It appears to have been known to the trade early in August that the British Leaf Tobacco Company, which is a subsidiary of the Imperial Tobacco Company of Great Britain and Ireland, would be in the market for a substantial quantity of tobacco. It is also evident from Mr. Buell's letter to Mr. Harrison that the Imperial Tobacco Company of Canada was apparently desirous of having the buying of this tobacco entrusted to them.

That this was done is acknowledged in a statement received from Mr. W. Milligan, President of the British Leaf Tobacco Company, located at Chatham, Ontario, where this company has a modern processing plant. It might be mentioned that the British Leaf Tobacco Company has maintained for a number of years a competent buying organization for the purchase of Burley tobacco in Ontario. In response to questions submitted in this investigation under date of December 12, Mr. Milligan states, in a letter dated December 24:—

We bought about 3,500,000 pounds from the 1932 crop. The Imperial Tobacco Company of Canada bought for us on a commission basis. All

tobacco was allotted to us in the barn before delivery was made. The average price paid for this tobacco was 16·81 cents per pound.

The Imperial Tobacco Company of Canada, by this arrangement, not only kept out of the market what might otherwise have been a competitor, but received a commission of \$35,000 on the transaction.

There is evidence that the delay in opening the market was not only unnecessary, but had the effect of adversely influencing the price and was against the interests of the growers. The responsibility for this delay, however, cannot be placed entirely on the Imperial Tobacco Company of Canada, notwithstanding the apparent existence of an unwritten law permitting that company to open the market and set the opening price.

The arrangement made by the Imperial Tobacco Company of Great Britain and Ireland with the Imperial Tobacco Company of Canada, by which their requirements were purchased under a contract between the latter company and the growers, was in itself sufficient to arouse suspicion and to justify the action taken by the applicants in calling for an investigation into the charges of collusion for the purpose of lessening competition among buyers. The large surplus of tobacco grown in 1932 over the requirements of Canadian tobacco manufacturers had an influence on marketing conditions that must be recognized. When the buying of leaf tobacco finally began the tobacco growers with the exception of a few of the companies or syndicates growing tobacco on a large scale were absolutely without any facilities of their own by which their tobacco would be taken care of and marketed. As a consequence they were wholly dependent on the tobacco manufacturers both in regard to time of buying and prices. The tobacco manufacturing companies, having a knowledge of the quantity of tobacco to be sold and also what quantity would be required by them for manufacture in Canada, apparently took extra precautions to safeguard themselves by offering very low prices for their requirements, looking forward to the possibility of their being a large surplus of tobacco in the growers' hands after their requirements had been met, which surplus might eventually be sold at very low prices.

It is quite obvious that the control of this surplus by the tobacco growers, together with an orderly and systematic method of marketing the same, is most important; and would place the tobacco grower in a more secure position by which he would be enabled to exercise some reasonable degree of control over the price not only for domestic purposes but also for export as well, and assure him a fair market price for his tobacco.

All of which is respectfully submitted,

Yours faithfully,

(Sgd.) DONALD SUTHERLAND.

Mr. E. C. SCYTHES, Simcoe, called and sworn.

*By Mr. Sommerville:*

Q. Have you a statement, Mr. Scythes?—A. We have not prepared a brief for submission to this committee, but I have a brief that was prepared by the members of the Tillsonburg Co-operative and the Flue-Cured Tobacco Growers' Association and presented to the special committee appointed by the Ontario Government. They called us before them and we presented a brief which is a comprehensive statement of the conditions in the tobacco industry, and if the members of your committee are not familiar with it, I would like to read that through.

Q. I have seen some of the features of it and I would very much desire that the members should have the benefit of your experience and knowledge as

shown in that brief. First of all, Mr. Seythes, what is your position?—A. I am President of the Victoria Tobacco Plantations.

Q. And where are you located?—A. At Simcoe.

Q. How many plantations, or farms, have you; what acreage have you in tobacco?—A. We had under cultivation in tobacco 469 acres in 1933.

Q. What volume of production did you have?—A. Of the 1932 product?

Q. Yes?—A. We had a very much reduced crop in 1933. Conditions were very unfavourable and the yield was very much lower than in previous years, so that our returns from the 1933 crop—which are not determined yet because we have only sold one crop out of a total of ten—

*By Mr. Kennedy (Winnipeg):*

Q. What was the yield?—A. The total yield of the 469 acres was approximately \$329,000.

*By Mr. Sommerville:*

Q. How long have you been growing tobacco in that field, your company?—A. Six years.

Q. And have you had a somewhat similar acreage each year?—A. We started with under 200 acres, and we have been expanding it gradually each year to 469 acres.

Q. Will you just be good enough to present your statement?—A. I may state, Mr. Chairman and gentlemen, that I am also a Director of the Flue-Cured Tobacco Growers' Association, and a member of the Ontario Market Committee which was set up last fall. I have discussed with several members of the Committee the Sutherland report which we only saw very recently, and we think it is a very comprehensive report. It shows painstaking work on the part of Mr. Sutherland, and it is a very accurate and clear-cut statement of certain conditions that prevail in the business.

Q. I understand your statement was prepared as a result of a conference of tobacco growers?—A. When we were requested to appear before this special committee two meetings were held. We had very little time to prepare this report. One meeting was held at Tilsonburg—a joint meeting of the two organizations—and another meeting at Simcoe. A committee was appointed to draft this report and present it to the special committee at Toronto.

Q. That is, a committee of the Ontario Legislature?—A. Yes. This is the report as presented:—

The present condition of the tobacco growing industry in Canada is to say the least in a very precarious position. A large number of our growers, especially in Western Ontario, have great difficulty in paying bare costs of production and in hundreds of cases have been unable to pay taxes. It is only a few years ago that the tobacco industry was one of the bright spots of Western Ontario farming but at the present time, with present prices of raw leaf it is very doubtful whether this industry can be carried on much longer without becoming a total loss to the tobacco farmers of Western Ontario.

The amount of money invested by the growers of flue-cured tobacco alone in Western Ontario in land, buildings and equipment is around \$20,000,000, which if invested at 5 per cent interest would produce a revenue of \$1,000,000; whereas, the total amount of money invested by the tobacco manufacturing concerns in Canada in land, buildings and equipment in 1932 was around \$11,252,422, which if invested at 5 per cent interest would produce \$562,621.10. In other words, all the tobacco manufacturing concerns of Canada have only little over one-half as much money invested as fixed capital compared to that invested by the flue-cured tobacco growers of Ontario alone.

*By Mr. Factor:*

Q. Your figures show that only \$11,252,422 is invested by the tobacco manufacturers in Canada. Where do you get those figures?—A. I believe our secretary took those figures from the official statistics of the Department of Trade and Commerce. That refers to fixed assets only. We are not referring to inventories of stocks in trade, working capital, accounts receivable, and, of course, the working capital of manufacturing companies is very much larger than that.

*By Mr. Sommerville:*

Q. Those are the fixed assets?—A. Yes, by the tobacco growers of Ontario alone. "But at the same time the tobacco manufacturers have enjoyed continued profits through years of prosperity and depression. In fact, the tobacco manufacturers are one of the very few businesses which have been able to show large profits during the present depression. To give an idea of the amount of profit made by tobacco manufacturers it can be proved that the net published profits of this business are more than has been paid to the tobacco grower for the entire crop." That is the net profits as shown—

*By Mr. Sommerville:*

Q. The admitted net profits?—A. The admitted net profits and the published net profits.

Q. More than in each year?—A. More than in 1932 and in recent years. "On the other hand, since 1928, when the average price paid in western Ontario for flue-cured tobacco was 31 cents, this average price in 1932 was reduced to about 15½ cents per pound, or only one-half of what it was in 1928."

The CHAIRMAN: Just a moment. Your point is that the amount earned by the tobacco companies in profits exceeded—

The WITNESS: —the total amount paid the growers for their product.

Mr. FACTOR: In the year 1932.

The WITNESS: In the year 1932, yes. I think that would apply for 1933 also to a much greater extent than 1932, because the crop was a much smaller one than in 1932. "On the other hand, the price paid by the consumer for cigarettes, smoking tobacco, etc., has practically remained stationary except for the reduction in the price of cigarettes which was due to a cut in excise duties and was not caused by any reduction in the price by the manufacturer. This steady price of manufactured tobacco to the consumer has been maintained in spite of the fact that the cost of raw leaf to the manufacturer has been reduced by one-half. While all other farm products are lower in price to the farmer, the consumer is paying a much lower price for all farm produce except tobacco. The tobacco growers have been told that they are producing too much tobacco but at the present time the growers have no information as to the amount of tobacco held in stock by manufacturers.

*By Mr. Sommerville:*

Q. Before you leave that paragraph, your argument is 'that the price of the finished tobacco to the consumer has not changed in the slightest?—A. I would not say in the slightest. There have been lower priced brands put on the market, but the price of cigarettes, which are the big selling commodity for which tobacco is used, has not varied.

Q. While the price paid to the producer—A.—has been cut in half.

Mr. H. B. SMITH: May I interject and say that at the time of the lowering of the excise, cigarettes were increased by five for twenty-five cents.

**THE WITNESS:** Well, the price was reduced with the lowering of the excise. The excise was reduced from \$6 a thousand to \$4 a thousand, which was a reduction of 33 per cent, and the retail price was reduced 25 per cent. They gave five cigarettes more for 25 cents—more than formerly—but that reduction was made through the reduction of the excise. The manufacturers' profits have not suffered in any way. In fact, it looks as they were benefited.

"Although there are certain statistics published by the Department of Trade and Commerce at Ottawa, these figures do not give a true picture of the situation. Therefore, how can the tobacco grower intelligently plan his operations, when he is absolutely in the dark as to the amount of tobacco in stock or held over from one year to another. Storage stocks of butter and eggs and other farm products are published periodically and it is of just as vital interest to the tobacco grower to have the same information on tobacco."

I might state that so far as the English market is concerned, we have very complete information; we know from month to month exactly the amount of tobacco on hand and the amount released for home consumption.

*By the Chairman:*

**Q.** Has there been any effort to get this information?—**A.** I believe there has. We have made several requests to Mr. Major, who has procured very excellent statistics in some respects, but he has reported that he has been unable to get the information we have never received.

**MR. SOMMERVILLE:** I understand that this information is available in the United States quarterly.

**THE WITNESS:** I think they know exactly in the United States what stocks are on hand; they are reported.

**THE CHAIRMAN:** You think the British Government publishes those statistics; is that right?

**THE WITNESS:** The statistics we get are published by a private broker, but he obtains the figures through the British Government.

*By Mr. Sommerville:*

**Q.** You say that if the statistics were published as to the amount of tobacco held in stock and the carry-over, the grower would be in a better position both to know what he should produce and also to bargain as to his price?—**A.** It would certainly be very useful information. We would know if there is too much tobacco being produced, and how much it should be cut down. We will touch on that phase of the matter later. How it could be done is another question. "When it is realized that the Government of Canada enjoyed a revenue of over \$42,000,000 from the tobacco industry in 1932, mainly through the efforts of the tobacco farmers of Canada, who after all produce the greater proportion of the raw leaf that is used in the business, the growers feel they are entitled to a larger share of the tobacco consumer's dollar."

*By Mr. Kennedy (Winnipeg):*

**Q.** When the excise was lowered on tobacco did it result in any benefit passing on to the grower?—**A.** We have seen no benefit from it.

**MR. SOMMERVILLE:** Since then prices have been cut in half?

**THE WITNESS:** Yes.

*By Mr. Kennedy (Winnipeg):*

**Q.** I will go a step farther. You have intimated how much Canada gets out of revenue through excise. If it were further reduced it would not follow that that would be any advantage to the grower?—**A.** This does not work out so far.

Q. Under present marketing conditions?—A. No. Apparently, that is not what is wrong with the industry.

Q. It needs something more than lowering of the duties on tobacco to carry the benefits to the producers, is that it?—A. Yes. We co-operated with the manufacturers and a deputation of growers came to Ottawa to request the government to make a reduction in the excise. We were requested by the manufacturers to do that and we were glad to co-operate. They said they would help us. But it has not worked that way; we have not seen any advantage so far. It may have increased the sale of cigarettes to some extent.

Mr. SOMMERVILLE: And that has increased—

The WITNESS: —the demand for our product.

*By Mr. Edwards:*

Q. At a reduced price?—A. Yes, the demand has been at a reduced price, but I would not say the reduction in the excise has been responsible for the reduced price.

Q. As to the reduction in the excise in connection with an additional five cigarettes for 25 cents, for instance, one forms the impression that the manufacturer is passing that benefit on to the ultimate consumer, but the producer is not getting any benefit from it; is that the idea?—A. The increased number of cigarettes—five for 25 cents—of course, the reduction in excise fully offsets the cost of those five cigarettes.

Mr. KENNEDY (*Winnipeg*): The only difference is you have been able to get five more cigarettes.

The WITNESS: Yes. The consumer has benefited, and we are favourable to it.

*By Mr. Sommerville:*

Q. Your information is that that has been offset by the reduction in the excise?—A. Yes.

Q. And that in all probability the manufacturer has made more profit since the reduced excise than he would make under the former excise?—A. He received a reduction of 33 per cent, and the retail price was reduced 25 per cent.

*By Mr. Factor:*

Q. And the revenue of the country has decreased from \$42,000,000 to \$39,000,000?—A. I would not like to make the statement that the fall in revenue is due to the cut in the excise. I think, even had the former rates of excise been maintained, you would have had a fall in revenue because of the conditions. There has been a falling off in the consumption of manufactured cigarettes and greater consumption is the use of tobacco—

The CHAIRMAN: Roll your own.

The WITNESS: Yes, roll your own. So that the revenue on tobacco—the tax on tobacco is 20 cents whereas on cigarettes it is \$4. “At the present time American flue-cured tobacco is imported into Canada to the extent of 9,000,000 pounds and from published statistics it appears that instead of the Canadian tobacco growers enjoying the benefit of the duty for the manufacturer. Over ten years ago when the production of Canadian flue tobacco was about 5,000,000 pounds, a request was made to the Dominion government to increase the duty on American flue-cured tobacco entering Canada, but at that time it was pointed out that the Canadian grower was not producing enough to supply the home market.

*By Mr. Sommerville:*

Q. The importation amounted to about 9,000,000 pounds last year. That is about half the importation of around 1927, is it not? There was about double the amount imported about six years ago?—A. We did not have the figures as to flue-cured tobacco six years ago. We know that the amount has been coming down, but the figures were bulked together until, I think it was, two years ago that we started to get the figures on flue-cured tobacco.

Q. The figures will be shown in tables number 3 and 4 in exhibit 105. According to this table the total importation of raw leaf from the United States was 17,094,943 pounds of all types, and last year the total from the United States was 8,950,432 pounds flue-cured. For 1927 the amount of flue-cured tobacco imported was 13,036,511, while for 1932 the importation was 8,832,160? A. "At the present time there is enough Canadian flue-cured tobacco being produced to supply the home market, but instead of enjoying the benefit of our home market we are exporting part of our crop and importing the same type of tobacco from the United States."

*By Mr. Factor:*

Q. What is that? What is the reason for that?—A. Well, the reasons given to us by the manufacturers are that once they establish a brand they are very loathe to make any change in the brand. The taste of the public—they are accustomed to a certain brand of tobacco, and if it is blended with imported leaf it costs a lot of money to put the brand on the market and they do not want to interfere with it.

Q. In other words, they require the importations of that particular brand in order to blend the cigarette?—A. Their blends were built up very largely on imported tobacco until the industry reached its present stage. We did not produce enough tobacco for the requirements, and their blends were mostly—particularly cigarettes—mostly imported tobacco.

Q. Could not the manufacturer get the same result from Canadian-grown tobacco now, without blending it with the imported tobacco?—A. We maintain they could if the tobacco were aged the same as the imported tobacco. The British manufacturers say that tobacco is not really in its best state of maturity until it is three years old—has had at least three summer sweats—and the finished blends are represented as aged tobacco.

*By Mr. Young:*

Q. Do these manufacturers keep that tobacco that they buy for three years before they manufacture it?—A. Well, the British manufacturers—no doubt the larger manufacturers do. They carry the stocks and mature them themselves. The smaller manufacturers have not the capital to do that, and they are able to buy American tobacco that is aged.

Q. What about the Canadian manufacturers?—A. The larger or stronger Canadian manufacturers do that. That is the only way they have been able to obtain supplies. There have been no aged tobaccos in Canada; there has not been any tobacco carried over here—flue-cured—from one year to the other.

MR. SOMMERVILLE: Except by the manufacturers.

THE WITNESS: Except by the manufacturers; but none in the hands of the growers. There is still in Canada plenty of last year's crop unsold at the present time, but when I say that none is carried over I refer to the time the next crop is ready for acreage, and the stocks have all passed out of the hands of the growers.

MR. YOUNG: There are no price quotations for old tobacco now?

The WITNESS: No. It has not been possible to buy old tobacco in any quantity in Canada up until the present time.

The CHAIRMAN: Proceed with your brief.

The WITNESS: "The argument has been put forth, of course, that the manufacturer is obliged to use a certain proportion of American leaf, but this has never been proved, and if there was no American leaf in Canada the consumer would have to smoke Canadian tobacco. In fact there is being sold to the public at present tobacco mixtures and brands of cigarettes which contain nearly 100 per cent Canadian leaf.

"Owing to the fact that the tobacco growers have so little information regarding the industry it is very difficult to present a case in any detailed form but the growers would like your committee to do everything possible to get the necessary information once and for all which will give everybody a true picture of the situation. However, they would like to make the following suggestions."

This was our recommendation of these two organizations to the committee at Toronto, and we would pass on the same recommendation to the committee. They asked for:—

A full investigation of the whole tobacco industry of Canada. And I presume this is the result, and also the result of the publication of the record:—

Publication of detailed statistics showing the amount of the different types of tobacco, both domestic and imported, used in Canada; also, stocks of all tobacco, domestic and imported, held by manufacturers; in other words, the publication of detailed statistics showing the actual state of affairs.

Representation to the British Government regarding the question of the use of the word "Virginia" in the sale of manufactured tobacco in England (at the present time there is a law forbidding the use of the word "Virginia" on any package of tobacco or cigarettes unless the tobacco used therein actually comes from Virginia). It is a well-known fact that in connection with the above act that tobacco which comes from Carolina and Georgia comes within the meaning of the act, while Empire tobacco could not legally be used. Because Virginia produces a very small proportion of the tobacco of that name. North Carolina produces probably two-thirds of all the flue-cured tobacco in the United States.

The CHAIRMAN: I suppose it is a registered name?

The WITNESS: Virginia is a generic term.

The CHAIRMAN: I would like the witness to say whether he knows that or not.

The WITNESS: I could not say whether it is registered or not. It is a word, I would say, that by long continued use has been accepted as a name for a type of tobacco.

Mr. SOMMERVILLE: And the flue-cured tobacco that you grow, is that Virginia flue-cured tobacco?

Mr. EDWARDS: It does not mean that it is grown in that area.

The WITNESS: No; not that it is indigenous to Virginia. North Carolina produces two-thirds of the flue-cured tobacco.

*By Mr. Edwards:*

Q. But the public associates it with coming from there?—A. Hon. Col. Kennedy told me of a conversation he had with one of the directors of the

Imperial Tobacco Company of Great Britain, and he mentioned this very fact, that this was an objection to using Canadian tobacco. He said, "Your Virginia tobacco does not come from Virginia. It comes from the Carolinas and Georgia." He said, "Oh, is that so? I didn't know that. I thought it all came from Virginia."

Q. It is on the same principle as the saying that all colonels that come from Kentucky are not colonels?—A. I dare say.

*By Mr. Factor:*

Q. What is the meaning of this on a package of cigarettes: "Straight cut Virginia, manufactured by the Imperial Tobacco Company Limited"?—A. Well, that is describing a type of tobacco.

Q. Has that cigarette got a mixture of Virginia tobacco in it?—A. Well, I don't know what cigarettes you are talking about.

Q. It is called the "Grey" cigarette, straight cut?—A. I can't give evidence as to what is done by the different manufacturers of cigarettes. That is the manufacturers' secret.

Mr. SOMMERVILLE: We will get something of that later on.

The WITNESS: Yes, it is the manufacturer's secret. In any case, we would ask that steps be taken to see that Canadian tobacco will not be discriminated against for use in English brands because of that ruling or law or decree regarding Virginia tobacco. We also ask for an investigation of the distribution of the tobacco consumer's dollar.

*By Mr. Sommerville:*

Q. You think you are not getting all of your share?—A. Yes, we think we are not getting our share. We ask also for the publication of the Sutherland report in detail, which has since been done. We ask the Dominion government to place an embargo on American tobacco seed owing to the prevalence of tobacco diseases in the southern states, and the fact that there is plenty of first-class Canadian-grown tobacco seed.

*By Mr. Young:*

Q. Just what evidence have you of that, Mr. Scythes, as to diseases?—A. I would much prefer that Mr. Freeman or Professor Leitch would give evidence on that point, rather than myself. Mr. Freeman is well qualified, I would say, to give evidence on that, having been former head of the tobacco station and a grower of very wide experience. My experience has been more concerned with the business end of it, the administration and business end of it.

*By Mr. Sommerville:*

Q. Will you continue?—A. We recommended also that the Dominion government be petitioned to pass an act embodying conditions similar to the British Marketing Act. We felt that that Act contained provisions that would enable the setting up of regulatory measures through which, perhaps, a large amount of the abuses in this industry could be overcome.

Q. Through some form of marketing control?—A. Proper method of control. If there is over-production, that could be regulated by licensing the growers.

Q. Your tobacco industry is confined to certain well-known areas, is it not?—A. Norfolk county and Essex county, with Norfolk county having the preponderating supply, Norfolk county producing probably about 2,500,000 to 3,000,000 pounds last year.

Q. Norfolk county produced 2,500,000 to 3,000,000 pounds last year?—A. Norfolk county would produce, I would say, between 80 and 90 per cent of all

the flue-cured tobacco produced. When I speak of Norfolk county, I speak of the border sections also of Elgin and Oxford, all known as the new belt district.

Q. That new belt district is a well-defined area?—A. Yes.

Q. Of land suitable for tobacco growth?—A. Yes.

Q. Having produced 80 to 90 per cent, you say, of the flue-cured tobacco?—A. That is grown in Canada.

Q. And then in Essex, in that area, what is the major crop there—burley?

—A. They also produce some flue-cured tobacco. That was known as the old belt, and they at one time produced as much as 6,000,000 or 7,000,000 pounds, but that amount has decreased to probably less than half that now. They produce a lot of burley in Essex county, and also in Kent county.

Q. Essex and Kent produce burley leaf?—A. Yes.

Q. Burley leaf is used largely for what purpose? Is that for smoking, heavy tobacco?—A. Yes, it is used for smoking tobacco, and I believe a type of burley is used also for cigarettes, a light burley. As we don't grow burley tobacco, I am not so well qualified to speak on it.

Q. We have someone who will speak on that. You think that, in your industry, there should be some form of marketing regulatory board that could cure the ills of the growers?—A. Yes. We go on to say, "Full government support for any plan which the growers may decide upon for the control of production of tobacco such as the licensing or registration of all tobacco growers so that the production of this farm produce can be placed on sane business lines."

Q. Yes, a measure of control within your own ranks?—A. Within our own ranks, yes.

Q. Now, Mr. Scythes, what would be the functions of such a marketing board, in your opinion? What could they do in the industry?—A. Well, I think they could carry on a very useful work. I might state that until last season the individual grower had no means of determining the value of his crop, other than through his own opinion—according to his own opinion. The buyers for the large companies visit the farms regularly during the curing season and inspect every kiln very carefully, and they grade the crop, they make an estimate as to the way that crops will grade.

Q. The buyers do?—A. Yes, and they buy really on grade; although it is called a barn-run system—they give you a flat price for your crop—the crop is really, in my opinion, bought on grade. These buyers are able to determine pretty accurately how that crop will grade out. The grower was not competent to do that. As conditions grew worse in the industry, the growers were compelled to get together and take some steps and try and protect their interests. We saw prices dropping in 1932; we saw the market open at 32 cents; we saw the buying holding back, other buyers holding back; the Imperial Tobacco Company opened the market and they bought very, very little. It was done very cautiously. They had stayed out of the market. They had spread—at least, propaganda was spread that had a very disastrous effect on the morale of the growers; and then we saw prices just sag from an opening price of 24 cents to where crops were bought at 11 cents and 10 cents and 13 cents.

*By the Chairman:*

Q. You are speaking of 1933?—A. 1932. I am speaking of 1932, the conditions on which this report is based.

*By Mr. Sommerville:*

Q. You say crops bought as low as—?—A. As low as 10 and 11 cents.

*By Mr. Kennedy (Peace River):*

Q. How did those prices compare with the cost of production?—A. The cost of production, of course, depends very largely on the yield per acre, and on the conditions, the cost of supplies. It would vary from year to year.

*By Mr. Kennedy (Winnipeg):*

Q. Mr. Scythes, with reference to your statement that the buyers can pretty well grade the tobacco, at what stage in the maturity of the plant is it bought?—A. Oh, well, it is bought after it is all cured and after it has been in the barn for some two or three weeks.

Q. There is nothing else that can happen to the plant after that period that will lower the grade—not ordinarily?—A. Oh, not ordinarily. There might be too much dampness from rain leaking in on it; but the tobacco improves a little while it is still in the barn, if it is packed properly.

*By Mr. Kennedy (Peace River):*

Q. What would you regard as a fair price for the last three or four years?—A. What would I regard as a fair price that the grower should get for his product?

Q. Yes, approximately?—A. I think a price, a range of prices between—well, we were not any too prosperous when the market prevailed at 40 cents a pound. If we had good crops, a good season, we were able to make a small return on capital at 40 cents a pound.

*By Mr. Young:*

Q. You say they buy, to all intents and purposes, on grade; but in determining the grade they make periodic visits to the farmers and inspect the crop at different stages of maturity?—A. Yes.

Q. Is it not possible to look at the cured product and grade it? A good grader could go into your barn when your tobacco is ready for sale and tell you the grade of it, could he not?—A. Oh, the grading that is done later on is done by handling each leaf individually, of course. The buyer inspects each kiln of tobacco. The tobacco is cured in kilns and those kilns contain perhaps 1,500 pounds of tobacco; and during the four days that that kiln is under cure, he may visit that crop four times, may see that kiln four times to see how it is being cured.

Q. It would not be practical to set up a grading system, and grade tobacco like you grade other things?—A. Oh, yes, tobacco is all graded at a later stage.

*By Mr. Sommerville:*

Q. What is the fact? Does the buyer not visit the farm when the crop is being grown?—A. Yes, he visits the farm.

Q. Just to keep in touch with the crop?—A. Yes.

Q. And when it is harvested, he visits to see how it is being cured?—A. Yes.

Q. And that is all before marketing begins?—A. Yes.

Q. So that he has notes on the product of each farm?—A. Yes.

Q. On what he regards as the quality of each product?—A. Precisely.

Q. Of each farmer's product; and then on marketing day, he can go to those which he regards having the highest grades and buy at once? Is that not the object of the visits from time to time by the buyer?—A. Yes, they make an appraisal of each crop.

*By Mr. Factor:*

Q. What is the object of grading when you are getting a flat price for your product?—A. That enables them to determine the value of the crop, to make an appraisal of the value of the crop by their standards.

*By Mr. Young:*

Q. Even if they had been through this, had been making these visits, and keeping track of your crop through every stage of development, when they go to buy, they would have to rake out your whole barn and examine it all, would they not?—A. Yes, they would have to turn over the barn of tobacco to form some estimate on it, but they could not do that nearly so accurately.

*By Mr. Kennedy (Winnipeg):*

Q. There is surely no objection to their visiting from time to time, is there? —A. I have not heard of any growers objecting.

Mr. SOMMERVILLE: Oh, no.

*By Mr. Edwards:*

Q. Is not that a plan that has been adopted by all tobacco buyers, for instance buyers in Cuba? I was down there one time and met a buyer on the boat, and he said it was his fourth trip that season?—A. I am not familiar with the method of selling in Cuba.

Q. There is nothing objectionable about that practice, is there?—A. Oh, no, I am not stating that there is any objection.

Q. In fact it is desirable?—A. What I started out to say was this, that a grower had no means of appraising his crop. He had his own opinion as to his crop, and when this marketing board was set up, we decided that one of the services we could render to the grower that would be beneficial to him would be to give him an appraisal of his crop; and we offered that service to the grower, and many of them took advantage of it. They had a report supplied by the association inspector as to the value of their crops. If the market opened at 24 cents —we knew once the market is opened that there is no possibility of raising it.

*By Mr. Factor:*

Q. What benefit do you get from getting a report of the grading when the price is fixed?—A. If a grower was offered 14 cents for his crop and he has an appraisal from the association that it is worth 19 cents, he knows not to sell. We advise him, if he is a member of the association, not to sell unless he gets a fair price.

*By Mr. Young:*

Q. A marketing board of your own association is in existence already?—A. Yes.

Q. You have such a board?—A. Yes. This board was set up just a year ago.

*By Mr. Sommerville:*

Q. That is the result of the conference with the Department of Agriculture at Toronto?—A. Yes, the result of many conferences with the department at Toronto.

Q. As a result of the conditions which you say were growing worse? —A. Yes.

Q. —conferences took place with the Department of Agriculture?—A. Yes.

Q. And out of that grew these arrangements, that there is a board and association set up?—A. Yes.

Q. And that that association would function for certain definite purposes, one of which would be to employ a certain man who was familiar with the grades of tobacco?—A. Yes.

Q. And to have this man go and grade a crop for the farmer, to give him an appraisal of the value of his crop?—A. Yes.

Q. So that he would have some idea of its value?—A. Yes.

Q. When the buyer came to him?—A. Exactly.

Q. That was the object?—A. Yes.

Q. And in that respect the farmers have been taking advantage of that service in the past year?—A. Many of them have, yes.

*By Mr. Young:*

Q. Do these men go through your crop the same as the company buyers do, from time to time?—A. Yes, the association inspector works just in the same way as the company buyer.

*By Mr. Kennedy (Winnipeg):*

Q. Will you clear this point up for me: is it your contention that the growers themselves are not competent to judge of the grades of their tobacco?—A. Many growers are competent; but the grower, when he is working with a crop, has not perhaps the same opportunity, and he has not an opportunity of comparison.

Q. Is it because of lack of experience in the growing of tobacco?—A. Many of these growers have had a life-long experience.

Q. I have in mind the wheat growers in the west, those farmers who grow wheat. They could tell the grades of wheat just as well as the best government inspector that ever got off the train?—A. Yes.

Q. They know, within a very close range, whether that wheat will grade No. 1, No. 2 or No. 3, or what it will grade?—A. Yes.

Q. And I was just wondering if there was something inherent in tobacco growing that makes it impossible for the growers to grade it?—A. No. I would say many growers are able to determine the value of their crop, but it is a great advantage to the grower to have an independent inspector come along and grade his crop and say, "According to the association standards your crop is worth so much money, your crop should bring so much money."

Q. Your trouble is not there; if the market is limited, if there is a combination or if you are more or less at the mercy of the buyers, what some person else says it would grade at will not determine what you will get for it?—A. Probably what led up to this, we knew in 1932 some crops were sold as low as 14 and 15 cents. Those were just as good as a few crops that were sold at 24 cents—a wide fluctuation in the market. This was one means of trying to correct the fluctuations in the market. We had panicky conditions in 1932. I have explained how propaganda was spread until the growers were in a state of panic, and how the market broke, and we appealed to Colonel Kennedy. We went to Colonel Kennedy and said, "Something has to be done; prices are dropping simply out of sight." Colonel Kennedy said, "What do you want?" We said, "We must have a fund so that we can handle the growers' crops and take the crops off their hands, where they can't get a fair price, and grade these crops and put them in hogsheads so that the tobacco can be kept and sold in an orderly fashion. At least, we must have some support to tide us over this emergency." And we received that support from the Ontario government. Once the announcement was made that a system had been evolved whereby the growers could have their crops graded and processed, so that they didn't need to sell, the market started to stiffen.

*By Mr. Sommerville:*

Q. When was that?—A. That was in 1932. Mr. Sutherland's report covers that.

Q. I observe that after 9th November, 1932, two weeks of selling, the price had dropped from 22·40 average to 14·50; then it started up again to

11·50, 14·50, 14·50, 17·57, 18·50, 16·26, and 18·24; you say that was because of certain arrangements made?—A. We feel it was the effect of the announcement that the Ontario government had offered this service to the growers—this plan to the growers; distorted this plan; that that had the effect of stimulating the market. In fact, we are quite satisfied it did.

Q. In other words, the market that year did not continue to carry through to the lower levels consistently the whole period of the market?—A. No, it closed at much better levels than it had originally. At one time it went down very fast.

Q. And that was due to these services that you are able to arrange to give the farmers themselves. You have referred to some arrangement by which the farmers' tobacco could be processed, up to the year 1933 there was no system by which the farmers could process their tobacco for the export market, was there?—A. In 1932, when we received the promise of support from the Ontario government, they agreed to advance enough money or to arrange a credit so that we could pay for the packing charges on the tobacco. We did not think that sufficient, because we knew that the growers could not hold their crop unless they got advanced cash returns out of the crop. We were unable to arrange for a credit to give crop advances at that time, and the crop was sold.

Q. For 1932?—A. The 1932 crop was practically all sold. Some of the tobacco was processed and held, and better prices obtained. We ourselves held a good portion of our crop and obtained a better price by doing so; by having it put in hogsheads and having it cured.

Q. Have you any idea what would happen if you all held back the whole crop?—A. If we had processed the whole crop and sold it all cured?

Q. Yes.—A. To give an answer to that would be a very speculative question.

Q. To hold it back might be speculative also?—A. Yes, it might be speculative. There are some growers of the opinion—there are two schools of thought; one school is when we reach a time that all our tobacco will be cured, sold on a cured and processed basis; on the other hand, the largest buyers, the Imperial Tobacco Company, have always bought under the other plan; and when a satisfactory price is paid, it is a very satisfactory plan for the grower.

*By Mr. Kennedy (Winnipeg):*

Q. You made a very interesting statement there, if it be true—I am not saying it is not; you intimated that without American tobacco we would have just as good a product; have you any grounds for that, or is it merely a hope?—A. I have been informed by people who know something about manufacturing tobacco that with an aged Canadian tobacco they can produce a first-class cigarette.

Q. Have you any knowledge of it yourself?—A. I have no knowledge of it personally, I am a tobacco planter.

*By Mr. Sommerville:*

Q. What about the method of buying by the companies? How do they buy your crop? Is there real competition among them in the buying of your crop?—A. Well, sometimes there appears to be some competition, but generally you receive an offer from one buyer, and if it is a satisfactory offer you take it; if it is not a satisfactory offer you might later have one from another buyer. Last year the buying stopped about the middle of December. There were no crops sold after the middle of December, very few at least. The Imperial went out and bought a little cured tobacco later on, but they stopped buying for a time and then bought just a little. Some of the other buyers discontinued buying altogether.

*By Mr. Factor:*

Q. I see in the Sutherland report there is a reference to the fact that these buyers meet together at some hotel in Tillsonburg—sort of a prayer meeting, I suppose—what happens there; do you know?—A. Tillsonburg is a sort of a centre, the best hotel is there in the district and it is a nice place to stay.

*By Mr. Sommerville:*

Q. The operation is commenced when someone begins to buy, as the Sutherland report indicates; the Imperial Tobacco Company have been in the habit of opening the market for years?—A. All the growers are waiting for the opening of the market, as they call it; there really is no opening of the market, it is done just as Mr. Sutherland states in his report.

Q. The Imperial goes out and buys, that sets the prices; do any other buyers exceed that price, or is the purchasing done at that price or less?—A. I have not known of any buyer exceeding the price set by the Imperial during my experience. I have known the other buyers to pay more for a crop than perhaps was offered by the Imperial, but I do not know of any buyer exceeding the top price that the Imperial Tobacco Company opened the market at.

Q. What do you say as to Mr. Sutherland's finding that the price relatively drops as the buying goes on, from that top price?—A. Well, the inference is that the top crops are bought the first day, or the first two or three days; and that the less desirable crops are picked up later, and that the price shrinks on that account; but we know however that there are many crops that were not bought which could be classed among the top crops; the same applies to 1932, and we know that some of the crops that were bought as I stated at 14 and 15 cents were the equal of other crops that sold at 22 cents to 24 cents.

*By Mr. Factor:*

Q. When did the market open in 1933?—A. Mr. Lea is present, and he could tell us the exact date. I do not remember.

*By Mr. Sommerville:*

Q. You do not remember the exact date?—A. It was along in October.

*By Mr. Kennedy (Peace River):*

Q. Is a good crop of high grade the result of skilful farming and good handling?—A. There is, of course, a lot in proper handling, and in the grower knowing his business.

Q. Is weather a factor?—A. We are very seriously affected by the weather, yes.

Q. Having regard to this \$20,000,000 investment, does that take in the whole of the farm on which the tobacco is grown, or does it just apply to the land actually used and the investment for equipment?—A. That would cover the entire investment in land.

Q. Is tobacco grown as a rotation?—A. Yes.

Q. In a regular crop rotation?—A. Yes, tobacco is a crop that exhausts the soil; at least the soil must be rested and rotated.

Q. And the comparison of investments between the investment of the growers and the tobacco manufacturers; is that a fair comparison, \$20,000,000 against \$10,000,000?—A. I would not say that that was. I think the secretary in inserting that paragraph wanted to show the amount of fixed investment.

*By Mr. Sommerville:*

Q. You made reference to numbers who had to go out of the business in the last two or three years; why was that?—A. I refer to the fact that many

of the growers will have to discontinue because the price paid for the product is not sufficient to maintain them on their farms; they cannot meet their expenses. It is a very expensive crop to grow.

*By the Chairman:*

Q. Can you suggest the price, and give justification for the price you suggest, that the association thinks the growers should receive?—A. Do you mean the price that we should receive?

Q. Yes.—A. I think Mr. J. F. McKay will submit a statement to you which will set forth our views.

Q. Representing the considered views of your association?—A. I would not say these are the considered views, we have not had an opportunity of placing it before our association; but I think it will meet with approval by the association.

*By Mr. Sommerville:*

Q. It will meet the views of growers who have had experience over a period of years?—A. Yes, as to a basis which would enable us to determine the price.

*By Mr. Kennedy (Peace River):*

Q. You said something about a licensing system; what would the licence cover, a licence to plant so much?—A. If we are over-producing—if there is over-production one year, and a proper system of control and regulation is set up, you would have that licensing system to bring the growers under control so that you could control production. This year our two associations are co-operating in working out a reduction in acreage. It has been suggested that we are producing too much tobacco. The Imperial Tobacco Company and the other companies are co-operating, and according to the last reports at the end of last week, 85 per cent of the growers have signed for a reduction of 25 per cent in acreage for this year.

Q. I suppose your object is to try to get a reasonable return for your investment and labour?—A. Exactly.

The CHAIRMAN: I think we will adjourn here, to meet again at four o'clock.

The Committee adjourned at 12.40 p.m. to meet again this day at 4 o'clock p.m.

---

#### AFTERNOON SITTING

The Committee resumed at 4 p.m.

*By Mr. Sommerville:*

Q. Mr. Scythes, before adjourning you were dealing with the producer not getting a fair proportion of the consumer's dollar?—A. Yes, Mr. Chairman. Before I continue with that subject, Mr. Kennedy (Peace River) asked a question as to whether our valuation included only the lands that were used for the production of tobacco. I might state that in the tobacco growing industry the tobacco growers are specialized—flue-cured tobacco growers are largely specialists, and practically all their lands are devoted to that one crop.

Q. The tobacco crop?—A. Yes. Perhaps, some of them raise a few other crops, but in a limited way, generally speaking, it is a specialized industry.

Q. May I ask you before you proceed. What proportion of the flue-cured tobacco growers do you and the other gentlemen who accompany you to-day represent?—A. I would say that the Incorporated Planters are well represented.

They cover, perhaps, 35 per cent of the production. The two associations—the Flue-Cured Tobacco Growers association and the Tillsonburg Co-operative association—would represent, perhaps, another 35 per cent, and there would still remain about 30 per cent who are unattached.

Q. So that you would represent about 70 per cent of the flue-cured tobacco growers?—A. Yes.

Q. Now, will you just proceed with the further development of that field of your argument that you are not getting a fair spread?—A. Because of similar conditions that prevailed in the United States an investigation was made as to conditions in industry, and a statement was prepared and presented to the Agricultural Adjustment Administration, and while we have not the figures in Canada, we believe an investigation would develop very similar figures here.

Q. That is an investigation by this committee?—A. Yes.

Q. Figures from the tobacco manufacturers and growers?—A. This relates to the price paid to the growers for their crops, and the profits made by the manufacturers. If I might be permitted, I would like to read the statement that was submitted to the Agricultural Adjustment Committee:—

Analysis of the returns obtained by tobacco growers and others in the tobacco industry indicates that there is an inequitable distribution of consumer's expenditure for tobacco products. One of the reasons for this is that although tobacco is grown by approximately 400,000 farmers, practically all the production is purchased and manufactured by a small number of manufacturers.

In 1923 the combined total of the amount paid to tobacco growers for all tobacco retained for use in the United States and the net profits of manufacturers was approximately \$250,000,000. Of this amount \$174,000,000 or 70 per cent, was received by tobacco growers and \$76,000,000, or 30 per cent, was manufacturers' profits. Since that time the profits of manufacturers have increased steadily and the amount paid to farmers has declined. This decline has been particularly great during the past four years.

Q. The growers got how much?—A. \$174,000,000.

Q. And the companies got how much?—A. They got about 30 per cent, \$68,000,000. That was the manufacturers' profits.

In 1931 the combined total of these two items was \$243,000,000 of which tobacco growers received \$96,000,000 or 40 per cent, and manufacturers' profits were \$147,000,000, or 60 per cent.

Q. That is, the situation was reversed in the eight years?—A. Yes.

In 1932, manufacturers were able to maintain their profits but farmers' receipts were greatly reduced. Of the combined total of these two items in 1932, which was \$214,000,000, the amount received by tobacco growers was only \$68,000,000 or 32 per cent, and manufacturers' profits were \$146,000,000, or 68 per cent.

Q. That is to say that in the United States the entire amount paid to the growers for all the tobacco taken from them was \$68,000,000?—A. Yes.

The CHAIRMAN: That is the sale price of the tobacco?

The WITNESS: The sale price of the tobacco. What the grower received.

Mr. SOMMERVILLE: What the grower received; and the same year the tobacco manufacturing companies made profits of \$146,000,000?

The WITNESS: Aggregate profits of \$146,000,000.

Mr. YOUNG: Will you define the word profits; what all does it include?

The WITNESS: That profit is the net profit available for distribution after all overheads and all charges. Those are the net profits of the manufacturers as

shown by their statement. The \$68,000,000 to the growers represents only the total amount he received—the gross amount he received.

Mr. SOMMERVILLE: That would cover his expenditures?

The WITNESS: The statement amplifies that.

The CHAIRMAN: I suppose the small amount the growers got in the last couple of years is due to their getting no profits.

Mr. FACTOR: They got paid below cost.

The WITNESS: We have never been on that scale.

Mr. SENN: Never is a long time. What about when you were getting 40 cents a pound?

The WITNESS: Well, the industry was healthy and prosperous at that time.

*By Mr. Kennedy (Peace River):*

Q. Have you got a statement about the number of people employed on the growers' side as against the manufacturers' side?—A. We have on previous occasions compiled a statement showing the number employed in the growing industry, and, of course, the figures are available for the manufacturer. We would be very glad to submit a statement to the committee.

Mr. SOMMERVILLE: We will get that statement.

The WITNESS:

These figures indicate that in the distribution of income between the farmers and the manufacturers the present organization of the tobacco industry is such that farmers are in an unfair bargaining position.

In considering the figures just cited it should be pointed out that manufacturers' profits for the most part represents only returns for the capital invested, whereas the amount received by farmers represents the return for capital, labour and management. Preliminary studies indicate that the original investment in tobacco manufacturing plants is somewhat less than the original investment in the land, buildings and equipment used in growing the tobacco. In producing the tobacco used by manufacturers last year approximately 250,000,000 hours of farm labour were used. If the rate of compensation for this labour were figured at a rate no higher than that paid to the lowest priced labour used by the manufacturer the total returns received by farmers would hardly be sufficient to cover the labour and cash outlays for fertilizers, allowing no return for other miscellaneous items. As a result of the decline in farmers' receipts the conditions among tobacco growers have steadily grown worse. The values of farm property have depreciated, debts have accumulated, credit has ceased to be available, taxes have become delinquent and the standards of living have reached a bare subsistence level.

Prices received by the growers of flue-cured tobacco in 1932 average 11.6 cents per pound, which was 4.2 cents, or 27 per cent, below fair exchange. In 1933 available data indicate that prices are little if any higher than in 1932.

The CHAIRMAN: That is fair exchange value. At that rate they figured the fair exchange value in the Southern States was 15.6.

The WITNESS: That was later determined at 17 cents.

*By Mr. Sommerville:*

Q. That is including the labour that is available in the south they figured that the fair average value of the crop was 15.6, and later on it was fixed at 17? A. Following the presentation of this statement and the investigation under the

A.A.A. the markets were closed. They declared a market holiday. There was no buying on the markets, and in the interim a plan was evolved, I believe, between the growers and the manufacturers, with the co-operation of the government, and a parity price was decided upon. The parity price, I believe, was the average for ten years based on the purchasing power of the dollar—adjusted to the purchasing price of the dollar. I suppose that fair value would represent that.

Q. And that was fixed at?—A. Seventeen cents.

The CHAIRMAN: A pound.

*By Mr. Senn:*

Q. Is that for all kinds of tobacco?—A. No, flue-cured tobacco. My remarks will all refer to flue-cured tobacco only. I am not posted on any other branch of the industry. The condition was that the manufacturers or buyers of tobacco would pay not less than 17 cents a pound average, and the A.A.A. inserted a penalty that they would tax any buyer the difference between the price he paid and the average price of 17 cents. So that he was liable for 17 cents a pound on his purchases.

*By the Chairman:*

Q. On his past purchases?—A. No, just for that year.

Q. No, but for his past purchases for that year; his previous purchases for that year?—A. I am not certain as to that, or whether that was from the date of the reopening of the markets. I am not certain whether that was for a year's purchase. Perhaps some of the other members of the delegation could answer that, but I am not certain as to that. In addition to the parity price of 17 cents, I believe they had a commitment from the manufacturers or buyers that they would purchase a quantity equal to their previous year's purchase, and there was also a penalty inserted that if they fell short in their purchases they would be taxed one cent a pound on any shortage.

*By Mr. Young:*

Q. You told us this morning that you did not make too much money at 40 cents?—A. I am referring to conditions in the United States.

Q. Can they grow that tobacco much cheaper than you can?—A. Conditions are very different over there.

Mr. SOMMERVILLE: Labour conditions are different in Virginia, Carolina and Georgia—coloured labour.

*By Mr. Young:*

Q. You spoke of farm values depreciating. What do you value your land at?—A. Well, you could buy some tobacco land at the present time, without buildings, at probably \$60 an acre—\$60 to \$100 an acre. You might buy certain farms cheaper.

Q. They have gone considerably higher, have they?—A. They have paid as high as \$500 an acre in Essex county.

Q. That was when you were getting 40 cents a pound.

The CHAIRMAN: That was in a period of optimism.

The WITNESS: That was in a period of prosperity. One time they got 60 cents a pound. We were not in the business. Those were the halcyon days. We are not asking 60 cents a pound. There is a happy medium that we think would be fair to the growers and that we believe could be arrived at and maintained, and that would be all we are asking.

*By Mr. Young:*

Q. It was that 60 cents that brought you into the business, was it?—A. Well, the business looked very attractive for a period of years, yes.

Q. And when it was 40 cents, I suppose it brought other people into the business?—A. Yes, they were still coming in in small numbers.

Q. And if they put it back at 40 cents, would that bring other people there also?—A. We do not know of any other areas that are suitable for producing this tobacco.

Q. Can production be expanded in your own area?—A. Yes, we believe limited expansion could still take place.

Q. There is only a limited amount of land that is suitable for this production?—A. Yes, that is the prevailing impression.

*By the Chairman:*

Q. Have you finished your quotation?—A. The balance of the quotation is, perhaps, not so important.

Q. What you are saying is: you are quoting this condition in the United States as being indicative of a parallel condition in Canada?—A. Yes.

Q. And if the figures as to production and profits of manufacturers are examined here a similar scale will be shown?—A. I believe a similar scale will be shown.

Q. In which the amount paid to producers has steadily been reduced?—A. Yes.

Q. And the amount of profit made by the manufacturer has been steadily increasing?—A. The manufacturers' profits have been maintained.

*By Mr. Factor:*

Q. Have you a statement showing the comparison of receipts between growers and producers since 1929—comparable to the statement you have just read?—A. Between the grower and the producer?

Q. No, the grower and the manufacturer?—A. The producer and manufacturer?

Q. Yes?—A. We have complete statements—I believe they have been filed with the committee—showing the average prices paid each year, and the quantity of tobacco. I only obtained them this morning, and I have not had time to review them yet.

Mr. SOMMERVILLE: The statements are here.

The WITNESS: They are all filed with the committee. Here is a diagram which I would like to file with the committee. It is a graph showing the rise and fall of prices according to this statement I have read.

The CHAIRMAN: Does the committee want this included in the evidence?

Mr. FACTOR: I think so.

The CHAIRMAN: All right, it will be included.

## UNITED STATES

## TOBACCO GROWERS' RECEIPTS AND MANUFACTURERS' PROFITS

— Gross receipts of farmers for tobacco retained for domestic consumption.  
 - - - Profits of 34 leading domestic manufacturers.

*By Mr. Sommerville:*

Q. This shows the drop in prices received by the producer down to the end of 1932?—A. Yes.

Q. And the rise in profits?—A. By the manufacturers.

Q. What you say is an examination of the figures would reveal a similar trend, as disclosed in that graph, in Canada?—A. Yes.

Q. That graph is to the end of 1932; and I think you said that the average price for tobacco then was 11 cents—11·6 in the United States?—A. Yes.

Q. And then the result of the increase in the price to 17 cents would be to improve the return to the grower?—A. Yes, absolutely.

Q. Is there anything further you have to present to the committee in support of your contention that these profits have been maintained as far as the manufacturing companies are concerned; as showing the relative or rather improved position that they are in, as against the grower whose position has been reduced?—A. Well, as an example, we have in Canada the Imperial Tobacco Company who have been extraordinarily successful in their operations. Supporting our contention that there is an unequal distribution of the consumer's dollar, we would like to point out that from an original common stock issue of \$1,000,000, it has grown since 1895 to \$47,000,000.

*By Mr. Factor:*

Q. What was the original?—A. \$1,000,000.

*By Mr. Sommerville:*

Q. Imperial originally was \$1,000,000?—A. Yes.

Q. In 1895?—A. Yes.

Q. And it has grown to what?—A. \$47,000,000.

Q. \$47,000,000 of common stock at the present time?—A. \$47,000,000. That refers to common shares only. In other words, there is \$1,000,000 to the \$47,000,000 that has been built up without investing any additional capital, but just from earnings.

*By Mr. Factor:*

Q. I am informed, Mr. Seythes—and I want you to correct me if it is not so—that in the tobacco manufacturing industry the dividends increased in 1930 enough to pay 92·25 per cent on new capital and in 1931, 1,041·5 per cent on new capital?—A. What you are reading from refers to Canada?

Q. Yes, the Canadian Forum, referring to Canada?—A. Yes.

Mr. YOUNG: They invested \$1,000,000 in the first place, you say, and you say their profits in that year were 1,000 per cent?

Mr. FACTOR: Dividends increased in 1930 enough to pay 92·25 per cent on new capital, and in 1931, 1,041·5 per cent.

Mr. YOUNG: 1,041 per cent?

Mr. FACTOR: On new capital.

Mr. SOMMERVILLE: That is to say, if the capital were invested at the present time, if you take the return on the original capital of 1895—

Mr. YOUNG: That was \$1,000,000?

Mr. SOMMERVILLE: Yes.

Mr. YOUNG: The profits this year would be 1,000 per cent on that? No—

Mr. SOMMERVILLE: The profits this year were about \$6,000,000, this last year, of the Imperial Tobacco Company—one company.

Mr. YOUNG: That would be 600 per cent.

Mr. FACTOR: At that time, in 1931, the profits were more and they amounted to 1,041·5 per cent.

*By Mr. Factor:*

Q. Might I read to you and put on record another quotation which should be checked up later on: "Tobacco dividends were \$1,051,522 higher than in 1929 (speaking of 1931) or 22.79 per cent; salaries were up \$294,000 or 8.63 per cent; wages were down \$552,000 or 11 per cent. The increase in dividends alone here is almost twice as much as the decrease in the wage bill." Have you got those figures?—A. No, not those figures. We are submitting these figures because it has been stated by one of the officials of the Imperial Tobacco Company that they have had difficulty earning their dividends during the depression, during these last couple of years. I would like to say that the dividends have to be earned on a very large amount of bonus stock; that this original investment of \$1,000,000 in or about 1895 was later augmented, by a bonus of five for one, to \$5,000,000; and later again—

*By Mr. Sommerville:*

Q. Have you got the figures when it was augmented?—A. I believe about 1900 or 1901; and later on, about 1912 a further bonus of five shares for one was given, bringing it up to \$25,000,000. Then a bond issue was put out for \$4,500,000, convertible into 20 shares of common stock.

Q. Twenty shares of common stock for each bond?—A. Yes, and it was all converted.

*By the Chairman:*

Q. Just a minute; there were funds put into the company for that bond issue?—A. Yes. That \$4,500,000 represents capital invested. I will qualify that later. I am just trying to show how the common stock structure has been built up without any additional capital investment. It is true that \$4,500,000 was capital invested. Later, in 1928, a 20 per cent stock bonus was given.

*By Mr. Sommerville:*

Q. Yes?—A. In 1907, an issue was placed of preference shares in the London market for \$8,000,000; so that you take \$8,000,000 that was raised through the sale of those preference shares, the \$1,000,000 that was originally subscribed, and the \$4,500,000, and it brings it up to \$13,500,000 actually invested. The average earnings on that capital, in the past five years, would represent about 40 per cent.

Q. About 40 per cent?—A. Yes.

*By Mr. Young:*

Q. What is the paid-up capital to-day?—A. The paid-up capital to-day in ordinary shares is \$103,961,352.

*By Mr. Sommerville:*

Q. You mean that is the value?—A. That is the value on the stock market, the present stock market value.

*By Mr. Young:*

Q. What is the par value?—A. The par value would be \$5 a share, about \$47,000,000.

Mr. FACTOR: \$47,255,160.

*By Mr. Young:*

Q. You told us that \$1,000,000 grew into \$47,000,000?—A. Yes.

Q. Apparently there has been something added to the \$1,000,000; there was \$8,000,000 and \$4,500,000?—A. Yes. I have tried to show that \$8,000,000 and \$4,500,000 and \$1,000,000 was the capital invested, and that is \$13,500,000.

*By Mr. Sommerville:*

Q. Of cash?—A. Of cash invested in the business; and that the stock market value of that \$13,500,000 on to-day's market is \$111,991,000.

Q. And the annual return, the average return, for five years has been what?—A. The average return on \$13,500,000 is about 40 per cent for the five years.

*By Mr. Factor:*

Q. I notice in their statement in 1933, ending December 31, they show an operating surplus of \$8,138,487?—A. Yes. Well, perhaps the shareholders of Imperial have something to look forward to in the future.

Q. Have you any information there of the subsidiary companies controlled by the Imperial Tobacco Company?—A. It is given in their statement, I believe. I believe the subsidiaries are—some of them, I am not sure I have them all—the General Cigar Company, United Cigar Stores, and a number of the principal jobbing concerns throughout Canada; B. Houde Company, Limited, of Quebec; the National Tobacco Company.

*By Mr. Sommerville:*

Q. The Tuckett Tobacco Company of Hamilton?—A. Yes. The Andrew Wilson Company of Toronto; they are large jobbers and manufacturers of the Bachelor cigar; and the Punch Cigar Company.

*By Mr. Factor:*

Q. That is subsidiary and associated companies, as it is termed here?—A. Yes.

Q. They also, I understand, control certain distributors?—A. Well, I believe they do. Andrew Wilson Company is one, and I think John Erzinger Limited, of Winnipeg, is another.

Q. Scales & Roberts, of Toronto?—A. Yes, I believe Scales & Roberts is also controlled by the Imperial.

Q. Have you got the prospectus? Would you mind looking on page 2, and tell me if you have any information—where it says "Distributors"?—A. "Scales & Roberts, Limited—tobacco jobbers, located in Toronto. A subsidiary, the E. Fortier Company, Limited, is engaged in the same business in Montreal. Entirely owned by the parent company. The company also controls and operates James Kirk Limited, and John Erzinger Limited; and United Cigar Stores Limited."

Q. What about Liggett & Myers Tobacco Company of Canada, Limited, of Montreal?—A. I am not aware that they are operating. They are a large American Company. They are not operating in Canada to my knowledge. Whether they have taken out a charter and are lying dormant I don't know. I don't know the position of that company.

Q. Then what about the Imperial Tobacco Sales Company of Canada, Limited?

MR. SOMMERVILLE: That is one of the subsidiaries of the Imperial Tobacco Company.

MR. FACTOR: And the Imperial Leaf Tobacco Company of Canada, Limited.

MR. SOMMERVILLE: The Imperial Leaf Tobacco Company Limited is also owned by them.

*By Mr. Sommerville:*

Q. Is their sales organization organized as a separate company?—A. I am not sure about the Imperial Tobacco Sales Company, but I should think that that is the sales organization of the company, through which their manufactured products pass to the public, to the trade.

*By the Chairman:*

Q. In your argument regarding the inequality of distribution of the consumer's dollar that you referred to in this alleged structure that you have set forth, have you made any allowances for the amount of returns to the Imperial Tobacco Company for their operations in connection with imported tobacco and other activities other than processing Canadian-grown tobacco?—A. Of course, those figures cover their entire operations.

Q. You have not broken that down?—A. No.

Q. In your calculations?—A. No, we have not done that.

Q. Your direct evidence, of course, is interesting on this point: What was the total amount received by the Canadian growers of tobacco for say 1932 or 1931, and a number of years; have you got a statement of that?—A. Yes, we have those. I am afraid it is not given here separately.

The CHAIRMAN: I think it would be desirable if we could have that evidence now, of the total crop; one year would do, but it would be much better if we have a number of years, the amount of domestic tobacco, and the total amount received for it.

Mr. SOMMERVILLE: The figures as supplied by the tobacco division of the Department of Agriculture indicates that the value of the 1933 crop, based on the assumption that the remainder of the crop would be sold at an average equal to that obtained for that portion already sold, for the whole of Canada, would be \$5,201,490.

The CHAIRMAN: Have you the other preceding years?

Mr. SOMMERVILLE: Yes.

The CHAIRMAN: Without going into the details, we might put that statement in the evidence.

Mr. FACTOR: The total amount received by the growers?

Mr. SOMMERVILLE: Yes, it gives the total amount.

The WITNESS: I am not sure that that is the figure for flue-cured tobacco.

Mr. SOMMERVILLE: It is for all tobacco, all kinds.

The WITNESS: Oh, yes.

Mr. FACTOR: Including burley?

The WITNESS: Including burley.

Mr. FACTOR: You have got that split up?

The WITNESS: Perhaps it is in this statement of statistics that was filed with the committee this morning, but I have not had time to go over it.

Mr. SOMMERVILLE: I will file this schedule which has been submitted by the department, which shows that in 1919, for 33,700,000 pounds the growers received \$15,548,000; and in 1932, for 54,094,000 pounds the growers received \$6,088,300. The amount had increased in production from 33,000,000 to 54,000,000, in round figures, and the price had dropped from \$15,000,000 to \$6,000,000.

The CHAIRMAN: I think that had better go in.

Mr. SENN: Are you going to include that in the evidence?

The CHAIRMAN: Yes.

## A. CANADA PRODUCTION

Year	Production	Value	Average
1919.. . . . .	33,770,000 lbs.	\$15,548,000	46.0c.
1920.. . . . .	48,088,500 lbs.	5,893,275	12.2c.
1921.. . . . .	13,248,962 lbs.	2,393,190	18.0c.
1922.. . . . .	25,947,570 lbs.	4,547,851	17.5c.
1923.. . . . .	21,297,000 lbs.	3,518,500	16.5c.
1924.. . . . .	18,700,000 lbs.	4,358,898	23.3c.
1925.. . . . .	29,255,000 lbs.	7,004,600	27.3c.
1926.. . . . .	28,824,000 lbs.	7,379,480	25.5c.
1927.. . . . .	43,916,700 lbs.	9,112,278	20.7c.
1928.. . . . .	41,976,375 lbs.	6,833,511	16.2c.
1929.. . . . .	29,886,350 lbs.	6,276,133	21.0c.
1930.. . . . .	36,716,917 lbs.	7,058,457	19.2c.
1931.. . . . .	51,300,000 lbs.	7,177,540	13.9c.
1932.. . . . .	54,094,000 lbs.	6,088,300	11.2c.
*1933.. . . . .	39,400,000 lbs.	5,201,490	13.2c.

\* Prices and value based on the assumption that the remainder of the crop will be sold at an average equal to that obtained for that portion already sold.

*By Mr. Young:*

Q. You say the quality improved in that time?—A. The quality of tobacco?

Q. I think in some of those reports this morning you said the crop was very good these last few years, very good quality?—A. 1930 and 1931, yes, the quality was very good; very excellent crops.

Q. You are growing better tobacco than you did back in 1919?—A. Yes, I think we are. I think we have improved the quality. We have changed the type and changed the method of harvesting, and I think there has been great improvement.

*By Mr. Senn:*

Q. Can you say whether there is a larger proportion of flue-cured tobacco, which is a higher priced tobacco, grown to-day than there was in 1919?—A. Yes.

Q. And is there a larger proportion from year to year?—A. Yes, the proportion has increased each year.

Q. Of flue-cured tobacco?—A. Yes, until 1933, when production fell.

Q. I mean so far as the ratio, the total production of Canada is concerned, it has increased?—A. Yes, it has increased.

Mr. SOMMERVILLE: Table No. 2 shows that, Mr. Senn.

Mr. SENN: I have not got that.

Mr. SOMMERVILLE: We will have one for you.

The WITNESS: If I might just conclude my figures in connection with the Imperial Tobacco Company, and their contention that they have difficulty in earning their dividends, I am informed that an original investment in 1895 of \$10,000 nets the owner of these shares \$30,000 a year in dividends to-day.

*By Mr. Sommerville:*

Q. \$30,000 a year dividends?—A. Yes.

Q. At the present time?—A. Yes. That is, it pays \$3 per year on one dollar originally invested.

Q. If we had only had foresight— —A. I wish our capital was all invested in the Imperial.

*By Mr. Factor:*

Q. You know nothing about the other end of it, the jobbing and retailing? —A. No.

Mr. SOMMERVILLE: All right, thank you, Mr. Scythes.

The witness retired.

Mr. H. A. FREEMAN, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Freeman, you are a tobacco grower in the new belt district?—A. That is right.

Q. And what acreage have you?—A. I started in 1923, as an original producer of flue-cured tobacco in the new district with 20 acres, and I have increased that gradually from 1923 to 1933 to 420 acres.

Q. I understand you spent a long time in the tobacco industry?—A. Yes.

Q. By reason of your knowledge and experience you were asked to take charge of the government experimental farm on tobacco at Harrow, were you not?—A. No, I came first to the Dominion of Canada connected with the tobacco division at the Central Farm, which position I held until 1926, and in 1926 I went to Harrow, Ontario, as Superintendent of the tobacco experimental station, as it was at that time at Harrow in Essex county.

Q. Subsequently you devoted yourself to the growing of tobacco?—A. In 1928 I left the government service and went into—I sold all the farms I had in 1928 to the Ontario Tobacco Plantations, and became Manager of that company, which position I held for three years, and then I had a bunch of farms of my own again and started operating on my own. I have been doing that since.

Q. What has been the position with respect to flue-cured tobacco since 1930?—A. There has been a steady decrease in the price to the growers since that date. I do not know what the definite per cent of the decline would be, but it is fairly continuous from that date.

Q. And to-day it is fair to say that it represents approximately 50 per cent of the price paid in 1930?—A. Yes.

Q. What has been the result as far as the price of the manufactured product is concerned? Has that dropped proportionately?—A. So far as my information goes it has not.

Q. In the meantime, has the cost of production, or harvesting increased?—A. No, the cost of production since 1928 has fallen. It costs less to-day than it did in 1928.

Q. What do you say as to the effect of an average price of 16 cents for your flue-cured tobacco upon production in your county?—A. Well, in my own mind, it is below the cost of production—my own experience.

Q. And has that been the experience of the growers with whom you have been associated?—A. Yes.

Q. And then what has been the effect of these steadily declining prices for tobacco on the farmers in the area?—A. Well, they have found their debts accumulating, they have found unpaid bills accumulating, and I know the fertilizer association claims that in the tobacco area taking Norfolk and back to Windsor, it has \$250,000 in unpaid fertilizer accounts. They have had such things as that accumulating on them, they have not been able to keep up with their payments of various kinds—mortgage payments and other demands. Up to 1928—I operate all of my farms with tenant growers—up to 1928 and possibly including 1928, I never had a grower that did not pay all of his costs and some money left, depending on the various kinds—some very well, some less—various amounts as a family income toward labour and management. Since that time I have had some that not only received no return for their labour, but find their capital impaired.

Q. And has that been the general experience these last three years throughout the flue-cured area?—A. Just how general I am not prepared to say, but I know it is happening right along, and has become more and more prevalent.

*By Mr. Senn:*

Q. Is your tenant farming done on a share basis?—A. That is right.

*By Mr. Sommerville:*

Q. That is the point which I wanted to develop. I understand that a very large proportion of tobacco raised in the new belt is grown on what is called a share-plan basis?—A. Yes.

Q. And that is, that the owner provides the farm, the building, the greenhouse, the kilns, the horses and the equipment; what else does he supply?—A. Horse feed, one-half the fertilizer, one-half the insurance, one-half the hauling of the tobacco to market, the paper and twine to wrap the tobacco for delivery; I believe that that covers it.

*By Mr. Senn:*

Q. What about taxes?—A. The landowner pays all taxes.

*By Mr. Sommerville:*

Q. And the insurance—A. One-half of the fuel for curing the tobacco, and one-half of the cost of the cure—a special man to do the actual curing—and any labour of that kind.

Q. When the tenant's crop is harvested and it is in the kilns for curing, a special man is employed to do the curing, and the owner of the land pays one-half of the cost of that?—A. That is the general practice, there may be a few exceptions from that, but that is general.

Q. Can you give us any idea of the proportion of tobacco which is produced on the share-plan basis?—A. So far as my information goes I think it would be somewhere around 70 to 75 per cent.

*By the Chairman:*

Q. In Ontario?—A. Yes. Now, I am speaking of flue-cured tobacco.

*By Mr. Sommerville:*

Q. And upon that basis then, during the past few years with the declining price of tobacco, could you tell us whether or not the tenant on the farm has been able to cover his cost of production?—A. I would say that when he has received higher than the average yield, and higher than the average price—higher than the price of 20 cents a pound—and higher than the average yield of the whole area, that he has made a little money, depending on what degree he exceeded these two things. Or it might be that one of these two things might be sufficient to off-set a certain amount of the other and to still leave a margin.

Q. But on the share basis I understand that he gets 50-50 of the proceeds of the crop?—A. Yes.

Q. That is, whatever the crop brings he gets one-half to cover his expenses and labour?—A. That is right.

Q. And of whatever the crop brings, the owner gets one-half to cover his expenditures and investment?—A. Yes.

Q. Then you say when he has received more than an average crop in the area; what do you mean by that?—A. I mean more than the average yield that has been given by, say the government estimate of the average yield of pounds per acre for the entire area.

Q. And what is the amount per acre given by the government estimates for that area?—A. From the figures I have here, the average in 1928 was given as 800 pounds per acre; the average for 1929 was 600 pounds per acre; the average for 1930 was 720 pounds; the average for 1931 was 896 pounds; the average for 1932 was 930 pounds; and the average for 1933 was 748 pounds.

*By the Chairman:*

Q. What is the average of that for a five-year period?—A. The three-year average, 1930-1932, was 849 pounds per acre.

*By Mr. Sommerville:*

Q. Approximately 850 pounds per acre as a three-year average?—A. Yes.

Q. And you say that if he receives more than that average?—A. More than that average of 840 pounds.

Q. And if his tobacco grades more than an average for the district?—A. Well, no—yes, he would have—I would gauge that on the price; if he receives more than an average of more than 849 pounds, and more than an average of 20 cents a pound, he could, in my own experience that is, make a little money; and the amount of that would depend upon how much above this is.

Q. That would cover his labour and the labour of his family?—A. Yes.

Q. As I understand it, these tenant farmers use the labour of their family in the raising of the crop?—A. Yes.

Q. And whatever he makes in this way goes to recompense then for the labour they have expended on the crop?—A. That would be his labour income or his wages.

*By Mr. Kennedy (Peace River):*

Q. What profit would the owner make in these circumstances?—A. As near as I can figure it out this 50-50 basis is about as equitable a distribution as can be made; and when the tenant grower makes a little money the landowner does the same; when the tenant grower does not make any money, the landowner is in the same boat.

*By Mr. Sommerville:*

Q. And when you are making a little money, do you reckon that as a return on your investment?—A. I haven't got figures here with me, but my experience has been very similar to the results obtained by the government. I have used their figures with respect to rental of land, interest on investment, rate of wages, hours of labour, cost of fertilizer, and fuel and curing.

Q. I suppose it would be possible to secure from these owners who represent 75 per cent of the production the figures of their costs, would it not?—A. I think in a great many cases it would.

Q. I do not mean the tenant farmers, but those who own the land; I presume they keep a record of their cost and it would be possible to obtain that from them?—A. I have found that most farms keep a very accurate record of these things.

Q. Are extensive expenses involved in handling these farms, Mr. Freeman?—A. Yes, depending—I have bought and equipped a number of farms, and I think that the price at which I bought the farms and at which I have been equipping them will stand comparison with most anyone in the area, and my experience has been that if I bought a farm of 50 acres and equipped it for the growing of 30 to 35 acres of tobacco, that my costs would be around \$10,000 to \$11,000. In some cases it would run a little higher, but on the average it would not be out very far either way.

*By Mr. Young:*

Q. How many acres of land in that farm?—A. One hundred acres of land in a farm.

Q. One hundred in tobacco?—A. When I mentioned equipment on that farm I was mentioning equipment sufficient to handle this 30 acres of tobacco.

*By Mr. Sommerville:*

Q. I understand 30 acres is an economical unit to operate?—A. There might be disagreement on that, I don't know myself; it is a very nice unit. Some others might operate a 40-acre unit and figure they would be handling it more economically. I would not be prepared to say as to that, but I know that 30 to 35 acres is a very nice unit.

Q. I understand the 30-acre unit is pretty largely looked upon as a one-man power unit?—A. Yes.

*By the Chairman:*

Q. That is, 30 acres in tobacco?—A. Yes.

Q. Then you rotate, do you, on your 100 acres?—A. Yes, on a fallow system. As soon as I get my tobacco off in the fall I sow that acreage that produced tobacco to rye. You must know first that these are very light and very unfertile sands, all of these soils, and I sow this rye in the fall and let it grow up the succeeding year and come to maturity and then with a disc put down the rye—straw, seed and everything—for the following year's crop of tobacco.

*By Mr. Young:*

Q. You do not take off the crop of rye at all?—A. No, that land is too poor; it needs all it can get of that kind of thing.

*By Mr. Sommerville:*

Q. Then I understand the risks of blows are very severe and serious?—A. Yes.

*By Mr. Young:*

Q. That only accounts for two-thirds of your land?—A. You will have a certain amount taken up by pasture and buildings, and a little may be soil that you can't use which would be in your pasture and the bush lot.

*By Mr. Sommerville:*

Q. At any rate, on the ordinary 100-acre farm you expect to grow 30 to 35 acres of tobacco?—A. That is the soundest way I think of handling it.

*By Mr. Young:*

Q. You only get a crop in three years?—A. No, every second year; one year to rye, one year to tobacco.

Q. Yes, but on a 100-acre farm you only grow 100 acres of tobacco in three years?—A. On the average 100-acre farm devoted to flue-cured tobacco in Norfolk County you don't have over 65 to 75 acres of flue-cured tobacco land on them—that is about the average, some may be a little over and some a little less; that would be the average.

*By Mr. Sommerville:*

Q. About 65 acres; then you just crop about one-half of your acreage suitable for flue-cured each year?—A. Yes.

*By Mr. Young:*

Q. In order to have an acre of tobacco each year you have got to own three acres of land?—A. I would not say you have to do that; if you sold off the bush lot and pasture land, and only left your 65 acres of flue-cured tobacco land, you would have to own that quantity.

Q. But that would be a proportion of about three to one?—A. Yes.

*By Mr. Sommerville:*

Q. Well then, with reference to the risks in connection with your growing you have, first of all, the blowing, the wind which blows the sand away; you have that frequently when the plants are small?—A. Yes, that is a hazard.

Q. And the risk is substantial there, is it not?—A. Yes.

Q. And frequently you have to replant?—A. That, of course, again varies with different farms, and the protection that they may have, and things like that.

Q. Yes. And then what about your hailing risk?—A. Well, up until fairly recently, I believe, about the last two years, we had to take that risk. Since that time it has been possible to secure hail insurance.

Q. And now you are protected in that respect?—A. Yes.

*By Mr. Senn:*

Q. What about frost, Mr. Freeman?—A. Of course, that is just another one of the crop hazards. A fairly light frost, a frost that will affect any other plant will damage the tobacco plant since it is the foliage of the tobacco that is the valuable part, and it is a serious matter for tobacco.

*By Mr. Sommerville:*

Q. Then I understand, Mr. Freeman, that all of the plants must first be raised in the greenhouse?—A. Yes.

Q. And grown to a certain size in the greenhouse?—A. Yes.

Q. And then taken from the greenhouse and planted in the furrows?—A. Yes, planted on a ridge which contains the fertilizer for that crop.

Q. And that would require a very substantial amount of fertilizer?—A. Yes.

Q. It runs \$17 an acre in fertilizer.—A. About a thousand pounds per acre on the average, and then the cost of the fertilizer varies, but around \$30 is the cash price, \$30 a ton.

Q. So that would be \$15 or \$17 whether you pay cash or get it on credit?—A. Yes, and depending on the analysis of the fertilizer. The higher the analysis it costs a little more.

*By Mr. Factor:*

Q. I notice in one of these contracts for the sale of tobacco they exclude tobacco that is green, ragged, worm-eaten or dirty. Will you explain those terms.—A. That means roughly handled tobacco; that may be an inexperienced grower who tore and damaged the leaf, and the green, of course, is tobacco that did not come to maturity, or was harvested before it reached maturity.

*By Mr. Sommerville:*

Q. Well now, has the method of harvesting in the last two years, of priming instead of cutting the stock, added to the cost of harvesting substantially?—A. That has added some to the cost of harvesting. Before, it was possible to harvest the crop with six or seven men, that is, a thirty-acre crop, in about the same length of time that it now takes with twelve to thirteen.

Q. Formerly, you cut your stocks and took them into the barn and dried them?—A. Yes.

Q. With all the leaves on them.—A. With all the leaves attached to the stocks.

Q. Now, in the last few years you have adopted the general system of what is called priming?—A. Yes.

Q. By which you go through the crop week after week and remove the matured leaves from the bottom of the stock?—A. Yes.

Q. And those are tied together and taken to the barn and cured?—A. Yes.

Q. As individual leaves?—A. Yes.

Q. And that means you have to go over the crop three or four times, do you not, perhaps more than that?—A. Just depending on the maturity, and the uniformity and the carefulness with which you do it. You must be very careful to pull only matured leaves to have a desirable crop, and, of course, take those off as they ripen.

*By Mr. Young:*

Q. You say that doubles your labour cost.—A. I did not say that doubles our labour cost. I say, the number of men required in harvesting a 30-acre crop used to take six or seven men. Now, to harvest that same sized crop in about the same length of time, or a little longer, it takes twelve to thirteen. Of course, in that number there are some women and some children who can be used which I would not say was exactly doubling the cost.

Q. It increases the cost?—A. Yes.

Q. Do you get a better price because you treat it that way?—A. I would think so, because you have a better article, a better quality.

*By Mr. Sommerville:*

Q. But you have not been getting the increased price for the whole crop by reason of your changed harvesting methods?—A. No, I have not.

*By Mr. Young:*

Q. Have some stayed with the old methods while others were adopting the new?—A. No, the big companies made that request of the growers, and the first year that they made it they insisted that that change be made, and it was made practically 100 per cent.

*By the Chairman:*

Q. What does the expression "cured" mean?—A. It means that out in the field you have the matured leaf ready for harvest and you take it in and put it through a curing barn, starting out with low heat and raising it to higher heat. Some people would call it drying, just bringing the leaf up to a dry state; it is not leaf drying, it is better called curing.

*By Mr. Sommerville:*

Q. And it is in that form in which it is sold by the producer?—A. Yes, Of course, it is taken off those stacks and baled in bales of from 50 to 60 pounds of leaf and sold and delivered in that way.

Q. And then it is sold and delivered to the warehouse of the purchaser?—A. Yes.

Q. To the purchaser's storehouse?—A. Yes.

Q. Is the leaf sold in bulk, or is there a price of so much paid for top and so much less for other grades?—A. Well, that varies with crops. Some crops are bought at a stated price. Say all that this owner has in his barn is bought at a straight price of so much per pound; some other crops are bought at so much, for some lower figure. Just as an example, two or three or four thousand pounds at 6 or 8 cents, and say the remainder at 15 or 20 cents, or whatever the cost may be.

Q. Well now, we have heard complaints made in some quarters, that when an average price of say 16 cents or 18 cents is paid for a certain proportion of the crop, there may be three or four or five thousand pounds inserted in the contract at 6 cents a pound.—A. Yes.

Q. And is that one means of the buyer evening up the whole price of the tobacco purchased?—A. It could be.

Q. It could be?—A. Yes.

Q. And does that grading still depend upon the buyer when he receives the tobacco at his plant?—A. Yes, so far as he is grading, but not any further grading. There has been some sold that way, but when the price is stated in the contract and the crop is bought on the farm there is no further grading. In the case of the tobacco they might go further where those two prices were made that way. It may be, that included in that tobacco is some low grade tobacco of the crop that is worth less money and therefore takes that lower price. There are those two sides to it.

Q. But both the quantity and the price is fixed in the barn?—A. Yes.

Q. For both grades, whether it is high grade or low grade?—A. Yes, as a general practice, that is the case.

Q. And then when they are delivered the company carries out its contract, into these two grades?—A. Yes, that is the case, although there may be a few from time to time sort of fly-by-night concerns that do different, but that is the practice of the well recognized companies.

*By the Chairman:*

Q. Have you any complaints about the method of grading or buying, I mean from the grower's standpoint; are there any grounds for complaint, not about price but the method of buying?—A. If I understand your question, not from the better companies.

*By Mr. Sommerville:*

Q. You mean, the payment for the product that is grown?—A. Yes.

Q. There is no complaint about that from the better companies?—A. No, that is carried out 100 per cent, as is stated in the contract.

Q. Well now, as to the method of buying that has been described to us, of the buyer coming in and making his bid, and you take it or leave it and he leaves, what do you say? Have you any assistance that you can give the committee in the matter of the buying method?—A. Well, there has been quite a lot of that. I never paid a great deal of attention to it. I never thought it mattered a great deal, but with some of the smaller growers and less informed growers it might mean a great deal.

Q. How do you account, Mr. Freeman, for the fact that all the buyers wait for Imperial to set the market?—A. Well, I cannot account for that fact.

Q. They all buy, do they not?—A. Yes.

Q. And they buy substantial quantities?—A. Yes.

Q. But they all wait for the Imperial?—A. Yes.

Q. And did you ever know of them bidding more than the Imperial has bid?—A. No.

Q. And then do you know of the bids dropping from day to day as the buying goes on.—A. Yes, I have known of that.

Q. And is that a regular practice and custom in the buying?—A. Well, I do not think it has always been a regular custom over my years of experience; I do not think it has. In looking back over the years, a great deal of the time that was the case of buying up the better crops and holding out on the lower crops and the price naturally falling as the lower average or lower grade crops were purchased, but I do not think that has always been the case.

Q. We have had some information about the prices paid, and that the average price paid for the 1932 crop was some 16 cents for flue-cured.

Mr. SENN: That is, for first grade.

Mr. SOMMERVILLE: No, the average price paid for the crop.

The WITNESS: Yes.

*By Mr. Sommerville:*

Q. That was the average price paid for the 1932 crop.—A. Well, I think so. I know with the largest production per acre that I ever had, the best year per acre and of pretty good quality, I got on the average a little less than that.

Q. You averaged a little less than that?—A. Yes.

Q. Now, does that cover the cost of production, that average price that you received in that year, taking into consideration the factors that you have mentioned?—A. No.

Q. So that the price paid you then was below the cost of production, although the price obtained for the finished product by the manufacturer apparently did not change from year to year?—A. Not so far as my information goes.

*By Mr. Young:*

Q. You grew tobacco also in the States, you say?—A. Yes.

Q. Can you tell us why it costs more to grow tobacco in Canada than down there?—A. You have got here in Canada the best equipment, the best flue-cured tobacco equipment in the world, and you use good machinery and good equipment on all of these farms. South of the line the tobacco is grown with chain traces, hook collars, a cotton back-band, and a \$5 plough.

Q. You do not mean to say that our better equipment increases our production cost, do you?—A. Well, I do not think so, but you have got a higher standard of living; you have got higher wages; you have got higher taxes and higher land value which, of course, results in higher taxes; you have got to grow your plants in greenhouses with pumping equipment and the best of water supply, whereas in the South you can go down on the creek bank and burn a brush and put a little cheesecloth over it, then sow your seed and the rain does the rest, and then go back and get your plants when you are ready to plant.

*By Mr. Sommerville:*

Q. And you have got very much cheaper labour there?—A. Very much cheaper labour, and lower fertilizer, very much lower fertilizer; it is closer to the points of producing it whereas our fertilizer is coming from that area to this country. All of these things enter into it.

*By Mr. Senn:*

Q. Mr. Freeman, I do not want to embarrass you, and I understand that this question may be embarrassing to you: Are you entirely satisfied, as a grower, with the methods adopted at the present time by companies in purchasing tobacco not only from your association but individual farmers?—A. Let me get that question exactly right, sir, just how is that now?

Q. I say, are you entirely satisfied with the methods employed by the different representatives of tobacco concerns in purchasing tobacco from companies and the individual farmers?—A. Well, I am satisfied with the methods that they employ when they pay me a price so that I feel that I can meet my cost of production and make a small margin of profit.

Q. Are the methods of purchasing, in your experience, on a competitive basis, or otherwise?—A. Well, of course, I cannot answer that very well. I have seen them on a competitive basis quite active, and I have seen them where I could not seem to see any competition.

*By the Chairman:*

Q. Have you seen them hold off the market, as the term goes?—A. Well, I was ready to sell a long time before I could; I was along with the others.

*By Mr. Sommerville:*

Q. Have you some of the 1933 crop still on hand, Mr. Freeman?—A. Yes.

Q. What proportion of the 1933 crop have you sold?—A. About 33 per cent.

Q. And have you processed the balance of it?—A. Yes, I have processed it.

Q. And have it ready for sale in such a way that it can be exported?—A. Yes, or sold here.

Q. Or sold here?—A. Yes.

*By Mr. Young:*

Q. Is it possible to sell it yet? I understand if you did not sell early you did not sell at all?—A. Well, I have not turned down any opportunity to sell yet.

Q. Do you expect to be able to sell before another crop?—A. I hope so.

*By the Chairman:*

Q. What is the average price you received for the 1933 crop?—A. The average price of the 1933 crop which was sold, in my case, is somewhere between 16 to 18 cents. That is just an opinion.

*By Mr. Kennedy (Peace River):*

Q. How does it happen that you sold 33 per cent? Do the companies make a practice of going around and just taking so much from each farmer?—A. No, I cannot say as to that.

Q. Is there a period of a big surplus of tobacco in the world?—A. Well, I do not know as to there being a big surplus in the world; I do not know as to here; I do not know anything about the quantity of tobacco in storage in this country other than that portion that is unsold.

Q. Then how does it happen that you have sold one-third only of your crop?—A. That is all I had a chance to sell.

*By Mr. Sommerville:*

Q. That is all they would buy at the time?—A. Yes.

Q. May I ask, Mr. Freeman, each year the tobacco companies have cleaned up the crop?—A. Yes.

Q. At a price?—A. Yes.

Q. The price may be low but they have taken it?—A. Yes.

Q. And it has gone off the market?—A. Yes. Some years it has been cleaned up at very favourable prices.

*By Mr. Kennedy (Peace River):*

Q. 1933 was the first year then that they did not clean up?—A. No, it is not the first year, but 1933 is the first year that there was such a large quantity left.

*By Mr. Sommerville:*

Q. And has the leaving of this tobacco in the hands of the farmer had a tendency to depress the price, or make the farmer more willing to accept a lower price?—A. Well, I do not know what the result will be.

*By the Chairman:*

Q. You do not know how much the manufacturer has in stock, so you cannot judge how anxious they will be to buy the balance?—A. No, we have no information as to that.

*By Mr. Sommerville:*

Q. If you had that information available, would that be of assistance to you in gauging your market?—A. Absolutely. If I knew that there was a big stock of tobacco in the manufacturers' hands and saw the figures of that I would absolutely govern my growing accordingly; if I saw that there was a great surplus on hand I certainly would not go ahead producing in the usual way.

Q. You cut down last year, I understand, on the production generally throughout the district?—A. No. The acreage last year—I don't know just exactly how much—increased, but due to the most adverse season that I have ever seen since I have been in this country, since 1915, it reduced—

Q. The production?—A. Yes, and the quality.

*By Mr. Young:*

Q. If you want to reduce your production what would you sow on that land?—A. Well, I would be better to leave it idle, or grow a little feed. It is very unproductive land, and you are just about as far ahead to grow your oats or grain as you are to produce them on that poor land.

Q. And you pay \$50 an acre for that land without any buildings on it?—A. Well, it has got a good dwelling house and barns on it. It is not just land with no buildings whatever. The buildings on a lot of these farms that you could buy for \$50 an acre would carry from \$3,000 to \$4,000 or \$4,500 insurance on them.

*By the Chairman:*

Q. What recommendations have you, Mr. Freeman, to give to this committee in order to improve the lot of the producer?—A. Well, there will be briefs submitted here, and I find myself in agreement with the submission in those briefs.

MR. SOMMERVILLE: There are some that will be dealt with, Mr. Chairman, the recommendations in the back of this summary that has been submitted.

*By Mr. Sommerville:*

Q. You have conferred from time to time with the committee that have been preparing these recommendations, Mr. Freeman?—A. Yes.

Witness retired.

J. F. McKAY, called and sworn.

*By Mr. Sommerville:*

Q. Mr. McKay, what is your position in the tobacco world?—A. President of the Ontario Tobacco Plantations Limited.

Q. And how many acres have you in tobacco?—A. Our company have two thousand acres altogether. We have cropped as high as 625 acres in tobacco. We have gradually reduced that acreage, until the past year we had only 525 acres in tobacco, and we have now signed up an agreement providing for another reduction of 25 per cent in the acreage.

Q. In the acreage?—A. Yes.

Q. And that was the result of the work of the committee, bringing together certain of the growers through the Ontario Department of Agriculture?—A. For this next year. Before, it was done partially at the suggestion of the buyers, and partially because our own production costs were going up and the revenue was going down.

Q. Now, in the field of cured tobacco I understand that there are two associations which work together?—A. Yes.

Q. What associations are they?—A. There is the Ontario Flue Cured Tobacco Association with headquarters at Simcoe, of which Mr. Perrett is the secretary, and then there is what is called the Southern Ontario Co-operative Tobacco Growers with headquarters at Tillsonburg.

Q. And they have been co-operating with a view to improvement in the selling of your product?—A. Yes, sir.

Q. And disseminating information for the growers?—A. Yes.

Q. And through these associations you have been providing the service that has been described this afternoon by Mr. Scythes?—A. Yes, we will call it an inspection service.

Q. And through those same associations you have been bringing about an arrangement for a reduction in crop?—A. For next year.

Q. For next year?—A. Yes.

*By the Chairman:*

Q. Why the reduction?—A. Well, probably the main reason was that there is still from 40 per cent to 50 per cent in the growers' hands.

*By Mr. Sommerville:*

Q. Of last year's crop?—A. Of last year's crop. That has something to do with it. The large buyers were certainly urging us to reduce, and that was one reason we reduced two years ago at the suggestion of the buyers, because they were afraid there was a surplus accumulating. This year they have certainly been very active in co-operating with the growers' associations in securing this reduction.

Q. And you have in your association an arrangement also with the buyers, that the larger buyers will favour those who are handling the reduced acreage, have you?—A. I believe that is correct although I have no definite knowledge.

Q. Now, you have had substantial experience with the tobacco business, for how long?—A. I had an unfortunate experience with the Burley tobacco business in 1926 and 1927; that passed out. Then we went into the flue-cured tobacco business, with Mr. Freeman as manager of our company, in 1928, and Mr. Freeman remained with us for a little more than three years, and since then my son has managed the company.

Q. And in that company you have this acreage that you refer to, of 2,000 acres, and do you crop through tenant farmers?—A. Our tobacco is raised through the share-man plan.

Q. And what has been your experience in the growing of your tobacco upon that plan during the past few years, Mr. McKay; give the committee the benefit of your experience and suggestions.—A. First as to the method of growing tobacco through the share-plan system, I am convinced that that is the most economical method by which tobacco can be produced in Ontario. Some of our shareholders think not; some of our directors think that the share the sharemen receive is out of proportion. I have, after careful examination and study, convinced myself that the 50-50 division is as reasonable as anything can be. When one remembers that these are men who are content to live in a very simple and economical manner, with small homes, and their wives and children working from,—I have known it to be from four o'clock in the morning till midnight sometimes, if possible, at any rate till the moon comes up, and sometimes only stop when the moon has gone down. That is how they work during the harvest season, in most instances, whereas if we had to hire that help my conviction is that the costs would be increased from 25 per cent to one-third, if we had to pay labour that would work on an hourly schedule.

*By Mr. Young:*

Q. When you adopted this new system of harvesting by which you had to put on twelve to thirteen instead of six or seven persons to harvest the crop, that whole additional burden fell on them did it not?—A. Yes it did.

Q. The land owners did not take any of it?—A. There is a measure of truth in that. Possibly there were other restrictions eased up on the share-men. The company realize that the share-men have to get money; the company has to finance the share-men; they have very little money. Many of them are Hungarians, Hollanders, or Belgians, and some Southerners who have passed out of the picture in the southern States, but they have very little money, so that the company has to finance these people, and we have financed them sometimes to our loss.

Q. You financed them before this thing really came in, just the same?—A. Well, that enters into the whole picture. We finance them every year for their necessities of life.

*By Mr. Sommerville:*

Q. And what has been your experience with the declining price for flue-cured tobacco, Mr. McKay?—A. When we organized our company in 1928, the price was supposed to have been at an average of 35 cents. The prospectus that was issued for our company was on that basis; we have 325 shareholders in our company and the stock was sold on that basis. It has been as high as 60 cents a pound but we did not take that as normal; we took 35 cents as probably normal. For the first two years of our operation we paid a dividend on the preferred stock.

Q. You paid a dividend on the preferred stock?—A. On the preferred stock. Nothing has been paid on the common, and nothing has been paid on the preferred since 1930. Small dividends were paid; we did not pay the full dividend in 1930; the preferred dividends have accumulated ever since.

*By the Chairman:*

Q. Does the preferred represent the actual investment?—A. Yes, less cost of organization, and so on. Every dollar of it was invested by Mr. Freeman who, I might say, is probably as economical a manager as there is on the American continent.

*By Mr. Sommerville:*

Q. And probably experienced?—A. Yes.

Q. Your own experience has been that your association has not been able to make enough money to pay preferred dividends to your preferred shareholders?—A. That is right.

Q. Since 1930?—A. That is right.

*By Mr. Factor:*

Q. What happened to the sharemen, the tenant farmers?—A. They are hanging on, hoping probably things will be better. Some of them stick but a great many of them have gone back to Belgium. Some of them are in the hands of the sheriff, in jail for debt. We have lost money to the sharemen to whom we advanced money for their grocery bill and their butcher bill.

*By Mr. Sommerville:*

Q. What about the position of the president of the company? I suppose he has shared in the general depression, has he?—A. The president is in the position of the sharemen. He has not drawn one dollar for being president of the company since it was incorporated, and he has given from one-third to one-half of his time.

Q. Apparently you are speaking feelingly, then, of the fact that no money has been made?—A. Yes.

Q. And out of your own experience?—A. I feel the obligation to my shareholders.

Q. What do you say as to the price received in relation to the cost of production?—A. I would rather not be quoted in that matter. I am not close enough to the proposition to know the details. I know what my balance sheets show but as for expressing an opinion on that point, I would rather be excused.

Q. What suggestion have you to make as to how we might arrive at the cost of production of your companies and owners?—A. Well, gentlemen, I am looking for peace in the industry. My desire is, if possible, to secure some basis which will avoid the unpleasantnesses that have cropped up in the industry during the past three years, particularly. It has been a very unpleasant experience. I hope from the investigation that is on just now, and the negotiations that we are having, that some method may evolve which may make it possible to eliminate the friction that has cropped up in the industry; otherwise I can see no future for the industry at all.

Q. What has been the occasion for that?—A. The cause of that has been the sudden drop in the price; only that. Otherwise, our relationships—I am only speaking for myself and my son, who is manager of the company—have been exceedingly pleasant.

Q. The falling off in the industry has been because of the drop in prices, you say?—A. Yes.

Q. And if that continues they cannot continue?—A. Quite so.

Q. Is it because of the falling off, the prices obtained have been less than the cost of production—the prices obtained by farmers have been less than the cost of production?—A. Yes.

Mr. FACTOR: When you say "farmers" you mean the owners?

Mr. SOMMERVILLE: Growers. The shareman is interested in the price as much as the owner.

Mr. FACTOR: He gets 50 per cent.

*By Mr. Sommerville:*

Q. What recommendations or suggestions have you to make?—A. I have a little statement which I would like to give, with the permission of the committee. It represents no official opinion. It has been submitted to several of the growers, but I do not want it to be considered as representing any organized opinion whatever. It represents my opinion and that of several others whom I know, further than that I would ask not to go. It is submitted with all possible humiliation and respect to the committee, not that I think we can find any new heaven and new earth, but such as it is I would ask the committee to accept it. The first part of this statement calls the attention of the committee to the differences that exist between tobacco growing and other forms of agricultural production. It is so difficult to get all these facts across to the outsiders that I have gone into a little laboured explanation to name some of those differences.

In many respects there is no parallel to the tobacco industry among the agricultural products of Canada. For these reasons it would appear to offer a unique opportunity to adjust the wide spread between the producers' receipts and the consumers' cost.

Stated in the briefest possible terms some of the features that distinguish the tobacco growing industry from other branches of agriculture are as follows:—

1. Tobacco growing occupies a particularly favourable tariff position, having a protection of forty cents per pound on imported raw leaf, a figure double the price paid to the Canadian producer. Further the preference on empire grown tobacco entering Great Britain is 49 cents per pound, a most generous preference. Thus, if the law of supply and demand were allowed to function freely, the Canadian producer should enjoy a highly prosperous condition.

2. The soil from which flue-cured tobacco can be produced is strictly limited and is confined to a compact area in southwestern Ontario, the district contains not more than about 30,000 acres. This is an estimate, which may be subject to criticism. However, it is my estimate, and being fairly familiar and having a fairly familiar connection with the area, I say it consists of not more than 30,000 acres capable of producing flue-cured tobacco. Now, that is a figure that I do not say is altogether authentic.

*By Mr. Factor:*

Q. In the new belt?—A. In the new belt. Essex county is very limited now. A small section of British Columbia is still in the experimental stage. This being the case, the variations in costs of labour, raw materials, freight rates, interest, etc. which complicate the efforts to deal with returns to agriculturists do not apply in the case of the tobacco farmers. Because of the concentrated area, the factors I have mentioned, freight rates, labour costs, raw materials and so on, are uniform over the whole area.

3. At the present time about ten million pounds of unmanufactured tobacco, of practically an identical type with that grown in Ontario are imported into Canada annually notwithstanding the high rate of duty imposed. I am making that statement, and obviously no doubt it will be disputed by the buyers who bring in the tobacco; but I have asked many many men from the southern states, men who come up to cure our crop, men who are sharemen, what the difference is between the Norfolk tobacco and the Carolina tobacco, and almost invariably I have been told by those men who cure that crop that they cannot tell the difference. These are men who have had experience in both crops. So therefore I say at the present time about 10,000,000 pounds of unmanufactured tobacco, of practically an identical type—that is an average. I say 10,000,000 pounds, but as high as 18,000,000 pounds have been imported, and sometimes 15,000,000 pounds—it is now down to 8,000,000, but I think 10,000,000 would be the low average—with that grown in Ontario, are imported into Canada annually notwithstanding the high rate of duty imposed. So long as this is the case it is difficult to see how there should be any actual surplus of the Canadian product. An artificial surplus may of course, be created; but as far as the actual surplus of Canadian tobacco is concerned, as long as this amount is being brought in, I do not think there should be any actual surplus.

Q. May I interrupt you there and ask you whether the companies find it necessary to import the tobacco in order to blend the cigarettes?—A. You will have to get that answer from those who know more about it than we do. No doubt that is the answer they will give. We cannot say anything about that other than to give you the opinions I have just quoted of southerners who say that the tobaccos are identical. If that is so, I do not see why it should be brought in.

*By Mr. Sommerville:*

Q. At any rate they are bringing it in, and they apparently are bringing it in for blending purposes?—A. Quite so.

Q. I presume they would not bring it in and pay duty on it if it was not necessary?—A. They had some object.

Q. For blending purposes?—A. Well, there is some object in bringing it in.

*By Mr. Senn:*

Q. Might there not be another factor that enters into it? Do you know whether or not there is a drawback of duty in case the tobacco is exported after being manufactured?

*By Mr. Sommerville:*

Q. Mr. Senn was just wondering whether or not you knew if there was a drawback on that tobacco after it was manufactured?—A. I believe not, unless it is exported out of the country, and not sold in Canada at all.

*By Mr. Senn:*

Q. Might not that be the explanation of it?—A. I think there is very little manufactured tobacco exported from Canada, very little as I understand; I never heard of any.

*By Mr. Young:*

Q. We have been told that in 1932 we produced in Canada 54,000,000 pounds. The figures for 1933 are not complete, are they?—A. No.

Q. While the crop was as great as in 1932,—A. That includes, too, the dark fine tobacco, you know. Flue-cured tobacco would not be more than 23,000,000 to 24,000,000 pounds.

*By Mr. Sommerville:*

Q. The production of flue-cured tobacco was expected to amount to about 22,000,000 pounds for 1933 as against 29,000,000 for 1932?—A. Yes.

*By Mr. Young:*

Q. You say about half that is still in the growers' hands?—A. Various estimates, 40 per cent; some say 50 per cent.

Q. In other words, there is just about as much of that grade of tobacco in the growers' hands now as is imported from the United States?—A. Some in the hands of the processers; all being processed and in the hands of the processing companies.

Q. That about equals the amount imported; is that right?—A. Equal to the amount imported.

Q. Your claim is if you shut out that tobacco that is imported, you could sell all your tobacco?—A. I think we could.

Q. You reduced the acreage on your farm alone by 100 acres?—A. Nobody can tell what the poundage will be. The acreage may be down, but in 1932 my company had an average of 1,120 pounds per acre; a remarkable production.

Q. This importation of 10,000,000 will only help you so long as both acreage and yield are constant? If the acreage goes up and the yield goes up, you will still have a surplus, even if you do not bring in any from the States?—A. It is now getting to the point where they very closely balance each other, and one has to take some chance on the weather. I mentioned that factor in regard to the imports coming in again to show that tobacco has no parallel among the agricultural products of the country.

4. At the present time two co-operative associations—we call them co-operative associations but they are tobacco growers' associations.

*By Mr. Sommerville:*

Q. They are not co-operatives in the ordinary sense?—A. No, not the ordinary sense.

Q. They co-operate for certain purposes?—A. Yes.

Q. To disseminate information and to spread marketing information?—A. Quite so. At the present time two co-operative associations of tobacco growers are functioning in the area, and these represent 80 per cent of the production. Those are the figures of this organization. I think Mr. Freeman said 70 per cent. Their joint efforts, in conjunction with some of the large buyers, are being

exerted to secure a reduction of 25 per cent in the acreage for 1934 in order to make certain there would be no carry-over next year. This feature also distinguishes tobacco growing from any other products of the farm.

Q. You would not think that it would be possible to make that kind of an arrangement with that percentage of growers of other agricultural products?—A. Quite so. These co-operative associations are functioning in a confined area.

5. The industry has now been in operation for a sufficiently long period to have established reliable figures as to costs of production. Fortunately a large portion of the enterprise is carried on by well organized and generally speaking, well financed limited liability companies. These concerns, necessarily keep records from which accurate data are available as to costs of production and receipts for products. This information is available in but few if any other branches of agriculture. I do not know of any other branch of horticulture or agriculture where such accurate details as to revenue and expenditure can be secured as are now available in this particular industry through these companies.

6. The plan of operation in the tobacco growing industry is through sharemen, except in the case of most of the individual growers. The sharemen receive 50 per cent of the money received from the sale of the crop. For this they provide all the labour except that of the executive officers of the company. Any plan therefore that may be revised to secure a larger price to the grower will automatically provide for a similar increase in the amount received by the labourer.

Mr. FACTOR: Goodness knows they need it.

The WITNESS: That is a very important point. We are stressing that now to show that we are not asking everything for ourselves. If these men were not sharing 50-50 with us, there might be a tendency on the part of the companies to extract for themselves 100 per cent of whatever benefit may come from the increased prices. As it is provided here automatically the workingman who, as I say, sometimes works from four o'clock in the morning until 10 at night, will receive his share of the benefit.

*By Mr. Sommerville:*

Q. At any rate, the increased price you hope to get would be passed on?—A. Half of it.

Q. To the working man?—A. Yes.

Q. At the present time the saving in price apparently has not been passed on to either the producer or the consumer?—A. I think that is right. Again I say it is doubtful if this feature applies in the case of any other farm crop.

7. While the industry has been in existence for about 20 years, it is only within the past six or seven years that the substantial development has taken place. The potentialities of the British market are still almost untouched notwithstanding the rapid growth in the export to the British market of the past three years. It may therefore be said that this is truly "an infant industry," and that can be said of few if any other Canadian farm products. Canada has been growing grain, live stock, apples and chickens for many years, but in this particular industry, we do claim that it is an infant industry and is worth fostering in any way possible.

*By Mr. Young:*

Q. It cannot possibly grow very big, if you have only 30,000 acres of land suitable for it?—A. It is pretty big now. The figures that are represented by the growth in this industry are pretty substantial figures. I have seen the statement made—I do not know whether it is accurate or not—that the amount paid at the low price for tobacco is equal to that paid for the entire apple crop of Ontario, scattered from one end of this province to the other.

*By Mr. Sommerville:*

Q. The price paid for the crop last year was \$5,250,000?—A. I made the statement as I heard it, and I do not know whether it is accurate or not. It indicates it is already, at least, a substantial industry, and may become larger.

Q. Your point is you may develop the potentialities of the British market?—A. Yes.

Q. The British market at present imports 197,000,000 pounds of tobacco, of which last year we exported about eight or nine million pounds, and you say the potentialities of the British market are very great, they have imported from the United States about 157,000,000 pounds?—A. Yes.

Q. With your tobacco improving in quality, and with special efforts being made to encourage the development of the British market, you think there are great possibilities there?

Mr. EDWARDS: And the preference.

*By Mr. Sommerville:*

Q. And with the preference of 49 cents a pound?—A. Yes, that is correct.

Mr. EDWARDS: With the drawback on that tobacco.

*By the Chairman:*

Q. Are there any impediments in your way, to prevent your exporting to the British market now?—A. None whatever that we can see.

*By Mr. Young:*

Q. Is this not an impediment, that they have fixed a price over there at 16 cents? You can't care much for that, 16 cents?—A. The 16-cent tobacco costs \$2 to get into Great Britain. The rest costs \$1.51 to get into Great Britain.

*By Mr. Factor:*

Q. Following up the Chairman's question, what is there to prevent you from developing your export market to Great Britain?—A. We don't see anything. I think it holds out wonderful possibilities for taking care of any surplus we can produce.

*By Mr. Sommerville:*

Q. Who is the largest buyer in the British market?—A. The Imperial of Great Britain.

*By Mr. Factor:*

Q. Then does the Imperial of Great Britain buy their requirements through the Imperial of Canada?—A. They did last year.

Q. That sort of puts you out of the picture entirely, does it not?—A. We hope not.

*By Mr. Sommerville:*

Q. There are some independents in Great Britain?—A. Yes, some very large buyers—Gallaghers and Godfrey Phillips, and so on. Godfrey Phillips, I think, have put a cigarette on the market in Great Britain and called it "Canada Club," made practically exclusively of Canadian tobacco, which would indicate that the quality of Canadian tobacco must suit the English manufacturer to that extent.

Q. And these independent manufacturers have, at any rate, been largely responsible for a large quantity of the importation into Great Britain?—A. Yes.

Q. Last year the importation of 6,000,000 pounds by the Imperial Tobacco Company of Great Britain and Ireland came through the Imperial Tobacco Company of Canada?—A. Yes.

*By Mr. Factor:*

Q. Why do these independent buyers still go to the United States to get their requirements?—A. The answer to that would be the same as was mentioned before, to continue their blend. They have been buying tobacco from the United States for many generations, and no doubt they have very intimate connections down there; and for various reasons they are still buying largely in the United States.

*By Mr. Senn:*

Q. Were there any representatives of these independent companies buying tobacco here this year?—A. Last year?

Q. This last crop?

Mr. SOMMERVILLE: Gallagher's representative.

The WITNESS: I think very little has been sent to the United Kingdom from Canada of the 1933 crop.

*By Mr. Senn:*

Q. Have you any idea why their buyers have not been here?—A. I have not, no.

Mr. SOMMERVILLE: I think we may have some evidence on that.

The WITNESS: Yes.

*By Mr. Sommerville:*

Q. Now, Mr. McKay, will you continue?—A. Yes. There is no difference of opinion regarding the very generous profits made by the large Canadian tobacco manufacturers during the past quarter century. The facts in this respect are a matter of public record. Neither is there any difference of opinion as to the severe losses sustained by the tobacco growers during the past few years. Here again a situation exists differing from that of other products from the farm, for in many cases the buyers and processors of farm products have not enjoyed much, if any, prosperity for some years past.

*By Mr. Factor:*

Q. The buyers?—A. I just call the attention of the committee to that fact that the men who have bought from the farmer, and sold, have also had their misfortunes and their evil days.

*By Mr. Sommerville:*

Q. You are referring to the middleman?—A. Quite so.

*By Mr. Factor:*

Q. You except tobacco buyers?—A. And I would say some of the packers.

Q. You exempt tobacco buyers from that, do you? I say you don't charge that against the tobacco buyers?—A. Well, there are exceptions in all rules.

*By Mr. Sommerville:*

Q. Yes, will you continue?—A. Just one more sentence under that heading: In the case of tobacco there are practically no middlemen to divide the spread. That is the point I am making under that heading, that there are no middlemen to divide the spread.

In the matter of tobacco the product is sold to the ultimate consumer through retail channels by the same parties—the same persons or companies—who buy the raw leaf.

Q. And the retail channels are owned and operated by the same channels?—A. To a considerable extent.

Q. Will you continue?—A. Yes. The manufactured article is largely sold under price maintenance agreements, and prices have varied little, if any, for several years.

Q. What you say is that the tobacco industry is again unique in that the manufacturer buys from the farmer and sells to the consumer through his subsidiary in the retail trade?—A. Yes.

Mr. FACTOR: Under agreements.

*By Mr. Sommerville:*

Q. Under price maintenance agreements?—A. Yes.

*By the Chairman:*

Q. You have no objection to the price maintenance system?—A. No, no, no. I think it is an advantage, Mr. Stevens. I think it is an advantage, and I don't want to be misunderstood as making any criticism of that feature.

*By Mr. Sommerville:*

Q. You are referring now just to the unique position of the tobacco industry as compared with other industries or any other branch of agriculture?—A. Yes, as you will see from my next sentence.

Q. Yes?—A. These prices—that is, the prices at which this retailing is carried on—are not subject to worldwide influences such as cause such wide fluctuations in the matter of fruit, live stock, grain, et cetera. Thus the buyer of raw leaf tobacco does not risk his money in a speculation when he buys from the grower, for he knows fairly accurately what he is to get for it. It is doubtful if a similar situation exists in the case of any other farm product.

Other differences existing between tobacco and other crops might be cited, but probably sufficient has been mentioned to show that no parallel exists.

The object in presenting the above facts is to show the committee that it should be a much more simple and practicable problem to find a remedy for the ills that afflict the tobacco grower than for those of other farm products. With this in view, the following outline of a plan of operation that would be fair to all parties and at the same time lasting and practicable, is respectfully submitted. Now, as I said at the beginning—

*By the Chairman:*

Q. Mr. McKay, if you don't mind, I would like you to read that through promptly, because it is getting near six o'clock?—A. I will just read it straight through. I would like to qualify it again by saying that this does not represent the area—does not speak for the entire area.

That the larger growers be requested by this committee of inquiry to submit to a firm of auditors to be named by the committee, their balance sheets covering a period of say the last five years; that from these statements a figure be arrived at which would constitute the average cost of producing a pound of flue-cured tobacco, as shown by the various companies during the past five years. This figure would have to include, in addition to labour, raw materials, et cetera, an allowance to cover interest on capital actually used in operation or invested in real estate and plant; also provision for depreciation at standard rates, and to

cover reasonable administrative salaries and other expenses. Any company which undertook to pay fancy salaries would be penalized, but we would ask for at least reasonable administrative salaries.

After such a figure had been established, the grower would be paid a price which would give him a reasonable profit, the percentage rate to be fixed either by this committee, the marketing board or some other government authority.

The cost figures arrived at as suggested would be subject to revision from time to time if either party to the agreement so requested. Thus, if the manufacturer found it necessary to reduce his price to the retailer, or consumer, he would make application for a reduction in the cost of his raw material, that is our tobacco; or if the grower found his costs of fertilizer, taxes, insurance, et cetera rising, he would similarly be entitled to an increase in the price he received.

Two of the outstanding advantages of the plan suggested are that it would not only put the entire industry—grower, processor and manufacturer alike—on a firmer basis than has been possible under the loose merchandising methods heretofore practised, but it would be automatic and permanent in its operation.

*By Mr. Sommerville:*

Q. It would not increase the cost to the consumer?—A. No, it would not increase the cost to the consumer, not at all.

Q. That is your suggestion for one means of arriving at a more reasonable spread in the price?—A. Yes.

Q. Arriving at the cost of production from the united statement of all those operating in a large way, and endeavouring to arrive at that basis of cost, and that being then brought about as the price to be paid for the product?—A. Yes.

The CHAIRMAN: Thank you, Mr. McKay. It is now six o'clock, and we will adjourn. We will meet to-morrow at eleven.

The committee adjourned at six p.m., to meet again on Wednesday, April 25, at 11 a.m.

HOUSE OF COMMONS, ROOM 368,

April 25, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock, Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., of Toronto, and Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order gentlemen. The minutes of yesterday's meeting are before me. They record the witnesses examined and certain exhibits filed, and in the afternoon meeting they refer to witnesses called and documents filed. Unless there is some question, I declare the minutes adopted.

Is the Macdonald Tobacco Company represented here to-day? I might say they were invited to be here yesterday and to-day, but apparently they are not here.

W. F. KINGSTON, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Kingston, you are a tobacco grower?—A. Yes sir.

Q. In Norfolk county?—A. Norfolk and Elgin.

Q. And you have been growing tobacco how many years?—A. Since 1927.

Q. And you are the owner of how many acres?—A. Well, between three and four thousand acres.

Q. Which is your own land?—A. Yes.

Q. And in which you made your own investment?—A. Right.

Q. Investing your own money in the enterprise?—A. Yes.

Q. And you crop about what proportion annually—last year, for instance?—A. Last year I had in about 1,350 acres in actual crop.

Q. And what was your production last year per acre?—A. Well, we got between 1,100,000 and 1,200,000 pounds. Our land is light, lighter than most of it. It is what they call the plain field sand and it grows a thin type of cigarette tobacco. Only runs about 800 pounds to the acre.

Q. But you grow a good type of tobacco?—A. Yes, I believe we do.

Q. Now, will you just tell us what your experience has been in the growing of tobacco from 1927 to the present time, having relation to your getting into the business?—A. I have written down about all I have to say for each year on this piece of paper. I would like to explain that I am not a member of any of these groups.

Q. You are not a member of any organization or any group?—A. No.

Q. You operate alone?—A. Yes.

Q. But you operate your farms on the same basis as many others; that is on the share plan basis?—A. Yes, I do.

Q. And you have how many farmers operating on your share plan basis?—A. Well, it varies with different years. Sometimes we double up our crops and sometimes we subdivide them. The most I have ever had is forty-two crops.

Q. That is, the most you have had is forty-two tenant farmers on your own privately owned land?—A. Yes.

Q. And you have had forty-two crops in the one season from the forty-two owners?—A. Yes.

Q. And what is the unit that is the most economical to operate from the standpoint of the tenant farmer?—A. Well, with the one team outfit about 30 acres is about right, but if you increase it more than that then you have to supply two teams and more equipment. Supposing you put in 45 acres, probably you will have to have two planters and various things.

Q. So that the most economical enterprise is conducted on a basis of about 30 acres?—A. Around 30.

Q. To the unit?—A. Yes.

Q. Now, then, will you just give us the benefit of that experience?—A. In that year, 1927—that is the year I started in tobacco up in Canada—I grew Dark Fired at Port Talbot, and that is the year I bought my flue-cured farms. I bought them in the middle of the summer and it was too late to crop them. The price of flue-cured tobacco was 45 cents for the top price.

Q. For the top price on flue-cured in 1927?—A. Yes.

Q. And at that time, and in view of that price, you bought largely the farm which you now own?—A. Yes, that is true.

Q. Bought practically the whole acreage?—A. No, half.

Q. Half of the present acreage?—A. Yes.

Q. And then you equipped the acreage you bought?—A. Yes.

Q. Several thousand acres?—A. I bought about half of it. The following year I bought the balance.

Q. You bought the balance the following year—1928?—A. Yes.

Q. At that time what was the top price—in 1928?—A. 1928 I put half of it into crop and the top price was 40 cents, and I had, probably, that year about 600 acres in crop, but it was all hailed out, except two crops. All our land on the Hazen Road was hailed out. That is where our big holding was at that time. But we had a crop at Maybees Corners that was not hailed out, and another crop that was not hailed out.

Q. You had how many acres hailed out?—A. 500. At that time we had no hail insurance at all. This hail insurance, while it is a help, is not a protection against hail, because since I have had hail insurance I have had land hailed out, and they come over and they estimate how much was hurt and all that, and you get part back, but you do not get what you would have if you had harvested your crop. That is true. In 1928 we had those 500 acres hailed out, and the other crops I sold at 38 cents.

Q. Your crops produced nearly the top price, that is, the ones that were not hailed out?—A. It was a good price, but it was good tobacco.

Q. And having relation to the top price, it was good tobacco and a good price for that tobacco?—A. Yes. Now, in the year 1929 I had everything arranged and larger buildings and kilns and greenhouses and so on, and I had in that year about as much land as I put in now, and it was average price that year. We had a great deal of trouble that year with blow-outs. We were blown out three times.

Q. What do you mean by blow-outs?—A. When we plant the plants and storms come, and this is light land and sometimes they cover up the plants with sand and kill them, and then you have to replant. I had to replant a good deal that year—three times. So, when I finally got a stand—that means when your plants are coming up—it was a little bit late; but still we had a good stand of tobacco, and it was sold at an average of 35 $\frac{3}{4}$ . The top price that year was 40 cents. But we had a frost before I got it all off, and about \$120,000 worth of my tobacco was frozen—was left in the field—because I only got that year 587,000 pounds of tobacco, and I should have had 1,000,000. The next year was 1930 and we had good luck, and the top price was 40 cents, and my average price was 37 cents. In the year 1931 the top price was 30 cents and our average price

was 27 cents. Now, that was the first time—no, it was not the first time, 1930 was the first time—I sold any tobacco in England. I sold five crops that year to Gallaher.

Q. In Belfast?—A. In Belfast.

Q. That is by reason of the fact that you had a large quantity and you could grade your tobacco?—A. No, it was bought in the barn run; and I would like to go on record here that I favour selling barn run. I like to sell barn run rather than pack.

Q. At any rate, that year you did sell— —A. That is the first time I sold abroad. Now, in 1931, the top price was 30 cents.

Q. That was the crop of nineteen— —A. 1930.

Q. And it sold in the year?—A. 1930.

Q. The fall of 1930?—A. Yes. I sold a portion of that to Gallahers.

Q. Did they have a buyer here in Canada?—A. Well, their representative is here, Mr. Maunder. In 1931 the top price was 30 cents and my average price was 27. Now, I had a certain amount of tobacco that year which I could not find a market for in Canada, and I sold it in England to Carrera. That year the price had dropped, and I lost half my growers. The ones that had money in the bank, four or five thousand dollars, were afraid to grow again and they packed up and went back to Belgium.

Q. That was the year when the price dropped from a top price of 40 cents to a top price of 30 cents?—A. Yes.

Q. And on that price the average you got was 27½?—A. 27.

Q. And on that price you say you lost half your growers?—A. The best ones.

Q. They gave up growing tobacco and went back to Belgium?—A. Yes.

Q. Was that because of the reduced price which they were getting?—A. They did not want to take a chance with their money any more.

*By Mr. Factor:*

Q. Who purchased the 1931 crops?—A. My 1931 crop?

Q. Canadian buyers?—A. The Canadian Leaf Tobacco Company, Dibrell Brothers, \$83,000 worth to the Imperial Tobacco Company of Canada and the balance went to Carrera.

Mr. SENN: I would like to find out how the domestic price compared with the export price.

*By Mr. Sommerville:*

Q. You say you had a quantity that you sold in Canada that year and then you had a quantity that you sold in the old country?—A. Yes.

Q. And how did the domestic price compare with the price you got from the old country?—A. You are talking about 1931?

Q. Either year, both years, if you have it?—A. In 1930 the tobaccos that we sent to Gallaher were sent at a price of 35 cents and it was supposed to be adjusted if it graded better, but we never got any increase.

Q. 35 cents was the price?—A. Yes.

Q. And what was the price that you got for your domestic tobacco that year?—A. My entire average was 37 cents, taking that at 35 cents.

The CHAIRMAN: That was in 1930?

The WITNESS: That was in 1930.

*By Mr. Sommerville:*

Q. On your 1929 crop?—A. No, on the 1930 crop.

Q. Now, what do you say about 1931?—A. In 1931 the tobacco I sold to Dibrell Brothers went to England. That was 30 cents; and the tobacco I sold to the Canadian Leaf was 30 cents, and the tobacco that I afterwards took to

England myself, which I could not sell in Canada, was a lower price, about 23 cents, barn run.

Mr. YOUNG: Was it the same quality?

The WITNESS: It was not as good. That is why I did not sell it here; I could not get them to take it.

Mr. SOMMERVILLE: In 1931 you did not find the market for it here, and you took it to England?

The WITNESS: Yes. It was good, useful tobacco, but, probably, a little on the heavy side, not so much of it cigarette type as pipe type.

The CHAIRMAN: You averaged 27 cents that year?

The WITNESS: 27 cents. In 1932 the price was 24 cents for the top and our average was  $17\frac{3}{4}$ ; but at that time—I will bring this in because I think it is very interesting to Canadian growers—that was the year that while the price was not so good the quality of the Canadian tobacco improved very much, and that is the year that Mr. Buell of the Imperial Tobacco Company sent out that letter stating that his company would prefer types of tobacco, I think, White Stem Orinoco and Yellow Mammoth, and they would prefer to have the tobacco all primed.

*By Mr. Sommerville:*

Q. At that time they requested the growers to change the variety of tobacco they were growing?—A. And the method.

Q. The method of harvesting?—A. Right.

Q. First of all they asked you to change from the then types to the Orinoco and the—A. Yellow Mammoth.

Q. And as a result of that letter in that year 1932 the growers did put in Orinoco and Yellow Mammoth?—A. Yes.

Q. And as a result they got a good quality of cigarette tobacco?—A. I think that was a good policy for the Canadian tobacco industry.

Q. And that request came from the Imperial Tobacco Company?—A. Yes, by letter.

Q. And, also, the Imperial that year requested that the growers change the method of harvesting?—A. Yes.

Q. Formerly it had been the stemming?—A. No, split stock.

Q. By which they cut?—A. They split the stock and cut it off at the bottom.

Q. And dried the leaves together?—A. Yes.

Q. And they asked that the method of harvesting be changed to what is called priming. That is going over your crop several times and taking off the leaves as they mature and harvesting the leaves and curing them separately?—A. Yes.

Q. And by reason of those two changes both in the quality of the product—the character of the product grown—and the method of harvesting there was a big improvement in the quality of the Canadian product?—A. No question about that.

*By Mr. Factor:*

Q. And also a big drop in the price?—A. Well, it was not the quality; the quality was better.

*By Mr. Sommerville:*

Q. The quality was better?—A. Yes.

Q. Notwithstanding the meeting of the request for an improved quality, and the growing of an improved quality, the price dropped how much?—A. Well, the top price that year was 24 cents.

Q. Instead of 30 cents?—A. My average that year was  $17\frac{3}{4}$  cents. I have not sold only to two customers—the Imperial and the Canadian Leaf.

Q. Now, the previous year your average had been  $27\frac{1}{2}$  cents?—A. No, 27 cents.

Q. And that meant that with this improved quality of tobacco meeting more nearly their request and requirements, the best you could get on your average was  $17\frac{3}{4}$  cents?—A. That is what I got.

Q. And that was, you say, good tobacco?—A. Oh, yes; it was in 1933.

Q. What was the effect of that dropped price upon the growers?—A. Well it was not very good and the whole point out here, Mr. Sommerville, is that at various times a good grower with his own money, and so on, gets loathe to invest it in the crop because the crop has a good many hazards, you know, unless it looks attractive to him. I have paid out myself as high as \$15,000 in a year to the bank to take up loans that they have made to growers that I backed, you see, and these growers of course, quit, and go somewhere else. You never get your money back.

Mr. FACTOR: That is Canadian leaf tobacco?

The WITNESS: There is a processing plant at Chatham owned by the Universal Leaf Company of the United States. They are big tobacco processors at Chatham, and they have been very helpful to the Canadian industry.

*By Mr. Sommerville:*

Q. They buy the product?—A. Sometimes they buy it, and sometimes they just process it for somebody else; they are both leaf merchants and processors.

Q. Are there large buyers also in the field?—A. At times.

Q. Representing, as you say— —A. I have sold them several million pounds since I have been in business.

Q. What was your experience the next year?—A. Last year, 1933, a top price of 24 cents; my average was  $20\frac{1}{4}$  cents. I sold all that to one firm, the Imperial.

Q. The Imperial Tobacco company bought the entire output?—A. Except 69,000 pounds. I had an offer on that but I didn't take it.

Q. What was your entire production in 1933?—A. Well, it was between 1,100,000 and 1,200,000 pounds of flue-cured—I am not talking of air-cured.

Q. In addition to that you had some air-cured?—A. Yes, that is sold too.

Q. What was your production in 1932?—A. Well, it was pretty close to the same.

Q. About the same?—A. It was lower in 1931. I cannot just recall it, I did not bring those figures with me.

Q. At any rate your production was— —A. It was up in that range, but last year was the biggest crop year we ever had by about 100,000 pounds.

Q. You had more last year than the previous year?

*By the Chairman:*

Q. You mean in 1933 or 1932?—A. 1933. 1933 was a poor year. Our line is light and it is the dew and the heavier sands that makes it very dry. The sun hits on it and they have a sort of mica content, which gives a rim fire and so on. But our land seems to be all right in any kind of weather; but we got a light yield.

*By Mr. Factor:*

Q. How does the average price of  $17\frac{3}{4}$  cents that you received in 1932 compare with the cost of production?—A. It is under.

Q. Under the cost of production?—A. Yes.

Q. What about the  $20\frac{1}{4}$ ?—A. I am coming to that.

*By Mr. Sommerville:*

Q. Now Mr. Kingston, because your own experience as a grower, investing your own money and operating on a large scale, you adopt the most economical methods?—A. We try to.

Q. What do you say is the minimum that should be required on the average price of your crop to meet production costs?—A. To make this a reasonable business matter, giving me a small return on what investment I have, we ought to get an average price of 30 cents a pound. That would mean a top price of 35, but of course when you say a top price that goes only for the very best crops, and remember all through the area involved, which is 20,000 acres or something like that, there would be a lot of poor tobacco. We claim we do not grow any poor tobacco; I do not think we do, but some do, you see.

Q. You say that 30 cents is the average price that should be obtained for the crop?—A. That is what I think.

Q. On the basis of your experience in the cost of production?—A. Yes.

Q. And that would give you a small return upon your investment?—A. Yes, and very small. If you had bad luck like I did the first two years, why you would just be out of luck then. But I think that 30 cents would give you your money back and a very small return.

*By Mr. Senn:*

Q. What average yield per acre are you basing that price on?—A. On my average yield.

Q. What is that?—A. About 800 pounds to the acre.

*By Mr. Sommerville:*

Q. You say that as a result of your own experience in your area?—A. Yes.

Q. And operating in the large way that you do and with a number of operators?—A. Yes.

*By Mr. Factor:*

Q. What is the reason you received only 17 $\frac{3}{4}$  cents in 1932?—A. Well, that was the market. I got more than the average price paid, I think.

*By Mr. Sommerville:*

Q. You got more than the average price paid, for your crop in 1932?—A. Yes, I would think so.

Q. So the average price throughout your district did not exceed 17 cents?—A. No, it did not.

Q. That is substantially below the cost of production, you say?—A. Yes.

Q. What is the future of the industry if such prices prevail?—A. Well, it is not very good.

Q. Of course, you men have your money invested there, and I suppose you just hang on like most farmers. You just survive as long as the capital lasts and the banks give credit?—A. Yes, but the banks will not give the growers credit any more. I have to put my name right across the notes.

Q. That is your experience of the effect on the growers as far as bank credit is concerned?—A. Yes.

Q. Was it possible to get bank credits for those growers up to 1930 when the price was 30 cents to 40 cents?—A. Yes. They would go in, sign their own notes. I would tell them where to go and explain to the bank manager the type of fellow he was, and how many there were in his family to work, the profit he had and how much in crop and so on, and they would get the money; I would not have to endorse the note.

Q. Since the drop in prices of tobacco, you find that the banks have restricted their credit and will not loan to those growers?—A. As a matter of fact, they are not very keen on tobacco loans any more, to growers. I think they have got a lot of them that have not been paid.

*By Mr. Kennedy (Peace River):*

Q. Is there a lot of family labour in connection with the tobacco industry?—A. Family?

Q. Yes?—A. Yes. We try to pick up families that have a lot of people in them.

Q. Is it hard work?—A. Well, it is hard work, but it is just the same as any other work.

Q. You do not think it is hard for the youngsters?—A. It is not the youngsters that work.

*By Mr. Sommerville:*

Q. The older people do the work?—A. I will give you an instance of one family. There is the father. At planting time he will drive the team, and he has a son and two daughters. One of the daughters is married and has a husband, and then they have other help which they hire. Now in the planting time, one has to sit here and plant with the left hand, and the other sits here and plants with the right hand.

Q. When you are planting your tobacco plants?—A. Yes.

Q. You use a planting machine?—A. Yes.

Q. Drawn by a team of horses?—A. Yes.

Q. One person drives?—A. Yes.

Q. And two persons sit at the back?—A. Yes.

Q. Just above the level of the ground?—A. Yes.

Q. On a level with your ridge?—A. Yes.

Q. As you drive along, they plant individual plants into the top of the ridge?—A. That is right. Every time the machine clicks, one drops a plant. This grower I am talking about is left handed, so she sits on this side—it is hard to get so many left-handed ones.

Q. That is efficiency plus?—A. It is. The machine clicks, and a shoe comes up and puts dirt around the plant that is put in, and it clicks again and a half pint of water goes around this plant, and after it has gone a space of 24 inches, it clicks again, and the fellow on this side plants one. That is the way it goes.

Mr. YOUNG: They alternate?

The WITNESS: Yes.

The CHAIRMAN: If he were ambidextrous he would do the whole job himself.

*By Mr. Factor:*

Q. What would be the average earnings of a family?—A. It varies. I would not go into that at all because I cannot tell you. But I was going to say, you are talking about having government inspection of crops and so on. Our manager, Mr. N. B. Clark knows as much about tobacco as anybody who came out of Carolina, and he is the only fellow I ever knew of who did this job that you spoke of. He planted all alone one crop; he did not have anybody on the other side. He did the whole job. He is the only fellow I know of who did that.

Q. My question is, on your system of sharing and growing tobacco, what would be the average earnings on a unit say of 30 acres?—A. You cannot put it that way. It depends on the number in a family, how they divide it up among themselves, how many outside help they have, how big the yield is, how much fertilizer they put in per acre, and things like that. You cannot get into that.

Mr. SOMMERVILLE: Also the return you get from your crop?

The WITNESS: Yes.

*By Mr. Factor:*

Q. In the year 1933 you say you got a return of 20½ cents per pound?—A. I lost some money on some growers this year.

Q. What happened to the sharemen?—A. Gentlemen, what I am saying is I had to pay notes for some of them.

*By Mr. Sommerville:*

Q. They were not able to pay their debts?—A. Yes.

Q. You had to pay them personally?—A. Yes.

Q. And you lost your growers as well?—A. Yes. I did not endorse the fertilizer notes for them, and the fertilizer men are out of luck on some of them.

Q. I understand there are large amounts owing to the fertilizer companies?—A. I cannot say as to that. I know some of my men and know they are not going to get their money out of some of my men.

*By Mr. Young:*

Q. Did you say there was a time when these men had thousands of dollars in the bank?—A. Once they had money in the bank, and the ones who had money in the bank all went back to Belgium.

Q. How long did it take them to accumulate the money?—A. Twenty years; they were all up in the Essex district, and more or less drifted down to the Norfolk district.

*By Mr. Sommerville:*

Q. When they saw the drop in tobacco they checked out of there?—A. They are very very thrifty people, Mr. Sommerville, and a dollar looks quite big round to them. It takes them a long time to earn it and the good ones hang on to it.

Q. You say the effect was to drive these people out of the industry?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. They started to leave at the time tobacco went down to 30 cents?—A. Yes, and the following year as well.

*By Mr. Sommerville:*

Q. When it went down to 24 cents, more of them left. Mr. Kingston, can you account for it, or was there any genuine excuse for the drop from 34 cents in 1930 or 40 cents in 1930, to 20 cents?—A. Well, the only thing that I would say to that is there was an increased production which came on quicker than the increased demand from Great Britain. We had been increasing our exports to Great Britain each year, but the year 1931 was a pretty large crop; it was a good growing season—

Q. A crop that amounted to what?—A. I cannot tell you from memory.

Q. At any rate, it was a big crop?—A. In years like that there is a considerable maturity of heavier lands that would crop 1,100 pounds to the acre, and from that a lot of tobacco—we do not consider it as good as ours—but it still has a lot of pretty good tobacco.

Q. Was there any reduction when the manufacturing companies bought this tobacco; was there any reduction to the consumer in the price of the manufactured product, that you are aware of?—A. Well, I am not familiar with that part of it.

*By Mr. Factor:*

Q. In 1933 you sold practically all of your crop to the Imperial Tobacco Company?—A. Yes.

Q. At 20½ cents a pound?—A. Yes.

Q. What would have happened to you if they had offered you ten cents a pound?—A. I would not have taken it.

Q. Do you mean you would have held it?—A. I would have tried to sell it in England or to somebody else. I turned them down on one crop, really two crops, but on the same farm. At least, I did not turn them down, but I tried to get them up a little on the price.

Q. This flue-cured tobacco goes into the making of cigarettes very largely?—A. Yes.

Q. The Imperial Tobacco Company, I understand, controls 90 per cent of the cigarette business in Canada?—A. I do not know; I cannot say.

Q. From their own prospectuses, one would gather that?—A. Yes.

*By Mr. Kennedy (Winnipeg):*

Q. When you say you turned them down, where did you get your outlet?—A. I have not sold it yet.

*By Mr. Sommerville:*

Q. They may have turned you down?—A. Yes. I considered they did; I thought it was worth more than that, that is all there was to it.

*By Mr. Young:*

Q. The year it was 30 cents a pound you did all right?—A. Well, I lost a lot of growers that year. I did not get 30 cents. I got an average of only 20 cents. A lot of crops were sold at 30 cents, but there were certain ones sold lower. My average was 27. On some crops I did all right, and some I did not.

*By the Chairman:*

Q. You were down as low as 29?—A. Yes.

*By Mr. Young:*

Q. At a price of 30 cents a pound, what is the cost of production; has it decreased?—A. I do not consider that it has decreased hardly any.

Q. Hardly any?—A. No.

Q. It costs just as much to produce a pound of tobacco now as it did years ago?—A. I believe it does. The labour costs are just as much; but of course, that is up to the grower.

*By Mr. Sommerville:*

Q. You have just as large an investment?—A. Insurance and everything else is just the same. There has been a small drop in fertilizer this year. Our hay and oats are higher this year, and your poison, bran and molasses, arsenic and paris green, and all these things, are just about the same. There is very little variation in those.

*By the Chairman:*

Q. What have you to say about fertilizer? Have you found any difficulty in getting a competitive price?—A. No, sir.

Q. And is the price a fair one?—A. I am satisfied with my deal.

*By Mr. Sommerville:*

Q. Is the price the same for all the fertilizer companies?—A. I imagine so.

Q. You are satisfied with the deal?—A. Yes, I am.

Q. You are a large buyer, and the large buyer gets a discount on his fertilizer, I suppose?—A. Well—

*By Mr. Edwards:*

Q. You know, a large order is much more to be desired than a small one?—

A. Well—

Mr. KENNEDY (*Winnipeg*): He is a mass buyer.

The WITNESS: I would put it this way, that I got what I considered was a fair price.

*By Mr. Sommerville:*

Q. I understand that the fertilizer companies issue a price list, and that list provides for—A. No, that is not the way it works, exactly. They come to see you, and one man will tell you this price. I have been given a variation in prices. They are not all the same. One company will have this price, and the other company this price, and so on; but there is a sort of general average in there. You still have to make your own trade with the fellow that you want to deal with, whose fertilizer you like.

*By Mr. Senn:*

Q. Who gives the orders?—A. For my company?

Q. I mean for the company generally, not yourself particularly?—A. I do for myself.

Q. Is it not true that certain companies act as sub-agents for the fertilizer companies?—A. Yes, but they send out salesmen.

The CHAIRMAN: Mr. Senn's question did not register. Will you ask it again, Mr. Senn?

*By Mr. Senn:*

Q. Is it not true that the companies or the larger growers act as sub-agents for the fertilizer companies?—A. I do not; I cannot speak for any of the others.

*By Mr. Sommerville:*

Q. It is a fact that representatives of the large tobacco buyers sometimes act as fertilizer sellers?—A. Not to my knowledge.

*By Mr. Factor:*

Q. I should like you to elaborate upon this point: what elements enter into determining the price of tobacco paid to the growers?—A. I would like to know that myself.

Q. I thought you could perhaps enlighten us on this matter?—A. I am afraid I can't.

*By Mr. Sommerville:*

Q. Perhaps you can tell us, Mr. Kingston, who are the principal buyers?—A. My two principal customers in the past have been Imperial Tobacco Company of Canada and the Canadian Leaf Tobacco Company. In addition to that I have sold considerable to the British Leaf Tobacco Company,—that is the Imperial of Great Britain,—to the Macdonald Tobacco Company, to the Rock City Tobacco Company, to Gallahers and the Carreras in England. They are the ones I have dealt with.

Q. With reference to these domestic buyers you have referred to, they are the large buyers in the Canadian field, are they not?—A. Yes, they are.

Q. What do you say as to opening of the market? Who opens it?—A. It is usually the Imperial Tobacco Company.

Q. Do the others all wait until they open?—A. Yes, that is true.

*By Mr. Factor:*

Q. Is not the element that enters into the domination of the price, that the first buyer opens up, and then his price is the price?—A. I think there have been times when it was not like that. It was before I was in the business. I think there have been British buyers come over,—that is the year the price went to 60 cents,—when it was opened by other parties.

*By Mr. Sommerville:*

Q. It was opened by other parties?—A. Yes.

Q. Since these buyers are not in the field, the price is opened by the large buyer who comes out and makes the first bid for the top price?—A. Usually.

Q. And the rest take that as their cue and buy from that?—A. Yes.

*By Mr. Edwards:*

Q. Does that include the British buyer?—A. Yes, it does.

*By Mr. Sommerville:*

Q. That is the British buyer as well?—A. Yes.

Q. Therefore at whatever price the large buyer opens the market, it fixes it for the whole of the trade for that season?—A. That is true. There was one other point I was going to bring out. My suggestions to help the flue-cured industry are these: We want to get an increased consumption of Canadian tobacco in Canada first, and I think myself—some of the other growers don't agree with me, but this is my opinion—that a cigarette of all Canadian flue-cured tobacco would be very popular in Canada; and it would be a good thing to decrease the excise to \$2 on that tobacco so that they could bring it out at say 15 cents, and if advisable they could equalize the excise and put it higher on cigarettes that have American tobacco in them. When I went to England with this tobacco a couple of years ago—a year and a half ago—they brought out this Canadian Club cigarette of all Canadian tobacco, and I smoked a great many of them. I have smoked cigarettes for a long time, and I thought this was an excellent cigarette. I personally believe that a cigarette of that type would have great popular demand in Canada.

Q. To increase the consumption of an all Canadian cigarette, you would reduce the excise payable on such cigarettes from \$4 to \$2 per thousand?—A. Yes.

Q. And if necessary, equalizing by increasing the excise on cigarettes containing a certain proportion of imported tobacco?—A. Yes.

MR. KENNEDY (Winnipeg): Are there any all Canadian cigarettes now, Mr. Sommerville?

*By Mr. Sommerville:*

Q. Do you know whether or not there are any all Canadian cigarettes at the present time?—A. Not to my knowledge.

Q. You don't know the formula?—A. No.

Q. For the cigarettes that are on the market?—A. No.

Q. But there are, at least, none that you know of that are advertised as all Canadian?—A. No. And another thing, I think it is a bad thing for this industry for certain companies to come out and boost this American tobacco. I know a certain brand of cigarettes—I won't mention it—where they say "All Virginia tobacco." That is just a slap in the eye to the Canadian industry. When you go to England they say, "What are you bringing in this American tobacco for, if you say your own tobacco is so good?"

Q. The Englishman says to Canada?—A. Yes.

*By Mr. Senn:*

Q. They are Canadian manufacturers, are they?—A. Yes.

*By Mr. Sommerville:*

Q. The cigarettes you are referring to that are advertised as all Virginia tobacco?—A. Yes.

Q. They are made by Canadian manufacturers?—A. Yes.

*By Mr. Factor:*

Q. But they are blended with American tobacco?—A. Well, they are all American. They claim it is all American.

Q. All American tobacco?—A. Yes. I can't see where they are as good as the cigarettes we have.

*By the Chairman:*

Q. Don't you suppose that there is a bit of evasion there, that when they say all Virginia, they mean Canadian Virginia or Carolina Virginia, not necessarily Virginia Virginia?—A. I think it is just the trade custom, but I don't think it is a very good thing for our industry.

Q. It implies that it is wholly imported American tobacco?—A. Yes.

Mr. EDWARDS: When they export it, do they get a drawback?

Mr. SOMMERVILLE: They get 99 per cent drawback upon imported tobacco which is manufactured and exported from the country.

The WITNESS: I don't think there is much there.

Mr. EDWARDS: Could you not get your details there, the amount of that drawback on the exportable surplus?

Mr. SOMMERVILLE: One might get some information.

The CHAIRMAN: There is comparatively little.

*By Mr. Sommerville:*

Q. But the flue-cured that you grow is Virginia tobacco?—A. Yes, it is.

Q. May it not be that the tobacco that is advertised as all Virginia contains that very flue-cured that you grow?—A. I would think so, but I don't know. I can't say.

*By Mr. Factor:*

Q. What good would increasing your consumption of tobacco do, if the price is not within 10 cents of the cost of production?—A. Well, we want to get the price up and have a bigger demand for this tobacco. That is the first thing that I would suggest. The second thing is to increase the British market.

*By Mr. Edwards:*

Q. Would you not suggest more competition in the buying, too?—A. I would say, "put the price up." I don't care how they get it up.

Q. There would not be very much use in increasing the consumption if you are not going to get the benefit—if the grower is not going to get the benefit?—A. That is true. That is what we are trying to do, get the price up.

*By Mr. Kennedy (Winnipeg):*

Q. May I ask, what about the land available for production in Canada? This very tremendous increase in consumption might all be overtaken by production?—A. I don't think there is very much good land left.

Q. So that the question of overproduction would not become a problem?—  
A. It might in this way: Down in the south, I am told that—I am not just sure of this, but I am told this—during the war when the price of tobacco went up to a dollar and over, a lot of land was put into tobacco that was not really suitable, and is still in tobacco now; and that is where poor tobacco is grown, and that is where they get the price down there.

Q. You are not referring to land in Canada?—A. No, in Carolina.

Q. In Carolina?—A. Yes. There is quite a lot of poor land in it.

Q. What about west Elgin?—A. You could not grow this tobacco in west Elgin.

Q. Is that not very light land?—A. There is some up around West Lorne, but it is cold bottom land. That is a failure, the tobacco crop up there. They are practically all out of it; that is Aldborough, and that way.

Q. How about South Oxford?—A. Well, there is some tobacco grown in South Oxford. I consider that the best tobacco grown is north Walsingham.

*By Mr. Factor:*

Q. What suggestions have you to make to this committee to help us in bringing in some recommendation about increasing prices, when there is no competitive buying?—A. That is for the committee to figure out. I am telling you what I think.

Q. Yes, but you are an expert.

*By Mr. Sommerville:*

Q. What comment have you to make, if any, upon the suggestion made yesterday that a marketing board might handle this industry and bring about a more equitable spread, or a more equitable distribution of the consumer's dollar?—A. Well, I have never had any experience with marketing boards. I can't say.

Q. I understand?—A. But I am not thoroughly sympathetic with it.

*By Mr. Factor:*

Q. Would you be in favour of fixing the price by some body?—A. I would like to see the matter handled by a sort of discussion between the buyers and some board, something of that type.

*By Mr. Sommerville:*

Q. That is to say, you would like to see a board representing the producers and a group representing the buyers sitting around the table and settling on a price?—A. Yes.

Q. A price that would have relation to the cost of production?—A. Yes, and of the season.

Q. And of the season?—A. Yes.

Q. And have that price prevail?—A. Yes.

Q. And not leave it entirely in the hands of the buyers to say, "This is the price, and this only"?—A. Yes.

Q. That is your suggestion?—A. Yes, something along that line.

Q. And that is leaving it within the realm of the industry itself to adjust prices from season to season?—A. Yes.

Q. If such a board, or such an organization could be set up?—A. I am told—I don't grow any cigar tobacco—but I am told that down in Quebec the growers of a certain type of cigar tobacco have that sort of system with the Imperial Tobacco Company each year, that they get together and settle the price and everything is happy. I don't know that to be a fact, but I am told that it is.

Q. You say you favour some such system by which there could be a conference between the two groups?—A. Yes.

Q. Under some kind of authority?—A. Yes.

Q. That would fix the price?—A. There is no authority in this one.

Mr. YOUNG: Voluntary co-operation.

The WITNESS: What was that?

*By Mr. Young:*

Q. Is it voluntary co-operation?—A. Well, I am told that it works out.

Q. You spoke about increasing the British market. How would you go about that?—A. Well, I think through Mr. G. Howard Ferguson for one, through Mr. Stevens and through Mr. R. B. Bennett and their combined efforts. They have all tried their best, I know that, and we have had increasing markets over there. I think that the efforts of the Imperial Tobacco Company have been very helpful in getting the Imperial Tobacco Company of Great Britain to take Canadian tobacco, and so on.

*By Mr. Sommerville:*

Q. Have you any comment to make upon the question that is referred to in Mr. Sutherland's report as Under Cover Buying; that is, a large buyer like the Imperial Tobacco Company buying for a number of other companies?—A. Well, my idea about that is this: I think it was a favour to the Canadian tobacco grower to have the Imperial Tobacco Company of Canada get the Imperial Tobacco Company of Great Britain interested in Canadian tobacco, and I think that should be encouraged.

Q. But is it not a fact that under cover buying of that type is prohibited in the United States?—A. I don't know.

Q. You are not aware of that?—A. No.

Q. You don't know of any decrees affecting that?—A. No.

Q. You don't know of any orders or decrees affecting the Imperial Tobacco Company, the British American Tobacco Company with respect to joint buying?—A. No, I don't.

Q. If you open your British market, and if the bulk of your product is going on the British market to the Imperial Tobacco Company of Great Britain and Ireland, how are you going to improve competition on this Canadian market if the buying is all done by the Imperial Tobacco Company of Canada?—A. Suppose it worked this way, that the Imperial of Canada wanted a certain number of millions of pound for themselves, and a certain number of millions of pound for the Imperial of Great Britain. That would become rapidly known in the tobacco industry.

Q. How? You don't know now. How would it become known?—A. I will tell you how. You go to London, and you go into Godfrey Phillips' office, and they can tell you almost everything that Carrera is buying, and everything that Gallaher is buying, or what the Imperial of Great Britain had. It is a fact. The minute that the people in Great Britain thought that the Imperial of Great Britain were buying a considerable amount of Canadian tobacco, Carreras—all these people—would want some themselves, and it would create competitive buying. They would go out and bid against the others for the tobacco; and then Macdonald would step up and bid, and all the other Canadian tobacco companies would come up and bid, and in that way create a market.

Q. That is the way you would get the benefit of this British market, you say—in that manner?—A. Yes. The more we can encourage the Imperial of Great Britain, the better it is for this industry, in my judgment.

Q. To take the product off this market?—A. Yes. If we can get them to take 10,000,000 pounds it would be a good thing.

*By Mr. Factor:*

Q. You don't think it affects the price by them buying through the Imperial of Canada?—A. They get it at the same price as the Imperial of Canada. The Imperial of Canada are the ones that really fix the price.

*By Mr. Senn:*

Q. Don't you think that, if the British buyers were here themselves, there might be more competition in the buying?—A. Well, for instance take in the burley, the Imperial of Great Britain don't buy their burley through the Imperial of Canada. They buy it with their own buyers. But I don't imagine that they pay any more for it. They know what the others are doing.

*By Mr. Sommerville:*

Q. So that really, even if you get the British buyer into this market, the result is that the price set by the Imperial Tobacco Company in Canada becomes the price for the British buyer?—A. Well, they all try—

Q. —to scale down from that?—A. Yes.

Q. Was there any other suggestion that you wish to make?—A. No, that is all. That is all I have to say.

Q. Well, thank you very much.

The witness retired.

The CHAIRMAN: Next we will have Prof. Leitch.

ARCHIBALD LEITCH, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Leitch, you are a tobacco grower?—A. Yes.

Q. And you operate the Windham plantations?—A. The Windham plantations and St. Williams plantations.

Q. And you have been growing tobacco for how long?—A. For five years.

Mr. BOULANGER: Where is that, Mr. Sommerville?

Mr. SOMMERVILLE: In Norfolk county.

*By Mr. Sommerville:*

Q. And in your operations you cover how many acres; how many acres of land do you own?—A. 7,300.

Q. 7,300 acres of land?—A. Yes.

Q. And that covers how many farms?—A. 64.

Q. 64 farms?—A. Yes.

Q. Then your farms run to something a little over 100 acres each?—A. On the average.

Q. And on these plantations, what amount have you under crop at a time?—A. In 1933, at our maximum acreage, between 2,600 and 2,700 acres.

Q. Between 2,600 and 2,700 acres?—A. Yes.

Q. At your maximum?—A. Yes.

Q. And that was in 1933?—A. Yes.

Q. Prior to your being engaged in the industry of tobacco, you were head of the Department of Farm Economics in the Agricultural College at Guelph?—A. Yes.

Q. For some years?—A. Yes.

Q. And prior to that, you had many years experience in operating a large commercial farm?—A. Yes.

Q. Then, since going into the tobacco industry you have taken a very keen interest in the development of that industry, both as a producer and in assisting the other producers, have you not?—A. Yes, sir.

Q. Are you a member of the association which at the present time exists in the industry, Mr. Leitch?—A. Yes. I am vice-president of the Ontario Flue-Cured Growers Association, and president of their marketing subsidiary, the Ontario Tobacco Sales Co-Operative; chairman of the joint marketing board set up to handle the pack belonging to both associations, and trustee for the Ontario government in its credits for them.

Q. You represent the Ontario government in this joint committee?—A. Yes.

Q. In respect of the credits which have been set up by the Ontario government relating to the processing and sale of tobacco?—A. Yes.

Q. Now, will you just tell us, Mr. Leitch, what has been your experience with the domestic buyers? First of all, I ask you to consider it from the standpoint of policy, and then later from the standpoint of practices. What has been your experience with respect to policy?—A. I have only one criticism to make of the policy followed largely by the Imperial Tobacco Company, and followed to some extent by the other domestic manufacturers; and that relates basically to their operations, their buying policies in the period in which they were encouraging the largest possible acreage. That was the period ending in the crop year 1930.

Q. What do you say was the policy that was adopted prior to 1930 by the large buyers, the Imperial for instance?—A. The policy adopted was as was to be expected, of course, to encourage as rapidly as possible that volume of production of Canadian flue-cured leaf that would, at the earliest possible date, give to the domestic manufacturers a supply equal to their usage or demand for Canadian leaf.

Q. And was this the policy that was consistently followed for the years prior to 1920?—A. Yes.

Q. And following, during the ten year period, previous to that date?—A. Yes, insofar as my knowledge of the business is concerned.

Q. And from your knowledge of the development of the business in your capacity as head of the department of Farm Economics in Guelph, I presume that was a subject that was under consideration by you from time to time?—A. It happened that in 1925 I was commissioned by the Ontario Department of Agriculture to make an investigation of the business of tobacco growing and marketing in the province of Ontario, and that led to my chief interest in this business.

Q. And at that time you came into contact with this policy which you have outlined to us of encouraging the production of flue-cured tobacco, or tobacco in Ontario such as was required for their consumption?—A. Yes.

Q. Then that continued until the year 1930?—A. Yes.

Q. And was that policy reflected in the prices which were offered during those years for tobacco?—A. Yes, basically it was to pay a remunerative price to growers generally.

Q. And up to 1930 what had been the experience with respect to prices?—A. There had been prices that were generally remunerative to all efficient growers, possibly not inefficient ones or those who had hard luck.

*By Mr. Senn:*

Q. Were not those prices justified?—A. Yes, they were entirely justified purely on the basis of supply and demand alone.

*By Mr. Sommerville:*

Q. And the prices that were obtained up to 1930 we have heard represented a figure of 35 to 40 cents?—A. Well, just for the three years previous to 1930. Previous to that it had ranged from 45 cents upwards.

Q. Previous to 1927 it had ranged from 45 cents upwards.

Mr. FACTOR: What was the highest price?

The WITNESS: The highest price to my knowledge, definitely, I think, was about 70 cents.

*By Mr. Sommerville:*

Q. About 70 cents?—A. I am absolutely positive that in 1926 it reached 60 cents in Essex county.

Q. And during 1927, 1928 and 1929 it was 45 cents and upwards?—A. 45 cents in 1927, 40 cents was the top price in 1928, 1929 and 1930.

Q. So that the policy was reflected in the maintenance of a price that was a remunerative price to the growers?—A. Yes.

Q. And did that have the effect of increasing the production of the cured tobaccos that were required?—A. Oh, yes, it did; it stimulated the production at a relatively rapid rate.

Q. And did that have the effect of inducing growers to go into tobacco as an industry—the raising of tobacco?—A. Yes. That was particularly true in 1930 and 1931 when the relative prices for all other farm products had dropped much lower than tobacco.

Q. So that when you had a price of 40 cents in 1930, that price was relatively much higher than the price of other farm products?—A. Yes.

Q. And that again increased the number of those who were growing tobacco?—A. Yes.

Q. And the amount that was produced?—A. My criticism is not directed against the general level of those prices; it is directed against what might be called the practice of paying reasonable, uniform or fixed amounts for all crops. There was not, in my opinion—there would not have been in that period a sufficiently wide range between the better valued crops and the lower valued crops commensurate with the difference in quality, and that brought about a condition which led unthinking growers largely—unfortunately, a lot of new men,—to go into a business with a lack of experience—that led them to believe that there could not be anything wrong with this business; no matter how poor a crop you had you got a good price for it.

Q. That is to say that up to and including 1930 the prices paid for all grades of tobacco were so relatively near the top price as to indicate that poorer grades would bring a good price?—A. Poorer grades would bring a good price, and that encouraged, to a large extent, a lot of expansion on indifferent and unfavourable soils, and encouraged a lot of people to go into the business without due care as to their experience, knowledge and so forth in regard to growing this crop.

Q. Then, in the meantime, there had been, during the years 1927 and 1928, a large increase in the number of growers who came into the business and operated?—A. Yes. That extended right up to 1931.

Q. And there was also a large increase in the number of syndicates and companies that operated through tenant farmers?—A. Yes.

Q. And made their investments during that period of time?—A. From 1927 until 1930, practically, all the syndicates started operations.

Q. That was a period in which you became interested on behalf of the Wingham plantations?—A. Yes.

Q. And your company invested large sums of money there in acquiring farms?—A. Yes.

Q. I do not want to become too personal, but what was the amount of the investment your plantation made in the industry, approximately?—A. Two companies \$826,000.

Q. In cash?—A. In cash.

Q. You put that much into the plantations?—A. Yes.

Q. And you say you had 64 farms?—A. Yes.

Q. Did that represent 64 farms and tenants—tenant farmers or share farmers?—A. As a matter of fact, these properties were purchased in 82 separate parcels from small growers, unoccupied lands and so forth, and we reorganized it into 64 tobacco units.

Q. And in each unit you had about 30 to 35 acres?—A. It varied. In 1929 when we started our average acreage per farm was 31 acres, and it averaged per farm, in 1933, 44 acres.

*By Mr. Young:*

Q. You would have a third of that in tobacco every year?—A. Roughly speaking we would have a little more than a third of the total land area. We had slightly less than half the total area that is suitable for tobacco.

Q. You would probably have 20 acres on each farm?—A. No, we averaged forty-four last year.

Q. In tobacco?—A. Yes.

Q. Then, the acreage of each farm would be three times that?—A. No, the average of each farm is slightly over 110 acres, but it happens that there is a creek running through the main part of the property, and we have some average lands, some waste lands, and some land that is bad all along.

*By Mr. Sommerville:*

Q. And then you have to provide for rotation as has been described to us?—A. Yes.

Q. And for the ploughing in of certain crops to provide for sustenance?—A. Essentially we followed the same practice as was outlined by Mr. Freeman.

Q. Operating in this large way you have been able to operate efficiently and economically?—A. Yes.

Q. How many share tenants did you need last year?—A. Sixty-four.

Q. Now, you have discussed with us the question of the policy that was adopted?—A. Yes.

Q. And your criticism was directed to the point that this policy encouraged the growers to produce?—A. Yes.

Q. And secondly, encouraged them to believe that the poorer grades brought very little less than the higher grades. What was the effect of that policy from 1930 on?—A. It is necessary to elaborate the 1930 conditions, because that was the crux of the situation as I see it, where the Imperial Tobacco company, as the large buyer and the price setting buyer, evaded the responsibility for a situation which they created themselves. The year 1930, probably, compared very favourably with 1933 as the poorest; it was a very dry year. A lot of the growers in the area were on new lands, not tried out, and on account of the drought the general crop was down, no doubt, and badly down in quality as compared with any year previously and succeeding, except 1933. It was an extremely poor crop of tobacco, yet the Imperial Tobacco people led people astray by going out and paying high prices which would seem to indicate that there was no limit to what they would buy when they would pay those prices, 40 cents, and an average price higher than the year before by a cent or two, for the poorest possible kind of crop; and that was in the face of their indications to growers made by some of their officials

—they may not have had authority—that they were all growing too much tobacco; and yet they set out to buy, approximately, every bit of that crop, knowing that the actual acreage planted had gone up. Under normal yield conditions there would be an export surplus, and yet they led growers astray. Possibly they did not do it deliberately. Probably it was one of those cases in which they did not foresee the indications, but they led growers to believe that there was absolutely no lower limits in quality and in production, and there would be a demand.

*By Mr. Senn:*

Q. Are you speaking of flue-cured tobacco?—A. Flue-cured tobacco solely. At the same time, six or seven of us then operating syndicates—we had come to the conclusion in the spring of 1930 that we had better prepare ourselves for in impending export surplus, and we made arrangements such as Mr. Kingston outlined, working in concert, I acting for the group, to make contacts, to get some British manufacturers to use some Canadian tobacco. There had been some shipped over in the previous year to one manufacturer; he made a contract for another shipment for the year 1930, and we arranged to withdraw from the Canadian supply of tobacco in the year in which the Imperial seemed to want it very badly, about a half million pounds amongst us for Gallaher's Limited. That was our first definite contract as large growers with the British.

*By Mr. Sommerville:*

Q. That was in 1930?—A. Yes.

Q. Of course, that was possible for you as large growers, but how about the small producer?—A. The small producer with his 25 or 35 acres could not possibly participate in business of that kind.

Q. Why?—A. His business was not enough to justify the expense. The quantity would be too small to take in the multitude of export grades.

Q. That is, for export purposes, you have to go into a great many grades?—A. To do any business in the export market you must, first of all, assemble a certain amount of tobacco.

*By Mr. Senn:*

Q. Had your co-operative association organized at that time?—A. No, an informal organization of six farmers.

*By Mr. Kennedy (Winnipeg):*

Q. Did anybody point out the danger of that buying policy to the Imperial Tobacco company?—A. I, myself, criticized that policy to the then manager of the Imperial Tobacco company.

Q. What did he say?—A. Oh, he put me off and said, "What have you got to kick about; you are getting a profitable price for your tobacco," and he was prepared not to listen to my injunctions.

*By Mr. Sommerville:*

Q. Then, having made the contacts in 1930 with a small group of the large producers you were able to grade in quantity the types of tobacco that were required for the export market?—A. Yes; put it up in the grades that the English market required—this particular manufacturer required. There are quite a large number of grades. If I remember correctly, there are thirteen separate grades.

Q. And that was shipped to Gallaher's?—A. Yes.

Q. And that opened up the export market with them?—A. With Gallaher's. At the same time, the Canadian Leaf Tobacco—leaf packing and leaf mer-

chant firms in Canada—had the previous year done some little missionary work on their own account, and in the same way they almost handled an amount—probably a little greater than the amount we handled. They sold theirs largely to one manufacturer, that is, Godfrey Phillips & Company, and a little part of it to Gallaher's also. They did that as a speculation of their own. That was the first start. The combined efforts of these two organizations was the first start in creating interest, in a large way in Canadian flue-cured tobacco; and it was the result of the experience of these two firms that forced the Imperial of Great Britain because of their favourable and profitable experience with this Canadian tobacco, and they paid us a price almost equal to the local Canadian price, which forced the Canadian tobacco company, being the principle competitors, to display interest the next year in Canadian tobacco. But I do not give the Imperial of Canada any credit whatever for getting that business for Canadian tobacco; it was competition from their own company in England.

Q. These two firms in England, or several firms handling Canadian tobacco, set up a competitive interest on the part of the Imperial of England in securing Canadian tobacco?—A. It is true the Imperial had got some small sample quantities previous to that time, had tried it, as all the foreseeing and intelligent manufacturers in England naturally did, but it was really the competition from other competitors in the use of this tobacco that created their interest.

*By Mr. Kennedy (Winnipeg):*

Q. It was not through any philanthropic idea on the part of the Imperial that Canada shipped into that market?—A. None.

Q. You differ from Mr. Kingston?—A. Absolutely.

Q. After all, I suppose, speaking generally, the interest of buyers, whether of tobacco or anything else, is to get their product at the lowest price?—A. Naturally; and get a product that they like.

Q. A product that they like at the lowest price?—A. That they can use and make profits.

Mr. EDWARDS: That is their job?

The WITNESS: Yes, the main motive.

Mr. KENNEDY (*Winnipeg*): And so long as they use fair methods you have no objection?

The WITNESS: None whatever.

Mr. YOUNG: Are you opposed to the underground buying practice?

The WITNESS: No, not necessarily. I feel this way: an English manufacturer must take the necessary means to protect himself against the hazards of this barn buying system. Only in Canada, of all tobacco producing companies of the world, does the barn buying system prevail.

Mr. FACTOR: Does it not prevail in the United States?

The WITNESS: No; it has the open market auction floor system in the main tobacco areas.

*By Mr. Sommerville:*

Q. Perhaps, Mr. Leitch, you will express your opinion on the merits of the open market auction system as compared with barn buying?—A. Personally, I have an open mind on the matter. The barn buying system suits our conditions agreeably well here because of the fact that we are large producers—the production per grower is large.

Q. What difference does that make as against the system in the United States?—A. It would introduce a sufficient amount of labour to do all the necessary farm grading at the auction floor. It is selling by grade—green tobacco by grade.

Q. Green tobacco by grade?—A. I should not say green; maybe mostly raw leaf produced on the farm by grades means that the farmer must himself learn to do the job and must incur the expenses of handling his tobacco in order to grade it into the large number of grades, tying it up, and offering it on the auction floor. Now, that, of course, means that the grower offers his tobacco in the form the manufacturer, foreign or domestic, can offer it. But, at the same time, we have a different climate from the United States, and I am not satisfied that with our severe winters—and that is the period when it must be sold—that that work can be done as adequately and as well on the farm, and done in a systematic proper fashion to make the auction floor system work adequately. It has the advantage that the grower is offering his tobacco in a form anybody can buy, and we may be forced to come to it in time.

Q. It can be sold in England, in the United States or in Canada?—A. Yes. That brings me to the point this gentleman asked, as to my opinion in regard to under-cover buying. It is absolutely necessary for the English manufacturer wishing to buy his supply direct to be protected against the hazards of barn tobacco; in other words, some service or some agency in Canada that has an efficient inspection force and a number of efficient buyers. In other words, to have some agency that will translate green barn run tobacco in their minds mentally in value into dry weight graded tobacco. That requires the services of an organization such as the Imperial Tobacco Company; therefore I have no criticism of the policy of buying that way; although I know it would be in our interest as growers if they had commissioned some other competent agency like the Canadian Leaf to have done it.

*By Mr. Factor:*

Q. Why is it expressed in that way "under cover buyer"?—A. I cannot recall what that expression means, at all.

Mr. SOMMERVILLE: It is an expression that is not used in Canada but in the United States where arrangements have been made for eliminating competition and things of that kind. It is against the anti-trust laws of the United States, apparently. No decrease has ever been shown by reason of that; I think that is the reference in Mr. Sutherland's report?

The WITNESS: As a matter of fact, the word is hardly applicable to the arrangements between the Imperial of Great Britain or the Imperial of Canada because it was not really under cover. We all knew, or most of us knew, that the Imperial of Great Britain was buying some.

*By Mr. Factor:*

Q. They may have employed them as agents?—A. They may have employed them as agents. We have had the same experience ourselves. I have acted in the same capacity for Gallahers, Limited, who depended on me to see they were protected against the hazards of the barn buying system.

Q. In other words, they had in this country an organization known as the British Leaf Tobacco company?—A. Yes.

Q. The British Leaf Tobacco company is owned and controlled by the British American Tobacco company?—A. Yes.

Q. Who owns and controls the Imperial of Great Britain and Ireland?—A. No.

Q. Or the reverse?—A. The British Leaf, I think, is a subsidiary of the Imperial of Great Britain.

Q. A subsidiary of the Imperial of Great Britain?—A. Yes. But the British Leaf in Canada, Chatham, have had no experience in handling in any quantity flue-cured tobacco. They have no organization themselves for protecting expenditure. Their operations have been entirely on air-cured tobacco.

Q. You made efforts then to secure this English market, and to supply the English market with tobacco that year? ? What has been your experience since in that connection?—A. May I be permitted to finish my experience with the Canadian?

Q. Yes.—A. At that time we were—

Mr. SENN: There was a change in policy?

The WITNESS: Yes. The Imperial Tobacco company seemed anxious to get hold of every bit of the 1930 crop. Their local agents, I mean, were resentful of my operations in taking away some of that supply for export, when they claimed they needed all in Canada. It seemed to indicate that there could not be much confidence put in their suggestion from time to time that we were producing too much tobacco. Well, it happens that the manager on whom we were inclined to lay the blame for operations of that kind is no longer with the Imperial Tobacco company. I always felt he was expressing views of his own. When the 1931 crop came along, there was a still further increase in acreage and an increase of almost 60 per cent in the average yield, and the consequence was our production doubled, the actual pounds of tobacco doubled as between 1930 and 1931. I maintain that the Imperial Tobacco company and their buying companies of 1931, while I have no general criticism of the peak price established of 30 cents under the conditions, entirely evaded their responsibilities, after bringing about those conditions. It appeared to me they did everything possible to create a panicky condition among the growers and the buying associations they maintain. In other words, they looked on it as proper from their standpoint purely as an economic factor. They said, here is so much tobacco; there is going to be a surplus. No doubt they estimated it reasonably accurately. They said, there is going to be a surplus of 5,000,000 pounds for export—that is what it turned out to be later on. They, no doubt on account of the high quality of the crop bought a little more from the producers. They bought a little more for stock purposes; but their operations were, in my opinion, to my knowledge, during the course of the market, to take the earliest possible opportunity to reduce that peak price down to 20 cents and below. That took place within a week.

Q. Within a week after the market opened?—A. Yes.

Q. The Imperial who had set a price of 30 cents as the peak, reduced the price to 20?—A. Reduced it below 20, by 10 days after; and that created an extremely bad panicky condition.

Q. That was for good quality tobacco?—A. Yes.

*By Mr. Young:*

Q. Was there a corresponding drop in the British market?—A. Those conditions really determined the prices paid in England at that time.

Q. They did?—A. Yes. The manufacturer in England, like the one in Canada, does not care to pay anything more than he finds his competitors paying. We must recognize that as a natural business law. Consequently, the Imperial, who are the dominating purchasers here, more or less set the conditions under which you can sell tobacco in England.

*By Mr. Sommerville:*

Q. The 43 cent preference gives it an added advantage in the British market?—A. Yes.

*By Mr. Young:*

Q. Would not our exportable surplus compare very slightly with the British needs?—A. Yes. You must remember that the British manufacturer had up to that time relatively little experience in Canada. They did not know whether they could use it properly. It was a new product, just lately produced.

Q. It had not made itself a place on the British market?—A. No. Those things take time; and then there is the tradition. They have been using the American product for 100 years, and it is only the more enterprising and far-seeing who will take a chance of using a new product as a substitute for American. Then, still further, we must recognize this fact. No matter how good intrinsically the Canadian tobacco may be, we must recognize, generally speaking, the tobaccos used from day to day in England are tobaccos that have been matured in casks for some time.

*By the Chairman:*

Q. How long?—A. Oh, it varies, depending on the type of use for which it is made.

Q. Two or three years?—A. Some high class tobaccos, yes; but I suppose for some of the lower priced brands considerably less. It varies considerably.

Q. One or two years?—A. Some considerable time, yes. That is the intrinsic character of it. There must be some measure of change going on all the time, because the tobaccos are matured in casks.

*By Mr. Sommerville:*

Q. Has that been produced by a modern method of processing flue-cured tobacco?—A. No, the methods generally speaking in the processing are the same as—

Mr. SENN: The American Tobacco Company ships in casks the same way?

The WITNESS: Yes. We follow the American methods very closely, both as to grades and methods of packing. Therefore to develop the idea further, no matter how good intrinsically our tobacco may be, it is still new, and to get it on a comparable basis with American tobaccos, we must have it as old, for use, as the current supplies of American. It is a matter of a year or two years or three years, so therefore no matter if our product were identical with the American in every respect, and known to be such, we are not on an exact basis of usage until we have somewhere stocks that have matured to the same extent as the stocks currently used in America. That is one of the difficulties and hazards of opening up a new market in a foreign country. Since 1931 I have no particular criticism of the Imperial Tobacco Company as far as their practices are concerned. We have had very very favourable relations with them. I have sold them millions of pounds of tobacco. They are honourable people to do business with, and they live up to their obligations. That is not only true of the Imperial, but it is characteristic of the Canadian manufacturers.

Q. Your criticism is of the policy which led to the development of the industry, therefore one that increased production, naturally?—A. Yes.

Q. And encouraged production?—A. Yes.

Q. But when you had that increased production no responsibility was assumed with the rest?—A. Yes. That is a matter of policy—for evading the responsibility, not for their policy, gentlemen, of increasing production.

Q. And after getting that production, they adopted a policy of cutting the market down very substantially?—A. Yes.

Q. From 30 cents in 1931 to less than 20 cents within 10 days?—A. Where a reasonably orderly maintenance of a price based on 30 cents a pound with reasonable precautions—in other words, if they had followed the practice they followed in 1933, when a similar condition arose.

Q. What did they do there?—A. They opened the market at 24 cents—however, without criticizing the legitimacy of the figure—

*By Mr. Senn:*

Q. Is that still maintained?—A. They maintained it religiously, right up to the end. I know I sold tobacco on that basis for months after the market opened

and other people did the same thing. It was an extremely commendable method of keeping up the peak market conditions and allowing the growers to have some little time to see what they had.

Q. Are you stating that 24 cents was a justifiable price?

Mr. SOMMERVILLE: I am going into the question of price.

*By Mr. Sommerville:*

Q. Now you had some further experience since then with the British market?

—A. Yes, continuously since 1930.

Q. You have developed quite a substantial number of customers to take a substantial amount of tobacco since then?—A. Until this year. I have not completed any arrangement with Gallahers yet, because I sold most of my tobacco like Mr. Kingston in the domestic market. I have not much for my regular customers this year. Since that time I have sold practically all through our agents, the Gallahers, quite a few million pounds there, and others.

Q. You have been assisting other growers to market their product in England to smaller customers, have you not?—A. Yes. In 1931 the plantations associated with me, and myself, got together. We were all pretty much ignored by the Imperial Tobacco company in 1931, probably for no justifiable reason.

Q. In their buying?—A. In the actual buying.

Q. Was that because they resented your going to the British market with your product?—A. I would not like to say that it was because I had sold on the domestic open market. I was quite as helpless as some of the smaller ones. As a matter of fact, out of my 64 growths, I think I only sold 7 on the local market. I had to export all the rest.

Q. You say you had to export the rest?—A. Yes.

Q. The balance of the 57 you did succeed in selling to the British market?—A. Yes, some at the opening of the market, about half, and the remainder later on, some to Gallahers at the opening of the market, and later to other manufacturers. During that time the great bulk of the unsold crop when the Imperial and the other buyers got through was something like 100 crops in the whole area, a little over 100, I believe.

Q. Unsold?—A. Unsold, in addition to those crops still held or unsold by the syndicates or large plantations.

Q. What do you mean by 100 crops unsold?—A. 100 small growers who either had not had an offer for their tobacco at all, or turned down any offer that was made, and were not sold when the domestic market was closed. That tobacco was assembled by one of the managers, Mr. Fair, manager of one of the other syndicates, and he made arrangements to have it financed and paid for, in the initial stages; and later on we jointly entered into an arrangement for the orderly selling of that tobacco; that is, tobacco that I held on behalf of myself and the syndicate associated with me, and tobacco held by Mr. Fair. We, in co-operation, disposed of that with some help from the Canadian Leaf Tobacco company. We disposed of that quantity of tobacco.

*By Mr. Senn:*

Q. In 1931?—A. Yes. In 1931 my operations in the export market were exclusively my own tobacco.

Q. Is it true that the tobacco that Mr. Fair marketed over there was sold at a much lower price than had been paid previously?—A. Sold at a price—yes, it was sold over there at a price that did not yield the grower of it or owner of it as much—

Q. I understand the companies that bought that tobacco bought it cheaper than they had already bought tobacco here. I understand that it was sold at a price below that which had been paid already by the British buyers in

Canada?—A. The three more active buyers who were looking forward to getting their supplies were Gallahers, Godfrey Phillips and the Imperial of Great Britain. The Imperial had arranged for their purchases of that year through the Imperial of Canada. They bought quite a large portion from me and associated plantations. Godfrey Phillips had made arrangements through Dibrell Brothers. The Canadian Leaf have purchased a large part of their supply through the jobbers held by myself and Mr. Fair. This other crop had to meet the hazards associated with getting interested those who had not sufficient interest to pay the high price. That is the real reason.

Q. That may be the reason but I am given to understand that that is one of the reasons the British buyers did not come back. The reason, I understand, is that they had paid a fairly high price, and the tobacco taken over by Mr. Fair sold to their competitors at a much lower price?—A. No; that is not the case. They came back the next year and bought larger quantities.

Q. I have heard that statement.

*By Mr. Sommerville:*

Q. As a matter of fact, next year you did sell a much larger quantity to the British manufacturers?—A. Yes; double the quantity.

*By Mr. Kennedy (Winnipeg):*

Q. The British buyer can be left to look after himself?—A. Yes, they look after their own interests.

Q. He does not need much assistance?—A. No. They need some assistance to make the necessary contact with the foreign buying system, so we can effectively do business. It is because of our archaic creaking selling machinery here that we do not make contact for his business. He does not need anything.

Q. He has a knowledge of marketing conditions?—A. Yes.

Q. And knows what supplies are available?—A. Yes.

*By Mr. Sommerville:*

Q. In 1931 the total exports amounted to 6,220,917 pounds; in 1932 it amounted to 11,084,548 pounds, and in 1933, 13,722,531?—A. Yes.

*By Mr. Senn:*

Q. I should like to complete that by asking you one more question. Was the 1932 crop sold to British representatives on our market here, or sold indirectly?—A. The Imperial Tobacco Company of Great Britain bought—I am trying to give you what happened to the total of that 11,000,000 pounds that went over out of that crop—the Imperial Tobacco Company of Great Britain bought 3,500,000 pounds right in the field.

*By Mr. Sommerville:*

Q. Of the 1932 crop?—A. Yes. Godfrey Phillips & Company bought by the agency of the Canadian Leaf Tobacco Company direct, something well over 2,000,000 pounds. I sold direct to Gallahers 1,500,000 pounds, green weight.

Q. Green weight?—A. Yes. And Mr. Kingston took his tobaccos over there, as he mentioned this morning, and the great bulk of the amount bought that year was actually bought.

*By Mr. Senn:*

Q. I was just asking the question to clear that up?—A. Yes, it was actually bought. Another point in connection with your previous question regarding that tobacco grown by Mr. Fair, you must remember that when the Canadian market was bought for the first direct selling to Gallaher, and purchases by Dibrell

Brothers and so forth of the 1931 crop, the sterling exchange was at a level of somewhere between \$4.25 and \$4.35. By the time Mr. Fair and I had our tobacco packed, on behalf of his one hundred odd growers and on behalf of myself and associated plantations, the exchange had gone down, dropping from \$3.80 to \$3.20, and there was a big loss occasioned there.

*By Mr. Sommerville:*

Q. What do you say as to the present position of the English market and its possibilities? You have recently returned, I understand, from your trip to England in connection with that industry?—A. About six weeks ago I returned.

Q. What is the fact about the market recently, and what are the prospects?—A. It is necessary to lay a foundation to explain this. It is an involved situation, and I think it is desirable that the committee should understand it as well as I can explain it.

Q. A little louder, for the press?—A. Out of the 1930 crop there was slightly over 1,000,000 pounds—1,300,000 pounds went to England, largely to these two original users, Gallahers and Phillips. Out of the 1931 crop, somewhere between five and five and a half million pounds went over.

Q. To them?—A. Yes. Now, just at the time the English manufacturers decided to get out a cheaper cigarette to the public, and they got out cigarettes selling 10 for four pence, as against 10 for six pence, which was the standard price for the standard cigarette. Their idea was to use Canadian, which was equal and comparable to American which they could buy. Although they paid us a reasonably good price for it, they saved some part of the preference—we didn't get it all—and did pass that on to the consumer. So they adopted this scheme of a 10 for 4 pence cigarette, a good American type cigarette, a reasonably good American type cigarette. That was started first of all, in a large way, by Gallahers. That particular cigarette went across with a bang. Included with that they had gifts, a premium or coupon system.

Q. That is, cards?—A. Yes, cards on which they could get gifts of various kinds.

Q. Which could be exchanged for premiums or gifts?—A. Yes, for gifts. In a very few months, all manufacturers had to be doing the same thing. One or two firms led the way and the rest had to fall in, for their own protection, naturally. Consequently when the crop of 1931 came along, there was a large demand for Canadian for that purpose. That was not the exclusive use for Canadians, but it just happened that there arose this extraordinary demand. Competition in these gift cigarettes became more or less vicious. But we must admit that, of the relatively large purchases out of the 1931 crop, and the double purchases of 11,000,000 to 12,000,000 pounds out of the 1932 crop, a large part was purchased for use in that type of cigarette. The competition became so vicious in that that last fall—in the middle of last summer when I was over, in July, I was aware that the manufacturers were trying to get together to cut out this thing, to agree mutually to cut this out.

*By the Chairman:*

Q. To abandon the system?—A. Yes, to abandon it before it ruined them. Just about the time our market opened last year for the fall, they had effected this plan, got them in order; that is in October of this year.

*By Mr. Sommerville:*

Q. In October of last year, you mean?—A. Yes.

Q. The manufacturers in England had agreed upon a plan to abandon the premium system?—A. Yes, to abandon the premium system, to go into effect on the first day of January. That is, after the first day of January there would be no more premiums.

There was a wide range of difference in the quality of the cigarettes. The originals, Gallahers' and Phillips'—they were the first to start it—maintained a fairly decent, high quality of cigarette, and a less generous gift scheme. Two of the later ones, large manufacturers, to come in on that kind of thing—Imperial and Carreras—had a much poorer cigarette, in my opinion, and a much more liberal gift scheme. The consequence was that, when they were cut out on the first of January, public antipathy against what was tantamount to raising the price practically ruined the business in that particular cigarette with the Imperial and Carreras, and left Gallahers and Phillips still with a considerable sale for their product.

Q. Of that same type of cigarette?—A. Yes.

Q. Because of the quality which they had in it?—A. Yes, largely on account of the quality. The only way I can make that statement safely is this: They all lost some business in January. I was in Gallahers on the first of March this year, and they told me this, that while they lost some business in January as a result of the public reaction to that by the last week in February, they were back again to their production, to the previous total. Mr. Arthur Phillips told us that, price and quality being satisfactory, he saw no reason why he should not buy something equivalent to his two previous years' supply. But the situation was this in so far as the total supply of Canadian was concerned: some of the large users had that particular use cut off. Consequently the rate of usage or withdrawals from bond by manufacturers each month necessarily went down, when you compare August, September, and October, of last year with January, February, and March. In other words, it meant that there was, on the whole, more months' supply of Canadian in England, and all manufacturers, all possible buyers, with the possibility of one exception—I will say two exceptions, Gallahers and Phillips—were more or less in a quandary as to what they were going to do. This naturally created a situation; and added to that, the poor quality of last year's crop, generally speaking the poorest we ever had. It is not comparable with that of 1931 and 1932 for export. That, to some extent, has created a situation in which, for the moment, there is a lack of interest in the packed supply of the 1933 tobacco. At the same time, the figures indicate that while there has been some loss in the use of Canadian tobacco, the actual use month by month as indicated by the government figures, with withdrawals from bond indicate that the usage of Canadian tobacco for this present calendar year will just about equal the quantity, or may be slightly below the quantity we have on hand to replace that. But conditions have transpired so that just at the moment it is not desirable to try and force the English manufacturers to take this tobacco, because to do that is like trying to force anybody. You have got to make a price adjustment; and tobaccos are well enough held this year, with sufficient funds on hand, so that a little patience can be exercised and it is not necessary to sacrifice the tobacco or try to press them on the market at this time.

*By Mr. Kennedy (Winnipeg):*

Q. Prof. Leitch, what is your view as to this practice of putting premiums in goods, in packages of goods that are being sold?—A. I think it is a vicious thing.

Q. Both to producer and consumer?—A. Yes, that is my own opinion. It is more or less an academic one, but it is my opinion.

Q. If one does it, then another competitor has to do it?—A. Yes.

Q. And then as you say, you get a reduction of the quality of the product and an increase in the attractiveness of the premium?—A. Yes. With this tobacco, it got extremely vicious in England, so that old traditional smokers in England, wedded to their brand of tobacco, changed it because of the pressure brought to bear upon them by the children and the wife, to get these things; and they had to abandon the system of gifts.

Q. It is the old system of crockery in cereals?—A. You could get anything in the warehouse, the gift department of these large manufacturers. It was just like a department store. You could get anything from a pair of socks to a radio.

*By Mr. Factor:*

Q. They also had a system of exchanging cards, that you could make a full deck?—A. No, they didn't have that at all. A package had so many coupons. A coupon was worth so much. You didn't have to build up a series. All you had to do was accumulate one hundred, five hundred or a thousand, whatever it was.

Q. Is there not a system that has been prevailing here with cards?—A. That is different, the system we have here in Canada.

The CHAIRMAN: We are poker players here.

The WITNESS: The buyer of the product here must go to some trouble matching up a deck of cards, and they can't all, and that means a lot of them are not redeemed.

*By Mr. Factor:*

Q. I have seen a retail store where you can go in and exchange a seven of spades for a six of hearts?—A. Yes.

The CHAIRMAN: To make up a straight flush. Now, we will have to meet again this afternoon. The professor will be back then. This might be a good point to adjourn for lunch. We will adjourn now until 3.30 p.m.

The Committee adjourned at 12.55 p.m., to meet again at 3.30 p.m.

---

### AFTERNOON SITTING

The Committee resumed at 3.30 p.m.

The CHAIRMAN: We will proceed with the evidence of Mr. Leitch.

*By Mr. Sommerville:*

Q. Mr. Leitch, we were dealing with the British market and the circumstances there when we adjourned. Perhaps you might continue your evidence with respect to that situation?—A. I think I have commented on the present position as it related to the supply of last year's crop that has not yet been sold, and I advanced the reasons, in my opinion, why that tobacco has not moved too freely. If I remember correctly, that is the point at which I discontinued. This tobacco is held by two organizations. If I might elaborate on the present condition in which it is held and the probable necessity for selling it.

*By the Chairman:*

Q. This is the Canadian stock in the hands of growers?—A. Growers' organizations. It has passed out of the hands of the growers themselves.

Q. But it has not gone into the hands of the manufacturers?—A. Quite so.

*By Mr. Sommerville:*

Q. It is still unsold?—A. It is still unsold. There is a quantity estimated somewhere between eight and nine million pounds, dry weight, packed in hogsheads, which is graded to suit the export market. That means it will suit the

domestic manufacturers too, although it is graded a little more finely than is necessary for domestic purposes. The fact that it is packed in export condition is not necessarily any detriment to selling it locally. This tobacco, roughly 3,500,000 pounds, is owned by the two growers' associations operating in that district, and the tobacco has to be packed under the control of the joint board set up to control all matters relating to the grading and sale of this tobacco; and on that tobacco certain advances have been made by the Canadian Bank of Commerce. They are guaranteed against eventual loss by the government of Ontario. The advances made by the present government are something below 15 cents a pound average.

Mr. YOUNG: On all grades?

The WITNESS: Average. That was the average advance made to date. Of that 15 cents sufficient was paid over to the packing companies who packed tobacco to pay their packing charges in full; the balance was advanced to the grower.

*By the Chairman:*

Q. Now, that 15 cents is not a parallel to the 24 cents and 20 cents paid to the grower; that is paid to the processor. In other words, this 15 cents is advanced on tobacco that is packed in form for shipment; it is in a somewhat advanced stage over what it is usually sold by the grower?—A. Yes, in that it is graded and has incurred the expense of packing which amounts to 5 cents a pound.

Q. That would be about 10 cents a pound to the grower, would it?—A. It would be less than that, because nearly 5 cents was used to pay packing charges—about 7 cents.

*By Mr. Senn:*

Q. Just there. Since you became chairman of the sales committee—I think you said you were chairman of the sales committee of this association—you have made certain sales of tobacco belonging to the association?—A. Only in the domestic market of certain grades.

Q. Could you give us a detailed statement as to the prices obtained? I am asking that so that I can compare it with the price that has already been advanced?—A. No sales have been made as yet from the packed tobacco, but certain grades were sold before packing, certain low grades.

Q. Could you give us the detailed prices of those?—A. There are two grades particularly. The broken leaf that arises naturally in the process of handling and packing, 4½ cents green weight on the grading table.

Q. Does that tobacco enter into the making of cigarettes in the same way as the better grades of tobacco?—A. To some extent, I imagine it is for that purpose.

Q. May I ask who purchased that?—A. The Rock City Tobacco Company in Quebec City.

Q. And they are using that in competition with the output of other companies?—A. Yes. Other companies, of course, have the same thing; they have scrap arising out of the mechanical breaking up of the leaf.

Q. Did the other companies purchase any considerable quantity of that or did it all go to the smaller concern?—A. It all went to the one concern. That is the scrap arising out of the tobaccos of this association.

Q. I suppose it makes it hard for the larger companies to compete?—A. The larger companies in making their green weight purchases bought scrap too. The conditions are the same.

Q. Did they not pay the prevailing rate of 15 or 20 cents a pound?—A. Yes, they would have to take their loss. It is a valuable product.

Q. Did you offer that scrap tobacco to, say, the Imperial or the other companies?—A. No, it was offered to a leaf merchant firm who also buys that for sale.

Q. It seems to me that it is rather an unusual situation?—A. No. It is not unusual at all, Mr. Senn; it is a valuable product. It has limits in its use for manufacturing, because it is broken. It is a valuable product. It often represents some of the fine and best of the leaf.

Q. In that case if it contains good tobacco, only in a broken form, I cannot see the difference, because it has to be broken up anyway?—A. Not broken up in the same way. For instance, it is very expensive to take the stem off because it is broken up. In the manufacture of high classed cigarettes it cannot be used because it contains so many shorts or fine particles that it would fill your mouth with little bits.

Q. Did you get any offer from the larger companies?—A. It was not offered to any Canadian manufacturer other than the Rock City Tobacco Company, because they normally get plenty of that in their own green weight purchases.

*By Mr. Sommerville:*

Q. That is, in the amount of green weight purchases which they make when they handle and pack and cure they all create a good deal of this same waste?—A. Yes, it is largely mechanical.

Mr. SENN: But they pay a larger price for it.

The WITNESS: Only in the mass. They naturally take into consideration when they are buying green weight purchases the fact that they are going to have 2 or 3 per cent of scrap, and that is naturally taken into consideration in the price.

Mr. SOMMERVILLE: When they are fixing the price they pay for the average crop?

The WITNESS: Yes.

*By the Chairman:*

Q. There is one point that Mr. Senn is not quite clear on. It is this: would the other manufacturing companies pay 15 cents a pound for scrap as scrap?—A. Decidedly not.

Q. That was the point?—A. Decidedly not.

*By Mr. Senn:*

Q. Not altogether. I should imagine that if the company was buying a large proportion of that tobacco, it should have a chance to buy a certain amount of this scrap as scrap at a lower price. There should not be a high price to one concern and a low price to another?—A. That is not the case. We have not offered it.

Q. I understood you to say, professor, that you had offered that to one concern. Perhaps, I was wrong?—A. You mean the scrap?

Q. Yes?—A. No. We do offer it to every potential buyer in Canada, and we take the highest offer we get.

*By Mr. Sommerville:*

Q. But in the grading you graded your product according to the qualities and grades required for the export market?—A. Yes.

Q. So, in tobacco that might ordinarily be sold at 15 or 16 cents a pound average you get some very high grade at above that and then you would have left some waste?—A. Yes.

Q. And the waste was sold?—A. The waste was sold.

Q. In the best market you could get?—A. The waste that would not stand packing charges.

The CHAIRMAN: That was brought about by the fact that you packed instead of selling in bulk?

The WITNESS: Yes, it was part of the natural process of packing.

*By Mr. Sommerville:*

Q. Now, would you just continue?—A. The great bulk of the balance of the tobacco unsold is held by the growers also, but they have consigned it to the Canadian Leaf Tobacco company who have made an advance, a cash advance on the crop, somewhat in relation to the value of each crop to the 24 cent top.

Q. Yes. Now, then, this tobacco which was not purchased during the marketing season is packed?—A. The marketing season, yes.

Q. Some of it was not purchased because of the services that had been rendered to the farmers in telling them that the value of their crop was more than the amount which had been offered for it?—A. No, I think there was very little of that, very few turned down any offers for sale this year. Practically all the buyers follow this practice of making an original offer very close to the value of each crop, on the 24 cent basis, and I know of very few cases where it was actually turned down.

Q. On the 1933 crop?—A. Yes.

Q. Of the crop not purchased, you say about 9,000,000 pounds is in the hands of the two associations?—A. The two associations, and the Canadian Leaf Tobacco Company who have taken in and made advances on and packed the crops of growers who are not members of either association.

*By Mr. Factor:*

Q. Who are the Canadian Leaf Tobacco Company?—A. It is a leaf handling and leaf packing, leaf merchant firm in Chatham, a subsidiary of the Universal Leaf Tobacco Company of the United States.

Q. Has it any relation to the British Leaf Tobacco of Chatham?—A. I think not; not that I know of.

*By Mr. Sommerville:*

Q. At any rate, the amount held by these three organizations constitutes about 9,000,000 pounds?—A. In addition to that, some large syndicates like Seythes and Freeman have some of the unsold portion which they are packing themselves, and I have some myself.

Q. So that the unsold portion is, in comparatively strong hands?—A. In comparatively strong hands; in hands that do not require any forced liquidation. In other words, it gives sufficient time to make an attempt to market it in a reasonably orderly fashion before the next crop comes.

Q. And you say that this method of holding it has been in the interests of the grower?—A. Decidedly.

Q. And it has been assisted financially by the provincial government?—A. Yes.

Q. And the first year in which this has been in operation was the year 1933?—A. Yes.

Q. And that was brought about by reason of the conditions which had prevailed in 1931 and 1932?—A. Yes. The conditions of 1931 and 1932 had pointed out to the growers some of the weaknesses in their system, and that was this: an individual small grower, if he did not get an offer from the Imperial Tobacco Company, Macdonald's or Rock City or some of the regular buyers,

was absolutely helpless. He was forced to take almost anything he was offered; but during the years the personnel in the industry made enough strides in organization to satisfy the Ontario government that it could carry on their business with a reasonable amount of intelligence; and, secondly, the assistance of government aid was available.

Q. And was it a fact, Mr. Leitch, that these growers who had not received offers from the big buyers did afterwards sacrifice their crops at very low figures to smaller buyers?—A. They did in 1931 and 1932, undoubtedly. They took offers that were less than they could have got had they been in a position to hold on.

Q. And by reason of the organization, in 1933, you say the situation has been changed somewhat?—A. Yes. And also that type of organization—the grower's own effort—eradicated a very vicious type of crop handling by vultures—brokers in the tobacco trade—who got hold of farmers' crops by making tempting promises to him—promises as to how much they could get—and they got hold of his crop and got possession of it without money and got it graded, and the poor grower would find himself entirely at their mercy because he did not know how they were handling it, and the returns were very low.

Q. And not having bought it, it had no cost to them?—A. No.

Q. Except the cost of handling?—A. And packing, yes.

Q. And they sold at their own prices?—A. Yes.

Q. And gave the farmer what was left?—A. It was very detrimental to those who were able to pack and hold because they had to meet that kind of competition in the markets, especially in England.

Q. And that tobacco was sold in England through these brokers?—A. A large part of it.

Q. And that prevailed in 1931 and 1932?—A. Yes.

The CHAIRMAN: These brokers would be a class apart from the regular manufacturers' buyers?

The WITNESS: Absolutely; entirely different.

*By Mr. Sommerville:*

Q. And they were the class who came along after they found the growers still with their crop on their hands?—A. Yes.

Q. Those growers who had not offers from the big buyers?—A. Yes. In 1932 particularly they came along and made contracts even before the market ever opened by making tempting promises of different kinds to these unfortunate men who could not sell, but were, otherwise, good and intelligent men who did not know what they were doing when they put the tobacco in the hands of these brokers in that way.

Q. Because of the fact that this tobacco is held in this way, and in spite of the present situation in the English market, I think you were going on to develop your evidence as to what were the prospects with respect to that tobacco industry.

*By Mr. Senn:*

Q. May I ask one question. Have you sufficient storage and packing facilities at the present time to handle your left-over crop?—A. Yes, there are ample facilities in the hands of good, reputable people to take care of the crop as large as last year or as large as any crop we have ever had, and, no doubt, from the prospective reduction in crop this year—it is not prospective now; it is going to be actual—the facilities are ample.

Q. I understand that certain interests are attempting a project or scheme for the erection of larger storage facilities, I think in Tillsonburg?—A. I have heard that there is a request for official government assistance to one co-operative building a packing plant.

Q. Is there need for it?—A. Not at present. We have plenty of physical facilities in the hands of good reputable people to take care of available business. It may be needed if the export business gets larger, but at the present moment—while most of them are not located in the right place, they are in Essex county to-day with cheap trucking charges it is not a serious matter.

*By Mr. Sommerville:*

Q. At any rate, by pooling your resources in the matter of physical facilities you can handle the entire crop there?—A. Yes.

Q. Then, you were going to continue with reference to the situation in the English market; or did you propose to present to the committee some evidence as to what you thought of the prospects in the English market?—A. I think, if I remember correctly, this morning I pointed out before we adjourned that just at the present time in respect to the tobaccos now in sight there is relatively little activity, and our efforts to sell at a profitable price have not met with much response. Although we have had price indications, both the marketing board handling these tobaccos and private individuals indicate that the tobacco could be sold well above the 15 cents advance but not sufficient yet to yield a price comparable with what the rest of the tobacco sold for. It is a situation requiring a little time to work out the difficulties and uncertainties that have arisen through the abolition of the coupons, and, particularly, to allow to sink into the Englishman's mind the real effect of this acreage reduction campaign, because that was the real reason for shrinking our acreage down to a point so that we were not running the danger of adding to the supply next year another year's usage of tobacco.

Q. That is to say, the Britisher having bought substantial quantities last year for use in connection with at least premium business, the premium cigarette business, has a substantial quantity in his own hands?—A. Yes.

Q. And your reduction of acreage this year will indicate to him that there will not be a surplus this year?—A. Yes. The growers themselves are taking the necessary steps to avoid the danger of building that up.

Mr. SENN: In that connection, is it not true that some 25 or 30 further units are commencing operations this year?

The WITNESS: The last information I had there were 22 new farms established.

The CHAIRMAN: Growers?

The WITNESS: Yes. New farms equipped. I believe there are actually more.

Mr. SENN: Will not that offset, to a considerable extent, your reduction in acreage?

The WITNESS: No, nearly all of these new growers have agreed to keep their acreage to 15 acres, and that would be only three or four hundred acres producing. Well, a 25 per cent reduction of 28,000 acres last year is 7,000 acres. This is really only a drop in the bucket.

*By Mr. Sommerville:*

Q. You think that with the assurance to the British market of there not being the likelihood of a surplus this year and the orderly marketing of your crop, there will be every prospect of a development in the British market?—A. Yes; but no doubt in addition to purchasing for use in cigarettes, the Britisher is finding uses in other directions. He is finding a use for Canadian tobacco in medium priced pipe-smoking mixtures, and the regular standard cigarette; and these uses are increasing as the kind of tobacco and the ageing of

the tobacco justifies. But we are not likely, as far as I can see, to have a market like the ten-for-four-pence cigarette, strike up that will create the terrific increase that we enjoyed during 1930 and 1932.

Q. But you count on a steady increase?—A. Yes. In connection with the steady increase, a continuity of supply is one of the essentials of the British market, or in establishing any tobacco business.

Q. You think you are in a position to provide a continuity of supply through the channels that are already in operation?—A. Yes.

Q. What about the effect on the Britisher of the restriction in acreage; is he not likely to say that continuity will be disturbed by restricting your acreage, as requested by domestic companies?—A. Well, no. You see, even with the restricted acreage in contemplation this year, with the usual Canadian buyer buying for the domestic trade, with a normal crop there will still be produced a sufficient quantity for export, to equal the amount they will use this year, which is the gauge for that. There is some difference of opinion as to just how much that will be, but after all it is in the hands of the Lord. We cannot tell what the crop will be like. There may be not any. If we have wet weather then we won't have any for export. If we have a little too much it will probably be the better quality of tobacco, and they may be tempted to buy for stock purposes.

Q. We have had evidence that the prices paid for the crops of 1932 averaged something like 16 cents, and for 1933 the average was something like 18 cents. This committee is desirous of knowing from you what price should be paid to the grower to provide him with the cost of his production and some reasonable return on his investment?—A. Well, using my own experience and my own companies as a guide, and as a basis, I would say an average price, taking into consideration the hazards obtaining in the industry, from time to time, or a price basis giving him an average of 25 to 28 cents would be—

Q. As an average?—A. Yes. I might say that would make my business fairly profitable, because I am one of the low cost producers in the area. I have a type of land that produces a good average every year, a good deal more than the average yield.

Q. You operate in a large way?—A. We operate in a large way, and therefore have effected large savings in operations.

Q. Your overhead is confined to that particular plant?—A. In addition to that I have not been subject to the worse vicissitudes of the local market. I have always been able to get a little better than the average price on the whole. For that reason a price situation that would provide for the average man in the industry 25 to 27 cents would be a profitable business to me, yield a fairly decent profit.

Q. That would make it a profitable business for you?—A. Yes.

Q. For the average man who has not the facilities that you have, it would pay him his cost of production?—A. Cost of production and a reasonably decent wage for the grower and a little profit say from 4 to 8 per cent, depending on how well run his farm is, and it would provide for necessary depreciation, over a term of years. It might not do that in one year, if the crop yield was low, but I am speaking of over a period of years.

Q. That average price of 25 to 28 cents would reflect in what way on the top prices?—A. Under the present conditions of selling it would require a top price of somewhere around 35 cents to make up that average.

Q. You would require a top price of 35 cents?—A. For a few selected top growths.

Q. That is your best judgment over a period of years, and having a knowledge of the conditions prevailing in the industry in the new belt?—A. Yes.

MR. KENNEDY (*Peace River*): To get that price, would it require an increase in the finished product?

*By Mr. Sommerville:*

Q. Would that entail any increase in the cost of the product to the consumer?—A. I do not think so. It might subtract a little bit on the profits of some manufacturer. It is so small you cannot pass it on to a package of cigarettes.

*By Mr. Young:*

Q. Could they not double it and pass it on?—A. As a matter of fact, here is a package of cigarettes that cost me 25 cents. I would be tickled to death to get my company  $1\frac{1}{2}$  cents for the tobacco that is in it,  $1\frac{1}{2}$  to  $1\frac{3}{4}$  cents for the tobacco that is in it; I am not getting that now.

Q. There would be a profit if you got that much for the tobacco that is in that package?

*By Mr. Factor:*

Q. How much is there in it?—A. There are 25 cigarettes. It takes roughly 3 pounds of tobacco to make a thousand cigarettes.

Q. Three pounds to make a thousand?—A. Yes. Of the 3 pounds of leaf part would be lost in stemming. The stem is taken out, but roughly speaking it takes 3 pounds of leaf to make a thousand.

*By Mr. Young:*

Q. Can you break that down and tell us how it is divided?—A. The biggest item is the stamp, 10 cents.

The CHAIRMAN: The excise stamp?

The WITNESS: Then in the cigarette, no doubt, there is a quantity of American leaf manufactured tobacco. To import that tobacco costs 40 cents a pound duty. These are taxes. Then, you have to remunerate the manufacturer, the jobber, the retailer. You have to remunerate the manufacturer for processing, manufacturing and printing the package, and you have to remunerate all the merchandising elements in the trade.

*By Mr. Sommerville:*

Q. You are not getting  $1\frac{1}{2}$  cents at the moment?—A. At the present time we are not getting  $1\frac{1}{2}$  cents. It would require very little increase on what we are getting now to bring it up to  $1\frac{1}{2}$  cents.

Q. A very little increase would bring it up to  $1\frac{1}{2}$  cents?—A. Yes, the increase would be so small it would be difficult to pass it on.

Q. That would make the difference between a profitable and unprofitable business, particularly for the growers?—A. Yes. You must remember the whole of the tobacco we sell does not go into cigarettes. It is not sold for high class purposes. It is sold for pipe smoking and other purposes. It might require a larger proportion of increase on that.

*By Mr. Young:*

Q. How many profits are in that?—A. That is hard to say. To determine that is assuming everybody is making money. That is to say there is the growers' profit, if any, the manufacturers' profit, if any; then there is the Imperial Tobacco company's profit, and there would be the profit of the leaf department of the Imperial Tobacco company, the Imperial Leaf Tobacco company, the buying agency of the Imperial Tobacco company, and then, the profits of all the merchandising elements of the trade. I do not know how many there are, but there are no doubt jobbers and retailers.

Q. At least two?—A. At least two.

Q. That would make at least four or five profits in it?—A. That is if they are all making profits.

*By Mr. Sommerville:*

Q. The one you had no doubt about is the grower?—A. At the present time, yes.

Q. He is not making a profit?—A. You can absolve me from any responsibility.

*By Mr. Factor:*

Q. You mean the Leaf department is a separate entity of the Imperial Tobacco Company?—A. For management purposes they trade under that name. I expect it is a subsidiary organization set up to run that service for the company.

*By Mr. Sommerville:*

Q. What recommendations have you to make to this committee with a view to improving the conditions which have been thus described by yourself and your conferees during the past two days?—A. Well, the first one I would make is one on which steps have been taken in the last few days to meet; that is to control the acreage to bring the potential supply insofar as it can be controlled for this coming crop within the limits of this potential demand. That has already been done.

Q. Control of acreage?—A. Yes; that has been done by joint co-operative action between the growers themselves and the buyers, and it has been extremely effective. I understand that up to last Saturday night, about 85 per cent of the growers—

*By Mr. Factor:*

Q. We did not talk that way in 1929 in the period of scarcity. It seems in every phase of industry, individuals who have come to this committee have asked for a restriction in production?—A. There is an absolute necessity to have this. We know that we cannot add to the exportable surplus of tobacco any faster than the English manufacturer can learn to use it at a reasonably profitable price. And we are faced with the position, if we have a normal yield this year, of winding up a year from now with a three year stock of Canadian tobacco on hand in England, when two is the normal supply.

*By Mr. Sommerville:*

Q. You say up until Saturday last 85 per cent of the growers had agreed to reduce their acreage?—A. About 25 per cent below last year. It is just for one year. It is not a permanent thing. It is not designed to be permanent, because none of us believe there should be any arbitrary barriers put against the normal and proper expansion in business. But this is to meet a temporary condition.

Q. What is the next recommendation that you have for the committee?—A. Well, the first one I would make would be immediate production by the proper government department of statistics, of stocks on hand by type, and the rates at which they are used, both foreign and domestic tobacco, by the manufacturer.

Q. That is, if you had the information available as to what stocks they have on hand, of the various grades and the purposes for which they are used—  
A. No, we would not ask them for the purposes for which they are used, nothing but the rates at which they are being used.

Q. The rates at which they are being used?—A. Yes.

Q. And the quantities that are being used?—A. Quantities, monthly or quarterly.

Q. Then you say that you would be in a better position to do what?—A. To direct our producing activities to keep our supplies somewhat in proportion to the rate at which they are used.

Q. Is this information available in England?—A. Yes, it is available in England.

Q. Is it available in the United States?—A. I understand it is. I have seen statistics that I think would be United States statistics along that line.

*By Mr. Kennedy (Peace River):*

Q. Have you tried to get them in Canada?—A. Yes.

Q. Have you been refused?—A. It has been reported to us by the tobacco companies of the central Ontario farms that they have not been able to get that information.

Q. I suppose it put the companies in a better bargaining position when they know your position and you do not know theirs?—A. Well, I would say so. Any secrecy regarding that is to the advantage of the business, I would say.

Q. They know all about your supplies?—A. Yes, they are right out there in the open. We cannot hide them. I think it is customary with most agricultural products that are stored to have reasonably accurate statistics available to the public. I see no reason why the tobacco manufacturer should be excepted from that, when it is so absolutely vital and necessary, to give the producing section of the industry the proper basic figure on which to determine the rate of their production.

*By Mr. Senn:*

Q. Just in that regard, what influence does the holding over of imported tobacco in bond have on the Canadian tobacco?—A. Well—

Q. Has it any detrimental effect?—A. No. To know how much imported tobacco is being held in store in Canada by Canadian manufacturers is, maybe, not quite so important to us as the statistics regarding the rate at which it is manufactured by month or by quarters or by years.

*By Mr. Sommerville:*

Q. I do not think that is the question Mr. Senn had in mind. Mr. Senn's question was, what is the effect upon your market in Canada of the holding of large quantities of imported tobacco in bond? Does that put the large buyer in the position of independence of your market? Is that what you had in mind?

Mr. SENN: Partly.

The WITNESS: Not necessarily. The Canadian manufacturers established certain balances, certain practices, using, we presume, a certain amount of Canadian and a certain amount of American, and he no doubt makes his purchases of both kinds, both types, in some reasonable relation to his usage month by month or year by year or quarter by quarter.

*By Mr. Senn:*

Q. I was also thinking of the situation in regard to limitation of acreage. Why should limitation of acreage go on to the extent it does while imported tobacco is being held in bond to the extent it is?—A. Well, you refer more particularly to the actual use of imported tobacco than to the actual amount held in store. I would say, generally speaking, at least, academically it must be with the continuous pressure of 40 cents a pound duty, and that forces the Canadian manufacturer to use Canadian in place of American as fast as he believes his public will take it. And the increase in the use of Canadian flue-cured tobacco, especially over the last six years since the Norfolk area came into the field with large quantities, would seem to indicate quite rapid progress is

being made along that line. Just whether it could safely make greater progress still and eliminate more American and supplant it with Canadian, is rather a conjecture, and I would not be able to say.

Q. There would not be any possibility of using a certain amount of it and having the domestic price depressed to the benefit of the company, would there?

—A. No, I do not think so.

Q. You surely realize that impression is abroad?—A. Yes; but after all it costs them 40 cents a pound more, and they have to pay pretty nearly as much, basically, for the tobacco itself first.

*By Mr. Sommerville:*

Q. It is not shipped from the country as manufactured tobacco?—A. No.

Q. There is practically very little manufactured tobacco sent out of the country?—A. Very little.

Q. There is very little manufactured tobacco brought into the country?—A. Very little.

Q. I observe from the reports made to the House on the 16th of April, that there were 5,360,294 standard pounds of foreign light leaf tobacco in the manufacturers' warehouses of Canada on the 31st March, 1934, and the question that Mr. Senn raises is, would that have the effect of depressing the price of Canadian grown tobacco, the presence of so much foreign grown tobacco?—A. No, I do not think that would have any depressing effect.

Q. The query is as to whether or not 5,000,000 pounds is necessary for the Canadian demand, whether a large portion of it might not be replaced by Canadian tobacco?—A. No, that 5,000,000 pounds on hand at any one time is a little less than a year's supply.

Q. Of American tobacco?—A. Of American tobacco; because we import, at the present rate of importation, somewhere between 7,000,000 and 8,000,000 pounds a year or during a year. A year's supply of tobacco, of any type, of any origin, is no great stock of tobacco, in this type of product.

Q. Because of the necessity of maturing?—A. Yes, the necessity of ageing.

Q. Would you continue with your recommendations?—A. The second one I have is the passage of the Natural Products Marketing Act which, in substantially its present form, appears to provide the necessary machinery for the sensible control of the industry, both production and marketing. On account of the compact nature of this industry, the continuity, the homogeneity of interests of all producers—that is, their interests are identical because they are not mixed up with other types of production on the farm—the small area, and the small number of people involved, we believe that an act in the substantial form of the Natural Products Act as it has been brought down, would provide the necessary control within the industry itself.

*By Mr. Factor:*

Q. Have you read the act, all the provisions of the act?—A. As it was first brought down, yes.

The CHAIRMAN: Order.

*By Mr. Sommerville:*

Q. Yes, Prof. Leitch, will you continue?—A. That marketing act, substantially as it is now—although there are a few places where I would like to see it—

*By Mr. Young:*

Q. —strengthened?—A. Yes, strengthened a little bit, but not in the form you mention, exactly; because I have been an economist, and I believe that the interests of the public are certainly entitled to consideration in bringing about

such legislation as that, to see that sufficient dominating power is not given to any producing interest any more than to any manufacturing interest, to abuse the privilege.

*By Mr. Factor:*

Q. Is there anything else but that in the act?—A. Oh yes, decidedly.

*By Mr. Edwards:*

Q. The Magna Charta is not involved?—A. No. The time has come when we must recognize this, that the free exercise of an individual's right to ruin himself and everybody else has to be circumscribed in some way,—just as he is not allowed to ruin himself in other ways than in political ways,—and we have got to learn how to do it. That is my opinion. It happens that tobacco, on account of the conditions I have mentioned, is an industry that could use this act.

*By Mr. Sommerville:*

Q. That is, the production and the consumption being domestic?—A. Yes, and particularly on all phases relating to the grading, marketing and exporting.

Q. And the question of the control of marketing would come within the purview of just such a body as has been indicated?—A. Yes.

Mr. YOUNG: Might I ask a question or two right there, Mr. Sommerville?

Mr. SOMMERVILLE: Yes.

*By Mr. Young:*

Q. Mr. Leitch, you say that because this is a compact industry, with both consumption and production largely within the Dominion, it would be very easy for us to make an arrangement that would give you a price of 25 to 35 cents, that is a profitable price?—A. Oh, not now; that does not necessarily follow.

Q. You say it could be done with this board?—A. No, I didn't. You could never tell till you try, but it would give an opportunity for the industry itself to have a fighting chance to get it.

*By Mr. Sommerville:*

Q. All the elements in the industry?—A. Yes.

Q. To get together under the aegis of this board?—A. Yes, under the aegis of the board.

*By Mr. Young:*

Q. Suppose we did it, and put the producers' on a profitable footing by that action. Considering that we cannot do that with other branches of agriculture what is there to prevent other farmers in other districts from going into tobacco growing, and upsetting the whole apple cart?—A. Your climatic and soil limitations would be one principal factor at the present time.

Q. Would you say the production of flue-cured tobacco cannot be very considerably extended in Canada?—A. It can be extended; just how much we don't know, but not to any great extent until we have the discovery of a type of plant that will mature in ten days to two weeks less time.

Mr. YOUNG: But there may be other districts that you don't know about, that could produce that very quickly; and this advancing price would tempt farmers all over the country to go into that. They would stop growing beans and grow tobacco; they would stop growing corn, and grow tobacco.

The CHAIRMAN: Weyburn, for instance.

Mr. YOUNG: Yes, Weyburn.

The WITNESS: There are definite, narrow soil requirements for this type of tobacco. The localities in which this type of soil exists are fairly well known in Canada. We have some in Ontario just as good, but they happen to be in areas north of Lake Ontario and up near Georgian bay where they have not a single month in the year free from frost. There are sandy areas in Canada of that kind that would grow this type of tobacco, but you can't grow any type of tobacco unless you have the months of June, July and August, the last week in May and the first two weeks in September free from frost.

*By Mr. Sommerville:*

Q. You are dealing at the present time with existing conditions?—A. Yes.

*By Mr. Young:*

Q. What are the existing conditions in British Columbia? Is there not an area out there producing tobacco?—A. There is an area out there in which I believe, during this last year, nearly 200 acres of this type of tobacco was grown.

Q. This move of yours would encourage them to extend their operations out there?—A. Absolutely.

Q. Absolutely?—A. There should not be any bar to making use of any natural resources in the country.

Q. The net result of your policy, if carried out, would be to raise up more competition within Canada; and then you would have to depend on your export market?—A. No, that would not be our idea. We would be foolish to do that. We know now we are past the rate of production that can be absorbed by the domestic market. We know we need an export market now. Our whole security depends on that.

Q. That won't affect the situation; if you put it on a profitable basis, you can't stop somebody else doing it, providing he has suitable soil?—A. That may be all right, provided it is done; and there should be provision made for the orderly expansion of any industry, in any scheme.

Q. You are going back to the scheme?—A. Yes.

*By Mr. Sommerville:*

Q. At any rate, under the policy you suggest there is provision for the orderly marketing of whatever is produced?—A. Whatever is produced; the orderly marketing of what is produced.

Q. Carrying out just such a plan within the industry as you have outlined has volutarily taken place through this existing board?—A. Yes.

*By Mr. Factor:*

Q. In other words, you would favour legislation, whether in the form of a marketing act or otherwise, prohibiting anybody going into the tobacco growing business?—A. Not necessarily.

Q. But that is what it means?—A. No—I said probably substantially in the form in which the act appears.

Q. Well, that act has licensing features which enables the minister of the crown to grant or withdraw a licence to the producer?—A. Yes. I would necessarily expect that anything set up by the government of Canada, the parliament of Canada, for the assistance of any agricultural group, would necessarily contain and recognize the necessity of containing some feature that would protect the public against abuses. That would be one of the purposes for a general marketing board to be set up, to see that the consumer and any other bodies interested were properly protected. Otherwise there would be no permanence, no value to the thing.

Q. In that act there is given to the minister of the crown entire discretion as to refusing licences, whether for production, for export or import?—A. My

little experience with ministers of the crown is that they are pretty responsive to public opinion. I would say that that would necessarily be provided for; if the thing is ever going to be any good, substantial or permanent, it must contain some features that take care of all parties.

*By Mr. Sommerville:*

Q. It must have public support?—A. Yes.

Q. And continue to justify that support?—A. Yes.

*By Mr. Factor:*

Q. Just the same, it does give dictatorial powers to the minister under that act?—A. It would appear to, from the way it reads, yes.

Q. And would you be in favour of that?—A. For the purposes of administration, yes, because you must have some form, some actual direction.

Q. It goes further than administrative purposes only; it gives him the right to refuse a licence to the exporter and importer?—A. Well, that may be justified under certain circumstances, decidedly justified under certain circumstances.

*By Mr. Kennedy (Peace River):*

Q. Have you any dictators in the industry now?—A. No, not in our industry.

Q. Is the Imperial Tobacco Company not in a dictatorial position?—A. It depends on in what sense you mean that.

Q. That is the impression I got from the last two days' evidence here?—A. Not dictators. They are dominators, but they are not dictators, in the sense that they seized power. They dominate by virtue of the large size of their business, and that large size has been effected by natural economic growth.

*By Mr. Sommerville:*

Q. You think that under some such scheme as outlined, with the board, there could be provision made for some more equitable distribution of the spread between the producer and consumer?—A. I would expect something.

Q. Without increasing the cost to the consumer?—A. Yes, without increasing the cost to the consumer.

MR. SOMMERVILLE: Judging by the profits that have been suggested here during the last few days, that might be possible.

*By Mr. Factor:*

Q. Prof. Leitch, where is there a line in that act which will give the minister the right to limit the profits of the Imperial Tobacco Company?—A. Well, I can't recall the text of the act.

THE CHAIRMAN: Do you want to bring the act in and analyze it?

MR. FACTOR: Yes, I analyzed it. I have got it right here.

THE CHAIRMAN: You might bring Hansard in.

MR. FACTOR: I think it is as well to analyze the act here in this committee, as to listen to a lot of evidence on legislation that the government has already introduced.

*By Mr. Sommerville:*

Q. Now, this second recommendation with reference to the marketing board provides for certain features which you think would improve conditions?—A. Yes.

Q. What other recommendations have you?—A. The provision of moderate credit by the federal government, to enable the growers' organizations, which appear destined to have that responsibility, to properly meet the risks and diffi-

culties necessarily attendant on the early stages of the developing of the British market. Such credits to be provided only if the two following conditions are met: First, that these organizations demonstrate that they have some skill and ability in the management of details of export; and second, that they are keeping their production in some reasonable relation to potential combined domestic and export demands. In other words, it is asking the federal government to take over the burden assumed by the Ontario government, of providing credits to tide the growers over the period in which they are going through the risks and difficulties attendant on the opening up of a new market. I qualified that by saying "moderate credits." That is, while any credit might be immoderate, due to conditions arising which nobody foresaw, there should be at least moderate credits; that is, never exceeding half or about half the expected market price, under moderate conditions, and only if the growers' organizations themselves demonstrate willingness and ability to earn, and some experience in the management of the details of export.

*By Mr. Young:*

Q. I suppose you would extend the same credit to all branches of agriculture?—A. I think so.

Q. To every branch?—A. For the purpose of developing export trade, yes, where a product is limited. I think for development of export business it would be probably justified.

Q. Have you ever made any estimate of what that would amount to, how much credit that would be?—A. Oh, it would be less than a million dollars.

Q. Oh, I mean for all branches of agriculture, every branch?—A. Of course, that would run into figures beyond my comprehension.

*By Mr. Sommerville:*

Q. You have not figured that out?—A. No.

Q. But in the case of the tobacco industry?—A. In the case of the tobacco business where there is the possibility of developing a profitable export business, profitable to the grower and profitable to the country as a whole, there should be moderate credit. That is the justification for the Ontario government doing it, for the sake of developing export trade; and they would not have done that for one minute if we were in some difficulty, if it were a fact that we had overproduction in the domestic market and no export possibilities. They would not lend us a cent.

*By Mr. Factor:*

Q. You have Ontario legislation in force now?—A. Well, we have these credits.

Q. Well, under the Ontario statute?—A. Credit was actually advanced before the present statute.

*By Mr. Sommerville:*

Q. Credits were arranged, and are supported by government authority?—A. Yes.

Q. In Ontario?—A. Yes.

*By Mr. Factor:*

Q. You mean there is no provincial legislation in Ontario supporting that?—A. There is now, as a result of this last session of the legislature.

Q. Why do you want to shift it to the federal authority?—A. Well, it is beginning to be beyond the capacity—not beyond the capacity, of course, of Ontario, but it would appear to be a provision to one industry that is solely

located in Ontario; and such provision made should be available to the British Columbia growers and the Quebec growers, any tobacco growers. Being an export business, I think it is a field for the federal government.

*By Mr. Senn:*

Q. Professor, is there a lien taken on the product?—A. Oh, yes.

Q. When credits are advanced?—A. Yes. The Canadian Bank of Commerce is loaning the money on warehouse receipts.

Q. Does that not make the danger very slight on any loan guaranteed by a government?—A. Well, loss could only arise if the credit was too large a proportion of the expected price, and that price was not realized.

Q. You don't think the credit advanced under existing conditions is too great?—A. No. We started at a very low price to begin with, 15 cents a pound on packed tobacco. It cost a third of that to put it in that condition, which means that after all there is very little advance to the grower.

Q. You don't mean to say that the 5 cents a pound packing and storage charges will be a loss to the grower?—A. Oh, no, they are not loss. They are paid eventually by the consumer.

Q. Processed and packed tobacco will bring that much more?—A. Oh yes, decidedly.

*By Mr. Factor:*

Q. How are these credits advanced now, through what agency?—A. The Canadian Bank of Commerce. It is an arrangement by which the Ontario government guarantees the Canadian Bank of Commerce against any loss arising out of the sale of the tobacco at a lower price than the advance; and the whole business is conducted just like I would conduct it myself as a private individual, if I were borrowing money from the bank. The government guarantees the Bank of Commerce against any eventual loss.

Q. In other words, the bank advances money to individual growers?—A. No, to associations.

Q. To associations?—A. Yes. The ownership of the tobacco is lodged by the member of the association in the association in his group; title passes to the association. The two associations are separate. Where the man is a member in the Simcoe association, the title passes to that association. If he is a member of the Tillsonburg association, it passes to the Tillsonburg association. They hold title to his tobacco. They pledge the warehouse receipts.

Q. To the bank?—A. To the bank, for a loan not to exceed 15 cents a pound, guaranteed by the government. The thing is operated by each of these associations which elects three members to a joint marketing board, which administers all matters relating to the handling of his crop, to the grading, packing and selling of his tobacco.

*By Mr. Sommerville:*

Q. And this committee handles the tobacco that is then placed in the hands of the two associations?—A. Yes.

Q. And they are the means of communication between the bank and the associations?—A. Yes.

Q. And they are the marketing agency for the disposition of the crop?—A. Yes.

*By Mr. Young:*

Q. Then you have the government in this position: They have guaranteed you a minimum price for your tobacco?—A. Up to 15 cents a pound.

*By Mr. Sommerville:*

Q. For processed tobacco?—A. Yes, for processed tobacco.

Q. And that price is very substantially less than the price that you get for the finished product?—A. Yes. One hundred pounds of average leaf tobacco delivered from the farm, produced, in the case of this Simcoe association, 72 pounds of packed tobacco; and in the case of the Tillsonburg association, 74 pounds.

Q. That is 100 pounds of green tobacco produced 72 to 74 pounds of packed tobacco?—A. Yes.

Q. That is upwards of 25 per cent shrink in the packing?—A. Yes.

Q. And in the curing process?—A. First of all, there is a shrink arising out of the sale of the crop, in the rejected grades, and the fact that in each crop there is always some quantity of tobacco unfit for any purpose at all; and then there is a shrink of about 10 per cent in the actual drying of the tobacco from the green farm condition to a dry condition.

*By Mr. Factor:*

Q. In other words, you feel that the security, by transferring warehouse receipts, is sufficient for the loan advanced?—A. Absolutely.

Q. Why could the bank not advance these loans without a government guarantee?—A. Because the associations had not yet demonstrated any ability to run it.

*By Mr. Young:*

Q. You don't want the government to give a guarantee; you say you don't want the government to give this guarantee until they have found that out?—A. Not the extension of any further credit.

Q. You want further credits?—A. No, no credits from anybody at all; if these two associations do not demonstrate some ability to handle this properly, they have no right to get any more money from anybody else anytime.

Q. Is the Ontario government to be relieved of this guarantee? You are asking that it be passed on to the federal government. Has the Ontario government expressed any anxiety over it?—A. No, none whatever.

*By Mr. Sommerville:*

Q. You just started this, did you?—A. Just started last fall.

The CHAIRMAN: They might be reluctant to let it go.

The WITNESS: I don't know. I never discussed the matter.

*By Mr. Sommerville:*

Q. At any rate, your recommendation is that this be made a federal matter and available to all producers of tobacco, federally?—A. If I may, I will modify that—either by the federal or any provincial government.

Q. All right. In other words, they may copy that in Saskatchewan, or Weyburn?

Mr. YOUNG: It has been there already.

The WITNESS: Make it a permanent policy, and only until such time as the industry has got established, to meet the risks and difficulties associated with opening a new market.

*By Mr. Sommerville:*

Q. Is that one of the practical suggestions of meeting and making a larger export market?—A. Yes.

Q. Now, what is the next?—A. The fourth: "In the event that this committee finds that the Canadian manufacturers have not passed on to the public

some or all of the savings resulting from the decreased cost of their purchases of raw leaf both domestic and foreign since 1931, that a tax on their Canadian purchases of 2 to 5 cents per pound be levied and used as a foundation fund for the above-mentioned credits, possibly more to protect the government against any eventual loss in those credits than as a bonus to the growing industry."

*By Mr. Kennedy (Peace River):*

Q. Why don't you ask that the profits the manufacturer is making be divided up, and take your ups and downs with him?—A. They made their profits out of other activities than handling Canadian tobacco.

*By Mr. Young:*

Q. Mr. Leitch, these people are paying you now 15 to 20 cents, and if you put a tax of 5 cents a pound on all they buy they might take that off you and pay you 10 cents?—A. They might. I will take a chance on that.

*By Mr. Sommerville:*

Q. If you create the export markets?—A. Yes.

Q. Are those the recommendations?—A. Yes.

*By the Chairman:*

Q. There is one question I would like to ask: is there any possibility of closer collaboration between the large Canadian manufacturing concerns, the processing and warehousing group, and the growers?—A. Oh, yes, I think so. I think there is.

Q. I think that Mr. McKay in his evidence made a very excellent suggestion—it was an express wish, I think, rather—he wanted to see peace and goodwill?—A. Yes. We all want to see that.

Q. What is there to hinder that closer collaboration between the interests involved so as to achieve a more satisfactory position for the grower? What are the impediments in the way?—A. To begin with there is the natural distrust and suspicion that usually exists between small agricultural producers and the middleman or manufacturer who handle his product. That is a very distinct psychological condition; it takes a long time to break down that prejudice, and it takes a long experience.

Q. Now, Professor Leitch—I will not say this to you personally, I am saying it to the group of officers who have appeared here the last two days—they strike me as a highly intelligent and well trained group of men representing the growers; so that particular factor which you have just mentioned does not exist?—A. Of course, you must remember that we are only a small part of 9,000 growers.

Q. You are a representative group, and you are the leaders. Could not you gentlemen who we have been listening to for the last two days get together with the large buyers and the processing firms that you mentioned to-day, and mentioned as concerns of high standing?—A. We are actually doing that. There is more cooperation between the groups to-day than there was five years ago when I started in business, and not because of any contribution of my own.

Mr. SENN: In spite of the fact that the prices dropped to practically half?

The WITNESS: Oh yes.

*By the Chairman:*

Q. The fact remains, from your own evidence and that of others, that the price to the grower to-day is too low?—A. Yes.

Q. Not only for profit, but for even maintenance of those in the industry?—A. Yes.

Q. And because there are debts being piled up now, which is an unhealthy condition?—A. Yes.

Q. Frankly, I think it would be possible for you to get together and make some suggestion to the committee whereby we might help or where government action might help on some common basis which would be acceptable to all.

*By Mr. Sommerville:*

Q. At the present time, the price drop has been the great barrier between the two factions, has it not?—A. Yes. Those of us who have appeared so far represent a fairly large portion of the producing industry, and, after all, Mr. Forsythe, Mr. Freeman and myself speak particularly for our association. I can tell you that up until these last few months it has been hard to get our general body of members to feel that our difficulties are not necessarily entirely due to the activities of the Imperial Tobacco Company and that we made some contributions ourselves to them; but a year ago or two years ago we could not have come down here and have spoken with the same authority that we can speak for growers to-day.

Q. Up until very recently, at any rate, the growers have been feeling generally that the troubles were troubles brought about by the big buyers?—A. Yes.

Q. But you say that in your group you recognize that the production of a large quantity has been a factor?—A. Yes.

Q. And that enables you to speak to-day as you could not speak before?—A. Yes.

*By the Chairman:*

Q. There are two things that strike me as outstanding. One is this: it is absolutely essential that you maintain, shall I say, the goodwill of the Canadian market?—A. Oh, absolutely.

Q. That is one?—A. Absolutely.

Q. And, secondly, you have now an entry into the British market which is momentarily depressed because of these changes you mention, and that business must be enlarged if you are to get that degree of prosperity that is desirable?—A. Yes.

Q. Those are the two objectives?—A. Yes.

Q. Does not that still leave the point I have mentioned, namely, that that will depend largely upon the measure of goodwill that exists between yourselves as growers, the large buyers and, of course, those intermediate firms like the processing and warehousing firms?—A. Yes. Of course, with the processing firms we have the most cordial relations.

Q. What I am getting at, and trying to get into your mind, frankly—and I think this is a good place to say it because we are desirous of promoting goodwill, as a committee—is there anything standing in the way of such a rapprochement between these interests?—A. Not from the standpoint of the growers, no. I think we are rapidly eradicating suspicion and distrust of the large bodies among our own growing people. Now, the joint effort to reduce acreage was worked up through co-operation. That is the first large thing we have done together.

Q. A moment ago, in your evidence, you said that an advance in price from 16 or 17 or 18 cents to, say, an average of from 25 to 28 cents would not amount to enough to be noticed in the retail sale price of tobacco?—A. Yes.

Q. If that is a fact, it strikes me that the point in dispute, or the difficulty that is concerning you, is comparatively simple, and as there are some very influential gentlemen here representing the manufacturing end I would like to see these interests try, say, to-night to have a little friendly and informal talk, and, perhaps, to-morrow when we are hearing more we might get a suggestion

from the whole group so that action might be taken that would assist in bridging this comparatively, apparently, insignificant gap?—A. Yes. I may say, Mr. Stevens, and I think I speak for all those associated with me, that we will be only too glad to welcome any such opportunity to do that.

Q. Is there anything else you want to say?—A. No, I think not.

Mr. MILLER: Might I interject to say that we would be very pleased to discuss the matter with Mr. Leitch and his friends any time.

The CHAIRMAN: That is very kind.

Mr. FACTOR: It might be very advisable also to get a few consumers of cigarettes.

The CHAIRMAN: You might take Mr. Factor in your conference. Frankly, gentlemen, I think it would be an excellent thing if you could get together. I have been very much impressed, I may say, with the clarity and the intelligence, possibly, of the presentation of the evidence here in the last couple of days, and it all indicates to me that business interests, such as we have here in this room to-day, surely could get together and overcome the difficulties with which these people are confronted. And we do not say just one thing—perhaps I am speaking a little out of turn, but one thing does weigh upon me constantly—and that is the plight of the fellow who works on the soil. It does seem to me that in the last year or two he has not been getting the deal that he should have been getting. I am not so much concerned about these keen minded businessmen who are managing the growing interests, but I do think of the fellow you have just mentioned, Professor Leitch, who is so occupied with his daily toil on his 20 or 30 acres that he cannot be expected to understand all the vagaries of manufacturing and merchandising and so forth. But I do say that you other gentlemen who have been here, who understand the situation thoroughly—you have displayed insight into the business from all its angles which is highly creditable to you and at the same time most illuminating—gentlemen like yourself and Mr. Miller and Mr. Lane and others who are here—should get together now and try it. I will ask you to try to reach some point of agreement, and, probably, before the inquiry is over we may have some really constructive suggestions whereby we can recommend to parliament ways and means of helping. Now, I just interjected this because it has been weighing on my mind for some time.

Mr. FACTOR: May I also interject here something that has been weighing on my mind as well, and that is the plight of the independent retailer, say, in the city of Toronto who is unable to get his supplies from the jobber or from the large manufacturing concerns. Would it not be well, before these gentlemen leave Ottawa, to have a conference from that angle of the problem too and see if we can arrive at some satisfactory solution.

The CHAIRMAN: Undoubtedly they are entitled to consideration, Mr. Factor—unquestionably.

Mr. FACTOR: I have received numerous complaints—I know Mr. Sommerville has too—and I do intend to press for an analysis of that problem, and perhaps, these gentlemen who are sitting in the room will bear that in mind when the proper time comes to help us solve the problem which is of intense concern to hundreds of people.

The CHAIRMAN: I believe there is a real opportunity not only before this committee, but before the gentlemen who are representing these interests to-day, to do a service to themselves and to this branch of one of Canada's industries.

*By Mr. Sommerville:*

Q. There is just one question I would like to ask to get the matter on the record before you leave, Mr. Leitch. You are a member of the Joint Advisory Tobacco Committee for Ontario?—A. Yes.

Q. And, as such, you prepared a report under the chairmanship of Mr. Major, of which you, Mr. Leitch, were a member along with Mr. Somerset and Mr. Blake Cohoe?—A. Yes.

Q. You prepared a report, and that report is attached to exhibit number 104. On the last two pages, 14 and 15, is the report on this problem. I would like to have it formally accepted as being the report of your committee?—

A. Yes.

Q. And I will ask that it be submitted in evidence at this time.

The CHAIRMAN: Now, gentlemen, I think we are through with Professor Leitch. Thank you sir, very much. I hope you follow my advice, gentlemen. We will now adjourn.

The committee adjourned until 11 o'clock, Thursday, April 26, 1934.

HOUSE OF COMMONS, ROOM 368,

April 26, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock a.m., the Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., of Toronto, and Mr. W. W. Parry, of Toronto, appeared as counsel for the committee.

The CHAIRMAN: The minutes of the last meeting deal with the usual matters regarding witnesses, etc., and the appointment of Mr. Fraser. If there is no objection I shall declare the minutes carried.

Yesterday we requested the various interests that have been before the committee in connection with tobacco, to get together and have a conference. Such a conference was held, and I wish to say that from what I have been able to gather it was conducted in a manner that lends hope to the ultimate successful termination of such a conference in a satisfactory way; but I do not think it is sufficiently complete for me to make any further statement than that, and to thank the gentlemen who took part in the conference for their co-operation in that respect. One company of very considerable importance has not, up to the present, appeared before the committee. Yesterday I sent a formal request to them to be here, and I understand they will be here to-day. It is necessary that that company should be included in the conference as well. A further announcement on this matter will be made later in the day.

In the meantime the Hon. Mr. Hoadley, who, because of an accident was unable to be with us a week ago, is present in connection with the presentation of a brief by the government of Alberta on live stock matters. Therefore we shall not go on with the tobacco matter for a short time, but hear Mr. Hoadley, after which I understand there are one or two tobacco growers from the province of Quebec whose evidence will be heard this morning, and then we shall determine later what further witnesses will be heard in connection with the tobacco phase of this inquiry.

Mr. SOMMERVILLE: There is also a burley grower from Essex.

Hon. GEORGE HOADLEY, called and sworn.

Mr. SOMMERVILLE: Mr. Hoadley is Minister of Agriculture for the province of Alberta.

The WITNESS. I have prepared a submission, but before proceeding with it, might I express my appreciation in having the opportunity of placing some of our conclusions in regard to the questions that you are considering, before you.

In no sphere of Canadian business has the unrest of the past few years been more marked or the criticism of current policies and practices more sharp, than in the fundamental industry of agriculture.

It is true that the policies behind agricultural production and the marketing and distribution of the products of the land, do not to-day differ greatly from those of a few years ago when the industry enjoyed an era of prosperity. But steadily falling prices for all farm commodities and the inability of producers to

meet their costs of production, have given rise to a searching out of what the producers believe are inequalities in the marketing and distributive system, and the focussing of public interest on these alleged inequalities.

It is my purpose, therefore, to present to you the viewpoint of the producers of farm and ranch live stock in the Province of Alberta, concerning the difficulties which to-day confront them, and to suggest, in their behalf, some remedies that must be applied if the rehabilitation of the live stock industry is to be effected.

The contribution of farm animals to the agricultural revenue of Canada has been of increasing importance within recent years. The estimated gross value of agricultural production reached a peak of \$1,825,950,000 in 1927. Of this \$490,644,000 or 26·87 per cent was contributed by farm animals and their products. The estimated gross valuation for 1932 showed a sharp decline from that of the peak year, the total being \$711,898,000, but live stock and live stock products in their contribution to the total, established a considerable gain, the figures being \$250,563,000 or 35·20 per cent of the total revenue.

*By Mr. Senn:*

Q. In livestock products you include dairy products?—A. Yes.

Mr. SOMMERVILLE: What year?

The WITNESS: 1932. We have no records for 1933. This increasing importance of livestock is particularly impressive when figures for the Province of Alberta are considered. In 1927 the estimated gross value of agricultural production in our province was \$330,118,000. Farm animals contributed \$55,475,000 or 16·8 per cent to this total. In 1933 the estimated agricultural production was valued at \$91,031,000 and the contribution of livestock and livestock products \$38,832,000 or 42·6 per cent of the whole.

*By Mr. Young:*

Q. What did you say was the total agricultural production in 1933?—A. In 1933, \$91,031,000.

*By Mr. Sommerville:*

Q. It had dropped from \$200,000,000?—A. It had dropped from \$330,000,000.

Q. In 1929?—A. In 1927; and the percentage was 16·8 per cent of the total in that year. In 1933 the percentage contributed by livestock and livestock products is 42·6. The point I wish there to emphasize is that livestock is making an increasing contribution to the whole revenue secured from agriculture.

Q. Becoming a very fundamental industry in the country?—A. Quite so.

Of the 619,300 head of beef cattle marketed in Canada during 1932 through stock yards and packing plants, 106,923 head were sold in the Province of Alberta. The sale of calves throughout the Dominion in 1932 totalled 335,213 head and Alberta contributed 29,146 of this total. In the same year swine marketings in Canada totalled 3,198,183 animals and Alberta producers were responsible for the sale of 1,008,452 head. Sheep to a total of 576,229 were sold during 1932, 113,261 head of these originating on the farms and ranches of Alberta.

*By the Chairman:*

Q. Is there any danger, do you think, in the figures that are given out regarding the sale of livestock, of any measure of duplication; for instance, a drover or a dealer in the country might buy a number of carloads of cattle or hogs from the market in Alberta, which would be announced as a sale in the stockyards of Edmonton, we will say—A. Or St. Boniface.

Q. —and then bring them down to Toronto and enter them on the market there, and sell them in the open market in Toronto as a further sale. Is there

any duplication to any great extent?—A. I cannot say to what degree, Mr. Stevens, but unquestionably there must be some duplication. For instance, further along you will find in the statement we sold a huge quantity, I think speaking now entirely from memory, approximately 50,000 feeder cattle for Ontario, and of course, when they come to market, they will be listed as sold on whatever market they are sold on after leaving our province, and they naturally are listed in our exports—

*By Mr. Sommerville:*

Q. Listed as feeders with you?—A. Yes.

Q. They will be sold as finished cattle, most likely, on the Ontario market?—A. Not necessarily.

*By the Chairman:*

Q. They might not?—A. They might. The possibilities of duplication are endless, because you might buy from us a carload of stockers and bring them down to the market and place them honestly on different stockyards, and there is duplication of sale again. It is a statistical difficulty.

Q. The effective statistics would be slaughterings and the exports?—A. Absolutely, if you could get them down to slaughters and exports, I think you would have as near accurate statistical information as possible.

*By Mr. Sommerville:*

Q. Then, your difficulty would be the local slaughterings?—A. Of course, it is just like our statistics in regard to wheat. You cannot deal very directly with the consumption on the farms, but you get some approximate idea, that is all.

*By Mr. Senn:*

Q. This swine marketing must mean the swine that went through the stockyards? Is that right?—A. Yes.

Q. There are other figures?—A. Excuse me, there. That is not accurate; through the stockyards or shipped direct to the packers.

MR. SOMMERVILLE: In Alberta?

THE WITNESS: Yes.

*By Mr. Senn:*

Q. Another witness gave us a figure of 6,000,000 hogs?—A. In Alberta?

Q. No.—A. Well, I gave you first the total—

Q. For 1933?—A. Yes. I think this is 1932. Our production is approximately 1,230,000 odd hogs in 1933. I know of that, but I am only quoting 1932 because the other is pretty much an estimate and it is not yet issued by the statistical branch.

Expressed in terms of percentages Alberta marketed 17·26 per cent of the cattle passing through Canadian stockyards and abattoirs during 1932, 8·69 per cent of the calves, 31·53 per cent of the hogs and 19·66 per cent of the sheep.

The development of Alberta's livestock industry has not been confined, however, to increases in farm animal populations or in the growth of marketings. Substantial gains have also been made in the quality of all classes of stock, and to-day the province is nationally known as an area in which farm animals of championship show ring calibre are consistently being produced. Winnings in recent years at the Royal Agricultural Winter Fair, Toronto, and the International Live Stock Exposition, Chicago, attest to the splendid progress made by Alberta livestock breeders and feeders.

In our province there is held the largest and most successful annual auction of pure bred beef bulls on the continent. I refer to the annual spring sale of

bulls in Calgary. These sales were established in 1901, and since that time 12,035 bulls have been sold for a total of \$2,012,290, an average of \$167 each. The record of this sale is indicative of the persistent efforts made by Alberta farmers and ranchers toward improving the quality of their cattle holdings.

I might say at this point that these paragraphs are not to vaunt at all. They are for the purpose of emphasizing of what importance to Canada it is to have such a splendidly built up, high class cattle industry as we have. That is all.

*By Mr. Sommerville:*

Q. And the necessity of preserving it?—A. Yes, of preserving it.

During 1933, 53,006 head of cattle were exported from Canada to Great Britain. Alberta sent 10,488 or 19.79 per cent of these, and again, as in other years won unstinted praise from British purveyors and others interested in the old country meat trade on the excellence of the bulk of her shipments. The province is recognized throughout Canada as a most promising potential source of hogs fitted for the exacting requirements of the British market. Substantial improvement has also been shown within recent years in the quality of sheep, lambs and wool marketed.

In addition to the important part this western province has played in the filling of domestic and export demands for livestock and livestock products, it has also taken an ever-increasing role in the supplying of feeder cattle and lambs for finishing in the older sections of the dominion. Alberta steers are in demand for Ontario feed lots, and during the past year or two sheep ranchers of the province, in common with those operating in Saskatchewan, have shipped lambs in large numbers to the east. The movement of store cattle from west to east has been as high as 48,000 head in one season, and the trend of agriculture in eastern Canada indicates that this business is only a small percentage of that capable of being developed. Alberta has been prominently identified in this movement of store cattle and is in a position to greatly expand her shipments. Our province, therefore, in addition to playing a prominent part in Canadian livestock marketings is also an important factor as a supply area for other sections of the dominion.

#### INCREASED IMPORTANCE OF LIVESTOCK

So much for the past and present of the livestock industry in Alberta, and incidentally in the three prairie provinces. Wheat market restrictions to be enforced this year constitute a fresh challenge to livestock growers and feeders. Due to low world wheat prices during the past few years a tremendous volume of the lower grades of wheat has been available as feed for stock. The outlook for 1934 is that this situation will be intensified. Legislative control of wheat marketing, in the event of a normal crop, will make available for the feeding of livestock a still greater supply of the lower grades of wheat; and the increased quantities of coarse grains produced on areas taken out of wheat production is expected to still further enhance the opportunity for livestock feeding.

The Legislative Assembly of Alberta, during the session concluded last week, went on record as favouring the bonusing of areas on which coarse grains will be grown this year in place of the wheat of previous years. This body also indicated a desire for reduced freight rates on coarse grains for feed purposes moving between interior points. These actions on the part of the Alberta Legislature show a desire in our province that every facility should be given to enable livestock operations to halt the fall of farm revenue.

The development of the industry, that it may meet the situation of to-day, does not lie in immediate expansion; for in spite of the adverse conditions under which producers have laboured during the past four years there has been a steady increase in the marketings of hogs, sheep and lambs. In the case of cattle,

marketings have been greatly restricted, resulting in an accumulation of cattle on farms and ranches which cannot, for the time being at least, be absorbed in domestic and export channels. In Alberta, for example, there were 80,000 less cattle marketed in 1932 than in the preceding year.

Illustration of the accumulation of cattle is given in the following figures representing marketings in the five year period 1928-1932. These figures represent marketings through stockyards and packing plants throughout Canada.

Year	Cattle	Calves
1928 .....	964,866	418,603
1929 .....	921,125	456,707
1930 .....	676,076	353,063
1931 .....	699,496	338,509
1932 .....	619,300	335,213

It is my considered opinion, representing the livestock producers of Alberta, that the development of our livestock industry to a point where it may efficiently take an improved position in the economy of agriculture, is hinged upon four essentials. These are:—

1. The stabilization of prices paid to producers.
2. The securing of a larger share of the consumer's dollar for the producer of farm animals.
3. The lowering of transportation and marketing costs.
4. The widening of markets.

Interlocked with these four major problems are other questions of great importance. These include the adjustment of export costs, the establishing and improving of production standards and the increasing of the domestic consumption of farm animal products. It will be my privilege to deal briefly with each of these questions.

#### CONTINUOUS FALL OF PRICES

You have already been told by witnesses before this committee of the chaotic condition of farm animal marketings in recent years. Prices paid producers have steadily fallen to lower and still lower levels. Instability has been the outstanding feature of an extremely unsatisfactory situation.

Unfortunately, marketing statistics for the year 1933 have not yet been released in their entirety, and it is therefore impossible to place before you the picture of unbalanced marketing, which will be revealed by the 1933 figures, at its worst. You are aware, however, that livestock prices in Canada reached the lowest points of a decade during 1933, and the presentation here of some figures for the five year period preceding the disastrous year of 1933 will indicate the manner in which those engaged in the production of livestock continued operations in the face of a steadily falling market.

#### YEARLY WEIGHTED AVERAGE PRICES

Year	Cattle		Calves		Sheep		Hogs	
	\$	cts.	\$	cts.	\$	cts.	\$	cts.
1928 .....	7	55	9	30	11	10	9	80
1929 .....	7	35	9	65	10	20	11	20
1930 .....	6	35	7	90	7	80	11	10
1931 .....	4	30	5	40	6	40	6	25
1932 .....	3	60	4	00	4	80	3	95

*By the Chairman:*

Q. What is that quotation from?—A. That is the yearly weighted average price all over Canada.

*By Mr. Sommerville:*

Q. All over Canada?—A. Yes.

*By the Chairman:*

Q. I wonder what the base of that would be, Toronto?—A. I think the base would be the markets that set the price; and I think Toronto practically does that, Toronto or Montreal.

Q. I confess when you say "Weighted average prices" for Canada, I am not clear in my own mind where it is fixed, or how it is fixed. It would be interesting to have that?—A. Well, that is a point that I think can be cleared up.

Mr. KENNEDY (*Peace River*): I would take in all the main stockyards, where you have a weighted average.

*By the Chairman:*

Q. That could be looked into?—A. That is a detail that you can get.

The CHAIRMAN: We will make a note of that and try and get it. It is really important to get that clear.

The WITNESS: It is a statistical statement.

*By Mr. Senn:*

Q. Where is that from, Mr. Hoadley?—A. It is taken from the statistics prepared by your own people. They will give you an explanation of it.

The CHAIRMAN: I will have the Secretary tell us what that is based on.

The WITNESS: I might say, Mr. Stevens, that further along I give our statistics of our own market, of prices.

The CHAIRMAN: I merely wanted to get that one point clear.

The WITNESS: Distressing as this continuous price decline may appear, its full reaction upon the producer is not revealed by the above figures. Price swings between months in each of the above years have also contributed to the general unsettling of the industry.

An indication of this is given in the figures representing the monthly weighted average prices per hundred pounds of all hogs sold on Canadian stockyards in January and in December of 1931.

*By the Chairman:*

Q. In December last?—A. Of 1931. It is purely an illustration of the swing between months.

In January the monthly weighted average price was \$8.85. In December it was \$3.85.

Q. That is between January, 1931, and December, 1931?—A. Yes.

*By Mr. Sommerville:*

Q. The swing in there was what?—A. \$5; down \$5 per 100.

Q. \$8.85 in January?—A. \$8.85; and in December of the same year it is \$3.85.

Q. I suppose that was enough to drive a good many people out of hog raising?—A. Yes, or staying in without any result from staying in.

Q. Will you continue?—A. Violent price ranges on specified grades are also disturbing factors in the production and marketings of hogs. The price ranges of select bacon hogs in the calendar year of 1932 at western points were as follows:—

## 1932 PRICE RANGES ON SELECT BACON HOGS

	Low	High
Winnipeg . . . . .	\$3 40	\$5 75
Prince Albert . . . . .	3 00	5 45
Moose Jaw . . . . .	3 10	5 35
Saskatoon . . . . .	3 00	5 45
Calgary . . . . .	3 25	5 25
Edmonton . . . . .	3 05	5 20

Of course, to be fair, we must recognize this, that the farther you get away from the markets of the east, and railroad transportation enters to a greater degree into it, there is naturally a decline of price.

It is true that within the past year the situation with regard to hogs has changed greatly.

In May, 1932, the monthly weighted average price of all sheep and lambs sold on Canadian stockyards was \$7.75 per one hundred pounds. The monthly weighted average price for November was \$3.80.

The price ranges on specified classes of sheep and lambs during 1932 was even more violent than the fluctuations in the bacon hog division. The following table gives the price fluctuations at three representative western points on lambs in 1932:—

## 1932 PRICE RANGES ON GOOD HANDY WEIGHT LAMBS

	Low	High
Winnipeg . . . . .	\$3 00	\$10 00
Moose Jaw . . . . .	3 00	9 00
Edmonton . . . . .	3 00	10 00

Q. That is the domestic market situation?—A. Yes.

Q. It is not the export market?—A. Well, that is the market. That is the price they were sold on those markets, whether they were used by the packers of our own city or local butchers, or whether they were shipped to Winnipeg or Montreal or Toronto.

Q. That product is not shipped to the old country?—A. No.

*By the Chairman:*

Q. What is that, lambs?—A. Lambs.

Q. We used to ship some to the states?—A. Yes, but they are not shipped to the old country.

*By Mr. Sommerville:*

Q. So these fluctuations were taking place in a commodity that was being consumed domestically?—A. Consumed within Canada.

Q. Within Canada?—A. Yes.

It is not my purpose to enter into an exhaustive study of production costs in western Canada as a means of impressing upon this committee the threat of disaster hanging over cattle and sheep ranchers. One example of the situation confronting these men will suffice to convey to you the entire situation. This is an illustration that I hope will carry some conviction.

## CATTLE PRODUCTION COSTS

During the years 1926, 1927, and 1928, a study of the cost of production of beef cattle under range conditions in southern Alberta and southwestern Saskatchewan was conducted by the Range Experimental Station with headquarters

at Manyberries, Alberta. This study based on over 10,000 head of cattle carried on ranches in herds of from 300 to 3,500 head, demonstrated the following production costs:—

## COST PER POUND OF BEEF FOR VARIOUS AGES

	Average weight at marketing less 3 % shrink	Total cost per head	Cost per pound
	pounds	\$ cts.	cts.
Calf.....	388	28 13	7.25
Yearling.....	710	49 58	6.98
Two-year old.....	1,000	64 16	6.42
Three-year old.....	1,275	78 44	6.15

These costs include a return of six per cent interest on the rancher's investment.

Permit me to remind you that the weighted average price paid for all cattle in 1932 was \$3.60. The weighted average for 1933 will be lower than this figure, for cattle sales struck an all-time low during the month of August last year. In October prime butcher steers sold at Winnipeg for \$2.88 per hundred pounds and values quoted at other centres were on similar levels. With a ranch cost for a two year old grass fattened steer of 6.42 cents per pound and a selling price of 2.88 cents per pound, less transportation to Winnipeg and yardage and commission charges, the ranch operator, if required to continue to do business on this basis, is faced with bankruptcy.

## RELATIONSHIP OF PACKING INDUSTRY

Interwoven with this pressing need for stability in livestock prices are the major problems of marketing, processing and distribution of livestock and meat products, and your Committee has already been given some details of the unrest prevalent from one end of the country to the other concerning the handling of these commodities from the time they leave the producer's hands until they reach the consumer's table. Producers long have felt that too large a proportion of the consumer's dollar goes to those who process and distribute meats and meat products, and too small a proportion to themselves as the growers and finishers of the live animals.

The distrust that has developed in this connection has been mainly directed toward those in control of Canada's Packing industry. The producers know, for example, that during 1932, a year in which they were driven to desperation by falling prices, and their complete inability to bring costs in line with their receipts, the Packer enjoyed a gross profit of his investment, which even with moderately efficient management must have insured a substantial net return.

Packers play an essential part in the livestock world and there is no desire to discredit them. Without question their contributions has been a valuable and necessary one. At the same time it is only common justice to the primary producers to suggest that the packers should not be permitted the measure of control which they have been permitted in the past. This cannot be justified if the producer is to be adequately compensated for his contribution.

According to figures contained in the 1932 Department of Trade and Commerce publication, "Slaughtering and Meat Packing," (published in 1933) the Packers of Canada, during the year 1932, paid \$66,000,000 for the animals slaughtered and the materials used in their plants. They expended \$10,000,000

on salaries and wages. The factory value of the products they sold in that year was \$91,000,000 and their gross return was therefore \$15,000,000. The capital investment of the Packing industry in 1932 had a total value of \$53,000,000; of this \$34,000,000 represented the value of land, buildings and machinery. A return of \$15,000,000 on a capital investment of \$53,000,000 gives a gross return of 35 per cent.

The producers know from their experience with the Packing industry that the latter is a highly efficient organization, and they maintain it is reasonable to suppose that in the packers' 35 per cent gross profit of 1932 there is contained a substantial net profit which has not been shared, in any degree, with the primary producers.

The meat retailer and the restaurant owner are also criticized by farm animal producers from time to time. It is not always true that prices of meats sold over the counter are out of line with the live animal values, but there are times when wide spreads undoubtedly exist between the prices the producer receives and those the consumer pays. It has been noticeable during the periods of depressed prices for cattle, sheep and hogs, that the charges levied by restaurant owners for meals in which meats from these classes of animals are the main items of diet, have not been lowered, to any appreciable extent, from their previous high levels. The producers maintain that exorbitant spreads between live cattle, wholesale, retail and plate-served prices are prejudicing the consuming public against their products without any resulting benefits to themselves. The downward trend of per capita meat consumption, they maintain, is a definite result of this.

#### DIRECT PURCHASES BY PACKERS

Considerable evidence has been given before this Committee relating to the effect upon livestock prices of direct purchases by Packers, and since the producers' viewpoint has already been fully represented to you, I do not propose to dwell on this subject. It has been suggested to you that Packers should not be allowed the right of direct purchase, and that all livestock sales should be made through stockyards. This suggestion, in the opinion of a large number of Alberta livestock producers, particularly the ranchers, is unsound in that it denies the primary producer his inalienable right to market where, how and when he desires. It is urged, however, that the Live Stock and Live Stock Products Act should be so amended that Packers will be required to weigh and issue scale tickets for all livestock they purchase on the same basis as purchases made at public stockyards. The transactions made daily in the Packers' Yards and also those made by the packer buyers daily in the country, should be known publicly as are those negotiated through stockyards, and market reports issued daily, weekly and monthly should contain records of transactions by Packers as well as on public stockyards.

*By the Chairman:*

Q. In other words, put them on the same basis as public stockyards in so far as weighing and prices paid are concerned?—A. Yes. If you would like me to say something about that at this time before I pass on I will do so. This representation is the result of a meeting that I called of all the different organizations interested in this particular subject; and I do not think it should be read into it that they are opposed to a system of marketing through the stockyards. If the conditions under which that is accomplished are satisfactory that is, adequate for the protection of the producer I think—it would convey a proper impression. If the stockyards were taken over and operated by the Dominion government, through the Department of Agriculture or any other department, at a minimum cost you could, through that method, secure the full effect of the

grading system for hogs, for instance. That is lost to-day by the direct purchase and shipment to the packing plant. Suppose I have two carloads of hogs, they are scattered grades, the buyer comes to me and he says, "I will take the whole bunch at a set price, I do not need to bother grading." I won't say it is the principle but it is the system of buying, that you do not purchase for the benefit of the other man to any greater degree than you can possibly help, and, consequently, the hogs are bought at a discount as compared to their real worth if they were graded and sold in a public stockyard.

*By Mr. Sommerville:*

Q. Sold in grades?—A. Sold in the grades they belong to, and getting the full price in that manner. You would balance the price in the markets throughout Canada if that method were followed.

*By the Chairman:*

Q. We have had evidence here, Mr. Hoadley, that something like 72 per cent of Ontario hogs, and in the case of Alberta, 90 per cent, go direct to the packer?—A. Absolutely. There is the operation of the stockyards, you have commissions, and you have all the other charges. I am not saying anything as to whether they are too much or not, but the point is this, the man on the land has to be considered, and we must realize that we cannot say: Well he should know this and he should know that. We must deal with facts, and the facts are, he does not know anything at all about marketing conditions, and consequently it is our duty to protect him against exploitation, and the only way to do it is to see that he gets service at the minimum cost possible with the purpose of protecting him to the greatest degree possible.

Q. Of course, the evidence up to the present shows—and I think my colleagues will agree with me—that any reduction in charges, any reasonable reduction, or any suggested reduction, would be so small, comparatively, when passed on to the producer that it would not be of very much value to him.—A. You mean to say between the direct system of purchase and the yard purchasing.

Q. No, I mean to say it has been suggested that stockyard marketing charges should be reduced?—A. Yes.

Q. But any reduction such as has been suggested to the committee by any witnesses, when carried through to the producer, is of such a small amount it would be scarcely noticeable?—A. Well, I would say in answer to that, Mr. Chairman, in the presentation I am making I have deliberately avoided suggestions which are detailed, for this reason: That I know, after having administered departments for many years, that there are occasionally or very often obstacles in connection with suggestions that are made to you in good faith but which you cannot put into effect and, therefore, I prefer to enunciate principles and leave it to the intelligence of those who have to carry it out. How are we going to get more to the producer if the consumer is satisfied with his present prices. Let us contemplate the situation by looking from this bank where we, as consumers, stand, across a void in which all the other people and processes are that come between the primary producer and the consumer. Within the between space, in my opinion, is the place from which the extra money must come for the producer, the man on the land.

Q. Your argument is, that by some saving in charges, as well as substantial contributions from the excess profits of the processor, there should be some additional amount go to the consumer?—A. There would be, and I would go further and say this: That there must be a clear and definite effort to educate the public to the fact, that they may be asking for greater service in processing than is necessary in connection with their foods. You see, you can have processing, or any of these things, go mad, and those costs are absolutely mounting beyond

reason. I think one of the greatest things that could be done would be to investigate this subject to see what it means in connection with other costs, see what it amounts to, and what can be eliminated.

*By Mr. Edwards:*

Q. What would you say as to the grading of beef?—A. I deal with that a little farther on.

*By Mr. Sommerville:*

Q. Before you deal with the question of stockyards and direct shipments, Mr. Hoadley, the continuance of direct shipments, even placing the packer under the regulations now prevailing under the livestock product Act, still leaves the packer in the same position that he has been in, to dominate the market by those direct shipments, or affect the market by those direct shipments?—A. Yes. If you will permit me, I would rather put it that he takes away from the market which established prices some of its finest products that have an effect in establishing prices.

Q. Yes, all these direct shipments have a tendency to affect the price on the public market?—A. Yes, that is true. I might say, Mr. Sommerville, that I have some very definite ideas, and I will touch on that very point. I wish to express my views on them if I may be permitted.

Q. Just before we get away from the question of stockyards, perhaps I might ask you, if it is not a fact that the price, generally speaking, of livestock in Alberta is ascertained by the price established on the public stockyards?—A. Yes, to a great degree. Of course, you must understand that we are two hours behind you in the east. Toronto, Montreal and other outside marketing points have established prices before our commission men start selling at all.

Q. Yes, we have had evidence that the information that is forwarded from the Toronto stockyards to the western markets has its effect upon the prices in those western markets.—A. Yes.

Q. And that that is the price and the only price that is broadcasted by radio, or by the Press, to the farmer, from which he can gauge the market price of his commodity?—A. That is so.

Q. We have had evidence that in the case of hogs, in Edmonton in 1932, 98 per cent of them were direct shipments to plants, and only 2 per cent bought on the Edmonton stockyards, and the 2 per cent set the market for the 98 per cent?—A. The price for the 2 per cent is set, to a great deal, by the reflected market in eastern Canada.

Q. And set by the men holding the 98 per cent?—A. Quite so.

The CHAIRMAN: It sounds like a vicious circle.

The WITNESS: It does. It is a circle whether it is vicious or not.

*By Mr. Sommerville:*

Q. And that, in itself, places the buyer then in a position where, if he desires to do so, he can manipulate the market?—A. Quite so.

Q. Mr. McLean gave evidence here, that livestock prices generally throughout Canada were uniform subject to the differential in freight?—A. Yes, I quite understand.

Q. That is, Alberta prices were the average prices less differential Toronto prices?—A. Yes.

Q. The differential from Toronto to Alberta was given as 1.14 a hundred on hogs. Now, I observe that last week, on Wednesday the 18th, the price of hogs quoted at Toronto was 7.50 f.o.b. country points; 7.85 off truck; and 8.25 off the cars at the market, while the prices that were paid beyond Edmonton,

at the stockyards at Edmonton for fed and watered hogs were 7.60 off truck, or 7.50, and off cars, 7.75. Now, if you had a truck load of 7.50 at Edmonton that would mean 8.64 right at Toronto off trucks?—A. Yes, by the proper interpretation.

Q. Yes, by the proper interpretation, and yet the market at Toronto was 7.50. In other words, the market at Edmonton was within 25 of the market at Toronto, whereas if the market at Toronto had been made a price of 8.50 that would have affected all the hogs in Ontario, would it not?—A. Yes, if they have as good hogs in Ontario as we have, of course.

Q. Do not let us make any assumption of that kind, Mr. Hoadley, in your presence, but for the same quality of hogs, we will say. Now then, I observe also, that in that week—April 18th and 19th—Blindman Valley hogs—that is the pool—sold to Canada Packers for 7.35 f.o.b. country points in Alberta. Burns bid 7.05 and Swift's bid 7.25. That is the Central Pool. The Northern Pool, Ponoka, sold to Canada Packers for 7.35. Burns bid 7.05 and Swift's 7.25, whilst the balance of the North Pool went to Canada Packers at 7.35. Now, 7.35 with an additional freight of 1.14 would bring the cost of those hogs at Toronto to 8.49, and that would be the price paid by Canada Packers at Toronto for those hogs at the time they were delivered here; is not that correct?—A. Yes.

Q. Well, the market at Toronto, fixed by those same packers, was a 7.75 market. Can you account for such a procedure, Mr. Hoadley?—A. No, I cannot. I think you had better ask Mr. McLean when he comes back.

Q. Well, he may not know.—A. Well, he may not tell you.

*By Mr. Senn:*

Q. Mr. Hoadley, why do you suggest that the stockyards should be taken over by the Federal Department of Agriculture rather than the Provincial?—A. Well, of course, all the rights we have in connection with the operation or control of stockyards have been passed over to the Dominion government years ago under legislation.

*By the Chairman:*

Q. That is, the rights of control?—A. Rights of administration and control.

*By Mr. Sommerville:*

Q. So as to provide uniformity?—A. Yes, so as to provide uniformity throughout Canada. The fact is recognized, that a great amount of the raw product that comes from the stockyards becomes an exportable product.

*By the Chairman:*

Q. But there is nothing to hinder a province from taking them over?—A. Oh no, there is nothing in the world to prevent that.

Q. As Minister of Agriculture in the Province of Alberta, and as one who has had a very wide experience both in administration and in business, how would you feel if you were saddled with the responsibility of running the stockyards of Edmonton and Calgary?—A. In regard to administration?

Q. Yes.—A. Well, my idea would be to cut every single expense that exists that is not necessary, and carry the utmost return back to the man that sent in his stock.

Q. Quite so, but in the operation of the yard, Mr. Hoadley?—A. I would cut out the commission man, for one thing.

Q. You would endeavour to make it a self sustaining institution?—A. Yes, to the greatest degree possible. But first of all, in the actual physical operation I would take all the hogs as they came in and I would put all the different grades

into different pens, and they would be there to be sold. In that way there would be no difficulty. You might come along and you might want all of the special grade bacon hogs.

Q. Of course, that could be done now?—A. That could be done now, yes, but it is not done. I do not want to say a word against anyone, but it is a well known fact that commission men have sold to each other. It is not an unknown thing at all. I say this advisedly that efforts should be made to eliminate the possibility of manipulation.

Q. Well, do you think that the elimination of the commission man would be a good thing for the producer now?—A. I do, because after all what is the commission man? He is only an aid, Mr. Chairman, to a sale. And who is the man that actually processes and disposes of that meat? The butcher that comes and can buy himself does not need a commission man to advise him, and the packers have their own buyers.

Q. Yes, but, Mr. Hoadley, supposing a farmer in your province sent a car-load of steers to the Toronto market. That is a long way off. Who is to look after his interests on the Toronto market in the face of the packers buyers who will be there to buy the steers, or the local butcher?—A. If it was an ideal condition—and, of course, that may be only something to dream about—but if it was an ideal condition, you would be shipping to a market that had no other purpose than to sell my cattle, or anybody else's cattle that came into their hands at as little expense as possible to me, and at the greatest value that could be received.

Q. You would make the owners of the yard the custodians of the stock shipped in?—A. Make them public officials working for the people of Canada, and not working for themselves to make profits, because it is not a necessity.

*By Mr. Sommerville:*

Q. They would be the representatives of the producer?—A. Yes.

Q. And they would be qualified and efficient salesmen to meet the equally efficient packer buyers?—A. Quite so.

*By Mr. Factor:*

Q. So you would first cut out the commission man, and you would also see that the stockyards are working for the public benefit and not for profits?—A. Absolutely.

Q. And the only man you are interested, in, in getting profits, is the producer?—A. No, I am interested in everybody that does something that is worth while and absolutely necessary for the people that live in Canada.

Q. Anyone doing something worth while to dispose of the livestock?—A. It is a question of administration. Anyone that is occupying a position between the consumer and the producer, which is unnecessary in the interests of either party, is an incubus, and a charge that should not be allowed to continue.

Q. In your opinion, the commission man is unnecessary?—A. Yes.

Q. And the privately owned stockyard should be made a public body?—A. A public utility.

*By Mr. Edwards:*

Q. You say the stockyards should be made self sustaining as far as possible?—A. Yes.

Q. You would load that extra debt on the government?—A. May I just give you an illustration—Denmark. In Denmark, you ship to an organization; you do not know what price you will get; you do not know what weight they are; you simply deliver them there, and they are weighed; it is entered against you, the weight of them, the quality, and everything; they are doing the work for you; there is the ear-mark.

*By the Chairman:*

Q. Who does all that?—A. The great cooperative packing plants.

*By Mr. Senn:*

Q. Do you think public opinion is at that stage here?—A. Oh, no, I think it is lagging.

*By Mr. Sommerville:*

Q. In Denmark, of course, the producer is protected by the cooperative, but is also protected by government officials in the packing plants?—A. Absolutely. Alongside of the rail where your sides come down there are three people, one of whom is the bookkeeper. Every hog or half a hog has a number in the ear, and as it comes along they look at that tag and the entry is made against your name. Say your number is 20. The weight is taken off; the government checker is there and he sees the weight; the grader is there and he grades it, and it all goes down on paper, and that man gets all that is in his hog with a minimum of cost in connection with it.

*By Mr. Senn:*

Q. Mr. Hoadley, what have you to say about complaints by the commission men themselves, that their experience results in better prices for the cattle sold?—A. Well now, I have some very good friends who are commission men, and it is not a personal question with me at all; I have no desire to be placed in the position of seeking to do the commission men any harm, but it may be that you will have to explore the whole situation in regard to sale. Some men are better than others, even amongst commission men, and some commission men will get you a better return than other commission men, and that may be the basis on which a commission man says that he got me, for instance, a better price for my last carload of hogs than I got for the previous carload, because the man who sold for me previously was not as good a salesman.

*By Mr. Edwards:*

Q. John Smith ships his hogs and Tom Brown ships his hogs, two farmers fairly close together. Those men get a certain price for their hogs, and usually they check up on that?—A. They do, and as a rule, they are not satisfied.

Q. Would not that be an argument for a commission man in favour of higher prices, with some competition on the market?—A. No.

*By Mr. Sommerville:*

Q. Your suggestion is, that whatever are the elements between the producer and the packing plant, those elements ought to be brought under government control, and they ought to be working for the producer, and at a minimum of expense, and not on the basis of private enterprise and private profit?—A. Yes. I would think so, even if it cost as much, because the psychology of the man on the land to-day is that he is being gouged. I say that advisedly. It would be in the interests of the man on the land, but it would have to be an organization that had no other purpose than to sell for me at the best price for me. If that were done the farmer would be satisfied to that degree, that the sale end of it was not, in any way, disadvantageous to him.

The CHAIRMAN: Mr. Hoadley, quite a substantial portion of western live stock is now marketed through co-operative organizations, wholly owned by the producer; that is true, is it not?

The WITNESS: Yes.

The CHAIRMAN: Now, if they are able, as an organization solely devoted to the interests of the producer, to get better results for the producer, why is it that there is not more sold through these agencies.

The WITNESS: Well, I am afraid I would be infringing more than I have done already on your time if I went into that, because it is a very very involved and complicated subject.

*By Mr. Young:*

Q. Let us have it anyway?—A. There is so much of history in it. Perhaps if we talk about the price of butter fat, it would illustrate the point. The price of butter fat per pound in Edmonton was 33 cents, and a pound of butter was worth 27½ cents in Montreal. Is there any monopoly? Is it common sense? Is it absolutely possible? It is not, except where you have another source of revenue than making butter. This is absolutely going on. Where did the money for buying that butter fat come from? Not from the sale of the butter; and you can apply this illustration to all sorts of marketing.

*By Mr. Sommerville:*

Q. But the fact is the co-operative has not been the solution for the problem which you have presented?—A. No, because of the many drawbacks, not in the system, but putting it into effect; and fighting concentrated power.

Q. And fighting power concentrated against them?—A. Against them.

Q. And then, of course, there are the administrative expenses involved in meeting that?

*By the Chairman:*

Q. Do you think a government-owned and operated agency would serve the producers better than the voluntary co-operative agency?—A. Well, I think it would; for this reason, you have the power of the government to fight antagonistic forces. And then I believe that whatever the producers got they would be better satisfied—they would be satisfied at least that the government got the utmost possible—and would eliminate the grounds for dissatisfaction that exist at the present time.

*By Mr. Sommerville:*

Q. Among the forces which you say have to be met by the cooperative, has it been your experience, or has it come to your knowledge, that certain interests—packing interests—did go out to set up opposition in the areas where co-operatives operated; and did give advantages that were not given by them in other areas to attract non-co-operatives?—A. I would not like to say yes to that, Mr. Sommerville. I would rather say that they set up various systems as time goes along, they vary the systems. It is just like the prize ring, you vary the blow according to the opportunity; and the general system is to send their bulk buyers in to buy hogs, for instance, without grading and shipping direct. Now that is the explanation of how you get the 98 per cent shipped direct in our district.

Q. And the buyer who goes in there goes in there largely representing the interests of the packer?—A. Oh, without doubt.

Q. Whether he is paid on salary or by commission, he is a representative of the buyer?—A. He can buy. We have had cases where cheques have been returned for more than a thousand dollars; hogs or cattle bought by a man supposedly in the past having been a representative of a commission house, for instance, or a packer. When the N.S.F. is put on his cheque, and the producer proceeds to try to collect the money, from his supposed employers he is confronted with the fact that this man was not the agent for any one, but was out to buy on his own, therefore recovery from him was an impossibility.

*By Mr. Young:*

Q. You spoke of the power of the government to fight antagonistic forces; that is to say, you think they would have more power in bargaining, and along those lines—is that the idea?—A. Yes, and then beyond that the methods that might be taken to destroy a co-operative could not be used to destroy the power of a government.

*By the Chairman:*

Q. I presume you would prefer that it would be the Dominion Government which would carry on this work?—A. Yes.

*By Mr. Young:*

Q. Has it been your experience as a government official that governments can sell to better advantage than anybody else?—A. No, and I will tell you why; because the people that sit in the legislature or in parliament in opposition to a government demand such absolute proof of honesty in regard to everything, that they have to check over and over any purchasing to satisfy these gentlemen, and they cannot buy as directly or as cheaply as an ordinary man does.

MR. FACTOR: Now the opposition is getting it.

MR. SOMMERVILLE: We seem to be getting both sides of the picture.

THE WITNESS: I do not know where any of you belong, so I can tell you just what I think.

MR. EDWARDS: Neither do I.

THE CHAIRMAN: This is an harmonious and happy family.

THE WITNESS: Oh, yes.

*By Mr. Sommerville:*

Q. Mr. Hoadley, I do not think by your answer you meant that the government had more power in selling than the packer?—A. No.

Q. What you meant was that a representative of the producer who is in the government employ, we will say, would have behind him influences which would prevent the working of the system which you have described as being the opposition of the big buyers at the present time?—A. Yes, there is force; and the power of public opinion behind the one situation, where it is a lone unsupported organization standing by itself in the other case.

*By the Chairman:*

Q. I suppose you could summarize this portion of your evidence by saying that it is clear that the producer does need a larger measure of, shall I say sympathy and support than is at present given?—A. Yes, I would say that. I would say that he is a man that needs all kinds of support. The other man does not, because he is able to take care of himself. One is a concentrated entity, while the other is a scattered multitude of units.

*By Mr. Factor:*

Q. What about the consumer, what class would he be in?—A. Well, he is pretty badly scattered at the present time, but still he is being supplied with his food. I have every sympathy for the consumer, but I do say about the consumer that low prices, poor prices received by the farmer producer would never help the consumer so much as good prices.

*By Mr. Edwards:*

Q. Would you apply that principle to all merchandise?—A. I would apply it to everything that is necessary for humanity to live. I do not believe in low prices.

*By Mr. Factor:*

Q. What about the purchasing power of the consumer under present conditions?—A. I did not think it was necessary for me to say anything about that, because it is obvious that it is at a low ebb, and it is going to be at a lower ebb the more prices drop. Let me give you an illustration, if I may: the first meeting that I ever attended in my life I attended on the borders of Scotland, when I heard a celebrated man, Lord Randolph Churchill—speak. After he got through talking about economics—wages, costs and so on, because they talked about those things fifty years ago also; there was an Irishman in the audience and he asked the speaker if he would answer questions. His question was this: when I lived in Ireland I got a dozen of eggs for six-pence, now living in Carlisle (that was the city, on the border of Scotland) I am paying two shillings a dozen; how is that? Lord Randolph, like many politicians, answered the question by asking another one; he said, I would like to ask you, if you could buy eggs for six-pence a dozen, why you ever left there; and the answer was: Because, be Jasus, I could not get the six-pence!

*By Mr. Sommerville:*

Q. That is sound economics, even if it is humorous?—A. These days we are having bread in our country sold for next to nothing. I will give you a direct illustration if you want one in connection with this subject if you talk about purchasing power: if you can buy a loaf of bread for five cents, you have to have five cents to do it with, and that is cheap purchasing, isn't it; but are you as well off as if you had to pay 20 cents for the same bread and had 25 cents with which to buy it.

*By Mr. Young:*

Q. And your contention is that if we had the government take over the stockyards, the packing houses, and handling the marketing of cattle and livestock, that they will get a little more money for us and we will have a little more money to buy with?—A. I have not said that; while that may be my thought, I have not said it.

MR. SOMMERVILLE: At any rate, he did explain that the medium of marketing should be made as simple and economical as possible for the producers.

THE WITNESS: That is the idea.

THE CHAIRMAN: Mr. Young, Mr. Hoadley did not include packing houses; I think, in justice to him that should be pointed out.

*By Mr. Young:*

Q. But we still have to sell them to the packers?—A. Yes, we still have to sell to the packers; however business is done processing is necessary.

Q. You said you would prefer that this should be done by the federal government, because they had more money; why is it necessary for them to have more money?—A. Well, I do not know whether I should answer that question; but if it is not shown to us all that under the existing state of affairs of the world, those who possess money in quantity have a power that those who don't have it certainly haven't got, I don't know how it is.

Q. The government is not going to establish processing plants, according to your idea, simply handle cattle for others; and if they need money it must be to cover losses with, isn't it?—A. No.

*By Mr. Sommerville:*

Q. That is not necessarily so?—A. If you are running a business—I do not know of course, and you will pardon me; I do not want to use an illustration about anyone else, because I do not know who I am talking to anyway, or their

business—but if I am running a business that requires capital for trading, I have to have that and I do not contemplate any losses—I may have to absorb them, but I do not contemplate losses—and my necessity for trading purposes may be \$10,000, \$20,000, or \$100,000. I must have capital, I must have money to do that; but it is not because I expect losses.

*By Mr. Young:*

Q. You would be handling the stuff for other people and all the capital you will need will be what will come in on the different products you are handling. The bank will furnish that just as readily for your business as they would for anyone else.

Mr. SOMMERVILLE: Assuming that somebody is providing the capital with which you can acquire the facilities with which to commence your business.

The WITNESS: I think we are getting in a rather confused position in the whole matter, because the supposition is that either the packers would go on or the government would buy them. I think I have tried to keep to the point that it does not really matter so much who does the necessary things as long as they are done at the lowest possible cost both for the consumer and the producer.

*By Mr. Young:*

Q. You are quite content to have the province do it itself?—A. It does not matter to me who does it, but I believe, and I say it seriously, that the Dominion Government—with the co-operation of the provinces if you like, sharing the cost; but the concentration of power throughout Canada is a necessity if you are going to set standards.

The CHAIRMAN: Yes.

Mr. SOMMERVILLE: I think we have your argument very well stated, Mr. Hoadley, on that score.

*By Mr. Kennedy (Peace River):*

Q. With regard to the question of prices, is not your argument with reference to low prices that the primary producer cannot go on, and it is not good for Canada?—A. Of course, that is beyond question. May I just illustrate that for one minute and tell you what occurred in Edmonton, because it is a complete illustration. Last year one of the big chain stores there for the purpose of “leads” as they call it—I think we all understand that.

The CHAIRMAN: “Loss leaders,” that is a very familiar term with us.

The WITNESS: Well, they are not all loss; in the case I have in mind the leader was mutton at two cents a pound. Alongside of this place is a butcher. I buy from this butcher for my house, and he told me that he had bought some half dozen sheep and killed them himself, and he had to sell them at that price to get any business. The next time, he bought at a price that would allow him a profit and compete with the people next door. Now, the people next door sell that—I can go and buy my meat at two cents a pound from that chain store, but their expectation is that I will pick up out of the thousand articles they have for sale, half a dozen at a good profit, and the profit on that other half dozen articles gives them a profit on the meat.

*By Mr. Sommerville:*

Q. And the producer suffers?—A. Of course, and every time you drive his price down you are just reducing humanity to the bread line as fast as you can.

*By Mr. Factor:*

Q. My question is this: I quite agree with you as to the low price the producer gets; but when you increase the price to the producer you must increase the purchasing power of the consumer, and under present conditions that is a difficult thing to do?—A. There is no question about that.

*By Mr. Sommerville:*

Q. There can be no recovery until the producer does get more for his product; and the consumers are only a class of producers and wage-earners?—A. You can carry the sheep business a little further, if you want to. As an illustration, the particular man in this case—I know him well—has a little flock of sheep outside of Edmonton and was making a decent living; he is a man with a wife and five children, they are in rags because they are not getting by as they should. If the price was decent every dollar that he would get would go for clothes, boots, and necessary things like that.

The CHAIRMAN: You mean a price that is fair value for the article in the light of present-day conditions.

The WITNESS: It would go back into the cities where these things are made, and it would help to make living conditions better for many others. You would just simply start a circle that would start machinery moving.

The CHAIRMAN: He is himself a potential consumer.

The WITNESS: Yes.

Mr. SOMMERVILLE: The biggest consumer.

The WITNESS: We are all consumers, and we all contribute for the things we consume. The sooner we get that into our heads the better.

Mr. KENNEDY (*Winnipeg*): And he would take joy in the spending.

The WITNESS: Of course he would.

The CHAIRMAN: All right, Mr. Hoadley.

The WITNESS: I am sorry—

The CHAIRMAN: No, no, it was most interesting and most illuminating. Will you proceed with your statement.

The WITNESS:

#### PACKERS' FEEDLOTS

As you are aware large numbers of cattle and lambs are purchased from time to time by packers and finished in feed lots owned or controlled by packing organizations. Producers are of the opinion that at times this works to the disadvantage of the men whose sole means of livelihood is in the production or feeding of live stock. It is true the percentage of live stock finished in packers' feed lots, compared to the total finished in the country, is relatively small, but the producers maintain that the possession of even this small percentage provides the packers with a means to combat price advances that has proven effective in the past.

*By Mr. Young:*

Q. Just there might I interrupt you; just how do the packers get hold of these cattle, sheep, or whatever they feed?—A. In various ways.

Q. Do they buy them on the market?—A. They buy them on the market or outside—make direct shipment.

Q. Suppose several carloads of cattle came on to the market which the packer does not need, and he selects those that are not well fed and says I will finish these in my yard; supposing he does not do that, what becomes then of the cattle on the market?—A. They go to some man who will feed them, whose business it is to do so, or they are killed and they might take their place in the general classification of beef.

Q. Well then the other man pays a better price than the packer does?—A. He might. If he does not pay as good a price—or rather it should be put the other way—if the packer will pay a better price than he paid, then the packer is paying it because he has two profits to stand behind his purchase.

Q. Do you object to them paying a better price in order to get these cattle?—A. Do I object to them paying it?

Q. Giving a better price in order to get these cattle?—A. I think if he wants them he would have to pay to get them.

Q. But whether these cattle are fed in the packers' yard or somebody else's yard, they are coming back onto the market any way?—A. No slaughter, they are going into the slaughter pen.

Q. Not into the slaughter pen, until they are ready for slaughter?—A. I know; well, that is right.

Q. They are going back into the market, somewhere, sometime?—A. No, they don't go into the stockyards. That is where we are getting confused. You are asking me if the packer sends these cattle. I say that is correct. If somebody else buys them they will come onto the market eventually when they are finished.

Q. Yes.—A. They do not go onto the market, they go into the packing plants and are slaughtered.

Q. But if the other man buys them they go back on the market again?—A. Quite so.

Q. They will send them on to the market another day?—A. Not necessarily. Of course, I think we confuse ourselves with regard to our real situation if we do not realize this, that the packing plants, if properly equipped, are equipped for the purpose of taking care of this for months and possibly a year; and my quarrel to a great degree with the present situation is that they do the purchasing day by day, week by week, or month by month at varied prices in a way that should not exist; there should be some system of stabilization of price. If the packing plants have great cooling chambers and freezing chambers for their products, is it not natural to ask that we should get some sort of level price? Now, for instance Mr. Young, supposing that you got a set price of 5, 6 or 7 cents, a steady price, then the man that is in the business of raising cattle—I do not care whether the cattle are farm raised or ranch raised—would know where he had to get his costs down to. He would have some idea; but at the present time he is between the devil and the deep sea.

Q. You set a price and you are going to give him that price continuously but if this meat, when it is finished, will not bring that price on the market, what are you going to do about it then?—A. Well, the whole thing is this: the price that is received is a part of the system.

Q. We have an export surplus?—A. Oh, well—

Q. You have to supply the domestic market, and your surplus must be exported?—A. There is another possibility. We have the Patterson plan in Australia, getting rid of your exportable cattle without destroying your domestic prices.

Q. Is it some such scheme as that that you have in mind?—A. I have nothing particularly in mind, but I believe in everything that will adjust the condition.

The CHAIRMAN: Let us get along.

*By Mr. Sommerville:*

Q. Yes, go ahead Mr. Hoadley?—A. By the process of refraining from purchases and drawing immediate supplies from their own feed lots, packers are able to create a condition of temporary stalemate in any given market at any desired time, at the same time realizing a profit on the animals they have fed

themselves. It is suggested that this is a flagrant and often used method of driving down prices, but there is a strong feeling among the men with whom the packers compete in the finishing of feed lot cattle, that serious consideration should be given to the question of the Packers' right to possess such an effective means. The principle behind the question of the Packers' right to feed livestock is one which might well be closely studied.

#### STOCKYARD CHARGES

Your committee has been presented with considerable data covering the yardage, weighing and feeding charges assessed by stockyard companies, and you have heard allegations of producers that these charges are exorbitant, particularly in this day of low livestock prices. You are aware that attempts have been made to justify these prices on the grounds that they are absolutely essential, as at present assessed, if the stockyards organizations are to show a return on the investment made in them. Reference has already been made to the suggestion that a more equitable price for livestock would result if a larger proportion of farm animals went through the stockyards instead of being consigned direct to packing houses. Permit me to state a strong opinion exists in Western Canada that a large volume of traffic, a volume sufficient to make possible a downward revision of the various charges made by the stockyard companies, has been diverted from these institutions to the packing houses, solely through the excessive nature of the levies made against producers.

Chief among the functions of the stockyards markets is the establishing of livestock prices. There is a very firm conviction in the minds of many producers that in the decrease in the volume of livestock routed through public stockyards, this main function is being defeated. A complete enquiry into all angles of the present marketing system, to include the part played therein by packers, stockyards companies and commission agencies, and at which producers may have full opportunity to air their grievances, is a pressing need. This enquiry, to be complete, should include study of the need and value of custom slaughtering facilities, and the value and practicability of auction selling as compared with the present method.

#### COARSE GRAIN FREIGHT RATES

There is a great need for reduction in prevailing rates on coarse grains moved from the areas in which they are produced to other districts where they are used as livestock feed. The cost of movement of coarse grains between interior points in the same Province, in many instances, is the equal of the cost of carrying the same grain from the point of origin to Fort William. It will be readily realized that when a livestock feeder is required to ship in grain, he is adding costs against his livestock, which cannot be recovered on the selling market. A reduction in the tariff on grain intended for livestock feeding would place large numbers of men located throughout the semi-arid range regions on a basis of equality with others in more favoured districts, and would also be of great assistance to all feeders in seasons of short crop.

The following is a tabulation. Shall I read it, or would you want me to just pass it over?

Mr. SOMMERVILLE: It will be put into the record as read in support of this argument.

The WITNESS:

#### LIVESTOCK FREIGHT RATES

The justice of the present domestic freight rate structure, in the light of the extremely low returns made to livestock producers during the past few years, is

a field for study which cannot be urged too strongly. The following tabulation gives the situation existing since 19114:—

FREIGHT RATES ON CATTLE, SHEEP AND HOGS IN CARLOADS, FROM STATIONS IN ALBERTA TO MONTREAL AND EASTERN CANADA POINTS WEST THEREOF.

Rate in cents per 100 lbs.

From	Sept. 1, 1914	Mar. 15, 1918	Aug. 12, 1918	Sept. 13, 1920	Jan. 1, 1921	Aug. 15, 1921 to date
Calgary, Alta.....	90	103½	108½	148½	143	114½
Coronation.....	90	103½	108½	148½	143	114½
Edmonton.....	94	103½	108½	148½	143	114½
Lethbridge.....	90	103½	108½	148½	143	114½
Macleod.....	90	103½	108½	148½	143	114½
Stettler.....	93	103½	108½	148½	143	114½
Wetaskiwin.....	94	103½	108½	148½	143	114½

It will be noted that in the period September, 1914, to September, 1920, three increases in livestock freight rates were granted transportation companies. Since September, 1920, two reductions have been made, the last in August, 1921. Shippers of livestock are to-day paying exactly the same charges they paid fourteen years ago, and they insist that if freight increases are justified in times of rising markets and general prosperity, downward revisions are equally justified when markets have fallen.

I am making that submission on behalf of the people interested in the business. For myself it seems rather difficult to imagine a static condition being altered just because of a crop condition, but that is the submission.

The present standard of carload minimum weights, upon which freight charges for livestock are based, is another factor in the transportation question which producers claim is hampering them in their efforts to reduce production costs. A study of these minimum weights should be included in any survey of livestock freight charges undertaken by this committee.

Now there is a submission of these things contained here but it is purely technical, and I presume it will be better for me to hurry.

Mr. SOMMERVILLE: Well, I am sure we desire to have the full agreement presented.

The WITNESS: I feel guilty at taking up so much time:

In connection with the rates on fresh meat products from Alberta points to Eastern centres, a situation exists which handicaps the western packer and re-acts to the disadvantage of the producer. Fresh meat products take a rate which is out of line with the livestock rate, and this permits eastern packers to purchase livestock in Alberta, shipped to the East for processing, and undersell the western packer in the fresh meat trade. This obvious injustice should be corrected by reducing the rate to a point at which it will not give an unfair advantage to the eastern packer.

The situation with regard to freight rates from western Canada on cattle consigned for export is similar to that which prevails in the domestic traffic. The following statement shows rates from representative western points to eastern seaboard ports, as they existed in June, 1916, and again in August, 1921. The 1921 rates are still in effect.

## FREIGHT RATES ON CATTLE, IN CARLOADS FROM VARIOUS WESTERN CANADA STATIONS TO EASTERN PORTS FOR EXPORT.

Rate in cents per 100 lbs.

From	June 1, 1916			August 1, 1921 to date		
	To			To		
	Montreal	Quebec	West Saint John	Montreal	Quebec	West Saint John
Calgary.....	90	95	95	114½	114½	121
Edmonton.....	90	95	95	114½	114½	121
Moose Jaw.....	86	91	91	110½	110½	117
Prince Albert.....	89	94	94	113½	113½	120
Winnipeg.....	60½	65½	65½	85	85	91½

## CATTLE EXPORTS TO BRITAIN

The question of the export of cattle to Great Britain is one of the highest importance to producers in Alberta. Our province has always been a steady contributor of cattle for overseas shipment, and, as has already been stated, of the 53,006 head forwarded from Canada to the Old Country in 1933, 10,488 or 19.79 per cent originated in one province. In addition to these direct shipments, large numbers of Alberta feeders have been finished in Ontario for this market.

You will recall that at the time the Imperial Conference agreements were signed very valuable advantages were given to Canada in the exportation to Great Britain of live stock, pork and pork products and mutton and lamb. In all instances save one, these advantages exist to-day as they did at the time the Imperial agreements were signed. In the case of pork and pork products they have entirely revitalized the hog industry. In the case of live cattle, however, restrictions have been imposed.

In the month of December last, exporters in Canada learned from the press that Canada had agreed with Britain to restrict exports in the first three months of the present year to a figure equalling that of 1933. This figure was 7,863.

Movement of cattle overseas this year to date has been brisk. In the month of January 4,469 head were shipped and in the month of February 3,438 head, a total of 7,907. Had this original quota arrangement been maintained, Canadian producers would have been without an export outlet from the end of February until a new quota was established for the second three month period commencing April 1. It is always difficult to forecast market trends but many of those close to the situation predicted a drop of a full cent in cattle prices all over Canada if the export outlet became closed.

Fortunately for the industry Canada re-explored the situation with the British Ministry of Agriculture, with the result it was agreed that exports to a total of 20,200 head would be allowed into Britain in the first six months of the year. This figure approximates that of the number imported into Britain in the first six months of 1933, the actual figure for last year being 21,792 head.

The British Minister of Agriculture has announced the entire question of cattle imports will be reviewed when the Imperial Conference agreement is reconsidered in June this year, and he has promised adequate protection to the British farmer.

The danger of an immediate drop in Canadian domestic prices, following the filling of the present quota, exists to-day, as it did during the period when the three-month quota was being so rapidly filled. Up to March 29, 11,558 head of the 20,200 to be allowed into Britain in the first six months of this year,

had been shipped, and several hundred head have left western Canada since that date. There is every likelihood that the present quota will be exceeded long before July 1.

Our opinion is that before the 24th of May the whole quota will be taken up.

If the cattle industry of this country is to be safeguarded it is imperative that the British outlet remain available for our cattlemen.

In the light of the total imports of cattle and beef into Britain the Canadian cattlemen's request for unrestricted entry of live stock is not unreasonable. In 1933, we landed in Britain 53,006 head. From the Irish Free State, a country that is not receptive to the policy of Empire unity, Britain drew in the same year 582,000 head. In addition to these shipments Britain received, largely from foreign countries, over 11,000,000 hundredweights of frozen beef and over 900,000 hundredweights of tinned beef. It should be possible for Canada's modest contribution to be permitted without restriction.

#### SUPERVISION OF EXPORTS NEEDED

The restrictions already imposed on exports of cattle to Great Britain make it imperative that maximum discretion be used by Canadians in selecting the animals to be sent overseas. Cattle shipped from the West must be of good quality in order to make a satisfactory return over the heavy costs of shipping.

Consequently, no low class cattle are shipped by us.

This, however, does not apply to Eastern seaboard shippers who are only confronted with ocean transportation, and it is a matter of record, that inferior animals of a type wholly unsuited to the British market within recent weeks have been forwarded to Great Britain. The continuing of this practice must inevitably create a prejudice against all Canadian cattle in the minds of the British importers.

I presume, gentlemen, that you are aware that nobody may ship meats for Great Britain from Denmark without having the government brand on it. They must have a standard of quality before the meat leaves that country.

Mr. SOMMERVILLE: Would you suggest that somewhat similar regulations be applied to live animals from Canada?

The WITNESS: I do. I think that the quota should be taken up only by the high class stuff that will create a reaction towards all our stuff.

To protect the reputation of Canadian cattle in Britain as well as the work of both Western and Eastern men who are earnestly endeavouring to send only choice animals overseas, and to ensure that the quota space is used in such a way that it will be of maximum benefit to the Canadian cattle industry, it is strongly recommended that an Inspector be immediately placed at seaboard for the purpose of inspecting export cattle shipments, and that full authority to refuse ocean transportation to any cattle unsuited for the British export trade be vested in this official.

We say seaboard as the official check. We, naturally, would not want people to move their cattle to Montreal if they could not ship them; so you would have to take care of that.

#### THE UNITED STATES OUTLET

The cattlemen of Alberta are not without hope that the United States market will ultimately be reopened to them. This outlet which has absorbed as many as 500,000 head of live cattle from this country in one year has been definitely closed to beef cattle producers since the Hawley-Smoot tariff of 1930 became effective. This tariff imposed a charge of 2½ cents per pound on cattle weighing less than 700 pounds and 3 cents per pound on cattle over 700 pounds. Representations have been made by Canadian cattlemen to the Government

from time to time in which the full value of this market has been stressed, and Western producers are confident their case will have sympathetic consideration in any trade negotiations conducted between Canada and the United States.

Meanwhile the British outlet contains the key to Canadian livestock prices, and it is of extreme importance that every possible action that will facilitate movement of cattle overseas should be taken.

## EXPORT SHIPPING COSTS

Costs of shipping cattle from Western Canada to Great Britain are heavy. The expense of transportation, handling and selling often totals 50 per cent of the gross returns for the cattle. When cattle of slightly inferior quality or finish are shipped the total costs are often considerably more than 50 per cent of the gross.

In order that you may have a complete understanding of the cost of exporting cattle at the present time, permit me to give you some figures covering a shipment of eighty head of steers from an Alberta ranch shipped from Montreal last September:—

## CANADIAN AND BRITISH CHARGES ASSESSED AGAINST SHIPMENT OF 80 STEERS SHIPPED FROM AN ALBERTA RANCH DURING SEPTEMBER, 1933

## CANADIAN EXPENSES

Rail freight at \$1.14½ .. . . .	\$13 91
----------------------------------	---------

Mr. YOUNG: Per steer?

The WITNESS:

Feed charges en route .. . . .	1.345	
Feed and wharfage at Montreal .. . . .	1.121	
Fodder on ship .. . . .	2.735	
Ropes, buckets, etc. . . . .	.30	
Loading and marking .. . . .	.10	
Tagging .. . . .	.05	
Cattlemen's wages .. . . .	.55	
Stamps and cables .. . . .	.05	
Montreal brokerage at \$17 per car .. . . .	.85	
Ocean freight .. . . .	12.00	
Marine insurance .. . . .	.50	
		\$33.511

## BRITISH EXPENSES

Wharfage .. . . .	.19
Landing .. . . .	.061
Veterinary inspection .. . . .	.081

Mr. SOMMERVILLE: Is that of 1 cent or \$1?

The WITNESS: Of a cent.

Lairage .. . . .	.609	
Droving .. . . .	.487	
Luck .. . . .	.243	
Commission .. . . .	2.43	
		\$ 4.101
Total of Canadian and British expenses .. . . .		\$37.612

The CHAIRMAN: That is per head?

The WITNESS: Yes.

Mr. SOMMERVILLE: Laid down at Birkenhead?

The WITNESS: Birkenhead or Glasgow. That is the total of Canadian and British expenses.

The average gross return per steer was \$61.01, and with a deduction of \$37.61 for expenses the average net return to the rancher was \$23.40. On the basis of Montreal weights these steers made a net return of \$1.932 per one hundred pounds.

*By Mr. Sommerville:*

Q. \$1.932 a hundred for his finest steers?—A. Yes.

Q. That is for September, 1933?—A. Yes.

This illustrates the statement that often 50 per cent or more of the gross return is absorbed by various charges.

The CHAIRMAN: Was that a shipment of good steers?

The WITNESS: Yes.

The CHAIRMAN: Eighty head.

The WITNESS: And it also serves to show the necessity of effecting reductions in transportation and other charges.

I do not propose to deal with these charges in detail but I do wish to impress upon you the importance of securing reductions in them. On the item of rail freight alone the shipper would have received \$5.98 per head more for his cattle if the rate had been based on the old tariff, which charged 90 cents per hundred pounds, instead of to-day's rate of \$1.14½.

The CHAIRMAN: When was that 90 cents in force? Prior to 1921?

The WITNESS: Yes, prior to 1921. 1921 is the last date changed.

The ocean freight charge of \$12 per head is high compared to the value of the cattle. Within recent months it has been increased.

Mr. SOMMERVILLE: The ocean rate at that time was higher than \$12, was it?

The WITNESS: Yes.

Mr. SOMMERVILLE: The ocean rate then was \$20?

The WITNESS: Yes.

Mr. YOUNG: You say it has been increased since this \$12 rate?

The CHAIRMAN: To \$15.

The WITNESS: Yes, to \$15.

Canadian shippers are to-day paying the basic rate of three pounds. In this connection it should be noted that in the early days of the cattle export trade the ocean rate was between \$7 and \$8 per head for animals that would outweigh those to-day being shipped by several hundred pounds.

Of course, in those days they shipped four, five and six year-old steers.

Mr. SOMMERVILLE: Of 1,400 pounds.

The WITNESS: Yes, big steers. I took a shipment to Great Britain in the nineties myself, and there was not a steer less than five years old. Now, the usual thing is eighteen months old—really forced calves, baby beef, young beef.

The CHAIRMAN: Those freight rates you mentioned were away back in the early part of the century?

The WITNESS: Oh, yes; when it was really straight arranged cattle. We calculated if we could get over \$35 or \$40 a head for a steer then it was a great return, but we carried them for five or six years.

*By Mr. Sommerville:*

Q. And that large beef was then made available on the Smithfield market, which was the only market that handled big beef?—A. Yes.

Q. Liverpool and Glasgow markets wanted the smaller beef?—A. Yes; but, of course, the whole situation is changed by small housekeeping and small cuts.

Q. And Smithfield market is not available to-day even for large beef?—A. No. In those days they used to take a T-bone steak that would cover your chest. You cannot get those off the small stuff we have to-day.

Cattle exporters in the West fully appreciated the action of the Department of Trade and Commerce in given direct aid to overseas shipments during a period when domestic markets were completely incapable of absorbing supplies.

Many of them feel that similar action this year would be fully justified and would be of great assistance in promoting cattle exportations and thus relieving the domestic situation.

In the interest of cattle exporters, particularly in view of the tremendous importance of cattle exports to the entire Canadian industry, it should be possible for an all-inclusive rate to be established. This would involve the co-operation of the Canadian and British Governments and all of the agencies rendering services in this connection. It would, however, be fully justified, for with such an all-inclusive rate established Canadian shippers could estimate their net returns with a reasonable degree of accuracy whereas to-day they ship with the greatest uncertainty. I recommend to this Committee that the establishment of an all-inclusive rate be immediately studied and brought into effect at the earliest possible date.

Another action that may well be taken without delay is the restriction of imports into Canada of meat and meat products. During 1932, 701,816 pounds of fresh, chilled or frozen mutton and lamb with a valuation of \$40,600 were brought into Canada. Of canned meats, poultry or game 4,453,927 pounds with a valuation of \$362,884 were imported. Imports of pork, barrelled, in brine, totalled 2,464,925 pounds with a valuation of \$130,318. These imports are a constant thorn in the flesh of western producers, hampered on every side by lack of available markets for the products which these imports supplant.

It is also recommended that a strong effort be placed behind the popularizing of meats as a staple item in the Canadian diet. This is particularly true in the case of beef, the per capita consumption of which has fallen greatly during recent years. In 1929 the per capita consumption was 66·57 lbs; in 1930 65·69; in 1931, 57·93 and in 1932, 56·02. The establishment of two grades of beef, Red Label and Blue Label, in 1928 was designed to increase the consumption of good quality beef. This policy was amazingly successful. In 1931, 17,240,748 pounds of the two grades were consumed; in 1932 consumption of these two grades had increased to 30,682,609 pounds.

There is need for a renewed educational campaign that the merits of graded beef be known to the consuming public, and that the consumption of the graded products be still further increased. It may be pointed out that so far no premium has found its way back to the primary producer of beef suitable for grading. The prices paid for cattle qualified for the red and blue label, when hung on the rail, and those not suitable for grading, choice though they may be, are one and the same.

There is a definite conviction among some cattle producers that the poorer grades of beef should be distinctly identified to the consumer in addition to the two top grades. These men hold that if consumers knew the poor quality product through a distinctive mark, they would make their purchases among the higher grades, and thus the standard of beef consumed throughout Canada would be raised. In the last analysis, if for no other reason, they would know definitely what they were purchasing.

Before concluding I would draw your particular attention to the plight of the beef ranchers in southern Alberta. For years these men have been at the mercy of our tariff makers or unmakers. At one time they found a profitable outlet for their grass cattle in the United States. To-day they are completely cut off from that market. From time to time restrictions have been imposed on exports to Great Britain, and to-day this outlet is greatly restricted. The ranches are in the position of having done everything possible, over a period of thirty years, to meet the requirements of the markets available to them, and time and time again have been rebuffed in their endeavors.

These men are the producers of some of the most superior beef in Canada, if not indeed in the entire British Empire.

I am saying this for the Alberta ranchers, but I say it for the ranchers in the province of Saskatchewan. They are men of the same kind.

Their production is the base upon which rests the splendid reputation enjoyed by Alberta grain finished cattle, including the Red Label Beef which has established such an enviable record in Great Britain and the larger consuming centres in Canada. Unless immediate action is taken to relieve their situation many of these men will be forced out of business and if this occurs the entire beef industry of Canada will suffer a severe blow.

Any steps necessary to sustain the beef ranching business, however drastic and any reasonable expense which the Federal Treasury may incur in this connection, is fully justified by the present situation. The beef ranches of Alberta must not be allowed to go into bankruptcy. Tremendous sums have been spent in sustaining other branches of agriculture. The ranchers have received no assistance in the past. They have relied on their own rugged individualism to carry them through periods of falling prices, drought and other hardships since they first established themselves on their ranches, but the present combination of circumstances working against them has proven overwhelming.

I may say at this point, that when I came down here last November I asked the principal men doing business for what you would call the whole ranching business of our province, to give me an estimate of the percentage of the debts that they could pay if their whole assets were realized, and the answer was, not more than 20 per cent of their debt.

*By Mr. Factor:*

Q. At present prices?—A. Present prices for livestock, yes. It is in their interest particularly that a broader vision of our trade relations with Great Britain should be taken. If a wider market for Canadian cattle cannot be obtained, as one measure of securing improvement and stability of domestic prices, the beef ranchers of Alberta will be among the main sufferers. I suppose you have all read Mr. Elliott's policy; that is the explanation.

The CHAIRMAN: Mr. Hoadley, it is now two minutes to one, and I think we shall come back this afternoon to finish your brief.

The committee adjourned at one o'clock, to meet again at 3.30 p.m.

---

#### AFTERNOON SITTING

The committee resumed at 3.30 p.m.

Mr. SOMMERVILLE: You may continue your brief, Mr. Hoadley.

The WITNESS: I had just got to the National Livestock Marketing Board, I think. I hope that stopping at that point is no indication that I desired to stop there.

The CHAIRMAN: No, no; it was just to give you breath.

The WITNESS: It is becoming apparent that unless Great Britain can enjoy a larger outlet in Canada for her manufactured products, she is prepared to further restrict the entry of Canadian primary products into British markets. To the Alberta rancher, in common with other agricultural producers, wider markets along with stability of prices are imperative. No other viewpoint, whether it be that of an eastern manufacturer who seeks the western trade in competition with a British competitor, or that of other interests, should be allowed to cloud this issue.

The people of the Western provinces are following the work of this Committee with intense interest. They are fully persuaded the aim behind this inquiry, as it relates to the marketing of agricultural commodities, is to seek remedies for all injustices which may be proven to exist. Your investigation is the most valuable undertaking ever attempted in behalf of the Canadian livestock industry, and I speak for all the producers of Alberta when I urge that it be continued until all the problems of our livestock men have been ventilated before you.

In the event it is found this Committee has insufficient time to complete an investigation that will reveal all of the essential facts respecting the live-stock industry, I respectfully suggest that a sub-committee of this Committee, or some similar body, be set up to continue this investigation and carry it through to a satisfactory completion.

And as a conclusion to the work of this Committee I strongly recommend as the spokesman of Alberta stockmen, the formation of a National Live Stock Marketing Board. This board in our opinion, should be created at the earliest possible date that the full value of your investigations may be utilized in the bringing about of the reforms in marketing and distribution covered by this brief and other presentations. This board should be a permanent body on which the live stock producers of the country are amply represented. It should have wide powers to continuously investigate all phases of live stock production, transportation and marketing, to correct injustices as they may arise and to impose penalties for contraventions of its rulings.

The live stock producers of Alberta are not content that their industry should lose its identity in the proposed Natural Products Marketing Act, or any similar marketing legislation. An industry that can contribute in the neighbourhood of \$2,000,000 in one year to the wealth of the nation is worthy of individual treatment in the seeking of solutions for its problems.

The work of this Committee followed by the early creation of a National Live Stock Marketing Board, and the decisions and actions of that board, are the mediums to which the vast majority of Alberta live stock producers are looking for relief from their present distressing positions. They see no other agencies through which can be obtained the speedy relief they seek.

*By Mr. Sommerville:*

Q. Now Mr. Hoadley, on the question of your marketing board, you would set up a separate live stock marketing board for handling the orderly marketing of livestock, I understand?—A. Yes; that is included, I think, in what I said.

MR. YOUNG: He said the powers of the board would be to investigate.

THE WITNESS: Shall I read it again?

MR. SOMMERVILLE: Perhaps you might enlarge upon it.

THE WITNESS: I had better read it again because I am afraid somebody did not really listen, or at any rate, absorb what I said. Of course, I have no desire to inflict it upon you, if you want to discuss it. I think we can explain it.

In the event it is found this committee has sufficient time to complete an investigation that will reveal all of the essential facts respecting the live stock industry, I respectfully suggest that a sub-committee of this committee, or some similar body, be set up to continue this investigation and carry it through to a satisfactory completion.

And as a conclusion to the work of this committee I strongly recommend as the spokesman of Alberta stockmen, the formation of a National Live Stock Marketing Board. This board in our opinion, should be created at the earliest possible date that the full value of your investigations may be

utilized in the bringing about of the reforms in marketing and distribution covered by this brief and other presentations. This board should be a permanent body from which the livestock producers of the country are amply represented. It should have wide powers to continuously investigate all phases of live stock production, transportation and marketing, to correct injustices as they may arise and to impose penalties for contraventions of its rulings.

It reiterates in the last paragraph what I read; the creation of a livestock marketing board only reiterates from another viewpoint.

*By Mr. Young:*

Q. Then you went on to describe the powers of the board?—A. Yes.

Q. Would you mind reading that?

*By Mr. Sommerville:*

Q. You say this board is established for the purpose of correcting abuses referred to?—A. This board should be a permanent body on which the live stock producers of the country are amply represented. It should have wide powers to continuously investigate all phases of live stock production, transportation and marketing; to correct injustices as they may arise, and to impose penalties for contravention of its rulings.

Q. What would be the advantages of this board in the livestock industry, Mr. Hoadley?—A. My conception of such a board, and I may say I am very enthusiastically in favour of it, if it is properly manned, and if the purposes in the minds of those who man it are directed towards the purposes that should animate them, and if, in addition to that, they have supreme power, used only in case they find it impossible to organize the industry as it should be organized by voluntary methods, then endless good will result. I do not believe it is any good to ask a tiger to live on meat unless you give him teeth to chew it with.

*By Mr. Young:*

Q. Supreme power, you say?—A. Yes.

Q. To organize them voluntarily?—A. Yes.

Q. Is not that a contradiction?—A. What?

Q. Supreme power to compel these people to organize voluntarily?—A. Supreme power to put the provisions of the act into effect. What is the good of you, in this parliament, passing an act to do certain things, unless you give the men that you depute to do these things, the power to enforce them.

Q. Might you not just as well drop out the word "voluntary"?—A. No, not at all. Why do we put criminal legislation on our statute books; for criminals, not for people who are not criminals.

*By Mr. Factor:*

Q. You would make criminals, then— —A. No, I would not do any such thing.

Q. —of those who would not consent to your scheme?—A. You do no such thing. What you propose to do is to try and get people together. Take the tobacco people, there are a lot of them here—if they will get together and organize their industry as it should be on behalf of the people they serve, as well as themselves, fairness to all, then you do not need those powers. If they say, "We are going to take no notice of it; we are going to do as we like"—you will pardon me; I am casting no reflection upon you, but I must use a horrible example—if they say, "we will do as we like; we do not care who we hurt as long as we do things for ourselves", would you be satisfied that that should be a fact? Unrestrained competition has cut the throats of everybody in Canada.

*By Mr. Sommerville:*

Q. Then your thought, Mr. Hoadley, is apparently when you have the voluntary co-operation of a large majority of those engaged in the industry you would not have their efforts nullified by somebody that stays outside?—A. Exactly.

Q. And wants to do as he likes?—A. Exactly.

Q. In other words, the voluntary principle would be accepted by the vast majority?—A. Quite so.

Q. And after this was accepted there should be power to require the rest to submit?—A. To enforce it if necessary.

*By Mr. Young:*

Q. What do you mean by vast majority?—A. Well, of course, that is only splitting hairs, Mr. Young.

Q. It is quite important?—A. Yes, I know it is. But it is important to you, in the House, when you are dealing with the bill.

Q. It is quite important to the farmer in the country?—A. You are here representing him.

Q. Yes.—A. You should guard his rights if you think they are being tampered with on the floor of the House, when you are dealing with the bill. As I said in the first place, I prefer to deal with principles. What you are dealing with is the administration of it, and it becomes detailed then. And it is only an illustration of the fact that a fanatic might put into effect some act in a way that will disrupt everything, while a sensible man who knows something about administration, and has an idea of the purpose of administration, and that is to accomplish things instead of being destructive, could administer the same act and have no difficulty.

Q. The success of your scheme would depend entirely on getting the right man to handle it?—A. If you leave out the word "entirely" I will go with you. You say, "depend entirely"; I do not say that. The enactment is a great thing, but its greatness is lost if the administration is not on an equality with your act.

*By Mr. Factor:*

Q. Who would constitute the marketing board?—A. I do not know; I have not asked Mr. Bennett yet.

Q. What interests would you have represented in it?—A. Well, I would not like to say what interests, but I would say this, that both the consumer and the producer, and if you like, the processor, shall have representation, but there should be representation beyond that, possibly.

*By Mr. Young:*

Q. Would you have this marketing board do any marketing?—A. Yes, where it is necessary.

Q. I gather from what you read in your brief that this board would act something like the board of grain commissioners and see that penalties were imposed for infractions of the law or investigate grievances and complaints. There was nothing said about marketing?—A. Well, the whole purpose that I can see for a marketing board—not the whole purpose, the great purpose of a marketing board, it seems to me, is this: we must have some method of changing the existing conditions. This morning there was something said about making the consumer pay more money, and that we must not do this and we must not do that. If cheap living would solve the problems of Canada, they would be solved to-day. The existing facts are proof that that theory is nonsense.

Q. You didn't read Mr. Buckle's evidence, did you?—A. No, I am not bothering about anybody's evidence but my own.

Q. He advanced a quite different theory?—A. Quite so. I have no doubt. I have no doubt but what there are lots of other theories than mine; but this I am telling you is mine.

*By Mr. Factor:*

Q. I am very happy that you call it a theory, anyway?—A. Well, of course, some people have different words to describe the same thing.

Q. By the way, it was your government, was it not, in Alberta that passed this miniature N.R.A. act last week?—A. I don't know what you mean.

Q. Was there not an act passed to control industry and trade in your province, last week?—A. I think I have got the act in my case here that might be the one that you are confused about.

Q. I would like you to clarify my mind on it?—A. I am afraid I left it home. I thought it was too dangerous to bring.

Mr. SOMMERVILLE: I have it here.

The WITNESS: That is all right. I don't want it.

*By Mr. Sommerville:*

Q. It is an act for the establishment of a bureau of trade and industry?—A. Yes.

The CHAIRMAN: Give it to Mr. Factor, for cross-examination.

Mr. FACTOR: I am going to ask a few questions later on with your permission.

*By Mr. Young:*

Q. I would like you to answer my question first, whether this board is to do any marketing or not—whether this marketing board is to market livestock?—A. You mean my idea as to what it should do?

Q. Yes?—A. What it shall do, of course, is not in my control. I don't know whether it should do marketing or not. It depends just exactly, in my judgment, as to how you can get along by a certain amount of control and direction. You know the tale of the man that lived in a house that had four doors, and his wife wanted him to always go out and come in by one door. She could not persuade him to do it, so she boarded up three doors and left one open.

Q. It is very handy to have a door to get out by?—A. You see, the illustration of that which I spoke of is that, if you have powers of restraint in such an act as we are speaking of and close the doors that are undesirable in the interests of the people of Canada, you would find possibly that people would be willing to go in that direction without any coercive efforts, or without any control.

*By Mr. Sommerville:*

Q. The mere existence of the power in the act would in itself, you think, be sufficient to add value to the voluntary effort?—A. Well, I am convinced that it would. I may be wrong, but I am convinced.

*By Mr. Young:*

Q. I am not clear on it yet. I may be dense, but I can't get into my head what you are going to have this board do. You want a marketing board. Will you please tell us what that marketing board's duties would be?—A. No, I am not going to tell you, because I am not going to take the function of your parliament. You are discussing it in the House of Commons now.

Mr. FACTOR: Oh, no, your recommendation is for the establishment of a live stock marketing board.

The WITNESS: You will excuse me; you have not asked me what my idea of the board is. You have asked me what this board shall do, and I decline to answer what it shall do.

*By Mr. Young:*

Q. Well then, give us your idea?—A. That is better. I don't mind answering that. For instance, we have difficulties in our stockyards. We have difficulties in connection with the system of setting prices. We have gone all over this. I am sorry I have to bore other people with it, but it is necessary, to answer that.

Q. Some of us are not as bright as others?—A. Well, of course, I think everybody is forgiven if they acknowledge their weaknesses. But there is not any limit, Mr. Young, to what this board might do, and there is not any limit to what it should have power to do, in my belief.

Q. That is to say, you would give it limitless powers?—A. Limitless powers within the purpose of the act. You see, there is no such thing as limitless powers. God Almighty is the only one who has illimitable powers, we are led to believe.

Q. Yes, we can accept that?—A. I am glad of that.

The CHAIRMAN: We have got a starting point.

The WITNESS: There is one point we can agree on, anyway.

*By Mr. Young:*

Q. You say "limitless powers within the purpose of the act"?—A. Without a doubt.

Q. Will you define the purpose of the act?—A. Oh, I can't. Again we are at variance. You mean my thought what it shall do?

Q. Yes?—A. My thought about what it shall do?

Q. Yes?—A. Well, you can do away—this is going over old ground—with the commission merchants, the commission men in the stockyards.

Q. You would give the board power to do that?—A. I would give the board power to have that done, if you nationalized the stockyards. Now, there is no question in the world there has got to be some way in which men from the country may ship their stuff, for instance, a carload of stock, to the yards. They would in the ordinary way ship to the commission man. You would have one man whose work is to take care of that function—instead of ten or eleven.

Q. Instead of these commission men, you would have a civil servant selling cattle?—A. I would not say a civil servant. Of course, he should be civil if he is a servant of the public.

Q. Would he be on the pay roll of the marketing board?—A. Yes, if you like that. I think you can get some very splendid men that will work for a government.

Q. He will be a civil servant?—A. He might be a civil servant. At any rate, it would be his duty to perform that particular kind of work.

Q. To sell that stock in the stockyards?—A. Absolutely. There is no difficulty about that. That is one thing he could do.

*By Mr. Kennedy (Winnipeg):*

Q. If you will allow me one question, Mr. Hoadley,—within your experience, is it your considered opinion that government officials selling live stock for the producers will render as efficient service as commission merchants do?—A. Well, I can't say that I have experience that would justify me in saying yes or no, because it has not been tried.

Q. But you have suggested doing away with them. I would expect you to have a definite view on that point?—A. I have. I have expressed it, that there should be one man.

Q. A government man?—A. Yes.

Q. That comes right to my question; is it your considered view that a government official will render as efficient service to the producers, in the matter

of marketing their live stock, as the commission merchant?—A. Well, I can't say yes or no, as I said before, from the standpoint of experience. But I have this belief, that there is no reason why a good man, working for the people of the Dominion of Canada, paid reasonably, treated decently, if he is the right kind of man, cannot serve the people as well as the commission merchant.

Q. I have no objection to your representation. I want you to understand that?—A. No, but I wanted to crystallize it. I think that is clear. For instance, we have got creameries in the province of Alberta. They are operated co-operatively for the people who send their products to these creameries. They are producing more butter than all the other creameries of a similar size, and we are setting splendid services from splendid men working for the people.

*By the Chairman:*

Q. Salaried men?—A. Yes.

*By Mr. Kennedy (Winnipeg):*

Q. I am not in the real estate business at all, but I have in mind the matter of selling any commodity—take selling real estate. You and I may be the owners of a number of properties. There may be individual cases where we can sell as advantageously as an agent. Yet, through long years of experience there has developed a class of men who are more or less experts,—they used to be real estate agents but now they are called realtors—and their function is to bring the buyer and the seller together; at least, communities have accepted their services, and must believe that they render valuable services. In so far as the producer of livestock is concerned, it seems to me that the commission merchant, if he is efficient, may well render a very valuable service there?—A. Well, of course you see, that brings in another situation entirely and it is this: Is the basis on which sales should be effected partly the ability of the man that is selling, or the commodity that is being sold?

Q. I would say partly both?—A. Well, I don't. I think it is wrong. I think it is one of the curses of our present condition.

Q. I am talking about things as they are, not as they should be?—A. I am talking about the facts being wrong.

Q. You don't think that there is not only the element of the quality of the product, but the efficiency of the man who is selling it?—A. The efficiency of the man that sells a thing and makes me pay more for it because he is a real salesman, persuades me to buy it when I don't want it, or persuades me it is worth more money than I should pay for it, he is an advantage to the seller—permit me to use that expression?

Q. Certainly?—A. He is an advantage to the sellers, but a disadvantage to the purchaser.

Q. Let me pursue that point farther. I think this is not over-stating the case: The buyer is chiefly interested in getting a particular commodity, whether it is steers or pork, at the lowest price that he can obtain it for. You will agree with that?—A. Oh well, yes.

Q. That is his job?—A. That is true.

Q. Now, I say an efficient salesman who may raise him on his price, may not be doing any injury at all, and still get a better price?—A. Well, of course, we have got into ethics now—"it may not be doing any injury." Of course, I can't follow that argument, that belief. I have so many illustrations; take just one, east of Edmonton, in one little district among the Ukrainians, one firm of tractor people sold them in one spring 800 odd tractors, and took their horses in part payment so they could not go back to the horses. It was just high-pressure salesmanship, and that is what caused them to be in debt down in that district. Now, that is something that has simply put that whole community in debt. That is high-pressure salesmanship.

Q. Do you consider commission merchants, commission agents or whatever they are, really parasites that perform no useful service?—A. No, I have no desire to use unfair language or expressions about anybody. I would not call them parasites.

*By Mr. Sommerville:*

Q. Is it not a fact, Mr. Hoadley, that your suggestion is that, efficient men, working for a salary for a marketing board, will render just as good service as these same efficient men working for ten different commission firms would render?—A. That is my point exactly.

Q. That is the whole point?—A. Yes.

The CHAIRMAN: And would remove the psychology.

*By Mr. Sommerville:*

Q. You would remove the psychological effect at the present time existing in the mind of the producer; you say you would remove seven or eight or nine firms now competing for that business?—A. Quite so.

Q. With a relative reduction in cost?—A. That is my point.

Q. Then, relative to certain evidence that we have had submitted, that the reductions in live stock commission agents' charges could not be made because it would affect the stability of the number of firms that are on the various markets,—you have in mind that situation, I presume?—A. Oh, without question.

*By Mr. Kennedy (Winnipeg):*

Q. Will you let me pursue this farther; I assure you that I am not interested in the commission man's point of view?—A. Oh no, I have no thought of that at all.

Q. Does not this element enter into it: If you have, as Mr. Sommerville said, government officials, efficient, salaried, sure of their pay, on the one hand, and on the other hand you have commission merchants, men dependent upon the development of their business for the reputation they get for efficient service, are you not going to get considerable incentive on the part of the commission merchants who depend upon their remuneration from the result of their services, to sell more effectively than you are on the part of the government official who is getting a steady salary, in any event?—A. Well, of course, I can't see the association of this particular activity, of that extra efficiency; because at the present time the packer pays, or any other purchaser pays, just what the market will allow him to pay or what the market demands him to pay; and it is not the efficiency of that commission agent that gets any extra money.

Q. We have had much evidence to the contrary?—A. I do not know, of course, about that.

Q. And I think a great deal of it came from commission merchants?—A. Of course, I prefer not to read evidence because I think it is rather inclined, with some people, to influence their opinion.

*By the Chairman:*

Q. You are giving us your considered opinion on that point, Mr. Hoadley?—A. I am giving you my own conviction. I may be wrong but I am simply giving you my own opinion.

*By Mr. Senn:*

Q. Mr. Hoadley, you were speaking a moment ago on the wide powers that should be given to a marketing board, and you said somewhere in your evidence that one of the chief difficulties with the livestock industries is the fluctuation in price, instead of having a stabilized price?—A. Yes.

Q. In your opinion, would it be feasible for a marketing board to have a fixed price?—A. Well, I think if the necessity arose. What I said this morning, if you will remember, was, that the minute there was in existence the power of putting into effect the fixing of prices, and doing away with the chaotic condition in the industry, if it became necessary, then voluntarily the people would get together and set a price.

Q. Then you would advocate such a board?—A. Yes, at least that is my opinion. If you give a job to somebody to do you must give them the power to carry it into effect.

*By Mr. Factor:*

Q. You have done a beautiful job in this respect with Bill No. 65?—A. Yes. I am glad you admire it.

Q. I am congratulating you on putting your theory into practice?—A. Well now, there is something there that you do not see in Bill 65. It is a fact that eleven of the principle businessmen that will come under that Act have petitioned to be brought under it. You see, we are an enlightened people up there; they realize their difficulties.

*By Mr. Sommerville:*

Q. Although that Act was only passed a month ago?—A. Absolutely, and they are petitioning to come under it.

*By Mr. Young:*

Q. In answer to Mr. Senn, you said that such a marketing board would have to have the necessary power?—A. Yes, they have got to have power, otherwise they could not function.

Q. But supposing the packer is not willing to pay the price that is set, where do you go from there?—A. Do you think that the packer is going to allow \$53,000,000 of equipment to lie idle?

Q. Supposing you fix the price at a figure that the packer cannot get anything out of it when he sells the meat on the market?—A. The board, if it is an intelligent board, will not do that. I am supposing there is an intelligent board.

Q. But don't you see, the minimum price would have to be sufficient to give the farmer a return for his labour?—A. Yes.

Q. But the world to-day is not regulated to such an extent that you can fix the price. Will you tell me how a marketing board is going to tell the world to pay that price for the meat that he buys from the packer?—A. I will be very pleased to oblige you in any way that I can, but I do not propose to answer suppositious questions.

Q. That is not a suppositious question, that is a fact.—A. Well, I think it is suppositious.

*By Mr. Sommerville:*

Q. I understand that your argument, or your suggestion is, that that board may have power to fix that price within a certain range?—A. Exactly.

Q. They would not have power to fix prices which would interfere with world prices?—A. No. I was just going to speak about this excellent thing that Mr. Factor—

*By Mr. Young:*

Q. Do not forget to come back to this later on.—A. I was going to say, that Act No. 65 does not propose anything but setting a minimum price which shall protect the people up to the retailer, then the retailers amongst themselves can take all the profit they desire. That leaves competition from that stage on.

*By Mr. Factor:*

Q. The Act contains a lot more than that?—A. Of course. I am only talking about one thing. You see, a horse has four legs; you can talk about one leg and still talk about the horse.

*By Mr. Young:*

Q. Well now, Mr. Hoadley, you are going to give this board power even to fix the domestic price on a cost plus basis, which I will discuss with you later. We have had evidence, sir, to the effect that if you raise the price of beef above a certain point the consumer then instead of buying beef will buy fish, or eggs, or something like that; he won't buy your beef. If I recall correctly, you told us the consumption of beef had decreased in the last few years. Is that correct?—A. Yes.

Q. How do you account for that falling off?—A. I would not like to undertake to account wholly for it. I believe, however, there are some factors that I could mention, and one is because the price of the beef to the man—I use the plate price deliberately—has been excessive as compared to the price that the producer was getting, and there has been undoubtedly a resentment in many peoples mind because of that fact. For instance, a man goes into Edmonton, or Calgary, or Saskatoon—I mention those places because they are familiar to both of us—and he walks into a restaurant and asks for a beefsteak; he gets it and it is very small one, and a very expensive one. He has just come from the stockyards where beef was selling at \$2.80 or \$3 a hundred pounds; he does not know anything about fish, or any of those other things you mentioned, but let us assume that he buys fish, as you say, for his meal instead of beef, simply because he does have a certain resentment at the price he is paying for a commodity on his plate when he thinks of the price it is selling for per hundred pounds at the stockyards. In addition to that, there has been, of course, a campaign for slimness—not amongst the men but amongst the women—an inclination to turn away from meat foods.

The CHAIRMAN: Such as orange juice?

The WITNESS: Yes, towards orange juice and other things. At any rate, it has been getting away from meats. There is no doubt there are many contributing factors. That is why I say it is easy for you to ask questions as to what is causing it. I would suggest that you think it out for yourself. There are so many things you can think of as well as I can.

*By Mr. Young:*

Q. Now, Mr. Hoadley, you say there is a tendency to get away from beef at the present time, and you propose a scheme that is going to disturb the relationship between the price of beef and the price of other foods. Will not that accentuate that tendency?—A. I do not think it would disturb the relationship, no.

*By Mr. Sommerville:*

Q. It would distribute the relationship more evenly?—A. Yes, it would equalize it.

*By Mr. Young:*

Q. But by your livestock marketing board you set the price of beef that the farmer must get, and that everybody else must get. Is it not a fact, therefore, that the people are going to turn to those other foods, such as fish and eggs, and leave your beef on your hands?—A. Well, is the marketing board only going to handle beef?

Q. Then you want to have a marketing board for every other commodity?—A. Of course, you want to get me into a position that I do not propose to be put in.

Q. What position is that?—A. That is, to follow your line of thought.

Q. I am following yours.—A. Pardon me. I know that as a member of the House of Commons, and of this committee, you have a certain amount of right to speak to me, and if I wanted to avoid it I should not have appeared here; but, on the other hand, I want to make submissions. They may not be very much good, but I am making those submissions, and I will endeavour to answer questions only along the line of my submissions.

Q. Well then, what I am trying to get at, Mr. Hoadley, is the effect of your proposal if it is carried out. You say, you believe that if we adopt this proposal we can force the people of Canada to contribute a larger share towards the support of the livestock man?—A. To get a better price for that which they produce.

Q. If we apply that to livestock only, if the livestock man will receive a larger benefit, and all the people of Canada will pay for it, and if you apply it to every line of industry in Canada, then everybody in Canada will get a larger price, but everybody in Canada will pay for it?—A. Yes.

Q. Is that logical?—A. Yes.

Q. Then I ask you, how much better off we are in that event than we are now?—A. You have asked me a lot of questions. Do you mind if I ask you one?

Q. Not a bit.—A. How do you think Canada is going to get out of the position she has been in, and is in, by going on as she has been going on?

Q. No, I do not think so, for a minute.—A. No.

Q. What I am enquiring into is, whether your proposal will get us out of it or not?—A. I do not know at all. I am only making my proposal, and I hope you will thresh it out on the floor of the House.

*By Mr. Kennedy (Peace River):*

Q. Mr. Hoadley, you compared two years. You showed the consumption of beef was lower one year than the other?—A. Yes.

Q. Was the lower consumption during a year when beef was at a high price or at a low price?—A. It was when it was at a low price.

The CHAIRMAN: And pork also was low that year.

The WITNESS: Yes. The yearly weighted average price, that is the one you wanted, is it.

*By Mr. Kennedy (Peace River):*

Q. Yes?—A. The price in 1928 was 7·55; then in 1929, 7·35; 6·35; 4·30; and 3·60.

Q. Did the beef consumption increase year by year when the price was falling?—A. It decreased.

Q. Decreased when prices were falling?—A. Yes.

*By Mr. Factor:*

Q. What about the retail price, have you any figures there?—A. No, I have not.

*By Mr. Sommerville:*

Q. In those same years, there was a steady drop in the price of pork as well, was there not?—A. Yes. I did not load the submission I have made with these details. I thought, to be merciful to you, that I should not go into too much detail, because you have got it before you; it has been given to you by other people, I think, has it not, Mr. Chairman?

*By Mr. Kennedy (Peace River):*

Q. You have a pretty good knowledge of the western livestock situation, Mr. Hoadley. How long do you think the farmers can continue raising beef cattle at anything near the present prices?—A. I would not like to say how long

they can continue because that all depends on how long the banks will continue to back them. I know one rancher—I had better not say how much or perhaps he might be identified—that has hundreds of thousands of dollars borrowed from the bank. The bank is practically running his outfit, and it is one of the biggest and best in Canada.

*By Mr. Boulanger:*

Q. Mr. Hoadley, what proportion of the consumption would represent the imports of chilled and frozen meat that you spoke of this morning?—A. I cannot give you that. It is a matter of deduction, that is all.

Q. Is it a large or small proportion?—A. A small proportion.

Q. And those imports really come from the Argentine?—A. Oh no. I think some comes from the States.

The CHAIRMAN: The canned beef, the fray bentos, comes from the Argentine. Then the balance, the barrelled pork, and I think some of the others, come from the United States, some from Australia and New Zealand.

Mr. BOULANGER: But it does not all come from Australia and New Zealand.

The CHAIRMAN: Frozen lamb and mutton comes from New Zealand and Australia.

The WITNESS: Fray bentos Brand is really an Argentine product produced by an organization mainly financed in Chicago.

*By Mr. Kennedy (Peace River):*

Q. You were talking this morning about the space between the producer and the consumer. Have you any evidence at all that some people within that area have been making good profits or large profits, or have they, as far as you know, taken their share of the losses in the last few years when prices were low?—A. Well, I have given you all I had, Mr. Kennedy. I will have to refer to it again—I think I can give you the same information from a copy which I have here—but I dealt with the packers' profit this morning.

Q. Yes, you did in a very general way; have you anything more specific?—A. Well, I think I gave you the particulars of the 1932 situation as contained in their own statement, that the profit was—yes, I have it here—that according to the figures contained in the 1932 Department of Trade and Commerce publications of slaughter and meat packing, published in 1933, the figures of all the packers of Canada during the year 1932; they paid \$66,000,000 for the animals slaughtered, and the material used in their plants; they expended \$10,000,000 on salaries and wages, and the factory value of the products sold that year were \$91,000,000; and the gross return was therefore \$15,000,000. The capital invested in the packing industry in 1932 was \$53,000,000, and allowing for the value of buildings and machinery, they reported earnings of \$15,000,000 on a capital investment of \$53,000,000, which gives a gross return of 35 per cent.

I have here and I wish to add just at this point, if I may, a report from the *Financial Post* which is as follows:—

#### CANADA PACKERS 1933 EARNINGS AT 1929 LEVEL

##### *Entirely Clearly Away Preferred Arrears of \$10.50 Per Share*

News stories published in these columns from time to time have indicated that Canada Packers by reason of the big jump in exports of bacon and pork products to the United Kingdom was likely to make a large increase in net profits over \$607,672 as shown in the year ended March 31, 1933, after all expenses, bond interest, depreciation and pro-

vision for taxation. Statements made at the recent meeting of representatives of the Canada Packers Company indicate that the net profits for year ended March 31, 1934, would probably be even with that made in the year ended March 27, 1930, and March 27, 1929, when more than \$1,500,000 was shown. The reason for the recovery, of course, is the stability in prices during 1933 as compared with the two previous years. Large write-downs of inventory have not been necessary and the export business, even though at a low margin, has been sufficiently voluminous to boost the company's profits.

#### *Cleared Off Arrears*

Expectation of a better situation was also stimulated because the company began last year to pay off the arrears of \$10.50 a share of surplus dividends. Regular dividends were resumed in 1929 but it was not until the fiscal year ended March 31, 1933, that the company tackled the problem of getting rid of arrears. During the calendar year 1933, it paid \$739,004 in preference dividends, of which only \$422,345 represented current payments. In the first quarter of 1934 the company continued this policy and paid \$211,172.50 in preferred dividends, only one-half of this being current. The payment of \$3.50 on arrears on April 2, 1934, entirely cleared away arrears and now it is plain sailing.

#### *Could Earn \$5 on Common*

Similar earnings in 1934 of \$1,500,000, with arrears cleared off, would leave an amount equivalent to about \$5 a share on the 200,000 shares of no par value common stock outstanding. During 1933 it continued to reduce the Wm. Davies Company bonds from the \$1,500,000 shown at the end of the preceding year and Harris Abattoir bonds to less than the \$3,390,900 shown a year ago. There is also provided a sinking fund for the preference stock.

#### *By Mr. Sommerville:*

Q. And that contrasts with the period which you show was the lowest price paid in a decade for cattle to farmers in Canada?—A. That is the idea, \$2.66 per hundred.

#### *By Mr. Young:*

Q. Have you any information as to how much of these profits were made out of cattle?—A. I have not.

Q. Then there is the problem of disposing of the exportable surplus; what plan have you in mind for taking care of our surplus over the domestic requirements. We find there is something like 2 per cent over our domestic requirements of cattle. How do you propose to dispose of them?—A. As I said this morning, there are various plans: one possibility, of course, would be under the Patterson system which takes a contribution from the bulk and creates a fund which allows you to dump if you like outside your surplus of Canada. It has been done for years in connection with butter under the Patterson in Australia.

Q. Are they satisfied with it over there?—A. They are very satisfied with it over there. Of course, I do not object to answering this Mr. Young, but after all every one of these things are matters to be explored by the committee. Humble individuals like myself cannot be expected to come here with solutions to these problems, when it takes all the brains of the House of Commons to try and do it.

Q. We are trying to get your view?—A. Well, it is a compliment I appreciate.

*By Mr. Sommerville:*

Q. I was just going to ask you to give us your summary?—A.

#### SUMMARY

The recommendations advanced in their brief are:—

1. That a permanent National Live Stock Marketing Board be created at the earliest possible moment, upon which the livestock producers will be fully represented and in which will be vested wide powers to continuously investigate all phases of livestock production, transportation and marketing, to correct injustices as they may arise and to impose penalties for contraventions of its rulings.
2. That the work of this Committee be continued to permit a full presentation of the view of Canadian livestock producers on the problems of the day and their solutions.
3. That a sub-Committee of this Committee, or a similar body be established to assist in this further investigation if deemed necessary.

To effect stability in livestock prices it is recommended:—

1. That a full inquiry be immediately conducted into all angles of the present livestock marketing system, to include the parts played by packers, stockyards companies and commission agencies, and the need and value of custom slaughtering and the value and practicability of the auction selling method, and
2. That the Live Stock and Live Stock Products Act be so amended as to require the weighing and issuing of scale tickets for all livestock purchased by packers and the inclusion of these purchases in market reports.

With the aim of lowering transportation and marketing costs the following recommendations are made:—

1. That a general reduction be made in freight rates on live animals moving to markets and to seaboard for export.
2. That freight rates be reduced on coarse grains for domestic use as livestock feed.
3. That the financial aid given by the Department of Trade and Commerce in the ocean shipping of export cattle last year be again extended in 1934.
4. That an all-inclusive rate on cattle for export to Great Britain be established from point of origin to final destination in Britain.

In order that markets for Canadian livestock and livestock products may be widened it is recommended:—

1. That vigorous action be taken to secure unrestricted entry of Canadian cattle into Great Britain.
2. That Government inspection of cattle intended for export to Britain be immediately established to insure that only cattle of the type and quality desired by that market be shipped.
3. That complete restriction be placed upon the importation of foreign meats and meat products into Canada.
4. That an aggressive campaign of Education be undertaken with the aim of popularizing meats among Canadian consumers.
5. That a grade be established for the lower quality of beef and that a distinctive mark be applied to this lower quality and it may be recognized by the consumer.

*By Mr. Senn:*

Q. Might I ask you one more question about the powers you would confer upon the marketing board; would you recommend that they have control of production as well as marketing?—A. No, I would not. I think that in regard to production that we in Canada have gone a tremendously long way in connection with it. I believe that without taking control of production—but rather by influencing proper and desirable production, we could accomplish the purpose by not allowing the export of anything but high quality products which the markets abroad demand. I think that would have the desired effect.

Q. That would be indirect control?—A. Indirect control.

Q. But not direct?—A. Yes. You see, in Denmark, as I said before, and as I suppose you are all aware, they have a “lure” brand—that is what they call it—that is a government brand that is placed on all exports of butter and hog products; nothing is allowed out of Denmark without that brand.

Q. Of course, they have control of production in Denmark?—A. I know that, but my point is this: I think the first step that might be taken in Canada to control exports would be the insistence upon quality in production, and if the board made the export outlet available, only for high class products, it would automatically force the farmer to aim at a higher quality of production. It seems to me that that would be a great deal better than trying to interfere. I do not think it is desirable, that the government should go to extremes at the moment in administering this Act; if later they are compelled to in the interest of the producers, then I think they should be in a position to do so.

*By Mr. Sommerville:*

Q. Might I ask, along the lines of the question Mr. Young asked about the two per cent surplus of cattle available for export; what suggestion have you to make, if any, or what consideration have you given to the question of removing that two per cent from the bottom instead of the top, taking off the poorer grades?—A. That is a point I've tried to emphasize earlier; that if you eliminate all the low-class stuff as export, you would automatically heal that trouble at once.

Q. But you would remove that two per cent surplus by shipping the better grades of cattle for export?—A. Yes.

Q. Have you thought of the removal of two per cent of your supply by doing away with the poorer grades, the canners and cutters.

The CHAIRMAN: As fresh meat.

The WITNESS: Of course, I have thought of that question, and it does seem to me that if we could get a market for possibly a certain amount of by-products and use a certain amount of material in that way.

Q. In the form of by-products?—A. Yes.

*By the Chairman:*

Q. In other words, the canners and cutters; you understand the term?—A. They should be eliminated from the beef problem.

Q. As a competitive factor in the Fresh Meat problem?—A. Exactly, that is the point.

*By Mr. Sommerville:*

Q. And used in by-products—feed and fertilizer?—A. Yes, in that and other ways.

*By Mr. Young:*

Q. I understand that at Edmonton you have competition from the Coast buyers as well as from the Eastern buyers?—A. Yes.

Q. And that competition sometimes makes a substantial difference in the market at Edmonton and in Alberta over the rest of Canada?—A. Yes, you see that by the price.

*By Mr. Sommerville:*

Q. I observe that to-day the Canada Packers are paying an f.o.b. price at Edmonton of \$7.05 per hundred?—A. Yes.

Q. And at Toronto they are paying \$7.95 f.o.b?—A. Yes.

Q. That is only a 70 cent differential, whereas the freight is \$1.14?—A. Quite so.

Q. In other words they are?—A. 44 cents off.

Q. They are paying 44 cents less at Toronto than in Alberta to-day?—A. Yes.

Q. And that doubtless is due to the competition of the coast buyers?—A. Yes, to the competition of the coast buyers. Of course, you see Burns has quite a large plant at Vancouver; he buys for that market to quite a degree. Gaynor's is another packing company. They do a great business. Practically all their business outside of the province is to the west, and that gives us competition even between the east and the west for our stock.

Q. On the other hand, they could buy hogs at Toronto at \$7.75 and they are paying \$8.44 to bring them down to Edmonton?—A. Well, in effect.

Q. All of which means that they are not going on the Toronto market to raise the price of hogs there?—A. No.

Q. They are staying off that market and buying elsewhere these quantities?—A. Yes.

Q. And if they went on the Toronto market that would raise the price for all hogs undoubtedly?—A. It should.

Q. It should, relatively through Canada.

*By Mr. Young:*

Q. Do you know anything about the profits of the Edmonton stockyards?—A. No, I do not.

Q. Nothing at all?—A. No, I have not any knowledge.

MR. SOMMERVILLE: We have a statement filed.

*By Mr. Kennedy (Peace River):*

Q. Mr. Hoadley, we had evidence here from some of the Alberta stockyards to the effect that the packers in buying go out to the ranch and make an offer for a calf, and if the rancher does not take it and ships the stock to the stockyard the packers would see that they did not offer any more for them in their yards. Do you know if this is a general complaint?—A. Well, I could not say, Mr. Kennedy, whether it is so, but I can say definitely that it is a statement that is fairly generally made.

Q. Does not that indicate that the packers are simply dominating the live-stock business?—A. Yes, of course, my opinion about that is that there is not a question in the world about it; I do not think there is a question.

Q. If that is so, there is no organization among the producers that is capable of coping with it?—A. Of resisting it; there is none.

Q. Is not that one of the best arguments for some additional control of marketing to protect the producers?—A. Well, in my opinion, it is the idea. I asked the question if we are content to leave things as they are. Well, if you say that we cannot make them any better, then it is a sad confession; if we say that conditions are all right as they are, then it is a matter of absolute indifference or a matter of lack of knowledge—one or the other.

Q. Is there any hope in your mind, or any possibility of the present co-operative organizations or similar organizations working out a solution without assistance from the Dominion or Provincial governments?—A. No. I think there is only a minimum of hope in this connection. I think there are certain businesses that can use the co-operative as an implement to help, and there are certain other businesses you cannot. For instance, if you desire me to give you my thought, take the dairy business. We have a peculiar condition in our province where the co-operative dairies are flourishing to-day as they never flourished before—in a time of depression; but as the packer companies are recovering they are coming into the picture with their creameries again and they are paying a premium away beyond what is justified by the price of butter, but they are not paying it out of what they make out of butter. It must be from some other source of revenue within the same business.

The CHAIRMAN: They are attracting cream to their creameries away from the co-operatives.

The WITNESS: For instance, I think I had seventeen letters from little district creameries that were just supported by the people around, asking for something to be done because they were on the verge of bankruptcy. They take in cream, process it, and make butter and the basis that they can pay for the butter fat is the price of the butter. The minute you force them to pay more than that, or they cannot get cream at that price, they are out of business.

*By Mr. Kennedy (Peace River):*

Q. Have you made any investigation of those complaints and the prices?—A. Yes. There is no question about it: with Burns paying 32 cents for butter fat, Swifts paying 33 cents, and butter making 27½ cents in Montreal, it tells you its own story.

*By the Chairman:*

Q. How much butter will a pound of butter fat make; is it more than a pound of butter?—A. Yes, just about an eighth—or correctly, 1.22 pounds of butter from 1 pound of butter fat.

Q. It makes about one and an eighth pound of butter?—A. Yes, approximately.

Q. It really amounts to about cost?—A. Yes, about cost; but you see there you are getting absolutely no relationship between the two.

*By Mr. Sommerville:*

Q. And that sort of thing can be carried on by the large buyer, but by the small creamery it is impossible?—A. Well, the big creamery even—you see the co-operative which is based wholly on processing one product has one source of revenue, and if you break the relationship between the raw product that makes the finished product, the butter, you immediately destroy the safety of the enterprise.

The CHAIRMAN: Quite so.

The WITNESS: But if you have another source of revenue in some business, the profits of which can be diverted, then you can give the extra price, and after a while your competitors are out of business. There is no use minimizing that.

The CHAIRMAN: Would you suggest that that was being done deliberately?

The WITNESS: Oh, I would not say that. If a man walked up to me and knocked me down I would not say he did it deliberately, but I would say he was doing it effectively.

Mr. YOUNG: Are you sure you are right on that figure that a pound of butter fat makes one pound and an eighth of butter?

The WITNESS: No, it is the other way around.

The CHAIRMAN: A pound of butter fat makes one and an eighth pounds of butter.

The WITNESS: No, it is the other way about.

Mr. YOUNG: You mean it takes a pound and an eighth of butter fat to make a pound of butter?

The CHAIRMAN: A pound of butter fat will make a pound and an eighth of butter.

The WITNESS: Yes, that is it as I first stated.

Mr. YOUNG: They told us in the department that a pound of butter fat will make one and one-fifth pound of butter.

The WITNESS: Yes. Well, of course, you are getting into the butter business.

The CHAIRMAN: There may be a little more water.

The WITNESS: Yes, exactly.

*By Mr. Kennedy (Peace River):*

Q. With regard to these small creameries, have they been operating over a period of years?—A. Oh, yes. Some of them have been operating ten or twelve years.

Q. And they are efficient?—A. Yes, they are efficient.

Q. Is this policy on the part of packing companies that have creameries something new?—A. Well, it is not new; it is revived.

Q. When was it revived?—A. Within the last six months; and we have had a regular war on in the province, a destructive war too. Of course, it is a very difficult situation to deal with, because whether it is justified or not the producer is getting a big price.

The CHAIRMAN: Temporarily.

The WITNESS: Yes.

The CHAIRMAN: Well, Thank you, Mr. Hoadley.

The WITNESS: Thank you very much. It is very kind of you to listen to me so long.

Mr. FACTOR: We enjoyed your homely philosophy, sir.

Witness discharged.

The CHAIRMAN: We will now go back to tobacco. Call Mr. Roch.

ROSAIRE ROCH, called and sworn.

*By Mr. Sommerville:*

Q. Mr. Roch, what is your position in the tobacco business?—A. I am manager of a co-operative of cigar tobacco and pipe tobacco in the northern tobacco section.

Q. In the province of Quebec?—A. Yes, sir, L'Achigan.

Q. Where is it located?—A. St. Jacques.

Q. That is a village in the county of Montcalm?—A. Yes.

Q. And how many members have you in your co-operative?—A. 213.

Q. And what quantity do you handle?—A. An average of 1,000,000 pounds per year, but since two years we have had a decrease in the production and we handle from 700,000 to 800,000 pounds.

The CHAIRMAN: For the last two years?

The WITNESS: Yes.

*By Mr. Sommerville:*

Q. Because of a reduction in production?—A. Yes.

Q. That has been brought about through your own efforts, has it, the reducing of the production?—A. No. I would not say it was brought about by our efforts, but by the low price of the tobacco.

Q. Now, what proportion of your product is cigar leaf?—A. About 50-50.

Q. And the other is pipe leaf?—A. Yes, pipe smoke.

The CHAIRMAN: Is it Burley leaf?

The WITNESS: No.

*By Mr. Sommerville:*

Q. Do you grow Burley?—A. No, not at all. Our pipe tobacco is different from the Burley of Ontario.

Q. Now, what has been the history of the prices that you have obtained for your product since 1929?—A. In 1929, which is considered the top price and which we did not touch since that time, the price of cigar leaf was about 15 cents a pound.

Q. Cigar leaf tobacco was 15 cents a pound in 1929?—A. In 1929, green weight.

Q. And what is the price of it to-day?—A. The price of it to-day is 5 cents a pound.

Q. And has it been going down steadily ever since 1929?—A. Yes, we have got an average price of 5 cents for these last two years.

Q. And what about your heavy pipe tobacco?—A. These heavy pipe tobaccos—in 1929 we had a price of around 12 cents, and now it is 4 cents—I mean for the 1932 and 1933 crops.

Q. Are you selling to the same people that you sold to in 1929?—A. Yes.

Q. And marketing your product to the same manufacturers, practically?—A. Yes. In 1929 this organization did not operate. This organization has operated since three years only.

Q. For the last three years you have been operating, and you are selling to the same people?—A. Yes.

*By Mr. Senn:*

Q. Could I ask you what is your average production per acre?—A. We have an average production in Quebec for cigar leaf of 900 pounds an acre. We could get more than that, but that is the actual production, the average production.

Q. And what about pipe tobacco?—A. For the large types—about the same quantity.

*By Mr. Sommerville:*

Q. Well, then, in Quebec, you do not go in for devoting the entire farm to tobacco growing?—A. No.

Q. I understand that you grow your crop along with other crops?—A. Yes, the dairy industry and hog production.

Q. It is only a part of your farm production?—A. Yes.

Q. Instead of being a specialized or exclusive operation?—A. Yes.

Q. Then, what do you say as to the conditions in your industry now?—A. Well, I would not say that we are satisfied with the situation, because we are selling below the cost of production. If we take the official figures from the Dominion Experimental Farm we see that the cost of production for cigar leaf varies from 10 to 12 cents a pound, but it is selling now for 5 cents a pound, so it is not a very pleasant situation.

*By Mr. Factor:*

Q. Whom do you sell your product to?—A. We are selling to some manufacturers in Montreal, and a part of it is going as raw leaf tobacco on to the market.

*By Mr. Sommerville:*

Q. Now, with reference to the product which you sell to the manufacturers—which you formerly sold at 15 cents and now sell at 5 cents—has there been any change in the retail price at which the manufacturers have sold their product in these three years?—A. Well, the tobacco I am selling to the manufacturers, is not what we call five cent tobacco, because it is a finished product.

Q. Finished product?—A. Yes. We are selling to cigar manufacturers what we call filler tobacco and binder; so we are selling it a little high because we have some work to do on it to make it up.

Q. You are giving me the price of the green?—A. Yes, green leaf.

Q. For your co-operative you process that green leaf?—A. Yes.

Q. You sell it to the manufacturer in a processed condition?—A. Processed condition.

Q. For fillers?—A. For fillers.

Q. And binders?—A. And binders.

Q. Can you tell me, from your knowledge of the tobacco industry, if the price of the manufactured product has dropped in the same proportion as the raw leaf?—A. No.

Q. Has it changed at all in the last few years?—A. It did not change at all.

Q. So that wherever the depreciation has gone, you did not get it?—A. No.

Q. What about your production now; how much has that decreased?—

A. Since 1928 we have decreased around 2,000,000 pounds. From 1928 to 1933 the decrease in production was 2,000,000 pounds.

Q. In the whole area?—A. In the whole area.

Q. Of the northern tobacco area?—A. Yes.

Q. Do you know what your production was— —A. About 8,000,000 pounds in 1928.

Q. 8,000,000 pounds?—A. 8,000,000 pounds, but now we are down to 6,000,000 pounds, in round figures.

Q. You say that the cigar leaf goes to the cigar manufacturer. Then what about the heavy pipe tobacco; was that formerly sold to manufacturers?—A. In some years they buy some, but the big manufacturers did not buy any of this kind of stuff these last three years.

Q. They have not bought those last three years?—A. No, nothing bought for the last three years.

Q. Where did you find a market?—A. With local tobacco dealers; but we have a certain pile of it which is unsold now, in the hands of the farmers.

Q. How much would you say is in the hands of the farmers?—A. I could not give an exact figure, but I should say we have a stock in the hands of the farmers of around 3,000,000 pounds.

Q. In the hands of your farmers, your own co-operative?—A. No, in the whole area.

Mr. SENN: That is half the crop.

The WITNESS: Yes.

*By Mr. Sommerville:*

Q. Half of last year's crop?—A. Yes.

Q. Half of last year's crop is still in the hands of the farmers; that is, the heavy pipe tobacco?—A. Both.

Q. I suppose the proportion prevails throughout the district that prevails in your co-operative, about 50-50?—A. The part which is sold now is the best crops of cigar leaf.

*By Mr. Factor:*

Q. What has happened? Has the consumption of the finished article, the cigar, been reduced?—A. Consumption of the cigar has decreased since.

Q. Decreased considerably?—A. Yes.

*By Mr. Young:*

Q. Pipe tobacco also?—A. Well it has certainly decreased, because in 1928 when we had a production of 8,000,000 pounds a year we sold practically every year our whole crop, and now with a low price we have to keep about half of the crop with a loss.

Q. You only produced 6,000,000 pounds?—A. Yes; with less production at a low price.

*By Mr. Sommerville:*

Q. With respect to the heavy pipe tobacco, you say that is sold to local merchants?—A. Yes.

Q. Is that sold in the loose form or is it manufactured by them?—A. It is sold in loose form, what we call bundles.

Q. In bundles?—A. Yes.

Q. Then your increase in sales of that type, I suppose, followed the drop-off in the sales of the manufactured article?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. Did I get it right, that the price went down and consumption decreased?—A. Yes.

Q. That seems to be turning economic laws upside down?—A. Yes, price went down, production went down and consumption too.

*By Mr. Sommerville:*

Q. Consumption of the variety of tobaccos decreased?—A. Yes.

*By Mr. Young:*

Q. How do you account for that?

*By Mr. Sommerville:*

Q. I thought there was an increase in the use of pipe tobacco when the depression came on and a decrease in the sale of cigarettes?—A. Well, I should not say that there was an increase in pipe smoking, as far as our tobaccos are concerned.

Q. Your pipe tobacco?—A. Perhaps Ontario pipe tobacco has got a chance to get into the market more freely than ours, but if we consider what we have on hand now, and the low price we can get for it as well, I should not say that we have an increase in consumption, because we have got half of our crop even at a low price.

*By Mr. Senn:*

Q. Might it not be possible that a corresponding increase in production in some other part of the country is responsible for that?—A. Certainly; we have a surplus of Ontario being shipped in. Burley has been sold in raw leaf, shipped to the Quebec market, and that had quite an effect on our local marketing.

*By Mr. Sommerville:*

Q. It has quite an effect upon yours?—A. Yes.

Q. In other words, your heavy pipe tobacco is a very heavy tobacco, is it not?—A. Well—

Q. Heavier than burley?—A. About the same.

Q. Heavier than flue-cured?—A. Heavier than flue-cured.

Q. You say you had an increase in the amount of Ontario burley that came down to compete with your tobacco?—A. Yes.

Q. That has affected the sale by your growers?—A. Yes.

*By Mr. Young:*

Q. Would that account for all the decline in your sales?—A. Yes.

Q. There has not been any falling off in consumption then?—A. In the consumption?

Q. Yes.—A. Yes, in every line of our tobaccos, cigar is a product of our tobacco. Cigar consumption has decreased in the last three or four years, and pipe consumption has decreased too.

Q. Can you tell me at what stage in the tobacco the tax goes on?—A. You mean—

Q. Excise tax?—A. If we have the excise tax on the leaf it would—if it were to our advantage?

Q. At which stage in the process—

*By Mr. Sommerville:*

Q. At what stage in the process of converting the leaf into the manufactured product? Perhaps we can get it another way.

(Mr. Boulanger puts the question to the witness in French).

—A. When it is taken out from the bonded warehouse.

Q. In other words, if the loose tobacco that you sell is loose leaf, there is no excise tax on it.—A. No excise tax on it.

Q. And that is sold to the public freely without excise tax?—A. Without any tax.

Q. Because it is not manufactured, then; it is dry?—A. Yes.

Q. As soon as it is manufactured and taken out of the bonded warehouse, then the tax goes on?—A. Yes.

Q. And it has to go through a process of manufacture before the tax applies, as at present?—A. No; the tax is put on the tobacco after it is processed and when it is ready to go to the consumer.

Q. That is what I understand. It has to be processed before the tax goes on?—A. Yes.

Q. In the case of dry leaf, or the leaf that you refer to, as sold as loose leaf, it is not processed and therefore there is no tax applicable?—A. No.

Q. And no tax payable on it?—A. No tax.

MR. YOUNG: And the consumption of that kind has also gone down?

THE WITNESS: Yes.

*By Mr. Sommerville:*

Q. What is the effect of this raw leaf trade in bundles, upon the trade?—A. Well, it is my opinion that this dry, raw leaf trade, is detrimental to everybody; it is detrimental to the producer, detrimental to the consumer, and detrimental to our manufacturers.

Q. Why to the producer?—A. Well, this raw leaf tobacco which is sold in raw leaf shape is the scrap of our crop, the cheap part of our crop which is sold as it is to the consumer. The reputation of our Quebec tobacco is going

around based on that poor cheap tobacco. If we want to keep the reputation of our Quebec tobacco, I suppose you would have to put a better product on the market.

Q. That is to say, the sale of this poorer quality of your raw leaf?—A. Yes.

Q. Uncured?—A. Uncured.

Q. Undried?—A. Undried.

Q. Has the effect of giving a reputation to the rest of the Quebec tobacco that is bad?—A. Bad.

Q. And harmful, and therefore it is bad for the producer?—A. Yes.

Q. Why is it for the consumer?—A. The consumer is at a point where he says there is no possible chance to secure any good tobacco in Quebec. Well, practically he is never satisfied; he cannot be satisfied when he buys a pound of this poor tobacco, and so he says there is no possibility for the farmers in Quebec of getting any more good tobacco.

*By Mr. Factor:*

Q. What does he pay for a pound of this tobacco?—A. There is no fixed price because this trade is made by thousands and thousands of people, pedlars of all kinds, farmers themselves, and everybody who is practically out of work in Montreal is in the tobacco business. Is not that right?

Mr. YOUNG: Is that the twisted stuff you see in the shop windows?

The WITNESS: No, they do not twist it; they do not take the trouble.

*By Mr. Sommerville:*

Q. It is pure leaf with a band around it?—A. And the price varies very much; you will see in Montreal that the price varies. The price varies along a street from 7 cents retail price to 30 cents and 50 cents a pound. So you get an idea of the price the farmer is getting for the tobacco.

*By Mr. Young:*

Q. Is there that much difference in the quality to warrant the price to range from 7 cents to 50 cents?—A. At the present time, no.

*By Mr. Sommerville:*

Q. There is a difference in the quality of the salesmanship?—A. The consumer doesn't know very much about the quality of the tobacco. He buys it by the colour, and that is why the Ontario tobacco has a chance to get in our market, because the consumer in a general way prefers a light yellow tobacco. And if he sees a bundle of this yellowish coloured tobacco that we call in Quebec "déchets," trash, or poor tobacco, you can ask him 25 cents for the poor tobacco, and you get a bundle of good aromatic tobacco which is a little darker in colour, and ask him 10 cents lower than the poor grade, and he will take the light coloured for poor grade at a higher price. It depends on the ability of the salesman.

Q. From your experience in the trade in the last few years, can you give the committee some suggestions or recommendations as to how things can be improved for the producer?—A. Well, I think in my opinion it would certainly be a good thing if this raw leaf trade would disappear completely.

The CHAIRMAN: It would be pretty difficult, would it not?

The WITNESS: Or put a tax, an equal tax on the raw leaf, as there is on manufactured products, manufactured tobacco.

*By Mr. Baribeau:*

Q. What do you think of the consumer?—A. Well as I said a few minutes ago, the smoker is not satisfied with the tobacco he is buying at the present

time. It is pretty hard for him to buy a good pipe of tobacco, as it is found on the market at the present time. Suppose you take some tobacco, and you process it through a manufacturer, and you put it in small packages in a manufactured form. The quality of this tobacco could be increased, we will say, 100 per cent, if it passes through the channel of the manufacturer; and the consumer will have a better product and will be more satisfied with the tobacco; that is, with the Quebec tobacco.

Mr. BOULANGER: Is it not a fact that the Quebec farmers have been buying tobacco in the leaf since the beginning of the world? In Quebec the farmers always buy their tobacco in the leaf. They have always done it.

The CHAIRMAN: In the villages and towns.

Mr. BOULANGER: In the villages and in the country and everywhere, they have always done it.

The WITNESS: Well, there is one thing we must consider too, that when the tobacco leaves the hands of the farmers, it is always in bundles; but there is one thing we must not forget, and that is that when it is in the hands of the consumer, I should say that 75 per cent of this tobacco is cut tobacco. That is, it is sold through a smuggling business.

*By Mr. Boulanger:*

Q. The farmers in Quebec don't smoke prepared tobacco; they buy their leaf and they cut the tobacco themselves?—A. And they buy it cut, without any tax on it.

Q. A very small quantity?—A. I would say that it is a good part of the business of the place where I am living now.

*By Mr. Sommerville:*

Q. That is to say, somebody is buying this raw leaf?—A. Yes.

Q. That is ordinarily sold as raw leaf?—A. Yes, as raw leaf.

Q. And is selling it as cut leaf?—A. Yes.

Q. You say there is a good deal of that going on?—A. Yes.

*By Mr. Boulanger:*

Q. You don't mean to say that all the tobacco which is sold in the leaf is bad tobacco, remnants, "déchets"?—A. No.

Mr. BARIBEAU: You don't mean that the merchants don't know when they are buying good tobacco?

Mr. BOULANGER: You don't mean the Quebec farmers don't know good tobacco?

The WITNESS: I will give you an illustration: We have some tobacco in our warehouse—and I would say if you want any good tobacco, then come to the co-operative to get some. But I sold thousands and thousands of pounds of poor tobacco for the raw leaf trade, and there is no market for good, aromatic tobacco at the present time. I have got some good tobacco in my warehouse at the present time, and there is no possibility to sell it.

*By Mr. Sommerville:*

Q. Is that because of the competition between these peddlers?—A. Yes.

Q. And they are buying for price and not for quality?—A. Not for quality.

Q. That is the reason for the condition which you describe?—A. Yes.

Q. That is, your inability to sell aromatic tobacco?—A. Yes.

*By Mr. Factor:*

Q. Where do the peddlers get it from?—A. From the farmers themselves.

Q. From the growers?—A. The peddler buys about 500 pounds. He has an old Ford, and buys 500 pounds.

Q. To whom would the farmers sell their tobacco if the peddlers would not buy it?—A. Well, to the local tobacco dealers or manufacturers; some manufacturers buy “déchets” too.

*By Mr. Boulanger:*

Q. What process do you put the tobacco through in your plant?—A. We handle the cigar leaf. We ferment it. We grade it. We ferment it, and we keep it in stock for one year or more, and following that we sell it to the cigar manufacturers.

Q. You sell it to the pipe tobacco manufacturers also?—A. Cigar and pipe tobacco manufacturers.

Q. You don't sell any to peddlers?—A. No, sir. The poor grades of our tobacco that are not worth handling are sold to tobacco dealers, local tobacco dealers.

Q. When a peddler goes to a grower, does he not buy his whole crop?—A. Not very often.

Q. But you have seen these buyers go to the growers and they buy Mr. so and so's crop and go to his neighbour and buy that man's crop, the whole crop?—A. He might buy the whole crop.

Q. Good, medium and bad altogether?—A. Yes, but he takes 200 pounds at a time, and he handles this crop. He will take the whole summer to handle this crop. It is not the same thing as a local tobacco dealer, whom I would not call a peddler, because the tobacco dealer has got to compete with the peddler.

Q. Besides the peddler of tobacco, there is the wholesale dealer of raw leaf tobacco?—A. Yes.

Q. He is the one who buys the whole crop at a time?—A. He is the man who buys the whole crop. He has got to compete with the peddler, and he has got to buy the cheapest part of our tobacco product. As I told you a few minutes ago, there is no market for good tobacco as raw leaf at the present time.

*By Mr. Sommerville:*

Q. Who do you say as to any suggestion other than a tax, by way of improvement of that condition?—A. Well, suppose that we have got a tax; we would not have any more raw leaf there. It would be certainly easier to get co-operation, closer co-operation with the tobacco manufacturer, tobacco dealer, and organize our product. That is one thing we don't have, that Ontario has. That does not mean they are very satisfied with the price, but their production is organized. They grow what the manufacturer wants; but at the present time in Quebec we don't know what the manufacturer wants. One year, in Quebec, a farmer will grow a certain variety and the next year he will grow another variety, and he does not know if he is going to find a buyer for his future crop. So I would say it would be easier to have closer co-operation between manufacturer and producer, to probably the benefit of both.

Q. If you don't have this competition in the raw leaf form?—A. Yes.

*By the Chairman:*

Q. The tobacco branch of the Department of Agriculture has given valuable assistance to tobacco growers. Do your people accept and follow their advice in the production of tobacco?—A. Well, I know something about it, because I worked for the tobacco division for eight years as extension man, and I could not say that there is much improvement in the tobacco culture methods now. But there is another factor entering here which is probably the low price. When

the farmer has got a good return out of his tobacco, he can buy some chemical fertilizers. He can take a little more care of it, and he gets, anyway, a better crop, a better product to sell. Within these last three years they have been more careless.

*By Mr. Sommerville:*

Q. Because of the low price that has been received?—A. Yes.

Q. He is not using the chemical fertilizers in the same way he was doing before?—A. No, because he does not get the money.

Q. Not to the same extent?—A. No.

Q. He does not get the money for his crop to justify it?—A. No.

Q. Can you give us any further recommendation? You say, first of all, that you would do away with this illicit trade,—not illicit trade, but this trade in raw leaf, and that would enable closer co-operation between grower, producer and the manufacturer, through the associations?—A. Yes.

Q. You could in that manner control production?—A. Control production.

Q. And also improve the varieties and qualities?—A. Yes.

Q. As has been experienced in Ontario?—A. Yes.

Q. What is your next suggestion?—A. As far as cigar production is concerned, two years ago—I guess it was in the fall of 1932,—we found out that the consumption of cigarettes decreased; the excise duty which was \$6 a thousand was decreased to \$4 a thousand for cigarettes. That was supposed to be a benefit, indirectly, to the Ontario tobacco growers. There is a duty of \$3 per thousand on cigars that the manufacturer has got to pay. I think it takes two pounds of imported leaf to wrap these cigars, and on a thousand it is \$3.50.

Q. \$3.50 for a thousand?—A. Yes, for a thousand cigars; and I think it would be good policy to decrease probably this actual duty, this excise duty that there is on cigars, and probably it would be a benefit, to increase the consumption of cigars.

Q. There has been a reduction in the price of filler and binder from 15 cents to 5 cents?—A. Yes.

Q. And there has not been any reduction in the price?—A. No, there is no reduction in the price of cigars.

Q. What assurance have you that reduction of the duty would increase the consumption?—A. Probably the manufacturer, if he does not want to make too large a benefit, will give the benefit to the growers, if there is closer co-operation.

MR. SOMMERVILLE: That word "if" in there is a rather important one.

MR. FACTOR: A very faint hope.

THE WITNESS: I want to draw attention to the smuggling that there is in cigars too, in the province of Quebec.

*By Mr. Sommerville:*

Q. There is smuggling in the province of Quebec?—A. Yes, of cigars.

Q. After all, that is a very small portion of the whole trade in Quebec, is it not?—A. I should say it begins to be very important.

*By Mr. Young:*

Q. Where do they smuggle from, the States?—A. In the province of Quebec, without any duty on cigars.

*By Mr. Sommerville:*

Q. From the United States?—A. No, no. You have tobacco dealers, small tobacco dealers in the towns and cities, who buy raw leaf tobacco. They strip that tobacco and make cigars out of it, and they sell it to the consumer.

*By the Chairman:*

Q. It is an evasion of the excise?—A. Yes, without any duty.

*By Mr. Boulanger:*

Q. Is it done on any great scale?—A. Yes.

Q. And the government doesn't know it?—A. Well, they probably know it. It is the same thing for any other kind.

*By Mr. Sommerville:*

Q. They know it goes on, but the thing is to catch him?—A. Yes, to catch him.

*By Mr. Boulanger:*

Q. To go back to your proposal to do away with the trade in tobacco in the raw leaf form, in order to do that, you would have to change the smoking habits of a whole people, would you not?—A. Well, I don't think so. As I told you, the actual consumer is not very interested in buying his tobacco in raw leaf form.

Q. They have been doing it all the time for hundreds of years, and you want them to change that habit and go in for smoking pipe tobacco or manufactured tobacco?—A. But you have got to change with the times.

Q. Providing the change is good?—A. Well, take a young man; we are all practically tobacco men here, some are smoking pipes, some are smoking cigarettes, but the young people nowadays are not interested at all in buying the tobacco in raw leaf form because they have not got the proper equipment with which to cut the tobacco. What they are interested in is to get this tobacco ready, and in good shape, and if they cannot buy it from the manufacturer direct, with the proper duty on it, then they will try to get this tobacco in some smuggling place specializing in that.

Q. Supposing you succeed in doing away with the raw leaf tobacco, will that do away with the peddlers in the raw leaf tobacco?—A. No.

Q. Supposing you remove the dealers and the peddlers of raw leaf tobacco, then the grower could sell his tobacco to the manufacturer only?—A. Yes.

Q. The growers would be doing just as the manufacturers are doing?—A. Well, I am pretty sure the tobacco dealer would handle the tobacco just the same.

Q. Don't you think, that if you have more competition you have a chance of getting a better price for your product?—A. As I said a few minutes ago, we have had more buyers in the last three years than ever before, and the price is down as low as 4 cents a pound.

Q. Another thing, if you market prepared tobacco they would have to pay a whole lot for it?—A. They would have to pay more than they pay now, but it is just as the gentleman who was here before said, that one goes with the other. Supposing the whole of the crop were manufactured, there would be more labour employed and consequently more wages, and then they could buy the manufactured product.

Q. Very few farmers have got the money to pay for the manufactured tobacco?—A. What are they doing now, they are smoking cigarettes.

Q. Very few farmers do?—A. I know farmers who come and deliver tobacco to my warehouse, and they are smoking cigarettes.

Q. They must be village dudes?—A. They are smoking cigars and they are smoking cigarettes. We are the only country in which tobacco is sold in raw leaf shape. Take the United States, there is not one bit of tobacco sold in raw leaf shape.

Q. We should not imitate what the Americans do?—A. That is not necessary, but we can profit by their experience. Our production has been as high

as 10,000,000 pounds in Quebec, a little more than that. We have always continued to sell our product as raw material. Ontario started to grow tobacco twenty-five years after Quebec; we had more production than they had when they started, but in 1933 they had something like 32,000,000 pounds and we only had 6,000,000 pounds. They are not interested in selling their production in raw leaf shape.

Witness discharged.

PHILLIP BLAIS, sworn.

*By Mr. Sommerville:*

Q. Mr. Blais, you are the manager of the co-operative at Ste Cesaire?—

A. Yes, sir.

Q. That is for the Yamaska Valley Tobacco growers?—A. Yes, sir.

Q. That is the southern area of Quebec?—A. Yes, sir.

Q. And how many members have you?—A. Around 325.

Q. And what is the extent of your crop?—A. Our peak production was 1,250,000 pounds. It is down to about 900,000 to a million now.

Q. Yes, and where do you dispose of your product?—A. Through the cigar manufacturers only.

Q. Through the cigar manufacturers only?—A. Yes.

Q. And I understand that about 80 per cent of your product goes to one manufacturer only?—A. Yes, sir.

Q. That is the General Cigar Company?—A. Yes, sir.

Q. Of Montreal?—A. Yes, sir.

Q. It is one of the Imperial subsidiaries. Now, what do you say as to the prices that you have been obtaining since 1928 or 1929?—A. I have got a list here of the advances made to farmers on their crops for the last twenty years or so, but we will not go as far back as that.

*By the Chairman:*

Q. Is the list complete on your sheet?—A. Yes, sir.

Q. You might hand the list in as it is and just give us the last five or six years.

*By Mr. Sommerville:*

Q. Give us the prices that you obtained for your tobacco in 1928?—A. You mean the price we obtained from the manufacturers?

Q. Yes. Do you process the tobacco?—A. We process every pound that we produce.

Q. That is, you take it in from your farmers and you process it?—A. Yes, sir.

Q. And then you deliver it to the cigar people in that form?—A. Yes, sir.

Q. And I understand that, after processing, it is ready for use, or you keep it for maturity, do you?—A. We keep it for maturity for about nine or ten months.

Q. And then it is ready for use?—A. Not quite, because the manufacturer, as a rule, likes us to age the tobacco before using it.

Q. You store it for them?—A. We do.

Q. That is, you keep it in store for them from year to year, and they take it as they need it?—A. For an average period of two and a half years.

Q. And then they pay you for storage?—A. They pay us 75 cents a month for storing charges.

Q. Then at all times you know what is going out for consumption?—A. We are always aware of the stock on hand that our customers have.

Q. Yes, and you always know then what the requirements would be of that customer?—A. We try to.

Q. And you, therefore, I suppose, communicate with your members and advise them as to the production that they should have?—A. Every year when we are through packing the crop, which takes place around the latter part of March, the government figures are always available of the amount of production, and we have always tried to inform the farmer of the requirements, and being informed of every years production we can then advise the farmers whether they can increase the crop or reduce it.

Q. And you are assisted, in giving him that information by the fact that you know what is being taken from your stocks by the General Cigar Company?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. Do the farmers cooperate well with you?—A. The farmers?

Q. Yes.—A. Well, the cooperative which I represent has been in operation for twenty-two years.

*By Mr. Sommerville:*

Q. They cooperate with you in the reduction of the crop?—A. Oh yes. As a rule they have always followed our advice as far as production is concerned. I have a list here.

Q. You have in your hand statistics as to the amount on hand, in the hands of the manufacturer and his needs, and that governs you in framing your production?—A. Indeed.

Q. That is what the Ontario growers were asking for. You are in a preferred position.

Mr. FACTOR: They did not go that far.

Mr. SOMMERVILLE: They are asking for information, which would put them in the same position as Mr. Blais is in.

The WITNESS: Here is a copy of a circular which we sent to the farmer when we paid him an advance on his crop, advising him not to be too enthusiastic on the price received. We have been so pessimistic that it is all right to be a little optimistic.

*By Mr. Sommerville:*

Q. Then what is the price that the farmer has received for his green leaf, how has that gone down?—A. The farmer received for his green leaf, for his 1933 crop, an advance of 11½ cents.

Q. That is on his leaf?—A. On his leaf, just when it is delivered.

*By Mr. Young:*

Q. That is an initial payment. Is there some more coming?—A. Oh yes, always has for the last twenty years. I don't know whether there will be this year.

*By Mr. Boulanger:*

Q. What is the total price that they get?

*By Mr. Factor:*

Q. Start from the year 1930 and give us the relative figures of the total price?—A. In 1930 he got an 11 cent advance, and he got a profit of 9 per cent on top of that. Out of those profits we keep 10 per cent, of the total profits, to go into a reserve fund. In 1930 he got 10½ cents, and he got a return of 8½ per cent.

*By Mr. Sommerville:*

Q. That will give him 12 cents less than which you put away in the reserve fund?—A. Yes, sir.

*By Mr. Young:*

Q. Not 10 per cent on 12 cents?—A. 8 per cent of the 10½ cents.

*By Mr. Sommerville:*

Q. You have a system under which you hold back 10 per cent of the money that goes to a farmer?—A. Yes; sir.

Q. And it goes into a reserve fund?—A. Yes, sir.

Q. And then each succeeding year you give them about 1 per cent of the amount that was in the reserve fund, that is, you divide up the 10 per cent and pay it to him in ten annual instalments?—A. Yes, sir.

Q. That is, they provide you with a certain amount of money that enables you to carry on your business?—A. Yes, sir.

Q. And out of that he gets his dividend, as it is called?—A. Yes, sir.

Q. Now, trying to get at the price of the green leaf, according to the report that comes to us from the tobacco division here, the price of cigar green leaf in 1929, in the Province of Quebec, was 15 cents. In the year 1930 it was 9 cents; in the year 1931 it was 5 cents in the year 1932 it was 4 cents; and in the year 1933 it was 5 cents?—A. Yes, sir.

Q. Now, does that represent about the price of the green leaf, cigar leaf?—A. That represents the price of the green leaf to-day to the northern farmer only.

Q. Yes. Well then, does the price that was paid to the southern farmer correspond to that?—A. The price paid to the southern farmer is double that paid to the northern farmer, because it is cigar leaf exclusively. I have here the details of a farmer's crop on which, I might say, we paid an average price of 11½ cents. That means to say, that out of the whole crop the farmer might have received 20 cents, while another farmer might have only received 4 cents. The first farmer got his price on the quality of the crop. This represents four acres of tobacco on which he delivered six thousand pounds, and on which we paid him a net price of 19½ cents on fifty-two hundred pounds.

Q. Was that on the green leaf?—A. That was on the green leaf as he delivered it.

Q. When?—A. In the latter part of January.

Q. Of this year?—A. Yes, of this year.

Q. Well now, your farmers have not been getting that as an average price?—A. This one has. The tobacco is graded in about fifteen grades, and the more pounds he has of the best grades—

Q. The more money he gets?—A. Yes, the more money he gets. But this particular farmer here happened to have a good crop, and the good grades were larger than in other crops.

Q. Yes. Well now, in that what was the low price?—A. In that price he got as low as 4 cents,—as low as 6 cents and as high as 30 cents.

Q. And on the average it worked out, for that particular farmer, at 19 cents?—A. 19½.

Q. But on the whole, taking 1932, you paid your farmers 8½ cents?—A. Yes, sir.

Q. Plus a profit of 17 per cent?—A. Yes, sir.

Q. 17 per cent and 8½ cents, and that represented about 10 cents a pound?—A. Just about.

Q. For the tobacco?—A. Yes.

Q. And that was after you had processed it sufficiently to sell to the cigar manufacturer?—A. Yes, sir.

Q. So that for the processed article you got 10 cents last year?—A. Yes, sir.

Q. Or 1932 rather?—A. Yes.

Q. And take 1930, he got about 11½ cents?—A. Yes, sir.

Q. In 1929 you got about 13 cents?—A. Yes.

Q. And in 1928 you got 18½?—A. Yes.

Q. And in 1927 you got 22 cents?—A. Yes.

Q. So that the price from 1927 to 1932 dropped from 22 cents to 10 cents; that is, the price your farmers got on their processed tobacco, after you had treated it and had sold it to the General Cigars?—A. Yes.

Q. That is to say, there was a decrease of 50 per cent in that period of time?—A. Yes, due to the fact that for the last three years we have been unfortunate in having some hail storms which damaged the tobacco a great deal and by having these hail storms, the yield of good quality is not as much as if we had not had the damage by these storms.

Q. For the last six years the price has been coming down; do you mean to tell me that the depreciation in the price of your cigar tobacco has been due to hail?—A. The price that we could get from our manufacturers was a little cheaper than that we got five years ago, due to the fact that during the period of prosperity which we have had, we had a production of around 194,000,000 cigars, and in that quantity there was a lot of 10 cent cigars in which our Canadian tobacco found a channel of use in cigars which were selling at from \$60 to \$65 per thousand, while to-day the mode of consumption has changed and I would estimate that 75 per cent of the total cigar production is now in nickel cigars, in which our tobacco is used.

Q. Will you tell me if during the last six years when the price of cigar tobacco has been coming down, if the price of cigars has come down relatively, because there is a decrease of 50 per cent in the price of cigar tobacco?—A. I do not think the nickel cigar has dropped, but the manufacturer, prior to the depression, sold a ten cent cigar in which he used a certain portion of our tobacco, where to-day he is using it in a five cent cigar, and that affects the price we get from the manufacturer.

Q. What suggestion have you to make as to improvements in the industry; is there anything you can suggest to help the producers whom you represent?—A. I do not feel qualified to make any suggestions right here, because it takes all of our time and ability to devote to our own business. We sincerely hope that if we can get a little more prosperity than we are having at the present time, it will be reflected in the price of tobacco, the price at which we sell to the manufacturer.

*By Mr. Young:*

Q. Do you have any trouble with manufacturers; any friction with them over the sale of your product?—A. None at all.

Q. Have they taken it all?

Mr. SOMMERVILLE: They take 80 per cent of the crop.

*By Mr. Young:*

Q. What about the other 20 per cent?—A. It is sold to other cigar manufacturers.

Q. Do you find that the demand has fallen off?—A. Very little.

Q. Well then, how do you account for the drop in the price of your tobacco?  
A. On account of the sale of nickel cigars.

Q. They have kept up the demand then by putting a nickel cigar on the market?

*By Mr. Boulanger:*

Q. There is no pipe tobacco grown in your vicinity?—A. Not in our vicinity.

Q. You do not sell any tobacco to peddlers or raw-leaf tobacco dealers?—

A. No, fortunately.

The CHAIRMAN: Thank you, Mr. Blais.

The witness was discharged.

Mr. M. H. SWATMAN, called and sworn.

*By Mr. Sommerville:*

Q. You are from Leamington?—A. Yes.

Q. That is in the county of Essex?—A. In the county of Essex.

*By Mr. Boulanger:*

Q. South Essex?—A. South Essex.

*By Mr. Sommerville:*

Q. You have been growing tobacco for a good many years in that county?—

A. A great many years, yes.

Q. And I understand that you have grown burley there, that is the centre of the burley industry?—A. Yes.

Q. And burley has been a very large crop in the county of Essex?—A. At one time it was the leading crop.

Q. What acreage have you been growing, Mr. Swatman?—A. I have been growing very little burley in the last fourteen years, I have been producing flue.

Q. You have been producing flue?—A. Yes.

Q. But there is a good deal of burley produced round about you?—A. Yes.

Q. And you have been producing flue; what acreage of this have you been producing?—A. From 12 to 20 acres.

Q. And what do you get from your acreage?—A. Oh, from 900 to 1,000 pounds.

Q. What has been your experience with respect to the prices which have been obtained for flue in your territory?—A. It has gone down materially in the last five years.

Q. Yes, from what?—A. From about 42 cents to an average, I would think, of about 15 cents; I think the high price this year was 22 cents.

Q. You are speaking of tobacco in Essex?—A. Yes.

Q. What has been your own experience in the growing of tobacco in your area; what has been the result of your growing?—A. I have lost \$21,000 in fourteen years.

Q. In the growing of tobacco?—A. In the growing of tobacco.

Q. And how do you account for that, Mr. Swatman?—A. There is a good many ways of accounting for that.

Q. You got a good price for a number of years?—A. Well, when it was the highest price I got nothing. That was when we got into that law-suit with the Macdonald people and I got nothing. It cost about \$26,000 for law costs.

The CHAIRMAN: Somebody benefited by that?

The WITNESS: Yes, Mr. Tilley.

*By Mr. Sommerville:*

Q. Now, what has been your experience with respect to the buying practices which have been adopted in your area?—A. Well, with me the practice has been since 1920 to have a hard job to sell my tobacco.

Q. You have had a hard time to sell your tobacco?—A. Yes, sir.

Q. You have had a good crop?—A. Generally, yes.

Q. Then, why is it that you had a hard time selling your tobacco?—A. Because I took a very active part in organization, to start an association of growers—I was the means of organizing that co-operative company, and I have had a hard job to sell my tobacco since.

Q. That is, you think that because you took an active part in the organization of the growers, you have had a difficult time in selling your tobacco?—A. I think so, yes.

Q. Have you not had offers regularly from the big buyers?—A. No, sir.

Q. And how have you been able to market your crop?—A. Well, one crop I did not market at all, you see; I just sold it out in small lots, and then sold my last year's crop—I put in burley (a year ago rather) and I sold that to a small firm, Mitchells; but last year I put it through the Simcoe Tobacco Growers' Association.

*By the Chairman:*

Q. Did you do better on that?—A. Well, I do not know, Mr. Stevens, until we get our last payments. I was well pleased.

Q. I mean your treatment, from the standpoint of treatment?—A. Oh yes, I did. It was going to say that I was better pleased with my first payment than I thought I would be.

Q. The price was low, of course?—A. Yes.

*By Mr. Sommerville:*

Q. Now, in the meantime when the price has dropped from 40 cents to an average of 15 cents, what do you say as to whether or not that crop can be produced at 15 cents?—A. It cannot be produced for 15 cents.

Q. What do you say is the cost of producing that crop of flue-cured?—A. I say 26 cents.

Q. 26 cents?—A. Yes, sir.

Q. That is, in your own experience—and it has been fourteen years of growing—you give us that figure as being the minimum price at which you can produce it?—A. Yes, sir, I have an itemized statement here showing the cost of production.

Q. And as a result of that you say the price is 26 cents?—A. Yes, sir.

*By the Chairman:*

Q. Have you a statement there?—A. Yes, sir.

Mr. FACTOR: That is the cost of production on a 12-acre crop.

*By Mr. Sommerville:*

Q. Is that your 12 to 20 acre cost?—A. Yes, generally; this is my statement.

Q. Will you just read that statement to the Committee?—A. Yes, if you wish.

The production of tobacco in Canada is much more important than could be imagined at first sight. The tobacco growers of Canada have approximately \$28,500,000 invested in land, buildings, equipment and cash to produce this crop and the interest on this amount would be \$1,225,000.

We produce here in Canada 55,060 acres or 51,300,000 pounds of tobacco, which would require 1,458 car loads to deliver this commodity to the market.

The growers employ 11,500 people a large portion of the year to produce this crop and this does not include those employed in making the commercial fertilizer which requires 22,000 tons at \$30.50 per ton or a total of \$671,000. It takes another 1,250 carloads to deliver this fertilizer to the growers. It has 660,000 tons of manure at \$1.50 per ton or a total of \$990,000. It takes 66,000 bushels of rye for cover crop at 50 cents per bushel a total of \$33,000.

It costs \$495,000 for fuel and \$555,000 for labour to cure this flue-cured tobacco and \$33,000 for twine for priming and \$41,250 for paper and twine for baling this tobacco.

It costs \$295,250 for hogsheads to pack this tobacco in for shipment. It costs \$2,565,000 to sort, grade, process and pack this commodity. In all it takes \$10,795,000 to produce this tobacco crop and prepare it for market and the interest on this amount would be \$600,000.

The Dominion Government of Canada receives a revenue of \$45,397,613 per year from the tobacco business of Canada. So the tobacco growers of Canada should receive some consideration from the Government of Canada. For the tobacco growers of Canada are in a deplorable condition as I have lost \$21,000 in fourteen years. Hundreds of others are as bad for 85 per cent of the tobacco farms in Essex are mortgaged while 95 per cent of the growers in Essex are doing business on borrowed money and all the tobacco farms have depreciated 75 per cent in value in the last ten years.

It costs \$156.50 to produce one acre of air-cured tobacco or 14 cents per pound and it costs \$207.50 per acre to produce flue-cured or 26 cents per pound on an average. The price that the growers are getting will not exceed 6 cents per pound for air-cured or 15 cents per pound for flue-cured. In 1919 this same type and quality of tobacco air-cured brought 42 cents per pound and from 65 to 75 cents per pound right in the growers' barn for flue-cured.

Now, I am \$12 lower on my figures on the production of flue-cured tobacco than the experimental farm of Harrow.

Q. The experimental farm prepared figures which were \$12 higher than yours?—A. Yes.

Q. Their figures were based only on one acre?—A. No; they grew a crop.

Q. Their figures were based upon one complete acre.—A.

The tax on my farm in 1919 was 98 cents per acre but in 1933 it was \$7.10 per acre. So in 1919 it took  $1\frac{1}{4}$  pounds of flue-cured or  $2\frac{1}{4}$  pounds of air-cured tobacco to pay the tax on one acre. But in 1933 it took  $47\frac{1}{4}$  pounds of flue-cured or 236 pounds of air-cured tobacco to pay the tax on this same acre of land.

The Imperial Tobacco Company of Canada controls the tobacco market here in Ontario and they just go ahead and set the price and pay the farmers just what they see fit and the other companies just follow up and pay about the same or less. So there is no opposition in buying. If the growers do not take the first offer, they will have to take less if they can sell at all.

I have the annual report of the Imperial Tobacco Company every year from 1913 up to and including 1933 and in that year they showed net profit of \$5,670,176 or 24 cents per pound.

Now, I believe I should make a little explanation there. On that 24 cents a pound you would be figuring on the direct 1933 crop, which was only 39,400,000; but I think it should be based on the preceding crop.

Q. Because the crop last year was a small crop?—A. Yes; and the other was about 50,000,000 pounds, which would make it about 19 cents per pound; in all fairness to everybody.

Q. The profits represent about 15 cents of a difference?—A. Yes.

Q. Have you applied those profits to flue-cured tobacco?—A. Yes.

*By Mr. Factor:*

Q. Their profits also include other sources of revenue?—A. Well, I will probably get to that.

Q. You are coming to that?—A. Yes.

The whole crop of tobacco in Canada sold for \$5,137,000, so the Imperial Tobacco Company received \$2,533,176 more in net profits than the whole crop brought the growers of Canada. In one of this Company's reports they say that the foregoing figures do not include the Company's proportion of the undivided profits of the associated companies, such as the H. B. Houde, the National Limited of Montreal and the Tuckett Tobacco Company of Hamilton, Ontario. They also say that the Imperial Tobacco Company of Canada has the field pretty much to themselves controlling 90 per cent of the cigarette business and 60 per cent of all the tobacco business of Canada. So if there is not a combine, there is a monopoly which is just as bad or worse. The growers are not getting the cost of production, so a large number of them are just quitting as they cannot finance another crop.

The tobacco growers of the United States in 1923 received for their crop \$180,000,000 but in 1933 they only received \$70,000,000 for their crop. While in 1923 the manufacturers received in net profits \$80,000,000 but in 1933 they received net profits of \$155,000,000 and it is just about the same here in Canada.

At the present time the Tobacco growers of Kentucky are getting 12 cents per pound for their Burley tobacco and here in Ontario the growers are getting only 2 to 3 cents for their Burley, which is just as good quality. The manufacturers are charging the wholesalers from 76 cents to \$1.46 per pound and the retailers are paying from 87 cents to \$1.78 per pound. The consumers are paying from one dollar to two dollars per pound.

Now, I got those figures from a retailer.

Q. For Burley?—A. No all kinds; for the manufactured tobacco.

Q. Burley you say was selling at two cents and 15 cents on the average?—A. Yes.

There is another phase of this tobacco situation that is those shippers or tobacco bootleggers or confidence men going through the country inducing the growers to put their crop through those small plants, thus having those crops processed and packed and sold on a commission without getting any deposit down and those fellows just dump this tobacco on the market and sell it for whatever they can get. That lowers the general price and sometimes the farmer get a small amount out of his crop and sometimes nothing at all and some are billed with a part of the cost of processing. So there should be an investigation into this matter.

Q. That is, with reference to some firms who induce farmers to send their tobacco to them to be processed?—A. Yes, which I think is detrimental to both the grower and manufacturer, because they dump this on the market at a very low figure, whatever they can get, so as to get their processing costs, charges and commission.

Q. That is just a few small firms?—A. Yes.

Q. It represents a small portion?—A. Yes. I think this should be looked into. I know several who are in destitute circumstances because they did not get a dollar out of their tobacco.

The CHAIRMAN: That was brought to our attention yesterday or the day before?

The WITNESS: Yes.

In fact there should be a full and complete investigation into the whole tobacco situation here in Canada.

Statistics should be given showing just how much tobacco there is in the possession of the tobacco manufacturers at the end of every year. So as to show the growers if they should reduce their acreage, because there is no use of producing a supply if you do not create a demand.

The bonding privilege on raw leaf tobacco coming into Canada should be changed from three years to one year only.

The Dumping Duty should be applied on all raw leaf tobacco coming into Canada that has been bought for less than the cost of production.

That 99 per cent draw back of the Tariff Duty on foreign leaf tobacco coming into Canada and being manufactured and shipped on to another country should be discontinued.

I am going to tell you why I advise that. I think it would remove a nuisance, I am going to say, to the government in the first place, and I think it would satisfy a lot of growers. They think that there is a big amount of this tobacco that is being brought in here, processed and manufactured and shipped, and we are losing that duty. Now, I think, in all fairness to the government, to the manufacturers, and to the growers, if that drawback was removed, it would be satisfactory to all.

The Tariff Duty on all foreign raw leaf tobacco coming into Canada should be increased to 65 cents per pound on all air-cured unstemmed or 75 cents per pound on stemmed air-cured tobacco.

On flue-cured tobacco the Tariff Duty should be 85 cents per pound on unstemmed and one dollar on all stemmed tobacco.

Now then, I have an itemized statement of the cost of producing one acre of flue-cured tobacco.

Q. You have given us figures showing 26 cents a pound, and if you give the itemized statement to the reporter, it will be copied into the record. Is there any comment you have to make on the itemized statement, as to how you make it up or anything like that?—A. Well, I have made that up from observations and experience that I have in the last 14 years in producing this tobacco.

Q. You have been interested in growers, operators and co-operators?—A. Yes.

Q. You are familiar with the cost of production?—A. Yes.

Q. Was there something further you had in addition?—A. Well, I have an itemized list showing the amount of profits from the Imperial Tobacco Company for the last 20 years.

Q. You can file that also?—A. I think that has been pretty thoroughly gone over by the other witnesses.

Q. If you just file that with the reporter, he will copy the latter part in. That is your statement to the committee with respect to the situation in Essex?—A. Yes.

Q. And the Burley situation, that is a bad situation too, is it?—A. It is worse than the flue.

Q. Worse than the flue?—A. Yes.

Q. The price has been reduced still further than the price for the flue?—A. Yes.

*By the Chairman:*

Q. Who buys Burley?—A. Well, the Imperial Tobacco Company, I think, buys the biggest amount.

Q. About the same range?—A. Just about the same range as the flue.

*By Mr. Boulanger:*

Q. There is no competition in the field?—A. Not to amount to anything, no.

*By Mr. Sommerville:*

Q. So your experience in the Essex field is apparently similar to that of the Norfolk field, that everyone waits until the Imperial sets the price?—A. Yes.

Q. And then they all come up and buy after the Imperial sets the price?—A. I think the Rock City Tobacco Company set the price one year.

Q. But never again?—A. Never again, no. Now, I might say this 42 cents a pound for Burley and 65 cents a pound for flue-cured tobacco I think was very largely brought around 1918 and 1919 by opposition buyers coming into the field. That was the Macdonald Tobacco Company. They were very heavy buyers, and always bought in the American market until 1918, and then they came into the Canadian market and that caused—

Q. There was real competition then?—A. Yes, there was competition.

Q. You got a harvest?—A. Yes, unfortunately I did not, because that was the year I got into trouble.

Witness discharged.

## ITEMIZED COST OF PRODUCING ONE ACRE OF FLUE-CURED TOBACCO

Putting on rye for cover crop . . . . .	\$ 3.00
12 tons of barnyard manure at \$1.50 per ton . . . . .	18.00
Spreading manure 25 cents per ton . . . . .	3.00
Ploughing the ground . . . . .	2.50
Rolling, discing and dragging twice over . . . . .	2.00
1,000 pounds commercial fertilizer . . . . .	15.25
Delivering fertilizer to farm and field . . . . .	.50
Putting on fertilizer, ridging and rolling . . . . .	2.00
Plants for planting and replanting . . . . .	20.00
Planting and replanting . . . . .	6.00
Poisoning for cut-worms . . . . .	1.50
Cultivating the whole season . . . . .	6.00
Hoeing the whole season . . . . .	5.00
Topping tobacco . . . . .	2.50
Spray and spraying . . . . .	2.00
Suckering the whole season . . . . .	8.00
Insurance against hail and wind . . . . .	2.00
Harvesting crop . . . . .	24.00
Twine for priming . . . . .	1.00
Fuel for curing tobacco . . . . .	9.00
Labour for curing . . . . .	10.00
Emptying kiln and putting in barn . . . . .	6.00
Cooping tobacco . . . . .	1.00
Bulking, stripping and baling . . . . .	10.00
Twine and paper for baling . . . . .	.75
Fuel for stripping room and steaming . . . . .	1.50
Delivering crop to the market . . . . .	1.00
Repairs on kiln and building . . . . .	2.00
Insurance on kiln and barn . . . . .	2.00
Insurance on tobacco . . . . .	2.50
Depreciation on buildings . . . . .	2.00
Interest on buildings . . . . .	9.00
Interest on land . . . . .	10.00
Interest on machinery, repairs and upkeep . . . . .	1.50
Interest on sticks and loss of sticks . . . . .	1.50
Interest on money expended in crop . . . . .	6.00
Taxes on land and buildings . . . . .	5.00
Miscellaneous expenses . . . . .	2.00
Total . . . . .	\$207.50

The average number of pounds produced in 1933 was 800 per acre. Cost of producing 800 pounds \$207.50 or 26 cents per pound. Average price paid per pound was 15 cents which would be \$120 or a loss to the grower of \$87.50.

It costs about \$51 per acre less to produce Burley or air-cured tobacco or \$156.50 per acre. It produces a heavier yield but the price is so much less, as the average number of pounds of Burley is 1,100 pounds per acre and the average price paid would not exceed 6 cents per pound or \$66 per acre. So the loss to the grower would be \$90.50 per acre. It costs on an average 14 cents per pound to produce Burley or air-cured tobacco.

## NET PROFITS OF THE IMPERIAL TOBACCO COMPANY

1913 . . . . .	\$2,353,425
1914 . . . . .	2,550,134
1915 . . . . .	2,313,225
1916 . . . . .	2,417,630
1917 . . . . .	2,815,740
1918 . . . . .	3,318,520
1919 . . . . .	3,456,480
1920 . . . . .	3,486,150
1921 . . . . .	3,536,753
1922 . . . . .	3,630,976
1923 . . . . .	3,645,845
1924 . . . . .	3,656,276
1925 . . . . .	3,662,840
1926 . . . . .	3,672,850
1927 . . . . .	4,371,313
1928 . . . . .	4,874,773
1929 . . . . .	5,862,207
1930 (\$8,153,638 for 15 months) . . . . .	6,400,000
1931 . . . . .	5,914,079
1932 . . . . .	5,471,175
1933 . . . . .	5,670,176

This is just as it is given in this Company's annual statement as given at their annual meeting to the shareholders of the Company.

The CHAIRMAN: Now, gentlemen, this morning I mentioned that I thought it would be desirable to adjourn the further consideration of tobacco until some day next week, but before doing so I think Mr. Factor wants to make some observations.

Mr. FACTOR: Mr. Chairman, the statement I would like to make is this: I have consulted with my colleagues on the committee, and we are willing to co-operate in any way in bringing together the growers and the manufacturers to see if they can solve their own problems; but we feel that this enquiry should be proceeded with further and that the following matters be gone into. I have briefly summarized them, and I would like to put them on record: first, the price spread. We had an illustration yesterday from Professor Leitch of a package of cigarettes retailing at 25 cents for which he said he would be happy if he could receive a cent and three-quarters for the tobacco contained in the package. The excise tax is 10 cents, so there is a spread of  $13\frac{1}{4}$  cents to be accounted for; and my colleagues and I feel that we should get definite information and have a complete investigation of how much the manufacturer, the jobber and the retailer receive.

The CHAIRMAN: We had no idea of cutting that out.

Mr. FACTOR: No. I am just pointing this out, Mr. Chairman, because you will realize that if the large manufacturers, such as the Imperial Tobacco Company, own and control both manufacturers, jobbers, and retailers, it becomes eminently important to ascertain this.

In the second place, I would like to suggest to you, Mr. Chairman, that auditors be put into the large tobacco manufacturers to obtain a picture of the financial structure—the profits made, the salaries paid to the executives, and the wages paid to their employees; third, the ownership or control by the large tobacco manufacturers of other manufacturers, jobbers and retailers; fourth, the method of jobbing and retailing. That is, the whole method of distribution of their product including the method of advertising; five, some investigation ought to take place into what I am informed is prevalent, that is, a price maintenance agreement amongst retailers, jobbers and wholesalers; my sixth point concerns numerous complaints I have received from the city of Toronto from independent wholesalers and retailers who complain—particularly wholesalers—that they are unable to purchase their products from the large tobacco manufacturers such as the Imperial and others, even if they are willing to pay cash for them, and that the retailers are unable to purchase their supplies directly from the tobacco manufacturers, and have to pay a 10 per cent higher price in buying them from the jobber. Now, the several points I have jotted down are very important, and I feel that we should have the manufacturers, both large and independent manufacturers, and wholesalers, independent and others, to present their evidence before this committee.

The CHAIRMAN: I do not think we have any objection to that, Mr. Factor. It does not interfere with the suggestion made, the main point of which is to see if it is not possible to secure for the grower a larger share of that dollar which is distributed—

Mr. FACTOR: Not at all.

The CHAIRMAN: —which is secured. To the other matters you have mentioned I have not the slightest objection.

Mr. SOMMERVILLE: I might state that we have financial statements from most of the companies, and we expect by to-morrow to have all the financial statements for the last five years for the purpose of having the financial structure examined.

Mr. YOUNG: If these gentlemen get together and form an agreement, I suppose that agreement will be submitted to us, because there might be other interests involved that are not represented at that meeting.

The CHAIRMAN: Quite so. It is merely that we might attempt, at least, some really practical results that will be of some value. Now, we will adjourn the tobacco enquiry until Thursday of next week. On Tuesday and Wednesday we have made arrangements for the bakers and vegetables growers.

The Committee adjourned to meet on Tuesday, May 1st at 11 o'clock.

## HOUSE OF COMMONS, ROOM 368,

May 1, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock a.m., Hon. H. H. Stevens, presiding.

Mr. Norman Sommerville, K.C., of Toronto and Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order, gentlemen. The minutes of the last meeting record the witnesses heard; no documents were filed. Unless there is some question, I declare the minutes approved.

Before proceeding there is a correction in the evidence of Mr. P. Blais of Ste. Cesaire, Quebec, on page 1308. A question was asked of Mr. Blais by Mr. Sommerville, as follows: "So that the price from 1927 to 1932 dropped from 22 cents to 10 cents; that is, the price your farmers got on their processed tobacco, after you had treated it and had sold it to the General Cigars?—A. Yes."

Mr. Blais points out that he did not quite understand the question, and he says that the term "processed tobacco" should be changed to "green leaf tobacco." I have checked this statement regarding prices and, obviously, it was an error in understanding of the question by Mr. Blais. So with the consent of the committee we will order that that change be made at the request of Mr. Blais.

Mr. BOULANGER: Mr. Chairman, with your permission I would like to make a motion:—

That the House of Commons, the Prime Minister and the Minister of Finance be respectfully requested to forward to this committee all petitions or protests against the imposition of a tax on raw leaf tobacco which they may have received during the present session.

As you know, a lot of these petitions have been filed in the House, and some of them have been sent to Mr. Rhodes and to the Prime Minister.

The CHAIRMAN: Mr. Boulanger, would you kindly leave that as a notice of motion. I am not quite clear on the formality of the regular proceeding. I see no objection to it.

Mr. BOULANGER: I have another favour to ask; Mr. Seguin, member for L'Assomption, Montcalm, told me that some of the tobacco growers of his district would like to send a representative to our committee.

The CHAIRMAN: There is no objection to that.

Mr. BOULANGER: I will ask him to get in touch with Mr. Sommerville or Mr. Parry, and, for myself, I would like to have one of those raw leaf tobacco growers appear. I would like to hear Charles Frenette, St. Charles, Bellechasse county, wholesaler dealer in raw leaf tobacco.

Mr. PARRY: Mr. Chairman and gentlemen, counsel is proposing this morning to launch into an inquiry into the spread affecting the price of bread in relation to milling. It is proposed at a later date to furnish the committee with an analysis of statements which will be shortly obtained from the milling and baking companies, but at the moment the inquiry is particularly directed to

revealing to the committee conditions in the baking industry in particular from one end of Canada to the other. In this regard I am filing three charts giving certain statistical data which will be of value to the committee, and to which I will draw their attention before the inquiry proceeds. In the chart marked "A" it will be observed that it reveals the average yearly price of one pound of wheat flour used in one pound of bread, and one pound of bread itself, using as the basis 270 pounds of wheat equal to 196 pounds of flour equal to 270 pounds of bread. It is also revealed that in 1913 the wholesale price of one pound of wheat at Fort William was 1.47 cents, and in 1933, 1.02 cents. The wholesale price of flour in one pound of bread in 1913 was 1.80 cents, and in 1933, 1.66 cents. The retail price of one pound of bread, taken from the 69 localities which furnished the statistical information in 1913 was 4.2 cents, developing at various rates up to 9.3 cents in 1920 and to 5.7 cents in 1933.

Chart "B" shows the spreads between the average yearly prices—it is not a relative chart in the same sense—and the table on the right-hand side of the chart reveals and deals with the question of spreads; but I would refer the committee to the indices in the right-hand side of this exhibit. The price spread between wheat and flour in 1913 was .33 cents; in 1933, .64 cents. The spread between flour and bread which in 1913 was 2.40 cents, in 1933 was 4.04 cents. The spread between wheat and bread which in 1913 was 2.73 cents, in 1933 was 4.68 cents.

Mr. KENNEDY (*Winnipeg*): And in the interim the spread was greater.

Mr. PARRY: The spread was greater. The high point of the spread appears to have been at 1930 when the spread between wheat and bread was 5.93 cents and there was a corresponding spread, and a high spread, between flour and bread of 5.13 cents.

Chart "C" develops the relative relation between Canadian wheat, flour and bread prices for the years 1924 to 1933 as compared to the relation of their average for the year 1923. It may be recalled that this chart in part was set forth in the report of the bread-baking industry which was handled by the registrar of the Combines Investigation Act in 1931, and this has been brought up to date. It will be observed that in and during the year 1933 there was a decided lag in the price of bread with relation to the prices of flour and wheat, but that lag has been largely taken up, and on the margin are revealed the relative relations between wheat per bushel and flour per barrel and bread per pound. I will file that as an exhibit.

*Charts "A," "B" and "C" filed, marked exhibit 107*

I am also filing, Mr. Chairman, for the use of the members of the committee as exhibit 108 the investigation into an alleged combine in the bread-baking industry in Canada, the report of the registrar dated February 5, 1931, and I wish for the information of the committee to read several brief extracts which will, perhaps, reveal the picture, changed only from the point of view of relationship during this time. At page 33 under the heading "Delivery and Sale Costs," I read as follows:

The outstanding development in the cost end of the bread-baking industry in recent years has been the rise in selling expenses. In the first half of 1930 the average cost of delivery and sale, according to the returns of 119 bakeries, was 1.66 cents. Few comparable records for earlier years are available, but a comparison of the present returns of five Montreal bakers with their statements in the 1925 bread inquiry (only five are comparable) indicated that distribution costs were increased in the case of four plants (from 1 cent to 1.98 cents per pound of bread, from 1.30 cents to 1.97 cents, from 1.99 cents to 2.36 cents, and from 1.04 cents to 1.80 cents). In the other instance distribution

costs decreased from 2.03 cents to 1.91 cents. Another indication of this trend is the fact that in 1913 all items of cost other than flour amounted to less than 2.4 cents (flour cost 1.8 cents, and bread sold at 4.2 cents). What the average of 1.66 cents per pound in 1930 means is that the Canadian consumer, buying a pound and a half loaf for, say, 10 cents, paid  $2\frac{1}{2}$  cents to cover the baker's sale and delivery expenses. Getting away from the Dominion average and taking Toronto costs alone, which are unusually high, the Toronto housewife paid not  $2\frac{1}{2}$  cents but  $3\frac{1}{2}$  cents to have a 24 ounce loaf sold to her and delivered to her kitchen. One Toronto baking company reported its delivery and sales costs in 1929 as amounting to 5.18 cents per 24-ounce loaf.

And on page 38 under the heading "Combination in the bread-baking industry" I read the following:—

The price of bread is not, of course, as flexible as the price of either flour or wheat. Neither is the competitive area as wide as in the case of flour or wheat. As a perishable bulky commodity, bread must be marketed within a comparatively short distance from the bakery, as well as within a short time after its production. Even though the improvement of roads and the use of trucks have widened the marketing area of producing plants, the range is still limited to a fairly restricted territory.

Competition therefore has until recent years been a matter of more or less local concern. Where prices were low it was presumably because of price competition. But the competition situation in Hamilton, for instance, had little or nothing to do with the situation in, say, Vancouver: the bakeries in each locality were seldom subject to outside control or influence. It is only recently that a new situation has arisen whereby the ultimate decisions on Hamilton prices are not necessarily made in Hamilton, or on Vancouver prices in Vancouver; both may be decided in Toronto or Montreal or Winnipeg. If decisions are made by the local groups they are subject to prior influence, or subsequent review on the part of centralized managements in some larger centre.

This new inter-city relationship has come with the advent of the large chain bakeries, nearly all of them now controlled by one or other of the large flour milling companies. Until 1925 there were but few chains of bakeries operating in Canada; the largest of them, the Canada Bread Company, was organized in 1911. Since early in 1925, at least twelve new chains of substantial size have come into being, nine of them now under the control of four flour milling companies. Of the three others, all owned independently of the milling companies, one has since disintegrated and the other two are operating thirteen bakeries, all of them in Ontario but none in the larger cities. Another independent chain of substantial size, producing a special kind of bread, and providing no delivery service, has developed since 1920, when its first plant was opened in Alberta. It is now operating in six cities in Ontario as well as in seven in Alberta and Saskatchewan.

This, of course, gentlemen, was in 1931. On page 39 of the report, last paragraph, I find the following:—

Some idea of the part which the mill-controlled bakeries are taking in the manufacture of the bread of the Dominion is given by their total output compared with the estimated consumption of bakers' bread in Canada. According to the records of the Dominion Bureau of Statistics for 1929 the quantity of bread manufactured by the bakers of the Dominion for that year amounted to 835,794,310 pounds. Measuring

this against the officially estimated population of the Dominion for 1929 (9,796,800) the Bureau's estimate of the per capita consumption of bakers' bread for that year was 85.3 pounds. The statements of the mill bakeries give their total production for 1929 as 317,819,277 pounds of bread. On this basis, 38 per cent of the bread sold in Canada in 1929 was produced by 76 mill bakeries. As, however, these bakeries have plants in only 54 communities, their output should be measured, not against the total production of bakers' bread for the Dominion, but against the market for bread of these particular prices, making due allowance for out of town trade. According to the latest estimates available, the population of the 54 communities in 1929 was 3,192,280, not far below one-third of the Dominion's population. Their estimated consumption of bakers' bread on the basis of 85.3 pounds per person was therefore 272,301,484 pounds. The sales of bread reported by the mill bakeries in these cities in 1929 were 317,819,277 pounds. Estimating 80 per cent of these sales as city sales, the production for the 54 cities and towns stands at 254,255,422 pounds, or 93½ per cent of the entire business of the communities in which they operate.

The above figures refer to the actual output of bread of the mill-controlled bakeries in 1929. The total capacity of 72 of their plants again according to their own statements is 892,679,000 pounds a year, or nearly treble their output, or over 50,000,000 pounds in excess of the 1929 total bread sales reported for the whole Dominion.

Six mill-controlled bakeries in Montreal, for instance, with an aggregate capacity of 163,236,000 pounds of bread, could supply four-fifths of the bread sold throughout the whole province of Quebec. The total of all bread sold in Montreal alone, based on population of just over a million, would be 87,914,000 pounds.

Six of Toronto's seven mill-controlled bakeries reported capacity of 202,389,000 pounds a year. City purchases amount annually to only 68,581,000 pounds, taking the estimated population of 804,000. In fact the whole of Ontario bought in 1929 only 403,000,000 pounds.

Winnipeg's three mill-controlled bakeries have capacity enough (77,542,000 pounds a year) to supply the whole province and more, estimating the annual provincial consumption of bakery bread as 57,000,000 pounds. The city of Winnipeg alone, with an estimated population of 192,000, buys 16,377,000 pounds a year.

Vancouver has four mill-controlled bakeries, with estimated capacity of about 50,000,000 pounds, almost enough to meet the total purchases of the province, which are estimated at 58,668,000 pounds. Vancouver itself, with a population of 238,885, buys only about 20,377,000 pounds.

And there are in the province of British Columbia and the Yukon 267 bakeries.

Now, I will quote from page 43, "The Chain Store":

Within recent months other forms of competition have appeared which make it difficult for the mill-controlled bakeries to sustain prices at unduly high levels. The same tendency toward centralization of industry which is seen in the consolidation of bakeries and their control by flour milling companies is to be observed also in the entrance of the chain store into the bakery business. On the one hand we have the flour mills reaching forward into bread manufacture and distribution; on the other we have the chain store, primarily a retail distributing organization, reaching back into manufacture—the two meeting on the common competitive ground of the bread-baking industry.

I quote from page 44 at the centre of the page:

The above returns have been supplemented by the records of seven other chain store companies which are not engaged in the baking business, but which buy their bread from local and other bakeries. In practically all of these stores bread was sold at a profit, or at least at prices higher than those actually paid the baker for the product. There were a few exceptions, however, where bread was sold at cost or below, doubtless as a "leader" the loss being charged to advertising account. Such a practice is illustrated by a rather extreme example given recently by the manager of a chain specialty store in an Ontario city, a store which ordinarily carries few if any lines of food products. Asked concerning the 24-ounce loaf which was being featured at 5 cents in a special one-day sale, the manager stated that his firm bought the loaf at 7 cents and sold it at 5 cents. A thousand loaves were sold, at a total loss on bread of \$20, but this money was regarded as well spent since it brought many customers into the store. Such a practice, particularly on the part of a chain which carries many lines of goods and can afford to cut on one for advertising purposes, undoubtedly works an injury to the baking trade whose only or chief product is affected. The impression which is given to many is that 5 cents must be the fair price for a pound-and-a-half loaf, and that anything above that is excessive.

The concluding reference is found on page 45:

It is often assumed that in business combination is very antithesis of competition; that so long as competition exists, a combination of manufacturers or dealers, cannot maintain excessive prices. Competition, regarded as the life of trade, is depended upon also as the public's chief measure of protection. Distinction should be made, however, between two different types of competition: the one, competition in price; the other, competition in quality, service and sales promotion. The one tends to keep costs and prices down to a minimum, the other, where it is not kept within control by price competition or some other means of regulation, has usually the opposite effect of increasing costs and prices.

Within the bread-baking industry examples of both kinds of competition are clearly seen: competition in quality, service and salesmanship more plainly in recent years, competition in price very markedly in recent months. The latter type seems to have come in part as a reaction from the other.

(Report re Bread-Baking Industry of Canada filed, marked Exhibit 108).

The CHAIRMAN: This has all been read from the report of the Registrar of the Combines Investigation Act.

Mr. PARRY: Yes, and filed as exhibit 108. I am filing the report on Bread and other Bakery Products' Industry in Canada, 1932, published by the Department of Trade and Commerce in collaboration with the Dominion Bureau of Statistics.

The CHAIRMAN: I will now call Mr. Pinchin.

Mr. R. J. PINCHIN, called and sworn.

*By Mr. Parry:*

Q. Mr. Pinchin, you are associated with the Copeland Flour Mills of the town of Midland, Ontario?—A. Yes.

Q. In what capacity?—A. Vice-president.

Q. And as such you have had considerable experience in the flour milling industry and have come in contact with the baking industry in the province of Ontario and other parts of Canada?—A. Yes.

Q. You have a presentation to make to this committee. Have you copies of what you are going to present?—A. Yes.

March 31st, 1934.

“Honourable Sir, Members of Your Committee.

GENTLEMEN,—Your request that I appear before you has been interpreted as an invitation to assist you to enquire into the relationship between the flour milling industry and the bakeries of the country and the effect of such relations on the banking industry of Canada rather than as a member of the Milling industry called before you to give evidence primarily in defence of certain operating policies.

May I say I deem it an honour to serve you. The magnitude of your assignment implies the nature of the responsibility which you have assumed in the interests of the Canadian people. Every serious minded citizen should follow with the keenest interest your deliberations here inasmuch as your recommendations to Parliament, based upon your findings from evidence submitted, must prove of far reaching import both socially and economically.

If I should be accused of a selfish motive, I trust you will find it to be a sincere desire to witness an early return to a state of balance in our economic structure so that we all may enjoy in our own right as individuals the fruits of our services and enterprise in a manner likely to insure healthy, vigorous progress throughout Canada, thereby indicating contentment and happiness among the greatest number of our population.

In the preparation of the material which I now present for your consideration, I have endeavoured, therefore, to keep constantly in view the real purpose of your committee as I understand it, namely: to ascertain if possible those forces leading up to and apparently responsible for living conditions which have become untenable for those who find it impossible to maintain their relative position in our social structure through lack of employment or insufficient purchasing power.

Item C of Resolution now before you refers specifically to the *relation* between the milling and baking industries and the *effect* of this relationship upon the latter. My remarks should not be interpreted as an exhaustive study of either the milling or baking industries but rather as confined to certain facts and observations strictly pertinent to the subject under review.

Of necessity my report is a lengthy one. It is well to keep in mind the important part which mill-bakery products play in our daily subsistence. Involving the use of the products of the farm, transportation and handling facilities, manufacturing, all forms of wholesale and retail merchandising, the granting of credit and all problems associated with each of these various activities, this major industry assumes a position of national importance and its products a matter of interest and concern to every individual.

As there are other sources from which you will be obtaining specific detail relative to individual operations, may I ask that you consider this part of my evidence as indicating my cumulative observations extending over the past ten years of continuous contact with the problems of the milling-baking industries.

### *Report*

In 1931 there appeared in pamphlet form the results of an investigation into “An Alleged Combine in the Bread-Faking Industry in Canada” conducted by the Minister of Labour under the Combines Investigation Act. Although a review of this report would furnish you with a great deal of the evidence which

I believe you now require, the fact that intervening developments have appreciably changed our economic outlook prompts me to use this report only as official confirmation of certain statements and observations which I may make, in order to eliminate the necessity of again presenting lengthy evidence in proof thereof."

*"Direct Relationship of the Flour Milling Industry to the Bakeries of the Country"*

Briefly stated, the direct relationship of the flour milling industry to the bakeries of the country may be summarized as follows:—

Five Mills, primarily producers of flour, with 83 per cent of the capacity of the first eight mills and 68 per cent of the capacity of all active mills in Canada, are also engaged directly in the operation of wholly owned or controlled bakery subsidiaries.

According to the Robertson Report on the baking industry, seventy-two baking units controlled by flour milling companies had an *installed* capacity in 1929, 6 per cent in excess of total bread sales for the whole Dominion in that year—6 per cent being equivalent to 50,000,000 pounds of bread. The *actual* amount of bread sold by seventy-six mill-controlled bakery units was reported as 38 per cent of *all* bread sold in Canada in 1929. The position in 1934 may be stated as approximately analogous to that of 1929."

I think, as Mr. Parry has read to the Committee certain extracts which I had intended to read from pages 39 and 40, we can pass them over.

The CHAIRMAN: Yes.

*"Effect of This Relationship on the Baking Industry"*

The effect of this relationship on the baking industry may be indicated in the statement that prior to the advent of the mill—bakery combination in a large way, the baking industry was a profitable vocation, a definite asset to, and a stabilizing force in, our economic structure. To-day it is in a chaotic state, with those directly engaged in it labouring under very discouraging conditions and those dependent on it financially suffering from its seriously weakened condition."

*By Mr. Parry:*

Q. Have you any examples to illustrate that paragraph?—A. According to the Dominion Bureau of Statistics 1932, a report on the bread bakery products industry, this discloses that in 1929 there were 1,769 units with an average investment of \$23,350 per unit; there were 9,940 employees receiving an average remuneration of \$1,160; there were an average number of employees per unit of 5.6. In 1931 there were 2,912 units with an average investment of \$18,600; and there were 18,337 employees receiving an average remuneration of \$1,000; there were an average number of employees per unit of 6.4. During this period the capital invested in these units increased \$31,000,000. In view of the fact that the number of units increased 1,143 it may be safely inferred that the percentage of capital increase might be traced to a comparatively small number of extensive units.

Q. Thank you?—A. Discussion:—

"In order to throw some light on whether the policy of milling companies controlling bakery outlets has been responsible for the unsatisfactory conditions in the baking industry, I suggest we study the two industries to determine if from such a policy might be expected a sound economic fusion, particularly under the conditions which prevailed and the manner in which the policy was pursued.

The science of successful business administration indicates that:—

1. A consolidation or merger is considered sound when the *combination* will *accomplish* that which is not possible as *individual* constituents. Primarily it is for the purpose of increasing or stabilizing operating profits, consolidating a competitive position in a certain field of activity, or both. Success depends largely on the *real purpose* of the combination and the extent to which recognized principles govern its formation, as well as its subsequent operations.

2. In any highly competitive industry, operating policies designed and practised in an effort to further the selfish interests of any unit or group in such a way as to undermine the stability and healthy nature of the industry as a unit, eventually must react against those responsible for their introduction, for the very obvious reason that the given *industry* must *prosper* if the *individuals* are to do so.

3. Commercial prosperity depends upon legitimate profits. It is the expectation of these profits which drives the industrial machine. If eliminated, stagnation follows. Temporary profits derived from the extremes of either cut throat competition or an artificially supported, economically unsound price structure eventually mean no profits for anyone, the ultimate collapse of normal trading and the inability of the industry to be a stabilizing factor, due to internal price disequilibrium.

A study of each industry will disclose certain salient facts pertinent to this discussion.

### *Milling Industry*

1. Milling lends itself to large scale operations, directed or controlled from one or more strategic points for the reason that the smallest unit capable of the greatest operating efficiency is of a size which requires active distribution over a wide territory to absorb its production. In 1932 there were 1,290 flour and feed milling units in Canada; 1,267 of these did  $\frac{1}{3}$  and 23 did  $\frac{2}{3}$  of the total business worked.

2. The trend in flour importing countries following the war has been towards self-sufficiency in production, manufacturing and industrial organization. As a result, milling capacity now greatly exceeds world requirements. This is reflected in the amount of idle capacity in countries formerly actively engaged in exporting flour. It applies particularly to Canada, where from table "A" appended you will observe it reveals that for every one barrel of business completed each day in Eastern Canada,  $4\frac{1}{2}$  barrels of capacity in active commission must stand idle or find an export outlet. The latter is capable of currently absorbing only one barrel of the  $4\frac{1}{2}$  barrel surplus.

Incidentally the  $3\frac{1}{2}$  barrels represents an investment interest, and depreciation cost of 35 cents per working day. This must be borne by the two active barrels, or a charge per barrel only slightly below the actual cost of milling a barrel of flour computed on a basis of full time production."

*By the Chairman:*

Q. That is 35 cents per day per what?—A. For the two barrels.

Q. For the two?—A. You see, that is arrived at by taking the cost of the installed plants, that equals \$963. If we take 6 per cent interest plus 5 per cent depreciation, it equals an annual charge of \$105.63; or, based on 300 operating days, the equivalent of 35 cents per day.

*By Mr. Parry:*

Q. And the figures you have in your "Appended A" show that this is the capacity that has to be provided for at a cost of 35 cents—on how many barrels?—A. On the ideal capacity of 60,000 barrels per day.

Q. Which you estimate to be carried at an investment interest and depreciation cost of 35 cents per working day?—A. In fact, that is per two barrels; let me read that again: "Incidentally the  $3\frac{1}{2}$  barrels represents an investment interest, and depreciation cost of 35 cents per working day. This must be borne by the two active barrels, or a charge per barrel only slightly below the actual cost of milling a barrel of flour computed on a basis of full time production." May I say there that in figuring the cost of milling flour, it is on a per barrel basis. This must be borne by the two active barrels; in other words, the two active barrels that are sent out while the others stand idle.

*By the Chairman:*

Q. That is, one for internal use, and one for export, out of the  $3\frac{1}{2}$  barrels?—A. Yes.

Q. And that means that the cost of production of 2 barrels of flour is increased by—what amount would you say?—A. By  $17\frac{1}{2}$  cents per barrel if the remaining  $3\frac{1}{2}$  barrels are to stand their legitimate charges of interest and depreciation; in other words, somebody has invested in these  $3\frac{1}{2}$  barrels.

"3. Possibly due to abnormally large profits during the war and the period which immediately followed, the executive capabilities of Canadian flour mill management may have been impaired. At least subsequent developments would tend to indicate that the executive management of the milling industry in the last ten years has not been equal to the problems with which it has been confronted."

*By Mr. Parry:*

Q. Why do you say that, Mr. Pinchin?—A. I will rest my expression of opinion there solely on the policy of the milling executives attempting to transfer the inherent weaknesses of the milling industry over to the healthy baking industry.

*By the Chairman:*

Q. Let me get that; your point is, that prior to a certain time—a few years ago—the baking industry was in a healthy condition throughout the country?—A. Yes, sir.

Q. Then the milling industry, which had overdeveloped, seeking an outlet for its particular mills, began to buy up bakeries for the purpose of securing an additional outlet for their own controlled mills; is that your point?—A. Yes, sir.

Mr. EDWARDS: And they transferred the loss to that two barrels.

The CHAIRMAN: Yes, the two remaining in the baking industry.

*By Mr. Factor:*

Q. Why do you attach any particular blame on the efficiency of the executive for doing that?—A. Well, they have transferred the inherent weakness of the milling industry, and they have not only failed to correct the weakness in the milling industry, but they have turned around and precipitated a similar situation in the baking industry, by attempting to correct the milling industry weakness in purchasing bakeries; in other words, let me put it this way, rather than let their plants stand idle—there were only two barrels capacity which could be worked, and some of the units had to stand idle to the extent of  $3\frac{1}{2}$  barrels; so I presume their reasoning was, let us buy into the baking industry so that we can absolutely secure, or assure ourselves, of a fixed outlet for our product, so that instead of standing idle, we shall be sure of our two barrels average.

Q. What is wrong with that?—A. It would be all right, if they had not precipitated a similar condition in the baking industry. In other words, they brought chaos and ruin to one large industry in Canada simply because they would not seek other methods of correcting their own difficulty.

Q. By increasing their capacity through the production of bread; is that what you mean—by going into the bakery business and thereby increasing their capacity for bread production?—A. No, no, I do not think it would necessarily follow because the mills went into the baking business that they would increase the per capita consumption of bread.

*By Mr. Edwards:*

Q. By getting control of the outlet?—A. By getting control of the outlet, so that in other words, my position as an independent, I was formerly selling Tom Jones of Windsor; he was a customer buying from me in a free and open market; suddenly, when I continued to call on Mr. Jones I discovered he had been purchased by a flour mill, and automatically that outlet for my products had been cut off.

Q. In other words, the business of the milling industry plants expanded to the extent of taking care of a large part of the trade?—A. Yes, sir.

Q. And having a loss they transferred it to all these small towns, and took up the independent baker?—A. And yet the amount of business in Canada, which we will say was a total of 10,000,000 barrels, was not sufficient to satisfy the productive capacity which had developed. But that is pretty well set out in my brief.

*By Mr. Factor:*

Q. Did it increase the capacity for bread production?—A. That follows too later on; I think I will answer that a little later on in my report.

*By Mr. Parry:*

Q. In any event, that is an illustration of what you consider to be uneconomic and unhealthy?—A. Yes.

"4. A strong financial condition, with a relatively high credit rating and the comparative ease with which the public and financial houses could be induced to invest in new issues allowed certain mills to adopt and pursue unchecked their policy of purchasing established baking units or building new ones."

Q. Have you any materials there with which to develop that point. In my opinion it is really important. Have you any illustrations of the refinancing of these bakeries by milling concerns?—A. Without mentioning any names, I will read from the annual report issued over the signature of one of our large companies.

*By the Chairman:*

Q. One of the large milling companies?—A. One of the large milling companies.

Q. Was it published?—A. Yes, sir, this is from a journal—

Q. In what paper?—A. The Northwestern Miller.

Q. Why not give the name? It is a public document everybody knows it?—A. This is the Western Canada Flour Mills.

Q. All right, go ahead; everybody knows it, it is published to the world.—A. This is for the year ending August 31, 1930, down the report it states: "The Purity Baking Company Limited which holds the bakery interests of the company, has acquired additional plants during the past year and is now represented in most of the large centres between Montreal and Vancouver.

*By Mr. Parry:*

Q. You will file that paper, please?—A. Yes, there is another reference I may want.

*By Mr. Factor:*

Q. Does that show the financial structure?—A. It shows their balance sheet here. You ask me whether that shows the financial structure. I really am not qualified to state how they finance their bakery, but I notice in the balance sheet here that the guarantee to the Purity Baking Company Limited by loan in 1929 was \$700,000, and in 1930 it was \$1,457,000.

*By Mr. Boulanger:*

Q. Did that policy of the millers buying bakeries provoke a price war in the baking industry?—A. That is answered a little later in my report, if you don't mind.

*By Mr. Kennedy (Peace River):*

Q. Were there any new bakeries built during the last two or three years?—A. I think that is a question which should be answered by the milling companies themselves.

Q. Well, in view of the point that you are stating here, that they allowed certain mills to adopt and pursue unchecked their policy of purchasing established baking units or building new ones, I thought possibly you might know?—A. My understanding is that there were bakeries built in the West and in Montreal.

*By Mr. Parry:*

Q. Have you any other information at your disposal to develop the point raised by Mr. Factor a few moments ago, as to the statement that both the public and financial houses could be induced to invest in new issues, other than general knowledge through the newspapers which are daily routine?—A. That could possibly be answered simply by obtaining the capital set-up of these different units, and in analyzing the amount of securities sold against the plants purchased. That is covered a little later on in my report.

"5. Although this policy was viewed in many quarters as highly dangerous and fraught with serious consequences, the healthy nature of the baking industry plus the new working capital derived from the sale of securities, bank loans or liquid resources allowed the combination to function for a time ostensibly with some degree of success.

#### *Baking Industry—*

1. Unlike milling, baking is a localized industry. Each unit bakes and sells products of a kind and amount to suit the needs of its particular trade area."

Q. Develop that a little further, Mr. Pinchin?—A. Anyone with two strong arms and \$5 and a bag of flour can produce a loaf of bread. You can develop that a little further. When they have \$100 they might buy a mixer, and their output is increased accordingly; so that any bakery in the local community really is developed on the basis of its efficiency to cater to the housewife, so that she will find equal or better value in purchasing from the baker than by producing her own bread. You can go back and study the baking industry, its evolution, and see how it has transferred from the home over to the bakeries.

*By Mr. Edwards:*

Q. On the estimated requirements of the community, I presume?—A. Or information.

Q. And there is no increase in the construction of private bakeries beyond these requirements?—A. In Mr. Parry's reading of the extract from Mr. McGregor's report, they stress that bread is competitive, and is sold within 24 hours, or sold locally, and so on.

*By Mr. Parry:*

Q. You would say then that the manufacture and distribution of bread by reason of that situation is entirely local?—A. At least it is but a local operation.

*By the Chairman:*

Q. Mr. Pinchin, you have had a good deal of experience in this: I would like your opinion, probably it is not evidence in the strict sense, but your opinion would be of value; would it be reasonable to say that the baking industry is of a character which as you say here, "lends itself to localized industry," and if a concern were to take charge of and to secure all of these localized units in different towns, the only result would be to add an additional expensive overhead to the cost of production?—A. Theoretically, yes; and practically, yes.

Q. That is, you would confirm that out of your own experience?—A. And as a business operator I will confirm that view.

Q. Thank you.

*By Mr. Young:*

Q. No economies could be effected by combination?—A. That is covered a little later on in my report.

The CHAIRMAN: All right, proceed, Mr. Pinchin.

The WITNESS:

"2. Prior to the advent of mill-owned bakeries, the baking business, with few exceptions, was in the hands of private or largely individual owner—operator management.

3. Due to its *localized* activities and the fact that competing units were relatively of the *same size* and *financial resources*, unfair and disturbing trade practices naturally had no tendency to reach a point where the healthy nature of the industry or the welfare of those dependent on it for a livelihood were impaired being perforce *limited* to the *available* capital of *each* unit."

*By Mr. Parry:*

Q. You have said a lot there, Mr. Pinchin; you have alluded to low prices, you have used the phrase "localized activities," "financial resources" and others; will you just give us an illustration of the points made in that paragraph?—A. We will take as an example two bakers in a representative community, Jones and Murphy: in the old days if there was a disagreement between the two, Jones might say to Murphy, Well, here, if you are not going to play ball on this thing, I am going out to get the business; he might cut the price one cent the first day, or the second day, the other chap might meet him, he would still be a little bit annoyed and he would cut a further cent the next day, until eventually the price might be dropped 25 per cent below the previous price; but within the course of four or five days they would get together and realize how absurd such a policy was, because both Jones and Murphy could figure the extent to which that competition might continue.

The CHAIRMAN: To their mutual elimination.

The WITNESS: Or, to the elimination of their resources. In other words, Jones might have had \$5,000 to throw into that, and Murphy might have had \$6,000; but that would be only relative, the big point is this: because these

men had had to earn that \$5,000 surplus, they were not going to squander it recklessly, because they knew it took a good many years to build it up and they would realize that there was a limit to how far either one might go under-selling their product below cost, without precipitating their own ruin, and it would be stopped there. To-day if one of these bakeries happens to be owned—we will say Jones is owned by one of the large baking companies; Murphy has no idea how far or how long the competition will run, because he cannot measure the resources of Jones and it may last three or four years.

*By Mr. Edwards:*

Q. He knows it will last until he is finished?—A. He knows it will last until he is through. You ask me for concrete illustrations; I venture to say you can go to almost any point where mill controlled bakeries are operating, and the independent baker, if he will tell you the truth, he will tell you how long that competition has lasted, and that his financial resources are down to the breaking point to-day, if they are not below that. I think I will develop that point a little further as I go along.

*By Mr. Factor:*

Q. Have you any statistics to show how many of these individual bakeries have been eliminated?—A. I have not. I venture the opinion though that there have not been so many actually eliminated, because of the ability of the small independent to hang on; it is remarkable how he can hang on.

Q. Is it not a fact that many of these, after they were put in that position, were taken over by the mill-owned bakeries?—A. I believe that is a point well taken. I think that on investigation you would find that in certain instances in the policy of the mills buying bakeries they would purchase the weaker of two units in a locality; and I base my information on that on this reason, that in a great many cases the sound well-established independent was not anxious to sell his business, and even although he might have been offered a ridiculous sum for it, he was in the baking business, that was his livelihood, he may have been 25 or 30, or 35 years of age, his father may have turned that business over to him, and so he naturally kept on. He has no idea of the type of competition which is going to confront him eventually; but in the meantime the mill in pursuing its bakery policy had to have a bakery in that locality, so they bought the next bakery that would sell to them? I am not assuming that, I think you will find that that is borne out by actual fact.

*By Mr. Young:*

Q. What form does this competition take?—A. That again is answered a little later on. If there are any questions, or anything you would like to know, I will be only too glad to refer back to it later.

The CHAIRMAN: Go ahead.

The WITNESS:

"4. To these facts may be attributed the steady progress and profitable operations characteristic of the baking industry prior to the mill-bakery combination. Managed and operated efficiently, it was capable at all times of meeting the most exacting requirements of the trade at the minimum cost. The Canadian consumer of bakery products was enjoying quality, service and value at the lowest over-all manufactured and distributive cost.

5. In 1932 there were 2,861 bread and other bakery products establishments in Canada, of which 2,800 did 58 per cent and 61 the balance of 42 per cent of the total business."

*By Mr. Parry:*

Q. Now, that develops from the figures contained in the report of the investigator—that indicates, does it not, that these particular units are increasing their capacity through these outlets at the expense of the other bakers?—A. On the surface it would appear that way. In other words, there were 76 in 1929 who did 28 per cent; but according to the last report, 1932, 61 units did 42 per cent of the total business.

Q. Why do you say, on the surface?—A. There may be—I am not just going by the government report here, and there may be some other factors enter into that that may affect it in reconciling the figures.

*By Mr. Kennedy (Winnipeg):*

Q. Have you any particular factor in mind?—A. No, in the bureau report they merely show the gross value of the product produced, that is the selling value of the product; and that analysis if broken down would show that certain bread units did so much business, and I have used these figures to show how that was arrived at.

*By Mr. Factor:*

Q. What year marked the origin of this milling baking combination; when did the mills first go into the baking business?—A. According to Mr. McGregor's report the Canada Bread I think was taken over by the Maple Leaf Milling Company some time after the war. I am not sure; but the big buying orgy of mills controlling bakeries was during the years 1927, 1928, 1929 and 1930. It started, and eased off then.

*By Mr. Parry:*

Q. In regard to Mr. Kennedy's question, I think there is a possibility that of the 61 there may be other than mill-controlled bakeries in that number?—A. Oh, yes.

Q. Whereas in connection with the 76 the figures all represented mill control?—A. Yes.

#### *"Mill—Bakery Combination"*

Let us now consider the results to be expected from a baking company buying a mill or a milling company buying bakeries. The following two theoretical illustrations are used:

##### *Illustration 1*

A baking company, capable of absorbing the total output of an efficient flour mill on a basis which will insure it a uniform, high quality product at an all-inclusive cost per barrel consistently below that at which it may secure its requirements from other milling units, may increase its net operating profit or consolidate its competitive position by purchasing or otherwise controlling such a milling unit.

This is an example of an economically sound combination. It is important to observe that in this case the baking company as the new owner does not change its status as its business continues that of merchandising bakery products in the same manner as it has heretofore. Competition has not been increased or disturbed. To the contrary, the combination is in a position to exert a steadying and healthy influence through its improved operating position."

*By Mr. Factor:*

Q. Is not that baker enjoying a more advantageous position than the one who has to buy from other units?—A. It may; but it owns the mill and it is

taking its total output from that mill by virtue of that combination, and, assuming it is able to reduce its operating charges and it passes that saving along to the trade, then it is furthering the soundness and stability of our economic structure. I merely use that illustration to offset the next illustration.

*By Mr. Young:*

Q. Is there any such baker in the country as that?—A. No, sir.

Q. Is any such baker possible?

The CHAIRMAN: It is too sensible.

*"Illustration 2*

A milling company seeking to control an outlet for its products enters the baking field. It acquires existing baking units or builds new ones. Due to the fact that other milling companies are pursuing a similar policy, the owners of bakeries are content to sit back, ask prices sharply above recognized, sound values, finally closing to the highest bidder.

The milling company eventually finds itself the owner and operator of a string of bakeries of various sizes and operating efficiency, scattered from coast to coast, and representing an investment based upon abnormally high or boom values.

In this case it is important to note that the status of the *milling company* as the new owner is changed as it now becomes a *distributor of bakery products*. The milling executive becomes a bakery executive or at least it must be qualified to direct, and be held strictly accountable for, all company policies or trade practises which may be pursued by its baking subsidiary.

Such a combination, fraught with uncertainties, is admittedly unsound for the following reasons:—

1. It fails to accomplish anything which constituents as individuals could not do in a more efficient and less costly manner.

2. Any doubtful saving in the form of lower flour selling costs; wider margin of flour profit; guaranteed business; extra bakery profits; etc., tend to be offset or dissipated in the initial high purchase or investment bakery cost, plus the high annual write-offs incidental to the cost of floating new securities and the depreciation necessary to adjust book values to sound market values."

*By Mr. Factor:*

Q. Has not that been the greatest difficulty in this matter—the fact that the milling concerns have paid such an abnormally high price for some of the businesses they have absorbed, and then issued stock to the public?—A. Well, I am using this merely as an illustration, but I would answer that—

Q. Is it not a fact?—A. Yes, I believe so.

Q. May I ask you again if you have any concrete illustrations of the taking over by the milling concerns of large bakeries and then the issuing of stock to be sold to the public at the high price the bakery was purchased for?—A. No, I have not, sir.

- “3. Although eliminating the cost of all flour sales resistance in units purchased, the milling company must still overcome in the baking field competition of a nature equally as difficult and increasingly more costly to combat and therefore requiring more aggressive salesmanship rather than a lower cost sales organization.

4. By substituting *direct owner-management* supervision with *indirect line-control management*, the *relative* efficiency of the combination is weakened appreciably, particularly so at points where its competition may still be the individual owner-management type.

That, sir, is answering your question.

The CHAIRMAN: Quite so.

"5. Impelled by the mill surplus necessity of increasing bakery distribution rather than merely maintaining it, the combination with its overwhelmingly greater financial and industrial power throws its full weight behind its bakery efforts, the outlet for which must be an *individual* bakery unit in *each* locality where the *pressure* is applied."

Mr. FACTOR: That is why we see five or six waggons on one street?

The WITNESS: Yes.

"This pressure takes the form of additional bakery routes, an increased sales force, newspaper and radio campaigns, the introduction of new products, with specials offered as inducements, etc. These are resorted to in quick order. Its competitors in each locality affected must keep pace or lose ground. The cost of distribution starts to climb. In the final analysis some one must pay, whether it is the miller, the baker, the employee, the stockholder, the creditor or the housewife."

Mr. PARRY: Would you say that any of those elements were the result of public demand or were forced upon the industry by external things?

The WITNESS: No, sir.

“(NOTE: This is not attacking progressive selling methods, but rather stressing the danger of injecting high pressure methods into the industry during a period when conditions warrant the intelligent and careful outlay of liquid resources.)

6. As the mill must continue to solicit flour business from independent bakers, chain stores, retailers and consumers in order to maintain its volume and enjoy competitive production costs, it is confronted with the increased competition arising from those milling units whose regular business has been disturbed and lost to the mill-bakery combination purchasing and cutting off overnight certain of their regular bakery outlets.

7. Confronted with keener competition, the mill-bakery combination has no alternative but to continue to eliminate by purchase or render ineffective through unprofitable operating conditions any competition which retards the execution of its policy or endangers its success.

8. The bakery purchase policy continues until an analysis reveals to the combination that the installed capacity of controlled units already exceeds by 6 per cent the total bread sales in the whole market and combined these controlled units are only participating in 38 per cent of the business. A halt is called.

At this point it is advisable to jump from these theoretical illustrations to actual facts.

You should find it comparatively simple to fit into the above illustrations the details of the exact technique practised by the average mill-bakery combination as they will be disclosed to you during the course of your investigation.

Should the milling units controlling bakeries attempt to justify the soundness of their bakery purchases, you may find it illuminating to secure from them complete particulars of the following nature:

1. The price in cash and securities for all individual baking units and companies purchased."

Mr. FACTOR: That is what I was referring to.

The WITNESS: Yes.

"2. The replacement cost of these units at time of purchase.

3. The depreciated value of same at the time of purchase.
  4. The present value of these same units, expressed in terms of: (1) replacement cost (2) depreciated value plus cost of subsequent additions (3) the value computed on a basis of current earnings.
  5. The nature and amount of securities issued against these purchases at the time of transfer.
  6. The cost of converting these securities into cash.
  7. The extent to which any milling company may have used bank loans to purchase baking subsidiaries.
  8. The approximate loss to the public as indicated by the difference between the original amount invested by it and the secured equity now represented by its holdings plus the loss of interest which might have been earned and expected under conditions of decontrolled bakery operations.
  9. The loss in wages received by all bakery employees, directly traceable to the competitive situation arising from the mill-bakery combination.
  10. The increased cost to the bread consuming public as indicated by the difference between the delivered wagon price about the time the mill-bakery combination was at its height and the relative price prior to its entry into the baking field. The factor of relative quality of the mill-controlled and independent bakery products should also be considered."
- Mr. PARRY: Will you enlarge on that; what you mean by that?

*By the Chairman:*

Q. What was the approximate date? I have asked this question before, but I do not think I have it clear in my mind. You say here, "about the time the mill-bakery combination was at its height"; you said 1928 and 1929?—A. Between 1928, 1929 and 1930. I would say about 1929. It may have been farther over into 1928. Perhaps I can explain that a little bit further. I understand that the average cost of a loaf of bread delivered to a home in Toronto is 3 cents more than the cost to stores on a wholesale basis.

Q. In Toronto?—A. That is in Toronto.

*By Mr. Factor:*

Q. That is the cost of delivery?—A. That is the extra cost of delivery.

Q. In other words, bread can be delivered for wholesale distribution at a price 3 cents per loaf less than to the home, for retail distribution?—A. Yes.

*By Mr. Edwards:*

Q. What is the comparison between the waggon delivered bread and the shop purchased bread to the consumer?—A. Why, really, I think it would be better to have that question answered by those who are actually in the baking business in each centre; but from what I can understand the price varies anywhere from 5 to 8 or 9 cents, maybe 10 cents. I understand they are selling bread in plain wrappers in "X" waggons that bear no name and yet the waggons are owned by some of the big baking companies, and you can buy bread from those waggons much cheaper than you can buy their other bread delivered with the wrapper on it at the home. Those things should be definitely settled by those in a position to state exactly what the facts are.

*"The Chain Store Companies as Bread Producers"*

The failure of the mill-bakery combination may be attributed to its inability to suppress in other individual enterprises, efficiency and progressiveness. Proof of this may be found in the entrance to the baking field of the chain store companies as bakery owners and bread producers.

Stated briefly, the mill-bakery activities resulted in such an appreciable increase in retail bread selling costs that the housewife was paying as much or more for her bakery products in 1929-30, with raw materials sharply lower, as she had when peak prices prevailed. This is fully covered by the Robertson report on the baking industry.

For several months it almost looked as though the days of the representative, independent baker and miller were numbered, at least for those whose operations were analogous to theirs but who lacked the financial backing of the mill-bakery combinations.

An analysis of the situation by certain aggressive owners of liquid capital, including the chain store operators, disclosed the fact that the spread between the cost of raw materials and manufacturing on the one hand and the price paid by the consumer on the other had been allowed to widen to a point where they might install the most modern and efficient type of bakery equipment, produce equal or better quality products, lower the cost to the housewife by an appreciable margin and still enjoy a satisfactory return on their investment."

Q. Could it be said that that condition still exists?—A. No.

Q. It does not exist now?—A. Because the price has been generally lowered; the average is down now to a point where that no longer prevails.

Q. I understand that in one case, at least, the chain stores have abandoned the actual production of bread. Do you know that?—A. Yes, sir.

Q. That is so?

*By Mr. Kennedy (Peace River):*

Q. Did this result in a big increase in the bread baking capacity of the Dominion? Was it done in one or two cases? You said there, "on the one hand the price paid by the consumer on the other had been allowed to widen to a point where they might install the most modern and efficient type of bakery equipment, produce equal or better quality products;" was that done?—A. I have only direct knowledge of five cases.

MR. PARRY: The report in 1929 shows six such bakeries operating in Canada—two in the province of Quebec, three in the province of Ontario, and one in Manitoba—page 43.

"The chain store operators are held responsible for the break in bread prices in 1930-31. This is correct but it is unfortunate and most unfair to accuse them of precipitating and being solely responsible for the chaotic conditions currently prevailing in the baking industry.

If the real cause of the trouble is to be uncovered and eliminated, it is most important that the point at which price cutting of an unprofitable nature actually started be clearly established and which type of business was responsible for it, i.e. the mill-controlled, independent or chain store bakeries.

This involves a study of certain fundamental principles or trade factors generally recognized as applicable to and influencing merchandising policies."

*By Mr. Young:*

Q. Was price cutting very drastic at that time? How much was the price cut?—A. Not at that time. The really drastic price cutting developed, I will say, about a year later after these units started to make headway.

Q. Was it a very drastic cut?—A. If I recall correctly the price was somewhere in the neighbourhood of 10 or 12 cents, and it was cut. It steadied away shortly afterwards at 8 cents. It may have been cut progressively from 10 cents to 9 cents and then to 8 and then as things started to boil it was cut to 4 cents.

*By Mr. Parry:*

Q. Did that result in the development of a second quality loaf that was put on the market?—A. Those things were all interjected about that time or shortly afterwards.

Q. You would not say that developed from the chain store itself as a bakery unit?—A. No. It is a factor which has resulted from all these different points which I have set out in order.

1. Competition is inevitable in a free society for it results from the public's comparison and choice among all the offerings which invite its expenditures. The desire to compete, to excel, to win a preference is the life of all games and characteristic of human nature in all lines of endeavour. This factor cannot be ignored when formulated operating or merchandising policies.

2. Demand arises from man's needs and desires, together with his ability to exercise such desires. There must be the will as well as the urge to buy.

3. Merchandising is the art of satisfying these wants and desires in a manner capable of maintaining a proper balance between production and consumption. This involves the responsibilities of the producer to the consumer and vice versa.

4. The problem of the producer to-day is largely one of distribution, not production.

5. We all produce to sell and in turn buy with what we sell. The volume and extent of our purchases are limited perforce to the actual exchange value of the goods or services we produce and are able to sell.

The foregoing is summarized in the following extract taken from a financial review published in 1932:

All students of the question recognize that the fundamental condition of prosperity is a state of balance in various economic relationships between individuals or groups of the population. It is necessary that costs, prices and wages of every kind be in equitable relation with other costs, prices and wages, so that the goods or services offered by each group exchange on an equitable basis with those offered by others, resulting in a rapid flow of all products into consumption. Goods coming to the market not only satisfy needs but represent buying power for other goods and there is no source of buying power outside of the exchanges between the various industries and occupations. Full employment, ready sale of goods and a high state of comfort are all dependent upon these exchanges, and hence upon the maintenance of balanced relationships.

Did the policy of the mill-bakery combination tend to disrupt the normal balance in the bread price structure, leading to the unsettlement in the milling-baking industries?

Turning to the Robertson Report, we find the following statements:

Page 33.—The outstanding development in the cost of the bread-baking industry in recent years has been the rise in selling expenses.

Page 34.—One explanation of the exceptionally high distribution costs of the larger bakeries appears to lie in their use of high pressure sales methods.

*By the Chairman:*

Q. This confirms a statement that you made and is, without doubt, highly important. Have you in your mind some illustrations of what you would term the use of high pressure sales methods?—A. I might add to the ones on page 6.

Q. Yes, at the top of page 6 you have mentioned—A. What you desire is a concrete illustration.

Q. Yes, if you could?—A. Again it involves—

Q. You referred to it at the top of page 6, "the introduction of new products, with specials offered as inducements, etc." Now, could you elucidate that?—A. Some of the practices, as I understand them, have been that the price of bread might still remain at 10 cents, but the price of a cake as such would be cut as a special, so that the combined cost to the housewife of the two or three units would be somewhat lower than the two or three units sold by themselves.

Q. Now, I think you have hit on the point. In the delivery of bread they now offer to the housewife at her door cakes and buns and various kinds of pastry—I do not know about pastry—but cakes and pies?—A. Yes.

Q. Now, when bakers are figuring the cost of the distribution of bread do they absorb any loss that may be made on these specials into the cost of the delivery of the bread?—A. I cannot answer that other than as the operator of a business, and I would say it must be absorbed somewhere in the net operating returns.

Q. In other words, when they express the view that the cost of delivering has gone up because of the demand for services by the public, it may be merely a different way of saying that they absorb a loss on these specials into the cost of the delivery of the bread?—A. That offers a very contentious point, honourable sir: did the public demand these increased services?

Q. I think they were offered by themselves.—A. They were offered to them because formerly—as I say, I am not a baker; I am a flour miller; and I can only observe, but in my observations I have noticed that where formerly these baker waggons were leaving at a certain hour in the morning and returning at 5 or 5.30 in the evening, these baker waggons are returning much earlier now than they did before, because the housewife—when I say the housewife, I mean that she has been offered her bread delivered in the morning. Suppose I am operating a waggon in Brantford and I am serving a certain number of streets in the afternoon, and one of my competitors comes along after I have served one of my customers and says, "Now, Mr. Smith, instead of getting your bread in the afternoon when you may be playing bridge or something else, if you take it from me I will guarantee delivery in the morning," and it is not at all improbable that she will say, "That is a good idea; I will get my bread delivered to me in the morning." The result is that we have increased bread routes and those particular routes are not earning what they were before because of the fact that the output per waggon, or the sale per waggon, is less than it was formerly when that particular waggon could work alone.

*By Mr. Parry:*

Q. Because the driver has become a salesman instead of a mere delivery agent; is that it?—A. It is because I have been forced to meet the competition of one of the other units to get my bread to the housewife earlier than previously.

*By Mr. Factor:*

Q. What is the system adopted in paying the drivers?—A. I cannot answer that, sir.

"Page 37: It is not a high weekly wage that raises the distribution cost per pound of bread; it is the excessive duplication of bakery routes and the requirements that the man who delivers the bread shall spend a large portion of his time selling other things which are more difficult to sell and canvassing new customers for his firm."

Mr. BOULANGER: What is meant by "other things"?

The CHAIRMAN: Cakes and buns and pies.

The WITNESS: These are all in the Robertson report; they are not my statement.

Mr. PARRY: And fancy breads of course that have developed?

The WITNESS: I believe you have raised a point there that is a contentious one; the sale of pies and cakes may have cut down the consumption of bread.

"Page 40: One effect of this factor of surplus capacity which has a bearing on the present enquiry is that it keeps before the management the constant necessity of increasing sales and thereby leads to the aggressive sales policies which add so materially to the cost and benefit the general public so little."

The CHAIRMAN: You are still quoting from the Robertson report?

The WITNESS: Yes.

"Page 47: At the same time the predominant position of these flour milling companies in the baking industry and the possibility of monopoly and price enhancement which are theirs are such as to warrant governmental interest in the situation and, should the need arise, further governmental action on behalf of the consuming public."

"It would appear from this concluding paragraph that the chief concern in the minds of the committee at the time was the possibility of a monopoly leading to artificial price enhancement. It was not to be expected that the committee could discern a period in which generally recognized fundamental economic laws would be suspended in a manner which would allow the inherent weaknesses of the mill—bakery combination to be protected to the point where it would represent a menace to the whole baking industry—not in the form of price enhancement, but as a major influence in precipitating and maintaining thereafter an unhealthy condition throughout the baking industry."

Mr. PARRY: When you use the word "committee" you are referring to the registrar?

The WITNESS: Yes.

"At this point may I suggest to you the advisability of determining to what extent:—

1. The mills owning bakeries sold flour to chain store bread producers and independent bakeries at prices inconsistent with the said mills' replacement costs."

Mr. PARRY: You are suggesting there that it might be possible that the chain stores were put on their feet by sales to them at less than cost prices from the large bakers?

Mr. YOUNG: You do not mean that these mills who own bakeries of their own will sell flour at less than cost to their competitors who are going to undersell them on the bread market?

The WITNESS: I am suggesting that you obtain that information. We have reason to believe that it happens.

Mr. YOUNG: Would you do it in your business?

The WITNESS: I certainly would.

The CHAIRMAN: You run against that in your competition?

The WITNESS: Yes.

Mr. FACTOR: What purpose would be served by the mill-baker doing that?

The WITNESS: May I just continue.

"2. The relative price charged the mill controlled and publicly financed bakery subsidiaries for the same grade of flour under similar market and terms of sale.

3. The conditions under which the mill-controlled bakeries offered and sold bakery products to chain stores not producing their own bread, thereby precipitating still further reductions in retail bread prices.

"If this discloses, as I anticipate it will, that such a sales policy was practised by certain mills owning bakeries, it would mean in effect that these mills were *setting up* and *subsidizing* unprofitable competition against *their own* controlled making subsidiaries, to say nothing of the disturbing influence which this directly exerted upon the price situation throughout the trade.

This is proof that the increasing employment of capital in the fixed investments of a given over expanded industry tends to intensify competition in that industry by removing a large degree of its flexibility to control capital costs and thus influence the management to strive for *capacity* production, regardless of market conditions and with little or no hope of earning a profit. Such operations are *demoralizing* to industry and warrant some means whereby they may be *definitely controlled*.

Based upon the foregoing, I submit that the mill-bakery combination has been largely *responsible* for throwing the bakery structure *out of balance* and the industry as a unit into a state of unprofitable disorder. This is tantamount to stating that to operate successfully, the mill-bakery combination must rest on a foundation economically *unsound* and therefore inherently unhealthy to industry and the consuming public.

### *In Summary*

It is my considered opinion and personal conviction that the entry of the chain store companies as bread producers and the efforts of the resourceful, independent bakers, prevented that which had every indication of becoming a complete monopoly of the bakery business in the hands of a few large milling units.

The picture of the baking industry which you discern to-day is largely the result of liquidating and clearing away the wreckage of this admittedly unfortunate attempt, both economically and socially, on the part of the large milling units to wage their merchandising warfare on the baking rather than on their own field of flour distribution.

### *In Conclusion*

You may ask: What is the solution?

The answer is a simple one. Either the mill-bakery threat to the baking industry continues until twenty-seven hundred odd independent bakery units and all those dependent thereon have been slowly squeezed to the point of complete extermination at a staggering cost to be paid ultimately by the consuming public, or immediate steps must be taken to counteract its power as a disturbing adverse influence in our economic system.

The procedure to be followed should be evolved by a group of experts, qualified by experience and recognized ability to intelligently study all the various and intricate problems involved.

If the baking industry is to contribute its share of stability to our economic system, the solution must satisfy the following major requirements, among others:

1. The baking industry must be restored to its status as a local, independently operated business, with the utmost dispatch consistent with the minimum disruption to the industry's normal activities."

### *By the Chairman:*

Q. Now, Mr. Pinchin, I gather that you are strongly of the opinion that there should be a complete divorcement of the milling industry from the baking industry?—A. Yes, sir.

Q. And you say that as an experienced operator in the flour milling industry?—A. Yes, sir.

*By Mr. Parry:*

Q. You are not going to suggest how it should be done, you leave that to the committee, I suppose?—A. I suggest that it should be evolved by a group of experts qualified by experience and recognized ability to intelligently study all the various and intricate problems involved.

Q. That is the committee, of course?—A. With the assistance of outstanding practical men who are engaged in the baking industry.

*By Mr. Edwards:*

Q. Practical men, not theoretical?—A. Practical men, men who have made a success of their business.

*By Mr. Kennedy (Winnipeg):*

Q. Not so much outstanding as practical?—A. I quote the two of them, because a man to be outstanding has to be practical.

Q. Not always, very often it is not.

The CHAIRMAN: All right, go ahead.

The WITNESS:

"2. There must be, ultimately, a *complete severance* of any direct connection between mills and bakeries which has had in the past or may have in the future the effect of controlling bakery operating policies or supplying financial backing to an individual unit inconsistent with its relative size and resources when compared to the local units with whom it may be in direct competition.

3. Mill—bakery subsidiaries should not be allowed to dispose of existing plants or rent same at a nominal charge, to be operated by new tenants or owners, except on a basis which represents a capital investment at least relative to the independent units tributary thereto. Failing this, due consideration should be given to a policy of permanently dismantling such plants as they fall back on the market."

*By Mr. Parry:*

Q. I would like to see that developed, Mr. Pinchin. You are suggesting that because of plans being abandoned voluntarily by some of the large bakeries, and revalued or written down to nominal figures, that that is not fair competition to local bakeries; is that correct?—A. Yes.

*By the Chairman:*

Q. Is that actually being done?—A. Yes.

*By Mr. Parry:*

Q. Can you give us some concrete illustrations of that particular thing?—A. In Orillia the Dominion Bakery there is now being operated by an independent—and again it is second-hand information—but it is reported to me that that baker has not paid a dollar of rent, and any time that the owners of that plant ask him for his rent, he will pick up his bag and leave; in the meantime you have a situation in Orillia which is terrible.

Q. Are the owners of the plant the milling company?—A. Yes, sir. He is using the plant and using the mill's flour. I do not know anything about the arrangement between them, but it is reported that he has not paid a cent of rent for that building.

*By Mr. Factor:*

Q. Is that baker cutting the price of bread in Orillia?—A. I do not know the facts, but the bakers there blame him for it. I want to answer your question

in this way: we are not prepared to sell any flour in the town of Orillia to these bakeries, because we are afraid of the whole situation; they have been undermined to the point where most of their financial resources are gone.

*By Mr. Parry:*

Q. Because of the fact that he does not pay any rent he can certainly afford to do his work on the market?—A. He can stand that better than the other fellow who has fixed charges in his own plant.

Q. I understand that that condition applies to many other towns in Ontario? —A. I have heard it, sir.

*By Mr. Factor:*

Q. That is making conditions worse?—A. Yes.

*By Mr. Parry:*

Q. He is making use of the other fellow's capital investment?—A. Yes. As a matter of fact that plant should be closed, because I think it is about the dirtiest place you would want to look into; and yet it was one of the most model baking plants north of Toronto.

*By the Chairman:*

Q. Badly run down and poorly kept?—A. Just dirt.

"4. Capital reorganization of mill—bakery subsidiaries designed to reduce fixed interest and depreciation charges for the purpose of securing an operating advantage over the independent units tributary thereto, should not be permitted."

*By Mr. Parry:*

Q. Have you any illustrations where that has been contemplated, the writing down of capital to put themselves at an advantage over the general independent?—A. I will read from a newspaper clipping.

*By the Chairman:*

Q. What is the paper?—A. I am sorry, it is not marked. I will read from this report: in explaining the proposed balance sheet the President says in part, at the time of the issue of the shares of your company the consideration received by it for the issue of the purchased shares, they were fixed at an amount of \$7,382,175; which figure represent the cost to your company of the assets acquired, and also the amount of its issued share of capital. Having regard to the general shrinkage in values, your directors are of the opinion that it is inadvisable to continue carrying the capital shares of the company in the books at the figure above mentioned, particularly by reason of the fact that the assets of the company are carried at such a figure as to require a very large amount to be provided each year out of earnings to cover depreciation. As a result the capital was cut down, I think, to something like \$3,500,000.

Q. Why would you withhold from the milling and baking companies the right to do what any other company would do under similar circumstances? —A. I will answer that by saying, it is defying sound, economic lines; and the independents with \$200,000, \$300,000 \$400,000, \$500,000, or \$600,000 invested in its plants—how can he do that. It is his own capital he has to write down, whereas with the others it is the public's capital; and that amount of money has been spent—I do not say in this particular case—but I think it is a fact that it has been spent, and they are taking business away from that independence, so that they would control that outlet for bread; or from the milling point of view, flour.

*By Mr. Young:*

Q. But the money has been lost?—A. The money has been lost.

Q. Why should he continue to value his plant at more than it is worth?—A. You are quite right, sir; but then, what is the effect that that is having on the baking industry of the company?

Mr. PARRY: Would not that be similar in effect in any other business, where it has been necessary to write down capital? I suggest that you are on rather weak ground in making that recommendation, I do not know where you will enlist support for it.

Mr. EDWARDS: Is it not a fact that that write-down of capital was a write-down of "water."

The CHAIRMAN: As a matter of fact, in this case from which Mr. Pinchin quotes, this President—John Turner—distinctly says that, "Your company at the time of the issue of the shares to your company, the consideration received by it for the issue of these shares was fixed at the amount of \$7,382,000, which figures represent the cost to your company of the assets required, and also the amount of this issued share capital."

Mr. FACTOR: That is the "water."

The CHAIRMAN: It looks as if the capital structure was not based upon the value of its assets, but on that plus the share capital. Now, just a moment; this having appeared in the public press, there would seem to be no objection to mentioning the name—it is Consolidated Bakeries.

*By Mr. Factor:*

Q. Is that an independent concern?—A. Yes.

*By Mr. Edwards:*

Q. Is that what is known as Ontario Bakeries?—A. No, sir.

Q. That is a different concern?—A. Yes.

*By the Chairman:*

Q. But your point is, that in these reorganization operations, they should not be permitted to write them down?—A. I do not say that they should not be written down, but it is not correcting an inherent weakness in the milling-baking industry to-day; should not that be the dominating consideration in trying to arrive at a solution of our difficulties.

The CHAIRMAN: Yes, but if this company in the first place pumped a considerable amount of water into its capital structure above the assets represented, is it not a healthy thing that it should reduce its capital down to a value which has a reasonable relation to its assets?

*By Mr. Parry:*

Q. The only alternative would be bankruptcy, as a matter of fact, wouldn't it?—A. That is quite right; but then you are giving that unit an advantage over the independent, which seems to be a little bit unfair.

Q. Have you any other examples?—A. On February 2 there appeared in the Toronto Press. I have a clipping here entitled "Canada Bread over-capitalized"; and the President of that company goes on to say that the company had an investment in plant not used of \$44,000, and in land of \$197,000, which it is proposed to sell. Further down the report continues, some of the plants have shown material losses for the past three or four years, and there is little question but that something will have to be done in the very near future; notwithstanding an actual write-down of values of \$1,000,000 to \$3,000,000, assets still stand at \$2,000,000 to \$3,000,000. He goes on to say that the value

of sales for the six months ending December 31, 1933, have shown an increase over the six-month period ending December 31, 1932. But the point there is, I do not know what they are going to propose to do with that unit, but this parent company which controls that—there is an article in the Mail and Empire of April 28, in which they are to reorganize that milling company.

*By the Chairman:*

Q. That is a Canadian company?—A. The Maple Leaf Milling Company. They have increased the sales in that period, and yet there has been a loss on it. They may distribute that on the flour direct; on the other hand, you see their bakery wagons all over the country. I see them almost every time I go to Toronto, several miles outside of the city. I do not know if it can be done profitably; I do not think I could, and I do not think they do it.

Q. All right, Number 5.

The WITNESS:

"5. Uniform wage scales and conditions of employment should be established at levels considered fair and in keeping with recognized standards of living. These should be fixed by law and rigidly enforced."

*By Mr. Factor:*

Q. Have you any information as to the rates of wages paid in bakeries?—A. No, sir.

*By Mr. Edwards:*

Q. Will you suggest a minimum wage for men?—A. With qualifications?

Q. Something of the kind must be done?—A. Yes. In other words, the wage item is such a factor in our economic structure, that I do not think it should be used as a method of competing one unit against another. In other words, when you come down to the human element, and apply that so that your employers take advantage of that, then I think the industry is only hurting itself because it is impairing purchasing power. That is a very broad subject.

*By the Chairman:*

Q. Have you any knowledge of the case where one of these mill-controlled bakeries went into a town and by competition forced down the wages of competing bakeries?—A. I think that situation exists right in my own town of Midland.

*By Mr. Factor:*

Q. You mean, mill-controlled bakeries paid a lower scale?—A. No, I mean through their activities.

The CHAIRMAN: Ruthless competition.

The WITNESS: Through ruthless competition, forcing other units there to reduce the rate paid to their employees.

"6. No attempt should be made to arbitrarily impose on the baking industry throughout Canada one set of rules and regulations, likely to have the effect of suppressing free and healthy competition among all units."

To set up a central authority and lay down certain rules and regulations, that all the members in the baking industry must do so and so; I do not think the baking industry lends itself to that.

*By Mr. Boulanger:*

Q. Does that mean price maintenance?—A. Yes, sir.

*By the Chairman:*

Q. You are opposed to that?—A. Yes, sir.

"7. Trade associations with small local units should be encouraged, to which all members should belong. If the real purpose of these groups is to secure co-operation on questions pertaining to quality, increased consumption, efficiency, cost-accounting, fair trade practices and the observance of sound economic laws, it will give to the industry that necessary flexibility required to effect quick adjustments wherever needed, thereby maintaining equilibrium throughout the entire baking."

*By Mr. Parry:*

Q. What do you mean by that word "should" in there in the second line; are you going to make it compulsory?—A. I think they would voluntarily belong to these associations.

"8. The fixation of prices, *whenever* considered in the interest of the trade and the consuming public, should be confined strictly to an established minimum, based upon the cost of the efficient operator and not upon an artificially supported selling price, designed to protect the high cost or inefficient producer or trader.

Except as I may be called upon to explain any part of the foregoing or answer any questions of which I may be capable, this completes my observations as I discern them and the opinions which I hold of the effect on our economic structure of mills owning and operating bakeries."

*By Mr. Young:*

Q. There is something about baking capacity: I go down the street here and I see a bake-shop with an oven in the window. At a certain hour in the day that oven is operating, but later in the day it is not operating. By the capacity of a bakery, do you mean the capacity of that oven if worked 24 hours a day?—A. I could not answer that.

Q. That would be a very small capacity?—A. Yes, if that bakery is installed right in the window, I would say that they are what is known as window bakers.

*By Mr. Young:*

Q. What I want to get at is, when you speak of the capacity of bakeries, do you mean their capacity to turn out bread if they keep their ovens going all of the time?—A. I could not answer that, I would say, no. I do not think they calculate capacity on the 24-hour production in a bakery.

*By Mr. Factor:*

Q. What basis is used in that report?—A. I do not know, that should be answered by a baker.

*By Mr. Parry:*

Q. In Midland, or in the vicinity of your community, have you come in contact with the problem of the supplies of bread being manufactured at distant points and brought into the community in competition with local bakers?—A. With the chain stores handling bread there the bread is being delivered—or was—by the Dominion Bakers in Orillia. They would send a truck over to Midland and supply the chain stores there.

Q. They supplied one of the chain stores from Orillia?—A. That does not exist to-day, because as I told you that particular Dominion Bakery unit is not being operated by the milling company in question.

Q. But have you met that phase of the problem in your experience?—A. That bread is being delivered long distances—yes.

*By Mr. Edwards:*

Q. Bread is shipped by express, of course?—A. And by truck.

*By Mr. Kennedy (Peace River):*

Q. Dealing with this question of milling capacity: most of the mills are up-to-date; or are some of them getting to the point where they are apt to be discarded in the near future; is there likely to be an adjustment of this position?—A. I cannot really answer that question, sir. I would say, generally speaking, that the mills are very efficient.

The CHAIRMAN: Well, gentlemen, it is nearly one o'clock; we will come back at 3.30.

The Committee adjourned at 12.55 p.m., to meet again this day at 3.30 p.m.

### AFTERNOON SITTING

The Committee resumed at 3.30 p.m.

The CHAIRMAN: We will call Mr. Jetté.

J. JETTÉ, called and sworn.

*By Mr. Parry:*

Q. Mr. Jetté, you are president and general manager of Caron Limitée, a baking concern, carrying on business in the city of Montreal?—A. Yes.

Q. And I understand from you that your bakery has seventy routes?—A. Yes.

Q. And is, therefore, a large organization?—A. Yes.

Q. And you are here to-day representing a number of French Canadian bakers?—A. Yes, sir.

Q. And you appear before the committee on their behalf and at their request to make certain presentations concerning the bakery situation in the city of Montreal?—A. Yes, sir.

Q. Will you just proceed with your presentation?—A. At the beginning I thank the government for giving an opportunity to bakers to make their complaint against chain bakeries and chain stores, but as I was advised last Friday that I was to have something to say here, I have just a small report on my salaries and on my operations. My salary is poor as you can see by my sheet.

Q. You refer to the wages you pay to your helpers?—A. To the bakers, because to my bakers I pay \$15 a week.

Q. And you are presenting with your brief a statement of the wages you pay in your plant?—A. Yes, sir. The reason is we had to pay our men less at the end of the year.

The CHAIRMAN: We will print the statement with your evidence.

*By Mr. Parry:*

Q. Now, this statement reveals, if I might interpret it for you, that you have analyzed the costs of your 1½-pound loaf, the cost of production being 0.0684 and out of that you made 0.64 cents?—A. Yes.

Q. The average selling price was 7.02 cents?—A. Yes, that is it.

Q. And since the new reduction of February 1, 1934, you are now only receiving 6.13 cents whereas your cost of production is 6.84?—A. Yes.

Q. With the result that your particular firm, which is a large one, employing forty-one persons inside help and seventy-seven inspectors and salesmen-carriers and ten women in the pastry shop and office and store have all had to take a real reduction in salaries or wages paid to them for their work?—A. That is it.

Q. Because of the price you are getting for your bread in Montreal. And you are suggesting as well that the French Canadian bakeries whom you represent are all suffering from the same condition?—A. Yes.

Q. And in your brief you have set forth the grounds of your complaint and why salaries have been reduced. Just proceed.—A. The bakery trade, in my opinion, should be operated by individuals or private companies, but not by milling companies, because in this industry, the leaders must know themselves the needs of individuals and collectivities, which could never be realized by chain bakery. I believe the bakery trade will never be normal as long as it stays in the hands of organizations who do not know the populations they serve. In Montreal, where the fight of milling companies—I put in this category the Frontenac Bakery which is controlled by Mr. Dussault—against independent bakeries has been and will continue to be active, numerous bakers, born in our city, having raised a family here, having contributed to all our developments, having participated to the construction of our schools, hospitals, churches, having thereby served the interests of the province, have to-day disappeared. And those who still survive, will inevitably disappear themselves within a short time if we do not put a stop, and very soon, to the illogical and guilty competition made to the independent bakeries by chains of bakeries, belonging, in reality, to the most important milling companies.

It is certain that the bakeries operated by milling companies can, in certain parts of the country, make the fight absolutely unbearable for the independent bakers—in other centres, realize very substantial benefits and arrive at a total, at the end of the year, and very satisfactory results due to their strong production and to their immense buying power.

Everywhere, when the chain of bakeries want to start the fight and oppress the local independent bakers, they can do it and very easily ruin and crush any private initiative.

The bakery trade is a trade that should always be considered as a local trade, the merchandise sold should not be carried out or exported, because the bread has to be sold daily.

The bread being a perishable product, cannot, if it is manufactured by chains of bakeries and sent in other cities than where it is cooked, keep its hygienic, nutritive nature until consumed.

The bakery cannot be considered as a manufacturer offering on the market products such as other industries can manufacture, industries having branches in many parts of the country and who sell their production at a uniform price. The bakery trade must absolutely be local and its conditions depend only on local circumstances.

In conclusion, I suggest:—

1. the regulation of working hours in the bakery industry;
2. the regulation of the number of apprentice employees;
3. that the bakers be allowed a profit of 10 per cent, after counting all expenses and depreciations;
4. the regulation of salaries and the setting of a minimum salary;
5. the fixation of a wholesale minimum and maximum price, as well as the fixation of a retail minimum and maximum price.

*By the Chairman:*

Q. Now, Mr. Jetté, your chief point is that the very existence of the independent baker is now threatened, on the one hand, by the chain bakery under the control of the millers and the bread sold through chain stores?—

A. Mr. Stevens, I prefer to give you an answer through a translator.

The CHAIRMAN: Perhaps Mr. Boulanger would act as your interpreter.

(Questions and answers given in the French language are translated by Mr. Boulanger.)

The CHAIRMAN: I will repeat my question. Your chief point is that the very existence of the independent bakery is now threatened, on the one hand, by the chain bakery under the control of the mills and the bread sold through the chain stores?

The WITNESS: That is exactly it.

*By Mr. Young:*

Q. What do you want 10 per cent on—on your product or on your investment?—A. On the invested capital.

*By Mr. Kennedy (Peace River):*

Q. What are the working hours of your staff?—A. The working hours have been increased due to certain conditions. At the present time the average working hours are 10 or 12 hours.

The CHAIRMAN: And the wages have ben decreased?

The WITNESS: Yes.

*By Mr. Parry:*

Q. To what prices were the retail prices of bread reduced in Montreal?—A. Since January, 1933, prices have changed very often due to the intervention of bakery chains and the war between the different chains.

*By Mr. Baribeau:*

Q. Can you tell this committee how long this competition has existed?—A. Since last June, especially.

Q. 1933?—A. Yes, 1933.

Q. What wages do you pay to your apprentices?—A. Bakers' apprentices, \$8 a week.

Q. What is the percentage?—A. Eight on a total of 22 employees.

Q. Is that the same proportion in all bakeries?—A. It is higher in our own bakery.

*By Mr. Parry:*

Q. How low did the price of bread go in Montreal?—A. Three cents.

Q. What was the weight?—A. A pound and a half.

Q. Who were selling it at that price?—A. Brosseau, Sanché and Frontenac Bakeries.

Q. Are those what you would call chain bakeries?—A. Yes, the first and second one is chain bakeries.

Q. Brosseau and Sanché?—A. Yes, Brosseau and Sanché.

Q. Mill-controlled bakeries?—A. Mill-controlled.

Q. Who controls Brosseau's?—A. Western Canada.

Q. Who controls the other one?—A. Dussault. Mr. Dussault was a travelling salesman.

Q. For what firm?—A. I am not sure.

Q. Is that condition any better to-day?—A. No.

Q. And you are still selling bread below the cost to you?—A. I figure on my price I cannot go lower than 5 cents. I will take 5 cents since the competitors sell for 4½. The lowest price I sell is 5 cents.

*By Mr. Baribeau:*

Q. What is the cost of distribution per loaf in the city of Montreal?—A. 2·2 cents.

*By Mr. Young:*

Q. Is this cheap bread being delivered at that price?—A. Yes, the same as the other one.

The CHAIRMAN: Do you wish to say anything further?

The WITNESS: No, sir.

Witness dismissed.

Mr. W. H. HARRISON, called and sworn.

Mr. G. E. HARRISON, called and sworn.

*By Mr. Parry:*

(To Mr. W. H. Harrison):

Q. You and your brother are carrying on business in the city of Montreal under the firm name of Harrison Brothers Limited?—A. We are.

Q. And you have been carrying on for some years?—A. Since 1930.

Q. And prior to that time you were engaged in the baking business under another firm name for a number of years?—A. That is right.

Q. What was the firm?—A. Our old firm? Dent, Harrison & Sons Limited.

Q. Which was taken over and absorbed by what company?—A. The Northern Bakeries.

Q. And in 1930 you organized your own company?—A. Yes.

Q. How many routes have you in the city of Montreal?—A. Seventy-six.

Q. How far out of the city does your delivery system go?—A. Our regular routes cover a radius of 25 miles.

Q. On the island?—A. On the island.

Q. On the island entirely?—A. Yes.

Q. Now, you have heard the evidence that was given by the last witness dealing with the price of bread in Montreal?—A. Yes.

Q. And your experience as in immediate distributor dates from 1930?—A. Yes.

Q. Will you tell the committee briefly the development that has taken place from 1930 up to the present time in the wholesale and retail price of bread?—A. Well, to me the chain store has been a big factor in the distribution of bread in the conditions outlined by the previous speaker. In 1930 the retail price of bread was 12 cents.

The CHAIRMAN: What size loaf was that?

The WITNESS: A pound and a half. It was being distributed by the chain stores at 10 cents.

*By Mr. Parry:*

Q. What effect had that generally on prices in Montreal?—A. It tended to reduce prices, as I will illustrate.

*By Mr. Factor:*

Q. When you were selling the loaf at 12 cents, what was the cost of production on that loaf?—A. I could hardly answer that question because we had only organized and started in business.

*By Mr. Parry:*

Q. I will develop that later. You were telling us that the prices were reduced by the chain stores to 10 cents. Did they go any lower?—A. Yes, they did. I have an exhibit here of June 5, 1930 which shows the retail price of chain store bread at 10 cents. I have another one of the same date, June 5, 1930, that shows the price of bread at 8 cents by another chain store on the same day.

Q. Would it be the same quality of loaf?—A. It says, "full weight baker's bread, 8 cents equal to any 12 cent bread on the market."

Q. And the chain store was selling for 8 cents what they claimed to be equal to any 12 cent loaf on the market.

Mr. FACTOR: That does not necessarily mean it was the same quality.

The CHAIRMAN: I presume that is evidence of the lost leader practice we heard so much about.

Mr. PARRY: Just proceed. I want to get the whole picture down to to-day as rapidly as I can.

The WITNESS: The prices were reduced gradually down to—following through 1931 and 1932—6 cents a loaf.

Mr. PARRY: The retail distribution price?

The WITNESS: Yes.

*By the Chairman:*

Q. Is that a chain store you are quoting?—A. Yes, a chain store.

Q. Have you got another ad?—A. I have not.

Q. Your statement is that the chain stores then dropped the price to 6 cents in 1932?—A. Yes. This had a serious effect on the bakers, and to hold their business—speaking for ourselves we put a loaf on the market to compete with that price of 6 cents.

Q. Did you have to change the weight, or how did you make it?—A. There is a standard weight.

Mr. BOULANGER: It is fixed by law.

The WITNESS: It is fixed by law.

The CHAIRMAN: Did you meet the price of 6 cents?

The WITNESS: Yes, we met the price of 6 cents of the chain store.

Mr. YOUNG: What change did you make in the loaf. You said you had to put a loaf on the market to meet theirs.

The WITNESS: We had to cut quality.

The CHAIRMAN: You had to cut the quality?

Mr. YOUNG: Did you do that by putting in cheaper flour, or how did you do it?

The WITNESS: We had to use cheaper flour and eliminate some of the ingredients.

*By Mr. Parry:*

Q. Was that the development of the second quality loaf?—A. That was the development in Montreal of the second quality loaf.

Q. Were you meeting the competition of the second quality loaf or the first that the chains were selling at a loss?—A. It was a good quality bread they were selling.

Q. Then you will say they were selling it at a loss at that time?—A. I would say so.

*By Mr. Factor:*

Q. How did you meet competition of the first quality loaf with a second quality loaf? You say the chain stores were selling a good quality of bread and

yours was a second quality; how did you succeed in meeting competition that way?—A. In the price. We put out a second quality to meet the 6 cent price of the chain stores.

Q. Was the quality of the chain store bread better than yours or not?—A. No, I would not say it was.

*By the Chairman:*

Q. I suppose, Mr. Harrison, that bread does vary in its quality with different bakers?—A. Yes, it does.

Q. And now, you say you had to turn out a loaf—I will not make that suggestion—but what did you do? Correct me if I am wrong—did you eliminate some of the fats and milk and other ingredients of that character?—A. Yes, we reduced our formula.

Q. And was it evident to you that your competitors did likewise?—A. Yes, they did.

Mr. PARRY: So that you were meeting the lowering of quality with lowering in quality yourself.

Mr. YOUNG: What is the difference in the price between the good flour you used in the making of the first loaf and the inferior flour you used in the making of the second loaf?

Mr. G. E. HARRISON: To-day?

Mr. YOUNG: When you made this change.

*By the Chairman:*

Q. I suppose the cheap costs in these things are the high prices ingredients—the fats and milk and other ingredients—rather than the flour?—A. Yes.

Mr. YOUNG: Do you mean that the flour is the cheapest product—the cheapest ingredient in the bread?

Mr. G. E. HARRISON: Not in the total cost.

*By Mr. Parry:*

Q. You have in your bread other ingredients than flour?—A. Yes.

Q. What is the relative proportion in regard to cost of the flour used and the other ingredients; is the flour greater?

Mr. G. E. HARRISON: Yes. Flour is a little greater than the other ingredients.

*By Mr. Parry:*

(To Mr. W. H. Harrison):

Q. Than the other ingredients combined?—A. A fraction of a cent more.

*By Mr. Edwards:*

Q. Did you reduce your wages?—A. No, we have not reduced their wages; we have absorbed the loss up until now, but we cannot carry on indefinitely.

Mr. PARRY: You have been losing money on your bread that is being distributed up to the present, but you have continued your wages, and you say you cannot continue to absorb that indefinitely.

Mr. YOUNG: In the beginning of 1930 the price of 12 cents a loaf. A few years afterwards it was six cents a loaf. Now, if my memory served me right, the price of wheat dropped from somewhere around one dollar on the farm, to somewhere in the neighbourhood of 30 cents; would not that make a sufficient reduction in the price of your flour to enable you to cut your price? Does the price of flour not fluctuate with the price of wheat?

Mr. G. E. HARRISON: I am not in a position to answer that. We did get a reduction in flour, and that was passed on by a drop in price when it dropped to ten cents.

Mr. YOUNG: Then there was a further reduction from ten cents to six cents; was that all absorbed in the price.

Mr. W. H. HARRISON: When the price drops from 10 cents to 6 cents we have to make a change in the ingredients.

Mr. YOUNG: And you did that by putting in cheaper flour, but you do not know how much cheaper?

Mr. W. H. HARRISON: I do not know how much cheaper it was at that time.

*By Mr. Parry: (to Mr. W. H. Harrison):*

Q. What is the weight of a barrel of flour?—A. 196 lbs.

Q. And how many loaves do you get from a barrel of flour?—A. 196 loaves.

Q. And I understand that you figure that the price of your bread is affected one-half cent if the price of flour drops 90 cents?—A. Right.

Q. And that is the general formula you use; when the price of flour is increased or lowered 90 cents the effect comes to half a cent?—A. Half a cent.

Q. Where do the chain stores buy their bread?

Mr. G. E. HARRISON: With one exception from the larger bakeries, one chain store operates its own bakery. The others buy from the larger bakery.

*By Mr. Parry (to Mr. W. H. Harrison):*

Q. What have you to say as to the effect of chain store competition on your business as a baker, and the price at which the chain store sells bread being the same as your distributing price?—A. I think it is the cost at which stores distribute bread to the home.

Q. Because they distribute bread to the home?—A. Yes.

Q. Is that a recent practice?—A. Yes, that is within recent years.

Q. Most of them deliver, in other words?—A. They advertise the fact that they deliver. There is another chain that has opened up a new bakery, I should say a chain of independent stores opened up a bakery, to supply their own stores, and recently they have started in a delivery system the same as the bakers. There was a demand for deliveries to the homes.

Q. And you say that there is a predominant demand for the delivery of bread to the homes, which is being met by the chain stores by extending their delivery service?—A. I think that is the answer, the chain stores going into deliveries.

Q. Have you any suggestions to make to this committee that would deal with the present situation as it is affecting the Montreal baking industry?—A. I think if the practice of contracts with chain stores were eliminated, that would help; and if the chain stores were charged for bread a price consistent with cost, this trouble would be avoided.

Q. What do you mean by the contracts of chain stores being eliminated?—A. Generally speaking the chain stores ask for contracts on bread.

Q. Long or short term?—A. Six months.

Q. And do you think that is too long a term for a bread contract?—A. I do.

Q. It gives them an advantage against you, you think?—A. They have a contract for six months, they can be sure of maintaining that price, irrespective of how conditions may change in the baking industry in the meantime.

*By Mr. Boulanger (to Mr. W. H. Harrison):*

Q. Do the chain stores ask for a price concession in making these contracts with the bakeries?—A. I would not call it a discount—it is a straight price, considerably cheaper than the price to the independent store.

The CHAIRMAN: They got a contract price for a large quantity delivered to their various stores, that is really what it amounts to, and this contract price in your opinion—

Mr. W. H. HARRISON: Is detrimental to the trade, because they have a contract enabling them to sell bread at 6 cents, and they know that they can sell bread at 6 cents for six months.

*By Mr. Factor (to Mr. W. H. Harrison):*

Q. Does that mean a profit or a loss on the chain stores?—A. Sometimes they have made a profit; other times they have had to sell it at a loss, they have gone lower than 6 cents.

The CHAIRMAN: Give us those first two advertisements that you quoted in support of this unfair competition; and then quote any others that you wish to put with them. We will keep them altogether here.

Mr. W. H. HARRISON: On October 12, 1933, the chain store price had been increased to a price of 8 cents to the chain store, and also for the baker delivered price. November 6, 1933, one chain came out with a combination offer of a loaf of bread and a quart of milk for eleven cents, a value of 20 cents.

Mr. FACTOR: What was the milk worth?

Mr. BOULANGER: Ten cents.

Mr. FACTOR: That is practically giving it away.

Mr. W. H. HARRISON: November 6, 1933, on the same date another chain store announced a special price of bread, 5 cents.

*By Mr. Factor (to Mr. W. H. Harrison):*

Q. They were losing money at that price, that was a real loss leader?—

A. That was a loss leader.

*By the Chairman (to Mr. W. H. Harrison):*

Q. Have you many of these ads?—A. Yes, sir.

Q. Let us have them.

*By Mr. Young (to Mr. G. E. Harrison):*

Q. Can you tell us what would be the cost of these ingredients in a 5 cent loaf?—A. Approximately 3 cents—2.8 cents to 3 cents.

Q. And the other 2 cents would have to cover the cost of making and delivery?—A. Right.

Mr. W. H. HARRISON: This 5 cent price here on the same date was a change over the week-end from 8 cents; their price and the baker's price 5 cents—was a drop of 3 cents.

Mr. PARRY: That might account for some of that 3½ cent bread, that Mr. Jetté was speaking about?

Mr. W. H. HARRISON: That is what I am coming to. That has forced the level down right along the line. There is another one here, on this quotation milk would be at a price here of 6 cents—that was on the same day—that would allow milk at 4 cents, and bread at 6 cents; a combination offer. Here is another one here, a chain that put a combination offer out—if the other chain came out at 5 cents, they have both a combination offer and bread at 5 cents.

The CHAIRMAN: That is cut-throat competition between the chains which kept beating these prices down?

Mr. W. H. HARRISON: Beating it down; one came out with one offer and the other with something different. The unfortunate part of that is that the bread with the exception of one chain, as I said, which has been supplied by the bakeries.

Mr. FACTOR: I didn't get that?

Mr. W. H. HARRISON: I say, the unfortunate part of it was that this drop under this competition all this bread was supplied to the stores by bakers, with one exception.

Mr. G. E. HARRISON: There is one baker in Montreal who used to make their own bread, have closed up their shop, and are buying from bakers to-day.

Mr. FACTOR: Is that a mill controlled baker, or an independent?

Mr. W. H. HARRISON: Mill controlled.

The CHAIRMAN: That is, the mill controlled baker is selling from the other bakers.

Mr. W. H. HARRISON: The chain store closed up their bakery, and bought the mill controlled baker. I might say that as far as I know the chain sold that bread for less than 5 cents, that was less than they were paying the baker for it.

The CHAIRMAN: Is there any possibility that the chain store by competition might completely eliminate the delivery of bread by bakeries and take their place?

Mr. W. H. HARRISON: The way the trend was going all I can say is that the competition was serious.

*By Mr. Parry (to W. H. Harrison):*

Q. As a matter of fact, you have told us that they are delivering?—A. They are delivering now.

Q. And what character of delivery service do they put up against your wagons?—A. Principally boys with bicycles or small carts, with the exception of the chain I mentioned.

The CHAIRMAN: That system of delivery could not possibly take the place of your door to door delivery, could it?

Mr. W. H. HARRISON: In some cases they get better service. A customer phones to the grocery and wants a loaf of bread right away and she can get it. It is hard for the baker to do that?

The CHAIRMAN: But she can only do that in the odd case, the chain store could not supply everybody that bread on that basis.

Mr. PARRY: What wage would they pay the boy for that delivery service.

Mr. W. H. HARRISON: From \$1.50 to \$2 a week.

Mr. PARRY: To compete with your driver salesmen and horses or automobiles.

Mr. W. H. HARRISON: Yes.

Mr. YOUNG: How many hours a week would these delivery boys be working?

Mr. G. E. HARRISON: Over 60 hours a week. The Montreal Boys' Association have some information on that line, and I believe that they are desirous of an opportunity to appear before this committee and state their case. They have cases where requests have come in for a small boy, and the Montreal Boys' Association asked why a small boy, and they say that we don't like to offer a big boy a dollar and a half a week.

Mr. YOUNG: Are these small boys working full time, or after school hours; have they no compulsory school law?

Mr. G. E. HARRISON: I believe recently there has been a law passed in Quebec where boys under fourteen years are limited to 60 hours a week.

The CHAIRMAN: But these boys at \$1.50 a week are taking the place of men normally with families at a normal wage.

Mr. G. E. HARRISON: Right.

The CHAIRMAN: Would you mind indicating what wage you pay to a regular delivery salesman, a bread salesman.

Mr. W. H. HARRISON: \$25.16.

Mr. PARRY: That would be earning, I understand they are partly commission and partly wages, and the total comes to \$25.16.

Mr. FACTOR: It does not seem to me that that is very fair. The trouble is that one is using a messenger boy, while the other uses a salesman.

Mr. G. E. HARRISON: That is the difference, that is our competition.

The CHAIRMAN: Their point is this, as I understand it; they pay an average of \$25 a week to bread salesmen who give to the public a certain service; that service is now under competition by these delivery boys at \$1.50 a week, which enables them to carry on that competition, irrespective of the price paid in the store for the article.

Mr. FACTOR: How is the quality of that 5 and 6 cent bread sold by the chain stores as compared to the quality of your 12 cent bread.

Mr. W. H. HARRISON: It is not as good, it is a cheaper loaf.

Mr. G. E. HARRISON: We have no 12 cent bread to-day, it is ten cents.

Mr. FACTOR: Is it as good as, or better than, the 6 cent loaf which you are making now.

Mr. W. H. HARRISON: No, I would not say it is.

Mr. FACTOR: It is not as good.

Mr. G. E. HARRISON: The situation to-day is that all this bread is made down to a price instead of up to a standard of quality.

Mr. FACTOR: Is it fair to say that the 5 or 6 cent chain store bread is of about the same quality as your 6 cent loaf?

Mr. W. H. HARRISON: Yes.

Mr. YOUNG: The cost of the ingredients of your 6 cent loaf is from 2·75 to 6 cents; what is the cost of the ingredients in a ten cent loaf?

Mr. G. E. HARRISON: About one cent more.

Mr. YOUNG: That would be 4 cents; that means then that the work of making and delivering the bread cost you 6 cents—is that right?

Mr. G. E. HARRISON: No, I would not say that is right.

Mr. YOUNG: But you place the cost of the ingredients at 4 cents, and you say you are selling it at 10 cents, that is a difference of 6 cents; where does that come?

Mr. G. E. HARRISON: Unfortunately we have had to take our figures on an average basis. We cannot very well separate the figures on account of the selling charges, and give all these things; but the average price, or the average cost is 7·89 cents. That is the average cost of making a loaf of bread.

Mr. YOUNG: Of making it?

Mr. G. E. HARRISON: Including the ingredients, that is everything.

Mr. YOUNG: And that is 7·89 cents?

Mr. G. E. HARRISON: 7·89 cents, and our report for last year was 7·59.

Mr. YOUNG: That is the average for the whole year?

Mr. W. H. HARRISON: Yes.

Mr. YOUNG: That is to say, you are losing on your cheaper loaf and you are making up on the more expensive loaf.

Mr. W. H. HARRISON: Yes.

Mr. YOUNG: When you were selling that bread at 12 cents in 1930, you did not know what it was costing you to make a loaf?

Mr. G. E. HARRISON: We did not know, we had only started.

Mr. W. H. HARRISON: We only operated at that price for two months.

Mr. YOUNG: It seems to me that the difference between the price of the ingredients and the price at which it sells is too wide; there must be something wrong with an industry that requires that much to make a loaf of bread.

Mr. G. E. HARRISON: That 12 cents has been passed up now since 1930.

Mr. YOUNG: You told us that it was the chain store that did away with that, it seems to me they have rendered the public a good service in doing it. If they have reduced the inequality in that spread, I am sure that they have rendered a public service.

Mr. PARRY: To whom?

Mr. YOUNG: To the consumer.

Mr. PARRY: That is all premised on the fact that the public wanted a cheaper loaf.

Mr. YOUNG: They certainly wanted a loaf which they could buy.

Mr. PARRY: I may say for Mr. Young's benefit that we are proposing to have a complete analysis of the price spread, and counsel expected to be able to lay before the committee the complete set-up of the component parts of the spread at a comparatively early date. Apparently Mr. Harrison has not been able to furnish these figures.

Mr. YOUNG: We will be very glad to have it.

Mr. W. H. HARRISON: I should clear up one point there, the chain stores did not influence that change in prices; the bakers changed the price in November of 1930 from 12 cents to 10 cents.

Mr. YOUNG: It was not the competition of the chain stores?

Mr. W. H. HARRISON: No.

Mr. PARRY: You refer to a combination offered that took place, about when?

Mr. W. H. HARRISON: In November of 1933.

Mr. PARRY: You have some other productions there, will you finish your statement, Mr. Harrison?

Mr. W. H. HARRISON: These simply follow up along the same line, except the price was advanced one cent and it is now selling at 6 cents; the price is not 5 to-day, it is 6.

The CHAIRMAN: By the chain stores?

Mr. W. H. HARRISON: Yes.

The CHAIRMAN: All right. Now, Mr. Harrison files a series of advertisements showing a series of reductions in price by chain stores, including combination sales of milk and bread, and also of bread alone, at prices indicated in his evidence. This is exhibit No. 110.

(Exhibit No. 110—a series of advertisements, filed.)

Mr. PARRY: Mr. Harrison, you as part of your exhibit produced the advertisement of a chain store in November of 1933, offering bread as a loss leader; did you have occasion, or did you see a circular sent out by a chain store under date of November, 1933?—A. I do not remember it.

Mr. PARRY: I think, Mr. Chairman, perhaps this had better be filed; it appears to throw some light on the general purpose behind this loss leader, and low price bread and milk campaign. It states among other things that its purpose is to get customers to the store. Further down it says: re milk and bread—we will continue the feature, and for next week milk will be at 7 cents a quart and bread at 5 cents; but next week may be the last opportunity for

us to feature these commodities at these prices. These are given for the express purpose of having our customers get into the habit of purchasing their bread and milk from our stores which will increase the sale of other commodities. That, I may say, is in the reports which are to come from the same firm.

Mr. FACTOR: Is that a copy of instructions issued to managers?

Mr. PARRY: Yes, I will pass it over to you.

The CHAIRMAN: Are there any other questions you wish to ask of these witnesses?

Thank you both very much.

The witnesses were discharged.

Mr. CECIL MORRISON, called and sworn.

*By Mr. Parry:*

Q. You carry on a baking business in the city of Ottawa under the name of Morrison and Lamothe?—A. Yes, sir.

Q. And I understand you have had a very versatile experience in the past ten or fifteen years in the baking industry in Canada?—A. It has at least been varied.

Q. You might perhaps indicate the various elements in the baking industry with which you have been associated?—A. Possibly if I would give you some extracts from a little talk I gave to our bakers the other day, it would answer your question. My experience in the bread business has covered every phase during the past eighteen years, from the small bakery in Ottawa of one wagon to being general manager of one of the largest chain bakeries in Canada; that is the Inter-City Western operated from Winnipeg to Vancouver, and the Inter-City Bakeries Limited operated in Montreal, Ottawa, Toronto, Hamilton. During the period of building up the Standard Bread Company in Ottawa I held very high standards, both as regards personal and business life. Then came the time when we sold out our business to a merger and I became general manager.

*By the Chairman:*

Q. You say a merger?—A. Yes, Inter-City Bakeries—that was the Eastern Company—and then Inter-City Western; and I became president of that.

*By Mr. Parry:*

Q. Was that a chain system, or mill-controlled?—A. It was mill-controlled, under Lake of the Woods Milling Company. There is no doubt that the chain stores and the small cut-throat bakeries have injured our industry tremendously. Mr. Parry has asked me to tell you some of the vicissitudes of the general manager of a big chain.

Q. You started off in a very interesting manner, a moment ago, by saying that you had high moral standards when you were with the Standard Bakery—perhaps we might like to have a little explanation of that, it is rather interesting?—A. I now know that if I had kept my personal ideals of total abstinence, purity of thought and action, fair and considerate dealing with employees, the spirit of live and let-live with my competitors, things would have been quite different in my life, but I had the mirage continually before me of some time becoming a Czar of the bread business.

Q. From where did that come?—A. Well, the general manager of a big chain that knows his business knows that if he does not keep his plant full, he is sunk; he would simply have to get this volume or drift into bankruptcy immediately. There is no question about that.

*By Mr. Factor:*

Q. No one likes to sink?—A. I did not. But I still always kept this idea of keeping my volume up regardless. Then we came into this terrible era of competition, the chain stores robbing you on one side, and changing wheat markets on the other. As I recall it the wheat market dropped from \$1.50 a bushel to 38 cents a bushel in a period of two years.

*By Mr. Young:*

Q. How was that hard to meet?—A. The trouble was that perhaps you would buy flour when wheat was \$1 with the thought that it would never go below that, and by the time I got delivery of it, it was down to 60 cents or 75 cents a bushel.

Q. But then you would buy your replacements cheaper?—A. And in the meantime your competitor has been buying for less.

Q. You formed the habit of buying your supplies ahead, did you?—A. Well, generally.

Q. Do not the millers supply you flour on a day-to-day basis?—A. They will.

Q. You can do it that way?—A. You can do it that way, if you like.

Q. You did not have to buy ahead, then?—A. No.

*By Mr. Parry:*

Q. As the operator of a mill-controlled bakery you had to use their flour?—A. Yes, but I used to do my own buying.

Q. Did you pay any increased price on the flour you used?—A. No, I used to buy the same as any other baker.

Q. Could you go into the competitive market and buy?—A. I was not allowed to do that.

Q. You had to buy flour?—A. I had to buy flour from the one mill.

*By Mr. Factor:*

Q. I understood you to say that your bakery was controlled by the Lake of the Woods Milling Company; did you use their flour?—A. Yes.

Q. Then it was just book-keeping?—A. No, it was more than that, there were outside shareholders in the company.

Q. You mean, that the Lake of the Woods Milling Company only had a majority of stock?—A. That is it.

*By the Chairman:*

Q. You were limited in your buying to the one company?—A. Absolutely.

Q. But all the transactions were the same as though they were independent?—A. Yes.

*By Mr. Parry:*

Q. You always bought at the market price?—A. I did, up till a certain period—tried to keep up with my competitors. That is the reason I am out of it to-day.

Q. Did you ever have to pay more than the market price for your flour?—A. I certainly have had to pay more than I could have bought it at outside.

Q. On the same day?—A. Yes.

Q. For the same quality of flour?—A. Yes, I would say that.

Q. Were they charging the outside world the same as they were charging you?—A. To give them the benefit due there, I do not think they used us any different from any other customer in the same category.

*By Mr. Young:*

Q. Did the millers have a price to be paid them; let us suppose that X represents the price of flour, you did not have to pay X plus 1?—A. I would not say that, but still X plus; the X represents the big customer—.

Q. Would you not get the same treatment from the mill as you would have got if you had been an independent baker?—A. No, I do not think I did.

Q. Then you paid more for your flour?—A. We paid a straight X price all the time.

Q. And the other fellow got a discount from your same mill?—A. I am not prepared to say that because I do not know.

*By Mr. Parry:*

Q. But you are saying that your price was not always the competitive price?—A. No, it was not; that is all I know. I want to go on record in saying that, I do not think it was quite fair to the minority shareholders.

*By the Chairman:*

Q. Of the bakery?—A. Of the bakery. That is one of the problems you face in any industry which is controlled by companies supplying your raw material. I think that a great many troubles of the industry are perhaps caused by this insatiable desire for volume. To get this the big plants follow the practices which you heard about here this morning. There is no doubt about it, there is overproduction in the milling business, as well as in all other industry.

Q. And that resulted in your development of the sliced loaf?—A. I was responsible for the development of the sliced loaf on high-priced bread; and I might say also that I was instrumental in the developing of the second quality loaf, too.

*By Mr. Young:*

Q. This sliced-loaf is already sliced, is it?—A. Yes.

Q. You do not butter it for them as well?—A. Not yet.

*By Mr. Parry:*

Q. What kind of competition were you meeting when you developed the second quality loaf?—A. Desperate competition.

Q. In what light do you regard the chain store as a competing factor in bread distribution?—A. They are very serious, if they are unfair. I had a very interesting experience in Western Canada. The Safeways Chain was organized in Western Canada around 1930—I am not sure of the year, it was about 1930.

*By Mr. Factor:*

Q. After the 28th July, 1930?—A. I am not sure.

The CHAIRMAN: You would say that.

The WITNESS: Just at that time Western Canada was invaded by the Chain of Safeways.

The CHAIRMAN: That was in 1929; that is the year.

The WITNESS: And the avowed intention—the manager told me about this at one time when we wanted to get his business—he told me that if they could get bread and milk as loss leaders—we did not call them loss leaders then—but as long as he could get these with which to get people coming to his stores, he did not care for anything else. He would put that business over if anyone did. The result was that the Piggly-Wiggly took issue with them, and Wedgewood and Spencer and others put in little bakeries on the top of their big stores out there and put on loss leaders, running these bakeries for nothing. I am satisfied

they ran them at a loss. I have talked with these gentlemen and tried to get them to listen to reason, but they would not. I think Mr. Ward has some evidence. I think perhaps I should not take up the time of the committee on this, because Mr. Ward's evidence will bear this out.

Q. Just go ahead, Mr. Morrison. I think the committee would like to hear your experience. You are very frank about it?—A. Safeways again, other chains, Piggly-Wiggly, other small chains and Eatons especially, took issue with them. They simply demoralized the business in the prairies, especially in Winnipeg.

*By the Chairman:*

Q. By these loss leaders?—A. Yes.

Q. Have you any illustrations of that?—A. I know they went so far in Vancouver—in two cities they gave bread away for nothing, it got down so low.

Q. And milk too?—A. Yes, and milk. Just went crazy.

*By Mr. Young:*

Q. Did the people that took that bread free suffer for it?—A. No. But I was forced to cut wages in the west until I almost wept—seeing men going away from me weeping—to try and keep out of the red ink, or reduce your red ink. That is the experience I went through in western Canada.

*By Mr. Parry:*

Q. The red ink was a matter of quantity, was it?—A. Yes.

*By Mr. Young:*

Q. That is in Vancouver?—A. All through the west, right from Winnipeg to Victoria.

*By Mr. Factor:*

Q. When did this start in the west?—A. It all started out by the coming of the chain store. It never rains but it pours. The chain stores came. Things seemed to play into their hands, because they got all the breaks of this wheat market going down. It was demoralizing the industry.

Q. In 1930—was that the time?—A. It started then, about 1929, 1930. I am not really sure.

Q. How did you get along before 1929; were you general manager of the bakery then?—A. Yes. We had been doing very well.

Q. Was it a profitable business?—A. Yes, it was a profitable business.

Q. And were you competing with the independent bakers?—A. Yes.

Q. And you were getting along all right?—A. Fine.

Q. How were the independent bakers getting along?—A. I think they were all prosperous, as far as I know.

Q. They were all prosperous too?—A. Yes.

Q. In other words, the whole trouble lies with the chain store that ruined the bakery business; is that your opinion?—A. I believe that is right. It was the chain stores which ruined the bakery business.

*By the Chairman:*

Q. Put it this way, that it was the practice of cutting the price below the cost of production?—A. Yes.

Q. And the chain stores seem to have practised it more than anybody else?—A. Yes. That upset the industry. I think perhaps we made some mistakes, the operators of the bakeries. I don't think we followed the reduction in the price of wheat quickly enough. It is fine to look back now and see what you should have done.

*By Mr. Factor:*

Q. Then you want to take part of your money and increase your productivity; you didn't reduce it?—A. It is a funny business, the bakery business. The more accountants and experts try to run it, the more they ball it up. I am in great sympathy with Mr. Jetté, a practical baker. If you hold your price too high, your volume comes down and you are worse off then. You have neither volume nor profit.

*By Mr. Parry:*

Q. So you followed the chain stores on the price cut?—A. We didn't follow them quick enough.

*By Mr. Young:*

Q. Then it was the chain stores that forced the price of bread to follow the price of wheat?—A. No. That would have been all right if they had followed it, but they went below the price of wheat, even at 38 cents, Mr. Young.

Q. Will you tell us what you sold your bread for, prior to the coming of the chain stores, say in 1929?—A. I have not got statistics here of all the plants. It is hard to go across Canada, because weights differ when you go out west.

Q. Take your pound and a half loaf in Ottawa, is that what you sell?—A. Yes, 1½ pound in Ontario and Quebec.

Q. What did it sell for then?—A. In 1930. Around 11 cents, I think it was, in Ottawa.

Q. How much of that was material?—A. Roughly, it would be about 4 cents.

Q. It costs you 7 cents to make a loaf of bread and deliver it then, over and above the ingredients, at that time?—A. At that time.

Q. At least, I don't know what it cost you, but that is what it cost the consumer?—A. Yes, perhaps it did.

Q. Don't you think it was time that somebody was coming into the market and forcing that down?—A. No, I don't think so. You take service. There is 7 cents, you say?

Q. Your ingredients cost you 4 cents and you were charging 11 cents for that loaf?—A. At that time, with wages the way they were, it perhaps cost 2 cents to manufacture; that is retail distribution, remember. It has to be distributed. There was cheaper bread than that. Perhaps 2½ cents for delivery, a cent for overhead, and then a cent for profit. In all my experience I have never seen more than a cent of profit in a loaf of bread.

*By Mr. Factor:*

Q. Never?—A. No, I have never seen any more.

*By Mr. Young:*

Q. One cent profit on a considerable number of loaves would be considerable. Is there no way of cutting down on that 7 cents? That seems to be an awful spread?—A. It is cut down to-day. Wages are down.

MR. FACTOR: That is where most of the cutting has been done, apparently, in wages.

THE WITNESS: In my plant my costs to-day are 7·45 in Ottawa. That is, we have two qualities of bread.

*By Mr. Young:*

Q. That is for your best quality?—A. That is the two together, 8 and 10 cents.

Q. And it cost you 7·45?—A. Yes.

Q. And you sell on an average of 9 cents, do you?—A. No, on an average of somewhere around 8. The wholesale price comes in that, but I think our return is somewhere about 8 cents for our total output.

*By Mr. Parry:*

Q. You have averaged up your costs?—A. Yes.

*By Mr. Young:*

Q. You are not making a cent clear, then, are you?—A. No, I am not.

Q. Is there no other cost that could be reduced?—A. No.

Q. You say it costs  $2\frac{1}{2}$  cents to deliver a loaf?—A. I will defy any man in Canada to run a bakery any more economically than I am running it.

Q. If a person does not ask for their bread delivered, and is willing to go and get it, how much does he save by doing that?—A. In Ottawa, one cent.

Q. That is not quite fair, is it?—A. Why?

Q. If it costs  $2\frac{1}{2}$  cents to deliver it, and the man goes and gets it only gets one cent, somebody is getting the other  $1\frac{1}{2}$  cents?—A. Well, it goes out in wages and so forth.

Q. It goes to the man who does not do that?—A. Well, I think the chain store should be the same price as the wagon price.

*By Mr. Parry:*

Q. Why do you say that?—A. Because it tends to disorganize the business.

Q. Have you any other reasons?—A. Yes. Chain stores again, as you have been shown, deliver bread in many cases. We have got this service set up and the public wants this service.

Q. I suppose floor space is worth something?—A. It is.

Q. And the advertising is worth something?—A. Yes.

Q. And when customers come in automobiles, I suppose there is cost added to that factor?—A. Somebody has to pay for the gasoline.

*By Mr. Young:*

Q. I have in mind the housewife in the city of Ottawa who has to make every cent count. She can send one of her children to the chain store to get a loaf of bread. If that loaf of bread comes  $2\frac{1}{2}$  cents cheaper to the merchant than if he had delivered it, don't you think she is entitled to that?—A. What good is it to her if her husband has not got a job to get the 7 cents?

Q. She has not got a husband, and I don't think she will get one by paying more for her bread.

Mr. FACTOR: What, a husband?

Mr. YOUNG: A husband. I don't think you can help her to get a husband by charging her an extra cent a loaf.

The CHAIRMAN: There are interest charges, Mr. Young, ordinary rentals and so on.

*By Mr. Parry:*

Q. In any event, in your experience that is what you are saying?—A. Yes, that is what I am saying. There is another thing; I am in great sympathy with the little corner grocery, the local man here, paying his taxes, trying to live. These chain stores—I don't think they should sell, but they do sell, bread a cent under him.

*By Mr. Young:*

Q. Can he buy from you as cheap as they do?—A. No, he can't.

Q. Whose fault is that?—A. Well, it is perhaps my fault, because I do supply one chain here.

Q. You supply a chain?—A. Yes, they take a thousand loaves a day.

Q. And the little fellow at the corner store takes a dozen?—A. The chain store, give them credit, they take them all in one bulk, but it is too low a price.

*By Mr. Parry:*

Q. You don't justify the price at which you do it?—A. No. I would get more to-day if it were not for what they are doing in other cities.

*By Mr. Young:*

Q. Do you lose on that thousand loaves?—A. You don't make.

Q. You don't make anything?—A. No, you don't make anything, if they paid a right portion of the overhead. I am losing money.

Q. You have got to make it up on the little fellow?—A. Got to make it up somewhere. It is not practical. I have no justification for doing it.

*By Mr. Factor:*

Q. What is the volume of bread that is sold by the city stores, say in the city of Ottawa, compared with the bakers?—A. It is particularly small in the city of Ottawa.

Q. How is it in other cities, in Toronto, for instance?—A. I think perhaps about 10—I am just guessing now, I don't know—perhaps 10 per cent.

Q. Is it not a fact that the chain store merely uses the bread as an advertisement, I mean irrespective of the merit of that form of advertising?—A. I know the chain store's idea is to get people to come into the store, and they know that bread is a thing that we have got to have every day. That is the stock argument of all the chain stores.

*By the Chairman:*

Q. Is this really not the point at issue, Mr. Morrison? I asked Mr. Jette the same question. Is there any possibility or is there anything to justify the assumption that the chain store could do away with the delivering of bread from house to house?—A. No. The house to house delivery is a system that is demanded by the public of Canada, to get their bread.

Q. And that is about 90 per cent or more of the consumption?—A. I would not say quite that high.

Q. What would you say, from your knowledge and experience?—A. I think perhaps 60 per cent of the bread is delivered—at least, 60 per cent of the total output. That is including institutions.

Q. I am talking about retail bread. Never mind about institutions which are, of course, buying large quantities. But with regard to the ordinary delivery of bread, what proportion is delivered house to house and what proportion is sold from your retail stores, chain and otherwise?—A. On our wagons, about 80 per cent is sold.

Q. About 80 per cent?—A. Yes, and delivered from house to house.

*By Mr. Factor:*

Q. Does the 20 per cent that is sold by independents and the chain stores control the price of the 80 per cent?—A. It does, to a great extent. That little 10 per cent of the chain store business controls your whole—really has an effect on your whole selling price.

*By the Chairman:*

Q. Disorganizes it?—A. Yes.

*By Mr. Parry:*

Q. What effect has the loss leader of bread on the public mind?—A. It makes the people think that the bakers are all rogues.

Q. It does create the idea that 5 cents is the profit on the price that he gets?—A. Yes, it gives the wrong impression.

*By Mr. Factor:*

Q. And still 80 per cent continue to buy bread from you?—A. Yes. That shows the ability of the baker.

Mr. FACTOR: And the gullibility of the public.

*By Mr. Parry:*

Q. Just proceed, Mr. Morrison?—A. I don't know where I left off.

Q. You have been all over Canada?—A. Pretty nearly. Then during this period—I am going to be frank; you asked me to tell what happened with the big bakers. Many of us sold bread below cost, inasmuch as we supplied these chain stores, deluding ourselves, the selfish attitude again, not looking at the big picture, and allowing these chain stores to cut into your volume.

*By Mr. Young:*

Q. Suppose you had refused to supply the chain stores with this thousand loaves of bread at the price they wanted, what would have happened?—A. Perhaps they would have got it elsewhere, or got it somewhere. I think quality bakers, that is, bakers who know how to make bread, would have been farther ahead if they had never sold a loaf of bread to a chain store.

Q. Do chain stores ever take over what is left over?—A. No, I have never known that.

Q. What do you do with bread that is left over at night?—A. The efficient baker should not have it. You should be able to see to that.

Q. You can do that?—A. Pretty closely, if you watch yourself, by watching that each route puts in the right number. It does not vary very much from day to day. That is where careful management comes in.

Q. You could not melt that bread down, could you?—A. No, that is one of the things we have never found a solution for, a satisfactory one. Usually, if it gets stale it is taken out and sold to a fox farm. That is the way I get rid of mine.

Q. There is some demand for stale bread, is there?—A. Oh, it is very limited. Then, during this period of demoralization there were a lot of evil practices which crept into our otherwise very ethical industry. We got selling bread below cost.

*By the Chairman:*

Q. Why would you sell below cost?—A. That is one of the things I repeated myself. I am dealing with the chain stores.

Q. Did you ever do that in a town where there were a couple of comfortable independents, in order to put one out of business or put both out of business?—A. No. I will be honest. I have never known that to happen. We may be guilty of lots of things, but that is one thing I have never known. We may have met competition, but the baker—I will go on record here that the mill owned bakers have honestly endeavoured to get reasonable prices for their products. In some cases they have been forced down to meet local competition, and perhaps unwisely met it. They may have done unwise things.

Q. When you say you have met local competition, what do you mean by that?—A. Well, for instance, we have an evil here in Ottawa. Outside the city here, in some of the towns—Carleton Place, for instance—the price of bread up there is a cent less than in Ottawa. That is an evil that should be corrected.

*By Mr. Parry:*

Q. But you were an unstabilizing element because somebody else was unstable?—A. Yes, we were forced down.

Q. And it must be reflected back in the ordinary local baker?

*By the Chairman:*

Q. Would you go into Carleton Place, for instance, with your highly developed organization and cut that fellow's price?—A. No, don't cut it.

Q. You would meet it?—A. Meet it. It has been met, but I think it is unwise.

*By Mr. Young:*

Q. You think it should not be allowed. Maybe that man's overhead is less than yours. Perhaps he has figured out a way of cutting costs?—A. It might be, but I don't think that baker should be allowed—I don't think we should be allowed to go in and cut the price of a local baker. I don't think that should be done. It may have been done in many cases.

*By the Chairman:*

Q. Take this case you mention. Take Carleton Place or anywhere else. Here is a local baker seeking to hold his customers. You send out a truck from Ottawa or some other central point and you go in there and you say you meet his price. You may have a little more inviting set up, or some cakes and buns which you send along, and soon he feels in self defence he has to cut his price again?—A. He may.

Q. And then you meet him?—A. He may.

Q. And so it goes on?—A. It may be. I don't think in that case, mostly the big bakers usually always get—are usually able to never send more than a limited quantity of bread in a local town for advertising, and so on.

*By Mr. Parry:*

Q. Your big financial resources are competing with the local man with the limited facilities for advertising?—A. Yes, and I don't think it is right.

MR. PARRY: You don't think it is right. It is very fair of you to say so.

*By Mr. Factor:*

Q. How long were you manager of this Inter-City Baking Company?—A. About five years.

Q. In the eastern or western section?—A. Until November of 1932, yearly inspection of both companies.

*By Mr. Young:*

Q. Have you ever found any competition from the housewife making her own bread?—A. That has fallen off.

Q. Does that increase as your prices go up?—A. No, I don't find that a factor.

Q. Did it increase when you refused to drop your price with the drop in the price of wheat?—A. It would eventually. The housewife knows her costs. She knows what is fair. We have found that out.

Q. You can't fool her?—A. I never found that we have been able to.

*By Mr. Factor:*

Q. Were you here when Mr. Pinchin gave his evidence this morning?—  
A. Yes.

Q. You don't agree with his contention that the independent baker is being put out of business by the mill-owned baker, do you?—A. No, I don't agree with that.

Q. You think that the independent baker and the mill-owned baker should get along very well if it were not for the chain store competition?—A. I think that is the key to your situation. That is the element that we cannot control.

*By Mr. Young:*

Q. It is control you want, is it?—A. Yes, and we are going to ask you for that before we are done. But that outside factor comes in. You see, again you have got your housewife. The baker can't get an exorbitant price for bread, because the housewife can always bake her own bread.

*By the Chairman:*

Q. If the bakers of the country were independent of the mills, would it be in the interests of the baking industry?—A. Well, I think that the mills going into the bakeries has been a mistake.

*By Mr. Young:*

Q. From whose point of view?—A. From both.

Q. Both miller and baker?—A. Both the miller and the baker.

*By the Chairman:*

Q. Has it been a success from other standpoints?—A. No.

Q. Financially?—A. No, it has not.

Q. Nor from a practical administration standpoint?—A. No, it is not satisfactory. I think the ideal situation is your local man. The bakery business is essentially a neighbourhood business.

*By Mr. Factor:*

Q. Then you do agree with Mr. Pinchin in that angle of it?—A. Yes. But I don't see where, now that they are established—the mill bakers didn't establish any new competition to my knowledge, only in one or two rare cases. They just took over existing bakeries.

*By the Chairman:*

Q. We had evidence here in another line of inquiry that in certain towns in Western Canada there were two or three cases—we have exhibits on file—where there was a local baker and he is carrying on his business, delivering his bread and supplies the town. A chain store puts on bread—in one case they give it away, and in another case at 2 cents a loaf, which bread was brought in from a large city, a large bakery such as you have been operating. How can that local baker exist, under conditions of that kind?—A. Well, he can't. He simply can't.

Q. Is not that a case where the large bakery, a national organization, whether it is mill-owned or otherwise, in conjunction with the services through the chain store, puts a local baker out of business?—A. Of course, a big local baker might do that, whether he was chain or otherwise.

Q. Quite so, but it is apparently the national organizations that are able to do that?—A. Well, simply because they happen to have the big plants, that is all.

*By Mr. Parry:*

Q. The result is they have done it; they have got the chain?—A. It may be in isolated cases, but the general practice of the mill-owned bakers has been pretty ethical.

Q. Did they lower the price to the chain?—A. I can't tell you, because I don't know the institution you are referring to. Perhaps the chain was just taking a loss on it.

The CHAIRMAN: They did when they gave it away, I presume.

*By Mr. Young:*

Q. I think you referred to the cut-throat competition of independents, didn't you? These are the ones that are unethical?—A. Again you go back to your reference there, that some of these small bakers have little overhead, and perhaps have no help; it may be a family affair, and they can sell very cheap. Under ordinary conditions, unless there is something extraordinary like Mr. Stevens referred to and the chains give the bread away, the local baker is well able to compete with any organization, a small baker.

*By the Chairman:*

Q. For instance, you recall very well the instance in Vancouver?—A. Yes.

Q. Which was carried on for a considerable period of time?—A. Yes.

Q. Where chain stores gave away bread or else sold for two cents, or a combination of milk for three or four cents a loaf?—A. Yes.

Q. They could not possibly have done that unless they had bought their bread from some large organization in large quantities, could they?—A. Well, I think in Vancouver they were making their bread, weren't they, in that particular case?

Q. I could not say exactly. I don't think they were all making bread. In fact, I know they were not, Safeways, Piggly-Wiggly and others. It must be the combination there of the loss leader in the chain store and the large baking organizations selling bread at a price that is not supplied to the ordinary distributing trade?—A. I grant you that. I think that is one of the sins of the big baker, of my own too—of many of the big bakers, and I take part of the blame. It was a mistake to ever supply the chain stores, to give them a weapon to cut your own throat. I think it was foolish on the face of it.

Q. All right, Mr. Morrison, will you continue?—A. Where are we?

*By Mr. Parry:*

Q. You are still at the dough?—A. Then there are, as I say, a lot of evils that have crept into baking, big buyers. If you have got a weak market, buyers are all keen buyers. Perhaps the worst buyer we have to contend with in Ottawa is the city of Ottawa, on the relief bread. On every loaf of bread that we supply there, we are losing half a cent at least. According to the statement here, I am losing a cent. We don't pay as big a commission to the drivers on that, so I figure I am losing half a cent a loaf. We went before this board to try and get an increase in the price of bread, and I was told by a doctor who, if you go in and look at him, he charges you five dollars, that they could buy bread for five cents.

*By Mr. Young:*

Q. Would you not be money ahead to let them buy it?—A. Yes, on the face of it.

Q. Why don't you do it?—A. Well, you have got to have a long picture of this thing. We always live in hopes that we will get a better price, and it means saving the connection with these people that are on relief.

*By Mr. Parry:*

Q. You want to hold the customers?—A. Yes, that is right. We hope that this depression will be over, and this man is a good customer perhaps in a year or two. In the meantime he is getting good bread. All these are some of the things we have to contend with, and when we sell bread, the amount of bread that relief takes to-day, it tends to hold the other price up. Secret rebates, coupons, advertising allowances and all these evils have crept into our industry. My conception of an honest baker is that he should exemplify the perfect business man, as I am trying to do here, honestly, by being a good citizen, a good competitor and a fair employer. I believe it is my duty to give to the public the best possible bread at the lowest possible price, consistent with paying reasonable wages, a fair return on capital invested—I mean a fair capitalization—and a fair salary to myself as chief executive or operator. In my own little business we have five groups. I have divided them into five groups: The shareholders, employees, the public, my creditors, and ourselves as chief executives, my partner and myself. I conceive it is my duty to see that each group gets its just due. If this is done honestly, one must of necessity be a fair competitor. I was trying to tell the boys the other day that we should adopt the highest attitude in our business, play the golden rule, take God into our business, if you like. Somebody says. "Don't mix religion with business." We have tried everything else in the bread business, and you had heard the condition of it. By the way, I am one of those fellows that have been affected by the Oxford Group.

*By Mr. Parry:*

Q. Oxford Group enters baking business?—A. Yes. It is my vision that the bakery business should set the ideal as to how an industry can be run. I was talking to the men on this at a meeting. Most of them are present here to-day. I said that I believed if we could get that ideal before us, and get a little help to control the chain stores, that we could within two months change our industry from one of chaos, with no uniformity of prices, no dividends to shareholders, poor wages to employees who work too many hours, to one of real prosperity where dividends will be regained on money invested, fair wages can be paid, hours can be shortened, more jobs created, and in other words make this unit of our business life, with all its environments, prosperous.

*By Mr. Kennedy (Peace River):*

Q. What about the wages right now?—A. I would like to be able to increase mine.

Q. What are they?—A. They are averaging about \$16 a week.

Q. What do the drivers get?—A. Well, to salesmen I pay \$35 a month, and 10 per cent on the money value.

Q. How much will they make?—A. Oh, they are averaging about \$80, \$85 a month.

Q. How many hours do they work?—A. Well, they actually work about eleven hours on a route. That means that our boys go to work anywhere from six to a quarter to seven in the morning, and then they get back between five and six at night. They work between ten and eleven hours a day.

*By Mr. Young:*

Q. You would like to increase your wages?—A. Yes.

Q. How would you go about doing that?—A. Throughout I am referring especially to the inside staff.

Q. How would you go about getting money to increase your wages? Would you raise the price of bread?—A. No, I would like to correct some of the evils in the industry.

Q. Some of those things which force you to sell for less?—A. Yes.

Q. In other words, you would like to raise the price of bread?—A. Not to the general public, no.

Q. To whom?—A. To some of the institutions and the city, and some of the cut prices that are going to large stores, and so forth, restaurants and so forth, in this town. If that were done, I could increase my wages further.

Q. Without increasing the price?—A. Without increasing the price to the general public.

Q. Of the 80 per cent of the bread which you deliver to the door?—A. It is less than 80 per cent of the whole; it is about 60 per cent.

*By the Chairman:*

Q. The chief cutting has been in what you might call the wholesale section of your business?—A. Yes.

Q. Large institutions, restaurants and city chain stores, etc.?—A. Yes.

Q. Now, under the further reorganization of the business along the lines you suggest do you feel that the consumer might get a benefit?—A. I believe they will eventually get the benefit.

Q. You were here this morning and you heard Mr. Pinchin?—A. Yes.

Q. You heard him make certain recommendations, and I notice you have appeared in favour of a number of them. I would like to refer to item number 1: "The baking industry must be restored to its status as a local, independently operated business, with the utmost dispatch consistent with the minimum consistent with the minimum disruption to the industry's normal activities." What do you think of that?—A. Again I do not see what would be gained. I cannot see whether it matters whether it is operated from the baker's standpoint by the mills or who so long as they play fair.

*By Mr. Parry:*

Q. Should it be a local business?—A. I think it is much better. I have had a very happy experience as a local baker in Ottawa. I took over a defunct chain plant which was in bad shape. It was run down, and the bakery itself—the floor was full of holes and the roof was leaking, the motors were not running, the horses were lame, the waggons were not painted and the staff was discouraged. I took that over.

Q. How long ago?—A. A year and a half ago. And the competition here is two of the greatest chain plants operating in Canada. I would say.

*By Mr. Factor:*

Q. In other words, you see nothing wrong with a bakery operating a mill so long as they conduct their business in a proper manner in relation to the public and in relation to their shareholders?—A. I cannot see anything wrong with it.

*By the Chairman:*

Q. You think a board of directors at a mill in Montreal can run a chain of bakeries from here to Vancouver as successfully and efficiently as a group of independents?—A. Not from their standpoint, no; from the baker's standpoint. I am speaking from a local baker's standpoint.

Q. There is the fact. A group of directors in a big mill in Montreal or Toronto can operate a chain bakery from here to Vancouver as efficiently as the local bakeries can run their business; is that your statement?—A. No. That is not quite what I meant.

Q. Will you make yourself clear, Mr. Morrison, because that is the inference I took from your statement?—A. He was referring to decentralization or closing up.

Q. No. What we are getting at is the question of the effect—this is the order of reference that we have here—I will not read it—the effect of the mill-owned chain upon the bakery business generally. Now, I am asking you again whether a board of directors in a large mill, say, in Montreal, can successfully operate a chain of bakeries from here to Vancouver?—A. They are not doing it.

Q. Well, from here to Winnipeg, then?—A. They are not doing it now.

Q. Not successfully?—A. There is not a successful chain in Canada.

Q. Then the system cannot be sound. You say you think it is. I am asking you, now, frankly.

*By Mr. Factor:*

Q. When you say they are not successfully operating what do you mean?—

A. There is not one of them paying a dividend.

Q. That is it. From the standpoint of the shareholders?—A. No.

Q. Is not the basic reason and cause of that the over-capitalization and the exorbitant prices paid for concerns that they took over?—A. I do not think it is, because they have not even their money back.

*By the Chairman:*

Q. I would like to get you clear on this, because twice you have made the statement that you can see nothing wrong with the mill-owned chain?—A. I am speaking from the independent baker standpoint.

Q. I shall put the question to you again. You have had experience you have already said from here to Vancouver. Do you think it is an economically sound method of carrying on a big business for the board of directors of a flour milling company to operate a chain bakery from Montreal to Vancouver?—A. No, I do not.

*By Mr. Young:*

Q. That being the case, then, and the further fact that it is not paying them, don't you think it is going to bring its own punishment?—A. It will work out.

Q. You spoke about the Golden Rule. I suppose in your business the Golden Rule means using a baker's dozen, does it? In your dealings with your customers—A. No, but I think the public should be considered as one of the groups.

Q. You have never used that dozen?—A. Personally, I give a cash discount for tickets. Some of the bakers say that it is wrong.

Q. Is that what you call the high price of salesmanship?—A. I believe that any person who pays cash in advance should get something. I think it is proper.

Q. Is it a worth-while discount?—A. Ten per cent.

*By the Chairman:*

Q. Now, we have one more witness. Are there any more questions you want to ask Mr. Morrison, or is there anything else you want to say, Mr. Morrison; have you any papers you want to file with the committee?—A. There is one on a chain store in Toronto, A. & P.

Q. Mr. Morrison files an advertisement. Have you any idea what paper this appeared in?—A. No, I do not. It gives the date. It is a copy of an editorial from one paper.

Q. It is an A. & P. advertisement.

(Witness discharged.)

E. A. BURGESS, called and sworn.

*By Mr. Parry:*

Q. You are a member of the baking firm of Burgess and Shelley of Kitchener?—A. Yes.

Q. And you have been a baker for years?—A. Eleven years.

Q. And for eight years, I understand, you were president of an organization known as the Dominion Bakers' Association?—A. Of Waterloo, Welland and Huron counties; later of the Dominion Bakers' Association.

Q. And you feel justified to speak for the bakers in the vicinity of Kitchener—the counties of Waterloo, Welland and Huron?—A. Yes.

Q. Will you tell the committee the conditions under which the industry is labouring in your community?—A. The conditions as we have them at the present time: we have one chain baker selling to a chain store which is always a cent below our retail price.

Q. Do you object to that?—A. Well, it is an advantage they have over us, of course; but outside of that the chain bakers have been very fair in the house-to-house trade. They have always kept the price with us.

Q. What do you mean by house-to-house trade? Delivery?—A. Delivery. Yes, they have a depot there—the chain bakery has. And our difficulties mostly are with those fly-by-night men who start up and sell to independent stores which advertise at such ridiculously low prices. That part of our trade goes downtown, and we have to keep a driver for auxiliary purposes—when there is bad weather or you want to buy a cake or some buns or something else, and use us more or less as an accommodation. I might state that in our own case we have been trying to get the prices of all equal—not too high for the family. We will say 8 cents a loaf which is a fairly good loaf for a family.

Q. Is that a pound and a half loaf?—A. A pound and a half. And then we have a better loaf which contains more ingredients for 9 cents, and I might state that through these fly-by-night fellows and chain stores and independent stores our volume has just been reduced by about one-third, and the result of that has been that our profits have diminished to an extent that we have had to cut our salaries just 50 per cent.

Q. You state that owing to the independents and chain stores and through what you call fly-by-night purchases you have had to cut your wages 50 per cent?—A. Yes, in order to keep going.

Q. Under what conditions are these manufacturers of bread operating?—A. Well, I would call it a foreigner taking perhaps two or three men in of his own country. They will stand them before a wooden box and say, "Now, go to the dough," and give them \$6 a week.

Q. Do you know of cases?—A. Yes, I know.

Q. Cases of where \$6 a week have been paid for men working long hours?—A. Well, they would work all night for that.

Q. For \$6 a week?—A. Yes. I might also state that three of these bakeries have gone into liquidation, and as soon as they step out there is always somebody to step in and do the same thing all over again. We were getting 8 cents for our relief bread because we were producing a fairly good loaf and they came along and said, "We will give you bread for 6 cents," which, of course, is another loss of our volume. I might state a case west of Stratford. There is one man has a grocery store, an elevator and a restaurant. He says, "There are too many bakers in the town, we will have to put a few out of business" and he sells the bread over the counter for 5 cents with the result that the other bakers sell it for 5 cents. In the meantime this has been going on for six months, and they are just waiting for Providence to do something or something to happen that this should stop. I was up there a week ago trying to talk sense, and I have always been a kind of missionary in that section trying to get a little brains into some of those competitors. I have a few ads that I have as exhibits to show what has been going on within the month of April.

Q. You are producing what purports to be a newspaper advertisement?—A. From the local paper, the Kitchener *Record*.

Q. It is dated Thursday, April 19, 1934?—A. Yes.

Q. It refers to the Canadian Department Stores groceteria offering fresh bread for 5 cents a loaf?—A. They could sell, well, for 11 cents, because they buy it for 9 cents, but they cannot sell the bread at a profit. That is one sure thing.

Q. What about this fresh bread for 5 cents a loaf at Bueher's?—A. That is a butcher shop. We had never thought of any meat shop or butcher shop in our city selling bread until this element got in and sold it, and they upset the whole works.

Q. And used it as a leader?—A. And used it as a leader.

Q. And has done your baking community harm. Now, Shell Brothers, what do they handle?—A. It is a general grocery store. At one time we did sell them, but never at a price that we could sell at, and he says that they have to support these foreigners because they are the means of keeping prices down.

Q. What about the conditions under which the bread is made in these foreigner's shops; are they good conditions or not?—A. Some of them not very good.

Q. What about your medical health officer; does he inspect these places?—A. The law is not kept any too strict in those things. In other words, as I have advocated for a long time, the bakery should have government inspection, not local inspection, to keep these fellows in order.

Mr. FACTOR: You mean Dominion government inspection?

The WITNESS: Yes.

*By Mr. Young:*

Q. Have you been in some of these fly-by-night shops?—A. Yes.

Q. You say they are not sanitary?—A. Just to give you an idea. The front part of the shop is a bakeshop, the rear end of the shop is the bedroom, and downstairs is the living room in the cellar.

Q. Is that front part of the shop where they make their bread, and is that clean?—A. Yes, fairly clean.

Mr. EDWARDS: That is not a very good recommendation for your local authorities.

The WITNESS: I agree with you on that.

*By the Chairman:*

Q. That can be covered by the municipal authorities quite easily, can it not?—A. I think so.

Q. It is purely a matter of local health inspection?—A. A question of sanitary conditions—inspection.

Q. Well, have you any other recommendations or submissions to make to this committee on behalf of the bakers of your counties?—A. In my opinion, I think it would be a grand thing if the government could set up some kind of a licensing board that we could get a committee to go and have them function and do away with a lot of these fly-by-night fellows, or so-called bakers that should not be in the business.

*By Mr. Young:*

Q. On what basis would you put them out? You would have to make certain rules and have them complied with. What would your rules be?—A. First of all, what have you got to start with? You haven't anything to start with.

Q. This man has turned his kitchen into a bakeshop. Instead of baking bread for his family he is baking it for the neighbours. Would you not allow that?—A. No.

The CHAIRMAN: You would not allow him to bake the bread in an ante-room to his bedroom?

The WITNESS: No.

Mr. YOUNG: Would you carry that a step further and say that a person could not bake bread for his own family if his kitchen is next to the bedroom?

The WITNESS: No.

Mr. EDWARDS: No. The conditions are different entirely.

The WITNESS: If you take a few loaves of bread in comparison with hundreds of loaves of bread to the community you have to go about it in a larger volume and you have got to use a little different method than if you bake a dozen loaves for your own family.

*By Mr. Young:*

Q. You told us about this 9 cent loaf. Where does the 9 cents go?—A. First of all, we do not keep track, as a small independent baker. We only get an annual statement. I could not give you the percentage of costs, but we try to make a good loaf of bread which is 50 per cent of our output, and that has been the only thing that has been helping us keep our head above water. The other portion which goes as low as wholesale at 7 cents and retail at 8 cents, we could not exist on that.

Q. You are making your money on the 9 cent loaf. Do you deliver it for that?—A. We deliver it.

Q. Are your delivery costs high?—A. Our drivers used to get \$30. Now it is \$12 and \$13. We pay them a 10 per cent commission.

Q. Would your delivery costs be as high as those in a city like Ottawa or Toronto?—A. Perhaps not quite as high.

Q. What competition have you in your own town in the matter of delivery? A. Well, the chain stores deliver bread with their grocery orders.

Q. And you are the only baker that does nothing else?—A. Yes, we have nothing else.

Q. You have no competition?—A. Oh, yes, there are other bakers there—quite a number. One time there were about six, I guess there are about sixteen now.

Q. You could not break down that 9 cents and tell us how much is ingredients and how much is labour?—A. No. I could not give you an exact figure on that. I know the public is well satisfied to pay us 9 cents on that, because we have been holding our business. That has been our only salvation in the last three years. When the bakers fell over each other to get the price down, I said that there was only one thing we could do and that was give the people a good loaf of bread and they will pay for it, and that is the only thing that would save us from rack and ruin.

Q. It is in the last three years that the prices have been coming down?—A. Yes.

Q. And it is in the last three years that these fly-by-nighters have been there?—A. They come and go.

Q. It only started in the last three years?—A. Yes.

Q. And did they force you to cut prices in the first instance?—A. Yes, that is the way they got their start.

Q. If it had not been for them you would not have cut the prices?—A. Well, we would have been there with the cheaper loaf to meet the chain stores. Our secondary loaf is a fairly good loaf—as good as the chain store—because we try to keep it as good as theirs.

Q. It was the competition with the chain stores and the fly-by-nighters that forced you to cut the price?—A. Yes.

*By Mr. Edwards:*

Q. What proportion of the bread sold in Kitchener and Waterloo would be coming from that kind of establishment?—A. Oh, it might run 10 or 15 per cent, perhaps 20. I could not say for sure.

Q. You do not know if that condition obtains any place else in the district?—A. Not so much because Kitchener is either way; a lot of these fellows that are there now had gone out west originally to take up land and work on the land, and when conditions got poor they went back to their class of people, with their friends or relations, and for the most part they are European nationalities.

*By Mr. Edwards:*

Q. I would like to make it perfectly clear that these conditions do not obtain in Waterloo county generally?—A. No, this is just the situation in Kitchener particularly.

Q. They are Russians and Mennonites?—A. Yes, and some are Austrians, and some are Roumanians.

*By Mr. Boulanger:*

Q. In your district have you any mill-owned bakeries?—A. No, it is strange with the city of Kitchener and the town of Waterloo right together we haven't one mill-owned bakery, although we did have bread sold by them perhaps two or three years ago.

*By Mr. Parry:*

Q. Did any mill-owned bakery ship bread into Kitchener?—A. One, as I said, in years gone by.

Q. To a baking plant?—A. They supplied Loblaw's store.

*By Mr. Boulanger:*

Q. Did you have any trouble with them?—A. They were always selling under us bakers.

*By Mr. Kennedy (Peace River):*

Q. You are paying some of your drivers \$12 a week?—A. Yes.

Q. Are any of these drivers married men?—A. They are all married men.

Q. They would have a hard time getting along with that?—A. They sure have, many a week I give them a dollar or two extra just to kind of help them along.

Q. That is all the business will pay?—A. I will just tell you that our annual statement will show that on a \$90,000 investment we made only \$500 last year—that included our total return on investment.

*By Mr. Young:*

Q. You spoke of cutting salaries; did the 50 per cent cut of salaries include both salaries and wages?—A. Personally I used to draw a salary of \$3,000 a year, and it is now down to \$1,600; that is wages that I had in mind, we are all cut 50 per cent except the foremen.

*By Mr. Kennedy (Peace River):*

Q. What do your bakers get?—A. The helpers would get from \$14 to \$16 a week.

Q. What did they get in 1929?—A. They were getting from \$22 to \$26 a week.

*By Mr. Young:*

Q. As helpers?—A. Yes—they were not bakers, they were second men.

*By Mr. Kennedy (Peace River):*

Q. What did the bakers get?—A. Thirty dollars a week.

The CHAIRMAN: Thank you very much, Mr. Burgess.

The Committee adjourned at 5.30 p.m., to meet again on Wednesday, May 2, 1934, at 11 o'clock a.m.

HOUSE OF COMMONS, ROOM 368,

May 2, 1934.

The special committee appointed to inquire into price spreads and mass buying met at 11 o'clock, a.m., Hon. H. H. Stevens presiding.

Mr. W. W. Parry, K.C., of Toronto, appeared as counsel for the committee.

The CHAIRMAN: Order please, gentlemen.

The Minutes for yesterday contain a record of the witnesses heard, and certain documents filed, together with a record of the Resolution by Mr. Boulanger regarding certain petitions filed in the House of Commons to be presented; and the afternoon session records the witnesses heard and certain exhibits filed. Unless there are any corrections or changes, we will declare the Minutes approved.

Now, Mr. Parry, what have you got.

MR. PARRY: I would like in the first place to table with the committee a suggested code, the word is used by the Bakers' Branch of the Maritime Section of the Retail Merchants Association, which was delivered to Mr. Thomas Bell, M.P., a member of this committee. This contains the suggestion for a code for the baking industry. This letter and the supporting affidavits with related material, forwarded by Mr. Bell in his letter of April 4, probably present the case just as well as any witness might have done had one been forthcoming, in appearing before this committee. The letter reads in part as follows:

In compliance with instructions from your Committee, preliminary meetings of the members of the Baking Industry were held in this City with final meeting on Tuesday evening, March 27, at which the enclosed Code for the Industry was adopted with only one dissenting voice.

Since that time certain developments have taken place necessitating immediate action on somebody's part, if chaos is not going to completely envelop this industry.

The situation culminated in one of the larger bakers dropping the price from eleven cents retail to eight cents retail, with a seven cent wholesale price, last Monday morning, in a direct effort to bring the thirty to forty odd small bakers into line and I am enclosing copy of the first ad which appeared in our local newspaper. All Bakers, due to local conditions where we have such a large proportion of home baking, are working on a considerably curtailed volume and the other responsible bakers are faced with the situation now of meeting this price with a known-in-advance, direct loss to themselves or be gradually eliminated from business. In the East with us, on account of the Geographical situation, raw ingredients cost our bakers approximately one cent per pound more for all material compared with upper Canada and also in contrast approximately ninety-five per cent of the business with us in the Maritimes is done wholesale through the grocer, so that any price change, such as mentioned above, has drastic effects.

I would like, Mr. Chairman, for the purpose of the comparisons which will later be made, to read into the record the details of prices as they are recorded

here with respect to the cost of manufacture, as supplied by the Maritime manufacturers:—

The following figures were obtained from a local, responsible bakery, showing actual costs of the loaf of bread to this particular concern based on the volume as of to-day, making proper allowances for taxes, insurance, workmen's compensation and depreciation write-offs. These figures give a fair picture of what the responsible members of the industry are faced with at to-day's price:

Ingredients		Manufacturing	
	Cents		Cents
Flour .. . . .	2.45	Insurance .. . . .	.18
Yeast .. . . .	.17	Prod. wages .. . . .	.92
Malt .. . . .	.09	Fuel .. . . .	.34
Arkady .. . . .	.02	Power and light .. . . .	.15
Shortening .. . . .	.23	Cleaning .. . . .	.01
Salt .. . . .	.03	Mach. R & M .. . . .	.07
Sugar .. . . .	.21	R & M Bldgs. .. . . .	.02
Milk .. . . .	.20	Taxes .. . . .	.13
Raisins .. . . .	.07		
Wraps .. . . .	.41		1.82
Miscellaneous .. . . .	.08		
	3.96	Depreciation .. . . .	.40
			2.22
Total ingred. and mfg. .. . . .			6.18
Selling and Delivery		Office & General	
Express .. . . .	.83	Bad debts .. . . .	.03
Wages .. . . .	.89	Superintendence .. . . .	.38
H. H. & W. .. . . .	.24	Office salaries .. . . .	.12
Autos .. . . .	.10	Stationery .. . . .	.03
Insurance .. . . .	.04	Tel. & tel. .. . . .	.02
Advertising .. . . .	.34	Postage .. . . .	.01
	2.44	Exchange .. . . .	.01
Depreciation .. . . .	.23	Sundry .. . . .	.02
	2.67		.61
Total sell and delivery and office and general .. . . .			3.28
Cost price .. . . .			9.46
(Before present situation) selling price .. . . .			9.36
Loss .. . . .			.10

And this, as the communication sets forth, is a condition which is intensified by the drop in price to 7 cents.

Mr. HEAPS: Can you tell the committee what size of loaf that is?

Mr. PARRY: That is the pound and a half loaf.

Mr. EDWARDS: It is a pound and a half always.

Mr. PARRY: With your permission, Mr. Chairman, I would like to file for record purposes a series of affidavits dealing with conditions in the Maritime Provinces, from the point of view of wages, amplifying evidence already given as to the effect of competition on wages and conditions generally.

Mr. JAMES DEMPSTER, called and sworn.

*By Mr. Parry:*

Q. Mr. Dempster, you are a baker carrying on your business in the city of Toronto?—A. Yes, sir.

Q. And I understand that you are the third generation of the Dempster family that has been engaged in the baking business in Toronto?—A. Yes, sir.

Q. And as such you have had ample experience in the ramifications of this particular business?—A. Considerable, yes, sir.

Q. Now, you are here to discuss with the committee the causes of the recent competition, and events that have taken place in the baking industry. I would be glad if you would in your own way for the moment at least tell the committee briefly the changes that have taken place in the past ten years in the baking industry in Toronto. By the way, Mr. Dempster, you are a 100 per cent independent baker?—A. Family bakery, sir.

Q. Your stock is held in the family?—A. Held in the family, sir.

Q. You have no connection directly or indirectly with any milling company?—A. We have no outside capital whatever.

Q. Will you just proceed?—A. The last ten years in the baking business has seen a most significant and gradual appearance of mills buying their way into the baking field. This probably foreruns other developments since.

Q. You might perhaps tell us why, in your opinion, the mills broke into the secure a share of the domestic sale of flour due to the curtailing of the export bakery field?—A. In my opinion this was thought advisable by the mills to market.

*By the Chairman:*

Q. You say, secure a share; you mean, to insure to that particular mill control of all the flour to certain bakeries?—A. Yes, sir.

Q. Because, they had their share before?—A. As commonly expressed, to find an outlet for flour.

*By Mr. Parry:*

Q. For their own flour?—A. For their own flour, through their subsidiary baking company.

*By the Chairman:*

Q. Through controlled bakeries?—A. Yes, sir. In my opinion that is the prime reason the mills have entered the bakery field.

*By Mr. Parry:*

Q. What has been the influence of the mill-controlled bakery on the baking situation in the city of Toronto?—A. In fairness to the mill-controlled bakeries I must say that they conduct business in a business-like manner, as they see it. Our experience has shown that we have successfully competed against them, but at annually enlarging costs for selling and distribution. Our distribution costs year after year have shown a steady increase, which I claim is due to the necessity for us making more aggressive selling campaigns. We find it necessary to be more aggressive in our advertising and trade-getting methods successfully to compete against the mill-controlled operator.

Q. To meet this competition your costs as an independent have gone up ever since they have entered the business?—A. Yes.

*By Mr. Factor:*

Q. Your distribution costs have increased?—A. Our distribution costs have increased, which we find necessary to maintain our volume against the very intensive methods of the mill-controlled bakeries in Toronto which, of course, are enormous.

*By Mr. Young:*

Q. You say their costs are increasing enormously?—A. I am not in a position to say.

*By Mr. Edwards:*

Q. Have you increased your selling area?—A. Slightly, not very much; we have developed the business largely in the west and north end of Toronto.

*By Mr. Young:*

Q. Why do you say these men are business-like?—A. I said, as they see it.

Q. As they see it; do you call it business-like to increase selling costs?—A. I could hardly answer that question in the affirmative, we have found it necessary in order to maintain our volume; and I have a 10-years' statement with me to support my facts. We have had to go more aggressively after business, and we have successfully done so.

*By Mr. Heaps:*

Q. Have you had any difficulty in buying the supplies you wanted?—A. None whatever, sir.

*By Mr. Factor:*

Q. You mean, flour?—A. No.

Q. You are not tied down to any one mill?—A. We buy where we think the value is best.

*By Mr. Parry:*

Q. Would you say, had it not been for that competition that it would have been necessary to increase the cost of production to such an extent over this past eight or ten years?—A. I think that is a very reasonable inference.

Q. Is it a fact?—A. To my knowledge, it is a fact.

*By Mr. Factor:*

Q. Is the mill-owned bakery any more efficient than your own business?—A. No, sir.

*By Mr. Parry:*

Q. Will you just indicate to the committee in what respect costs have been increased, along what line?—A. Taken from our annual statement year by year, up to the end of 1927 our delivery costs, not including administration costs, which are commonly known as office and overhead, our delivery costs have increased from around 22 per cent up to 30 per cent, 29 per cent, or 27½ per cent of our total sales.

*By the Chairman:*

Q. Per cent of what, the retail price of bread?—A. Our total income.

Q. Oh yes?—A. We are largely a retail distribution bakery.

*By Mr. Factor:*

Q. From 22 to what; what was your highest point?—A. 30·05 per cent.

*By Mr. Heaps:*

Q. Have your sales increased during that period?—A. No, our sales have been very constant, they have shown probably an increase of \$30,000 in that period.

Q. How does the increase in cost compare with your increased production?—A. The increased cost of delivery from 22 per cent to 30 per cent would be an outlay of from \$22,000 to \$23,000 a year more selling per cent.

*By Mr. Senn:*

Q. What proportion of your sales are through grocery stores, or other sources than wagons?

*By Mr. Parry:*

Q. You might develop that, Mr. Dempster; you are getting into that as you are giving us particulars with respect to your cost of administration?—A. If you will pardon me, sir, we are dealing pretty well with the mill-controlled end of the baking business, or the influence of the mill-controlled.

Q. Will you just proceed with that, we will take chain stores?—A. Am I asked to say whether the mill-controlled is a benefit or a detriment to the baking industry?

*By Mr. Factor:*

Q. No, we are discussing the increase in distribution costs. Will you give us the details, tell us specifically how and in what manner your selling costs have increased?—A. That is answered by the more aggressive selling methods, that is the general statement.

Q. What would that include?—A. Larger advertising appropriations, more bread solicitors on the road, office expenses, and the like.

*By the Chairman:*

Q. Apropos that point: has this intensive selling campaign which you, and others I presume, have put on increased the consumption of bread as distinguished from cakes and pies and other things?—A. Not in the least, sir.

*By Mr. Heaps:*

Q. What periods were you giving us?—A. I am dating back from 1923 to 1932, a ten-year period.

*By Mr. Factor:*

Q. Have you increased the selling commission paid to your salesmen?—A. I would say that the remuneration paid to salesmen is largely the same as it was in 1923. It might be slightly less to-day, I cannot say; but in 1932 I would say they were very comparably the same as in 1923.

*By Mr. Senn:*

Q. Is that straight salary, or on a salary and commission basis?—A. It is a mixture of both, sir, we pay a minimum wage, and we pay a salary plus commission, and in that case it must be no less than the minimum wage.

Q. The salesman is responsible for collections as well?—A. Not in our firm, sir.

*By Mr. Heaps:*

Q. What do these men make?—A. The average salesman to-day is making from \$23 to \$23.50 or \$24 a week.

Q. Can you tell us in what year you reached the peak of your production?—A. Our unit sales were very constant, there is very little variation from 1923 to 1930, there is less than half of one per cent difference, apparently, by this table.

Q. Between 1930 and 1933?—A. That enters a new development, any change since 1930 I do not attribute to mill-controlled in the least.

Q. Do you attribute it to the hard times?—A. Partly, and partly to the more direct method of selling which has been developed through chain stores and such agencies.

*By Mr. Parry:*

Q. What is your opinion of the chain store development from 1930 to 1933?—A. We have found that the chain store very successfully competed against us through retail deliveries to the home to the diminution of bread sold to the retail connections.

*By the Chairman:*

Q. Have you had an increase since 1930?—A. We have had a decrease since 1930.

*By Mr. Senn:*

Q. That is, a decrease in production?—A. In production.

*By Mr. Heaps:*

Q. Can you tell us why that same condition would not apply to the other bakeries in Toronto?—A. I think it is a general condition; but the bread supply to homes is less than it was three years ago.

Q. The consumption of bread is less to-day than it was three or four years ago?—A. I should think that the consumption would be very constant in the city of Toronto.

*By Mr. Edwards:*

Q. Has home-baking increased in the district?—A. No, home baking has lost out in the city of Toronto.

Q. It has very materially increased in the territory in which I live?

Mr. SENN: It has in all the rural districts.

Mr. EDWARDS: Very materially.

*By Mr. Parry:*

Q. You do not regard it as a competitive factor at all?—A. Not in the least.

Q. Will you just proceed, please; the chain stores have a certain effect on your business?—A. I think the effect is very general on the industry. The Chain Store probably regard bread and milk as two prominent articles of sale for daily consumption, so it is to their advantage to sell these articles as close to cost as possible. I have evidence to show, I think, that they have been sold at times directly below cost. We have knowledge in Toronto bread was even given away on Saturdays with groceries; I think that is a glaring abuse on the baking industry, and it is being developed at this time.

*By Mr. Factor:*

Q. Where would the chain stores buy this bread which they sell at cost or below cost?—A. Some of the chains originally started their own baking plants. There is only one chain in Toronto now that operates its own baking plant, the other chain stores have made contracts with certain bakeries.

Q. Independent or mill owned?—A. Both types.

Q. How is the quality of the bread that they sell?—A. A good wholesome second-class loaf.

Q. What effect has this competition had on the independent bakeries in Toronto?—A. I think it has made conditions difficult for the independent bakers. It has also made it difficult for the independent dealers, that is the smaller grocery stores and such like, the very intensive methods adopted by the chain stores in selling bread at or close to cost.

Q. How have you met this competition?—A. Being an independent bakery we consider that the independent trader should have rights, and the independent grocer should have rights, to sell bread in direct competition with the chain stores; and we have been successful in demonstrating that right in supplying the independent groceries in Toronto with a very wholesome grade of bread in direct competition with the chain store product.

*By Mr. Factor:*

Q. Is it a good wholesome second-class of bread?—A. It is a very good grocery loaf.

*By Mr. Parry:*

Q. What do you say is the difference between a quality loaf and a wholesome loaf such as you are referring to?—A. There is not the variety available in the grocery loaf, it is a one-shape loaf, it is a production loaf turned out with a minimum of handling, and as far as quality is concerned, it is not quite as finished quality as the ten cent loaf.

*By the Chairman:*

Q. Not so much high quality ingredients like milk and shortening, and so on?—A. Quite, the grade of flour may be slightly lower.

*By Mr. Parry:*

Q. And you are supporting the retail merchant through your firm in his efforts to compete with the chain stores?—A. We feel from the economical sense of delivery that it is very advantageous to the small grocer to be able to compete against the chain-store selling.

Q. Is it working out successfully?—A. We are quite satisfied with it.

Q. Have you developed a large volume of business direct to retail merchants?—A. A very satisfactory volume.

*By Mr. Factor:*

Q. Is it a profitable business?—A. Yes.

*By Mr. Parry:*

Q. Do you believe that this second-quality loaf is here to stay?—A. No, I do not think it is here to stay at its present extent; I think that as times get better people will again swing to the door service.

Q. To the door service?—A. At the present time with the high price of this door service largely brought on by intensive selling methods, the majority of citizens cannot afford to pay for that special service.

*By Mr. Edwards:*

Q. What is the difference in the price of a loaf of bread off the wagons and at the store?—A. The wagon price of the second-grade or grocery-type loaf is 8 cents off wagons; it is generally sold at 7 cents from grocery and chain store.

*By Mr. Parry:*

Q. Do you ship to outside Ontario points?—A. No, we regard the baking business as a very localized type of business, and cannot see any economic reason for shipping a distance.

Q. Would you say that there is anything detrimental to the consumer in shipping to outside points?—A. No. I think shipping to outside points has been carried on generally at the prevailing prices at those points.

Q. In your system of distributions with retail merchants, is he enabled to sell the bread with which you supply him at a price cheaper than the wagon price?—A. He sells that bread at 7 cents, against our delivered price of 8 cents on the grocery or second-grade loaf.

Q. You think that that is an economical adjustment, that he should sell cheaper in the store than you do off your wagon?—A. Yes, and I think it is easy to substantiate the difference by the cost of the service.

Q. But you are of the opinion that you will come back to your own, that is delivery from wagons, when conditions improve, as a result of public demand?—A. No, we will serve the public the way the public wish to be served. If they wish it at the door we will give it to them at the door.

*By Mr. Heaps:*

Q. What is your impression on that point, do you think the people want it delivered by the wagons, or would they prefer to go out and get it for themselves?—A. Unfortunately in these distressed days a large proportion of the public find it necessary to buy the cheaper loaf.

*By Mr. Young:*

Q. Under normal conditions, what has been your experience?—A. Under normal conditions, so far as 1930—the majority of the bread I believe would be serviced to the door.

Q. And if things become normal again you believe they will prefer to buy bread delivered to the homes?—A. Yes, sir.

*By Mr. Factor:*

Q. What is the proportion of bread sold by stores as compared with wagons?—A. I haven't that information.

*By Mr. Parry:*

Q. Could you estimate it, from your own experience?—A. I would guess it at about 50 or more per cent through the stores.

Q. And that would include the bread used as loss leaders?—A. Bread used as loss leaders is only in occasional sales, it has not been the policy of the chain stores to develop loss leader selling recently; in 1930 and 1931 they were quite persistent in loss leader selling.

*By the Chairman:*

Q. With bread?—A. With bread.

*By Mr. Young:*

Q. They are getting away from it now—A. Yes, sir.

*By the Chairman:*

Q. In that figure of 50 per cent, do you include sales to restaurants?—A. No, sir.

Q. That is the retail selling through independent chain stores and such like as against wagons?—A. I want to impress, Mr. Stevens, that that is only my guess.

Q. We had evidence yesterday from another experienced gentleman from Montreal who gave us his opinion; it is worth having, and we appreciate that it is not based on actual figures.

*By Mr. Parry:*

Q. So far, Mr. Dempster, you have left the committee in this position; that the entrance of the mill-owned bakery into the baking situation in Toronto has resulted in increasing costs?—A. Yes.

Q. The entry of the chain store into the situation has decreased prices?—A. Volume.

Q. Price and volume?—A. To the detriment of the retail store.

Q. And prices?—A. No, it has not decreased prices on retail distribution; it has made available a 7 cent loaf through the grocery business.

*By Mr. Factor:*

Q. That being a second-class loaf?—A. A grocery or second-grade loaf.

*By Mr. Parry:*

Q. Are there any other factors which have disturbed the serenity of the baking industry in Toronto?—A. In my opinion there are other factors that have disturbed it more than mill-control in the baking business, although mill control is undesirable, I think, from the public point of view, as the mill has a dual interest of being a miller and also having an outlet for flour through baking ends; and there are other factors I think that are even more acute.

*By Mr. Edwards:*

Q. Would you consider the mill-owned baker more serious competition than the privately owned bakery in your area?—A. More intensive competition, sir.

Q. Is there any reason why you would object to competition from mill-owned bakeries, outside of the fact of chain competition?—A. The only score would be the more expensive type of selling necessary. We find mill-owned bakeries are fair in their methods, but they seem to have evolved a very expensive system of merchandising.

*By the Chairman:*

Q. That is, they have large resources and they utilize these resources, for instance, for introducing cakes, buns, pies and other incidentals into the delivery system?—A. That is part of their advertising campaign.

Q. Which forces you to follow them with the same type of service, which from the bread standpoint is not a necessary service?—A. It would be much preferable if we were competing against privately owned bakers. I do not mind saying that, but we have a condition here which has been created quite locally, and we have to deal with it as we find it.

*By Mr. Parry:*

Q. It does increase the cost of production, for which consumption has to pay?—A. Not of production, the cost of sale.

Q. The cost of delivery?—A. Yes.

Q. For which consumption has to pay?—A. Yes.

*By Mr. Edwards:*

Q. Permit me a question, Mr. Dempster. Is it your view that the method of distribution by the mill-owned bakers is economically unsound; in other words, that they operate at a loss?—A. I can't answer that question. I think that should be left to the public to decide, whether they think the service is too expensive or not.

Q. You have intimated that the distribution system of the mill-owned bakeries force the independently owned bakeries into a more expensive method of distribution?—A. Of counter selling, yes.

Q. Then it follows from that naturally; is it your view that the system of the mill-owned bakeries is economically unsound or is more expensive than the trade warrants?—A. We would be very glad to see it less intensive and less expensive.

Q. Of course, nobody likes intensive competition particularly. That is not the point. It is a question as to whether or not the independent bakeries have to meet a distribution system by mill-owned bakeries that is economically unsound, and that the losses are absorbed somewhere else?—A. There is an economic waste there.

Q. Do you suggest that the mill-owned bakeries operate at a loss, and that that loss is absorbed in some other part of their system?—A. Do I suggest that they operate at a loss?

Q. Yes?—A. The statements, in the last year or so, of the independent mill-controlled bakeries are not good statements.

*By Mr. Heaps:*

Q. Are they as good as your firm's?—A. Our statement is satisfactory to ourselves.

Mr. EDWARDS: Not yourself particularly, but the independent bakeries.

Mr. HEAPS: What I am getting at is, if your firm's statement is more satisfactory than the mill-owned bakeries, then you are competing with them most satisfactorily.

Mr. FACTOR: It would be still more satisfactory if the intensified selling campaign was eliminated.

*By the Chairman:*

Q. Is not this the situation, Mr. Dempster: You are delivering bread in a certain area in Toronto. Along comes a competitor—never mind who he is—with a full page ad. in the evening paper, about some fancy bread?—A. Yes.

Q. At a lower price; that immediately constitutes costly competition for you?—A. Yes.

Q. In other words, if you don't meet that competition substantially, either in the same way with a costly advertising campaign or some other form, then you are going to go out?—A. That is the answer completely, sir.

Q. The point is that a large, powerfully backed institution or competitor in the bakery business is able to put on a campaign of that character, where the normal bakery company would never think of conducting that type of campaign?—A. They would certainly not initiate that type of selling.

*By Mr. Factor:*

Q. The point is this: There is nothing unfair nor unethical about the method of advertising of the mill-owned bakeries, is there?—A. Unless one could construe that this advertising and intensified selling has a secondary purpose in the outlet for flour.

Q. But there is nothing objectionable about the manner of advertising; you find nothing objectionable about it?—A. No misstatements in the ads.

Q. That is what I mean?—A. Not at all.

*By Mr. Edwards:*

Q. Is your chief objection to this competition that it is bigger and stronger than the independents?—A. I am not objecting. I think I have demonstrated

very clearly that we have met it quite successfully. I am just trying to indicate the difficulty to-day of operating business, as against ten years ago. We are not complaining. All we ask is a fair field, and let the best man win.

Q. Then you are not objecting to the mill-owned bakeries operating?—A. I regret that it is necessary to increase your selling costs abnormally, and allow the opportunity for grocery loaf selling against this type of selling.

Q. It is the stiffness of their competition that you are feeling?—A. There is no doubt of that.

*By Mr. Senn:*

Q. Would you say that competition results in higher costs to the consumer, Mr. Dempster?—A. In the long run, all costs have to be passed on to the consumer.

Q. Or to the producer?—A. Or the producer.

*By the Chairman:*

Q. Or taken out of the hides of the workers?—A. I cannot say that the mill-controlled bakeries have been exploiting labour.

The CHAIRMAN: I don't say so either.

*By Mr. Heaps:*

Q. Mr. Dempster, to your knowledge do you know whether the mill-controlled bakeries charge the same price to their bakeries as you pay for your flour?—A. I have no information on that point. We buy on the open market, on a strictly quality price or value basis.

Q. You have no idea of that?—A. As to what the mill-owned bakeries pay for their flour?

Q. Yes?—A. No, I have no idea.

*By Mr. Kennedy (Winnipeg):*

Q. Is there any understanding between bakers generally, as to maintaining the price of bread?—A. No, sir. The price is largely dictated by the close proximity of costs.

Q. There is no understanding as to maintaining the price?—A. What do you mean by "understanding"?

The CHAIRMAN: Among the bakers, bakery companies.

*By Mr. Kennedy (Winnipeg):*

Q. I mean just what I say; among bakery companies, is there any understanding as to the price they will charge the public for their bread?—A. In explanation of that statement, I might say that some years ago we as independent bakers considered the price of bread at 11 cents was too high. We reduced, or our firm reduced the price of bread to 10 cents, and were followed the next day by the rest of the trade in Toronto.

Q. They would naturally follow the competition?—A. Yes.

Q. But is there any general understanding among bakeries as to maintaining a uniform price?—A. No, sir, there is no general understanding about maintaining prices.

Q. Well, is there any understanding?—A. There is always a preliminary discussion regarding the fairness or necessity of lowering or raising a price.

Q. I am not objecting to it, but I don't think there should be such reluctance about saying so?—A. In my own opinion, it is a very fair arrangement; and the public has not militated against it.

Q. Will you go ahead and tell us what the arrangement is as to maintaining prices?—A. Before the price was shifted upwards, every firm must feel it is absolutely necessary or there is no move.

Q. Then there is an understanding before there is a change in the price of bread?—A. There must be acquiescence in the necessity of the move.

Q. By all the bakers?—A. By a complete—by the bakers, yes.

*By Mr. Senn:*

Q. In how large an area?—A. Quite locally. That works all through the province in localities.

*By Mr. Edwards:*

Q. Following Mr. Kennedy's question, don't you think it would be a very good plan, of benefit to those in the business, if there was an understanding? What is wrong with a fair price for merchandise? That is what I want to get?—A. I think any arbitrary setting of resale prices would not clear the situation entirely.

Q. I mean, a fair price for your merchandise based on your cost?—A. May I question you? How would that be worked out? Who would decide on the fair price?

Q. Well, if you want to go into that, I would say your group. You base your cost on cost of material plus your labour, plus overhead?—A. I think I might answer that by proceeding a little farther with what we call other grievances in the business. I think that would answer that.

Q. Just on that one point, is there any objection, or do you see any objection to fixing an honest to goodness price for your merchandise?—A. None whatever. I think nobody is hurt, public or trade.

Q. I quite agree?—A. Mr. Parry, I think we were proceeding to other grievances in the business, were we not?

*By Mr. Parry:*

Q. Yes, other competition?—A. That is more grievances, this mill control influence.

*By Mr. Factor:*

Q. May I ask one question there? Can you tell me whether the cost to the consumer has increased since the mill owned bakery came into operation?—A. Our records show that our delivery costs have increased.

Mr. PARRY: That is not the question.

*By Mr. Factor:*

Q. No; has the price of bread that the consumer pays been increased since the mill owned bakery came into operation?—A. I think not.

Q. You think not?—A. No.

*By Mr. Young:*

Q. When did you cut the price from 11 cents to 10 cents?—A. Three or four years ago, I can't tell you the exact date.

Q. About 1930?—A. Around that.

Q. About the time the price of wheat came down?—A. Yes.

Q. And flour came down?—A. Yes.

Q. It has come down to 9 cents, has it not?—A. We sell at 8 cents and 10 cents delivered to the home.

Q. You sell for 10 cents, delivered?—A. 10 or 8 according to the type of loaf that you buy.

Q. What is the cost of the ingredients in the 10 cent loaf?—A. I have not the figures here. I could prepare them. Captain Parry has read the figures for the maritimes as to costs. I have no figures available here, but I could secure them.

Q. I would like to have them?—A. All right. May I proceed with the other things?

*By the Chairman:*

Q. Yes, do proceed, Mr. Dempster?—A. We believe there are other grievances in the trade, coming from you might say the smaller or uncontrolled—from the smaller type of bakery who have no regard for wages paid to their employees, have no regard for the working conditions, working hours or condition of the employee. These people—commonly called bootleggers or pirates or what you wish to call them—have proved, in the aggregate, nasty competition in producing bread at low prices. We even have one case in point where a firm in Toronto, which was investigated under the Fair Wage Act, was found to be paying its men around \$8 a week. This man to-day enjoys a large city contract given by the House of Industry in Toronto, without reference to the conditions obtaining in his shop.

Q. That is a question, Mr. Dempster, that is up to the local health authorities and municipal authorities, is it not?—A. I understand this House of Industry is run by a board of citizens. A thorough investigation was made.

Q. I mean, in regard to the conditions of the shop?—A. Yes, unfortunately.

Q. Sanitary conditions and fire hazards and so on?—A. Yes, sanitary conditions but not wage conditions.

*By Mr. Heaps:*

Q. Wage conditions do not come under any one jurisdiction at all?—A. Unless a man enjoys a contract with the city, he can refuse information as to his wages.

Q. What I am getting at is that there is no fair wage clause in the province of Ontario, or most of the other provinces, that covers male labour?—A. Not that I am aware of.

*By Mr. Parry:*

Q. This contract was for the distribution of relief?—A. For the distribution of bread for relief, under the House of Industry. I think this matter was thoroughly aired in the Board of Control, but the contract was renewed with the people cognizant of the low scale of wages being paid.

*By Mr. Young:*

Q. What is the price of that bread?—A. It is made by the Gula firm, and it is sold on contract. I understand the price is around 4½ cents a loaf.

*By Mr. Factor:*

Q. For a 21-ounce loaf?—A. For a 24-ounce loaf.

*By Mr. Young:*

Q. That is the same as your 7 cent loaf, is it?—A. Yes, the same weight. I am not sure that it is the same quality.

Q. What is the difference in the service? You put your 7 cent loaf into a local store for that price?—A. Yes.

Q. This man delivers it by the thousand, does he?—A. He delivers probably a truck load at one time, one institution.

Q. What saving would be effected there?—A. His delivery would probably cost him—with his scale of wages, it would cost him very little.

*By Mr. Kennedy (Winnipeg):*

Q. To what extent are female employees used in the bakery business?—A. To a very limited extent.

Q. Five per cent, ten per cent—what would you say?—A. I think that would be quite sufficient. There are no females at night, and the baking business is a night-time business. There are some used in the cake shops in the daytime.

*By Mr. Heaps:*

Q. Is there much labour employed inside of your shops now, in the baking industry?—A. Yes, there is a considerable amount.

Q. Has the labour ratio, during the last fifteen years, decreased?

Mr. KENNEDY (Winnipeg): You mean by reason of mechanization?

Mr. HEAPS: Yes, machinery.

The WITNESS: No, I don't think there has been much change. There are quite a lot of various shapes of loaves serviced to the doors, peculiar types of loaves.

Q. With the amount of new machinery and equipment that is being used in the manufacture of bread, hands scarcely touch a loaf of bread, do they?—A. That is right.

Q. Has there not been a reduction in the amount of labour that is utilized in the production of bread in the last few years?—A. I would say that the growth over the last fifteen years in what we call new, larger type bakeries has more than compensated for the reduction in the labour that would have taken place.

Q. Has the ratio of labour going into a loaf of bread been reduced in that period?—A. There is no home-baked bread now, practically. Twenty or twenty-five years ago there was considerable home-baked bread. I can't say there has been any marked reduction in the number of men employed.

Q. You are talking about the number of men employed. I am referring to the ratio of labour going into a loaf of bread?—A. In view of the fact that home-baked bread has been eliminated from the Toronto area, I really must say again that I don't think the quantity of labour has been restricted or reduced.

*By the Chairman:*

Q. Mr. Heaps, I presume, is referring to the extension of the use of machinery in the bread-making industry?—A. Yes.

Q. Has that resulted in the diminution of the labour factor?—A. I can't answer that question, Mr. Stevens, due to the growth of bakeries in the urban centres.

Q. How about yourself? Do you use as many men? Are there as many men in your employ now as there were in 1923?—A. Yes.

*By Mr. Parry:*

Q. Are there as many commensurate with your volume?

The CHAIRMAN: His volume has not changed, he says.

The WITNESS: Our volume is quite satisfactory. It is higher than formerly.

*By Mr. Parry:*

Q. What Mr. Heaps is trying to find out, and what we all want to know, is whether the mechanization of the baking industry has resulted in throwing out of employment a proportion of men, in up-to-date bakeries?—A. In theory, any intensified labour—any mechanical means of producing an article would reduce the labour in any industry. The introduction of machinery always tends to reduce the number of manual workers.

Q. Then it has reduced it, in practice?—A. I say with the compensating effect of home baking being wiped out, as it were, and the growth of these larger bakeries in the last fifteen or twenty years, I can't say that there has been any marked diminution of the amount of labour involved.

*By Mr. Heaps:*

Q. What you mean to say is this, that with the increased amount of bread production by the modern, large, up-to-date bakeries, on account of that factor A. Practically. It has merely taken the work from the housewife to the baker. they have been able to maintain the same number of employees as formerly?—

Q. Has the ratio of labour to the pound or pound and a half loaf of bread been reduced?—A. The production per man is doubtless much larger than it was twenty years ago.

Q. Do you know what that increase per man is to-day?—A. No, I could not tell you that.

Mr. EDWARDS: It is taken off the housewife and put on the machine.

*By the Chairman:*

Q. Will you proceed, Mr. Dempster?—A. Getting along with the nuisance, we might say, of the smaller man who recognizes no ethics in business, we would respectfully suggest that this committee consider some sort of fixed minimum pay for bakery workers. We would also suggest, if it were possible, to make illegal loss selling; that is, put business on a cost plus basis without any artificial restriction. In other words, a fair field, and let the best operator set the price

*By Mr. Parry:*

Q. Where the competition is fair, you will take your own chance?—  
A. We are quite satisfied with fair competition, on good humanitarian grounds.

*By Mr. Heaps:*

Q. Are you in favour of a code, as was suggested this morning by the bakers of the maritimes?—A. I always think that a code, a strict code, is very hard to enforce. Getting back to purely economic laws, business will take care of itself as long as there are definite rules of how to play the game.

*By the Chairman:*

Q. But you want definite rules?—A. Yes.

Q. Regarding labour?—A. Yes, for the good of the worker, for the good of the public, and also for the good of the efficient operator.

*By Mr. Kennedy (Winnipeg):*

Q. It is well to have everybody know what an offside play is?—A. Yes.

*By Mr. Heaps:*

Q. Who would you have enforce those rules? I think very few restrictions would be necessary, such as I have already stated; a definite minimum wage, with severe penalties for not observing the same; and a definite cost plus type of selling, whether by the chain stores or anybody else, with severe penalties for not observing it.

Q. Do you expect some government authority to exercise that power?—  
A. Yes.

*By Mr. Boulanger:*

Q. Mr. Dempster, would you be in favour of the fixation of the price of bread by agreement between bakers of a certain district, or a certain city, or a certain area?—A. I think it is a very fair way of working it.

Q. Would you be in favour of making that price, so fixed, the legal price of bread in that district?—A. I don't think the price of bread should be fixed legally.

Mr. EDWARDS: That would hardly work out. You could ship into that area from outside.

Mr. BOULANGER: The areas would have to be protected.

*By Mr. Edwards:*

Q. I want to ask Mr. Dempster a question. You were stating a little while ago that there was an institution in Toronto, not municipally owned, that was purchasing bread from a baker who, we will say, is not up to standard?—A. Unfortunately it is an institution that is municipally run.

*By Mr. Factor:*

Q. The city runs it?—A. The House of Industry, operated by the city of Toronto.

*By Mr. Edwards:*

Q. That makes it all the worse?—A. Yes.

Q. Then would you say that in the supplying of bread to an institution of that sort, there should be a fair wage clause inserted in the contract?—A. Yes.

*By Mr. Heaps:*

Q. Of course, as I pointed out before, there is no fair wage clause in the province of Ontario for the bakers?—A. No, not for male help.

*By Mr. Parry:*

Q. You are not making the statement that there was no fair wage clause in the Toronto contract, are you? I believe there is.—A. It has already been disclosed by this evidence that this man is not adhering to any fair wage.

Q. But it is there.

*By Mr. Factor:*

Q. Didn't the Board of Control in Toronto go into that question with Mr. Laver?—A. They did. It is not Mr. Laver's department; it is outside of Mr. Laver's department. It is run by the House of Industry, who have not recognized the wishes of the Board of Control.

Q. Is not the same gentleman now supplying all the bread for relief purposes in Toronto, through Mr. Laver's department?—A. No.

Q. He is not?—A. No.

*By Mr. Boulanger:*

Q. When I asked my question a moment ago, I had in mind what was done in regard to milk. Could the same thing be done in regard to bread?—A. I think local groups of merchants that are recognizing fair business practices can well look after the resale price, without government interference.

Q. And could look after competition that came in from the outside?—A. Yes.

*By Mr. Parry:*

Q. How would the consumer be protected?—A. By competition; by the working of the economic law.

Q. But there would be no competition?—A. Yes. If the local bakers unduly enhanced the price of bread, there are plenty of small window bakeries, as we call them, or one-wagon bakeries or what not, to immediately take advantage of that fact.

Q. There would be no agreement?

The CHAIRMAN: Just a minute. I think the committee are getting Mr. Dempster wrong. He didn't support the idea of fixing the price.

The WITNESS: No.

The CHAIRMAN: But he did support the idea of fixing the minimum wage, so that competition in costs would be on a fair basis.

The WITNESS: Quite. Give us fair rules, and the business will look after itself.

*By the Chairman:*

Q. And the elimination of loss leader practices?—A. Yes.

Mr. EDWARDS: I understand he also supports the view that the local trade should be permitted to make their own arrangements as to maintaining fair prices.

The WITNESS: I think that is fair.

Mr. PARRY: We are coming back to price fixing.

Mr. EDWARDS: No, not fixing by law; the right to agree among themselves, and not be in contravention of any anti-combine act.

*By Mr. Parry:*

Q. I repeat, where does the consumer get his protection?—A. By the fact that there are so many; that the baking art is no mystery; that it is possible to start a baking business with a minimum outlay of capital. No unduly enhanced price could survive.

*By Mr. Heaps:*

Q. Have you not that right now, to do what you are suggesting, fix the price among yourselves?—A. Yes.

Q. Why don't you do it?—A. As I have already mentioned, when it is necessary to increase the price there must be a one hundred per cent agreement or acquiescence by the bakers in that locality, to enhance or increase that price.

Q. Do you think you are likely to get more unanimity in the future than you are to-day?—A. We are not so many now.

*By Mr. Edwards:*

Q. You can't sell your goods at any price except the price that the lowest man sells for?—A. I would say the general price; we can sell a poorer quality.

Q. I mean, quality is considered?—A. It is considered, yes. We must sell at the current value.

Q. Mr. Parry has brought up the point about the consumer of bread. Has not the consumer always recourse to baking her own bread?—A. Yes, quite. As I say, baking is no mystery. The price will find its own level.

*By Mr. Factor:*

Q. I would hate to see the consumer revert to that?—A. Not only the consumer, but the small window type bakery is very effective competition, in the aggregate.

*By Mr. Parry:*

Q. Have you any other representations to make?—A. I think I have evidence here of what might be termed loss leader selling of a large chain store,

approximately a year ago to-day. I might say that this practice has largely ceased.

Mr. PARRY: The witness produces an advertisement of March 6, 1933, from the *Mail and Empire* of Toronto, of selling by the Atlantic and Pacific of a 24-ounce loaf, Big Ann Page bread, the same fine quality and texture—made in our own sunlight bakeries from the finest ingredients—in wax-tight wrapper for your health's protection, 5 cents.

The WITNESS: For one week only.

*By Mr. Kennedy (Peace River):*

Q. When did the loss leader practice cease?—A. Well, we have not been confronted with it for, I would say, nearly a year. Here is evidence that this minimum wage is not being observed even in city contracts.

(Advertisement of March 6, 1933, and clipping from *Evening Telegram* of February 8, 1934, filed, marked Exhibit No. 114.)

*By Mr. Heaps:*

Q. With regard to loss leaders, do any of the large bakery firms put on loss leaders?—A. No, sir.

*By Mr. Young:*

Q. You used to sell bread at 11 cents, your best bread; now your best bread sells for 10 cents?—A. Yes.

Q. Can you tell me why it is that with the general reduction in prices of raw material and other things, you have not been able to reduce that price more than one cent?—A. It is due to other expenses increasing in the meantime.

Q. What are those expenses that have increased?—A. I have indicated here quite a significant increase in delivery cost.

Q. Will you give us that, please? You have got the figures?—A. Our increase has gone from 22 per cent of sales up to 30 per cent of sales.

Q. You have not got it in cents per loaf?

Mr. HEAPS: \$23,000 was the cost.

Mr. FACTOR: \$22,000 to \$30,000.

The WITNESS: It has increased. I have \$53,000 as our selling expense for 1923; \$83,000 was our selling expense for 1930.

*By Mr. Young:*

Q. You have not got that reduced to loaves, how much it is per loaf?—A. No, I have not.

Q. Is that the only thing that has gone up?—A. Our delivery expense is the largest increase. We have probably more taxes levied against us.

Q. Your taxes are higher?—A. Taxes of all types are higher.

Q. How about your rent?—A. We have no rent.

*By Mr. Parry:*

Q. What about your advertising?—A. Advertising is included in the delivery cost.

*By Mr. Factor:*

Q. What about the price of flour; has that gone down?—A. The price of flour has been rather stationary for some time.

*By Mr. Young:*

Q. It has gone down considerably since you were selling bread at 11 cents, has it not?—A. Yes. I have not the figures.

Q. Sugar has gone down?—A. Well, sugar is going down, after going up. We hope to see it down on July 1.

Q. It is down to what it used to be when you sold bread at 11 cents, is it not?—A. I would have to get the figures. I could not say.

The CHAIRMAN: No, I don't think it is at the present moment, not with the additional tax.

*By Mr. Factor:*

Q. Let me put it to you rather bluntly, Mr. Dempster: Is not that price of 10 cents for quality breads too high, considering the present condition?—A. In view of the very ordinary statements being brought out by the larger companies, I would say that the 10 cent price is not too high for the service rendered.

*By Mr. Edwards:*

Q. What proportion of the cost of a loaf of bread is raw material?—A. I think I have the figures for our particular place, sir. If I remember rightly, it was around 45 per cent for ingredients, as we call it.

Q. Less than half, anyway?—A. Yes.

Q. Then your opportunity to reduce the price on a loaf of bread, as against the price of material, is rather small, is it not?—A. Yes, due to the extra service cost, not ingredients.

*By Mr. Young:*

Q. Does it not necessarily follow that if you do reduce the price of a loaf of bread from 10 cents, you must take it out of the hides of the men that work for you?—A. Either that or lose in profits.

Q. Or cut your own salary?—A. Yes. It must come out of other charges than ingredients.

Q. You can hardly change your price; if wheat is \$1.50 to-day and it is 90 cents three months from to-day, you can't reduce the price of bread to any great extent?—A. Not proportionately with wheat, no.

Q. If wheat goes up from 90 cents to \$1.50, do you increase your price of bread?—A. According to the price of the bread.

Q. So you increase the price of bread if the price of wheat goes up, and if it goes down you don't lower it?—A. According to the price of wheat, and in proportion to the increased value.

Q. I think we had evidence, Mr. Dempster, that it costs  $2\frac{1}{2}$  cents to deliver a loaf of bread in the city; is that correct, approximately?—A. Are you referring to the retail distribution?

Q. Yes?—A. I think our 1932 cost showed around 3 cents; somewhere around that.

Q. Let us accept  $2\frac{1}{2}$  cents; why should not the person who goes to the grocery store to get their own bread not be entitled to a  $2\frac{1}{2}$  cent reduction?—A. Because of the service to the store, he must pay the sales service to the store; in other words, it costs money to deliver bread to the store, and the grocer naturally wants a turnover profit on the sale there.

Q. Then we will take the cost of the delivery from the bakery to the store and subtract that from the cost of the delivery from the bakery to the door; don't you think he should get the benefit of that?—A. You have to consider the grocer's profit as well.

The CHAIRMAN: The grocer has got to get something for the delivery of it.

*By Mr. Parry:*

Q. He has to pay for his advertising and for his own delivery service?—A. Yes.

The CHAIRMAN: It costs the grocer more to deliver a loaf of bread from the store, than it does to deliver one after another to the door.

*By Mr. Factor:*

Q. Can you suggest any way of reducing the cost of distribution in the baking industry, which seems to be very high?—A. No, sir, there is considerable overlapping; but the public must be served as the public wishes.

*By Mr. Edwards:*

Q. In other words, the piper calls the tune?—A. That is a very intrinsic way of putting it.

*By Mr. Kennedy (Peace River):*

Q. Is it not possible to organize the delivery in the city of Toronto into sections so as to avoid overlapping in deliveries?—A. Not with the approval of the public; it would be an economic saving no doubt, but bread is not like milk, there are various flavours and qualities of bread, and people become very much attached to one baker's product as compared to another; in other words, we as an independent bakery would not have survived to the present day if we had not appealed to some particular palate, you see.

Q. What about the capitalization of the baking industry in Canada, is it too high?—A. I regard it as high.

Q. More plant than is necessary?—A. The capacity of plants is increasing today.

Q. How much?—A. I could only hazard a guess.

Q. What is your guess?—A. It is very difficult to say, there is so much to a baking plant today.

Q. Is the industry paying interest on over-capitalization?—A. The industry is not, but these particular bakers that are unfortunate enough to have it have to bear the loss.

Q. Do you think it is paying interest on a fair capitalization?

The CHAIRMAN: Do you mean, as a whole, Mr. Kennedy?

Mr. KENNEDY (Peace River): I mean, according to capacity of the industry.

The WITNESS: I do not know what you mean by the industry; do you mean the bread industry.

Mr. KENNEDY (Peace River): I was just asking about it in general.

Mr. PARRY: Is anybody making money out of the industry in Toronto?

The CHAIRMAN: Outside of yourself.

The WITNESS: I think the position from the Toronto point of view is very deplorable.

*By Mr. Kennedy (Peace River):*

Q. Are they losing money?—A. There are bakeries that are losing money.

Q. What about the independents?—A. A lot of them have been washed out of the picture, we are proud to say that we have survived and we are still doing business at a small profit.

*By Mr. Heaps:*

Q. How do you account for the fact that your firm is able to produce without a loss when larger firms are losing money?—A. I would suggest that you try Dempster's bread and you will have the answer; three generations in the business, knowing the business, and close management.

*By Mr. Edwards:*

Q. Isn't there something in the fact that a practical man is on the job and watching it all the time, and the other is remote control by financial concerns; has not that got something to do with?—A. The remote control idea is not fundamentally sound, local conditions should be dealt with immediately.

Q. And the man who owns his own business and is on the job, is there to do it?—A. Yes.

*By Mr. Parry:*

Q. It was suggested here yesterday that it would be well for the baking industry if there was a severance between mills and mill-controlled bakeries, from the point of view of the financial support the mill-controlled bakeries have and the drive for volume that comes from their seeking an outlet; it was recommended to the committee, what is your opinion?—A. It is my opinion that in the public interest it would be desirable; like the millenium, we are always hoping for it but we hardly expect it.

Q. I see, you are endorsing that recommendation?—A. I think that the mill-controlled baking business is not sound economically.

*By Mr. Heaps:*

Q. Do you find that prices from the mills with regard to flour as far as you are concerned are fairly competitive?—A. Yes, we deal with the independent mills and we find that their prices are quite competitive.

*By Mr. Kennedy (Winnipeg):*

Q. You have just said that you thought that in the public interest it would be better if the mill-owned bakeries were divorced from mill-operation control?—A. Yes.

Q. Do you mean it would be an advantage to the consumer to have such action taken?—A. Theoretically speaking, only.

Q. Let us be practical, from the practical point of view would it be of any advantage to the consumers to have that divorcement?—A. Not much; but I would say that the price to-day is not high, with these large bakeries taking care of this, due to their over-capitalization probably—but theoretically speaking again, I do not regard it as an advantage to the public to have the bread supply concentrated in a few hands.

The CHAIRMAN: Hear! Hear!

*By Mr. Edwards:*

Q. This question may not be exactly a fair one to ask you, operating as an independent baker, but we have had some evidence here about what is known as bootleg bread, and some of us who live out in the more rural parts of the country have an idea that perhaps stale bread, bread that is taken out of the stores that have had it in for a day or so probably, is taken out into the country and sold at a lower price than the bread produced by the local baker.

The CHAIRMAN: The doctors say that is healthy.

Mr. EDWARDS: I am not saying it is not, but the point is this: that bread that is unsalable at a fixed price of say 10 cents in the city is taken out to the smaller towns and villages and perhaps sold for 8 cents or 7 cents to compete with the local bakers as loss leaders, if you like.

The WITNESS: I would not call that loss leader.

*By Mr. Edwards:*

Q. You do not need to answer that question unless you wish, has that come to your knowledge?—A. No, that is a very scarce occurrence if at all; it has not come to my knowledge in any shape or form. Bread which is sold for purposes such as fox feed or cattle feed is outside of the question.

Q. That is beyond everything; but what I am saying is that bread that is in the store or in the bakery a day or two, and then taken out into the smaller towns and villages and sold for one or two cents a loaf less than the standard price in the city?—A. I think that is not the practice at all, sir.

*By Mr. Kennedy (Winnipeg):*

Q. Would not any bakery concern that followed such a practice really be cutting its own throat?—A. Yes, it would be a very low practice.

*By Mr. Parry:*

Q. You have already said that you would believe that the baking industry should be a localized business?—A. I believe that thoroughly.

The CHAIRMAN: Thank you very much, Mr. Dempster. -

The witness was discharged.

Mr. R. W. WARD, called and sworn.

*By Mr. Parry:*

Q. Mr. Ward, you are Vice-President and General Manager of Canada Bakers Limited?—A. I am, yes.

Q. A chain system of bakeries operating in what provinces?—A. In British Columbia, Alberta and Saskatchewan.

Q. And I believe you are here to make representations to this committee on behalf of certain groups of bakers in the western provinces; will you just indicate whom you represent?—A. The Alberta Master Baker's Association, the Master Baker's Association of the lower mainland of British Columbia.

Q. And this Master Baker's Association of the lower mainland of British Columbia, is it representative of the whole of the baking industry in that part of the province?—A. Vancouver, New Westminster, North Vancouver and the Fraser Valley.

Q. Is it representative of the bakers of that section?—A. In that section, yes.

Q. And they are small independents?—A. Yes, everybody.

Q. So that the views that you are expressing are the results of conferences which were truly representative of the bakers in these particular communities, including the Alberta Bakers Association?—A. Yes.

Q. Will you just give the committee briefly the conditions on which the bakers in the western provinces, and particularly I understand in Vancouver, are suffering at the present time?—A. Now, I think probably the best thing for me to do is to read a letter addressed to the Honourable H. H. Stevens by the Executive of the Master Baker's Association of Vancouver, and signed by their President:

I have been appointed by the Executive of the Master Baker's Association to prepare a survey of conditions which are dominating the Baking Industry in Vancouver. Photographs and newspaper clippings enclosed herewith will graphically illustrate the wide range of the domination of this industry from the small independent store to the large and small chain grocery interests, the department stores, meat markets, pub-

lic markets and others. For your greater facility, the photographs have been numbered from 1 to 5, and the newspaper advertisements from 6 to 10. It will be noted that the price of bread in these exhibits varies from 4 loaves for 15 cents to 3 cents per loaf. In explanation, let me point out that the price of 4 loaves for 15 cents was established as a "Bread and Butter Day Special," by David Spencer Ltd., Vancouver, B.C., and this was responsible for the complete breakdown in the attempt by the bakers to stabilize last fall. Its subsequent use as a leader to effect the sale of other lines has brought about retaliation by competitors throughout Vancouver and New Westminster, until to-day the enormous volume of bread so sold has placed the Industry in a bondage from which it is impossible for it to free itself. It has completely disorganized the Baking Industry, and so renders it impossible to adjust the price of bread in accordance with the advance in cost of flour and other materials, which additional loss has to be borne by the baker. The effect of such unbridled competition has resulted in the sale of bread of poor nutritive content, by many in an effort to survive. The effect in revenue to the Government is manifest: profitless merchandising is but a form of tax circumvention. In this particular case it is so grossly unfair, as with the baker having the one line of merchandise, he finds it impossible to compete with others having many lines upon which to create profits.

David Spencer Ltd. and Woodward's Ltd. each operate their own bakeshops, but in all other cases the bread so "Specialed," is supplied by bakers. To the laymen it might appear incongruous that bakers supply a product that brings about their own downfall; but the explanation is that, as in the case of other lines, the bakers are played one against the other. We have some who could not understand the meaning of ethics, unless through translation into their mother tongue, and there are certain mill-controlled bakeries to whom sales volume is the ultimate, regardless of who is affected by the process.

The Bakers of Vancouver welcome this opportunity of placing their serious situation before your commission. It is their intention to augment the proof herein submitted with properly attested documents, to show the scale of wages and general living conditions that this ruthless competition has brought about.

Reverting to the photographs No's 1 to 5, and the newspaper advertisements No's 6 to 11, the following is a description of each individual unit so numbered:—

#### *Photograph*

No. 1. The Butter Stores, 2412 Granville St., Vancouver, B.C. This is conducted by a small independent grocer specializing in butter. It is directly opposite the Rollin Pin Bake Shop, which is affected by this unwarranted competition. All appeals to the owner have proved useless. The bread is made by a family of Poles who live like cattle.

Mr. PARRY: This is a grocery store with a bakery next door. This indicates, Mr. Chairman, that the bakery and the chain store are actually contiguous, the door of the grocery immediately adjoins the door of the bakery, and on the window immediately facing the door of the bakery and part of the store known as the O.K. store is a sign which offers bread at four loaves for 15 cents. Any one going into the bake shop must see that, and of course could not help being interested in it. It is an extreme example. All right, please proceed.

#### *The WITNESS:*

2. O.K. Store No. 8, 3346 Dunbar St., Vancouver, B.C. Occupying the northern half of the duplex store, next door to a small bakery. This

shows a callous disregard to the rights of the baker. This chain store, along with other business ventures in Vancouver, is controlled by a Jew. The bread is made by a Jewish bakery.

3. Safeway Store No. 36, 563 West Georgia St., Vancouver, B.C. No bread price in this neighbourhood warranted this 4 cent sign displayed on the window. This was met with four loaves for 15 cents by the Hudson's Bay Company department store. My association with the Safeway Stores Ltd., as a mediator in former price wars, convinced me that they are soulless exploiters. This chain operates forty-six stores in Vancouver, and others in New Westminster and points in the Fraser Valley. Bread is supplied to the Vancouver stores by a mill-controlled bakery.

4. Metropolitan Stores Ltd., 641 Columbia St., New Westminster B.C. It is inconceivable that bread should be featured with other articles as shown on the window. This sign reads 4c. bread. I sent you previously an advertisement of the same company from the Vancouver store, bread 3 loaves for 10c. Bread is supplied by Jewish Bakery.

5. Safeway Stores, Ltd., New Westminster branch, 667 Columbia St., New Westminster, B.C. Bread 3 loaves for 10c. Same company as in photograph No. 3. Bread in this case is supplied by the firm that serves all Piggly-Wiggly stores in Vancouver.

#### *Newspaper Advertisements*

6. Ray's Market, 41 West Hastings St., Vancouver, B.C. A meat market controlled by owner of O.K. Stores. The wording in this advertisement, i.e. "Bread 16 oz. loaf 3c. with any purchase of provisions," shows that its direct object is to sell other merchandise. No clearer case than this could be found. Bread supplied by mill-controlled bakery.

The CHAIRMAN: Just a moment, these photographs will be filed as Exhibit No. 115. Now proceed with your statement.

#### *The Witness:*

7. The Hudson's Bay Company, department store, Vancouver, B.C. Bread 3 loaves for 10c., in retaliation to the Safeway Stores 4c. competition on the opposite corner. Bread is supplied by the same company that serves the Piggly-Wiggly chain stores.

8. David Spencer Ltd. Department Store, Vancouver, B.C. When interviewed the manager of this company declared that his firm could make a profit at bread sold at 4 loaves for 15c. as it was made in the store and sold over the counter. It is difficult to understand how they are able to send it to their Fourth Avenue Branch to sell at the same price, or to New Westminster, where it was sold on March 1st, 1934, at 3 loaves for 10c. This company's branch store at Fourth Ave. West, Vancouver, is threatening extermination to many small tradesmen in that community, and it is understood that this company is also about to establish another branch on South Granville St.

9 and 10. These complete the cycle of illustrating bread as a loss leader in the Blackburn Public Market and the Westport Market, Vancouver, B.C. These are the latest links in the evolution of cut-throat merchandising. Scott's operate their own bakery to serve a chain of such markets; it is managed by a Greek.

II. David Spencer Ltd., New Westminster, B.C. Branch, Advertising for sale on March 1. Bread 3 loaves for 10 cents. This bread is made in their Vancouver bakery and is shipped in their own trucks. This is an attempt to answer the advertisement of the Safeways Stores, Ltd. shown on photograph No. 5.

*By Mr. Factor:*

Q. There is a statement there that a store is selling bread at four loaves for 15 cents?—A. Yes.

Q. How do you account for that?—A. That is the David Spencer store. They bake their bread on the top of the store building. We do not know what rent they take into consideration, or anything else.

Q. If they can sell bread at that price and make a profit, what is wrong with that?—A. There is nothing wrong with it, we claim that they cannot make a loaf of bread to sell at four loaves for 15 cents.

*By the Chairman:*

Q. You include a reference to the Hudson Bay Company, they did not start using bread as a loss leader until after the chain stores had started?—A. Presumably, yes.

Q. And the same way with David Spencer, wasn't it?—A. Yes, of course the David Spencer store have been cutting prices more or less for the last two or three years.

The CHAIRMAN: But that was in order to meet the competition of the chain store practice on loss leaders?

*By Mr. Heaps:*

Q. Does the witness know anything about the conditions under which this bread is produced?

The CHAIRMAN: You refer to what?

Mr. HEAPS: Labour conditions, as they apply in the Hudson Bay store, and in the Piggly Wiggly stores.

The CHAIRMAN: The David Spencer store, there is a difference there; you had better ask the witness about the David Spencer store.

The WITNESS: I know nothing about their wages, or hours of work.

*By Mr. Heaps:*

Q. Do you know anything about conditions in the Piggly Wiggly stores?—A. The Piggly Wiggly bread is made by a bakery which is under the direct control of the Piggly Wiggly people.

Q. What kind of wages are they paying?—A. I presume they are probably paying down to the minimum.

Q. What is the minimum?—A. I do not think there is a minimum wage for men in British Columbia, I think the minimum wage in British Columbia is the maximum for women.

*By Mr. Kennedy (Winnipeg):*

Q. Do you know what wage conditions actually are?—A. Deplorable.

Q. You are referring now to Piggly Wiggly?—A. I do not know, I could not make a statement.

*By Mr. Heaps:*

Q. Do you know anything about the wages of the baking industry in general?—A. Yes, I haven't got the details of that with me now because I got the notice to appear here when I was down in Saskatchewan, and before that I did not know I was going to be here. I do know that there are people being employed in the baking industry being paid \$4.50 for a week of 70 hours, and others being paid \$7 a week for a week of 70 hours, and others ranging around \$8, \$9 and \$10.

Q. What are the highest wages being paid?—A. The highest wages being paid are around an average of \$21 to \$22.

Q. Could you give us any idea as to the numbers who are working for the low wages you have just referred to?—A. I would say probably 30 per cent to 40 per cent.

Q. And the other 60 per cent are receiving higher wages?—A. I would say yes; the mill-owned bakeries pay fair wages.

Q. But you do not know anything about the Piggly Wiggly and these others?—A. I think probably, since the legislation was brought down by the Provincial government, Piggly Wiggly Stores are paying a minimum wage.

Q. That would apply to such bakeries?—A. It will. I have a wire here from Vancouver, under date of April 30, which says that a minimum wage is assured. You see, the Provincial Government set up a Board to study wage conditions and hours in British Columbia, and they are going to segregate each company and put a minimum wage into effect in that particular industry, I understand. So that we expect that in British Columbia a minimum wage will be set any day now.

Q. In which case it will be pretty difficult for these firms to take it out of the hides of the employees?—A. Yes, if it is enforced, I think the bakers will be entirely satisfied.

*By Mr. Kennedy (Winnipeg):*

Q. Has there been no minimum wage in force?—A. No, if there has been, they have not enforced it; because I think the department felt it was better to have men working, no matter what wage they got, than to have them on relief; and there have been very few prosecutions in British Columbia out of a Minimum Wage Act for the last two or three years.

Q. But in any event the provisions are there in the Minimum Wage Law? A. I think possibly they are, but they have not been enforcing them.

MR. PARRY: None of the baking business in any event.

*By Mr. Edwards:*

Q. Is this Oriental labour or white labour?—A. It is all white labour.

*By Mr. Kennedy (Winnipeg):*

Q. What did I understand you to say was the prevailing average wage in the baking business?—A. I have not got the detail of that here. I think I can get it for you if you would like to have it.

Q. I understood you to say?—A. About \$21 in the larger bakeries, that is over the whole plant, the drivers and everybody else.

Q. But it does not include the salaries of officials?—A. Oh, no.

*By Mr. Kennedy (Peace River):*

Q. What about hours?—A. The larger bakeries are pretty well forced to a 28-hour week.

Q. But you said that bakeries were hiring people for \$4.50 for a 70-hour week?—A. They are hiring them, we know of cases of that kind.

Q. And you say that the average is \$21 for a week of 48 hours.

*By Mr. Heaps:*

Q. Would you say that this low-wage condition is general?—A. It is quite general, in some place they are working for their board.

MR. PARRY: I am going to read you a rather lengthy letter along the line of Mr. Heaps' question, one which was received by the Clerk of the Committee

under date of March 19, from a baker in Vancouver. It is couched in rather nautical terms, and it reads in part:—

The industry at present is in the most deplorable and almost desperate condition, brought about by the Piracy practised on the Bakery ships of the Merchantmen of Vancouver, B.C., by the three large Department Stores, namely, Woodward's Ltd., Spencers Ltd., and Hudson Bay Ltd., also the Chain Stores Piggly Wiggly Ltd., Safeways Ltd., and all the smaller Chain Stores who are forced to adopt the same tactics, viz: Price cutting of bread to 3 loaves for 10 cents and in other cases 4 loaves for 15 cents, also in some cases as low as 3 cents per loaf, also the price cutting at some time or other of every product of the Bakery, using it as an "Advertising medium" or a "Loss Leader" as it is called; we have no other goods to make a profit on, with which to pay wages or keep afloat. They make their profit on other goods.

The result of this piracy on their part has been the sinking of seven ships with their crews, wives and families took in the Sea of Depression called Bankruptcy. 150 others are being attacked and are nearly overwhelmed by the cutthroat tactics now carried on against our Trade mercilessly. All wage workers in the trade are under Slavery conditions of pay and hours of work, some doing 14 and 16 hours per night or day as the case may be. Nine of the large delivery bakers lost thousands and thousands of dollars each last year, even after cutting wages and increasing the hours of work for every one.

My two daughters, one employed here as bakery assistant, and the other as store clerk, after working here 12 years and 6 years respectively, have been forced by these conditions to work the last eight months without pay; and besides that, have loaned the business over \$300 dollars to help keep it running, and practically every small Bakery is in the same critical condition. The "Bakers Association" has done everything humanely possible to get these people to be fair and just to our trade, and have been laughed at for their trouble and desperate efforts to better conditions.

The Bakery Industry is now helpless, dominated and controlled by Pirates, and we are praying the Government to take quick action, daring action, to save the trade and the workers in it.

Do you indorse this sentiment?—A. I do, absolutely; here is another day.

*By Mr. Young:*

Q. What effect do these low prices have on the price spread in the city?—A. What has happened there is that the larger bakers, the better bakers have fought it with all they have. They have tried to maintain their price.

Q. What is the price?—A. It varies from 3 loaves for 10 cents to 7 cents a loaf.

Q. That is the price delivered?—A. Three loaves for 10 cents, up to 7 cents a loaf for the high grade.

Q. Seven cents delivered at the door?—A. Yes, in a good many cases.

*By Mr. Kennedy (Winnipeg):*

Q. Is there any inspection of the bread product by any municipal or other authorities?—A. Yes and no; the city forced to economize has cut the staff down to one man who is looking after bread and milk, I understand, at the present time; it is a pretty big job.

*By the Chairman:*

Q. That is, sanitary inspection?—A. That is on wages, sanitation and everything else.

Q. Is quality subject to inspection?—A. No, it never was.

Q. Weights only?—A. Weights only.

*By Mr. Heaps:*

Q. What is your suggestion as to remedying this situation?—A. My suggestion is, a fair living wage.

Q. Are you satisfied with the law as already enacted in British Columbia?—A. There is a new Act coming in there, and we understand that the Minister of Labour is going to see that it is put into force; he is going to see that proper wages are paid and proper hours of work observed—he is going to iron out this situation for us.

*By Mr. Parry:*

Q. You heard Mr. Dempster's evidence?—A. Yes.

Q. You heard his conclusion, to the effect that if fair competition were brought about the industry would thrive; do you endorse that sentiment?—A. I do, yes. We talk about bread and loss of production. You know, in the city of Vancouver there is at least a 25 per cent reduction in the quantity of bread that is consumed as compared with 1929. People are eating all of the loaf now. Mr. Stevens will know the district to which I refer, Shaughnessy Heights; I remember there in 1928, 1929 and 1930 that you could see as much as half a loaf of bread thrown away at some of those homes. That is not being done today; nobody throws anything out in Vancouver these days, there is nobody working.

*By Mr. Edwards:*

Q. In other words, they are eating more efficiently?—A. They are not eating so much. Our people in Vancouver, a good portion of them, are living on two meals a day, and all of our young men are away in camps.

Mr. EDWARDS: A lot of Parliamentarians are doing that too.

*By Mr. Young:*

Q. These people are not getting enough bread to eat now, and you want to raise the price. Will they eat any more bread then?—A. We don't want to raise the price.

Q. You don't?—A. No.

Q. You made the statement that it was impossible to adjust the price in accordance with the advance in cost of raw material?—A. I will tell you what would happen; if these other chaps that are working for nothing, working 17 hours a week, were working 48 hours a week and selling half the bread that they are selling at the present time and raised their price up on the level, or near the level with the rest of us, they would have a far better living than they have today. They would have time to enjoy themselves, which they are not doing today. I know of independent small dealers, not independent—we have very few independent dealers out there, but bakers that are not owned by the mills, are controlled by the flour mills through credit.

Q. Who are the people that take advantage of this bargain of 4 loaves for 15 cents?—A. You would be surprised. We have a lot of customers who will pay us 7 cents for a loaf of bread, and will go down town, or send the kids over to the corner store and buy 3 loaves for 10 cents. They will eat the one loaf themselves and let the kids eat the cheap loaf.

Q. That is in the West?—A. That is everywhere. Your Toronto men will tell you the same thing.

*By Mr. Kennedy (Peace River):*

Q. Is it your contention that it is not possible to produce a 3 cent loaf?—A. Absolutely no.

Q. And pay decent wages?—A. No, it can't be done, and nobody can show me that it can, or you either.

Q. There can't be any remedy for the situation by taking the burden off the consumer and throwing it on the producer?—A. I think in the long run the consumer would be better off by paying the full price for his bread.

*By Mr. Young:*

Q. What advance has taken place in the price of the raw material lately?—A. There is no advance lately.

Q. You made the statement that it is impossible to adjust the price in accordance with the advance in the cost of raw material?—A. At the time of that letter—it is dated in March or April; March, was it not—at that time lard was getting very high. We still had that two cents tax on sugar which we get relief on of one cent. Many items were going up. Raisins have gone up. Many things enter into it. You take farm products, they have gone up 38 per cent in that country since last fall.

Q. But you really don't want to increase your price now?—A. No. We want to cut out this everlasting three for ten cents. That is the stuff that is strangling us.

*By Mr. Parry:*

Q. That, you know, is being sold at a loss?—A. At a loss. We know it is sold at a loss.

Q. Creating false ideas in the public mind as to the value of bread?—A. Absolutely. We are pikers. We are not advertising. We can't afford to advertise. We have not had an ad. in the newspaper for two years, can't afford to. Give us the money and we will spend some.

*By Mr. Young:*

Q. That applies to all the bakers in Vancouver, I suppose?—A. Yes, absolutely, every one.

Q. You can produce a loaf and sell it for 7 cents?—A. Yes. Mind you, that is retail. But taking your average price, it would not work out at 7 cents, because our business in British Columbia, 50 per cent of it is taken by wholesale and 44 per cent by retail.

*By the Chairman:*

Q. When you say retail, you mean delivered?—A. Delivered from the wagons.

*By Mr. Young:*

Q. Your loaf is only 16 ounces?—A. 15 and 16 ounces. 15 for the wrapped, and 16 for the unwrapped.

Q. The eastern loaf is 24 ounces?—A. Yes.

*By Mr. Edwards:*

Q. Mr. Ward, we had some evidence introduced by Mr. Burges from Kitcheners to the effect that foreigners of various types had small bakeries in the front room of their houses and were living behind, and so forth?—A. Yes.

Q. In other words, that they were not complying with the sanitary regulations of the municipalities?—A. Yes.

Q. Does that appear, to any great extent, in your territory?—A. Yes, we have many cases of that.

Q. Is there any effort being made to wipe those conditions out?—A. Well, we hope there will be. There has not in the past.

Q. Don't you think that the municipal authorities are very derelict in their duty in that regard?—A. Yes, I do. I believe that. But the trouble is that your cities and your provincial governments have not got the men to carry on that. They have cut their staffs down. It is not being looked after.

Q. Your health board makes regulations, and the medical officer of health is supposed to visit these premises and inspect them, and lay charges if they are not right.

The CHAIRMAN: But he has said, Mr. Edwards, that they have only got one inspector in the city of Vancouver, with 238,000 people, to look after both milk and bread.

The WITNESS: Exactly.

The CHAIRMAN: Obviously he can't do it. That is the answer to that.

Mr. EDWARDS: Certainly, it is a condition that this committee could not handle.

The WITNESS: It might be a good idea. Honestly, I am hopeful.

*By the Chairman:*

Q. Have you anything further?—A. Yes, I have Alberta.

Q. Will you proceed?—A. I have a bunch of ads. here from Edmonton.

*By Mr. Parry:*

Q. Those are of a similar character, are they?—A. Yes.

Q. Just showing price cutting and loss leaders?—A. Yes.

Q. Just file those?—A. All right. I don't want to take any more of your time than I can help.

(Advertisements filed and marked Exhibit No. 115.)

The WITNESS: This was also presented by Mr. McKay of the Retail Merchants Association of Alberta. I don't think this necessary.

Mr. PARRY: No, it was filed. It is here.

The WITNESS: Here is bill No. 65, an act for the establishment of a Department of Trade and Industry, and to describe its powers and duties. Do you want that?

The CHAIRMAN: You can hand it in, but it is already filed.

*By Mr. Kennedy (Peace River):*

Q. Do you think that would help you?—A. Yes.

Q. Do you work under it?—A. We are working under it. We have our choice in Alberta. We can come under the Utilities Act or come under this.

Q. Just in what way do you mean that?—A. Well, the Utilities Act in Alberta was amended this year to bring the bakers under the same act as what the milk men are under.

Q. Do you think there will be any increase in the price of bread caused by cutting out loss leaders?—A. It is not necessary to increase the price of bread if we get away from this stuff. I don't see it.

*By the Chairman:*

Q. The loss leader seems to be your chief difficulty?—A. That is our trouble, not only with the bread business, but everything else.

Mr. PARRY: Mr. Ward is filing a code of ethics set up by the bakers of Vancouver. That will be Exhibit No. 117.

The WITNESS: Yes.

(Code of ethics filed, and marked Exhibit No. 117).

The WITNESS: Here is a memo on that code. It might be attached to it. That is all I have, unless someone wants to ask questions.

*By Mr. Kennedy (Peace River):*

Q. You are vice president and general manager of Canadian Bakeries?—

A. Yes.

Q. You have bakeries in Moose Jaw, North Battleford, Prince Albert and so on?—A. Yes, we have, in Moose Jaw, Regina, Saskatoon, Prince and North Battleford.

Q. Are they making money at any of those places?—A. No.

Q. Are they able to pay interest on capital?—A. No. We ship money in there to keep those places going.

*By Mr. Young:*

Q. Where are you getting the money, out of this 7 cent bread in Vancouver?—A. Yes, and Alberta. We manage month by month, to pay our bond interest, that is all.

*By Mr. Kennedy (Peace River):*

Q. How are salaries?—A. You mean wages in that district?

Q. Salaries, how do they run?—A. Our managers?

Q. Yes?—A. They run around about \$45 and \$50 a week in some cases; probably a smaller plant, \$35. We are back of those communities. We own property there. Our manager lives there; pay just the same as they do in other bakeries. We went in and bought out inside bakeries and carried on.

Q. A lot of these mills have taken over bakeries; they were taken over by the milling companies?—A. In 1925. We were the first in the west.

Q. Was there any big increase; did they build new bakeries?—A. We built two bakeries, in Edmonton and Saskatoon, but the buildings we bought in 1925 are still in existence and the same machinery is in there.

Q. Is the trouble due in any way to over-capitalization?—A. No, I don't think so. I think it is just less consumption of bread.

Q. How were things running up till 1929?—A. Good. We made good before that.

*By Mr. Young:*

Q. What is the point in having all these bakeries; can you manage them better, having them strung all across the continent?—A. I think so; I think it is sound.

*By Mr. Edwards:*

Q. Do you really think that?—A. Yes.

Q. That by long distance control you can manage a bakery better?—A. A great deal depends on the men you have running these plants. We try to be part of the community where we are. We have good men.

Q. No matter how good a man is, unless he is financially interested in the business, you would not suggest that the man you would hire would be as efficient and careful in looking after things, as the man who is losing his own dollars?—A. Possibly not. But I would be interested, and it is my intention—and my managers know it—if we ever get to the point whereby we can at least pay our way, we will pay them commission for running it, and make them a part, so to speak. I think that is the only system.

Q. I just challenge that thought, that a string of bakeries, or a string of anything else, with managers handled from long distance by financial experts, so called, are nearly as efficient or perform the duties they are supposed to perform nearly as well as the man who is on the job and knows the business and is handling his own dollars?—A. I might tell you this, that our business is not handled from Toronto or Montreal. It is handled right from our centre in Calgary.

Q. But it is absentee control?—A. Well, it is. We have two directors of the Maple Leaf Milling Company on the board. The rest of the directors are Vancouver and Calgary men.

Q. The evidence that has been given here, so far as I can see, has been to the effect that the baking industry is primarily and essentially a local industry?—A. Well, that is a matter of opinion, entirely.

*By Mr. Parry:*

Q. Your financial statement will reveal the whole thing?—A. Yes. You have it on file.

Q. It reveals what you pay on your capital investment in your particular industry, and how you utilize the capital?—A. Yes.

Q. It speaks for itself?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. Was the loss leader in existence to any extent up until 1929?—A. No, it was not. The loss leader really came in in 1929 and 1930 and got worse as it went along.

Q. We have been hearing evidence here with regard to the miller-baker relations?—A. Yes.

Q. Can you tell us any advantage arising from that connection?—A. It all depends on the position you are in. If you have to buy your flour, take your flour from the mill that owns you and pay the price they set for you, I say it is a disadvantage.

Q. Is it a competitive price?—A. I have bought on a competitive price, and I have not always stuck with my own company.

*By Mr. Parry:*

Q. Since when?—A. That was first in 1931, or something like that. I thought the price was high, and I went out and got a fair price and bought from other mills. I would do the same thing to-morrow morning, if the occasion arose.

*By Mr. Kennedy (Peace River):*

Q. Did you get a lower price?—A. Yes, I did, at that time, but they have been competitive since.

*By Mr. Young:*

Q. It was not a loss leader you bought, was it?—A. No.

Mr. EDWARDS: What was that question, Mr. Parry?

Mr. PARRY: I simply suggested that the financial report of the company would show the amount of capital going in and whether it was an economic venture or not, regardless of anything the witness may say as to the advantages of it.

Mr. EDWARDS: You are not saying that seriously? I would disagree with that.

*By Mr. Young:*

Q. You say you are losing money on all these bakeries on the prairies?—A. Yes.

Q. And making it up in Vancouver?—A. No, not making it up in Vancouver. Losing money in Vancouver, when we take depreciation and everything into consideration.

Q. You said you were sending money in?—A. Yes, we are chiselling it out of our depreciation.

Q. You have no loss leaders to contend with on the prairies?—A. That is where they are real bad, in Regina.

Q. What happens there?—A. Regina has gone through more of that stuff than anybody else in the country.

Q. Who is using bread as a loss leader now?—A. Everybody. We got it fixed up a little while ago, but it was down to giving it away for a while.

*By Mr. Kennedy (Peace River):*

Q. What advantages are there in this connection between mill and bakery?—A. I don't know that there is a great deal. There is no real advantage to the thing. I would be happier to run my own place.

*By Mr. Parry:*

Q. You would not object to them giving it back?—A. I would not object to them giving it back to me, what I had before I went into it.

Q. And you would make some money?—A. Sure I would. I think so.

*By Mr. Kennedy (Peace River):*

Q. You are not as well off as when you went into it?—A. No, I have been bad for three years.

Q. When did you go in?—A. I went in in 1925. I sold out in Calgary. I sold out in 1925 and have been associated with the company ever since.

*By Mr. Parry:*

Q. We might almost get from you that you were more of an economic unit in the proper distribution system before than subsequent?—A. Yes.

*By Mr. Kennedy (Peace River):*

Q. Have you any idea how the milling companies regard the situation to-day, if they would be glad to get rid of it?—A. I don't know. I don't think they would be glad to get rid of it. It is a big source of outlet for the flour.

*By Mr. Senn:*

Q. Can you say whether all the larger milling companies are engaged in that?—A. In the West they are. Because you take Ellisons, with four mills at Lethbridge, they are a big concern. That is a big local concern. You probably know that, Mr. Young, they control through debt, probably three of the largest independent bakeries in Vancouver.

Q. Lake of the Woods?—A. The Lake of the Woods Company was a chain through the West, Ogilvie.

*By Mr. Edwards:*

Q. Did that condition of affairs obtain very long ago? When did the chain store business start in the West?—A. I don't know from memory. I would say 1928 or 1929.

Q. Four or five years ago?—A. Yes.

Q. In other words, if they had had a good export market for their flour, they would not have been so anxious to establish chain stores?—A. No, I suppose not. You can never tell about that.

The CHAIRMAN: Gentlemen, we have one more witness. I had hoped to get through this morning, but we will have to come back this afternoon. We will meet at four o'clock.

The committee adjourned at 12.45 to meet at 4 p.m.

### AFTERNOON SITTING

The committee resumed at 4 o'clock p.m.

The CHAIRMAN: Order, gentlemen. We will now call Mr. Bredin.

Mr. MARK BREDIN, called and sworn.

*By Mr. Parry:*

Q. You personally carry on the business of manufacturing and selling bread and bread products in the city of Toronto?—A. Yes, sir.

Q. Under the firm name of?—A. Bredin's Bread Limited.

Q. You are here representing the Canadian Bakers' Association?—A. That is it.

Q. And are you also representing the Toronto Retail Cake Bakers' Association?—A. I am, I can safely say that; that might be subject to contradiction, but I have got their documents here, which were handed to me.

Q. But you are authorized to make representations on their behalf?—A. Quite so.

Q. Would you just briefly amplify to the committee the businesses that are represented by your association, the Canadian Baker; how comprehensive is it?—A. Oh, they cover from Halifax to Vancouver.

Q. Go on from there, you are making representations on their behalf?—A. I had better start at the beginning. We had an organization that lived for about thirty years, and some of the bakers felt that there was no way of getting around this thing without disbanding that organization practically and starting a new one; this had its first meeting on the 21st March of this year which was well attended, and I was the unanimous choice of that convention for the office of president, although not desiring and not wanting it, and would have been well satisfied if I had been left out. That is an office I have held since around 1909, about twenty-five years ago, and I don't mind telling you that there's a lot of work in it.

Q. Just go on with the detail of your organization.

The CHAIRMAN: Just tell us precisely what constitutes this comprehensive organization to which you have made reference.

The WITNESS: We have forty-five members registered.

*By Mr. Factor:*

Q. Are they independent bakers?—A. Both.

*By the Chairman:*

Q. Have you a list of your membership?—A. I am sorry but I have not.

Q. Run off some?—A. Our secretary was away.

Q. Are the bigger bakers in it?—A. Yes, there is Harrison of Montreal, Burgess who appeared before you yesterday of Kitchener, Mr. Deitrich of Kitchener, Zurbidg of Stratford and Seaforth—they are brothers.

*By Mr. Factor:*

Q. Are Canada Bread in your organization?—A. They are in, and Morrison of Ottawa. It is very general.

Q. And Harrison Brothers of Montreal?—A. Mr. Harrison of Montreal, yes.

*By the Chairman:*

Q. Just what sort of an organization is this, does it include the large bakers like Canada Bread for instance?—A. Yes, sir.

Q. All of them?—A. All of them.

*By Mr. Parry:*

Q. And you claim also to represent the small independent?—A. Each member only counts one, we don't count the plants at all.

Q. And you claim to represent the small independent baker whose conditions are being heard about here?—A. I would be practically safe in saying that it includes almost everybody from coast to coast.

Q. What per cent of the volume in Canada would it represent?—A. 80 per cent.

Q. Your estimate is that it would represent 80 per cent of the bread producers in Canada?—A. Yes.

*By the Chairman:*

Q. Of capacity or number of plants?—A. In volume, 80 per cent in volume, and possibly 50 per cent in numbers.

*By Mr. Parry:*

Q. And you have seriously considered the difficulties of the industry, and are here to make representations to the Committee on behalf of the baking business?—A. Yes.

Q. Will you just proceed, Mr. Bredin?—A. In the first place, I want to express the appreciation of the trade to our Chairman of today, and his committee here; and to say that we are to a large extent looking for relief that is very much needed by the trade in the whole Dominion of Canada, and we are looking to you, Mr. Chairman, as a life saver. You have heard enough about it without me saying very much—the shape they are in, many of them. From the look of the gentlemen who are sitting around here and who are associated with the trade, I am afraid you might get a rather mistaken impression of conditions as they exist—many of them do not look much like the forgotten man, that is what many of our members are, not making enough out of it to keep body and soul together, or to pay them any wages.

The question has been asked this morning several times about arranging the price of bread; this has to be done, if done at all, by local industry. During all the 30 years that we met in our association, price was never once discussed; but at local meetings of the industry it is discussed and that is where it should be settled; and if there is to be any understanding along that line, and we are looking forward to it, we hope for it, it would have to be done by zones and districts with some one person placed in authority. I am also associated with many who have been here before, and I agree with them that baking is a localized industry which must be handled in small units, with each constituency catering to their own particular people. For instance, the bread that we call a good loaf in the city of Toronto will not suit the people in Winnipeg; and the bread they will like in Winnipeg will not suit them in Vancouver; neither would the bread popular in Montreal suit the people of Quebec, or the Quebec bread would not suit the people in one of the other provinces. These are conditions that exist and always have existed. We started out with the

idea of organization, and one of the big things in our mind was—I do not know what you term this, whether it is a regulation or a code, or what it is, but it is no matter what the name is—but we thought we could get the organization running and we could at least get a start on doing some things which we agreed on. Of course, if we had had everybody with us, we would not have had to come here at all, but we are now in the position that we have to come here.

This voluminous looking book here—I am afraid there was a bit of extravagance in that, but a young man was sent out to get a book, and he brought in this thing; I don't know who he was, but anyway I am not finding fault with anybody particularly—but there is a lot of things in here that will interest you.

Page 33: in the city of Winnipeg, special stores, Friday and Saturday, April 20th and 21st, 1934, bread was sold at three loaves for ten cents; and the regular price of bread in Winnipeg was 6 cents a loaf; bread is advertised at 3 loaves for 10 cents—unwrapped bread, I mean.

Page 36: effective Wednesday afternoon and Thursday, November 23 and 24 of last year; bread 16 ounces, unwrapped, 2 loaves for 5 cents.

*By Mr. Edwards:*

Q. Where is that?—A. In the city of Winnipeg, the Safeway Stores.

*By Mr. Young:*

Q. Was that the one day only, or continuous?—A. They don't say for one day, I imagine it would be continuous.

Page 37: Piggly-Wiggly, effective Wednesday afternoon and Thursday, bread 2 loaves for 5 cents—free with any other purchase.

*By Mr. Factor:*

Q. All these are loss leaders?—A. Yes.

Page 37A: Safeway Stores again; prices effective Friday afternoon and Saturday, April 21 and 22, 1923; bread 3 loaves for 9 cents.

Page 40: This will give you a better picture, this appeared in the *Toronto Evening Telegram*; the Stop and Shop Stores, in this page here—bread 8 cents a loaf.

*By Mr. Parry:*

Q. Just give us the date of that so that it will go on the record?—A. That is from the *Evening Telegram*, Toronto, Thursday, September 18, 1930. That goes back to when the thing started.

Page 41: The next one—you can all see it—bread 7 cents; that is where our trouble starts.

*By Mr. Young:*

Q. That is the pound and a half loaf?—A. Yes. The *Globe Shopping News*, Toronto, Thursday, November 13, 1930—bread 7 cents.

Page 42: The A. & P.—The *Toronto Daily Star* of Thursday, February 12, 1931; bread, 5 cents—large enough for anyone to see.

*By Mr. Factor:*

Q. That has been pretty well illuminated?—A. Yes.

Page 43: The A. & P. again—bread now 6 cents, the popular 7-cent loaf favoured in thousands of homes now 6 cents—this is a new low regular price—this is the third regular price reduction on bread that A. & P. has introduced. First the price was reduced from 3 loaves for 25 cents to 8 cents each. Then it was reduced from 8 cents to 7 cents. Now it is lowered from 7 cents to 6 cents.

*By Mr. Edwards:*

Q. You did not give us the date of that?—A. The *Toronto Daily Star*, of Thursday, February 12, 1931.

Page 44: The *Toronto Daily Star* of March 6, 1931—a large square loaf of bread at 4 cents—a temporary price reduction—full 24-ounce loaf, machine wrapped; this is not a cheap loaf baked to sell at this low price—but our usual 24-ounce wrapped loaf which we sell at a regular price of 6 cents. We reserve the right to limit quantities—and will be sold only to those making other purchases.

Page 45: Superior Stores, Thursday, March 15, 1934—bread 5 cents.

*By Mr. Heaps:*

Q. Who are the Superior Stores?—A. They are an amalgamation that buys together, a number of independents who buy together and advertise together, and that kind of thing; but they are not owned by a chain.

Q. They are individual retail stores?—A. Yes, grouped together for their own advantage. This is in St. Thomas.

Page 46: This is St. Thomas, the week ending March 17, 1934 (that is a famous day), bread, 2 for 11 cents.

Page 47: 500 loaves daily, wrapped bread with order, 5 cents per loaf; bread alone, 6 cents per loaf—that is from London, I do not see where the date is, but it says, "Our third anniversary sale is now on."

On the same page, Greenaway's—fresh bread full weight, 6 cents per loaf. Also on the same day—five loaves, 25 cents, the Daily Bread Company Limited, 685 Dundas Street, London. It does not give the date.

Page 48: Free, one-half dozen of Dr. Jackson's Roman Meal doughnuts with a purchase of any one of the big specials listed below—that is in the cake.

Same page: bread, 5 cents, B. J. Harrison—I do not know where Harrison is.

Page 49: Extra week-end specials for Friday and Saturday—wrapped two loaves of bread, 9 cents—Pape Avenue—cut-rate meat market.

Q. You have no date there, if you will pardon me?—A. No, there is no date to that, it is just a handbill sent out.

Page 50: Try our fine wrapped bread, fresh daily, 5 cents—this is also a circular sent out from 1348 St. Clair Avenue West; Tractors Grocery Store.

Q. Not Factors?—A. No, in this case it is Tractors.

Page 53: Here is a clipping:—

"Hamilton, April 19 (Special)—Formerly proprietor of one of Hamilton's oldest businesses, John Aussem, 65, admitted to-day in court that he was unable to pay 2 girl employees \$41 claimed as wages. Judgment was reserved for a week.

John and Albert Aussem were proprietors of the Aussem baking business, established by their father 75 years ago. A few years ago \$48,000 was offered for the property alone. The city recently took the property for taxes.

Employees on a salary of \$12 a week cannot afford to be generous, but I will give you a week to raise the money, the magistrate said."

Fisher's Bakery; free—1 loaf of bread; that is from Guelph.

Q. What date was that, Mr. Bredin?—A. There is no date on that, nor on the other item here also from Fishers, which takes the form of a strip of coupons—free, six loaves of bread. This certificate is good for one free loaf of bread.

Page 55: Free, one loaf of bread; this certificate good for one loaf of bread absolutely free, Berry's Bread, 355 Barton Street East, Hamilton—there is no date on that.

Free, one loaf of bread; Berry's again.

Free, 1 loaf bread; Berry's again, giving these tickets away.

Then there are these photographs of windows showing prices ranging around 5 cents and 6 cents a loaf.

*By Mr. Heaps:*

Q. Do you know how that cheap bread is made?—A. No, I do not.

Q. Do you know under what conditions it is made?—A. No, I do not know that either.

I have one letter I think which might be interesting here; this is about a Chain Store manager who made this statement to three men who have made their affidavit as to the statement. I will read the affidavit:—

Canada,	}	In the matter of
Province of Manitoba		
To Wit:		

We, Messrs. R. H. Bryce, F. J. Hannibal, A. E. Longstaffe, of the City of Winnipeg, in the Province of Manitoba, make oath and say:—

That on or about February 8th, 1934, we had an interview with Mr. L. D. Squair, Dist. Manager of the Safeway's Stores Ltd., Winnipeg, Man. During the course of our discussion regarding local bread price we were informed by Mr. Squair that, as he did not permit independent grocery stores to sell merchandise at their prices, therefore he would not allow them to sell bread at the same price as their stores.

This is signed by these three men, R. H. Bryce, F. J. Hannibal, and A. E. Longstaffe, under date of April 26, 1934.

*By Mr. Parry:*

Q. Is that an affidavit?—A. That is an affidavit by these three men.

Q. You are filing the book containing those advertisements which you have referred to in your evidence as an exhibit?—A. Yes.

(Book of advertisements filed, Exhibit 118.)

The WITNESS: Now, in reply to Mr. Factor who asked when some of these bakeries started: the Canada Bread Company started business on June 30, 1911. They were taken over by the Maple Leaf Milling Company in 1919. There was no purchase of anything, only the stock of the company; it was just taken over, there was no addition to the stock, they just purchased control through the common stock.

Mr. Young yesterday I think was misled a little, not intentionally at all, by Mr. Harrison, as to the 4 cent value of the raw materials in a loaf of bread. I have taken the government report, so that ought to be good enough for anybody, all right. The government report showed the value of a loaf of bread at 5·42, from 5·12 to 5·42.

*By Mr. Young:*

Q. What date is that?—A. This book would be 1931; that is not the low price of flour of to-day.

*By Mr. Parry:*

Q. It is 1929, I think?—A. Yes, it is taken from a report dated 1929, but appears in the registrar's report of 1931. Bearing out the statement of Mr. Scovil made earlier to-day, 11·41 was the cost of delivering a pound and a half loaf in the Maritime Provinces; the cost was 10·05 in Quebec, 9·76 in Ontario, 9·61 in Saskatchewan, 10·74 in Alberta, and again bearing out Mr. Ward, 11·40 in British Columbia, that the goods cost more at the far ends.

*By Mr. Kennedy (Winnipeg):*

Q. Will you give us the cost for Manitoba?—A. Manitoba being a different weight of loaf, it is rather hard to calculate the cost. It is given here at 5.82, but I have not worked it out on a pound and a half loaf; I did not think you would want it, or I would have done so.

*By Mr. Young:*

Q. You have not got those figures up to date?—A. No, I have not. I would be pleased to have them. I have some figures here. We were called in a hurry, I might say. We got notice in a hurry. The first duty of a soldier is obedience, so we came and we brought our figures with us and we got out some here in Ottawa. We have them both for the mill-controlled and for some few independents that we have with us. In the first place, these bakeries you have here employ 4,160 men. Of this number, 3,485 are employed by the mill-controlled bakeries and 675 by the independents, right here. The wages per barrel for 1929, \$8.16—

Q. Wages per barrel?—A. Per barrel of flour. That is for the delivered loaf, wages per barrel.

Q. \$8.16?—A. That is bakery No. 1. 1930, \$9.17; 1931, \$9.30; 1932, \$8.78; and 1933, \$7.64.

*By Mr. Factor:*

Q. What do you mean by wages per barrel?—A. The bakers' wages are put in that, delivery charges—the man on the wagon, the truck that goes out—and the office. All three sets of wages are in there.

*By Mr. Kennedy (Winnipeg):*

Q. That is, baking and distribution?—A. Yes.

*By the Chairman:*

Q. Why do you use the term "barrel"?—A. Most of the book-keeping is done in barrels of flour.

Q. That is the basis of your calculations in bakeries?—A. Yes, that is the basis of our calculations. That is taken from our statement.

*By Mr. Factor:*

Q. You mean the figure \$7.64 in 1933, represents those three items of wages?  
A. Yes.

*By Mr. Heaps:*

Q. Can you tell us what a barrel of flour contains?—A. 196 pounds of flour.

Q. What is the value of the finished commodity?

Mr. EDWARDS: 196 loaves, is it not?

The WITNESS: I have not got that here, but I could give a guess at it.

*By Mr. Heaps:*

Q. You might give us an answer?—A. It runs from \$16 to \$18, retail value. This also gives the value of the loaf, farther down. No. 2 firm, wages per barrel amount to \$6.19 in 1929; \$6.76 in 1930; \$6.95 in 1931; \$6.71 in 1932; and \$6.37 in 1933. For No. 3 the wages per barrel amount to \$8.89 in 1929; \$8.39 in 1930; \$8.14 in 1931; \$6.75 in 1932; and \$6.37 in 1933. You can see what is happening there, gentlemen, wages coming down in order to try and balance the budget. The man getting wages is the man that has to suffer.

*By Mr. Parry:*

Q. You have referred to Nos. 1, 2, and 3; you mean individual firms that have furnished you with the information?—A. No, those are controlled bakeries. I have the spread shown for the independents.

Q. Nos. 1, 2, and 3 are separate firms?—A. Yes.

Q. There is quite a disparity in costs there?—A. Yes.

*By Mr. Heaps:*

Q. Those are the large firms that you are speaking of now?—A. The large firms.

*By Mr. Kennedy (Winnipeg):*

Q. Mill-owned bakeries?—A. Mill-controlled bakeries, three of them. The fourth one comes in here, and he just gives us three years. For 1931, \$6.18 per barrel; 1932, \$5.74; and 1933, \$5.44. That is the lowest yet.

*By Mr. Heaps:*

Q. Those firms that went as high as \$8 per barrel didn't sell their loaves at 2½ and 3 cents each?—A. They could not do that very well, I do not think. A very interesting part is the number of barrels of flour used.

Q. What year? Will you give us the year?—A. I am going to do that, yes. The number of barrels of flour used by No. 1 in 1929 was 285,714; in 1930, 254,758; in 1931, 237,719; in 1932, 223,152; in 1933, 218,595. You can see what is happening there.

*By the Chairman:*

Q. That is barrels of flour?—A. Yes.

Q. Used in that particular bakery?—A. In a year, by that particular one.

Q. By that particular company?—A. Yes.

*By Mr. Young:*

Q. Where did this bread go?—A. Well, I would say a part of it went to the chain stores, and a part of it went to the Cheap John bakeries you have heard something about, and part of it went to relief.

Q. Do the chain stores not get bread from some of these bakeries?—A. Yes.

Q. What one bakery loses, another one gains, is that right?—A. Yes, that is right. For No. 2, the number of barrels of flour used in 1929 was 312,352; 1930, 313,446; 1931, 271,760; 1932, 239,748; 1933, 230,028. So you see, No. 1 dropped from 285,000 to 218,000, and No. 2 dropped from 312,000 to 230,000 in five years.

*By Mr. Factor:*

Q. Reduction in the price of bread didn't help to increase the consumption of bread?—A. No. For No. 3, the number of barrels of flour used in 1929 was 127,936; 1930, 125,866; 1931, 121,761; 1932, 136,158; 1933, 129,660. Evidently that particular firm has got some of the business, because they increase—although not much—from 127,000 to 129,000 in five years.

The third firm gives us three years: 1931, 147,595; 1932, 150,831; 1933, 151,223. That is another firm that has got some addition.

The number of employees employed by No. 1 firm in 1929 was 1,759; in 1930, 1,797; in 1931, 1,794; in 1932, 1,794; in 1933, 1,548. There is a drop there.

For No. 2 the number of employees in 1929 was 1,504; in 1930, 1,527; in 1931, 1,421; in 1932, 1,257; in 1933, 1,279. That is a drop from 1,504 to 1,279.

*By Mr. Kennedy (Winnipeg):*

Q. Is any of that drop attributable to increased mechanization?—A. No, sir. I was going to refer to that point, but it has not happened in this time.

For No. 3, the number of employees in 1929 was 757; in 1930, 735; in 1931, 702; in 1932, 700; in 1933, 658. The fourth firm only gives the number for one year, and that is last year, 1933, 801.

The average cost per pound and one-half loaf in 1933 for No. 1 firm was 8·12; No. 2 firm, 7·85; No. 3 firm, 7·53; and No. 4 firm, 7·41. So you see that they are some fraction between 7 and 8 cents, which is pretty close to the cost, all right.

The revenue received for that was as follows: For No. 1 firm, 8·12 was the cost and 8·22 was the receipt; for No. 2 firm, 7·85 was the cost and 7·33 was the receipt; for No. 3 firm, 7·53 was the cost, 7·68 the receipt; for No. 4 firm, 7·41 was the cost and 7·29 the receipt.

*By Mr. Young:*

Q. Were those breads of the same quality?—A. Yes.

Q. That is to say, one firm makes a loaf that costs 8·12, and the other firm makes identically the same loaf for 7·41?—A. There might be some little difference I could not tell. For instance, one might use more patent flour than another.

*By Mr. Heaps:*

Q. Does that include delivery?—A. There might be a more expensive delivery, one might cover a wider territory than the other.

*By Mr. Factor:*

Q. Two of these firms apparently have been losing money?—A. Yes.

Q. And still are carrying on business?—A. Yes. I think the statements to the public have admitted that and shown it.

*By Mr. Parry:*

Q. I don't quite understand. Are you dealing there with just the quality loaf, or what we refer to as a second quality loaf combined with the quality loaf?—A. Yes.

Q. The average cost?—A. Yes, it takes the two together.

*By the Chairman:*

Q. How about all the folderols that these big bakeries sell—cakes, pies and doughnuts and all that sort of stuff that they take around to the houses? Is that included in your figures?—A. No, that is strictly bread.

Q. Strictly bread?—A. Yes.

*By Mr. Factor:*

Q. Is not the other the profitable end of the business?—A. At one time it was, but not to-day. There is just about the same amount of money in cakes as there is in bread. There might be a little more, but it would be just fractional.

The cost of ingredients, flour, for No. 1 firm, is 1·70; for No. 2, 2·13; for No. 3, 1·94; and for No. 4, 1·76. You see the great variation in costs there. One man may have bought at the wrong time, hit the market wrong and it goes on inventory; another man may have got into the market just at the right time.

*By the Chairman:*

Q. What is that 1·70 or whatever it is—per what?—A. 1·70 per loaf.

Q. Per loaf?—A. Yes.

Mr. FACTOR: That is the cost of the flour.

*By Mr. Young:*

Q. Is it the practice of the bakeries to buy quantities of flour and other supplies, keep them on hand until they are done, and buy another quantity? Or do they watch the market from day to day?—A. Usually in the flour business we buy two or three times in the year. Sometimes if the condition is favourable, we buy once in the year, about October, when the crop is coming in, in the West. It has been for many years thought to be the best time. That has been upset in recent years, but for many years it was thought that that was the best time of the year to buy it, and we took that chance on it and it usually came out right.

*By the Chairman:*

Q. You contract ahead?—A. Contract ahead, and just take it and pay for it as it comes in.

*By Mr. Kennedy (Winnipeg):*

Q. Just a point there, Mr. Bredin. We had evidence this morning, if my recollection is correct, that the raw materials in a loaf constitute about 45 per cent of the cost. Would that evidence be borne out by these figures you have given?—A. I think so.

Q. Those figures you have given us are in connection with flour?—A. I have other ingredients here.

*By the Chairman:*

Q. You are going to give them?—A. Yes.

*By Mr. Factor:*

Q. What is the system of buying flour used by the mill owned bakeries; do they buy by special arrangement?—A. In some cases, the general manager of the bakery buys flour when he thinks it is the proper time to buy it; in other cases, when the mill thinks it is the right time to put down the order for the flour.

Q. What I mean is, do these mill owned bakeries get any special consideration from their mills in the purchase of the flour, even if it is only a bookkeeping entry? Do they get a special price?—A. Well, having a little experience in that line, being head of the Canada Bread Company for some eighteen years, I always thought I did well if I got them down as low as other people could buy it for, and I generally saw that I did that. I did buy as low as any person almost any time. I think that still holds good with the general managers, that they have that principle.

*By Mr. Heaps:*

Q. Is it possible they charge less to the independent bakeries than they do to their own bakeries?—A. There are instances of that. I would not say it is the general practice, but there are instances of that. In the one case they have to buy off them and in the other case there is competition.

Q. And because they have to buy from them, they might take advantage of that fact?—A. Yes, take a little advantage. We are all liable to do it.

The cost of other ingredients for No. 1 firm was 1.25; No. 2 firm, .86; No. 3 firm, .84; and No. 4 firm, 1.18. I could not explain that difference there between .86 and 1.25. It is a wide margin. I don't know why that is. That would have to be explained from the inside.

Baking cost—that means cost of baking, manufacturing cost, and what we term delivering it into the bread room before it is shipped—for No. 1 firm, was 1.73; for No. 2 firm, .93; for No. 3 firm, .85; and for No. 4 firm, .92.

*By the Chairman:*

Q. With regard to the first and second number, one is double the other. The others are very close?—A. All the others are not far apart—.93, .85 and .92. That is pretty close.

Selling: No. 1 is 2.77; No. 2, 2.28; No. 3, 2.70—they are getting closer. The selling cost of No. 4 was 2.07, the lowest.

Overhead—that means office and that kind of thing.

*By Mr. Parry:*

Q. I notice in 1929 the average of the mill controlled delivery and sales costs was 1.86, and in this 2.77 is the high figure you gave, in cents per loaf?—A. Yes.

Q. That is where the increase has come in, as was pointed out this morning?—A. Yes.

*By Mr. Heaps:*

Q. Why has there been that increase, Mr. Bredin?—A. What was that item again, Mr. Parry?

Mr. PARRY: Delivery in sales, distribution.

The WITNESS: Sales have been climbing, in spite of everything that any of us could do.

*By the Chairman:*

Q. Sales costs, you mean?—A. Yes, sales costs.

*By Mr. Young:*

Q. Have you raised wages, or are your horses more expensive, or what is it?—A. Wages did go up for a time, but they are not up now.

Q. What keeps your sales costs up?

Mr. FACTOR: Trying to sell.

The WITNESS: People are demanding more in the way of service all the time.

*By Mr. Young:*

Q. What additional service are you giving now? You were taking the loaf of bread to the door and getting your money for it. What do you do in addition to that now?

The CHAIRMAN: Slice the bread.

The WITNESS: There was a time when the men went out with nothing but bread on the wagon to deliver; they were delivery men then. Now they are going out with bread and cake that has to be sold. Instead of making a delivery that will take two minutes, a young man will spend ten minutes trying to sell a lady a few cakes.

Q. You should charge that to the cakes, and not to the bread, should you not?—A. That is correct. I accept that statement, and we are correcting it as time goes on. When we first went into cakes, we didn't do that; but to-day it is pretty generally being done, placing a lot of charges against the cakes.

*By Mr. Heaps:*

Q. This morning we had an independent baker who said it was the company controlled bakeries who were forcing up the costs of the sales?—A. Well, I listened to Mr. Dempster, and I think that his evidence was very good. I would not dispute his evidence.

Q. But is that correct? You have been connected with a company controlled bakery. Is it correct?

Mr. PARRY: No, not now. Mr. Bredin is an independent.

The WITNESS: I am in my sixth year as an independent.

Mr. FACTOR: He has had experience with both.

The WITNESS: I was an independent before, and then in the group, and now I am independent again. Of course, taking space in the paper by the page—no small concern can afford to do that. That is only nonsense.

*By Mr. Parry:*

Q. That is not the result of public demand?—A. No. That is adding to the cost.

*By Mr. Factor:*

Q. From your mature experience, what has actually added to the cost of the distribution of bread? Is it, as was suggested to us, the intensified selling campaign?—A. Well, that is one of the things, but it is not the whole cause. For instance, prior to the chain stores coming into existence, a waggon would go on to a street and serve twenty customers on that street. Since the chain stores came in, he will sell ten or twelve, maybe a dozen, and the cost is just as great of sending them on to that street, for selling to ten or twelve as for selling to twenty. I might just at this moment interlude a further measure—it was mentioned here the other day—that is, a measure of selling. We are going into the streets—our system of distribution is ridiculous. I am prepared to admit that right now, that when you have five or six or seven waggons going on to one street with twenty or forty houses on it, it can't be explained.

*By the Chairman:*

Q. Each one with a basketful of cakes and pies, and a loaf of bread?—A. Yes. It can't be explained logically. I don't attempt to defend it. It is indefensible. Sometime they will have to be brought together in some way. As Mr. Dempster pointed out to-day, it can't be done away with off-hand, because each customer decides on her certain kind of bread, and certain shape of loaf and that kind of thing, and each of us gives that. Of course, it is best for people to think that no one else can give them as good bread as we can.

*By Mr. Boulanger:*

Q. Could that be cured by the industry itself, by co-operation or something like that?—A. The closest I saw it being cured was during the war. I was called to Ottawa, and I was told that if the war lasted another six months, on account of the necessity of man power, we would have to do away with that system of distribution, that we would have to get together: They had me coming to Ottawa for a long time. I spent some days discussing that question with the Food Board, and it would have come about at that time. But if we are left to ourselves it will be rather difficult to bring it about.

*By Mr. Heaps:*

Q. May I point out you showed in your figures earlier that your labour costs had come down proportionately by a greater ratio than your production had decreased during the past few years, in which case it would go to show that your labour cost is really not a factor in maintaining the high cost of distribution?—A. We would not claim that. I would not claim that.

Q. What is it then?—A. At one time—again going back to the waggons in the city of Toronto—the business that I was the head of distributed 4,000 loaves per waggon. To-day a waggon is doing well that distributes 2,000, just half the number.

Q. Have you got the same number of waggons on the streets to-day as you had in 1929?—A. Far more.

Q. There are more?—A. Yes, far more in the streets to-day.

Q. Each waggon is doing less business to-day, considerably less than it was doing say four or five years ago?—A. Yes. If a waggon sold 4,000 loaves last year, and the same waggon was selling 2,000, it would take two waggons to do that 4,000. That is about the principle it would work out on.

*By Mr. Parry:*

Q. The ratio is down fully 50 per cent per wagon?—A. Yes, fully.

*By Mr. Young:*

Q. Are more companies sending out wagons, or is each company putting on more wagons to handle this business?—A. It practically applies to all the companies. Some person, I forget which one, giving evidence to-day—I think maybe it was Mr. Dempster again—pointed out that the delivery was wanted in the morning by so many. No, it was somebody yesterday afternoon. It was pointed out that so many ladies want delivery made in the morning, and each competitor going in says, "I will give you delivery in the morning, and he is selling a customer that has been satisfied with evening delivery, maybe.

Q. And they are working their wagons only half days?—A. Yes.

Q. And their men only half days?—A. A little more than half. Usually they start at seven in the morning and get through about two o'clock.

Q. Is there anything you can put them at to fill out the day? Can you put these men to work at anything else to fill out the day?—A. No, they are through. They go home. They come in and settle up, and then go home.

Q. How many hours a day do they work?—A. About seven or eight hours a day, six or seven.

*By Mr. Heaps:*

Q. How many days a week?—A. Six days.

Q. What time do they come in in the morning?—A. About seven o'clock.

Q. Is that the time they start the delivery?—A. They have to fill up their wagons with the bread. Their horses are looked after for them, but they have to wait until their horses are ready for them.

Q. What time do they punch in in the morning?—A. I think very few bakers have a clock. There are different conditions obtaining.

*By the Chairman:*

Q. Different routes have different times?—A. Yes, you know if there is a nice maid in one house a man may stop a little longer.

Q. I notice in this report of 1931 where it says that the total capacity of 72 of the plants of the mill-controlled bakeries is 892,000,000 pounds a year or nearly treble their output which, I think, is 317,000,000. Can you confirm that fact?—A. Yes, that is one of the great troubles to-day with nearly every flour mill and every bakery the whole country over.

Q. Now, the fact that these large organizations are operating to only approximately on the average about 30 per cent of their capacity must add materially to the costs of distribution?—A. Very.

Q. Is not that, perhaps, one of the chief problems with which we are confronted?—A. Well, I would not say it was one of the chief ones, but it is a real problem.

Q. But there would be a tremendous pressure due to this 70 per cent over-capacity to go out to get business and to cut each other's throats, to use a common expression?—A. Yes, that is one of the items. The strongest item is there; you have no plant to put in. There it is; go and do the business.

*By Mr. Factor:*

Q. There is no cut-throat competition among the bakers in the popular sense of the term?—A. I do not think there is any other business suffering from as much cut-throat competition as the baking trade.

Q. Not among the bakers themselves?—A. Yes, among the bakers themselves.

Q. The different mill-owned bakeries, or the mill-owned and independent bakeries?—A. Both.

*By Mr. Young:*

Q. Is not the small baker who is not over-expanded in a better position to meet this competition than the big one who is?—A. Yes, I would say. The man who has his capacity filled right up is in good shape to go along. His overhead is so low. He should be in good shape to compete.

*By the Chairman:*

Q. But do not these large bakeries with only 30 per cent on the average of their capacity operating invade the territory of the economical unit and destroy his rather happy position?—A. Yes, that is going on too.

Mr. YOUNG: How do you mean invade the territory?

The CHAIRMAN: If he has a route. Suppose there is a baker operating a route that will take care of a dozen wagons or half-a-dozen wagons and he is fairly well up to his capacity, here are bakers capable of producing 70 per cent more than they are handling and they are pushing into that territory. That is the question I am putting. They would push their efforts into that territory.

The WITNESS: There is and has been the temptation all the time to try to fill up that empty space.

*By Mr. Young:*

Q. There are no exclusive routes anywhere?—A. No.

Q. There always was competition in all routes?—A. No, that day is gone. As it is to-day some bakers try to play the game. More than a couple of years ago one man started by going over the country routes every other day. The other gentleman started in on the other three days of the week and he cut that man's output in two.

*By Mr. Parry:*

Q. In connection with the overhead figures you are going to give us now, are you satisfied that proper allowance has been made in the preponderance of capital and the water in the stock of these big companies to show a proper picture?—A. I do not think that has been taken into account to the finish.

Q. We will be getting these figures. I wondered if that is part of the picture?—A. Bonds are always a charge to the business but the stock is not. I do not know of any company that charges up stock. Overhead at number 1 plant is .44, at number 2 plant 1.42, at number 3 plant .91, and at number 4 plant 1.18.

Mr. HEAPS: What is charged in that overhead in view of the spread you have mentioned?

The WITNESS: There are some little items of principal, the office and the salaried officials.

Mr. YOUNG: What is the matter with number 2? He has so much more than anybody else.

The CHAIRMAN: He has a larger bond issue.

The WITNESS: I think after he sees these figures put together he will get busy.

Mr. YOUNG: He will try to find out.

The WITNESS: Wrapping: number 1 ·23; number 2 ·23; number 3 ·29; number 4 ·30. That is very close. I would say that wrapping is increasing all the time. I fought against wrapping. I did not believe in it. It does not improve the quality of the bread. It is better without it. In spite of that it is increasing right along.

*By Mr. Parry:*

Q. It looks as if it has gone up in some cases almost 1,000 per cent. In 1929 it was only 0·14?—A. In our own case it has gone up 50 per cent in a year.

Mr. KENNEDY (*Peace River*): The wrapping?

The WITNESS: Yes.

Mr. HEAPS: The paper people put up a pretty good campaign, did they not?

The WITNESS: Yes, the paper manufacturers had a lot to do with it.

*By Mr. Kennedy (Peace River):*

Q. What is the advantage of wrapping?—A. Oh, the hands do not touch the loaf. That is one thing.

Q. You said the bread was better without it?—A. Yes. I still say so.

Q. What is the reason for that?—A. All the flavour of the bread is in the crust. If the loaf is wrapped, and it very often is before the loaf is thoroughly cooled, the acidity is driven back into the crust of the loaf, softening it, and affecting the whole eating quality of the loaf.

*By Mr. Factor:*

Q. Is the wrapping of bread a municipal regulation?—A. No, sir, Dr. Hastings brought it in one time, and I was successful in convincing him of the error of his ways, and he dropped it.

Q. Is not there some by-law—municipal by-law?—A. No, sir; not in Toronto.

The CHAIRMAN: It is for advertising purposes, I suppose?

The WITNESS: Yes, advertising. I would not speak for the whole of Canada, but there is no by-law in Toronto.

Mr. FACTOR: It was something new they were giving the people?

The WITNESS: Yes.

Mr. EDWARDS: Is there any provincial statute covering the matter?

The WITNESS: No, sir.

Mr. KENNEDY (*Winnipeg*): The paper manufacturer sold the idea to the public?

The WITNESS: Yes, you are offering the wrapped loaf against the other man's unwrapped loaf and trying to get business.

Mr. FACTOR: I was under the impression that there was some municipal by-law or regulation regarding the wrapping of bread and the wearing of white gloves?

The WITNESS: They were going to put through an ordinance for wrapping bread. The bakers opposed it from the standpoint of the deterioration of the quality of the bread. After taking it up with Dr. Hastings he recommended white canvas gloves. I went down and saw him and asked him to leave it over for a day or two and I would buy those gloves and put them to the test. I

bought the gloves and after they were used I took a number of them down to Dr. Hastings—dirtier than any man's hands. For that reason he dropped the question of white gloves and said bread had to be handled by tongs and forks.

The CHAIRMAN: Silver-plated, I suppose.

The WITNESS: Yes. Total cost: Number 1, 8.12; revenue, 8.22. Number 2, total cost, 7.85; revenue, 7.33. Number 3, total cost, 7.53; revenue, 7.68. Number 4, total cost, 7.41; revenue, 7.29. The first one has 0.10 of a profit, the second one has 0.52 of a loss, the third one has 0.15 of a profit, and the fourth one has 0.12 of a loss. That completes the mill-control records.

Comparative data on baking industry. Wages per barrel in 1929. There is only one independent that gives it for five years, and it gives really no comparison at all. The figure for 1929 is 9.20; 1930, 8.65; 1931, 8.66; 1932, 8.12; 1933, 7.86—showing a constant drop which means lowering of wages.

Number of barrels of flour used: 1929, 23,865; 1930, 22,983; 1931, 19,191; 1932, 17,180; 1933, 15,751. There was a shrinkage there right along. The third one gives figures for two years, 1932, 54,261; 1933, 60,808; number 4 gives one year, 1933, 35,516.

Number of employees: 1929, 166; 1930, 148; 1931, 138; 1932, 122; 1933, 122. Number 2 gives for 1933, 55. Number 3 gives 304 for 1932 and 320 for 1933. Number 4 gives 178 for 1933. That is the only year they give us.

*By the Chairman:*

Q. It seems to me that the last two, which are comparatively small bakeries, seem to have a much higher labour employment than the first two, is that right, in comparison to the barrels of flour used?—A. I would say that is so for the last one, in any case.

Q. Is that because of less machinery?—A. No, I do not think so. I do not think that is it—putting on higher pressure selling I imagine is some of it—putting two men on a wagon instead of one.

Average revenue: number 1, 1933, 9.34; number 2, 7.029; number 3, 7.40; number 4, 7.599. You will see there, Mr. Heaps, the difference between the different bakeries. If one baker is selling the great majority of his bread retail they will have a much higher revenue per barrel than the man selling at wholesale. I think that is what is accounted for to a large extent. Mr. Dempster, I think, made a little error in connection with the information about the percentage of retail bread. We keep track of that.

Q. He just gave us an offhand opinion?—A. He said he wasn't sure of it. I paid attention to him.

Q. Have you any definite information on that?—A. I have of some businesses, but not of the whole field, but some businesses would represent very much what is done in the whole field. It runs from 70 to 80 per cent in retail.

Q. Wagon delivery?—A. Wagon delivery, and the balance wholesale. I think that is a pretty general condition. I think it would work out over the whole country.

*By Mr. Heaps:*

Q. Has it been your experience that the customers insist upon delivery to their homes?—A. Yes, they want delivery to their homes.

Q. They will not out to the stores to buy?—A. No; and, as Mr. Dempster pointed out, if good times come—and they are on their way I believe—the people that are buying from the chain to-day will cease buying from the chain to some extent—not altogether; but we look to many of those people coming back to us and having the wagons go to the door.

Q. You do not think any legislation of that kind will be necessary?—A. We might try to do much by legislation.

*By Mr. Parry:*

Q. Are these independents all making money?—A. No. Not on this sheet.

Q. You gave the figure of 9.34 against 9.20. I took down your figures; I may be mistaken.

The CHAIRMAN: Complete your statement.

The WITNESS: I beg your pardon, I gave you the revenue. I gave you the revenue and not the cost. The cost for that 9.34 is 10.30; number 2, cost 7.45 and revenue 7.029; number 3, cost 7.33 and revenue 7.40; number 4, cost 7.89 and revenue 7.599. You can see that the independents are not in very good shape.

Now, the cost of flour is 1.79 for number 1; 2.21 for number 2; 1.81 for number 3; 1.74 for number 4. They are closer. Only one man is out of line. Number 2 is 2.21—a little higher than the rest.

Mr. YOUNG: What happened to him?

The WITNESS: He has hit the market wrong I would say. I hope not too bad.

Other ingredients: 1.45 for number 1; 1.07 for number 2; 1.06 for number 3, and 1.12 for number 4. There is a big variation there.

Baking costs: 1.77 for number 1; 1.41 for number 2; .85 for number 3; .88 for number 4.

Selling costs: 3.72 for number 1; 2.19 for number 2; 2.73 for number 3; 2.20 for number 4.

Overhead: 1.26 for number 1; .56 for number 2; .61 for number 3; 1.60 for number 4.

Wrapping: .27 for number 1; .27 for number 3; .33 for number 4. He does not give number 2.

Total cost: 10.30 for number 1; 7.45 for number 2; 7.33 for number 3; 7.89 for number 4.

The CHAIRMAN: There is a big difference there.

The WITNESS: Yes, quite.

Average revenue: 9.34 for number 1; 7.02 for number 2; 7.40 for number 3, and 7.59 for number 4.

Profit and Loss: .96 for number 1 that represents a loss; .42 for number 2. That represents a loss .07 for number 3. That represents a profit .29 for number 4. That represents a loss. Things are not looking very good. The question of grades of flour came up yesterday. I think Mr. Young asked the question. For the present year the spread between first and second patents was 60 cents.

*By Mr. Young:*

Q. Sixty cents a bushel?—A. Sixty cents a bushel. For some reason third patent flour was not selling so well and it was at 50 cents, the standard spread. Some of them when they are buying that might make it less—15 cents a bushel below second patent. That would make a spread between first patent and third patent of 65 cents.

Q. What is that third grade flour like?—A. That is a good flour. That is the principal export flour.

Q. The high patent flours are used altogether at home, are they?—A. They export very little of them.

*By the Chairman:*

Q. The bakers use what is called a strong baker?—A. That is second patent. That is the name of it.

Q. That is commonly used by the bakers?—A. Commonly used; but there are some bakers that want to improve their product, of course, and they put in high patent flour and they say they have a better loaf than their rival when trying to get business.

*By Mr. Kennedy (Peace River):*

Q. What sort of flour do they make brown bread of?—A. Whole wheat flour.

Q. Is that the same as the number 3?—A. That does not come under that classification at all. That is white.

*By Mr. Heaps:*

Q. From the standpoint of nourishment, is not the bread selling at 3 cents as good as the bread selling at 7 cents?—A. Yes, it is as good; it may not look quite as good—

*By Mr. Kennedy (Peace River):*

Q. How does the whole wheat flour compare in price?—A. It is lower, about the same price as number 3.

*By Mr. Factor:*

Q. Can you say anything about the bread-eating habits of the people; are they eating more or less now?—A. Less. That has been established by research.

*By Mr. Kennedy (Winnipeg):*

Q. What has taken its place; you say there is a reduced consumption, what is taking its place?—A. One of the items is the very heavily advertised breakfast foods that we have, which people are taking to; then there are some places where nothing is required to take its place—with ladies wanting their boyish figures, you know.

*By Mr. Heaps:*

Q. And there is not so much wasted now as there was a few years ago?—A. I think there is something in that all right. Then, too, people are not so particular in these days about getting a fresh loaf as they used to be. Shipping was talked about by several men; my position on that is and always has been that bread is not meant to be shipped, it is not meant to be handled; the less handling a loaf gets before it reaches your table, the nicer and better it will be for the people using it.

The question of cost was raised: a gentleman pencilled this out and gave it to me to show what his taxes—Dominion, Provincial and Municipal—but not including gasoline or licences—was, and it amounted to \$28,000 in 1923, and under the same headings he paid \$76,000 last year.

*By Mr. Heaps:*

Q. Is that why you called Mr. Stevens a life-saver just now?

*By Mr. Young:*

Q. Does that include the municipal tax, the profits tax, and the sales tax?—A. Yes.

Q. Does he enumerate the taxes there?—A. He just gives them under the three heads, Dominion, Provincial and Municipal.

Q. How much is each?—A. \$28,000 in 1931, and \$76,000 in 1933; these were the three concerned.

*By Mr. Factor:*

Q. Have you got that broken down?—A. No, I may say in my own case in the City of Toronto, that the city tax alone was \$7,600.

*By Mr. Kennedy (Winnipeg):*

Q. That is at the present time?—A. Yes.

Q. As compared with what?—A. Well, I just moved in there five years ago.

Q. Well, so far.

Q. That has not varied much in the last four or five years.

*By Mr. Heaps:*

Q. Does that include the business tax?—A. No, only the city tax; \$7,600 for the city tax alone, without any other.

*By Mr. Young:*

Q. If the city tax had remained constant, the provincial and federal taxes must have increased?—A. I am speaking of Toronto alone.

*By Mr. Parry:*

Q. The figures you mentioned show that that man's taxes increased from \$28,000 to \$76,000?—A. Yes.

Q. No increase in municipal taxes?—A. Not in Toronto. This man is not in Toronto at all. Incidentally it shows an increase of 167 per cent.

*By Mr. Young:*

Q. How much do you pay for newspaper advertising?—A. Outside of the big chains and a couple of independents—a couple of large independents there is very little spent by the general rank and file of bakeries.

Q. It would appear from the evidence that we have heard that a lot of your trouble is due to newspaper advertising?—A. Very often. If you show a full page ad. to a man, he sees red.

Q. You do not think it is a very good thing in the baking business?—A. We do not. As has been stated here already, it will not increase the consumption of bread; it has not done it. It has not called for more bread to be eaten, it is just trying to transfer it from one to the other.

*By Mr. Kennedy (Winnipeg):*

Q. You do not suggest that advertising should be stopped, or controlled, do you?—A. I see there are newspaper men here, I would not suggest that in their presence.

Now, I think I come to my conclusion, unless there are some questions to be asked which I will endeavour to answer; but we have found a means, or what we think is a means, of benefitting the trade. They got together and spent a lot of time in the last two months particularly in getting together a code of ethics that we think would be most beneficial, particularly if we get your assistance. We do not say it is the law of the Medes and Persians, but it is our best thought—whether or not it proves best in the long run.

Before starting to read that, Mr. Parry asked me if I represented the retail bakers, particularly in the city of Toronto. I have here the gist of their criticisms and I will read them if you wish.

The CHAIRMAN: Just read so much of it as you think will give us the gist of its contents.

The WITNESS: We consider this a bread Code, as no mention or protection is given to the sale of cakes and pies, and no mention made of them.

Sale of bread on consignment: we cannot agree to the latter part of this paragraph, which prohibits the sale of bakery products at a reduced price after they are on their way to being stale in a retail store.

The wording of this paragraph (III) should be changed to read,—the combination selling of bread with other articles, or the combination sale of bakery products, for less than the proper price of such articles. As an illustration, see Hunt's advertisement,—the gift of ice cream with a package of cake, without any weight indicated.

On the principle of competition would be this one: There has been no suggestion and no desire on the part of any one in Canada, to do away with the door-to-door delivery of bread. This is a service that is required by the people and no one is suggesting for a moment that it should be discontinued. However, as there is no public demand for the house-to-house delivery of cakes, pies, and other bakery products, these items should be limited to the sale over the counter by the retail bakery store.

The CHAIRMAN: I am glad you mentioned that. I was going to ask you if there was the elimination from the door-to-door delivery of the salesmanship of cakes, pies, biscuits, and so forth, would it be of benefit to the bread-making industry, and would it effect a diminution in the cost of delivering bread.

The WITNESS: It would increase the cost beyond anything you can think of at the present time.

The CHAIRMAN: Increase it, what do you mean?

The WITNESS: Such a large percentage of cake is being sold by the wagons that if you pull out that percentage and left only bread—.

The CHAIRMAN: Is it not because of these things, the introduction of the sale of cakes by the driver, that has caused the cost of delivery to go up; all the statistics indicate that.

The WITNESS: That is not the case there, though.

*By Mr. Kennedy (Peace River):*

Q. You sell them to sell bread, of course?—A. That has been a help, that has been an aid which has helped us to get business where otherwise we would not have done it.

*By Mr. Heaps:*

Q. Did you keep the cost of the cake end of the business separate?—A. At first we did not, but each firm now keeps the right charges on cake, keeping them where they belong. We now have a pretty good idea as to what each end of the business is costing us, and that perhaps is a better system.

*By the Chairman:*

Q. You now have them separate. You now support the delivery by the wagon salesmen of cakes and pies to the door?—A. Yes, sir, without question.

The CHAIRMAN: It strikes me that that is a most uneconomical thing.

*By Mr. Edwards:*

Q. Do you have any particular competition with home-made baking; women making bread and selling it to people around, to their clientele?—A. In the large homes of our best families, that is where a maid is kept, perhaps all the baking is done there.

Q. I don't mean that, I mean people baking and offering it for sale; who have a group of customers and who offer for sale?—A. Oh yes, people who start baking in the city in an oven.

Q. I mean, baking it for gain, making a business of it?—A. That is what I refer to, sending the husband out with a basket on his arm and peddling it around. They gradually get more business and then they buy a second-hand stove for a payment of \$20 to \$25 down.

Q. Yes, buys a new stove in other words?—A. Yes.

Mr. YOUNG: Do you object to that.

Mr. EDWARDS: Not at all, I am in the stove business.

The WITNESS: In one city, Stratford, back in 1928 they had 5 bakeries, and to-day there are 27 which have come in along these lines; and that makes it very bad for the 5 who originally did very nicely.

*By Mr. Young:*

Q. As times improve these men will find other work?—A. They will go back to their jobs, that is what I believe, in any case.

*By Mr. Parry:*

Q. Mr. Bredin, I wish you would file that document from that association so that if it is asked for, we will have it?—A. I will be pleased to give it to you.

(Toronto Retail Cake Bakers' criticism on Canadian Bakers' Association Code File is Exhibit 119.)

I now come to "conclusions." This document is addressed to:

Chairman and Honourable Members of the Select Committee on Price Spreads and Mass Buying:—

The appointment of your committee empowered to deal with the question of baking has impelled the bakers of Canada to submit representations on behalf of the industry in order that a much needed stabilization might be evolved.

In submitting to you for your consideration recommendations for Federal legislation, with adequate machinery to ensure the enforcement thereof, the bakers have recognized the fact that the manufacture and sale of bread is a semi-public utility which should be guarded and protected from factors which are, primarily of a short-sighted commercialism, and have only resulted in a demoralized industry.

For several years the conditions in the industry have become more and more chaotic, through the exercise of many and varied forms of dominance by interests not only inside but outside its jurisdiction, forcing a disastrous competition not only among bakers, who may be willing to compete without regard to cost, but also with those who, while realizing the folly of so doing, are forced into the vortex, resulting in many cases in the virtual slavery of the employees in the industry, long hours and low wages, together with unnecessary loss and hardship to all others in any way connected with the industry.

These conditions have been contributed to, or are the direct result of the development of unethical trade practices and cut-throat competition among which may be briefly included:

- (a) Sale of bread below cost—the experience of the last few years has proven that while the consumer may receive a temporary benefit from the sale of bread below cost the evil effects upon the manufacturer and wage earner are too far reaching to justify such a practice. Selling below cost has no ultimate advantage to the public.

- (b) Special discounts, allowances, rebates, free baked goods, premiums, tokens, advertising allowances or any other forms of rebate or gratuity.
- (c) The sale of bread on consignment, and the taking back of bread already sold in exchange for fresh, or throwing bakery products not sold on day of manufacture upon market at greatly reduced prices.
- (d) The shipping or trucking bread into any area outside the shippers immediate community at a lower price than the prevailing wholesale or retail price in the market in which he ships.
- (e) The giving away free of bakery products to present customers or in order to obtain new business. The combination sale of bread with other articles for less than the proper retail price of bread and of such other articles.
- (f) The use of bread or bakery product "loss leaders"—this is one of the most objectionable practices to which the industry is subjected.
- (g) Sale over the counter by chain and other stores at less than retail wagon prices—this destroys the service of the route men.

*By Mr. Young:*

Q. In regard to paragraph C: the sale of bread on consignment, what is the objection?—A. Say for instance you put 100 loaves in a store and you come back the next day and find they have sold only 50 loaves and you take back 50 loaves; they are worth much less than when you place them there, they are a second-hand article—that would eventually increase the cost on your bread.

Q. If you did not take that back then the merchant would have to take a loss, would he?—A. That applies to any line of goods, I think.

The CHAIRMAN: He would have to work them off.

*By Mr. Edwards:*

Q. The man who buys 50 loaves of bread on consignment and he buys 50 loaves of bread for which he pays; which bread does he sell first?—A. It would not be hard to answer that question.

Q. Following that clause C, there is a question I asked this morning about shipping or the trucking of bread into other areas; is that a common practice, going out to the country with stale bread?—A. Not stale, fresh bread.

Q. Well, anyway, going out into these areas where the smaller bakeries are now; the villages and towns, selling this bread at a cheaper price in competition with the local baker?—A. There has been a lot of that done.

*By Mr. Heaps:*

Q. Is there much bread sold on consignment?—A. Very little, that has never been a big item.

*By Mr. Young:*

Q. I cannot see anything wrong about selling on consignment; if you are selling on consignment and a man buys 100 loaves and you take back 50, I think you will very soon stop sending him that much?—A. What would you advise him to do with the 50 he takes back?

Q. I would advise him to be more careful by not putting in 100 loaves the next day?—A. Correct.

Q. Taking back bread already sold in exchange for fresh, that is the same thing. There is in bakeries products not sold on the day of manufacture, but they can be sold at a greatly reduced price; what is the objection to that?

You are a baker, at the close of the day you have a thousand loaves on your hands; what is the objection to selling that on the next day at what you can get for it?—A. Well, my plan as a manufacturer would be not to have that much left on hand; then, of course, you would have to sell it cheaper the next day.

*By Mr. Edwards:*

Q. I think, Mr. Chairman, the objection to that is largely that this man goes outside of the area to which he ordinarily supplies his bread; he goes out to the small towns, to where the small baker is handling his capacity all right, and he destroys that baker's market?—A. Yes.

Q. Now, as I see consigned goods, no matter whether it is bread or what kind of consigned merchandise it is, I do not think it is sound merchandizing. I do not think there is any doubt about that?—A. It is very unsound in any case.

Q. When a man buys his stock, he naturally sells that first?—A. Yes.

Q. When he gets consigned goods, he just does not sell them until the others are gone?—A. To use another illustration: 3 or 4 bakers may go into the same store, one baker will not change any bread and the others will; whose bread will be sold first?

Q. Sure?

*By Mr. Young:*

Q. I want to ask you what would you do with the stale bread; would you throw it into the furnace, or feed it to the hogs?

Mr. EDWARDS: Sell it for fox feed.

The WITNESS: It would regulate itself. The man sold on consignment would not take in 100 loaves. Where the manufacturer has that bread on his hands, it is not fresh bread and he can't get the same price for it, but why do you object to him selling it cheaper?

The CHAIRMAN: What do they do with it, ask him that?

Mr. EDWARDS: They sell it for a lower price.

Mr. FACTOR: If he is a good manufacturer he hasn't any bread left over.

The WITNESS: It goes out of consumption when it is beyond being fit for human consumption. Bread that is not good for any one; it goes into fox feed, pig feed, sausages, and all kinds of things of that sort.

*By Mr. Young:*

Q. You would not have this man who has stale bread on his hands at night and cannot sell it for the same price next day, you would not insist on his keeping it until it was not fit for human consumption, and then making sausages out of it, would you? Is it not a proper thing for him to try to sell that bread in order to get it off his hands? Is it not quite a proper thing for him to sell it cheaper?—A. We find we cannot regulate our trade if that is done.

Q. Is it not an advantage to the housewife who cannot buy a loaf of fresh bread to get a loaf cheaper if she buys it stale?—A. Right to-day anybody who cannot buy it can get it through the welfare bureau.

Q. Not everyone wants to go to the welfare bureau for bread.

Mr. FACTOR: Housewives would not want to use stale bread.

*By Mr. Parry:*

Q. That practice had a demoralizing effect on the whole industry?—A. Yes, that is my idea—that is our idea; not my idea, but our idea, the trade's idea.

*By Mr. Kennedy (Peace River):*

Q. Is the problem of left-overs a big one in the industry?—A. No. With careful management it can be cut down to very small proportions.

Q. That was the evidence given—A. And it usually is.

*By the Chairman:*

Q. Now, Mr. Bredin, proceed with your second section—distributions?

Mr. YOUNG: We have not got through with this other yet.

The CHAIRMAN: All right, let us finish it.

*By Mr. Young:*

Q. With regard to the matter of trucking bread outside of your own community, I have in mind a community where bread is sold at two loaves for a quarter, and somebody trucks bread in from a distance and brings that down to a reasonable price. What is the matter with that?—A. Our biggest fault-finding with that is from the small man who is in that particular territory and is driven out of business. That is where our great complaint comes from.

Q. Suppose the small man in that territory is inefficient and can't sell bread at a reasonable price?—A. I don't think there would be a large number of them. I think they would be a very small number.

Q. Is it not then a good regulator, that whenever he goes beyond reason in his price, the truck will come in the nearby city and undersell him? Won't that force him to efficiency?—A. Well, I don't think it is done for that particular reason.

Mr. EDWARDS: No.

Mr. YOUNG: No, it is not done for that particular purpose, but that is the effect. I know we don't often do things from altruistic motives, but sometimes it works out all right.

The WITNESS: You have to consider whether it would be better to benefit one locality or benefit the whole industry from coast to coast.

Mr. YOUNG: It would be in many localities.

*By Mr. Parry:*

Q. And you are speaking of this as dumping your surplus product into a community by truck which is demoralizing?—A. Yes.

Mr. YOUNG: He says at a lower price than the market to which he ships; it might not necessarily be lower at the place he ships.

*By the Chairman:*

Q. Perhaps you can get at it better in this way: is it the policy on the part of some of the large bakeries to send truckloads of bread out from a large centre into the smaller centres within reach?—A. Where is it done, Mr. Chairman, it is done daily. There is no taking an odd item and shipping it out. It is done daily, every day in the week.

Q. Competing with the local baker?—A. Yes, and driving him out of business.

*By Mr. Young:*

Q. Is that bread dumped; I mean is it sold cheaper there than the sales in his own town?—A. In many instances.

Mr. EDWARDS: That is the point.

*By Mr. Young:*

Q. Why would he do that, if he can get more at home? Why would he ship it out?—A. Because he can't sell enough of it at the same price at home. It is his surplus market he is going out to.

Q. There is not very much surplus.

*By the Chairman:*

Q. He has got 70 per cent over-capacity?—A. The surplus market extends now, with trucks and good roads, to 70 and 80 miles.

*By Mr. Young:*

Q. It is not just his left-overs that he ships that way?—A. No.

Q. He runs his factory extra time?—A. It is made for the purpose; it is manufactured for the purpose of sending out there. I might say if there is one clause in this whole brief that appeals to the average small baker throughout the country, it is that clause.

Q. I don't doubt that. How does it appeal to the consumer in these small communities?

Mr. EDWARDS: Who is not a consumer? That is the point.

Mr. YOUNG: Yes, everybody is a consumer. Therefore we should consider the consumers' interests first, because we are all consumers.

Mr. EDWARDS: You are not going to eliminate a lot of people just to take dumping off these big bakers, I hope?

The CHAIRMAN: Anyway, the witness has answered that to the best of his ability, I imagine. Have you any other questions before we go on to the next section?

Mr. YOUNG: No.

*By the Chairman:*

Q. Then, will you proceed with the next section, Mr. Bredin?—A. Yes.

#### DISTRIBUTION

As a result of years of experience, it has proven that the house to house or retail distribution of bread is the most satisfactory method of distribution to the Canadian public.

- (a) The consumer in Canada demands that his bread be delivered to his door daily in all weather conditions and in all seasons of the year and in the best possible condition. This demand for service is a very real one in Canada. In spite of the intensive chain, department store, and other competition, the predominant portion of bread is still delivered to the door of the consumer. One cannot imagine a higher test of the surviving demands of the consumer than the test of the last few years.
- (b) Any elimination of house to house service would throw out of employment a large number of men. The baking industry of Canada is actually founded on the services of the route men who are in constant contact with the consumer.
- (c) Any elimination of horses and delivery wagons means a reduction in the consumption of farm products, such as horses, oats, hay, straw, hides (for harness), to say nothing of material and labour which goes into the manufacture and maintenance of wagons.

The above reasons clearly demonstrate that the house-to-house delivery of bread meets the great consumers' demand and is the very foundation of the industry.

#### SUGGESTED RECOMMENDATIONS FOR STABILIZATION

We, therefore, ask on behalf of the baking industry of Canada that your committee will recommend to the House of Commons the creation of a federal licensing body which has the following powers:—

- (a) To require all bakers, jobbers and independent distributors of bread to operate under a licence.
- (b) Issue and continuance of such licence being conditional upon compliance with regulations from time to time promulgated by such licensing body.
- (c) The setting up of an advisory body representative of the bakers to assist the licensing body in carrying out its functions, such advisory body consisting of representatives of provincial associations of the baking industry.
- (d) The regulation of the price of bread in co-operation with the board or committee outlined in clause (c), such price to have as its basis the cost of raw materials, all production, delivery and other costs, including a fair scale of wages with a minimum wage and maximum hours as adopted, and to be enforced by the properly constituted authorities.
- (e) To compel a high standard of cleanliness and sanitation; adherence to provincial standards of weight.
- (f) The definition and prevention of unfair trade practices.
- (g) The elimination of the spread between the resale price at chain and other stores and retail wagon price.
- (h) The proper consideration of the consumers's interest in the performance of all its functions.

Any problem of chain or mill-controlled bakeries, chain or departmental stores is automatically taken care of in the above suggestions.

It is felt, and strongly urged, that these requests are of vital importance to the industry, and that federal intervention, to the extent indicated, is absolutely necessary, and that the steps indicated must result in the re-creation of an industry where the producer receives a reasonable return, the employees receive a reasonable and fair living wage, and to the public the purchasing of a staple article of food at fair prices.

All of which is respectfully submitted.

*By Mr. Young:*

Q. You want price control. Do you want the price fixed and regulated on a cost plus basis?—A. Personally I am not in favour of that; but I think the man who goes out and sells below cost—there should be some way of regulating that. It is only by going and finding out what the cost is that it can be done.

*By Mr. Edwards:*

Q. You believe that merchandise is worth a fair price?—A. Yes.

*By Mr. Parry:*

Q. You said in the beginning that is somewhat a public utility; I suppose that justifies your argument for the fixing of the price?—A. Yes, quite so.

Q. You made no mention of allied trades which I understand form a very important part of your industry. I notice there is no recommendation in here

dealing with them. Do you consider any necessary?—A. No, I don't consider them necessary. They are a very fine institution. They have a good organization.

Q. They are organized?—A. Yes.

The CHAIRMAN: Any other questions, gentlemen? Thank you, Mr. Bredin.

The witness retired.

Mr. FACTOR: Does that complete one phase of the baking inquiry?

The CHAIRMAN: That completes one phase of it. The other is not completed yet. There is certain information regarding capitalization and other matters that are in course of preparation now.

Mr. FACTOR: Do you intend to give the large bakers an opportunity of being heard?

The CHAIRMAN: Absolutely. To-morrow we will meet at eleven o'clock and continue the tobacco inquiry?

The committee adjourned at 5.30 p.m., to meet on Thursday, May 3, at 11 a.m.
